HARPER'S NEW MONTHLY MAGAZINE.

No. CIII.—DECEMBER, 1858.—Vol. XVIII.

DAY'S WORK IS OVER.

A WINTER IN THE SOUTH.

Seventh Paper.

THE glimpses obtained by our tourists of the romantic environs of Chattanooga served rather to stimulate than satisfy their curiosity, and it was with longing regret that they resumed their Southern journey, on the day fixed by the programme, without having fully explored that glorious region. Railroading it through northern Georgia, *via* Dalton and Atlanta, and thence westwardly, they arrived at Montgomery, the capital of Alabama, about daylight, after a tedious run of more than twenty hours.

As may be imagined, the sketch-books were not much enriched during this portion of their trip. Although the country is filled with objects of interest, a few tremulous and hurried notes from Larkin's pencil are all the visible evidences of their passage worthy of record. Of the Squire's dreamy observations he remembers nothing along the line of the road but a streak of doggeries, with quaint and hospitable inscriptions on the doors.

He is fully under the impression that there is an unbroken hedge of them from the northern line to Atlanta, and accounts for this unusually prolific growth on the principle, that as wayward moralists and lawgivers have undertaken to repress the seed in Tennessee, nature, in revenge, has produced a double crop in Georgia. Larkin says, however, that Squire Broadacre was asleep generally, and only waked up at the stopping places.

Montgomery is a handsome town of some four or five thou-

Entered according to Act of Congress, in the year 1858, by Harper and Brothers, in the Clerk's Office of the District Court for the Southern District of New York.

STATE CAPITOL OF ALABAMA.

sand inhabitants, situated on the Alabama River, and a worthy capital of an opulent and prosperous State. A cotton mart of considerable importance, its spacious market-place exhibited numerous interesting and picturesque groups attendant on the sale and transportation of the wondrous vegetable. There were cotton carts and covered wagons, carrying from one to half a dozen bales, with *attelages* of mules, horses, or oxen, governed by a sable conductor with whip or goad, or mayhap the hard-faced, bronzed proprietor (*white* by courtesy), skillful to drive his own team and his own bargains. At the landing lay several steamers of palatial dimensions, taking in cotton and passengers for Mobile.

On one of these, the *Henry J. King*, the Squire took passage, and at four o'clock in the afternoon went on board with his party, bag, baggage, and responsibilities. In the Southern country it is not customary for a boat to start until she is ready; and although they had hastened to embark, our travelers soon ascertained that they would have several hours to spare. With a journey of 330 miles and two days' duration before them, this was a matter of no moment; and with the active and entertaining scenes on the landing they were even disposed to wish it longer.

Yet there were some who grumbled; men of a race smitten with the curse of Salathiel, whose wretched fate it is always to be in a hurry, who hasten from a restless boyhood to a premature age, without ever having had time to taste the food they swallow; trampling down both flowers and fruit by the wayside, in their hot pursuit of some fantastic future, unreal as a jack-o'-lantern. The Squire settled himself in a cozy seat on the promenade deck, and with a sigh of contentment pursued his discourse:

"I used to hate these people that are always in haste. It made my bones ache to see them. Now I only pity them. Poor, joyless wretches, whipped and tantalized through life—the past a disappointment, the present a vexatious hinderance, the future a phantasmagoria. Poor souls! if men only knew— Yet perhaps it is wisely ordered that we should not know, and among the gems of ancient wisdom I have somewhere read the following:

"'Life's ills, could man by knowing
Be spared from undergoing,

There would be sense in knowing.
But since, with all our knowing,
We must still be undergoing,
Why, what's the use of knowing?'"

"Carry out the idea," replied Larkin, "and it would lead to fatalism, and suit a stupid Turk rather than a self-relying Anglo-Saxon. For my motto I would prefer the saying of Pittacus of Mitylene:

"'The wise, with prudent thought, provide
Against misfortune's coming tide;
The valiant, when the surge beats high,
Undaunted brave its tyranny.'"

"The wise!—Who are the wise? Young man, the day will come when you will begin to ask yourself that question, and seek in vain for an answer. Yet it all reminds me of a childish fancy derived from the old nurse that dandled me on her knee."

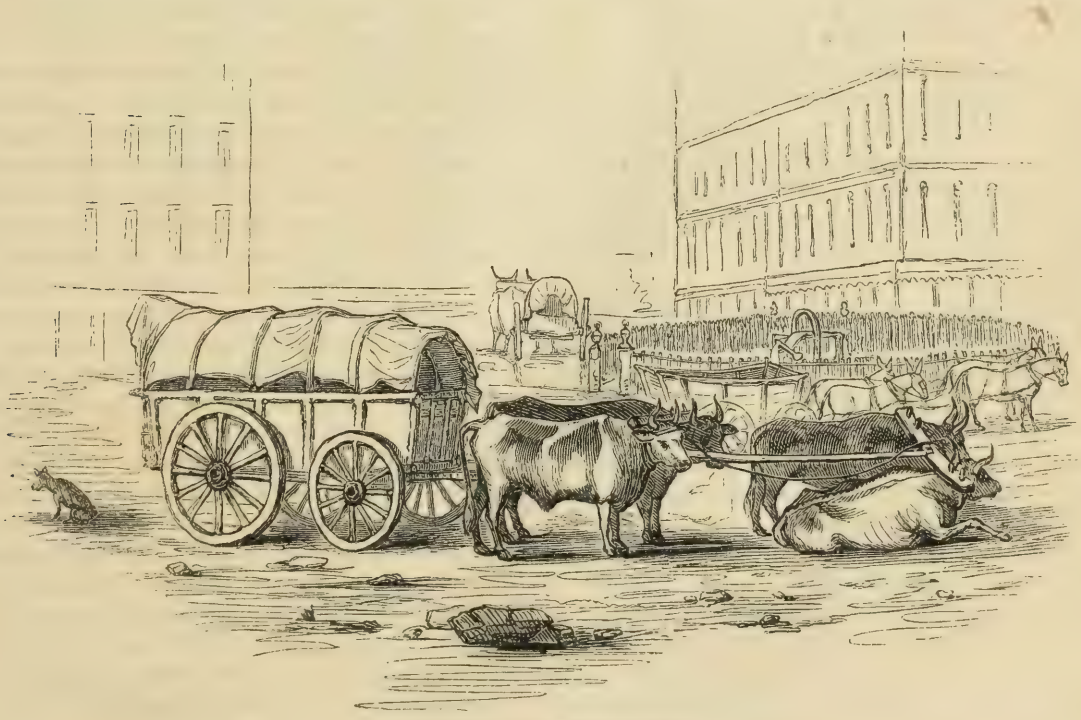
So the Squire told his story, and presently thereafter Leonore wove it into verse, which may please some better than the prose.

THE RAINBOW.

When but a child, 'twas long ago,
My nurse this story told:
She said, Whoe'er might chance to know
The spot whereon the bright rainbow
Touched the green earth, would find below
A pot of shining gold.

Therefor, on many a summer even,
When rains were pass'd away,
And the fair arch spanned all the heaven,
Have I from hill to hill-top striven,
Until the cloud-born colors seven
Faded to misty gray.

And with a boy's simplicity
I marveled, half in fear,
That ever as I ran with glee
Toward the spot where I could see
The rainbow touch, it seemed to me
To vanish in the air.



When grown a youth I often smiled—
Remembering this gold—
To think how, when a silly child,
I was so easily beguiled,
And credited the legend wild
The doting dame had told.

But with maturity of years,
Gray hair and bearded chin,
The legend now a type appears
Of human life: how worn with cares
We follow where Hope's rainbow cheers
Some visioned prize to win.

Pausing at length on the last hill,
Whose foot Death's waters lave,
From that dark river deep and chill
We shuddering shrink with awe, until
We see the rainbow, arching still
The lands beyond the grave.

Looking plump and unctuous as fruit matured in its proper clime and season, negro waiters and maids bustled about the boat—skillful, through long practice, in making a great racket with a little work. On shore, a party of athletic young blacks, with shouts of merriment, were tumbling cotton bales from the low warehouses on the brink of the bluff down the steep bank, and by dint of hook and shoulder tugging them to their place on the lower deck. Stout porters, as they deposited their ox-loads of baggage, would testify their sense of relief by executing a double shuffle on the deck before departing for another load. The sooty firemen were poking up their fiery furnaces, drowning the iron clatter with a grand Mandingo chorus. Carriages were rattling to and fro, delivering their freights of well-dressed passengers—gentlemen and ladies, maids and children, all playing their part in the noisy and animated scene.

On the left was a picture of a graver cast. A planter, with his people, is emigrating to some new land; to Texas, perhaps; but what matters it? You may easily recognize the proprietor, a tall, portly man, bronzed and careworn, as he sits on horseback overlooking his dependant family. Grouped around *en bivouac* are some

MARKET-PLACE, MONTGOMERY.

PLANTER EMIGRATING.

two hundred negroes of both sexes and all ages, from the gray-haired grandsire to the puling infant in its mother's arms. Some are lolling on chests and baled blankets; others stretched on the bare ground, sleeping. Some are quietly whiffing their corn-cob pipes; while others are kindling fires to cook their evening ration of bacon and corn-meal.

Below, the boat which was to convey them was pouring out volumes of black smoke from her kindling furnaces.

But neither the note of imminent preparation sounded from time to time by the hoarse steam-pipe, nor the exciting hilarity that surrounded them, seemed to disturb in the least the impassiveness of the dusky group.

At length the ropes were cast loose, the gangways drawn aboard, and the *Henry J. King* went steaming down the river. The clatter of the landing is exchanged for the rush of paddle-wheels and the jar of machinery. The last gleam of the setting sun illuminates the fading domes of Montgomery, and a fat waiter with a brazen bell proclaims supper.

The tender ones were sleeping in their state-rooms; a balmy breeze played over the steamer's deck; a glorious moon, near to her full, sailed in the azure firmament, her soft light lending the enchantment of mystery to shore and river. In such times as this it is sweet to sit and philosophize. A silly opinion prevails in the world that Philosophy is intended to sustain us in misfortune, to shield us from the sharp arrows of sorrow. No idea can be more fallacious. Ask any practical man, and he will tell you how worthless are the maxims of sages, ancient or modern, to soothe the cares and sufferings incident to human existence. But when we have sound stomachs, and success crowns our undertakings, Philosophy is indeed a jewel. How wise she makes us feel; how profoundly grateful to Divine goodness for the blessing—no, not for that, but for the *gift* of superior foresight, and sounder sense than other people have! How liberally we dispense advice and encouragement for the benefit of our less lucky neighbors; with what complaisant meekness we pour out, as a libation to Fortune, the froth that floats on the overflowing cup of our self-conceit!

"What a lucky idea was this of mine," said Mr. Broadacre to his young kinsman, "this idea of traveling for health. That I should have been credulous enough to have consulted doctors and chewed dried gizzards! Bah! How soon a little movement dispels the spleen engendered by too long a residence in one locality; and a little hardship knocks off the rust that gathers from habitual ease and luxury. The great difficulty is in the starting; but once upon the wing, I feel as much at home in this stirring life as any young vagabond among you. Ay, and can rough it too with the best of you!"

"Certainly, uncle; no frontier man could have stood the mountains better."

"Never fear me, Bob. I've been a campaigner in my time. But I don't care to boast of that—a mere matter of nerve and muscle. But when I used to be out in the world I was a great physiognomist. My intuitions in that way were wonderful; I seldom wanted more than one glance at a man to enable me to tell his character and social position with considerable accuracy. Now I have observed a young man on board the boat who evidently is in some distress, and whose countenance interests me. I saw him a short time since playing cards in the Social Hall. An altercation occurring, he

left the table, and has since been wandering uneasily about the boat. I suspect he has fallen among sharpers."

"I have no faith whatever in physiognomy," replied Larkin; "and it is difficult nowadays to draw any reliable inferences from dress, where ready made clothing stores so universally prevail. And since the spirit of Democracy, not satisfied with political equality, is fast leveling all distinctions in morals and manners, it is hard to distinguish between a gentleman and a billiard-marker; to know the difference between a rich banker and a swindler; or tell an M. C. from a black-leg."

"Too true, Robert; too true. But the art of the physiognomist is more an instinct than an effort of reason; or if of reason, its method is too subtle to be appreciated or understood. I have been interested in a young man's face without knowing why."

"Why? The simple fact that there is seeming distress is sufficient to interest you, Uncle Broadacre. But as trouble is the common lot of all, it proves nothing in regard to character."

"Now we are getting tangled up in metaphysics," replied the Squire, as he strayed off toward the Social Hall. When he got there, it happened by some accident that he was slightly jostled by the young man to whom he had taken such a fancy. The stranger made a polite apology, which the Squire received so agreeably that they fell into conversation.

"Pardon the liberty, Sir," said the youth, with a bow of unctuous deference, "but I perceive you are a Virginian."

"You are right," replied the Squire, with a smile. "But pray tell me how did you know that?"

"The air, Sir, the bearing—excuse the impertinence in an entire stranger. But the Virginia gentleman is unmistakable. I was myself educated at the University of Virginia, one of the noblest institutions in the world."

"Indeed!" exclaimed Squire Broadacre, warming up; "then you must have been acquainted with my nephew, Bob Berkeley."

The young stranger was dumbfoundered with respectful astonishment. "Have I, then, the honor of addressing the kinsman of my dearest friend Bob Berkeley—a friend that I am proud to own—always at the head of his class—a terrible student—graduated with hon—"

"Come now," interrupted Squire B., "you are too partial. My nephew was a great whelp, and didn't graduate at all. I wanted to ask you what he was dismissed for."

"Ah," cried the youth with a knowing wink, "that was an unfortunate affair—entirely the fault of the Faculty—a base, tyrannical action on their part. For Bob was a whole-souled fellow—spent his money free. He and I used to lend each other money on all occasions."

"Hum," said Squire B.; "he managed to get through a good deal in a short time."

"The very soul of liberality and honor, Sir," responded the stranger.

"I suspected him of gaming," said the Squire.

The youth's countenance fell as he answered. "He certainly had a weakness for a game, Sir, like many others that have suffered by it."

The speaker turned hastily to brush away a tear, while the Squire took him kindly and familiarly by the arm.

"It's a bad habit," said he—"a bad habit—one that should be avoided or gotten rid of. I observed that those fellows were too hard for you to-day. Did you lose much?"

The young man sighed. "It was but a trifle, Sir; and but for the peculiar circumstances in which I am placed I wouldn't mind it. I am hurrying home to see my mother, who is ill. I have lost every thing I had about me, and in consequence of my criminal folly I shall be detained for several days at Mobile. In the mean time I know not what may happen."

Squire Broadacre winked two or three times to get rid of the moisture that was gathering in the corners of his eyes. "Come, youngster, don't make a serious matter of a trifle"—pulling out his wallet—"how much will you need to take you home?"

At the sight of the wallet the youth looked surprised and hurt; so much so that the Squire apologized, but persisted in his kindly offer until the stranger reluctantly named twenty or twenty-five dollars.

"Nonsense!" said the Squire, in an under tone, offering a fifty-dollar bill.—"Get out, you rascal!" (to Jim Bug, who had pulled his sleeve.)

The youth refused; and a friendly altercation ensued, which ended in the Squire's forcing the note upon him. The outpouring of the young stranger's thanks was interrupted by the stoppage of the boat at a landing.

"There's my card and address," said he. "And yours?"

"A. Broadacre, St. Louis Hotel, New Orleans."

"All right, you will hear from me within four days."

"Master," said Jim, in a grieved and indignant voice, "you're done fooled—tuck in scandalous."

"You impudent dog, get to bed! How dare you address me in that style? How dare you interrupt me when I am conversing with gentlemen? You pulled my sleeve twice."

"Master," persisted Jim, "you'se fooled. I see dat man playin' chuck-a-luck down on deck, all fur to make a raise to git into dis game up stars. Den they cotch him cheatin', and saunt him."

After sundry impatient and menacing gestures with his cane the Squire relapsed into thoughtfulness.

"Who was that young man I was talking with a short time since?" he asked of the clerk.

"That was Jedediah Suggs, Sir, a son of the celebrated Colonel Simon Suggs, of Montgomery."

"Is he still on board the boat?" asked the Squire, hastily.

"Think he left when we landed just now. Had you any business transaction with him?" inquired the clerk, with a smile.

"None," replied Squire B., reddening—"that is, none of any importance;" and he walked off toward his state-room.

The excitements of the evening were not yet over. As he was about going to bed the Squire missed his wallet, which contained several hundreds in bank-notes, besides important papers. After hurriedly visiting his pockets one after another, he returned to the forward part of the boat in great perturbation, and commenced a search, in which he was assisted by several employés of the steamer and a number of officious by-standers. The appearance and eagerness of some of these latter seemed rather calculated to make the loser nervous, but the Squire was beyond either hope or suspicion. His mind was made up on the subject. "The infernal scoundrel," he muttered between his clenched teeth, "to have picked my pocket under such circumstances!" This the Squire said, and a great deal more scarcely proper to be recorded. But with the appearance of Larkin and Jim Bug on the scene both philosophy and dignity were for a moment forgotten. "The misbegotten scoundrel!" he repeated, stamping furiously on the floor. As he did so something dropped out from the leg of his breeches, and Jim nimbly grabbed up the identical wallet. The rejoicing was general, while drinks and congratulations went round. "I am sincerely glad of one thing, at least," the Squire whispered to Larkin, as they again retired to their respective rooms, "the young rascal's mother is not sick, after all."

The day following their departure from Montgomery our tourists passed most agreeably on board their boat; and certainly no public conveyances in the world can compare, either in substantial comfort or luxurious elegance, with those of our Southwestern waters. The weary may repose on spring mattresses or cut velvet sofas; the hungry are fed with the richest viands, served with a quiet elegance nowhere equaled but in the first-class restaurants of Paris; the ivory key-board of a superb piano tempts the itching fingers of the musical; books there are for the studious; and the artist, when he gets accustomed to the jar of the machinery, may sketch almost as well as on *terra firma*. To those whose perceptive faculties are too active to permit the enjoyment of parlor amusements, the moving panorama of the river shores offers a varied and attractive feast; while the mixed and changing population of their floating world furnishes endless entertainment to the observer of character. As the events of the preceding evening have unfortunately deprived us of further observations from Squire B. on the subject of physiognomy, with Larkin's sketch-book before us, we feel constrained to hazard a few straggling comments of our own.

GENTLEMAN'S GENTLEMAN.

Apropos of negroes: Some time ago a raw Hibernian, on landing in one of our Southern cities, lost his trunk. When he applied at the baggage-office for redress he was asked how he happened to lose it.

Pat naïvely replied, "Shure, a big black nagur took it away on his shoulder."

"And would you know him again if you were to see him?"

"Faix, is yer honor makin' game of me? There was a hundred of thim; and how can ye tell one nagur from another any more than ye can tell one sheep from another?"

Those unacquainted with the *personnel* of the peculiar institution are apt to think like the innocent Paddy; yet we are not sure but the African face presents as strong and remarkable varieties of character as that of the Caucasian.

Observe the gentleman's gentleman, as with waiter and napkin in hand he stands behind the rich man's chair—at once proud and obsequious—swelling with his master's importance and his

STEAMBOAT COOK.

own — scrupulously neat in his dress—punctiliously polite in his deportment; yet scarcely polite enough to conceal his scorn of a common nigger, or his somewhat pitying contempt of poor white folks. Then cast a glance into that steaming pandemonium the steamboat kitchen, and mark the ruler of the realm.

Compare old Aunt Sally, who, in the capacity of family nurse, has waged an amiable war with consecutive generations of fair-haired rebellious Anglo-Saxons; with Julia, my lady's pert and petted maid, who has been heard to wonder whether it is possible that real ladies at the North sometimes wear calico—as is reported. But the book furnishes more examples than we have space to exhibit.

Whom have we here? A coarse, common face, which our artist deftly purloined while its owner sat smoking his corn-cob pipe upon the guards of the boat. We meet with many such faces in our travels through a new country, the impassive countenance indicating nothing more than vulgar energy and endurance—evidently a man of deeds rather than of words. Sometimes, perhaps, an overseer; an emigrant bound for New Mexico; a filibuster *en route* to join

QUIEN SABE?

Walker. He would manage an estate, kill bears and Indians, yoke oxen, and grub new land, with the same resolute, emotionless face; regarding the business in hand only in a speculative light; asking but one question before going into battle—"How will it pay?" The story of his life may be a wild romance, but he knows it not.

Here, lolling gracefully in his cushioned chair, we have the proprietor of a thousand bales, reading from the leading Montgomery journal politics, poetry, and prices current. And here, again, the man of ten bales; awkward, uneasy in this fine company; half afraid to sit on these fine seats, and not altogether sure of the propriety of squirting tobacco juice on these rich carpets. He feels more at home in the Social Hall, and will be vastly communicative if you give him a chance. He is hazarding himself (possibly for the first time) so far from home on his way to the great cotton mart, Mobile. Perhaps this may be the veritable Willey Harbucket, our old friend who wrote that droll letter, so characteristic of his class, that although it has been published before, we can not resist the temptation of stealing, for which we hope to be pardoned here and hereafter.

CLARK COUNTY *Alabama* —— ——

Mr Brown Smith and Johnson Mobile

WILLEY HARBUCKET.

THE FAMILY NURSE.

Meanwhile Squire Broadacre made acquaintance with a gentleman whose courtly manners and commanding presence attracted, while they inspired respect. His evident familiarity with the scenes around them soon led into an interesting and long-continued conversation, in the progress of which the following historic reminiscences were elicited.

"It was my fortune to have served through the whole war of 1812, with the renowned chief of the Southwest, and I was an eye-witness of the scene which I am about to describe. On the morning of the 7th of November, 1813 (I remember it now as if it were but yesterday), the army of General Jackson arrived at the Coosa River, just where this beautiful stream, concentrating its volume, breaks through the southern spurs of the Cumberland Mountains. Our march led down the west bank, and, although nerved for the sterner realities of war, we could not but be impressed with the grandeur and loveliness of the scenes around us. For a distance of more than two miles the waters rushed between beetling crags and lofty precipices, foaming and boiling over their narrow and rocky bed. The cliffs were then covered with innumerable wild fowl, which, disturbed for the first time, probably, by the approach of the white man, flew over us in clouds; the beating of their wings and discordant screams mingling with the roar of the river. At the foot of this rapid are the Ten Islands of the Coosa—at that day prominent landmarks in this unfrequented wilderness; and there we halted and built Fort Strother, as a rallying point and basis for future operations against the wily and savage enemy with whom we were warring. From this point we marched to the bloody fields of Tallashal, Talladega, and Emuckfaw, and hither returned with the trophies of our victories.

"But amidst the scenes associated with the name of Fort Strother, neither the awful array of armies marching to battle, nor the proud return of conquering legions, have left so profound an impression on my memory as the events of December, 1814. Braver troops or more patriotic men never entered the field than the first brigade of Volunteer Infantry, the chivalry of Tennessee, the right arm of Jackson's military power; yet, owing to a misunderstanding between these men and their chief, a serious discontent arose, which progressed until the whole brigade stood in an attitude of defiant and open mutiny, threatening more fatal consequences than could have resulted from the triumph of our savage foe, blighting every prospect of future honor and usefulness.

"It is due to the living and the dead that the facts which gave rise to the difficulty should be clearly stated. They were briefly these: The Tennesseeans had been mustered into service on the 12th of December, 1813, for one year, and therefore maintained that they would be entitled to their discharge on the 12th of December, 1814. But it had happened that after their enlistment they had been dismissed for a time, and had remained at home unemployed for more than five months. The General, construing the articles more strictly, refused to discharge them at the end of the year, but required five months' additional service to make up for the time which had been unemployed. The subject had been long discussed around the camp-fires. The men wanted to return home; and, although hardy campaigners and prompt for battle, were equally stiff and sturdy in the maintenance of what they believed to be their right. The commander had been formally appealed to; but to have lost these troops, with a beaten but still unsubdued enemy in the field, would have subjected his weakened army to certain disaster and possible destruction. There was fair ground to question their right to a discharge at that time; and with his zeal for the public service and the fruits of a glorious campaign weighing in the same balance, he did not hesitate in his decision—an absolute refusal to grant it.

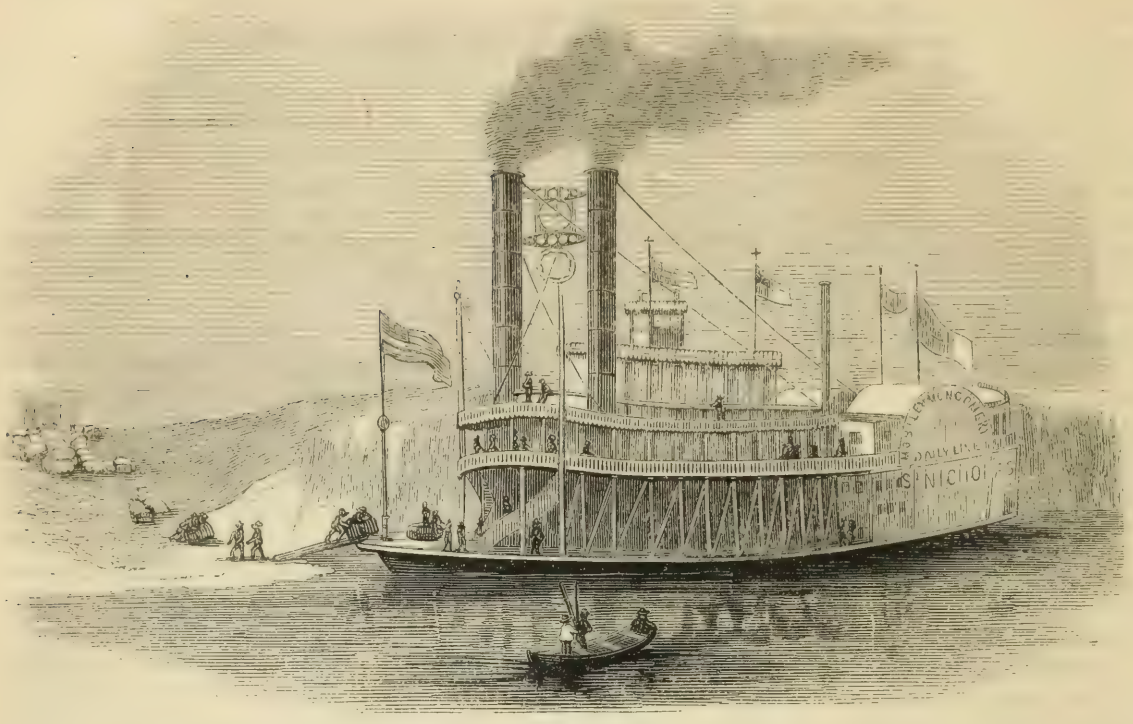
"As the 12th of December approached the lowering clouds of discontent seemed to presage

an inevitable storm. Around the glimmering camp-fires the soldiers' wonted jest and song were heard no more. Gloom and anxiety shaded every face. The Tennesseeans made no secret of their determination to return home on the day appointed, and General Jackson as resolutely determined to prevent it. Thus was issue joined between a thousand brave and warlike men on the one hand, and the commanding General on the other; and it was evident to all that the tenacity of opinion and purpose for which Jackson was most remarkable was about to be put to the severest test. The 11th of December at length arrived. The dawn was overcast, and the damp, drizzling clouds seemed in unison with the sullen temper of the camp. About nine o'clock the officers of the brigade assembled to take counsel for their action on the 'imminent to-morrow.' Before their deliberations had been reduced to formal resolves the council was interrupted by an authoritative order from the commander to form the brigade in front of the gate of the fort.

"The order was obeyed in silence. Without the sound of drum or trumpet the sullen veterans stood marshaled on the appointed ground. To such an extent had the disaffection spread through the camp that Jackson had not over a hundred men on whom he could rely. With these (his life-guard), and one piece of artillery, he posted himself in front of the mutineers. While the gunner waved his blazing linstock beside the loaded gun, the commander rode to the front, and, rolling his eye along the line, met the lowering and defiant glances with a look of stony firmness. Not a shout, not a whisper, greeted his appearance. The suspense of the moment was awful,

"'And the boldest held his breath
For a time.'

"In a voice in which reproach and kindness mingled he at length broke the silence. He reminded them of their deeds in arms, of the laurels they had won, and the glory that yet lay before them in the path of duty. He told how the enemy lay embodied within sixty miles, waiting for battle, and any road that did not lead to them could only lead to infamy and disgrace. Then, rising in his stirrups, he shouted, in trumpet tones, 'Now where is the man who dares tell me that he will desert his country's standard in the hour of darkness and danger? For, by the God that made us, that man shall only pass on his way over my dead body! Are you ready for the fight? Come on!'



"Along that line of grim and war-worn faces was a movement of confusion and irresolution. Men looked hurriedly into each other's eyes to ask counsel. There was a momentary pause. Then rung out the quick peremptory command, 'Shoulder arms!' The line shook, but made no responsive movement.

"Again he spoke, in a calm, confident voice: 'The General expects prompt obedience from every soldier. Shoulder arms!' Like an electric chain that feels the lightning's shock the arms of the whole line rung with the simultaneous movement. The brigade stood at a shoulder — silent, submissive, quelled like a child under the eye of an awful yet honored parent—ready to do his bidding without a murmur, though it led, through fatigue and privation, to danger and death."

THE CAMP-FIRE.

For a considerable distance below Montgomery the Alabama River flows between banks sufficiently steep and high to shut out from the navigator all view of the adjacent country. An occasional plantation-house peering over the brink, or a group of warehouses indicating a town, are the only sights that break the monotony of the walled up stream. We must not forget to add to these items the hourly detentions of the boat to take on cotton. The bales are sometimes rolled down a steep bank, as at Montgomery; sometimes dropped or craned down from a precipice twenty or thirty feet high. But on all the best improved estates there is a long covered building, reaching from the brink of the bluff to the river, reminding

LOADING COTTON.

one, for all the world, of a ten-pin alley or a rope-walk set on end. This building is divided longitudinally into two compartments, one containing a stairway and the other a smooth-floored slide, or "shoot," by which the cotton is delivered.

On the morning of the second day these high banks had disappeared, and the widening stream pursued its course through a low, flat country, covered with forests in which the gum and cypress seemed to predominate. The river was swollen considerably beyond its ordinary volume, and here and there a forlorn plantation appeared half submerged in the turbid waters. In places that the water had not reached the houses appeared built upon piles, and the great house with its attendant cottages reminded one of a sow and pigs traveling through the mud. As the boat approached the shore cotton fields could be seen, waving with the last year's plants, whose dried pods, fluttering with the tags and remnants of the snowy crop, presented a singular appearance to eyes accustomed only to wheat-stubble and corn-fodder shocks. The forests, too, were beginning some signs of tropical luxuriance. The tender green of the budding cypress contrasted strikingly with the gray-beard moss that hung from every bough. The broad-ribbed and pointed leaves of the ground palm were reflected in pools of brown swamp water, while the shade of the wooded aisles was deepened by the dark foliage of the magnolia.

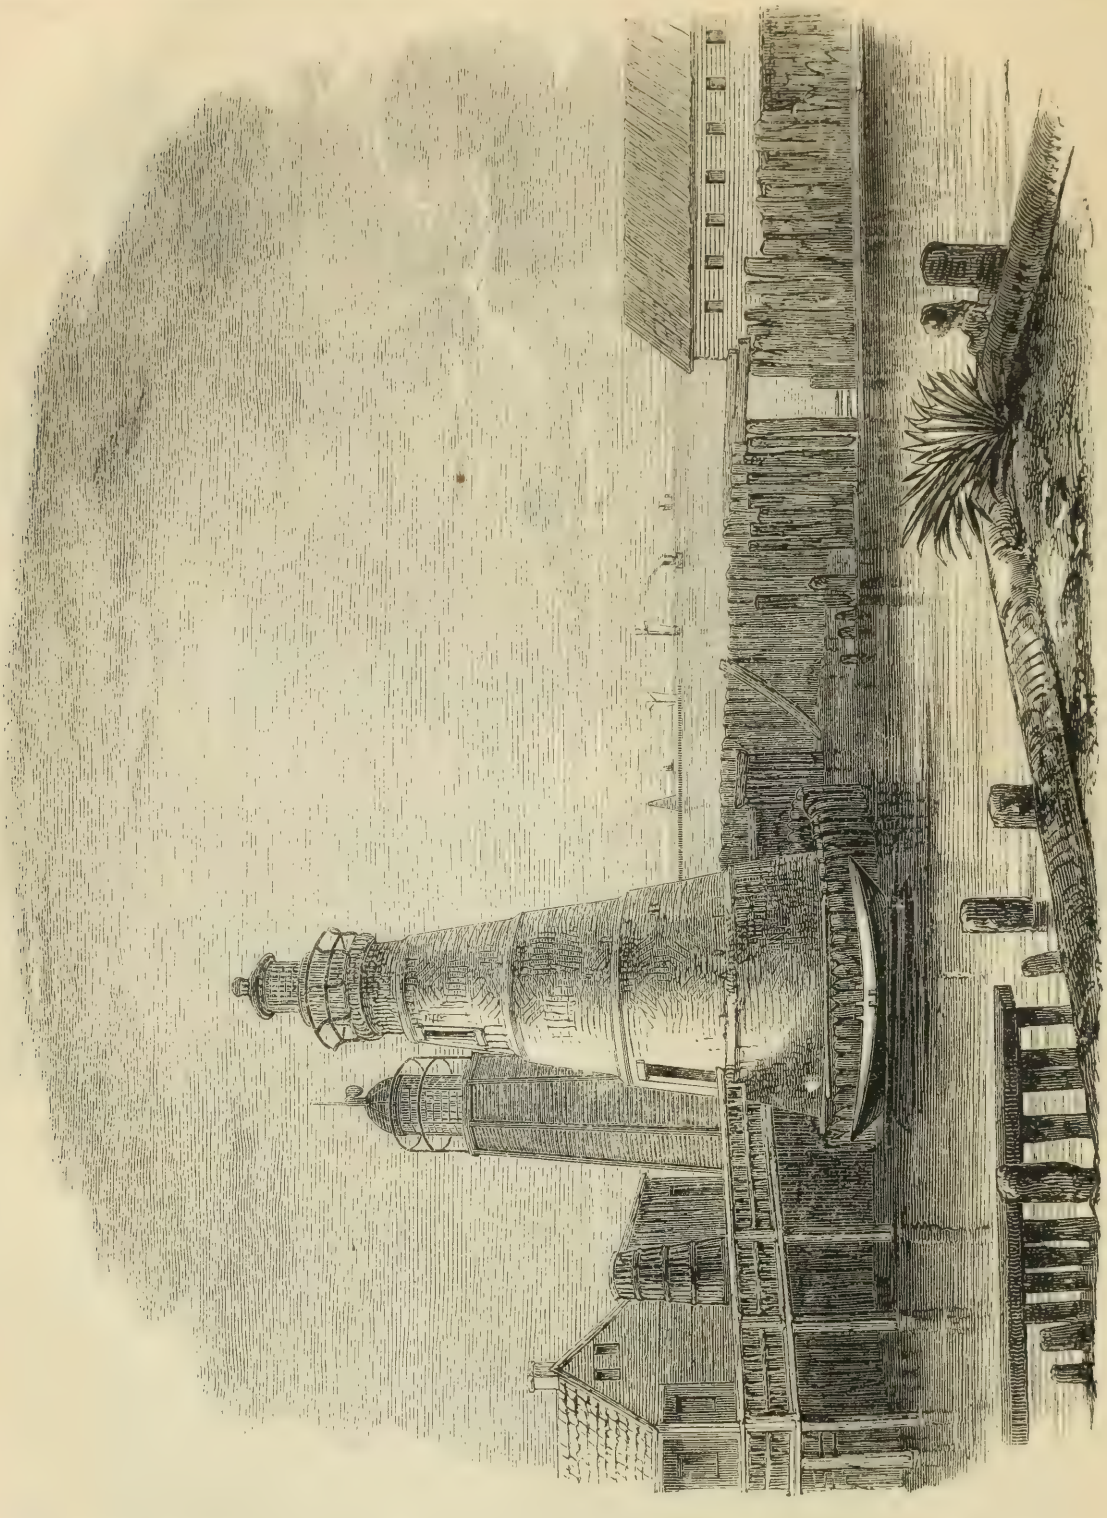
At length domes and spires were seen, rising above the level horizon of land and water, and about mid-day the steamer tied up at the cotton loaded wharves of the fair city of Mobile. The

COTTON PLANTATION ON THE ALABAMA

SOUTHERN SCENERY.

travelers were transferred from their floating hotel to the Battle House; and as their journey had left no sense of fatigue or discomfort, they were soon strolling about the city to see what could be seen. Mrs. B. saw a number of things that she wanted to buy, and Tiny was highly excited with the golden heaps of tropical fruit that shone on every corner. The artist's eye was charmed with an old Spanish tower that reminded him of the old world, and the marble streets of the populous cemeteries, that reminded him possibly of another world, of common interest both to the old and new.

There was a broad street lined with handsome private residences, each situated in its ornamented inclosure, luxuriant with rare and beautiful tropical plants. On the landward side the town was shaded by dark pine forests; and toward the water the business quarter was composed, as in all other cities, of brick, dirt, and dullness. The only distinctive features here were the cotton dépôts—squares of low brick-walled sheds, filled with the great staple that controls the commerce of Christendom.

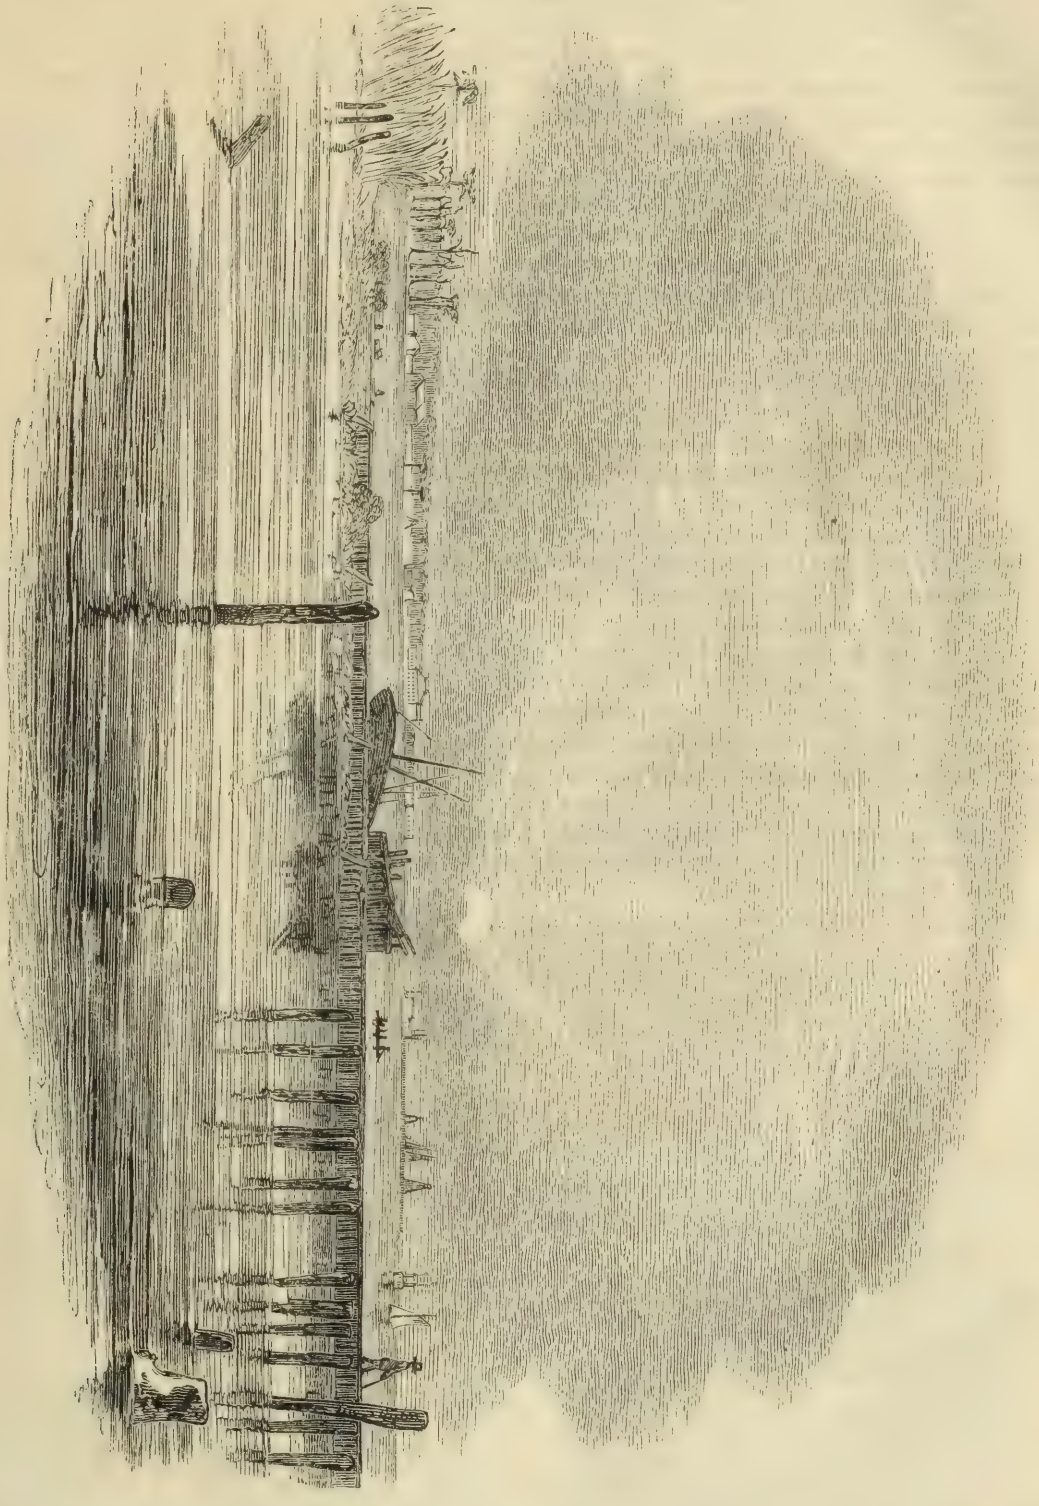


While our friends were seated at a sumptuous dinner in the Battle House, amidst a numerous company composed of planters with their families, merchants, ship-masters, speculators, and travelers generally, they were startled by the rapid ringing of alarm-bells, and the cry of fire. City folks preserved their equanimity, and went on with their dinner as usual; but the country people, of course, got into commotion. A tall gentleman opposite our friends laid down his knife and fork to listen; his next neighbor smiled, and passed the wine. The tall man attempted to pour it out, but spilled it on the cloth. "My dear," said his wife on the other hand, "don't be agitated." "Ding-dong—ding-dong. Fire! fire! fire!" "Change your plate, Sir?" said the waiter. The tall gentleman rose hastily and left the room. Then another and another. "Fire! fire! fire!" People began to get more restive and curious. "Where is it?" asked one of another. Presently one, with hurried step, stalked into the room, and approaching a group discussing the flavor of some rare wine, announced, in a stage whisper, "The cotton sheds of Brown, Smith, and Johnson!"

There was a general stampede. "It seems," quoth the Squire, "as if the sword of Damocles had fallen and cut short the feast."

From their chamber windows our friends

ENTERING THE GULF.



THE LIGHT-HOUSE.—LAKE PONTCHARTRAIN.

could see vast clouds of black smoke rising between them and the river; and far into the night the volumed flame continued to ascend, illuminating with its fierce light the city streets, the line of steamers moored along the wharves, and the calm water of the bay, spread far in the distance.

Larkin went out to get a nearer view of the picturesque and animated scene. The city firemen were striving with unavailing efforts to quench the devouring flame. Bands of wild-looking negroes were rushing into the smoke and dragging out the smouldering, half-burned bales from the blazing mass. Instead of the usual vulgar crowd attendant on fires elsewhere, here were groups of well-dressed gentlemen, quietly looking on at the piteous spectacle. Here were elegant carriages, driven by liveried footmen, more than one containing high-spirited dames and bright-eyed daughters of the planters, come to sympathize with husbands and fathers. Thus it was that in a few hours a million of dollars evaporated in smoke.

When next morning's sun arose upon the scene there were a few crumbling lines of brick wall, a few smouldering heaps of ashes, a few half-burned bales, bedraggled and defiled, with two or three negroes asleep upon each; some tag ends of ropes and scraps of bagging scattered here and there—all the visible remains

VIEW ON LAKE PONTCHARTRAIN.

of that vast wealth which on yesterday sustained the golden hopes of hundreds. Who can tell what fairy castles vanished with those rolling clouds? what milk-pails were overthrown? what broad lands remained unpaid for till another season? what dresses deferred? The lord of a thousand, with corrugated brow, begins to cipher on the back of his last business-letter, then pays a visit to his banker. Willey Harbucket wipes a tear or so from the end of his nose, takes a stiff horn, "withouten sugar," and the first boat for the upper country. Far in the interior David Pipkins hears the fatal news, and curses the day he intrusted his "crap" to the keeping of his unlucky neighbor. Dan Butin swears there's something wrong somewhar, and threatens to sue somebody. Even the humble hearth-stone of the negro is reached by the great sorrow, and tears trickle down cheeks of ebony. The big bale went with the rest. Boy Joe, and Bob, and Elijah, and Nancy look at each other with mournful countenances, and the voice of the banjo is mute. But long before Time, the consoler, smooths the care-drawn puckers from the master's brow, the banjo reawakened sounds merrily from the cabin, and Elijah quotes this comfortable text from the Good Book (Elijah quotes from memory), "Blessed am dem what 'spects nuffin, for they ain't a gwine to be disapp'inted!"

On the day after the fire our tourists took passage on the steamer *Cuba* for New Orleans, and that evening, for the first time, saw the sun quench his burning disc in the waters of the Gulf of Mexico. Although the season was mid-winter, the air was soft and balmy as if a May breeze were rippling the surface of the sea. The deep, blue dome of night glittered with stars, and anon the full moon rose, lending her crowning splendor to a scene such as is seldom witnessed out of Southern latitudes. It is hard that folks will get sleepy in spite of stars and moonlight, but so it was. Our tourists left all this magnificence and went early to bed. The voyage was calm and prosperous, and their sleep sound and refreshing. When they awoke their vessel was cleaving the placid waters of Lake Pontchartrain, whose broad, mirror-like surface was rosy with the reflected blushes of the approaching dawn; and half an hour after they went ashore at Lake Landing, between the old and new light-houses.

Here they found that peculiarly French institution—a cup of good coffee—and a train of cars to convey them to New Orleans, about eight miles distant. Their route lay through extensive swamps, shaded with cypress and magnolia trees, with a thick undergrowth of cane and ground palm. The first appearance of the city reminds one of what Hood says of Holland. To see the domes, steeples, and chimney-tops peering over the tufts of grass and shrubbery that decked the open country, it seemed as if "a city had been sowed and was just coming up."

They entered the city by the French quarter, which is built up of low wooden houses, generally without much architectural pretension, but, as is usual in the Southern country, quite surrounded with shrubbery and ornamental trees.

At the railway dépôt Jim Bug was much disgusted at hearing the negro porters and hack drivers speaking French. "The idea," said he, "of them black rascals undertakin' to talk larned, like ladies and gent'men." But on being assured that most of them were totally ignorant of English, his indignation gave place to astonishment.

"Why, Mass Robert, I thought all black people talked like we does at home. I thought they larned to talk from white people, and not outen of books like these does."

"Well, Jim, we've not time to explain that to you now. The coach is waiting to convey us to the St. Louis."

Once installed within the massive walls of their hotel, our travelers indulged in the pleasant consciousness that their wanderings were at an end, at least for a season. They could

VIEW IN THE FRENCH QUARTER, NEW ORLEANS.

hear around them the hum of a great city, the commercial, social, and dramatic centre of the Southwest. Near at hand, but as yet unseen by them, the great river was rolling—the river whose very name is synonymous with sublimity; yet there was no occasion for haste, and before withdrawing the curtain from such a scene, one likes to sit down quietly and in imagination con over the little part that he or she expects to play in the forthcoming drama.

Tiny was reveling in dreams of dolls and ribbons, and the fancy of Madame B. was, doubtless, busy with French silks and laces. The Squire, I think, from his puckered brows, was doing a sum in arithmetic. A large gilded 20 which filled his mind's eye stood for dollars; a 30 placed under it signified the days of the month. Multiplied, the result was 600—double the same to cover extras. The Squire ejaculated the English title of his Satanic Majesty, and wound up with a locomotive whistle. At the moment his eye fell upon Leonore, who was sitting apart, apparently lost in reverie. His face was suffused with kindly feeling, and approaching her, he took her hand affectionately, when they had a long and animated conversation in an under tone.

Up stairs Annette was seated on the trunk which Jim Bug had carried to her room. Jim had just concluded some important revelations with these words,

"True as Gospel, young mistress—just as I tell you. I see him do dat—I always makes a mark of these things."

"Well, never mind, Jim, it's not a matter of any consequence—not in the least. It was very natural and very kind in him. But now go 'way, don't tell me any thing more."

Bob Larkin was engaged, we believe, in writing a letter to a friend, some extracts from which we will give, as they will throw a glimmering of light upon some subjects of which as yet we know but little:

"DEAR P——: I write from the St. Louis Hotel, in great haste, to advise you of our safe arrival, etc.

"Our progress since we left East Tennessee has been too rapid to have been very satisfactory. Some wag has characterized Southern scenery 'by a line and a pine,' and there is both wit and truth in the idea at first view; yet the hasty glimpses I have had of the country have excited my fancy, and I am anxious to see more. . . . .

"Leonore is a strange girl, and she grows more and more mysterious every day. She and Uncle Broadacre have long confidential conversations, which often, on her part, end in tears. Then I have observed she has grown sadder and more abstracted as we approached this place—New Orleans. She no longer takes interest in art, and often, during my most elaborate discourses, she starts and acknowledges she has not heard a word of what I have been saying. It occurred to me she might be in love, and I attempted some gallant speeches, which at first were received with a cold smile; and on being repeated brought me such an unanswerable rebuke that I am convinced she is not in love with me.

"I do not believe I could ever fancy her; that is, that I could ever experience any sentiment beyond pure admiration. The human mind is so constituted as to dislike perfection. We may admire, but can not love that which is faultless. The Greek ideal—what infernal nonsense I am writing.... Good-by.

"Your friend, BOB LARKIN."

LITTLE JERRY, THE MILLER.

A BALLAD.

BENEATH the hill you may see the mill,
Of wasting wood and crumbling stone;
The wheel is dripping and clattering still,
But JERRY, the miller, is dead and gone.

Year after year, early and late,
Alike in summer and winter weather,
He pecked the stones and calked the gate,
And mill and miller grew old together.

"Little Jerry!"—'twas all the same—
They loved him well who called him so;
And whether he'd ever another name
Nobody ever seemed to know.

'Twas "Little Jerry, come grind my rye;"
And "Little Jerry, come grind my wheat;"
And "Little Jerry" was still the cry,
From matron bold and maiden sweet.

'Twas "Little Jerry" on every tongue,
And thus the simple truth was told;
For Jerry was little when he was young,
And Jerry was little when he was old.

But what in size he chanced to lack,
That Jerry made up in being strong;
I've seen a sack upon his back
As thick as the miller, and quite as long.

Always busy, and always merry,
Always doing his very best,
A notable wag was Little Jerry,
Who uttered well his standing jest—

"When will you grind my corn, I say?"
"Nay," quoth Jerry, "you needn't scold;
Just leave your grist for half a day,
And never fear but you'll be *tolled!*"

How Jerry lived is known to fame,
But how he died there's none may know;
One autumn day the rumor came—
"The brook and Jerry are very low."

And then 'twas whispered mournfully
The leech had come, and he was dead;
And all the neighbors flocked to see:—
"Poor Little Jerry!" was all they said.

They laid him in his earthy bed—
His miller's coat his only shroud—
"Dust to dust" the parson said,
And all the people wept aloud.

For he had shunned the deadly sin,
And not a grain of over-toll
Had ever dropped into his bin,
To weigh upon his parting soul.

Beneath the hill there stands the mill,
Of wasting wood and crumbling stone;
The wheel is dripping and clattering still,
But Jerry, the miller, is dead and gone.

LUSSAN BARGAINING WITH THE CAPTAIN.

AN OLD FILIBUSTER.

SIEUR REVENAU DE LUSSAN was a native of Paris, and when a mere boy only seven years of age, gave evidence of his roving disposition by often stealing away from home and making long excursions in the city. This adventurous spirit led him, as soon as he was capable of bearing arms, to attach himself to an officer in the army just before the siege of Condé. He served through the campaign, and then became a cadet in a marine regiment. His captain managing to drain him of all the cash with which his father supplied him, the latter, at a heavy expense, procured his discharge. He again enlisted, and fought gallantly at the siege of Guislane. The camp, the drum, the bugle, and the perils of the conflict had a charm for him that no exposure or hardship could break. The war being over he returned to Paris; but the dull routine of daily life wearied him, and he resolved to see something of the world outside of his native France. The marvelous stories of the New World, which were then in every body's mouth, enchained his roving fancy, and, despite his father's persuasions and his mother's tears, he embarked in March, 1679, for St. Domingo. The sea, with its storms and billows, enchanted him. St. Domingo opened a new world to his vision; but his fresh-born delight soon received a check in the tyranny and cruelty of a Frenchman to whom he engaged himself as a laborer. He passed three years in little better than servitude; and when his bondage finally became intolerable he laid his case before the Governor, who ordered his release. Hearing nothing from his parents, and being heavily in debt, he began to cast about for an opening suitable to a man of his desperate fortunes. After turning various projects in his mind he finally resolved to join a gang of freebooters. The next thing was to select a commander; for he knew that the service of a vigorous young man, bred to arms, would be gladly accepted by the leader of any expedition. After mature deliberation he offered himself to Captain de Graff, who bore a roving commission from the Count of Toulouse, the Lord High Admiral of France, and was accepted. With this commander he set sail on the 22d of November, 1684, and began to cruise for Spanish vessels in the waters surrounding the West India Islands. Although the men composing such expeditions were called at the time buccaneers, freebooters, etc., yet many of the vessels in which they sailed were, in fact, privateers of the present day. Lussan, it is seen, sailed under a regular commission, and was no more a freebooter than the American privateers in the war of 1812.

From the 22d of November, 1684, to the 1st of March, 1685, they kept cruising in the Caribbean Sea, meeting with various adventures, yet taking few prizes of any value. They, however, by chance, encountered two other vessels and four boats manned by buccaneers, which proved a great accession to their strength. Of their little fleet, the two largest vessels—one carrying fifty guns and the other forty guns—were commanded by Captains Landresson and de Graff.

In the latter part of February the vessel in which Lussan sailed came to anchor at Golden

Island, near Caledonia Bay, where, a few years ago, Strain commenced his terrible march across the Isthmus. Here they learned from some Indians that a band of buccaneers had started a short time before to seek their fortunes in the South Seas, and that two captains, Grognier and Lesenier, dissatisfied with the leaders, had remained behind as guests of the Indians. Letters were immediately dispatched to these commanders informing them of their arrival.

The next day two of the four boats with which they had been in company turned into the same port. They immediately sent persons on board of the new-comers, telling them of the advance expedition of the buccaneers of which the Indians had informed them, and of their own determination to follow after. Captain Rose, who commanded one of the boats, having had a fruitless cruise, resolved at once to try his fortunes with them; and his whole crew, excited by the dazzling accounts given of the pearls and jewels and gold found on the Pacific shore, gladly consented to accompany him. Setting fire to their vessel, they, to the number of sixty-four, joined the new expedition. A hundred and eighteen out of the other vessel followed their example; and when they assembled on the main land the whole band numbered two hundred and sixty-four men. Captains Rose, Picard, and Desmeraise were chosen leaders, and on the 1st of March drew up their respective forces and harangued them on the danger and uncertainty of the expedition before them—of the necessity of maintaining thorough discipline; while, at the same time, they painted in glowing colors the rich booty that lay beyond the mountains which they were now about to cross. Then, as it was their invariable custom, a priest (for one always accompanied them) offered up solemn prayers to Almighty God that he would watch over and guard them, and give them safe deliverance from all their enemies.

With some forty Indians, to act as guides and assist in carrying the baggage, they turned their faces toward the mountain and boldly entered the almost impenetrable forest. The notes of the bugle that at first cheered their march soon grew silent, and the straggling column panted silently up the steep acclivities or struggled through the deep ravines and tangled undergrowth. Marching order was wholly lost, for each one had as much as he could do to pull himself up the rocks and force his way through the vines and thick bushes. This first day's march confounded the men, most of whom had passed their lives on the sea. Unaccustomed to the woods and mountains they could make but little progress, and here, at the outset, murmurings and curses were heard on every side. Hanging along the cliffs, tumbling down the torrents, and falling amidst the tangled meshes of the forest, they soon gave out, and after making in all but nine miles, halted on the bank of a stream for the night. The sentinels being posted and the camp fires lighted, the weary adventurers threw themselves on the ground and were soon wrapped in deep slumber.

The next morning, while dispatching their scanty breakfast, the heavens suddenly became overcast, and they had scarcely commenced their march when the rain began to fall in torrents. All day long the tropical flood poured down

THE PRIEST'S BLESSING.

upon the straggling line, swelling the streams and rendering still more slippery the steep acclivities. Burdened with their ammunition and arms they staggered and fell against each other, and long before evening were so completely worn-out that they threw themselves on a hill-side, and, soaked to the skin, lay all night under the dripping trees. The third day they reached a plain and the head-waters of that most tortuous of rivers the Chucunaque, along the banks of which toiled so long and wearily Strain's gallant little band. The stream turned back on itself so constantly that the buccaneers were compelled to wade it forty-two times in six miles. The bed of the torrent was filled with slippery rocks, over which some of the more clumsy tumbled into the stream, to the no small merriment of their companions. At night they encamped on its banks. The next day they reached a large barn-like building, used by the Indians when they assembled in council. Into this comfortable shelter the whole two hundred and sixty-four stowed themselves and rested after their severe labors.

On the following morning the commanders informed their half-starved followers they were to remain there over night, and that those who chose might go hunting. The woods were full of game, deer, birds, monkeys, wild hogs, etc. The monkeys they found very large and difficult to kill, and if one did receive a mortal wound he would twist his tail so dexterously around a limb, that, when he could hold on no longer with his claws, he still hung suspended in the air and out of the reach of the hunter. Lussan shot one in the belly, the ball letting out a part of his entrails. The animal immediately put them back again with one paw while with the other he held to a limb. He hit another on the nose, and the blood flying in the creature's eyes and dimming his vision, he snatched off a handful of leaves and deliberately wiped his face. All day long the woods rang with the report of fire-arms, and when at evening all were assembled the amount of game secured astonished every one. The carcasses made a huge pile, and amidst great mirth and noise fires were kindled, and soon fowls and deer and animals of all kinds were roasting under the trees. The hungry adventurers snuffed the savory smell that went steaming up through the forest with delight. It was the first meal they had enjoyed in four days, and they gorged themselves with the abundant supply.

The Indian guides, aware of the tortuous course of the Chucunaque River, did not attempt to follow it, but struck across the country to another stream, called Bocca del Chica, which ran in a more direct line to the Pacific. Refreshed and elated, the column struck cheerfully into the forest, but had not proceeded far before the undergrowth became so matted, and the swamps so thick, that it was almost impossible to make any progress. The trees shaded them from the burning rays of the tropical sun, but not a breath of air could reach them, and the stifling heat of the woods became almost insupportable to them, accustomed as they were to the free air of the ocean. Thus, for six weary days, they toiled on their monotonous way, until at length they reached the long-sought river. At the sight of it they gave a shout, for the Indian guides had promised that on its banks they could construct canoes to carry them to the ocean. The prospect of exchanging the forest and the mountain for water, and the toilsome tramp for sailing, quelled at once the murmurings and complaints that had well-nigh reached the point of mutiny. Resting here the remainder of the day, they early next morning went out to see the trees designated by the Indians as proper for canoes. Before commencing operations they entered into a formal contract with their swarthy companions, by which the latter were to furnish them, while building boats, corn, potatoes, and bananas, and receive in payment knives, hatchets, needles, pins, combs, etc. Having thus secured the commissary department, they set to work on the boats.

They were now in the heart of a well-populated Indian country, and would have found it impossible to proceed quietly with their work had not the savages understood that they were enemies of the Spaniards, who were also their deadly foes. Their gold had been seized, their wives and daughters violated, and their homes laid waste by Spaniards; and though jealous of showing any stranger across the country, their desire for revenge overcame all other considerations, and they were ready to aid, in any way in their power, those who were at war with their persecutors and oppressors. Still the buccaneers, knowing their inherent treachery, always kept a portion of the band well armed and on guard while the rest worked. The camp was constantly thronged by visitors of both sexes—the men entirely naked, the women clothed with a native cloth from the waist downward.

For several days the woods resounded with the stroke of the axe and crash of falling trees. The bustle and noise of the numerous workmen made the bank of that lonely river in those deep solitudes seem, for a fortnight, like a modern ship-yard. Boat after boat was completed, launched, and moored to the shore, until fourteen, capable of carrying over twenty men apiece, together with all their provisions, arms, ammunition, etc., were afloat. On the day they were finished (the 23d of March) the camp was thrown into a state of excitement by the arrival of an Indian, who had just returned from conducting the party of the hundred and fifteen English freebooters across the Isthmus, and who brought the joyful news that they had captured two vessels from Lima laden with provisions.

The work of breaking up camp, making the oars, and collecting provisions, etc., now went merrily on; for the prospect of standing once more on the deck of a vessel—and that, too, in a sea which, in their imaginations, seemed to have golden shores—elated every one. Five days after, as they were almost ready to start,

BUILDING CANOES.

another Indian came in, bringing with him one of Captain Grognier's men, who got lost in hunting while his party were building canoes on this same river. He also brought a letter from the buccaneers who were afloat in the Pacific, saying they would wait at King's Island, and urging them to hurry on and share with them in the spoils of the rich fleet which was on its way from Peru to Panama. Joy and animation now reigned throughout the camp; every man worked with a will, and the wild songs of the rover made the forests of Darien ring. Past toils and hardships were all forgotten. Those who had murmured most now sang loudest; and in three days every thing was ready, and, with a loud cheer, they loosened their little fleet and floated down the stream. With a parting salute to their deserted encampment they bent to their oars, and soon the forest shut them in.

But their troubles were not ended. The river was so shallow in some places that the heavy boats had to be lifted over; in others, so rapid and filled with rocks, that many suffered shipwreck. The hot climate acting on the men, who were half of the time knee-deep in water, brought on dysentery, and every day some one or more of the company was carried on shore, and, with rude ceremony, buried on the lonely banks. After four days of hard toil and constant exposure the advance-boats halted for the others, which were damaged and hence far behind, to arrive. During the day they all came up, and the half-starved, fatigued band rested till morning, when they again set sail. They had now reached deeper water; but the stream was so choked with huge trees which the floods had brought down that it required the utmost care and exertion to escape shipwreck. While floating along, the news passed through the little fleet that two soldiers had just died, accompanied with the order to pull up to the shore and bury them. It was raining heavily; and the gloomy day and pelting rain made still more dismal that wild burial of their companions in those far-off solitudes. In their piratical uniform, with the storm beating on their upturned faces, the two rovers were laid side by side and a volley fired over their solitary graves. The next day they got clear of the flood-wood into deep water, and, the sun having come out, they hauled up to the banks to rest and dry their clothes, which had been soaked by the rain of the night and day previous. Another sick man, who for a day and a night had lain drenched to the skin, was borne ashore only to die and be buried like his comrades—never to be heard from by his friends and relatives more.

The following morning they pushed off, and by constant rowing (there being twenty oars to each boat), in five days reached the mouth of the river.

While moving along over this broad sheet of water they saw a small vessel approaching, and on hailing her, found an Indian aboard, who had been sent by the buccaneers below to inform them that they had concealed some provisions for them in a certain designated place. This was acceptable news; for during the last

week the rations of each man of the party had consisted of a single handful of corn per day. Their sufferings, of course, had been great; and the near prospect of something to eat was, for the time, more exhilarating than booty.

A little later in the day, however, came equally exciting news that the Spaniards, informed of their arrival, had mustered a thousand men, who lay in ambush along the river bank awaiting their approach. A consultation was immediately called, and it was resolved not to advance till night should cover their movements. So the moment the short tropical twilight was ended they shoved off, but had not proceeded far before they met the incoming tide, and, ignorant of the fact that the Pacific tides rolled in with a strength and to a height unknown on the Atlantic coast, were astonished to find their boats swept far up the river, and one totally wrecked in the struggle to stem the current. Though no one was drowned, all those on board lost their muskets and ammunition, which was equivalent, practically, to the loss of the same number of men, or rather would have been but for the deaths that occurred in their tedious passage down the river.

With the turn of the tide the fleet of boats again drifted seaward. When they came abreast of the Spaniards on shore awaiting them, the Indians (the river being broad there) made a long, straggling line of the boats, keeping them close in under the farther bank. Some few were challenged, but the Indians replying that it was only a few of their own boats on their way to the ocean after salt for their tribe, they were allowed to pass. Having experienced the tremendous force of the tide, they next morning, the moment they felt the strength of the flood, cast anchor. About ten o'clock the tide began to turn, and every anchor was raised, but the little fleet had scarcely got under way when the mid-day became midnight. A sudden darkness settled on forest and river, so dense and impenetrable that men sitting at the bow could not distinguish those in the stern. To make this unlooked-for change still more appalling, no sound had heralded its approach or accompanied its advent. A strange, mysterious hush was on every thing. The bold rovers became subdued under this unnatural aspect of nature, and spoke only in half whispers, not knowing of what terrific outbreak this was a precursor. Suddenly there came a roar like the sound of a distant cataract. Nearer and nearer it swelled on their astonished ears, until at last the heavens opened and there descended a real cataract on the quivering earth. The boats were half full in a few moments, and although two men in each one were kept bailing vigorously, they all expected to go to the bottom under the descending weight of water. One sick pirate, who had borne up bravely till now, succumbed under this new trial, and in the midst of the overwhelming deluge breathed out his spirit; his dreams of gold and pleasure all vanished, and he was left to swell the number of those who slept their last sleep in the wilds of Darien.

The storm subsiding with the day, the free-

WRECK OF THE BOAT

booters took the ebb-tide and swept rapidly toward the sea. Arriving at midnight, they descried two barks at anchor waiting for them. Setting sail in these, they steered for an island four miles distant, where provisions had been left for them. Feasting on these for two days, they departed toward Panama in search of the fleet of their companions. The whole having finally rendezvoused at King's Island, they found that altogether they had a fleet of ten vessels.

Making a successful expedition in canoes against a small place called La Leppa, the entire fleet proceeded to a beautiful island lying at the mouth of Panama harbor. The pirates were enraptured with the loveliness of this and the adjacent islands. They were in a state of high cultivation, covered with the country seats of the wealthy residents of Panama. Orchards, interlaced with running streams, bloomed beside the almost endless variety of flowers that in gay parterres surrounded the picturesque dwellings, while arbors of jessamine stretched up and down on every side, within which hung in tempting clusters the finest fruit of the tropics. The people of the city had christened them the "Gardens of Panama." The delighted buccaneers remained here three days, enjoying with keener relish this profusion and repose from the recent toils and privations they had encountered in crossing the Isthmus. Sailing from thence past the city of Panama, they proceeded to the Isle of Taboga to caulk their ships. This island had been converted into a landscape garden by the wealthy Spaniards, who had lavished every thing that taste could suggest or money purchase on their beautiful retreat. Even to these bold, reckless buccaneers it appeared an enchanted island.

Having finished calking they set sail to waylay the Spanish fleet from Peru. They cruised around or lay at anchor at King's Island nearly a month, when at last, from Captain Grognier's vessel, was descried the signal announcing that the long-expected fleet was in sight. In an instant all was in commotion. The anchors were swung to the cat-heads, the sails unfurled, and the whole fleet moved away, amidst the deafening hurrahs of the crews, who had begun to fear that the rich prize had slipped by them into Panama.

The Spanish vessels moved steadily forward; but before the buccaneers, who manœuvred to get the weather-gage, could succeed in their attempt, night came on and parted the combatants. The former came to anchor, and putting out all their lights, sent a small vessel with a bright lantern in her rigging to anchor far to leeward. The buccaneers, supposing this to be the fleet, managed to get to the windward of it, when they also came to anchor. To their utter amazement, when morning broke, they found that their whole fleet, with the exception of Captain Grognier's ships and Townsley's, although to windward of the light, was to leeward of the Spaniards. The latter having the weather-gage, used their guns, which were of larger calibre, with scourging effect. A tremendous cannonading was kept up all day, and the guns were so well served that Lussan's ship alone received a hundred and twenty-three shots. Night again separated the vessels, and in the darkness the Spanish weighed anchor and steered for Panama. Instead of securing the rich prize they had watched for so long the buccaneers had received a terrible pelting, and lost several of their men.

From this time on, for three years, these bold marauders continued to infest the surrounding seas, capturing small vessels, surprising towns along the coast, and seizing the inhabitants, for whom a heavy ransom was always demanded. The English and French, however, soon quarreled, and, separating, each cruised on their own responsibility. Small parties would sometimes be sent miles inland to attack a flourishing village. There were many desperate encounters and hand-to-hand fights, but the courage and resolution of the buccaneers were always an overmatch for the Spaniards, and the whole coast was kept in a state of constant alarm. At the first appearance of the fleet the inhabitants would secrete their treasures, so that the assailants got more hard knocks than gold, and often suffered for want of provisions; indeed, they were sometimes on the verge of famine.

The richest harbor they entered was Panama, where, with their guns bearing upon the city, they demanded and obtained a heavy ransom. The town of Queaquilla was a maritime port, and next to Panama, on that coast, in importance. It was well fortified, and the garrison felt themselves strong enough to defend it against any force the buccaneers had in those seas. The latter, however, landing, stormed it sword in hand, and, after a short but desperate conflict, took it. This place proved to be a rich prize both in treasures and prisoners. Being perfectly confident that the pirates would be repulsed, they had not provided for their own defeat. Still, in the retreat, they contrived to carry off the largest portion of their property.

This town was a very pretty one, and distinguished for its beautiful women and loose morals—the monks and priests taking the lead in open and unblushing illicit intercourse with the other sex. Five hundred prisoners, $70,000, and a large quantity of silver-plate, jewels, etc., were the fruits of this successful foray.

The people had been told frightful stories about the pirates—that they were monsters in form, and ate their prisoners. Lussan captured a handsome young woman—a maid of the Governor's wife—and, to prevent her escape, made her walk before him to the place where the other prisoners were assembled. As she moved on in obedience to his commands, she turned her head toward him, and, with her dark eyes swimming in tears, exclaimed, "*Señor, por l'amor de Dios no mi como!*"—"For the love of God, Sir, pray do not eat me!"

With their spoils and their captives, the freebooters repaired to the Isle of Puna, to wait

LUSSAN'S PRISONER.

there the ransom that had been promised for the latter. Here, under the green trees on the greener sward, with the ocean all around them, they enjoyed for a whole month the freebooter's paradise. Laden with spoils, with abundance to eat and drink, nothing to do, and crowds of beautiful women to minister to their pleasures, they passed the time in a round of gayety and dissipation. The women soon found many of the handsome, well-formed pirates far preferable to the fat monks of Queaquilla, and, passionate and romantic like their race, became enamored of their captors and the wild life they led. With the women, the buccaneers had brought also the lutes, harps, guitars, and other instruments of music that they found in the luxurious apartments of the place. On these the prisoners of both sexes played in concert, to pass away the time, while others danced upon the green sward. It was a strange, wild scene they formed there on that lonely island in the Pacific—one that the imagination could hardly conceive. Hundreds would sit, of an evening, scattered in groups among the trees, the dark-eyed Spanish beauty reclining fondly in the arms of her new-found lover; a hundred more would be whirling round in the open space in the exciting, voluptuous Spanish dances; while over all arose the sound of lute, harp, and guitar, till the air itself seemed an instrument of music pouring forth sweet sounds. And on these strangely-picturesque groups the soft sunset would fall, mantling green sward and dancers in the mellow beams. And there, too, later still, they would sit until the broad round moon rose slowly over the main land and flooded the gentle sea with golden light; while, to impart still greater romance to the scene, the rich voices of a score of singers would pour forth some romantic Spanish ballad. A stranger suddenly dropped on that green island, in that far-off lonely sea, would have been bewildered at the spectacle presented to him, and fancied he had fallen on one of those fairy isles inhabited by beings of another sphere, as described by Greek and Latin bards. These bold rovers abandoned themselves wholly to the pleasures and excitement of this new life, and, forgetting all their past miseries, "thought no more of danger from the Spaniards than if they had been in the middle of Paris."

The treasurer of the town was killed while fighting gallantly in its defense, and his young widow, a beautiful Spanish lady, was taken prisoner. In a few days she forgot her slain husband and became desperately enamored of Lussan. So strong was her passion that she at last proposed that they should hide together in some corner of the island till the freebooters were gone, and then return to Queaquilla and be married. She promised to get for him the office of her deceased husband, and make over to him her whole estate, which was very large. Lussan thanked her for her kind offer; but said he was afraid that her interest was not powerful enough to overcome the hatred of the inhabitants, who could not easily forget nor readily forgive the injuries he and his friends had inflicted on them. Determined to retain her lover, she, with the ingenuity and perseverance of woman, went secretly to

work, and finally got papers signed by the Governor and chief officers of the place, promising Lussan all forgetfulness of the past and the kindest usage in the future. This rather staggered our hero, and in his own quaint language he says:

"I confess that I was not a little perplexed herewith; and such pressing testimonies of good-will and friendship toward me brought me, after a little consultation with myself, into such a quandary, that I did not know which side to close with, nay, I found myself much inclined to close with the offers made me; and I had two powerful reasons to induce me thereunto, one of which was the miserable and languishing life we led in those places where we were in perpetual hazard to lose it, which I should be freed from by an advantageous offer of a pretty woman and a considerable settlement; the other proceeded from the despair I was in of ever being able to return into my own country for want of ships fit for that purpose. But when I began to reflect upon these things with a little more leisure and consideration, and that I revolved with myself how little trust was to be given to the promises and faith of so perfidious as well as vindictive a nation as the Spaniards, and more especially toward men in our circumstances, by whom they had been so ill-used—this second reflection carried it against the first, and even all the advantages offered me by this lady. But however the matter was, I was resolved, in spite of the grief and tears of this pretty woman, to prefer the continuance of my troubles (with a ray of hope I had of seeing France again) before the perpetual suspicion I should have had of some treachery designed against me. Thus I rejected her proposals, but so as to assure her I should retain even long as I lived a lively resentment of her affections and good inclinations toward me."

The freebooter was still a Frenchman and a French philosopher, and disposed of this love affair in the most approved French style.

At length these bold, adventurous men became tired of this inactive life and longed for the freedom of the open sea. They ascertained also, that, instead of sending the promised ransom, the Spaniards were making preparations to attack them. They resolved, therefore, to move to a point of the island not so retired and snug as their present quarters, but which commanded the sea to a great distance. The Spaniards, however, were before them, and as they moved out of the deep bay they saw two Spanish war-vessels awaiting their approach. At noon they came within long cannon-shot, and the Spanish vessels having the weather-gage kept at that safe distance, and fired away till dark, pommeling the ships of the buccaneers badly, but killing only one man. At dark both cast anchor, but soon as daylight broke over the ocean they were at it again. The little land breeze, that for a while barely filled the sails, soon died entirely away, and the sea lay unruffled as glass. The buccaneers then got out their canoes and began to tow to windward, and when the breeze again freshened found they had the weather-gage. But the superiority of the enemy's vessels enabled them in half an hour to regain this advantage. Toward evening the cannonading became very heavy, and the vessels of the buccaneers suffered severely; but at dark it ceased as before, and both came to anchor. The next day both remained stationary till three o'clock in the afternoon, when they came to close quarters, fighting within musket-shot. The buccaneers then showed their superior markmanship; for, while they had but one man wounded, they made such havoc on board the Spanish vessels that they could see the blood run out of the scuppers. At dark the Spaniards bore away, shouting as they went, "*To-morrow at it again!*"

The next day they still held the weather-gage, and remembering the deadly work made by the small-arms of the buccaneers the afternoon previous, kept within half cannon-shot, and bent all their efforts to dismast their enemies, so they might finish them at their leisure, and finally succeeded in striking the foremast of the largest ship five times with round shot, and the mainmast three, but not deep enough to bring them down. The following morning the Spaniards, for the first time, hung out their Burgundian colors and closed gallantly; but finding, after severe handling, that the pirates were determined to board, bore away to refit. In an hour they returned, but kept at long cannon-shot. The following morning at day dawn, there being a fresh breeze, the Spaniards swept down apparently with the determination to finish the long conflict, for they kept steadily on till within close musket-shot, when both fleets opened with a terrific uproar. For a long time the struggle was fierce, the vessels frequently coming so near that the muzzles of the guns almost touched; but the buccaneers fired with such precision into the port-holes of the Spaniards that they were finally compelled to close them and bear away. The largest of the pirate ships received this day sixty-three cannon-shots between wind and water.

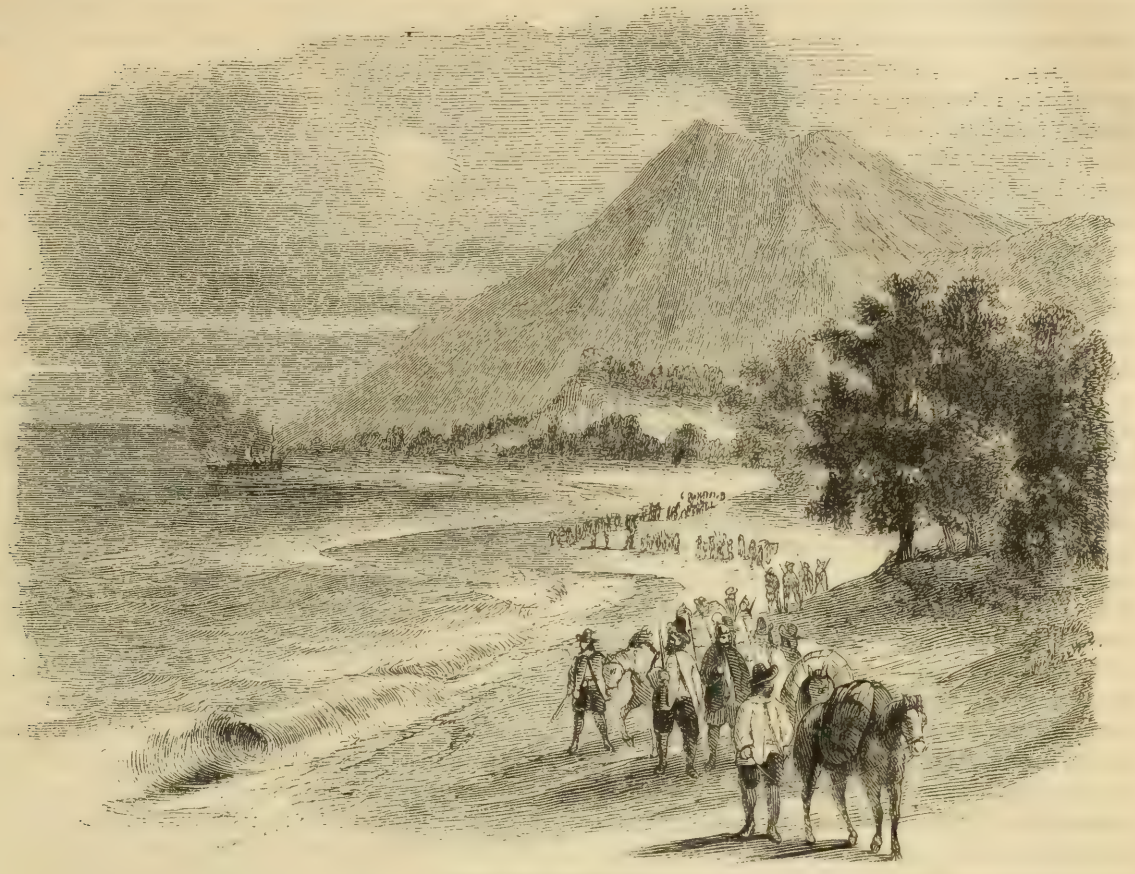
The next morning they again got ready for action, but on looking seaward no trace of their enemies was visible. Satisfied with the sound beating they had received, they took advantage of the darkness and sailed away. During the progress of this strange protracted combat, the buccaneers kept the Governor and chief men of Queaquilla on deck, to witness the cowardice of their countrymen, who again and again refused to board; while the remaining five hundred men and women—in canoes moored near the shore, in shoal water, where the Spanish vessels could not come—sat astonished and trembling spectators of the scene. There being now no motive to go to Point Helena, the buccaneers, after lying at anchor two days to refit, steered for the main land, followed by their crowd of prisoners in canoes.

The listless and dissipated life of the past month had exerted an enervating influence on

many of the freebooters, while their intercourse with the women had weakened their ferocity of disposition, and made them pine for their companions and friends on the other side of the Isthmus. As soon as they reached the main land, therefore, they began to make preparations to retrace their steps. They did not even wait for the promised ransom, but set all their prisoners at liberty. Some of these beautiful women had become so attached to their captors that they wept bitterly at parting. As the canoes returned from landing them on the deserted shore, the buccaneers gave them a parting salutation and bore away.

The next day they divided their booty, and as the pearls and uncoined gold could not be equitably distributed, they were put up at auction and sold to the highest bidder, and the proceeds apportioned. After all their toil and danger for three years, the sum total to each man, in money, was but three hundred dollars.

The next day, the 12th of June, Captain David, in command of the large vessel, sailed away to refit, and then return home by way of the Straits of Magellan. The other vessels were too small to attempt this long and hazardous voyage. They therefore cruised about, hoping to take a ship of sufficient size, occasionally making a descent on a place, until January, when they resolved to abandon their vessels and cross on foot to the North Sea. After much consultation they concluded to go by way of Segovia, which, as near as I can make out, took them across the widest part of Honduras, the passage occupying more than two months.



Many of the men had lost their share of the booty in play on board the ships, and as Lussan had been a great winner, he was afraid some of the desperadoes might make way with him in order to recover their money; and so he took the precaution, in presence of all, to divide his wealth among several of his friends to carry for him, they to have a certain portion at the end of the journey. This foresight saved his life.

On the 2d day of January, having burned their ships and said their prayers, this band of buccaneers, to the number of two hundred and eighty, set out on their perilous journey, taking with them sixty-eight horses, which they had captured, to carry their plunder. The first day they loitered along the sea-shore, reluctant to turn their faces inland, where so many perils and sufferings awaited them. The next day, however, they struck boldly into the interior, and although the hostile Spaniards constantly hovered on their flanks and rear, no serious demonstration was made. They contented themselves with destroying the provisions on the way, and setting fire to the dry grass in the savannas they crossed, which caused the smoke to blow in their faces, which annoyed them so much that they were often compelled to stop in the deserted houses till the fire burned itself out.

Thus, day after day, they kept on, marching in close order, until the eighth, when they took a prisoner, who informed them that in a large village a little distance ahead, three hundred mounted soldiers awaited their arrival. This body of troops, however, filed away as

PARTING WITH THE PRISONERS.

THE JOURNEY BACK.

soon as the head of the little column of buccaneers appeared in view. After leaving the village they entered an extensive tract of country covered with a dense pine-forest. As they slowly passed through this, they heard martial strains on either side of them, and afterward, all day long, keeping pace with their march, arose the stirring notes of the bugle. These three hundred horsemen had divided into two bodies, and, concealed by the thick pines, moved in parallel lines with the advancing column. This invisible music keeping pace with their march, echoing away among the thick evergreens, and rising and falling with the wave-like gusts of wind that swept through their tops, produced a strange sensation. It was like walking through an enchanted palace, with music all around and the performers nowhere to be seen. At night they encamped opposite the encampment of the buccaneers, and at morning roused them with their bugles sounding the reveille. For five days this invisible serenade was kept up.

As they approached the town of Segovia they came upon an ambuscade, and at the first discharge of the enemy two of the buccaneers were killed. The Spaniards, not waiting to reload, fled precipitately. This place lay in a deep valley, surrounded on every side by mountains that completely overlooked the place and walled it in like a prison. As the buccaneers descended into it they found it wholly deserted, and the provisions it contained consumed. They rested here until the next day, seeing no enemy, although they were occasionally saluted by a musket-shot sent from the thick pines that grew along the slopes which hemmed in the place. Here they were so fortunate as to secure a prisoner who knew the way to the river beyond the mountains, whose course they were to follow to the sea.

Twenty leagues of the worst mountain-travel lay before them. As they ascended the heights the cold became intense, while impenetrable fogs would wrap them for hours, drenching them to the skin and chilling their frames, which were exhausted with toil, weakened by hunger, and rendered sensitive by their long stay in a tropical climate.

On the thirteenth, as they were picking their way by early daylight along the crest of a high mountain, they espied on the opposite height, from which they were separated only by a deep, narrow valley, what they took to be some twelve or fifteen beeves, which filled the starving adventurers with extravagant joy. A halt was immediately called, and twenty men sent forward to reconnoitre and bring away the cattle. On their return they reported that what they took for beeves were horses saddled and bridled, and, moreover, that on the crest of the mountain was an intrenchment, and still farther down another, and lower yet a third, completely commanding the narrow path that skirted the little stream below, and which at that point was so contracted that two horsemen could not ride abreast. More than a thousand muskets covered this exposed spot, over which the buccaneers, less than

three hundred strong, would be compelled, one by one, slowly to defile. A thousand men could not have forced it, and yet there was no other way to go. All around was a matted forest, windfalls, morasses, and precipices, over and through which, even if they had been able to pass themselves, they could not have carried their baggage. The enemy had evidently selected this spot, from its great natural advantages, on which to make their final stand. The mystery of the long attendance of those invisible horsemen was now solved. They were to fall on the rear when the attack was made in front.

The prospect looked gloomy enough. They must fight—that was clear—but without any possibility of success. In the council of war that was called, Lussan said that the attempt to force those intrenchments was downright madness—they must be turned, and no matter what obstacles intervened, a flanking party *must* get to the rear, and all their efforts should be directed to that object. To effect this he said the baggage should be left behind under a guard of eighty men to protect it from those three hundred invisible troopers, while the remaining two hundred, encumbered only with their muskets and cutlasses, must make the forlorn attempt. A careful reconnoissance was made, and from a more elevated mountain than the one on which they were encamped a road, beyond the highest intrenchment, was discovered, through some breaks in the forest, turning short to the right around it, and winding along the steep ascent. Convinced that this was a continuation of the same road that crept along by the stream under the enemy's guns, they determined to approach by that side, knowing that if it was so they could easily, when once in it, find the rear of the highest intrenchment.

Every thing being arranged, the commander of the eighty, who were to be left to guard the baggage and prisoners, was ordered to set the sentinels, and have them relieved as usual by the firing of a musket, and the drum to be beat at the regular hour, so that the three hundred in rear might suppose that the whole band had encamped for the night. Moreover, if within an hour after he heard the battle cease in the morning he received no tidings from them, he was to know they were defeated, and he and his men must then shift for themselves.

The sun went down, flooding the mountains in light; and as its last rays disappeared from their summits the Spaniards made a simultaneous discharge of six hundred muskets to show the buccaneers their strength. As soon as it was dark those two hundred desperate men solemnly said their prayers, but muttered them in a low tone, so that the Spaniards on the other side might not hear them, and set forth.

An hour after, the tropical moon rose over the heights, casting weird lights and shadows upon summit and abyss. Cautiously and silently that bold band crept forward, and had proceeded about an hour when they heard the Spaniards at their evening prayers. They paused a moment, and listened, and there arose on the night air the Litany of the Saints, and as the responses were sung in the clear mountain air by those strong men's voices, they had a

CLIMBING THE HEIGHTS.

strangely-solemn sound. At every response there was a discharge of musketry, the echoes of which were sent back from every surrounding height. The route taken by the buccaneers would, to ordinary men, have been considered impassable, and was rendered still worse by the dim light of the moon which, though it bathed the mountain tops in splendor, sent only fragmentary beams through the dense foliage of the tropical forest. They had more use for their hands than feet, and now pulling themselves up one precipice only to slide down another, they made such slow progress that, though the whole distance they had to go was less than a quarter of a mile, it took the whole night to accomplish it. Sometimes the entire two hundred had to be pulled up a ledge of rocks, one by one, and let down in the same way.

At daylight next morning, as they were stretching along the mountain, they came upon the Spanish patrol making its morning rounds. Dreaming, however, of no danger in that quarter, the latter were not on the look-out, and passed carelessly on. A thick fog, too, lay on the mountain, which rendered objects very indistinct a few paces off. The buccaneers, advised of their proximity by the sound of the horses' feet, were enabled to make them out while they themselves remained unseen. They knew at once that this patrol was in the road they were seeking, and immediately pushed forward, and, to their great relief, found they were not mistaken. Here they halted for half an hour to take breath and examine their muskets. While standing silently in the road they heard the voices of the Spaniards at their morning prayers. Directed by the sound which way to go, they immediately started forward; but had marched but a short distance when they, unexpectedly, came upon two sentinels, whom they were compelled to shoot, to prevent them from giving information of the point of attack. Roused by the sudden firing, they shouted, "To arms!" Bugles, sounding the rally, rang through the intrenchments, and the soldiers, seizing their muskets, rushed in front, supposing, of course, the single volley was to apprise them of the advance of the buccaneers. Five hundred men defended this first intrenchment; but, standing behind their breast-works, they were entirely uncovered in rear. On these the buccaneers rushed, with a shout and a volley. The Spaniards, terrified at the sudden apparition, fled over their works on every side, into the surrounding forest. The victors drew up behind the deserted defenses, and began to pour their volleys into the exposed intrenchment below them. Those within immediately retired to the lowest of all, where a steady fire was kept up. The fog, however, was so thick the buccaneers were unable to see it, and could fire only at the spot from whence the volleys of the enemy proceeded. Finding this produced no effect, they left the barricade, and, with a loud shout, dashed down the mountain, into and over the next intrenchment, upon the third and last. The Spaniards bravely held their ground until they saw the gleam of the advancing bayonets through the fog, when they broke and fled. The fallen trees, and various obstructions which they had placed to impede the buccaneers in the assault, as well as the open spaces in the trees they had made to uncover every approach, now turned to their disadvantage, and the volleys of the victors mowed them down at every step. None asked for quarter; nor, for some time, was any offered. At length, weary with the slaughter, and moved by the rivulets of blood that flowed down the mountain, the pirates refused to slay any more, and made them prisoners in spite of their obstinacy.

Returning to the first intrenchment, they found the five hundred they had driven out fighting the guard they had left behind. These they quickly dispersed; and then, gathering together, chanted "*Te Deum*," in honor of their great victory. "*Te Deum Laudamus*" swelled up there in the mountain solitudes, and over the mangled corpses of the slain that lay in heaps along the crimson slopes.

Sixty men were then mounted on horses and sent back to those in charge of the baggage to announce the victory. They found there an officer, sent from the three hundred Spaniards, who had just told the buccaneers that the battle had gone against them—that their friends had been cut off—and, if they would surrender themselves prisoners of war, their lives should be spared, and they have a free passage to their own country. The sudden arrival of the sixty buccaneers, on Spanish horses, and shouting as they came, changed his tone, and he hastily took his departure. The buccaneers, however, followed so close upon his heels that the troopers had no time to form before they were upon them with their cutlasses and pistols, knocking them over right and left. They also took a great many prisoners. Most of these, however, after being relieved of their baggage and horses, were suffered to go free. This leniency they soon regretted; for, on questioning those whom they kept, they ascertained that a few leagues ahead was another intrenchment, and they were afraid the fugitives would rally there: and this apprehension was increased when, soon after, they saw a huge beacon-fire blaze up from one of the highest mountain-tops. They immediately set a strong guard in the road to stop any passing that way; and, as they could take but nine hundred horses with them, they hamstrung the remaining nine hundred, to prevent their being used by the Spaniards. Hastily burying the only two of their men who were killed, and dressing the four wounded, they pushed rapidly on. Before night they came up with the intrenchment of which they had been forewarned, but found it deserted. The next day they passed another; and, on the third day after the battle, reached the long-sought-for river.

They set their camp, and commenced building rafts on which to float down the stream. Four or five trees, after being cut down, were peeled,

SHOOTING THE FALLS.

and then lashed together with vines that grew in abundance there. This constituted a raft; but, in the unseasoned state of the timber, it would hold only two men; with this slight load it sank so deep, even in smooth sailing, that the almost helpless navigators stood up to the knees in water, while in the rapids they went to their waists. The horses were killed and salted, and strapped upon these crazy structures, and the whole ninety rafts pushed off. This river plunges with frightful rapidity down the mountains, sometimes leaping in lofty cataracts. The navigation, therefore, was extremely dangerous, for the rafts were at the mercy of the current, especially in the rapids. Often two or three would strike on a rock, and the rest come tumbling after, making a complete wreck, from which some of the poor wretches would be hurled and carried over the cataracts below to be seen no more. They fortunately found at the top and bottom of all the high falls a still, deep pool, enabling them to steer their rafts ashore. One would then go below, while his companion loosened the raft and sent it over. As it came up from its mad plunge and floated away on the quiet basin, the former would swim in and bring it ashore, when the two would again get aboard and drift downward through the thick forest. If he failed to reach it, it was soon whirled away out of sight, and they were compelled to build another. After three days of this perilous and exhausting navigation, Lussan proposed, as they were out of the reach of the Spaniards, that they should no longer keep together, but move along singly, so that if one was cast away on a rock, those upon it might have time to get off before the others drifted down against them; thus swelling the wreck and increasing the danger. This would also enable those in advance to set up poles or flags to show where the best channel was in the frightful rapids through which they passed. They wanted no beacons to indicate the cataracts, for their heavy monotonous roar could be heard for miles echoing along the gorges.

This arrangement proved to be a wise one, for although they lost some men, they got along much more rapidly and safely.

These nearly three hundred bearded men presented a strange spectacle on their frail rafts drifting down through the mountain gorges and primeval solitudes. Scattered along for more than three miles in length the flotilla of nearly a hundred rude structures was subject to every variety of fortune. Here a raft would be drifting quietly along over a level space; another, all alone, plunging from some high cataract, the strong swimmer below eagerly watching its descent; a third, high and dry on a rock in the middle of the stream; a fourth, utterly without control, whirled, like the bubbles of the distracted waters, past jutting precipices, while another lay broken in pieces, the two occupants of it each astride of a single log shooting downward, anxiously looking for some quiet stretch of water where they could paddle ashore and build another raft. Of course their pro-

visions were all destroyed, and their powder being wet so they could not hunt, they were obliged to subsist on plantain that grew along the banks. At length they came to some Indian huts, and chased the occupants to get their food, but the latter were too nimble for them.

Here Lussan was reminded of the prudent course he took in getting rid of his treasures; for to his horror he came upon the bodies of seven Englishmen who were known to have a good deal of money. The murderers hid themselves, and were not seen again by the party.

It would be impossible to describe a fraction of the perils and difficulties the hardy adventurers encountered, or the fatigues they suffered. At length, a month after they struck this stream, they drifted out of the mountain gorges into a broad river impeded by no falls or rapids. The current, however, was strong, and filled with flood-wood of every description, which the torrents had brought down from the mountains. Against these their crazy rafts would drift, and being sucked under by the current, turn upon their edges, pitching those upon them into the water. Several were drowned in this way. A few leagues farther on the stream became clear and placid, and they concluded to go ashore and build canoes, in which to make the rest of the journey. In nine days they were finished and launched, and in nine days more they reached the mouth of the river which empties into the sea at Cape Gracias a Dios.

Here they heard that an English ship from the West Indies was a few leagues away at the Isle of Pearls, and would soon be there. It was ascertained that she could carry but forty men, and they agreed to cast lots who should go in her; but she had scarcely anchored in port before fifty crowded aboard of her, and among the number Lussan. Unwilling to risk their chances in leaving that inhospitable region by casting lots with those on shore, they compelled the captain to hoist anchor and sail away. They arrived in the West Indies in safety, and Lussan finally reached Paris, to the no small surprise of his friends. Of the companions he left on the Mosquito Coast he gives no account; but probably some passing vessel at length took them off.

Thus, in those early times, was the Isthmus of Darien, in almost every part of the northern section of it, probed by adventurers; and we find none of those facilities for a ship canal which Gibson reported, and which set on foot the various exploring expeditions, among which was the one Strain commanded. The recent reports contradicting his statements will, we venture to say, prove as groundless as those that misled him, and well-nigh caused the destruction of his entire command.

BUCCANEERS EMBARKING.

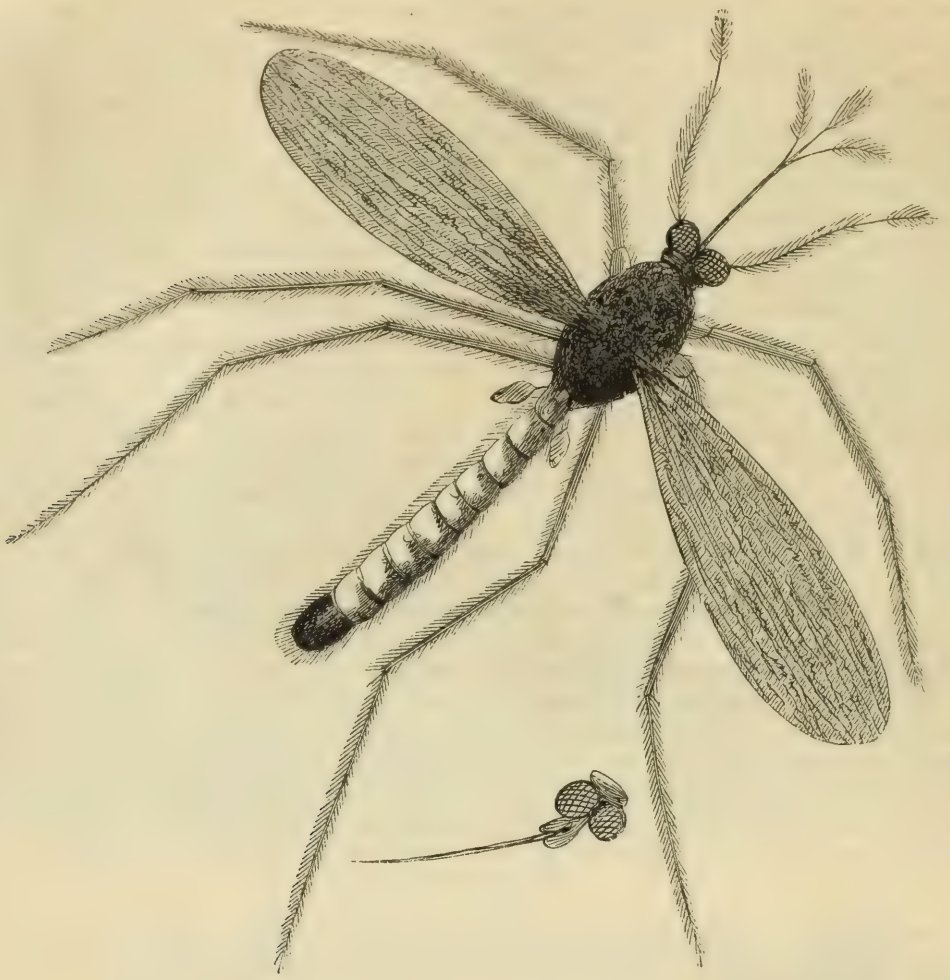


FIGURE 1.—THE MALE MUSQUITO.

THE MUSQUITO FAMILY.

"EN avant, Monseigneur Maringouin!" is a phrase you will frequently hear among the French population of our Southern States. It is generally applied to a persistent, obstinate, peevish, whining person, always returning to the charge in spite of *No!* emphasized as the growling thunder or the coo of the sucking dove. So they say, in a peculiar tone, "*En avant, Monseigneur Maringouin!*"—"Proceed—or never give up—My Lord Musquito!" When does the insect give up? Obstinacy is the stamina of its life. You have said "No! *no!*" but there they are, after every rebuff, buzzing their solicitations, sometimes louder, sometimes more softly, until you at last exclaim—"*En avant, Monseigneur Maringouin!*"

Permit me to introduce to your especial consideration our very interesting and distinguished *Monseigneur* and *Madame, sa femme.* Behold this illustrious couple!

You perceive that Monseigneur is tufted and plumed, while Madame is more simple in her toilet. He plays all his life, while she has work to do; besides, she is a Xantippe, and scolds and stings on every side. He simply salutes us with his plumes as he passes, his mouth organs being too weak and too few in number to give us any annoyance.

They are called in England "Gnats;" on the Continent, "Cousins," "Moucherons," etc. By our foreign population they are styled "Maringouin"—evidently a corruption of the subgenera *Megarrhina.* I once asked a Florida Indian the name of this insect. He replied "De white man call 'em *Must-quit-oh!* He come—he see our fine land—he set him down. Den come de fly—how he bite—Whoop! whoop!" (striking himself). "He say, *must-quit-oh!* He shout gin, whoop! t'oder side—*must-quit-oh!* whoop! —dis side, den behin', den before, all de time, *must-quit-oh!* whoop! whoop! *must-quit-oh!* whoop! But *he* neber quit, neber, neber, for all dat. He hold fast de land. No, de poor Indian, he must go." For the want of a better derivation, this may serve for the present. It certainly suggests an origin for the word Musquito. All these Southern Indians call them "Must-quits," and never pronounce the "*q*" as a "*k*," as we do.

The type of the very large family of Culicides, of which our subject is an eminent member, is the *Culex pipiens* (Humming Gnat).

It is a native of Great Britain, and all the north of Europe and Asia, and must be considered the type of this family here. It is common with us only in the extreme Northeastern States, and in high situations in our Middle and Southern States; while the genus *Megarrhina* of Linnæus, with innumerable subgenera,

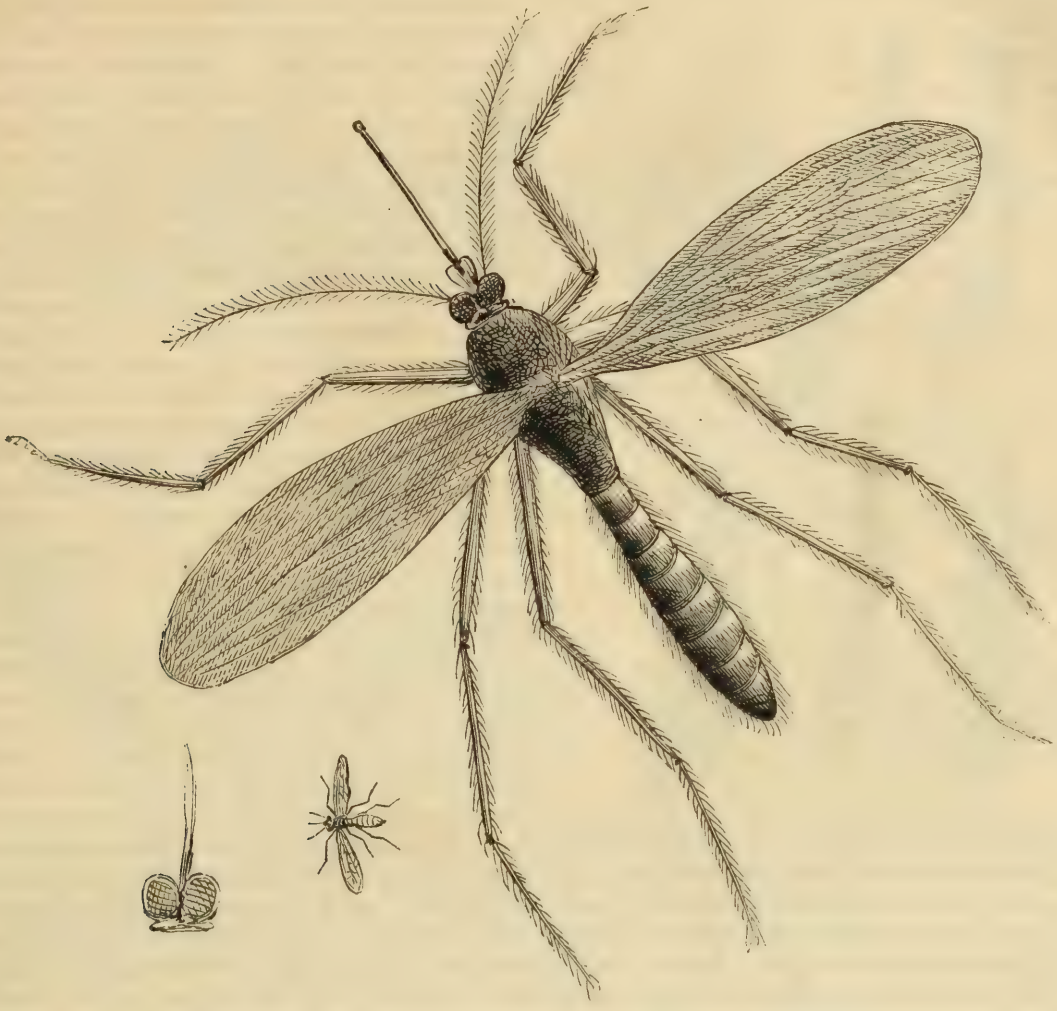

FIGURE 2.—FEMALE MUSQUITO.—NATURAL SIZE AND MAGNIFIED.

again compose our largest portion of the family. By comparing the two you will perceive Monseigneur's body is not so thick, but longer; the proboscis is slightly recurved, that is, thrown back; she carries it straight forward; as shown in the illustrations. The palpæ in both are shorter; the wings distinctly differ in their nervures, the latter resembling gray crinkled silk. The prismatic colors are deepest on the edges, fading softly away the lower they fall. This is the easiest way to class these insects (by the wings); but who is to do this mighty deed? whose eyes or whose life could hold out long enough to count and class this legion? No two years bring back the same subgenera. They are always alike in general appearance; but when the student transfixes the specimen, he rises in despair, exclaiming, "Still they come!" He alone who holds them in the hollow of His hand can do this; therefore let us finite creatures be thankful for the very little we are able to arrange satisfactorily and scientifically. I shall give no catalogue, but individualize a few for your present entertainment.

FIGURE 3.—CULEX PIPIENS.—HEAD OF MALE.

I give the wings of several members of this family who paid me calls on the night of the 1st of August last, from ten o'clock until half past one. I wish I could give them with the prismatic hues of life upon them. They look here dull and dingy, but as I looked down upon them through the glass, no Iris was ever more beautifully shaded than they. To paint an insect dead, and the same creature alive, is about the same as to paint a newly blown or a wilted flower.

Now while I have pen in hand, let me offer

FIGURE 4.—WINGS.—NATURAL SIZE AND MAGNIFIED.

my earnest protest against the cruelty of men to insects. Who dares say they feel no pain? If they have the joy and bliss of life, why should you argue that they are exempt from a counter influence? Gros, the artist, on seeing a favorite pupil enter his study with a beautiful butterfly pinned to his hat, flew into a violent passion, exclaiming, "Wretch, you find a beautiful thing, and you know no better than to crucify it and kill it! Go out, and never come back! Never appear in my presence again!" What would he say to see the rows of pins transfixing these poor sufferers exhibited in various collections? Let me suggest to the amateur entomologist a small vial of chloroform and a hair pencil. If you wish to *kill* the insect, touch it quickly between the eyes on the sucker or mouth, and across the thorax, with the pencil wet with this liquid. A few tremors, and it is stilled forever; bright and brilliant, without a fleck; with no hideous pin disfiguring its body. If you merely want to examine or paint it, touch it slightly on the points of the antennæ. The chloroform will keep it tranquil. It will repose, as they do for me hour after hour, while I transfer their hues to paper with the light of life still within, but dormant for a while. A few drops of cold water on it when you are satisfied, a short rest on a leaf to awake from its dream, and away on its beautiful wings it goes, with only an additional experience of life.

The last wing of the group belongs to a very large *Culex* which I found poised on a bunch of flowers upon the window-seat, just as day was dawning. With a glass I confined her upon my hand; and I assure you she had quite an appetite for an early breakfast.

Entomology is a homogeneous study. The insect answers to the call of Providence and Nature without hesitancy. Where her duties and mission call, you will find her. To say each country has its own independent entomology is preposterous. Every part of the globe has its own types, upon which others must form their genera and subgenera, if we are to have harmony and order in the study. A type is an original insect found, for the first time, in a certain country. For instance, the silk-worm in China; the tsetse in Africa; the bee in Greece; the *Ægeria exitiosa* of Say among the phalœnidæ; the peach-tree destroyer of America (which will, in time, be elevated into a type; I have made it one for some years, and have founded seven subgenera from the plum, apricot, etc.); the *Scarabæus sacer* of the Egyptians; the walking leaf-insect of Java; and the *Vespa Britannica*, the tree-wasp of the northern part of England.

Whenever, by cultivation, the soil of a country is changed, its vegetation, of course, becomes altered; new plants spring up, and somehow—the mystery is yet unsolved—presently appear the insects in all the varieties belonging to each plant. When some of the varieties of firs of the Continent were introduced into Scotland they were soon followed by the sphinx and phalœnidæ belonging to them. Since the planting of these firs has become the fashion in England the *Sphinx pinastre* and *Geometra piniaria* have been found in abundance over England—insects only known before to France and Scotland.* Therefore we perceive the inseparable connection between the plant and the insect; that the law is analogous for every country, and incontrovertible; and though it may be objected to by the readers of catalogues, it is as positive a law of nature as the evolutions of the seasons, the evaporation of the ocean, or the evocation of light by the sun.

But Monseigneur is waiting for us: There is little to be said about him. He takes the world easy. He sups and dines upon the dew and nectar which he finds in the cups of flowers. The tall and beautiful white lily is his favorite resting-place. You may, at early dawn, count dozens of these seigneurs who have passed the night in a revel in this charming bower. Some, again, have a coarser taste, and dip into the flowers of the squash, pumpkin, and more humble plants. The males of all insects require little or no food; the dew of flowers generally sufficing for them. He pays his addresses to the ladies, and after he has flirted and passed away the noontide hours, he grows old rapidly, and soon disappears from the insect world.

With Madame it is otherwise. She has her mark to make upon her age, and proceeds thus: Selecting some quiet, cool eddy in a murmuring brook, she crosses her hind legs and commences building her boat. When finished, it contains three hundred eggs—sometimes more,

* Haworth's *Lepidoptera*.

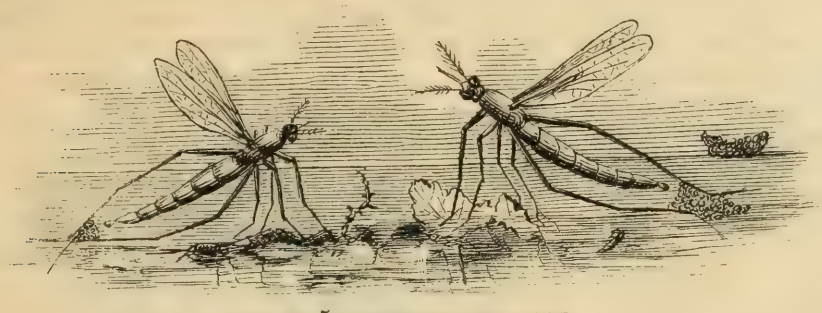

FIGURE 5.—BUILDING THE BOAT.

sometimes less. But it is always of one form. The eggs near the ends contain males; the middle, females. This boat can not be upset or filled with any effort you may make. Pour gallon upon gallon over it, still it will float.

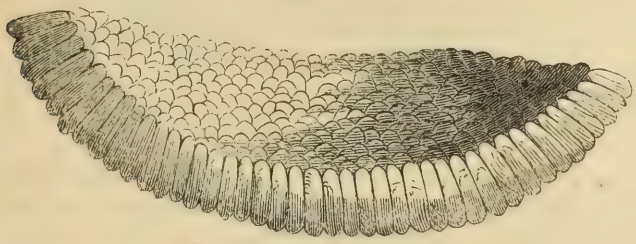

FIGURE 6.—THE BOAT.

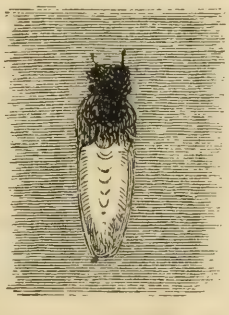
Nor can any weather affect it. Freeze it until you can see it like a speck through the solid ice; thaw it out, and expose it to a June sun, and in time you will find larvæ from these eggs. But they do not all build this boat. The females of several families have their eggs strung.

I can not refrain from mentioning an experiment made last year. Seeing a spot of this indissoluble mucus, full of eggs, floating on a rain-water tank, I dipped it up carefully, transferring it, and some of the water, to my breeding-glass. In five days, exposed to the warmth of the sun, but not to its rays, the larvæ began to come forth, thus:

FIGURE 7.—EGGS.



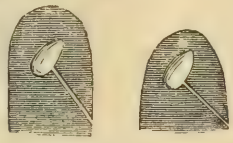


FIGURE 8.—LARVA.

They grow rapidly. When six days old, I saw them floating about — some with two egg-shells, some with three, and one lazy fellow with four attached to the extreme hairs of his body. See him opposite.

Why were they so slow, lazy, and lifeless in their movements? I did not wish to change the water, for the third part of the eggs were not hatched. At last I determined to sacrifice the eggs to the living larvæ. I emptied the whole into a basin; washed and filled the glass with fresh rain-water; and then dipped up these forlorn ones, and placed them in the fresh water. Down to the bottom they went; then all ascended again as quick as light, leaving the egg-shells at the bottom of the glass. No doubt these egg-shells served as life-preservers in the heavy, stagnant water; but in the fresh, buoyant element they were no longer needed. Pray what do you call this? Instinct, forethought, reason? How loudly this little gelatinous particle of matter proclaims, "There is One who careth for the worm!"

The large musquito of the Southern swamps sinks a hole in the soft mud with the end of her body, and hangs the eggs upon a foot-stalk, thus:

You may see this arrangement on the banks of any of the rivers of the South, where the water is untouched by the salt of the ocean. If you do not mind yielding perhaps an ounce of blood in the cause of science, you may watch them, day by day, performing this instinctive manœuvre in these locations. When the larva comes out there is always water at the bottom of the hole, ample for its sustenance until it sinks into the mud to undergo its transformation, when it comes out the perfect insect.

The large musquito of the dry, arid, sandy pine barrens of the Carolinas and Georgia selects a spot exposed to the fury of the sun, and drops her eggs among the grains of sand. The larvæ, when hatched, must penetrate very deep to obtain moisture. Its proceedings and habits are yet to be tested. All you can see is the mother fly dropping her eggs. Twelve or fif-

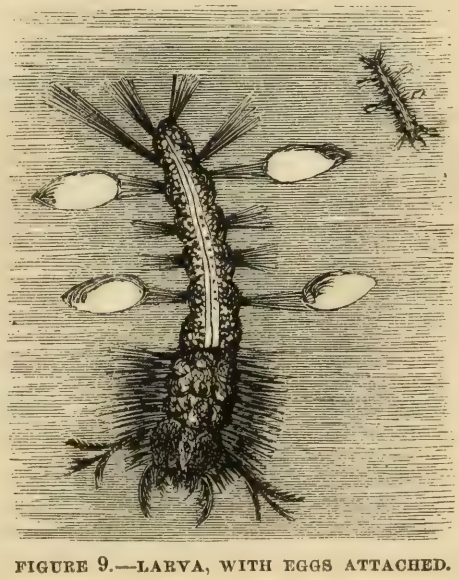

FIGURE 9.—LARVA, WITH EGGS ATTACHED.

teen days from this time the metamorphosis is complete. Place the hillock between you and the sun, as he is setting; they ascend in such numbers that you would think it must be smoke from a boiling spring. These are the genuine "stingers," and contain more venom than ten other tribes amalgamated.

Here is the larva from the egg of the boat:

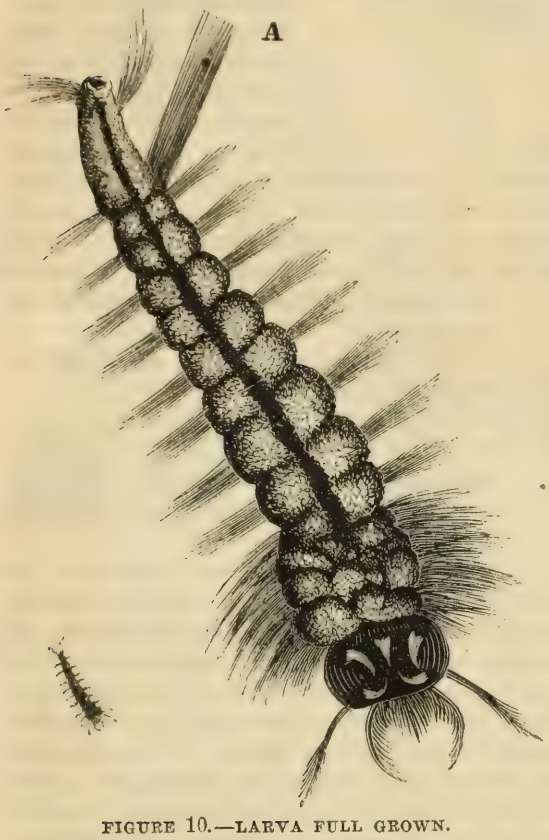

FIGURE 10.—LARVA FULL GROWN.
(A, Respiratory Tube of Hairs.)

There appears to be very little, if any, difference between the larva of the subgenera and that of the *Culex pipiens*. They are thus described by Latrielle: "They have a distinct, rounded head, furnished with a pair of antennæ and of ciliated organs, which serve, by their continual motion, to form a kind of current which brings their food to their mouth; a thorax, with bundles of hairs; an elongated, nearly cylindric, abdomen, much narrower than the anterior part of the body; ten-jointed; the antepenultimate joint being furnished with a respiratory organ; on its back the terminal joint is also terminated by setæ and radiating pieces."

I have some larvæ before me now. They are all arranged, heads downward, in a circle around the mouth of the glass, where the air meets the water. Let the shadow of a feather pass over, and down they go, closing the hairs of this funnel, and carrying air enough down to serve them until they come up again for a fresh supply. Swammerdam says: "The larvæ grease this funnel, to prevent it from being saturated, by passing it through their mouths." Fancy must here, I think, have had some influence. There is an attitude some species of pupa take, doubling the tail up under the thorax, causing them to resemble very minute balls; but this is done in the *pupa state*, and is adopted by them to sustain the weighty head and breathing tubes steady at water and air demarkation.

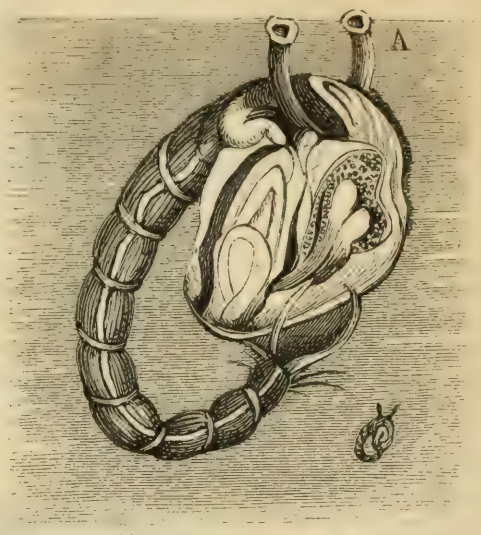

FIGURE 11.—PUPA OF SWAMP MUSQUITO.
(A, Breathing Tubes.)

To doubt is the part of the honest investigator. It gave science Bonnet as a naturalist. When told of the proceedings of the ant-lion, he doubted them, and made merry at the credulity of others. He went to work, at last, to examine for himself; made discovery of new facts; and from that time he became the enthusiastic disciple and friend of Reaumur. What boldness, you will exclaim, to doubt the great Swammerdam! Still, I affirm that I have watched long and patiently, and I have never seen any act approaching this performance. Nay, I have even taken out this larva many times—the last, not ten minutes ago—with an extremely fine camel's-hair pencil; stretched it on a piece of fine letter-paper, and brushed the hairs of this tube with a dry pencil, so that if any substance of any kind was there it must have come off. With scarcely any life in him, I have laid him gently on the water. Presto! he was as nimble and saucy as ever; sinking to the bottom as if he had not just been handled in the roughest manner possible.

The larvæ of some of our species are very naked of hairs, having only a few round their mouths, and the long ones of the respiratory tubes. They remain in the larvæ state from five to fifteen days, according to the weather. They cast their skins thrice—sometimes oftener—and then go into the pupa state. The position is now changed; the head—or, at least, the breathing tubes—is kept up in the water. You can see the change in Figures 11 and 12.

The pupa is not quite so active now, and seems to skull along with the paddles at the end of the tail. Five or ten days, according to the weather, and the pupa bursts on the back; and, like the ghost of Monseigneur, behold him, in Figure 13, rising from his watery couch!

Slowly, but not over-surely, is this feat accomplished. Out of five, at one time before me, making this effort, without a breath of air

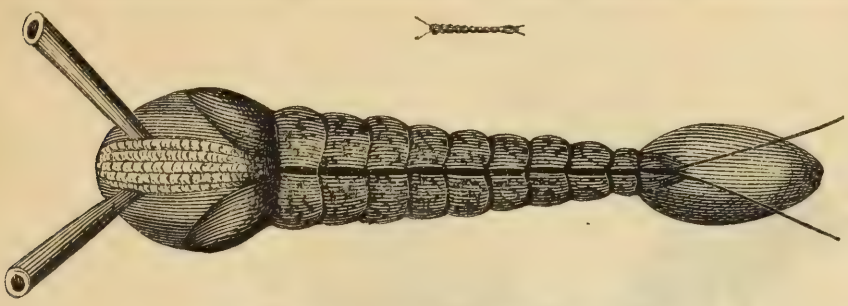

FIGURE 12.—PUPA, SHOWING BREATHING TUBES.

stirring, three keeled over, and no power of mine could right them again. One I held up until he drew himself forcibly out "by the skin of his teeth." Meanwhile the other two expired. Not a thousandth part of all that burst the pupa case escape. And lucky for us it is so. You can see them, any summer day, floating, like half-shrouded ghosts, at the mercy of wind and water; but not long. They are a *bonne bouche* for every species of fish, newts, water-spiders, beetles, and frogs.

The successful couple I confined in the same glass, covering it with a piece of paper; and here they lived forty-five days, without food or air. Whereas if the glass had been thus covered when they were in the larvæ state, they would have all died in less than ten minutes.

The question may be asked, How the insect can possibly raise its shoulders out of the water, and sustain itself there, when it is specifically heavier than the water? Kirby answers thus: "Because the middle of the back of the thorax has the property of repelling water, apparently from being covered with some oily secretion. Hence, as soon as the pupa has once forced this part of its body above the surface the water is seen to retreat from it on all sides, leaving an oval space in the disk which is quite dry. Now, though the specific gravity of the pupa is greater than that of water, it is but so very slightly greater that the mere attraction of the air to the dry part of the thorax, when once exposed to it, is sufficient to retain it at the surface; just as a small, dry needle swims under similar circumstances." He is convinced by the following experiment: "If, when the pupa is suspended at the surface, a drop of water be let fall upon the dry portion of the thorax, it instantly sinks to the bottom — the thorax, which belongs to the heaviest half, being the lowest; and if the pupa be again brought to the surface, so that the fluid be repelled from its disk, it remains there without effort as before."

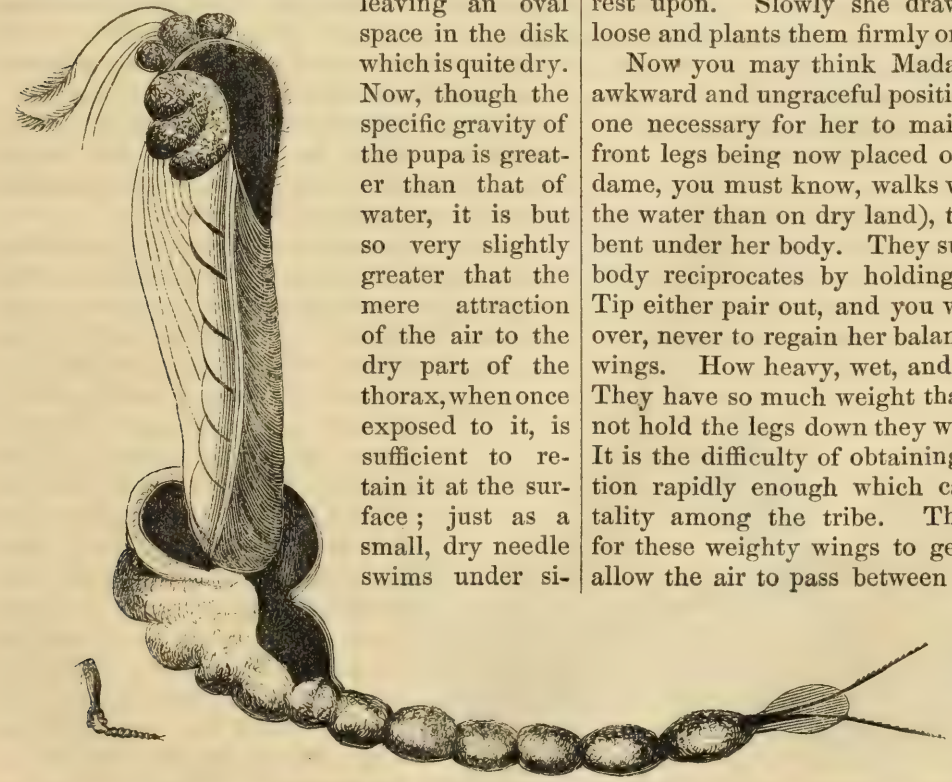

FIGURE 13.—MONSEIGNEUR EMERGING.

This is not the cause of the pupa being able to sustain itself on the water. Besides, the drop of water would cause the insect to delay emerging to an indefinite period. Even if it is a dull day they will not come forth, but linger on. They have instinct enough to know that the sun's light is very necessary for them to emerge successfully; and they will not come out unless he is present. The proof is this. I have made the experiment often. Before they are ready to emerge, force them to the surface and sink the breathing tubes. Sustain them here for a while, and as soon as the air is exhausted in the tubes the insect dies. But when it feels itself ready to emerge, the insect comes up of its own accord. As it floats, it must have its breathing tubes under water; and it is the pressure of the water upon the air in these tubes that forces the insect to the surface and keeps it there, until the bulky part of the insect being excluded the rest floats by its own lightness.

The pupa case serves as a raft for the fly to rest upon. Slowly she draws two long legs loose and plants them firmly on the water.

Now you may think Madame is in a most awkward and ungraceful position. But it is the one necessary for her to maintain. Her two front legs being now placed on the water (Madame, you must know, walks with more ease on the water than on dry land), the other four are bent under her body. They support it, and the body reciprocates by holding the legs down. Tip either pair out, and you would see her fall over, never to regain her balance. Observe the wings. How heavy, wet, and lumpy they are! They have so much weight that if the body did not hold the legs down they would capsize her. It is the difficulty of obtaining this same position rapidly enough which causes such mortality among the tribe. The next move is for these weighty wings to get separated, and allow the air to pass between them. As soon as this is done they serve her as the balance pole does the rope-dancer, and she is safe. The next pair is now

FIGURE 14.—MADAME TRIES HER WINGS.

drawn forth, and placed on the lip of the pupa case. The long body now elongates itself; the gauzy wings begin to unfold, expanding gently. At last they commence to dry. The antennæ shake out; the beautiful plumes, in the male, float on the air; the long proboscis is elevated, to see if all its parts be complete. Finally, the last long pair of legs are drawn forth; the body poised; the strength is tried; the wings are elevated, and waved to and fro; every nervure filled with the balmy summer air. She pauses, and like another Eve, gazes down in astonishment at the beautiful image in the water.

In this position she will stand for several seconds—sometimes minutes. Then, with a gentle wave of the wings, she bids adieu to the home of her childhood, the pretty cradle in which she had been rocked, and the murmuring, placid water, soothing and cherishing her like a mother. All this is now forgotten. She is in the world.

We will not follow her proceedings. You know them well: her unwearying solicitations; her ill manners and ill temper; her peevish, crying requests. You know them all; and clapping your hands impatiently exclaim, "*En avant, Madame Maringouin!*"

FIG 15.—MADAME ADMIRES HERSELF.

But let us take a closer view of her. She belongs to the night, gray and sombre. Very little light falls around her. Her wings are strong and coarse; the nervures well developed; the fine lines you see on the tip of the wings are strong black hairs; the edges are turned up, giving an angularity which naturally does not belong to them. I have taken the liberty of calling her the *Culex Americanus, par excellence*, although in reality I know she belongs to a subgenus of a European genus. She is no type; but she is found from the extreme north down to the Capes of Florida. Let whatever genus or subgenus be missing, every season finds her on hand, blood-thirsty and vituperative, as if she had just arrived from the banks of the classic Po—the paradise of her race. My specimen had taken such a hearty meal out of somebody that, while subjecting her to the glass to sketch her, she burst open. She seeks dark nooks in our houses, and retires among sombre shrubbery during daylight, coming forth only after nightfall.

She has a congener of the day, resembling her closely, except that the wings are more delicate; the nervures being connected with a kind of tissue. (See Fig. 4; the wing in the upper right-hand corner.) This insect never flies after sundown; but is active all day in low marshy places. On the lakes, on the St. Lawrence, and at Niagara, you will find them in perfection, and not behind our lady of the night in bloody anticipations and querulousness. Her body, when empty, is of an apple green color, turning to a dark amethyst hue after a meal. This is a mark of all the day *Culicidæ*. I have dissected her body that you may see some of the interior arrangements. There are many

FIGURE 16.—CULEX AMERICANUS.

small tubes and chords for the admission of air to purify the fluids acting as the blood of the insect, too complicated to be represented in so small a space. A knotty chord runs up the back, which doubtless represents the pulsating motion or heart. It is necessary here to remark that the families differ exceedingly in intestinal arrangement; the chief part having only a large coarse vein or muscle running from one extremity of the body to the other. This canal can be seen often with the naked eye convoluting through the body; but when full of blood, the parts can not be minutely distinguished.

Here is the upper side. On a very close examination I was quite at a loss to determine what the fine scales were which are seen on the upper part of the body. A closer inspection proved them to be *Acari*. Letter A represents a specimen which I found walking over the paper, coming from her body. What a wonderful exhibition is this—a parasite upon so minute a creature! Dare we hazard the suggestion that they are bred from the food which she imbibes from human blood? They were clustered thickly above and below, of every size, which proves that they were generated on the body. What a world of mystery for the eye to penetrate, causing the mind to exhaust itself in conjecture, and ponder in awe for a solution!

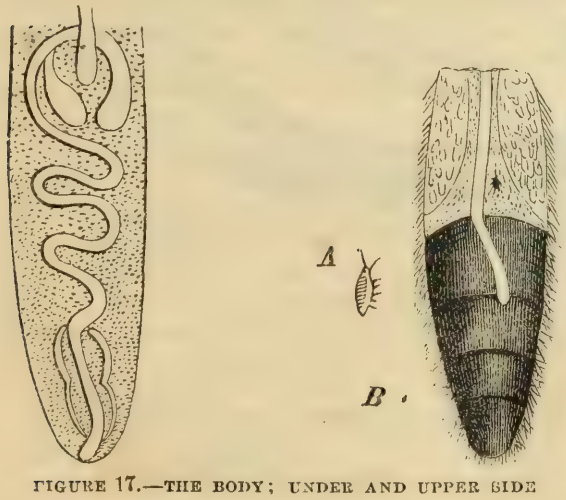

FIGURE 17.—THE BODY; UNDER AND UPPER SIDE

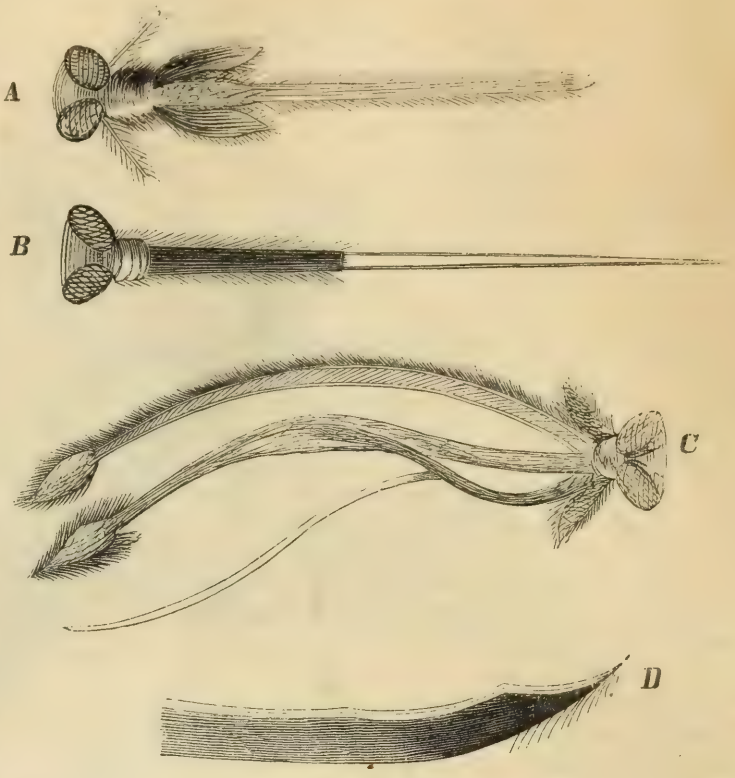
The eye of the insect is most brilliant. The uvea is of a rich ruby red; the facets are more thickly placed than those of the bee. From each facet springs a small sharp cornea, which catches every ray of light, causing the eye, as you turn it, to scintillate with every shade of red and amethyst. The black lid falling over it seems to shield it from very intense light. At the back, looking down on the neck, you will find that the lids are hollow, standing up like two small hoods, and trimmed with a deep white silvery fringe. From this beautiful eye spring the coarse bristly antennæ in the female.

The head of the male is plumed in the same manner, if not more thickly, than that of the *Culex pipiens*. These plumes falling over such a pair of brilliant eyes make a right royal regalia, which, when once seen, can never be forgotten. Years have elapsed, the sorrows and vicissitudes of life have swept over me; but never do I see a royal diadem mentioned but

memory presents to the mind's eye this splendid and regal tiara. It is a favor in a lifetime to see it, the male is so excessively shy, never leaving the sedgy banks and meadows, where he seeks the female. The eye of the night musquito, at least of the specimens I have thus far seen, is black with gray facets, and smaller, without lids of any kind. The ridge running down the back of the day musquito looks like solid gold. It is no plumage or hair, but appears to be a fine ligament inseparable from the back.

Now let us examine the instrument with which she annoys us so perseveringly. Authors are by no means agreed whether this instrument is composed of many or few pieces. Leuwenhoeck says it has four pieces; Swammerdam affirms that he found six, including the lip; while Reaumur says there are only five. I have long since convinced myself that these pieces are increased in number according to the genus to which the insect belongs; and that we can no more compare the proboscis of the genuine gallinipper of the Southern swamps and Florida everglades with that of the musquito of Maine and New York, than we can compare the sting of the scorpion with that of the bee. Can it be the same instrument which you feel pricking your brow in Broadway that pierced through the military boots of the Father of his Country in the Jersey marshes; and, according to contemporaries, made this exemplary man "swear like a trooper?" or that attacked the army of Julian the Apostate, and drove him back? or that compelled Sapor, King of Persia, to raise the siege of Nisibis, stinging his elephants and camels to such a degree as to cause the route of his army? which render the banks of the River Po almost uninhabitable? or that compel the Laplander to coat himself with grease, to prevent them from getting foothold? Humboldt tells us of the poor people living at the mouth of the Rio Unare, who accustom themselves to pass the night buried four inches



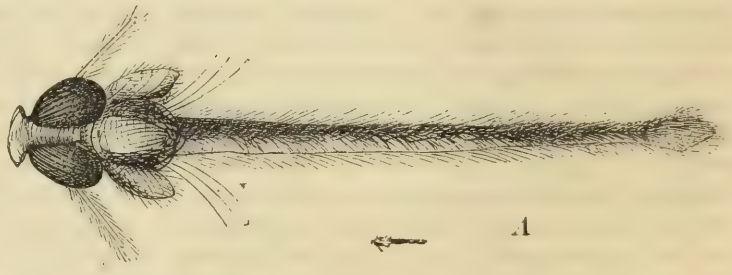


FIGURE 18.—THE STING.

F. Natural size.

deep in sand, with a handkerchief over their heads to preserve them from the attacks of these insects. Surely it would be preposterous to suppose theirs was the same simple instrument as that of our musquito. In that of the large musquito of northern latitudes, you can feel several prickers by pressing it against the skin; and certainly the points of at least a dozen lancets can be felt in that of the southern musquito. I have seen one proboscis with eight points. I found three prickers in one species; five in another; and had got as far as eight in the third specimen, when a puff of wind carried him away. These were Georgians. Let us take for the present the sting of the *Culex pipiens*, according to Reaumur and Roffrede's dissection. It will illustrate the performance of the instrument as well as if it had a dozen needles. On the opposite page I have subjoined the portions of the sting of our own musquito, the *Culex Americanus*.

I have always found three lancets in this subgenus of the night musquito; but could never detect more than two in the congener of the day; and I am inclined to believe, from the specimens of the *Culex pipiens* I have seen in Europe, that if Reaumur had had the lenses then we have now, he would have discovered three lancets at least. When once you can get the tubes separated from the sheath (it is exceeding nice work), you can, with a suitable instrument, separate all the lancets without much difficulty. I am convinced that the two side tubes serve, when the insect is sucking, as suction tubes to assist in drawing up the blood if it is thick and heavy. They act likewise as supporters to the head while the insect is in the act of imbibing; but they are evidently meant eventually to protect the lancet case on the outside. Examine the sheath. You perceive quite a hollow into which the blades of the lancets fit; then these join over them, and the sheath is complete. You perceive how complicated it is. The next musquito that stings you you must respect the more when you recall the wonderful construction of this little instrument. Figs. 21 and 22 show how it is applied.

I must note here that all our Culicidæ have not the hairy sheath. I have seen several species with the proboscis as smooth and polished as a piece of ebony. Swammerdam says: "I should think that the acute and hollow extremity of the sheath is certainly introduced into the wound,

FIGURE 21.—HEAD AND STING.

and by means thereof the gnat afterward sucks the blood which, running or ascending by suction between these parts, is at length conveyed into the stomach of the insect. Hence there appears almost the same use of this sheath as

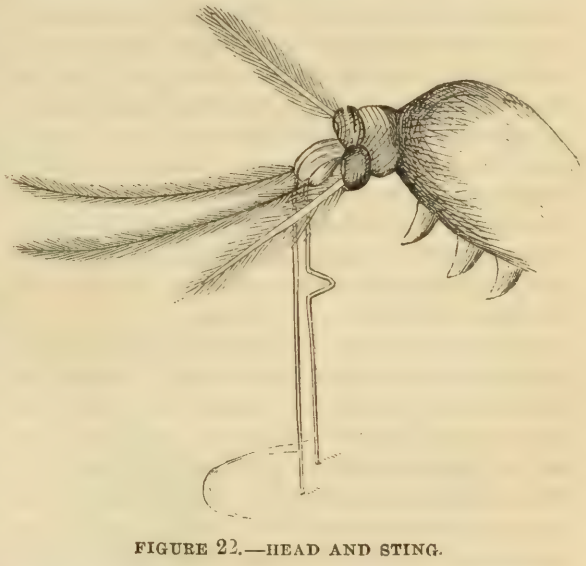

FIGURE 22.—HEAD AND STING.

there is of the silver pipes used by the surgeons, through which they pass their lancets into parts deep seated; in a word, to prevent their wounding any other part than that which they intend to cut." To convince yourself of this, let a musquito settle firmly on your hand; feel assured that the proboscis is well inserted; then, with a fine camel's-hair pencil, dipped in chloroform, touch the insect on the head and antennæ. It will fall off in the act; and by subjecting it to the microscope you will perceive that the sheath is a sort of forcing-pump, the needles keeping the wound open, while the suction of the pipe carries the blood into the stomach. The musquito has not always a thirst for blood, and can often be seen sucking up sugar and water, tea—and especially any liquid with

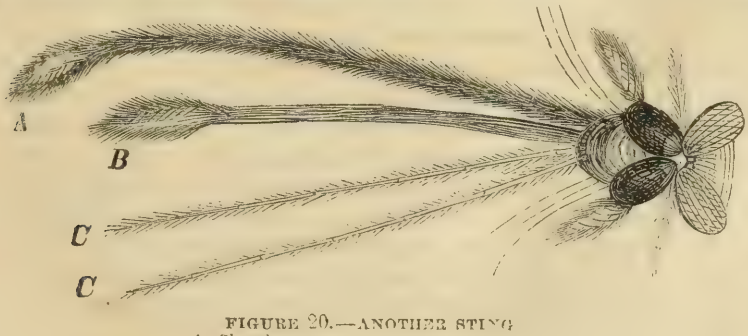

FIGURE 20.—ANOTHER STING.
A. Sheath.
B. Lancet-case, closed.
C. Outside protection to lancet.

spirits in it. Of gin they are very fond. When sucking up fluid from a tumbler, they have the power of elongating the tube beyond the lancets, which they do not use at all.

Reaumur supposed the pain of the wound to be caused by a poison which they eject for the purpose of thinning the blood and rendering it easier to suck. This suggestion of Reaumur's can not be correct. It would require an apparatus for a descending fluid, as well as for an ascending one, which evidently does not exist. So, after the first application of the instrument, there can be no more until the repast is finished, and the instrument returned to its original position. It is evident that this is simply a fluid kept in the sheath to preserve all its complicated parts in order and ready for action. It is not poisonous to all persons alike. On some people—myself for instance—a thousand stings would not make a red spot the size of a mustard seed; while my neighbor over the way has to keep her room, because she is so disfigured from a visit to a friend "where they do congregate."

But what are a dozen stings to the murmuring whine of the insect? If she would only fill herself and go quietly, it might be bearable. But to weary one, first here, then there, coming closer, then receding, going right into your ear like the blast of a trumpet, disappearing only to renew the attack more from some unexpected quarter! Verily, Madame Maringouin, your trumpet has blown on many a brain with the strength of the trumpets against the walls of Jericho, in certain states of the nervous system, when a thousand stings would have been unheeded.

It is a disputed point how this noise is made. Aristophanes makes Chærophon banteringly ask Socrates, "whether gnats buzz with the mouth or the tail?" Many hundred years ago as this question was asked, it is still with many persons open for discussion. Kirby says, "The friction of the base of the wings against the chest (thorax) seems to be the sole cause of the alarming buzz of the gnat." He continues: "I have observed that early in the spring, before their thirst for blood seizes them, gnats when flying emit no sounds." These two paragraphs look oddly in juxtaposition. Does not a gnat fly in the same manner in the fall as in the spring? If the noise proceeded from the friction of the wings on the chest, it must be always made when the insect is in the act of flying; but every observer knows that there are only particular portions of time during the summer season when musquitoes hum. It would consume too much space to repeat the suggestions of numerous authors. Some, that it proceeds from the winglets; others, that it comes from the poisers; others again, that it is the beating of the air with the wings, and so on. There seems no agreement on the subject. Why should I not have my say as well as another? I consider that I deserve it for the patience given to the investigation for years. So I pronounce my conviction, from experiment, that the humming proceeds from the proboscis. I have just called your notice to its very numerous parts. When the thirst for blood comes upon the insect, this tube, and all its other tubes and air-holes, are kept open for instant action. The motion of the wings forces the air through them, causing the vibratory humming noise we hear; and very probably the insect keeps them all in play herself so as to have them open and ready for use. We have all listened often to the loud noise of the wind sounding through a keyhole or a crack. Why may it not have the same power when passing through such a number of small tubes, subject to the control and movement of one instinct? Make the experiment yourself. Hold the insect by the legs, and cut the proboscis off in small pieces. As you reduce it in length, you reduce the sound; and when cut close all sounds cease. The insect may be held before you by the legs and vibrate its wings for a minute at a time; but you will have no more music. Therefore to tweak Madame's proboscis is the only way she can be silenced.

Some genera of the Culicidæ make their appearance very early. I have seen the *Culex Americanus*, in sheltered spots, when the sun was shining warm and bright on the Connecticut hills, as early as the 20th of April, and as late as the 10th of November. But more delicate species do not appear until the summer. The worst siege I ever experienced, beyond any Southern swamp attack, was in New York, at the corner of Greenwich Street, facing the Battery, on the 15th of January. The snow lay more than five feet deep on the Battery. The room had had no fire in it during the season. It was far out of the way, but commanded a view of the Bay, the wild, tempestuous river, and the grand wintry landscape. No room would do but this. So the kind landlord indulged me, had a glorious fire made, and rendered me comfortable. As soon as the room was warmed the invasion commenced. Where the insects came from was beyond all conjecture; but they swarmed. No quarter was given. Like Norway wolves they settled upon me. I was forced to show the white feather, and beat a retreat after two hours' battle, leaving the field to the enemy. I brought away three prisoners, and found them, when put under the microscope, to be the undefatigable ubiquitous *Culex Americanus*. So you perceive they survive very severe cold weather in the adult state, and do not lose their appetite.

From the time the egg is deposited generally averages five to ten days. When the larvæ come out they feed upon the invisible animalculæ in the water. In ten or fifteen days they go into the pupa state. In five or ten days more they come out the perfect insect. Three weeks is about the time allowed from the egg state to the imago; so that there are many broods during the summer.

I am constantly asked, verbally and by letter.

where, when, and how, I obtain my specimens for examination; and will answer the question here. To obtain specimens I carry my box, vial, and glass wherever I move, whether for a long walk or from room to room. Your objects fly against you; they come to you when you least expect them. You will find specimens of this particular insect in the meadows, by the banks of the rivers, in rain-water, in little brooks, on flowers, on blades of grass, on fruit, in cisterns. Two fine specimens I caught a week ago; one sipping from my tumbler; the other, attracted no doubt by the gaslight, regaling himself on sugar at the supper-table. The choice places—where you are certain of obtaining many varieties—are in rail-cars, and on board of the River and Sound steamers. Some species I have never found any where else. Driven by the winds across the waters from numerous localities, as the boats pass or stop to land passengers, they take refuge on board. Nay, you need only fill a tumbler with rain-water, and place it in a warm nook on your window-sill, when it will presently be used by some straggler as a receptacle for her eggs. Watch well; you will soon see the larvæ, then the pupa. Now comes a most interesting sight. The insect rises from the pupa case. You may officiate three hours at the birth, if you like, as I did a few days ago. Launch the cunning thing into the new world of air and light, and for your trouble and anxiety have the tiny trumpet blown in your ear all night, besides a sly depletion of a vein every now and then.

While making an illustration for this paper a little dot fell upon the sheet before me. Behold the most beautiful and fairy-like of creatures! It is nearly a line in length; its wings are of the brightest amber; its legs and thorax a shade darker; its body a pale apple green; its eyes as black and shining as beads; its proboscis straight, polished, and black as ebony. My finest pencil, with the slightest touch, was too harsh to convey the delicate soft pencilings of this insect. I placed it on my hand and covered it with a glass. I was not sensible of the proboscis being inserted; but the green body soon changed to a darker hue, and I perceived that she had partaken of my life-blood.

It is a study requiring years, patience, perseverance, unremitting observation, and watchfulness; but, with your glass in your hand, you will see wonders which will amaze and startle you; mysteries which will soothe a weary heart, console and cheer the broken spirit. The closer you cling to kind Nature's bosom, the warmer and more genial will be her welcome. You may learn from her, in time, some of her secrets, her mysteries, and her marvelous doings. With these she will touch in your heart that electric chord leading

"From Nature up to Nature's God;"

and you will learn, which is of more importance still, how to adore and praise the Maker through His works.

The question is constantly asked, "Of what use are these troublesome musquitoes?" Many uses might be assigned; but we will be satisfied with one or two. They are the food of the large family of the Libelludæ or dragon-fly. On the rivers of the South, particularly the Altamaha and Ogeechee in Georgia, the Cooper and the Santee in South Carolina, you will find the dragon-fly in thousands, and of varieties many of which have never yet been mentioned by naturalists. These subsist almost entirely upon this insect. When their season is over, they, in their turn, fall dead on the waters and float gently down to the ocean, feeding the varieties of those delicious fish over which epicures gloat, after having spent a winter and spring at the South. Then, again, there are numbers of night birds whose principal food consists of this insect. The whip-poor-will lives chiefly upon them.

How beautiful and harmonious is this grand chain, linking together every living thing, so that each falls to the share of the other, as spring falls into the lap of maturer summer! And how overwhelming is the thought that He who pointed the needles of the insect's sting, made with the same ease that magnificent and eternal mystery—the brain of man; and that with the slightest breath of His power all could be made to pass away, from the buzzing insect to the worlds that gem the heavens, leaving space as blank as if they never had existed! When the music of the sweet singer of Israel ceased, the refrain of his song was the same as when he commenced, and thus must it be with every student of Nature, no matter how cursorily these marvelous works are beheld. The eye of faith contemplates the Maker's touch, and the heart must echo the strain of the Psalmist: "Let every thing that hath breath praise the Lord."

FIGURE 23.—EYE OF THE DAY CULEX.
A. The Eye. B. Eyelid. D. Antennæ.

AN AFFAIR OF HONOR.

"*Honor* is the subject of my story."

FOR five-and-forty years I have borne the name of Peter Smith. Though you have never heard of me I flatter myself that my family name will be familiar to you. I am quiet in my habits, and, I believe, not disposed to interfere with the rights of other men; yet even this did not avail to save me some ten years since from becoming involved in an affair of honor. Let me tell you how it happened.

At the time of which I speak I was an inmate of Mrs. Jones's family. I use the word *inmate* advisedly, since it was well known that Mrs.

Jones never took boarders. In fact she expressly gave me to understand that her only inducement in taking me was the pleasure she expected to derive from my society—that she was far above mercenary considerations. Of course I felt flattered by the compliment thus insinuated, though I confess I was somewhat surprised, since all mercenary considerations were disclaimed, to be charged a higher rate for board than I had ever before paid. Still I did not demur, feeling certain that I had at length found a home.

Let me describe Mrs. Jones, my hostess. Physically speaking, I should say that she came of a great family, her proportions being most aristocratic. In her demeanor toward me she was always very gracious and condescending, for which I felt properly grateful. She always came to the table arrayed in a stiff satin, the very rustle of which betrayed her consequence, and impressed me with a sense of my comparative insignificance.

Mrs. Jones had a daughter, by name Sophronia. In external appearance she was quite unlike her parent, being exceedingly tall and slender, while the latter was short and dumpy. In a copy of verses which she was kind enough to show me some enthusiastic young man had the temerity to call her a sylph. I do not know much about sylphs, never having seen one to my knowledge; but I question very much whether sylphs have red hair or noses with an upward tendency. I have my doubts also as to whether sylphs squint. Still I am far from denying that Miss Sophronia Jones was a sylph, since that belief evidently afforded her satisfaction.

Mrs. Jones's table was admirably adapted for a valetudinarian. There he would find no dishes of unwholesome richness—nothing, indeed, that was calculated to induce excess in eating. If, as some physicians have declared, health is best preserved by always rising from the table with an appetite, I was never in a fairer way to secure its blessings than when enjoying the genteel insufficiency of Mrs. Jones's hospitality.

About a month after my arrival, conversation turned, at the dinner-table, upon a concert which was to be given the same evening by Signora Falfalini. I have a poor memory for Italian names, but that is the name to the best of my recollection.

"I wish I could go, ma," said the fair Sophronia.

"So you could, my dear," replied Mrs. Jones, "if you had a gentleman protector."

Thereupon she began to declaim against the customs of society which preclude a lady's attending a place of amusement without a gentleman, lamenting that Sophronia had, on this account, been more than once debarred from gratifying her exquisite taste in music.

Of course I could not, in politeness, refrain from offering my escort, although I should thereby be prevented from attending the weekly meeting of the club of which I am a member.

Sophronia, in great confusion, said she could not think of troubling me.

I began to hope that she would not; but her mother quietly silenced her scruples by saying that she was a silly girl (thirty-five if she's a day), and that she must not think of refusing.

Sophronia made no further objections, and I had the pleasure of paying a high price for a couple of tickets.

Nature not having bestowed on me a musical ear, I could enter but indifferently into the raptures of my companion, who pronounced Signora Falfalini's singing divine, although she considered her quite devoid of personal attractions. The Signora being built after the same model as Sophronia, I quite agreed with her in this last bit of criticism.

"Do you know," simpered my companion, confidingly, "I have myself thought at times that I was designed by Nature for a prima donna or an opera singer like Signora Falfalini?"

"Then why did you not become one?" I inquired.

"Because ma had such an objection to any thing of a public character. She felt that I should be demeaned by so doing, and advised me to content myself with contributing to the gratification of my friends at home. You have never heard me sing, I think?"

I had at times heard a shrill voice in a very high key, as I sat in my room, which had struck me as far from agreeable. I thought it best, however, without mentioning this, to utter a simple negative.

"You must not expect much," continued Sophronia, "my voice is wild and uncultivated. Ma is always telling me that I ought to devote more attention to it; but I can never sing except when the inspiration seizes me. If you will come in to-morrow evening I will sing for you if you would like."

I expressed my thanks for this disinterested kindness, and, as the concert was now finished, proceeded to escort the lady home.

As we were making our way through the crowd, it chanced that some one, accidentally or otherwise, jostled my companion.

She immediately seized my arm convulsively and informed me that she had been insulted.

"Who did it?" stammered I, for I confess my courage is not of the highest order.

In reply Sophronia pointed out a tall gentleman with a very fierce mustache, who was standing at a little distance.

Mentally deciding that it might not be prudent to have an altercation with such a person, I hastened to assure my companion that it must have been an accident.

"No," said she, very decidedly. "It was not an accident. It was intentional. I wish you to demand an apology in my name."

"Don't you think it would be better," said I, in great embarrassment, "to treat him with silent contempt?"

Sophronia was by no means of this opinion.

Accordingly I approached the gentleman, who

appeared still more formidable on a nearer view, and asked—in what was intended to be a resolute tone—"what he meant by insulting the lady under my charge."

"Sir-r-r," he ejaculated, wheeling sharply around.

I repeated my request in a fainter tone, and suggested that I trusted it was accidental on his part.

Stroking his mustache very fiercely he informed me that he had no explanations to make—that if I wished to hear from him at any time I should have an opportunity, and forthwith presented me his card.

Without stopping to look at it I slunk away in the crowd and soon reached home.

My companion intimated that she supposed I should seek satisfaction in the usual way.

I said something indistinctly—I am not sure exactly what—and very thankfully took leave of the fair Sophronia in the entry.

Reaching my chamber, I examined the card which had been placed in my hand, and found inscribed thereon the name of Captain Achilles Brown, Astor House. Very probably he was distinguished by the same qualities which characterized his great namesake, and it made me shiver even to think of a conflict with him. Resolving that I would at least take every possible means to avoid it, I went to bed and sank into a slumber disturbed by frightful dreams, in which I fancied myself shot through the heart by that terrible Achilles Brown.

Early next morning, while in the momentary expectation of hearing the breakfast-bell, I was startled by a knock at the door. Immediately afterward entered a tall man, "bearded like a pard." He introduced himself to me as a cousin of Sophronia, and intimated that, having heard of my difficulty of the previous evening, he had come to offer his services as my second.

Thanking him for his kindness, I said that I had not, as yet, decided to call out the gentleman in question.

"Not yet decided!" repeated my visitor, springing to his feet, causing me thereby to recede two paces, in some personal apprehension; "not yet decided! But perhaps I do not understand you."

I intimated, rather uncomfortably, that I had conscientious scruples against the practice of the duello.

"Conscientious fiddlesticks!" interrupted my visitor. "Sir, you *must* fight. There is no alternative. A lady has been insulted while under your protection. That lady is my cousin. Unless you take notice of it, *I* must."

"I shall be very glad to have you," said I, eagerly, thinking to shift the duel upon him.

"You misunderstand me," said he, gravely. "Unless you challenge Captain Brown, I shall understand it as a personal disrespect to my cousin, and shall challenge you. Choose which of us you will fight."

This was said so resolutely that I succumbed at once. I reflected that, while there was equal danger to be incurred in a duel with my visitor, there would be less credit.

"Shall I write the missive?" inquired my companion, who called himself Lieutenant Eustace.

"Yes," said I, faintly.

He sat down at my desk, and in a few minutes produced the following:

"SIR,—You grossly insulted a young lady, while under my protection, last evening. As a man of honor, I call upon you either for an ample apology, or for the usual satisfaction accorded in such cases. I send this by Lieutenant Eustace, who is authorized to act as my *friend*. Yours, etc., PETER SMITH.

"CAPTAIN ACHILLES BROWN."

Having signed this, with some misgivings, I inquired as to the character of this Captain Brown.

"I don't know much about him," said my *friend;* "but I presume he is a regular fire-eater."

This was satisfactory—very.

"Suppose," said I, in a tremulous voice, "you erase the word 'ample' before 'apology.' I shall consider any apology sufficient."

"But *I* shall not," was the Lieutenant's emphatic reply.

There was no more to be said. He departed with his missive; and I was left in no very enviable frame of mind.

Two hours after, the Lieutenant returned in high spirits.

"Has he apologized?" I inquired, eagerly.

"Not a bit of it," was the reply. "He vows that he will shed the last drop of his blood first."

"What a sanguinary monster he must be!" was my internal reflection.

"The meeting is appointed for to-morrow morning, an hour before sunrise," resumed the Lieutenant. "It is to take place at Hoboken: weapons, pistols; distance, fifteen paces."

"Isn't that *rather* near?" I ventured to remark.

"Near? Of course, you want it near. You will be more likely to hit your man."

"And he will be more likely to hit me," I rejoined.

"Of course," was the careless reply. "You must take your chance of that."

I could not help wondering whether he would be so cool about it if he were the principal, and I the second. In fact, I have always observed that seconds are much more scrupulous about the honor of their principals than they are disposed to be about their own. I suppose it is human nature. I think it altogether likely that *I* should make a very fierce second.

"I suppose you are used to pistols?" remarked my friend.

Used to pistols! I remembered once having fired one as a boy to the imminent danger of my little sister's life. Since then I had not had one in my hands.

As I strolled out into the streets in an unhappy frame of mind, a newsboy thrust into

my hand a daily paper which I mechanically bought. Glancing over the columns I observed that a boat was advertised as about to start that day for Havana. The hour of departure was four in the afternoon. A sudden thought struck me. Would it not be much better to embark for Cuba than remain behind to be shot—a result which the state of my nerves and my want of practice with the pistol rendered altogether probable.

With new-born alacrity I immediately repaired to the boat and demanded to see the agent. He informed me that the boat would positively start at the hour indicated.

I asked to see the list of passengers.

Running my eyes casually down the list my heart beat quickly as they fell upon the last name. Could it be possible that my dreaded opponent Captain Achilles Brown had secured passage! What could be his motive?

"When did this gentleman book his name as a passenger?" I inquired.

"Not half an hour since."

"Did he understand that the boat started to-day?"

"Yes; he made particular inquiries on that point."

"Will you describe him to me? Is he tall?"

"Yes, quite so."

"And has a black mustache?"

"Yes."

"A dark complexion, and wears a large cloak?"

"Precisely. You know him, then?"

"Very slightly," said I, carelessly. "By-the-way, I don't think I shall be able to get away for a week. I won't engage to-day."

"We would give you good accommodations."

"No doubt of that. On the whole, you needn't mention to Captain Brown that any body inquired for him."

My heart bounded with exultation as with some difficulty I realized that my opponent, whom I had dreaded so much, was about to leave the country from fear of encountering me.

What a joke that was! I laughed all the way home, though I endeavored to preserve my gravity. On the way I purchased a brace of pistols, which I ostentatiously displayed on reaching my boarding-place.

"To think you should risk your life for me," simpered the fair Sophronia.

"Miss Sophronia," said I, with suitable fierceness, "no one shall with impunity insult a lady while under my protection."

During a portion of the afternoon I practiced shooting at a mark, and was never more lively than at the tea-table. Lieutenant Eustace, who was present, seemed considerably surprised at the change in my demeanor, and was evidently puzzled to account for it.

After tea I invited the company to witness my will, which I had drawn up for the sake of producing an impression. It proved quite a master-stroke. I noticed that Lieutenant Eustace treated me with increasing respect, while Sophronia repeated several times under her breath, but loud enough for me to hear, "Brave man!"

All this I enjoyed, and took the opportunity to discourse severely upon the sacredness of honor, in defense of which I asserted that any man ought to be willing to lay down his life.

In the course of the afternoon I had had the pleasure of witnessing the sailing of the *Ariel*, with Captain Brown on board. Whether this circumstance had any thing to do with inspiring in me these elevated sentiments, I leave the reader to judge.

The next morning at an early hour I proceeded to the field with my second.

Captain Achilles Brown was nowhere to be seen!

I professed a great deal of disappointment, and insisted on waiting three hours to allow him ample time to appear. Of course it was in vain. All, however, testified to the remarkable courage which I displayed under the circumstances, and tendered their congratulations. The affair even found its way into the papers, and I found myself all at once elevated into a hero. I could not walk Broadway without being furtively pointed out as the celebrated duelist. Among the ladies, particularly, I became an object of great attention—a circumstance that may well excite surprise when it is considered that my only claims to their regard lay in my having been implicated in an affair which the moral sense of the community professes to condemn.

Soon afterward I left my boarding-place to the great regret of the fair Sophronia. I afterward learned that, had I shown the white feather, it was arranged that Lieutenant Eustace should force me into a marriage with his cousin on pain of a duel with himself. The extraordinary show of courage which I exhibited imposed upon him to such an extent that he did not think it advisable to offer the alternative, lest I should accept the duel.

I have heard nothing of Captain Achilles Brown since the memorable day on which he did me the service to sail for Cuba. Had he possessed a little more courage, I shudder to think what might have been the result.

THE LOAN OF A LYRE.

I.

"A PRETTY piece of business, Mrs. Barcarole — a very pretty piece of business, upon my soul—and I a husband and father of a family!"

"What are you talking about, my dear?"

"If you want to know, please to fix your naked eye upon this little bijou of a communication, just received per this morning's post."

Mrs. Barcarole stopped washing the breakfast silver, dried her fingers, and taking the letter from my hand, read aloud:

"*Meliboeus Barcarole, Esq.*

"IMMORTAL BARD,—Pardon the *unlaureled* incense-burner before your lyric altar of *undying* fame, who thus

informally, and (but for her uncontrollable enthusiasm) *inexcusably* addresses you. Though the liberty I take has, perhaps, *no parallel* in that circle where *frigid ceremony* wields her glacial sceptre, in your *habitual benignity* remember, I pray you, that you sit on that *celestial pinnacle* of fame where you are less *your own* than *all mankind's;* and even a *humble* heart like my own, whose slender strings have been thrilled by your songful breath, may claim a part in you.

"I need not say that, with *outwelling* eyes and *palpitating* bosom, I have read *every line* which your *wondrous* pen has contributed to the age's symphony. Still more, oh divinest of living bards! I know each *word* of *rapture* by heart—and sleep with Ticknor's blue and gold edition of you pressed close to that heart, nightly. In the name of *all Time*, let me thank you, Sir, for those pulses of *ecstasy* with which you have stirred its *eternally resounding* corridors.

"With what *speechless sympathy* do I enter into your sorrows! As I write, my tears stain this sheet, confessing my maiden weakness; for I have just come from the perusal of that *bottomless* utterance of lonely grief and passion recorded at page 310 of the second volume of your 'Antiphonal Antistrophics.' Need I say that I mean 'The Wail of the World-weary Wanderer?' It is no vain compliment when I say that *Homer*, *Dante*, and *Tupper* will not survive one verse of the many which bathed me in tears. 'Tis this:

"'Headlong out of heavenly blisses
Hurled to fathomless abysses,
Dream I still of feeling kisses
Kissing me forever more;
Like the moonbeam's sparry shiver,
Quenched upon a midnight river,
Slides away the airy giver,
And in the darkness horrid
I dash my burning forehead
On the adamantine floor.'

"But I trespass on your time. I will only say a word more. You end that poem with this aspiration: 'Oh for one fountain-heart, whereof my own might drink!' I believe it is *my* mission to be *that* heart—to comfort your wretchedness—to bind up your wounded spirit.

"*All* I wish is, to gaze into your *deep blue eyes*—to walk the same *violet-scented* turf—to breathe the same air with you. I will, therefore, be with you in that 'pastoral solitude beyond the rules of earth' (described so affectingly on your 17th page) on Monday next, by the 5 o'clock, P.M., express from New York (having to wait till then for my new mantilla from Bulpin's). With eternal ardor, your respondent dual soul,

"LILLIE TAYLOR."

"Well, I declare!" said Mrs. Barcarole, opening those large brown eyes of hers, out of which I had so often drawn my inspiration, until they equaled in size of aperture that other vessel wherein I dipped my quills. "And what do you mean to do about it?"

"Rum-tum-tum-tum-tiddy, rumtumtiddyi-do—"

"What do you mean to do, I say, dear?"

"Rum-tum-tiddy—oh, beg your pardon, love—I mean to—well, that is—really I haven't the least idea."

"Well, I must say, *I* should know what to do under such circumstances if *I* were a man. I'd have a policeman ready at the cars, and have her arrested for bigamy, or whatever it is that they call running away with another lady's husband."

I intimated to Mrs. Barcarole that bigamy might be a somewhat difficult charge to sustain against my correspondent on the existing evidence; moreover, that I was not run away with yet, and, in all human probability, should not be—so long, I added, with a glance of amorous sweetness, as I possessed a niche in the heart of such a charming woman already.

Which mollified Mrs. Barcarole considerably.

"What sort of a creature do you think she is, this scandalous person?" asked my wife.

"I suppose her to be," I answered, "a tall, thin, yet sympathetic young woman, whose tendrils were, some forty years ago, more or less, torn from a robust male support, with a tendency to spectacles, short sleeves, low neck, and singing 'Go, forget me!' to a pleuritic piano. I fancy, also, that she is fond of Poe, Shelley, and—I would not be so vain before any body but you—Barcarole. Add to this description, an appetite for young clergymen who need sisterly sympathy and slippers, and I guess you have her."

"She must be very ugly, too," said my wife.

"Eminently so, of course," I assented.

"And she may stay a fortnight."

"Oh, six months, at the least; there will be no getting rid of her. It always was agony for women to tear themselves away from me."

"Impudence! Something prompt must be done, then."

"I agree with you, my love. I will try to settle on the exact thing, and let you know by dinner-time. Till then I must weed my strawberries. By-by, dear."

II.

I was the poet Barcarole—laying claim, I fancy, to something like a transatlantic reputation, having been reviewed in the *Athenæum* as the author of "Another mass of American stuff." Daily was I solicited for my autograph. I am extravagant enough to believe that I could have made a good thing out of my hair, if I had cut it up, like the submarine cable, into lengths to suit purchasers, and advertised it to my admiring public.

It is pleasant to be famous. I like to have men poke one another in the ribs, when they see me on a railroad car, and say, "There he is—that's *Barcarole!*" I am fond of being called on to write sonnets for great occasions. I love to see pretty girls absorbed in my last edition, at watering-places and on steamboats.

But in some respects I sit on "a painful peak." It is not pleasant to think that the world is interested in the set of one's night-cap, or would listen breathlessly to a lecture on your peculiar method of cutting up a water-melon. There is a possibility of conceiving some things which a respectable citizen, however famous, might wish to keep private—to do, with the candle of publicity blown out, and society at large *not* looking through the key-hole. I have never been able to do that class of things in a frame of any calmness. There is a jealousy of observation—a nervous sense of being noteworthy—that makes a great poet go to bed, rise, put on his cravat, as if the parquet of Burton's were just the other side of the wash-stand.

Then—probably because my poems were so wondrously life-like and graphic—it never could

be understood by the general reader how I was not *in earnest* in every thing I wrote. I am not "A Deserted Soul;" yet, if I choose, can not I write "The Battle-cry" of that unfortunate being, without disagreeably identifying myself with him? No, I can't. Can I consistently weave into lyric symphony "The Plea of the Plaster-cast Man?" No; for if I do, the next review notice of my life asserts, upon abundant authority, that I "rose out of the greatest obscurity, having originally been a vendor of gypsum praying Samuels and poll-parrots, whose talents were first discovered under the following circumstances," etc. And there is not a dyspeptic young person who does not cherish me as the representative of sublimely-gifted wretchedness, on account of those love-lorn breathings which I, the happy husband and father, have uttered histrionically in my songs and plays.

Meliboeus Barcarole—immortal bard! I do not know whether to call you an unfortunate dog or not, in this fame which you have won. But certainly, of all inflictions that follow glory, sure never was one severer than the present. A woman for whose craze your genius was responsible coming to stay an indefinite time with you, in an attitude of adoration!

My wife might not have a spare room convenient. Oh, no matter! had I not written,

> 'Tis sweet to sleep beneath the stars,
> With moonbeams for your curtain bars?

The young woman would therefore come prepared to find me eschewing the conventional horse-hair and feathers, and boarding out-doors altogether. We might not have any cake in the house—a mortification which to the mind of Mrs. Barcarole has no parallel among the woes of life. No matter, again.

> The forest berries our food shall be,
> Our dishes the bark of the white birch-tree.

Had I not written it? Evidently there would be no way of discouraging the young woman.

This train of meditations was revolving in my brain as I weeded the strawberries. It got to be near mid-day. I had cleaned two beds, and was half-way through a third, but without settling on any course of prompt action.

I stopped working, and leaned to rest on my hoe-handle, when, whom should I see strolling into the garden but my nephew, Meliboeus Barcarole, Jun., a youth of parts, who was spending a month with me for the benefit of his health. The history of that young man was a sad one. He was the oldest child of rich but honest parents, and had risen from the most extreme opulence to a very honorable position among the intellectual men of society. By indomitable energy he had conquered the disadvantages of wealth, and was a hard-working, studious, and useful fellow. Though the circumstances of his family were such that I have known them compelled to subsist on turtle soup and meringues for nearly a week at a time, and their only way of keeping off the rigors of a severe winter consisted of a few black, poisonous holes in the floor, my nephew had grown into a vigorous, healthy, and handsome lad. A striking instance of what manly resolution may do against all the obstacles of fortune.

But of late a sad affliction had overshadowed him. He was evidently passing through that trying disorder—that teething complaint of the grown-up infant just weaned from tops and paper-kites—the first love. And he had it very hard. To such a degree did it affect his appetite and sleep that his parents thought my country fare would be a good change for him, and so expressed him to me, with orders to amuse him till the season opened at the Springs.

Now, as Meliboeus strolled into the garden, as aforesaid, a thought struck me. Might not the study of this interesting woman run bard-mad prove a diversion to him? Might he not at the same time rid me of my difficulty, and occupy himself healthfully in the analysis of the phenomenon?

Wandering with clasped hands, and a face full of the gentlest Idyllic melancholy, the youth approached me. Until he had stepped right upon my most fruitful clusters he did not see I was there. Then he noticed me, and started back.

"Meliboeus," said I, "you are bored in this rural quiet—confess it, boy!"

"Shall I tell you the truth? I believe I am—immensely."

"So I thought. Well, it's perfectly natural. You meet a very pretty girl at the Philharmonics—she returns your dazzled gaze with a half-venturous glance followed by a blush—your soul bathes in her till the last echo of Tannhauser dies away—you and she depart your several ways—you never see her again—her image remains ineffaceable—you arrive at the conclusion that you are necessary to one another's existence. Now, country air, fresh vegetables, my society, and nowhere to go in the evening, do not seem to be what you want for your complaint. Have I hit it?

"Exactly, my uncle."

"I therefore proceed to prescribe a new remedy. I have discovered the very thing that you want, until every body comes into town again, and you can resume your search for *l'Incognita*. You need a sensation, and I've got it for you."

"Let us hear what it is."

Upon this, I pulled out of my pocket that little packet of incense, the letter of Lillie Taylor, and handed it to my nephew to read. With an amused look of puzzle he finished it, and I continued:

"Of course it isn't possible for *me* to meet those overtures appropriately. I am a married man—settled in life—every thing steady and quiet of that sort. I am romantic, and write about moonlight; but being rheumatic, do not walk in it. In fact, I have given up all kinds of sky-larking.

"But, supposing I had a nephew—a tolerably well-looking young rascal—with a great fund of woman-talk and a boundless talent for every

variety of diablery. Supposing he bore the same name as his uncle, had some approach to the same intellectual forehead, and by circumstances which we will not here dwell upon, had contracted the same look of classic sadness. And, to wind up, supposing he took it into his head to make believe he was his own uncle—to borrow the lyre of that gifted man and play the poet for a few days to a charming female adorer—Heh? what do you think of the hypothesis?"

"By Jehoshaphat! wouldn't that be rich! I declare I've the greatest mind in the world—"

"Say you will!"

"Well, I *will*, then. Here's my hand on it. When is she coming?"

"Didn't you read? Five o'clock train, day after to-morrow. Your aunt and I will go down with you to see her come in. Play your game well, and if we don't have some fun I'm mistaken."

The young man went away with a lighter step, and, putting up my hoe, I returned to let Mrs. B. into the plan. She was enough of a wag to assent to it heartily, and promised to get the best room ready for our romantic visitor.

III.

Meliboeus was certainly a lad of genius. He went to work rehearsing for our little comedy with a zeal and a facility worthy of any old stager on the New York boards. He had never, even in his most unhappy moments, written so much as a sonnet; so, to prepare for being a poet, he "crammed" on the large edition of my works, until he could repeat the finest passages without a single balk. He accustomed himself to part his hair in the middle, adopted rolling collars, and affected being distrait when his tea-cup was passed. Oh! he did it admirably! And by the time that we had to start for the station, on Monday afternoon, I was one universal chuckle at the prospect of his success.

According to my promise, Mrs. Barcarole and I accompanied him to the cars. Leaving the horses around the corner with black Jimmy, we planted ourselves on the platform and waited for the whistle.

We were not allowed the pleasure of long anticipation. Up came the train, stopped, and began to disgorge its motley contents of men, women, babies, bandboxes, and parcels, which were to stop at Middletown Centre. In vain did I search the crowd for my idea of my admirer. There were spectacles there, but they beamed with no look of inquiry for a poet; ancient maiden ladies, with a pensiveness in their tones; but it was entirely laid out upon questions as to the welfare of their trunks—they asked no one the way to Mr. Barcarole's.

I was just turning to my wife and Meliboeus, with the words, "What if it should be a sell!" when a fresh, childish voice asked, close at my back, "Can you tell me how to get to the house of the poet Barcarole?"

"Whist!" said I, in a hurry, "now's your time!" and touched Meliboeus with my elbow.

"I am Mr. Barcarole, Madam," said that young gentleman courageously, turning to the petite vailed figure whence the inquiry proceeded. "May I dare to hope that this is my fair correspondent?"

The young woman lifted her vail with a tiny hand that trembled with surprise; and lo, no Gorgon, no Sphinx was there, but a very, very pretty girl of eighteen or thereabout, blushing and downcast in a state of the most winsome trepidation.

But what is the matter with Meliboeus Jun.? What is there in that little modest sylphide to startle a young man in society, to make him swerve as from the cannon's mouth?

The youth caught my arm convulsively and just whispered brokenly in my ear, "It is *she*—it is *she*—the lady I saw at the Philharmonics!"

For a moment my astonishment was mixed with the fear that this sudden discovery would unnerve the boy from the execution of his plan—that he would let this magnificent chance slip through his fingers. But no! he did better than my utmost hope. Seeming in an instant to recognize the unsurpassed advantage of making love on a poetical basis, he regained all his self-possession and took Lillie Taylor by the hand.

"Let me lead you to my carriage, fair maiden—'tis but the rude wain of a simple bard—yet it is ennobled by waiting for *you*."

The two led the way, Mrs. Barcarole and myself following close behind. And as we walked we looked at one another queerly without speaking. At last I broke the silence.

"She is '*very ugly*,' heh, Mrs. Barcarole?"

"'Tall maiden lady, torn from robust male support,' heh, *Mr.* Barcarole?"

We both of us certainly had to confess our ideals of the young lady somewhat at fault. She was a girl, as I have said, of eighteen, with great dreamy brown eyes that melted in their own softness—a sweet little sympathetic face that daguerreotyped your own thought when you talked earnestly to her—and to such a woman one felt ashamed to talk in any other way. And her airy figure was just such a one as you would not be in the least surprised to come upon in wood-solitudes, lying on the tops of the lilies and violets without bending them, drinking dew and listening to fairy stories from the bees.

Meliboeus handed the young girl into our carryall, jumped in beside her on the front seat, and when his aunt and I had mounted behind actually turned around toward us with the most unblushing coolness, and said, blandly,

"Miss Taylor, permit me to make you acquainted with an uncle and aunt of mine, who had the misfortune to be born deaf and dumb. They were for a long time in the school of Mr. Weld, at Hartford, where they first knew each other. I am happy to say, however, that they have so far overcome that sad calamity that they understand your meaning by watching the motion of your lips. Though they are still unable to—"

The miserable sinner! I knew what he was

going to say. "Speak!" that was the word; and Mrs. Barcarole and I stared at one another frantically, knowing that a fearful embargo was hanging over our tongues for Heaven knew how long. Thought of agony! I grasped the young villain by the arm, signed to him to wait, and wrote on the back of a letter with my pencil,

"For Heaven's sake say we talk incoherently, at least!"

That wretch looked at us with a sweet smile, and scribbled under my sentence,

"Suppose she'd been old and ugly—who'd have had to stand it *then?* I *guess* you can put up with paying for *that* risk?"

Mrs. Barcarole and I sat, in all senses, literally dumb. Meliboeus whipped up the horses, finished his sentence with, "Utterly unable to articulate," and the young girl shook hands with us over the back of the seat, her face full of childish pity.

"Poor, poor people!" she said, sadly, to the wicked humbug. "Yet they look so kind, so intelligent indeed. The lady is quite good-looking, and the gentleman has a very healthy, animated countenance, though I should never have taken him for a poet's relative."

"Why, sweet little maiden?"

Lillie blushed, but answered, "I oughtn't to say it when the poor man is your uncle; but his look seems unappreciative—matter-of-fact. Did he ever read any of your beautiful poetry?"

"I'll ask him. Uncle, did you ever read any of *my* beautiful poetry?"

I was enraged enough at the young man already, and this last was said with such a provoking ostentation of distinctness to conform to the assumed necessities of my case, that I became conscious of being very red in the face, and made an insulting gesture of abhorrence, pointing to the mud under the carriage-wheels.

"He says, Miss Taylor, that he never did, and thinks it vile stuff."

"Oh, the monster! I'm sure it's very kind of you to let him stay with you."

"He feels it to be so; don't you, uncle?"

The conversation happily now took a turn.

"Do you know, Mr. Barcarole," said the young girl to my nephew, "that in some respects you are—I hardly know what to call it—perhaps 'surprise' is the word—somewhat of a surprise to me?"

"A disagreeable one, is it?"

"No—oh no! not that. But as I was riding in the cars to-day I began thinking what a strange thing I was doing. You must never tell; but my guardian thinks I have gone into the country to spend the summer with an old aunt. I don't like guardians; but then, you know, one has to have such a thing—a young lady, especially, just out of Madame Gaie-Cherie's, and all finished up, with what they call large expectations, I believe, and no near relations in this country. Well, as I said, I was thinking, and I began to wonder what every body would say if they knew I had run away. Then, said I, supposing the poet Barcarole should be like other people after all—even such a person as that poor fellow on the back seat, for instance—and should have some terrible wife who would think me impudent, and all that sort of thing, for coming to see how a poet looked, without being invited. And supposing he should be very stern and cold, and she should be unkind, and not even ask me to take off my things and sit down, and all of them should say I was crazy, perhaps. I hadn't looked at the matter in this light at all before, and when I did I was one tremble all over. I came near not asking where you lived at all, but half made up my mind to stay at the station till the next train down, and go right back. And now it is so delightful to find you are not angry with me, but, in every thing, just like your poetry—just as I thought you would be, except—"

"Except what, Miss Taylor?"

The little creature looked down, with half-shut eyes, and grew all damask-rosy as she whispered—

"Younger and better looking. You aren't at all like your portrait."

Pleasant for the deaf-and-dumb man on the back seat! Oh! decidedly. Mrs. Barcarole and I looked at one another with indignation that could hardly be kept speechless. The picture referred to was taken some twenty years ago, just after I was married. Exactly as I looked when the beloved woman struck her colors to my fascination. Peale did it, and considered it a privilege. It had been the work of months. There were six fresh blush roses in my button-hole at each sitting. And every curl was conscientiously educated into symmetry with the best adipose secretion of Canada bears. Yet Meliboeus Barcarole—having lived to an age when there was no opportunity of going back and getting it done better—hears a graceless scamp, who plasters his short hair on his temples, and wears whiskers, shaped like a breakfast-roll, inclined toward his shoulders, called "younger, better looking" than that exquisite *chef-d'œuvre.*

Oh, times and manners, you are going to the devil!

Necessarily both Mrs. Barcarole and I were in the sweetest of humors when our carryall reached the piazza of Eclogue Cottage. To the manifest wonder of my little rhyme-struck devotee, or more properly, now, my nephew's, she found that rural solitude not altogether one of nature's wilds, but a country residence, with its parallel in common life—gravel walks, box around the front flower beds, a shorn lawn, and glimpses in the rear of something very like the vegetable garden and picket fence of an unnatural state of society. She was dispatched, immediately on arriving, into a very civilized and pretty little bedroom, and, while she attended to the details of her after-travel toilet, Mrs. Barcarole and myself embraced the opportunity, in the other end of the house, to unburden ourselves of our opinion of Mr. M. Barcarole, Jun.,

in a very un-deaf-and-dumb manner, and to that young gentleman personally.

"Well, Sir! I suppose you consider what you've been doing a very delicate and graceful joke?"

"I confess it wears a little of that aspect, my dear aunt."

"To set your uncle and me in such a ridiculous light before a total stranger!—a young woman in New York society too, who probably knows the Summergoods, and the Fallstocks, and all the first families of our circle (I've often heard them speak of a very rich Miss Taylor), and who will go back and let it all out, and then we'll be in a pretty fix, won't we? I sha'n't dare to lift up my head next winter!"

"My precious aunt, I intend this whole affair to be an entire secret between me and—my wife."

"What are you talking about?"

"Simply that the young lady who is now arranging the hair of Miss Lillie Taylor will return to New York Mrs. Meliboeus Barcarole, Jun. I know that it seems hard to deprive you of the noble gift of speech. I myself shall suffer more severely than you can imagine by the deprivation of your kindly tones and my uncle's inspired utterances; but recollect what you gain to balance the loss. You may both be present at the best scenes of all our piquant courtship—you can assist me, oh, indescribably, if you will! and then think, my beloved lyric kinsman, what an opportunity *you* will have for the gradual development of a drama, upon the basis of this joke, which will eclipse all your past fame on both continents. Just fancy it! Already, how the titles for the surpassing work crowd on me! 'The Delicious Deception, a Dithyrambic of the Deaf-and-Dumb!' Or, 'Love Lassoed by a Lute-String!!' Or, 'Pseudo-Meliboeus, and his Marriage with a Muse-Mad Maiden!!!'"

"Meliboeus, you hair-brained rogue!—"

"Put it in any shape you please. Drama—five acts. Romance—ten cantos—Maud style—I., II., III., IV., big Roman numerals. Oh, delicious! And *won't* it take? Dear me!"

"Wife, I don't know but the young scamp's right! Shall we forgive him?"

"Oh, it's all very well for you, Mr. Barcarole, you get paid for keeping your mouth shut *now*, by being able to sing poems with it by-and-by; but I'm only a poor little woman, and no poet—my mouth goes unrewarded—unused utterly—"

Both the Meliboei jumped up at once and falsified the statement by occupying opposite sides of that pretty little wronged aperture with a sonorous, long kiss.

"Forgive me, deary, deary aunt! Be good and help me! Oh, *do* help me! I have been joking; but I tell you seriously now, that all my happiness for the rest of my days depends on this thing's turning out well—and I know you will be as good to me as you always have been—*do*, dear Aunt Barcarole!"

So it ended with our both being merciful to the rogue.

IV.

Things went on delightfully. Mrs. Barcarole and I lived, day after day, in a delicious atmosphere of courtship, all fragrant and full of sunny sparkles as the one wherein we first kissed and cooed twenty years ago. Seeing those young people together, hearing their long, sweet, silly talks, watching their innocent dalliance, knowing that every hour they grew deeper, and still deeper enamored—all this lifted us quite out again from the sober, settled marriage twilight into which we, like even the warmest of lovers, had passed with the course of years.

And Lillie Taylor was so beautiful, so original, so good—an emigrant from Arcadia, just "come over"—a citizen of the unfallen virgin world. In her life there was none of that stiltedness which had appeared in her letter, or, if there was the same pure enthusiasm and rhapsody, now that we knew her it did not seem stilted. She was a most impassioned creature—but her fire burned without smoke or soot—there was no taint of bad self-consciousness in her emotion. She never was ashamed of herself, as most impulsive people happen to be fifty times a day—there was nothing to be ashamed of. Yet I blessed Heaven, over and over again, that it had cast her, fresh-risen, like the yet pure Venus, above the waters of this world, upon our poetic shores. There were few places where she could possibly have been understood but Eclogue Cottage—elsewhere she would have been the horror of appropriate beings, or, if tolerated at all, only under the shadow of that insulting protection known as "making allowances" for one. As for us, though we had been startled at first by the pureness of a pearl which was so unusual as to challenge suspicion lest it were mock, we soon came to make the only allowance that was made for our own worldliness—not her unworldliness.

I do not suppose that she ever once gave a name to the feeling she was cherishing for Meliboeus. She was perfectly satisfied; she drank in happiness to the full, and that was all she knew, as she walked lingeringly through the woody lanes with that naughty make-believe poet's arm folding her waist, her hand on his shoulder, and their tongues alternately, or in duet, running on to the music of his borrowed verses, quoted at all times and in all places with an admiration on her part great enough to have flattered the rogue into an inspiration of his own.

Meanwhile the deaf-and-dumb man and his wife sat by, looking on, seeing and hearing many sweet, and a number of funny things, with an exhilaration that almost boiled over.

As yet the pastoral affection of the pair had not reached that tender spot on the stair-case of love, the landing-place of the first kiss. Mrs. Barcarole and I were favored enough to be close by when they did come to it. And the manner thereof was droll exceedingly.

The whole of one dreamy, lotus-eating afternoon, the two had been sitting together on the

turf between the great roots of my favorite lawn elm, talking poetry and romance as usual, while my wife and I amused ourselves with the pretended occupations of knitting and reading, upon a rustic seat within easy ear-shot. By-and-by we heard Lillie say,

"Mr. Barcarole, there is one favor I want you to do me, that I have never asked yet. Make me an impromptu."

My eye caught Meliboeus's just then, and a more comical look of agony I never saw in the world. The struggle going on between Humbug, whose existence depended on asserting its indefinite capacity for all things poetic, and Truth, groaning to say "Never did such a thing in my life!" showed on his face like a very bad fit of toothache. I gave a maliciously good-humored chuckle in spite of myself, and pretended it was something very rich in the volume of Bibb's Discourses I was reading that did it. Meliboeus threw a pleading glance at me, and answered with a desperate sprightliness,

"Oh! do you like impromptus? Now really, for my part, I think they are the very shallowest pools in the stream of song. I don't recollect when I have made one."

"But just try it, please, for once. I know you can improvise. I saw a notice of you in the *Lady's Magazine* as long ago as I can remember, that said you were only equaled in that way, though not surpassed, by the Italian improvisatori. Come, that's a dear man. I shall keep it forever to remember you by."

And the little creature took out a note-book of visiting-card dimensions, and a pencil like a button-needle, to be ready.

For a moment Meliboeus caught his breath, and then, with the sudden determination of getting as much as possible for the terrific risk to his laurels, he said,

"Yes, I do it on one condition. You grant me a favor in return, and pay it beforehand Sooner or later I must have taken it without asking, for I'm wanting it more and more every minute. Give me one of your very sweetest kisses, Lillie Taylor!"

The young girl hesitated for a moment and blushed, glanced askance at Mrs. Barcarole and me, saw us very busy, and remembered we were deaf and dumb, then made up one of the most witching little mouths, and looked "Well, if you must" at Meliboeus.

The young man did not expect this promptness, evidently. He had flirted in town, among the window-curtains at parties, out of town, on watering-place piazzas, but I doubt exceedingly if he ever asked for a kiss in so matter-of-fact and direct a style before, and had it granted so pure-heartedly and quickly.

But he adapted himself to this new phase of woman's character very creditably. And when his lips settled, with all the chivalric gentleness of a humming-bird dipping into a fuschia, upon those of Lillie Taylor, I wondered, peeping over my spectacles, whether he was thinking of the impromptu. He assured me afterward that that consideration for the moment was entirely banished from his mind. If so, and it be true that the verse he made was as entirely without immediate forethought as mine would have been likely to be at that age, just after the absorption of my first kiss from the girl I loved, then I must say I consider the effort a clear case of Cupid's own inspiration, for I never imagined before that that boy could realize the coincidence in termination of "frog" and "log."

"And now for the impromptu," said Lillie Taylor. "It ought to be a very good one, naughty poet, for you have broken the bouquet in my belt all to pieces."

With a desperate enthusiasm Meliboeus began:

"Sweet girl, those damaged roses speak
More—hold on a minute—oh, yes—than my lips could in a week;
My heart just touched them, they were — were — well, say—shattered;
It must be contagious—to be—battered."

Lillie Taylor clapped her hands.

"Is that the way they improvise?" said she. "It's very funny. I like it, though. Is that one of your best?"

"Better than any thing I ever said. Better than any thing in my published poems." And Meliboeus looked over at me with a triumphant relief which silenced sarcasm. I did not chuckle; but Mrs. Barcarole did, very quietly, in a gentle, approving way, as women do when they see a thing of that sort going all right. Lillie Taylor put down the impromptu on her note-book. So did Meliboeus on his. And he has written for the journals ever since—a striking instance of the revelation of slumbering powers which may be effected by a pretty woman, who moreover is good and loving.

It was proposed that same afternoon, when the sun had reached a comfortable nearness to his bedtime, that we should ride to the village of Middletown Centre behind the bays. That idea seemed acceptable, and after a very pleasant hour, we all stood on the platform of the station enjoying, what to us simple country folk was a pleasant exhilaration, seeing the evening train come in. Among the passengers there stepped from the cars a small boy, with a bundle of placards under his arm, and a very mussy paste-pot hanging from his hand. Lillie and Meliboeus were now separated by the crowd from my wife and me, and did not notice him. We did, and saw him plaster up in a very conspicuous position on the outer wall of the station-house one of the bills from his package.

"Perhaps it is a circus coming," said Mrs. Barcarole. "The children will like to see the monkeys. They come back from school next week, you know."

No. It was no circus—monkeys were not even indirectly mentioned—and with faces of mingled perplexity and horror we read and saw it was—something else.

I left my wife standing by the bill for a moment, and sought out my nephew. Signing

my excuse to Lillie, I drew him aside, and whispered to him to go to his aunt; then took the young lady under my protection, while he hurried off to the spot.

When he reached there he read as follows, with what emotions I leave to be imagined:

"$500 REWARD!

"The above sum will be paid to any one who will give information leading to the discovery of Miss Lillie Taylor, a young lady who left the house of her guardian, the subscriber, on the 8th ult., and has not since been seen or heard from."

Here followed her description. Then the placard continued:

"At the time of her departure her intention was the paying a visit to her aunt, Mrs. Tabitha Sears of Chelmsford; but as that lady has not the slightest knowledge of her whereabouts, it is feared she has been forcibly abducted, or that other foul play has been instrumental in her disappearance. Persons able to give the slightest clew to her present situation will receive the reward above stated, and the sincere thanks of her very anxious relatives. COTTIN BAYLES,

"No. — Broad St."

"Now what have you got to say?" asked Mrs. Barcarole.

The only opinion Meliboeus vouchsafed was, that it was a very pretty kettle of fish. To which his aunt acceded cordially.

"And what are you going to do about it?"

"Discover her whereabouts to her guardian, and claim the $500. That amount I shall invest, one half in a saddle horse for my uncle, the other in furs for you, to pay you for being such good dummies."

"So you will back out after all?"

"Wait till to-morrow morning, and see if I do."

The whistle was just blowing for the departure of the train when Meliboeus tapped the placard boy on the shoulder.

"You needn't go any farther up the road. Take the next train back to town, and tell Mr. Bayles to meet me—no matter what my name is—at this station to-morrow at twelve o'clock. I will give him the information he wants."

The boy stared for a minute, not knowing whether he was being victimized. But Meliboeus quietly drew the placards from under his arm, thus leaving him no option, paid him for them at the rate of a cent a piece, and said, "Mind me," in a voice which reassured him. He then scratched down the still wet bill from the wall, and returned with his aunt to me.

That night we were all sitting after tea in the library by one of the windows which opened upon the veranda. Meliboeus and Lillie had taken their places upon the sill—it was their favorite seat, for it had no back, and that gave the young man a pretext for supporting the waist of the little girl with his arm. She was now leaning with her elbow on his knee, and looking up rapturously into his face as he recited one of my poems:

"To be great, yet not for glory—
To be famed, yet not for pride—
Sung in songs, rehearsed in story,
Lifted up, yea, deified—
Only to feel that you
Were given your queenly due
In being honored by my side."

Finishing the poem, his voice grew yet more earnest.

"Lillie Taylor, when you came to Eclogue Cottage, or rather when you started for it, what was your feeling for that person known as Meliboeus Barcarole—the exact nature and extent of it, I mean, if you can define it?"

She thought for a few seconds, and then answered considerately:

"It was intense admiration—reverence for your great mind."

"You are sure you would have come just as soon if you had known me to be the father of a family—an old man already married?"

I could see that Lillie Taylor caught the hint contained in these words, for even in the moonlight her face suddenly flushed scarlet, and with a manner of wounded pride, or as if she would withdraw misplaced confidence, she removed her elbow from the young man's knee and said, spiritedly,

"I came to enjoy seeing and hearing the *poet*—I do not have to leave New York to *find* a *man*."

"Do not be offended. I meant nothing unpleasant. You will understand why I ask the question in a moment. You have been here now a month. When your letter came I expected to receive you as a devotee. Lillie Taylor!—every day you have been here has made me yours—you have grown dearer to me than all the fame I could win if I were a Homer! And tell me—sincerely, from your deep, true woman's heart—has any such change happened in your feeling for me? Do you *love* me, dearest?"

Probably she awoke to know it for the first time. For she became pale again as the moon that was silvering them both, and trembled from head to foot as she faltered out,

"It has all been like some long, beautiful dream—yet I know now that I do—yes, I do love you with all my heart."

I checked myself just in time not to say "Hurrah." But they would not have heard me, or any thing but their own hearts, which were now throbbing close together in the strange gladness of their first love embrace. Meliboeus spoke first.

"And you are sure, dearest love, perfectly sure that it is not admiration for my talents in the least degree that makes you love me?"

"If you had never written a line—if you hated poetry—if you were as unknown and untalented as your poor uncle—I would love you just as much."

"Then I will dare to make a confession to you. Forgive me, if you can; but what you just supposed, for the mere question's sake, is true—a fact. I am *not* the Meliboeus Barcarole who is a poet—I am not famous—I am nothing but a man who loves you with his whole soul! Lillie, can you love me yet?"

"Why, what in the world do you mean?"

"This, sweet one—that I have worn a mask ever since you have been here—I have made believe that I was the poet, only because I feared that without that you would never, never think of me, care for me, love me. For, absorbed in the famous uncle, how could you ever have looked even at the unheard-of nephew? Oh! it was very wrong to be such a cheat; but think what a temptation beset me when I knew that I might thus be deciding a whole life's happiness."

"You amaze me! Who is the poet? Is there one at all?"

"It is my uncle, Barcarole, who sits right behind us on the divan. Bless his dear soul for giving you to me!"

"And is he really deaf and dumb?"

"Not a bit of it, nor my aunt either. Can you—can you forgive me?"

"Oh, you shameful, wicked sham! You bad man! You imitation pearl—you paste diamond! I am so angry with you I hardly know how to speak!"

"Well, Lillie! It is all as I feared—I have sinned too much to be forgiven. I am not worthy of you—the rest of my life must be spent in repentance for the folly that has lost you. I will go to-morrow."

He rose to leave her, with a face that was full of intense pain; but just then the conflicting feelings in Lillie Taylor's bosom grew too much to keep in, and woman's ready relief came, as she threw herself upon the breast of the penitent young humbug, sobbing, and saying in a choked voice, "Oh, don't—don't—I *do* love you—I *do!*"

Mrs. Barcarole and I had borne it as long as possible. We threw ourselves into the affecting scene, and mixed up our arms and lips inextricably with those of the two lovers, kissing and hugging, crying and laughing, hurrahing and soothing. And when we had all exhausted ourselves we sat down.

"It has all ended so happily now," said I, feeling called on to address the meeting, "that I am hardly sorry that we were all such rascals. Lillie Taylor, forgive me as well as Melly. Wife, I am a humbug, thou art a humbug, he is a humbug—we, ye, they are humbugs; but, future, indicative, and negative, we will never do it again. I am the poet you admired, Lillie. If you've

> "'The slightest particle
> Of that pleasant article—'

left for me, do me the favor to let me ring for the waiter, send after our minister and give you to the man that loves you. And thank your aunt, Meliboeus, for having fallen in love with me and carried me off twenty years syne—or, you may be sure, you'd never have been my proxy in the entertainment of this visitor!"

And the two were married that very night.

As I came up into our cozy little bedroom I saw the last review, with a flattering notice of me on the table, and then I looked at my good, smiling, happy wife. As a symbolic act, I threw the magazine on the floor, kicked it across the room, and kissed Mrs. Barcarole with a fervent enthusiasm, crying,

"Oh, ye gods! how much better to be loved than to be admired!"

V.

The next morning broke on us as clear and smiling as it ought, to honor worthily those dear young people's first married day. And all our faces were as clear—the masks gone forever—the tongues untied—and the naughtiness of the past weeks forgiven by Lillie, and forgotten in the dove-like, before-breakfast kisses which she gave us all.

"And now, my dear wife," said Meliboeus, in the serene and lovely dignity of being married, which fitted him *so* much better than laurels—"how would you like to go with me this morning and give somebody a delightful surprise? Your guardian, as I learned indirectly yesterday, is a little worried at your absence, and to put his mind at ease I have invited him to come up in the twelve o'clock train and hear all about you. Will you go down with me to meet him?"

Lillie looked a little confused. Then said she, "Dear deaf-and-dumb-ies, will you promise to be really dumb if I'll tell you something? You too, Melly—I never said a word about it before, for I wouldn't have it get out for the world—but now, as it's all in the family, I'll speak it. Just the day before I ran away, I got a little note from my guardian, Mr. Bayles, and it actually asked me to be his wife, just like any matter of business, and ended with promising to build a green-house if I would. I haven't any doubt it was written in the very same style that his letters about coffee, and tea, and molasses are, down in Broad Street. I never answered it—it frightened me out of my wits—and then I came up here. Oh my! won't he be angry when he sees me! But then, the idea of my being step-mother to young Cottin Bayles, who's older than I am, and does nothing but dress and cultivate horrid habits. Nobody'd like to be it, I'm sure. It's too ridiculous. But never mind—I'll go with you—only don't let him make you angry or say any thing rude, dear."

We had been so long practicing ruses that we couldn't quite yet consent to abjure them utterly, and so contrived one which was carried out as follows:

Lillie, Meliboeus, Mrs. B., and myself, made up our usual *partie carrée* and drove down to the station. When we heard the train coming the two ladies and I hid in the baggage room, leaving the door just enough ajar to let us watch the operations of my nephew.

Among the very first passengers that leaped to the ground, was the Dr. Bartolo of our dear little Rosina. Meliboeus knew him instantly—who does not know Cottin Bayles, Senior, that has ever been in New York, operated on 'Change, and attended Leviathan Anniversary Meetings of Brobdignagian Societies? And, in spite of his intense anxiety, he seemed to stand exist-

ence remarkably well, and to be as beaming with intense well-to-doishness as ever. Before he could look around or make inquiries of any body Meliboeus had taken him pathetically by the immaculate olive right glove, and observed to him, in a tone of profound sympathy,

"I am the person, Mr. Bayles, who sent to confer with you upon the painful subject of the unfortunate young lady."

"My dear Sir, you will oblige me by instantly relieving the deep solicitude under which I labor. For days past I have neglected all the fluctuations of the market—sugars have risen and fallen—I pay no attention to them whatever—to speak vulgarly, my business is by the ears—I am preoccupied, abstracted. I hope she isn't dead!"

"No—she still lives."

"And can you tell me where I may find her? It is of the utmost importance to her prospects that she returns with me. In strict confidence, I will tell you that one of the wealthiest and most prominent men in New York has made overtures for her hand. I feel as if I should like to aid him. Let us come to business—what do you know of her?"

"Yes—just as you say—*business*—and that includes the $500 reward. You may notice, in looking at me, that *I* do not suffer from the want of it; but I wish to aid a literary man not over-rich, who has been prominent in acts of the greatest kindness to your ward. Give me your check, then, and I produce her."

I rushed out of my concealment.

"No no, Meliboeus, that is carrying the joke a little too far. I am authorized by that literary man to say he will receive no money—being satisfied with the consciousness of a noble action."

Mr. Bayles stared at us both—not knowing in the least what to make of it.

"Perhaps you are right, uncle—more especially as Mr. Bayles might think his money thrown away, when he discovered how little we are able to assist his prominent wealthy friend. Aunt, Lillie darling! will you favor us with your presence?"

The two ladies emerged from their hiding-place, and with mingled condescension, and a proper guardianly displeasure at the conduct of his ward, Mr. Bayles took Lillie by the hand, saying,

"In spite of the past, I am glad to see you again, Miss Taylor."

"Thank you, Mr. Bayles, you are very kind."

"Oh dear me!" cried Meliboeus. "You needn't be so fearfully reserved, Mr. Bayles. I shall always consider you as a venerable friend of the family. You may kiss *my wife*."

"Sir, this is no joking matter!"

"I never was more cheerfully serious in my life."

"Are you *his* wife, Mistress Lillie?"

"I am so happy as to be that person."

"Then I consider you all a precious set of scamps, and bid you a correspondingly respectful good-morning. You may suffer for this yet, Sir!"

But he never has. On the contrary, he is rejoicing to this day in the results of that month at Eclogue Cottage, when his uncle's verses were the prelude to that sweet music which thus far fills his heart and Lillie's in their happy married life—when the gift of a wife, better than all laurels, crowned the loan of a Lyre!

ENJOYABLENESS.

THE other day I chanced to get, from my little boy, a lesson in the minor ethics of life that I shall be slow to forget. It came upon me unexpectedly; but all the better for that, I verily believe, as I often notice that my best blessings reach me from unlooked-for quarters. Trouble and sorrow, so far as we can prepare for them, ought not to come unawares. With happiness, and especially with instruction, it is different. The back-door is their entrance. But to the lesson.

In my eagerness to contribute to the happiness of the lovely boy I had expended a few dollars in purchases at the toy-shop. When I took them home and presented them to him, he seemed very glad, and forthwith went to amusing himself with them. I thought they were just the things—the very things for him; and as I had exercised some ingenuity in selecting them, I confess to a little vanity in watching the experiment of making him happy. A few days passed off, and I began to find him rather indifferent to what his mother, wiser than myself, called his shop-happiness. And it grew upon the little fellow; and not long after I was somewhat mortified, despite of wife's sager philosophy, to see that he had cast them altogether aside, and was very busy manufacturing his own amusements.

I was rather chagrined, as already stated; not that I was weak enough to suppose that nature in the boy ought to yield her ancient ways of thinking and acting to my quarter of a century wisdom, but slightly touched in my vanity that I really knew so little of the genuine instincts of the heart. When I saw the boy turning so independently from his painted toys, and taking to sand-houses built on his feet, to paper-kites with broom-straws, and miniature mills of his own making, I did not think the less of him, but of myself for trying to dictate how he should be happy. And this was the lesson I learned: that Nature is always aiming to awaken within us a free and spontaneous enjoyability, and that if left to ourselves, to natural and healthy instincts, to our own simple tastes and pursuits, we shall have much more pleasure than when we torture her to adopt our poor methods of being happy. The boy could do without artificial excitements. Costliness was not essential to his easy-flowing joy. Hoops, sticks to play horses with, were worth more than shop-happiness. And I am sure this is Nature's way with all of us, until we quite overmaster

her kind authority. I was late in finding it out; but, thanks to the boy, I did learn that Nature is very bountiful if we do not scorn and crush her, and that she has a most heavenly way of giving us pleasure ere we know what she is intent on doing.

I prize the lesson—I prize it highly. And since that day of instruction I have been somewhat of another man, breathing pleasure in the air, inhaling it from fields and flowers fresh every morning with the odorous charms of a purified world, drinking it in water, receiving it from sunny faces met on the street, and imbibing it in countless forms from the myriad sources of gratification opened around me. All of us have some such experiences. That is, every body has occasional glimpses of the inherent fullness of life, of the well of happiness within. Few, however, are wise toward themselves. Few learn any thing out of the depths of their own souls. Nature keeps the best school ever taught; but I fear that only a small number ever go to her for truth and knowledge.

Of one thing I am well assured: that human Nature has far more resources of happiness than are generally used. There is more provided for us than we know. It is either a poor Nature or a rich Nature, as we use it. Learn its laws, obey its guidance, penetrate its depths, and it is a far nobler thing than we can exhaust. Ten thousand calls on it for strength, impulse, endurance, blessedness, are all promptly, freely answered, and ten thousand greater responses are still left ready for new summonings. Appeal to its imperial grandeur, and it will not dishonor the demand; but treat it distrustingly, scornfully, and it will refuse you every request. At once it is poverty-blasted. Nor will it stop at your limits, but go lower and lower down, sounding fathoms of degradation. A nature belied is awfully revengeful. The demons feast and fatten at its table, and leave you to starve. But a nature prized according to God's estimate, loved as self but not selfishly, served in the sense for spirit's sake—such a nature makes good the assurances of instinct, and draws the plenitude of the universe into its faculties. Hoping in the right way, men can not hope for too much from themselves. If separated from God's truth and love, they are separated from every thing great and good. Men imagine that they can live in the world and dismiss God as an inconvenient, or expletive, or obsolete idea. Such a falsehood instantly converts the world into an alien sphere. Its very gravitation to such a being becomes a lie. Things cease to be realities, and sink into hollow forms without substance. It is a painted universe of shows and phantasmagoria. The song of the bird is not its native-born melody, and the flow of streams, otherwise so musical, has a gurgling, choked sound, as of men struggling in agony.

Therefore, the first attribute of true enjoyability is this recognition of the soul as a divinely-created substance that can not be divorced from goodness and fulfill the laws of its being. This sense of divineness enthroned in the conscience must not be a mere sense of duty. Glorious as that is, it can not answer all the wants of nature. To its authority, supreme among the functions of the mind, we owe all that is solid and substantial in the foundations of character and life. It is the abutment on which we build, or the honor of a "wise master-builder" is not ours. Notwithstanding, there is something more to do. No great character is the simple product of a sense of duty. A conviction of law is essential; but the love that fulfills the law rejoices at last in goodness for its own sake, and carries the Ten Commandments in its spirit and not on tables of stone. It is a free, glad, exultant spirit, enjoying the liberality of the world as a cordial, affectionate companionship, working without the consciousness of work, and serving because of the innate blessedness of service. Its growth is more tree-like than architectural, foliage and flower springing from instinctive vigor, a creature of sunshine and moisture. Abroad it never goes, but holds fast by its roots, and stands in its own predestined spot. That spot is its own place, safe from intrusion. It is no restless seeker, asking for better situations, as if sunshine and dew were more genial on the mountain than in the valley. The truly enjoyable soul is never enslaved to times, seasons, circumstances. Triumphant over these, it lives by the simplicity and openness of receiving just what is given; and abundance is always given to a heart that has no unreasonable desires, and is content to exist on unmerited bounty. You can not impoverish its substance. Fictions and fortunes pass away, but its genuine self and genuine connections are fixed and imperishable. More is left than is taken. It never has outside losses to repair. For its fullness is of itself as derived from the divine Fount of Life, and the certainties that sustain it, abiding in the order of the universe, come as a portion of day and night, seed-time and harvest.

Enjoyability has a large sense of adaptation. Objects fit into it as if they were made for that purpose; or rather, what is far better, it suits itself to objects. We say far better, for in adapting ourselves to circumstances we exercise our will and discipline our tastes in such a manner as to improve the tone of character; but where we strain and struggle to make circumstances suit us, there is all the difference between working outwardly and inwardly. The former is a spiritual thing; the latter material. The one forms real excellence; the other cultivates the skill and ingenuity of mechanical art. In the one the soul is an artist; in the other an artisan. Our success, too, is so much more marked in adapting ourselves to circumstances than in the opposite method. Circumstances are not for our private gratification. No man ever found them, in any great degree, his willing and devoted friends. They often show a spice of hostility. But in harmonizing ourselves with them, we can effectually carry the day; for

the soul can always manage itself, if it will, and every man can be as contented and as happy as he chooses to be.

I have two friends, A and B, who are, in this particular, very unlike. A is an excellent sort of a man, but with an aristocratic personality about him that would do very well if things in this world had not such provoking ways, and did not delight in crossing us. At one time he taught school with eminent success, but after a while ascertained that it did not agree with his health; so it was abandoned. Then he studied law and was admitted to the bar, but he had to wait too long for practice. Medicine followed, but it did not pay well enough. He then undertook a vineyard, but the vexatious Dutchmen were more than he could stand. The last time I heard from him he was cultivating literature, assuring me that he had now fallen upon a mode of life that suited him exactly. It is so pleasant, says he, writing in one's own room when you feel what he calls the afflatus, escaping the drudgery of hours, putting things in general to rights by the stroke of your pen, and floating down to a great immortality on a thin stream of Harrison's Columbian Black Ink. I had a thought of writing to him that literature was an agreeable relaxation, but a wretched profession, and that a man who used but a thumb and two fingers, and held a seven-inch pen-handle, was fighting the battle of life on short rations and with a very doubtful weapon.

B takes things better. Although a man of taste, select taste, and with exquisite sensibilities, yet he knows that human life has some hard conditions, and that one of them is in the shape of a legislative enactment, made and provided for such cases as his, and significantly entitled "*An Act against Agreeable Circumstances.*" B is a very law-abiding man, and, of course, submits. You always find him cheerful, and often buoyant. If any thing go amiss he quietly repairs the damage. If he meet with a loss in business, you only know it by observing that he works a little harder and with a more sunny face. In company he is the soul of fellowship. Without pet opinions and poodle-dog dogmas, he never gets insulted in argument, nor thinks you have a private grudge against him because you happen to differ from him. He is a kind of host and hostess in every society. People who are with him are always in keeping with the occasion. Indeed, a transcendentalist would say that he is an occasion in himself.

The difference between these two men is simply in the fact that A is bent on making life suit him, while B is satisfied if he can adjust himself to the circumstances around him. A is hard to please, and B is easily gratified. A thinks that the art of life is an external accomplishment, but B believes that it is an inward acquirement. A is the veriest of slaves, although he vaunts himself on his high independence. His stomach depends on his cook; his sleep on the servant who attends to his bed; and even his religion on good preaching. He despises such maxims as "Half a loaf is better than no bread." But B is not made of such stiff and unbending materials. A lithe blade is he, always winning the victory. If life is a battle, says he, you can fight it any where, and with any weapon that comes to hand. And his work corresponds with his creed. Wherever you find him his position seems to have been born with him. The world is a part of himself; and, indeed, I have sometimes thought that outward life and he were in wedlock, so well do they agree. B has been a living Sermon on the Mount to me. And from his serene tempers, cordial acquiescence in all the destinies—the thousand destinies—of every day, and from his heartiness in word and deed, I have often felt that it was quite possible to make the world as a bride, young and lovely, to one's spirit, and to find beauty and joy almost immeasurable in its companionship.

Enjoyability has quick, large sympathies. And I suppose that this is one great secret of its strength and happiness. People differ widely in this matter of sympathy. Here is a man whose sympathies are the offspring of his thoughts only. There is another who has none except what his taste creates. With those who are better constituted sympathy ordains the law to intellect and taste. Heart rules every where, in every thing. Not that blind and reckless impulse sways them, for impulse and heart are not identical. Heart is soul itself—the substance of our being—the proprietor of past, present, and future—the genuine personality with which heaven and earth negotiate in all great transactions. Impulse is but one of its modes of action. Men sometimes need it as an escape-pipe for their steam-works, and on a vast scale; impulse performs the office of a volcano, in affording vent for the dangerous gases that might rend the earth if not allowed to liberate their fury in the open air. Heart is God's power; impulse is man's imitation of heroic vigor. Wherever heart asserts its rule, as it always does in the best-endowed natures, sympathy is broad and energetic, brimful of outgoing activity, sweeping in circles like the eagle's, and, with an eagle's eye, quick to detect its object. Intellectually it is a vast power. Genius may exist without its presence, but it is the Temple without the Shekinah. A man of mere intellect, of massive faculties, of comprehensive scope, of ox-like laboriousness, may build the pyramids of literature, but they are pyramids of the desert. The far-seeing and all-interpreting eye, the mighty imagination, that combines the compass of the telescope and the minute inspectiveness of the microscope; the grandeur of mind that encircles a system of worlds, and the spiritual subtleness that wanders through the labyrinths of an atom, and greets it as a storehouse of wonders; and, above all, the perception introspective, looking far down into the depths of the absolute soul, and listening to its low-murmured prophecies of the ages to come,

as those ages shall be when they wear the resplendent glory of a restored and perfected universe; such genius as this can only spring from the great sympathies of a still greater heart. In His reckoning with manhood, both here and hereafter, God honors with the higher distinctions nothing else. For it is the law of the universe—of all objects in earth and heaven, as well as of God's government—"*Give me thy heart!*" The humblest shrub, the tiny dew-drop, the fragile flower, the majestic trees, the magnificent firmament, speak to us, and each says, "*Give me thy heart!*" But they thus speak as of God, and not for Him, in so far as they are his proclamations of royalty in wisdom, power, and love, and not for themselves.

Our more recent poetry and criticism have acknowledged this power of sympathy as essential to all truthful and profound insight. Love is seen as the highest inspiration of intellect, no less than the sublimest joy of the affections. Cowper and Burns were full of its cordial, exhilarating fire; Charles Lamb and Christopher North, Chalmers and Channing, although widely different in temperament and gifts, have all yielded to its potent sway. Intellect is not a self-developing power, for it leans on the heart, and draws its best life from hope and trust. But sympathy has a greater work than this. As an ennobling influence for everyday life, as a secret but authoritative interpreter of other hearts, as a source of strength and joy, it is as a seraph among the other faculties. For it is the office of this sympathy to give us a sense of property in all things beautiful and pure, to enrich our poverty with the wealth of the universe, and thus to supplement our life with the fullness of being around us. A sympathetic man is a recipient of vast favors, but he finds it "more blessed to give than to receive." Christ's words have an hourly fulfillment within him. The outgoings of his soul expand and exalt him, and whenever a good thought or feeling issues forth from him, how something better hastens to fill the vacancy! It is the old rule —*Give and Get.* How mysterious this outgoing and this incoming! We love childhood, and it brings back our own childhood and adds its beauty to our present being. We enter into our neighbor's gladness, and it suddenly becomes ours. Even inanimate objects contribute to his spirituality. Deeper than his senses penetrates the fragrance of flowers, the grace of forms, the musical movement of planetary orbs. Far off in the East the tall palm lifts for him its broad leaves, and the cedars of Lebanon shade a landscape nearer and closer than the mountains and vales around his dwelling.

These three elements, then, are essential to an enjoyable nature, viz.: the sense of divineness in the soul; personal adaptation to the disciplinary laws of life; and broad, diffusive, earnest sympathies. On these conditions we may enter into the blessedness of being. The three are in firm concord, and hold strongly together. If we will live in the universe on God's prescribed terms it will not be a dull, monotonous, cheerless habitation. It will not be a prison. It will not be a purgatory. But for us every day will be a new birth out of heaven, and every night a fresh firmament not before seen. Trials and sorrows—called such on earth —will come, but known on high by other names, they will, ere long, tell us what they are in the serene light of God's presence. Vailed as these angels now are, and wearing dark robes as they lead us on toward the City of the Great King, we shall soon see them grow luminous in the light of an unshaded glory, and hail them as the messengers of Infinite Love to conduct us into the realms of perfect peace.

LOVE AT A LATTICE.

June 10, 1858.

THERE'S a little maid in blue
(Who she is, is naught to you!)
Sits at a window all day long
Chirping like a gladsome linnet,
And her simple little song
Has a wondrous magic in it.
Her hair is of a golden brown,
And her white neck rises up
From a modest muslin gown,
Like a lily from its cup.
Then her eyes are—what are they?
Black or blue, or brown or gray?
On my soul I can not say—
On my life I never knew;
Sometimes they do seem as blue
As the sunny skies of May,
But skies grow dark—and so do they.
This I know, whate'er their hue—
Gray or black or brown or azure—
That to gaze on them is pleasure;
And to me—across the way—
They make bright the livelong day!

June 13.

'Tis the cruelest little maid,
She that in the window sits!
What d'ye think she does? She knits
From early morn till evening shade.
And what d'ye think she knits? A stocking?
Ah! my friend, 'tis far more shocking.
Perhaps the mystery is a mitten?
Alas! I would it were so written.
A sofa-cover, then? Far worse!
The little traitor knits—a purse!
Yes! a purse of pea-green silk,
Thickly sown with silver beads;
And my heart instinctive reads
That this red-lipped cockatrice,
With those hands as white as milk,
Works some conynge, quaint device;
Probably the odious cipher
Of some lover! Ah! I'd die for
Just one peep to satisfy
My innocent curiosity;
Not that I care one pin. Not I!
But then the cool atrocity
Of knitting a purse that I am sure
Is only a shameless *gage d'amour!*

If there's aught I can't endure
'Tis to see hands white as milk
Knitting purses of pea-green silk!
Still, it is the prettiest sight
To watch those fingers, slender and white,
Twisting out, and twisting in,
Through the meshes of silver and green,
Like white birds that play in the month of May
At hide and seek, through a leafy screen.
Ten white birds so busily making
A nest for Love in a silken lattice.
Ah! what pains are the little ones taking!
Labor like this is not given gratis.
In and out, and over and under,
Here and there with a snowy flutter—
Am I to blame if I often mutter,
"What are the love-bird's initials, I wonder?"

June 14.

Yes! I have bought me an opera-glass;
Now, my little Lachesis, tremble!
Twist your threads as you like, fair lass!
Bit by bit as the beads assemble
I shall read unfelt, unseen,
The secret that glimmers in silver and green.
Nay, even now I fancy I spy
A half-grown letter—I think an I;
But I'm not quite sure, for it may be a Y;
And, on looking longer, perhaps a B,
Or—Pshaw! I'm altogether at sea!

June 16.

What right have I to overlook
This poor, unconscious little girl?
To scan her through tubes of mother of pearl,
And ransack the shade of her modest nook?
Heaven ne'er published so dainty a book
To be pawed and pried in for pastime merely—
I know that I love light reading dearly;
But the novel is easily bought for a dollar,
While the rare edition belongs to the Scholar.
I feel like a thief every time I stand
Behind my curtains, *lorgnette* in hand;
A cowardly thief who sends his eyes
(Or his pupils) out as proxies to steal
A maiden's privacy—splendid prize!
When I think how unmanly all this, I feel
A blush suffuse me from head to heel.
Never again, on my solemn honor,
Shall opera-glass be bent upon her!
At least—Hallo! what's that in her hand?
As I live, a villainous three-cornered note!
Now a round, or a square, or a rhomboid, I'd stand—
But three-cornered *billets* from ages remote
Have been very well known to be dangerous epistles,
And, like conical bullets, most fatal of missiles.
Oh! for one good glance at the writing,
To tell if 'tis male or female inditing!
Confound it! opticians were made to provoke us!
I can't for my life get this glass to a focus.

June 18.

The pea-green purse progresses finely;
Day by day the initials grow.
What they are at last I know—
A flourishing C and a great fat O.
The little maiden smiles benignly
While her fingers to and fro
Weave the emblems of my woe.

June 19.

What kind of fellow is he,
This lucky C O of the purse pea-green?
Tall and black, and martial of mien;
Gigantic shoulders, the ruddiest hue,
And teeth as white as white can be.
This, I'll vouch, is like as one pea
Is to another. I never knew
A tidy maiden, like ours in blue,
Who did not invariably make her nest
On some colossal husband's breast.
Perhaps because maids feel 'tis as well
To marry a conjugal citadel—
A massy rampart of flesh and bone
Between them and attack up-thrown.
I, alas! have the mortification
Of not being a human fortification.
My legs are not towers of strength, I fear;
My chest to a rampart comes no way near.
I can't lift hundreds of weight on my palm,
Nor is my head like a battering-ram.
I am a scholar without much muscle;
The Astor's alcoves are my gymnasium;
There with mighty folios I tussle,
But in Euclid only I know the Trapezium.
What chance have I, I should like to know,
Against our athletic friend, C O?
I've seen in my time a good deal of society,
And studied men in every variety,
And watched the way the women are won;
And found as a general rule (though none
Are without exceptions) that in the fray
Of Head against Shoulders, I grieve to say
Shoulders will always carry the day.
And whether at opera, concert, or ball,
The Scholar invariably goes to the wall.

June 20.

Ah! how beautiful is she to-day
As she sits at her casement over the way!
The trained thorn-apple, with its flowers of flame,
Clusters all over the window-frame,
While she like a picture, sun-lighted, sits—
A picture, however, that sings and knits.
No! what am I saying? She knits no more.
The huge C O stands quite confessed;
The ten white birds have built their nest;
And now, their labor completely o'er,
With rings on their necks, are taking their rest.
Not so the maid. Her bright face shows
No tokens of a calm repose;
Her cheek is flushed, and I think I spy—
Not, I fear, with the naked eye—
The heave of a hot, impatient sigh
Moving the folds of that wicked blue gown,
Sometimes up and sometimes down;

And I see her drum with her little feet,
And follow her glance adown the street,
And watch her playing, with anguish keen,
With that odious purse of silver and green.
'Tis plain as a pike-staff, I say,
C O is coming to see her to-day.
Yes! He returns in triumph at last,
Countless perils and dangers passed,
With a sun-burned face and a wreath of laurel,
And his pockets stuffed with diamonds and coral;
For he most probably is a sailor,
Sent to look after the steamer *Styx*,
Who, boarding all, from smack to whaler,
Nearly got herself into a fix;
Or he may be a soldier, just from Utah,
Where each has six wives and a six-shooter,
And where, though in constant relations with Brigham, he
Has not been yet seduced to polygamy.
Yes, I am sure he's a martial fellow,
With lots of adventures to tell, like Othello,
Who crammed Desdemona with all sorts of fibs
About the numbers he stuck in the ribs.

3 o'clock p.m., same day.

A carriage drives up to the door,
And I see a male figure within,
Muffled and cloaked to the chin.
Alas! welladay! All is o'er!
'Tis C O. There can not be a doubt,
For the maiden her head stretches out
Of the window, and beckons with glee;
And he that sweet signal has caught
(He isn't as big as I thought),
And so rushes up stairs. It *is* he!

I watch her room with eyes of lynx—
I watch the forward little minx
Fluttering ever to and fro,
Like a pet dog that doth know
The step of its master on the stair.
Ah! *her* master is C O!
Now her door opens—there's a glare
Of light—HE enters—there's a flight
Of something blue across the chamber.
I know they're kissing—'tisn't right,
With the window open! She tears away
His cloak, and he stands in the broad, full day,
While she dances round him with joyous rackety—
Oh Heavens! he's dressed in a school-boy's jacket!

(Five minutes allowed for recovery
After this strange discovery.)

Yes, after all, he's her brother!
The purse, after all, was for him!
It seems like a wonderful dream
That follows the struggle and smother
One feels in a nightmare. Hurrah!
I feel like a new-born star,
Or something as lofty and light!
I'll go over and see her to-night—
No, I can't—I don't know her. Oh horror!
There's Jenkins, he knows her, I'm bound;
I'll make him take me around,
And I'll make her acquaintance to-morrow!

My Wedding-day, August 2.

The ten white birds are mine! I've caught them—
To complete subjection brought them.
In my bosom they have their nest,
And I to-day will duly invest
The eldest born with a thin gold ring,
So they will be my slaves forever,
And I their lofty but loving king!
In short, I am to be married to—who?
Why, who but the little maid in blue!

THE WIFE OF OUR NEW MINISTER.

THERE had been a pastoral change in our congregation. The people, after a ten years' trial of good old Mr. Wharton, and his amiable, compliant wife, came to the conclusion that a different kind of preacher, with a different kind of wife, would vastly improve their spiritual condition. There was a lack of strength about Mr. Wharton (so it was alleged), and certain prominent ladies in the church had wished (aloud) so often that Mrs. Wharton were less old-fashioned in her ways, that change, sooner or later, had come to be a settled thing in the minds of a majority. It was simply a question of time; and time settled the question. The change was made. Old Mr. Wharton and his wife retired, and Rev. Mr. Newton and his wife took their places in the pastorate of the congregation—I say "Mr. Newton and his wife," for our people think, or used to think, that, when they "hired a minister," they hired his wife also, and regarded her duties among them in quite as high a light as they did the duties of her husband.

I happened to be away from the village at the time this change was made, and did not return until after Mr. Newton and his wife had been doing duty for something over three months.

"How do you like the new minister?" was among the first of my inquiries.

"He's a charming preacher," was the reply I received on every hand. Yet I saw, by the manner of my friends, that some drawback existed.

"How do you like his wife?"

Ah! The little mystery was explained. Mr. Newton was well enough. But his wife!

"What kind of a woman is she?" I asked.

"Don't know. Can't make her out," was the vague answer received.

"Is she any thing like Mrs. Wharton?"

"Oh dear, no! I only wish she was. Why, she doesn't take a particle of interest in the church. Hasn't been to one of the monthly concerts for prayer; nor to the weekly sewing-circle; nor even to the Sabbath-school. We calculated entirely on her taking the senior girls' class which Mrs. Wharton taught for so many

years; and a committee of ladies waited on her with an invitation to do so: but she actually declined, saying that she had neither *taste* nor *aptitude* for teaching! Now, what do you think of that for a minister's wife! Did you ever hear the beat of it?"

I saw, at a glance, that there was trouble ahead; for Miss Phœbe Lane, who made me this communication, was an active "circulating medium" in the congregation. She knew every body's business, talked to every body, and acted as opinion-maker to a large majority of ladies who had too much to do in their families to have time for independent thinking in church matters.

I must confess that I felt a sort of liking for Mrs. Newton on this representation of Miss Lane. Mrs. Wharton had been such a pliant subject in the hands of my spinster friend, and a few like her, that an involuntary respect was created for a minister's wife, who, in coming among us, could from the beginning show that she had an individuality of her own, and meant to hold on by it.

Two or three days' intercourse with the members of the congregation satisfied me that Mrs. Newton would not do for the Church of St. Charity. When and where this lady was sainted I have never learned. I have my suspicion that Miss Phœbe Lane, who rechristened the parish on the occasion of building our new church, was not particularly well read in the Saintish Calendar. But let that pass. Ours was the Church of St. Charity. Mr. Newton was a delightful man! Such a preacher! So active in all the interests of the society! So pious! So humble-minded! But his wife! No woman could be less suited to her condition. It was even doubted whether she were a professor! Phœbe Lane was positive about it; and averred that she didn't believe there was a spark of piety in her soul. How a man like Mr. Newton could ever have mated himself with such a wife was regarded by Miss Lane as one of the inexplicable mysteries. "A man like Mr. Newton, who might have had his choice among women!"

I went to church with no ordinary feeling of interest on the Sabbath following my return. Whether my leading impulses were of the earth, earthy, or of heaven, heavenly, I will not stop to question. Five minutes before the time for service to begin a lady, just above the medium height, beautifully formed, and with a step of blended grace and dignity, passed along the aisle leading a child by the hand, and took her seat in the minister's pew. Though not in any sense gayly dressed, there was a style and air about her that by no means indicated a pious disregard of worldly things. Taste had evidently presided at her toilet. I noticed a slight flutter running through the congregation, and the turning of many heads toward the minister's pew, which occupied the most prominent place in the church. The lady did not look around her, nor show the slightest sign of interest in the people. How different, in all things, was her appearance and bearing from that of good, kind, compliant Mrs. Wharton, whose pleasant, almost smiling face I had seen for so many years in that pew—a face turning, as by instinct, its mild sunlight ever and anon upon the congregation, while her husband broke for them the Bread of Life!

The contrast was hardly agreeable.

"She'll never do!" whispered a lady-shadow of Miss Lane's, bending to my ear from the pew just behind the one I occupied. "Proud as Lucifer, any one can see! Such airs won't do for St. Charity."

I made no reply. Though annoyed, I was yet sensibly influenced by the remark.

Very still, almost like a statue, sat Mrs. Newton, the minister's wife, and I could see that the child, a little girl six or seven years old, leaned very close to her. How I wished that she would turn toward the congregation! How I longed to see her face! But I was not granted this desire until after the morning's services were closed.

I was particularly pleased with Mr. Newton. His sermon, in contrast with the usual discourses I had listened to from the lips of Mr. Wharton, was a master-piece of eloquence. No one seemed to listen to him with more rapt attention than Mrs. Newton.

At last the services closed, and the time came when my restless curiosity was to be satisfied. The minister's wife turned her face to the congregation, and I had a view of every feature. It was a face, once seen, to be remembered. Classic almost to severity in its outline, the full lips and soft hazel eyes gave to it a gentle expression. You saw at a glance that she was a woman of thought as well as feeling.

A few ladies gathered around her as she stepped from the pew, and I noticed that her countenance lit up very pleasantly as she spoke to them. But there was nothing obsequious; no undue familiarity, no wordy affability. A certain air of dignity and self-respect marked every attitude of her person and every expression of her countenance. All vulgar familiarity toward her was out of the question—I saw that at a glance.

But only a few ladies in the congregation ventured to approach her. In the eyes of many she was proud, and they were not "going to force themselves upon her notice." The prejudice admitted into their minds by others made them shun rather than court her acquaintance. Of the few who did notice her some were attracted by affinity, and some by a desire to gain a little reflected importance. Others thought it but hospitable to show her attentions, as a stranger among them, and acted accordingly; though the force-work was apparent. Desiring to meet her and make her acquaintance, I asked to be introduced, and was presented by a friend. I thought her reception rather cold; and after passing a formal word or two, moved

past her to speak to an old acquaintance whom I had not met for some time.

"How do you like our new minister's wife?" was almost the first question.

"Can't say. Must know something about her first," I answered.

"She'll not do for *us!*" said my friend, warmly. "She's not the woman for St. Charity!"

"What's the defect?" I inquired.

"It's all defect!" was the sweeping reply. "Just look at her! A pretty thing for a minister's wife, indeed! Why, she carries herself with the air of a queen!"

"Mr. Newton," said I, "is a charming speaker. I never heard a more beautiful sermon."

"Oh, Mr. Newton is splendid!" replied my acquaintance, warmly. "But his wife! Oh, dear! it's dreadful! What could have possessed him to marry such a woman! She'll never suit us in the world—never, never! Why, I don't believe she's even a professor. She didn't stay to the communion on last Sunday! Just think of that—and she the minister's wife! It's been the talk of the congregation ever since! We fully expected her to take a class in the Sunday-school — but no! We invited her to be present at our sewing-circle—but no; she couldn't leave her children! A mere excuse, of course! Then we elected her President of our Indian Missionary Society; but she declined the honor, saying that she had neither time nor taste for such public duties; that with her, charity, for the present, must begin at home. Now, isn't that a Christian spirit for you! Our minister's wife to talk of charity beginning at home! Why, she's a heathen!"

My church acquaintance waxed warm.

"Some of our people were eager enough to get rid of dear, good Mrs. Wharton," she added. "She wasn't bright and fashionable enough for them; but I rather think they've got their dose now!"

I met, here and there, a lady of our church, who belonged to the home-duty mind-your-own-business class, who did not join in this hue and cry against Mrs. Newton; who thought that, if she had neither taste nor inclination for Sabbath-school teaching, sewing-circles, or missionary societies, the congregation should not interfere with these peculiarities. She had three little children, to whom she gave all a mother's care; and as the slender income which her husband derived from the parish of St. Charity (four hundred a year and the parsonage) would warrant her to keep only a single domestic, a large part of her time had, necessarily, to be given to household duties. "Nobody can say," remarked one of these ladies, in my hearing, "that she neglects her children, or wastes her husband's income. The little parsonage has never looked so attractive inside or out as now. Mrs. Wharton was not tidy, as we all know, and things around her were generally at sixes and sevens. And as for her children, they were always neglected. Many times have I seen them playing in the dirt while their mother was at the sewing-circle, or somewhere else that she had no business to be."

But the ladies who talked in this way belonged to the "queer" ones of the congregation. They were not of the pious kind. So all they said went for nothing with the many.

Without "variableness or shadow of turning," as St. Paul says, did Mrs. Newton keep on her way. Home was her parish, and she was content to do her duty there. Occasionally she accepted an invitation to take tea and spend an evening abroad; but in most cases declined these pleasant entertainments, and though over three months had passed there had yet been no tea-drinking at the parsonage. Mr. Newton, on the other hand, mingled very freely with his congregation—sat with them at their tables, and joined them in their social gatherings. Of course the absence of Mrs. Newton on these occasions always formed a subject of remark; and it was generally voted that her failure to accompany her husband seriously marred the pleasures of the evening.

"Ah, if his wife were only like him!"

This was invariably the sighing ejaculation of Miss Phœbe Lane, or some one of her party.

At last the matter assumed so serious a shape in the minds of certain leading ladies in the parish that it was determined to wait upon Mrs. Newton and remonstrate with her on the course of conduct she was pursuing—"a course of conduct," urged Miss Lane, "that is working untold injury in our church. Ever since she came here a change for the worse has been going on in the congregation. Members are growing cold or indifferent. Our sewing-circles are losing their interest, the monthly concerts of prayer are badly attended, and the Sabbath-school is dwindling away. The social sphere, always so warm and attractive under the genial influence of good Mrs. Wharton, is fast losing its power—and all from this strange conduct on the part of our minister's wife. She must be talked to on the subject! If she doesn't know her duty, she must be taught it. If she won't hear her husband, she must hear the congregation."

A committee of ladies—Miss Lane at the head of them, and voluntary spokeswoman—finally undertook to set Mrs. Newton right in regard to her duties to the parish of St. Charity, and formally waited upon her for that purpose. Curiosity prompted me to accept an offered membership in that committee. Let me picture the interview with Mrs. Newton.

We found her sitting in her orderly-arranged little parlor, her person as neat as every thing around her, and her three children as sweet and pure as May blossoms. Two were playing on the floor, and the babe slept in the cradle, that was drawn so close to the mother that she could touch the rocker, if needed, with her foot. She was sewing on a shirt for her husband. Four ladies made up the committee—a formidable number. Mr. Newton was away, attending the

funeral of a poor laborer's child—so the coast was clear, and the culprit in our power.

With an easy grace the minister's wife received us, and after we were all seated she stepped to the door and spoke to her girl, who was in the kitchen. A smart, tidy-looking domestic came forward, and Mrs. Newton said to her, with a kindness of manner that I could not help noticing,

"Take Aggy and George into the garden, Jane, and keep them till I call you."

"Yes, ma'am." The girl spoke very cheerfully. The two children sprung up instantly from the floor, and bounding from the room left us alone with Mrs. Newton and her sleeping baby.

A grave silence followed. The committee was embarrassed, but the minister's wife was entirely at her ease.

"We have come," said Miss Lane, after sundry preliminary throat-clearings and bridling motions of the head peculiar to herself, "to have a little conversation with you about our church matters."

"Hadn't you better talk on that subject with my husband?" was answered, with the utmost self-composure. "It is his particular province."

"No, ma'am," said Miss Lane, her voice gaining emphasis; "we have no fault to find with Mr. Newton. He does his part entirely to our satisfaction."

"Oh! I understand." Mrs. Newton spoke as if light were breaking into her mind.

"Yes, ma'am," Miss Lane went on, "it is your duty in the church that we have come to talk about, not your husband's; and I hope you will not take it ill of us if we speak out plainly."

"Not by any means," replied Mrs. Newton. I noticed a slight quiver in her voice, a slight flushing of her cheeks, and a brightening of her soft hazel eyes. But it was plain that she was fully self-possessed, and in no way intimidated by this unexpected citation to answer for delinquencies.

"Not by any means," she repeated. "Speak out plainly, and if in any thing I have been derelict, I will confess my fault, and do all I can to lead a better life."

"Plain speaking is always best," said our mouth-piece, oracularly. "So we will speak plainly. The fact is, Mrs. Newton, you have failed almost entirely to meet the expectations of our people."

"Indeed! I am grieved to learn this." Mrs. Newton spoke seriously, but with no sign of disturbance. "I was not before aware that the people had any special claims upon me."

"No special claims upon you!" Miss Lane uttered the words in undisguised astonishment. "No special claims!" she repeated, "and you the wife of our minister!"

"What do you expect of me?" calmly inquired Mrs. Newton.

"We have already intimated our expectations in various ways. There is the girl's senior class in Sunday-school; that, of course, we expected you to take. And you are wanted on the Visiting Committee and in our Missionary Society. Unless our minister's wife takes the lead in the temporalities of the church nothing will prosper."

"Then," said Mrs. Newton, "it is understood that while my husband's duties relate mainly to the spiritualities of the church mine have special regard to its temporalities."

"Certainly, ma'am! You have expressed the difference of relation exactly," replied Miss Lane, led on by the peculiar way in which Mrs. Newton put the question to admit the existence of a very wide range of duties as required of that lady by the congregation of St. Charity.

"This is all new to me, ladies," said the minister's wife. "I was not aware before that any one in the congregation regarded me as having failed in duty."

"Every one so regards you." Our spokeswoman was a personage who used great plainness of speech.

"This should have been stated in the beginning," said Mrs. Newton. "How was I to know your views in the matter? I saw all of my husband's correspondence, but not a word was said about his wife or the parish requirements in her case. Now it appears that her range of duties is almost as wide as his. I ought to have known this before I came here, ladies; and I really think the complaint of failure in duty is against you instead of me. Let me ask, so as to reach a clear understanding of this matter, what salary you pay your minister's wife?"

"Salary!" gasped Miss Lane, her under jaw falling, and her eyes projecting at least a quarter of an inch beyond their ordinary position. "Salary!" she repeated, in a bewildered, half-confounded way.

"Yes," quietly replied Mrs. Newton. "The salary. You do not, of course, require the services of your minister's wife in the way you propose without compensation."

"Preposterous!" Miss Lane had recovered herself, and gained a little blind indignation with her partial self-possession. "Did any one ever hear of a thing so absurd! In hiring your husband for our minister—"

"You did not hire me!" interrupted Mrs. Newton, with calm dignity. "Bear that in mind, if you please."

"Thank you for the remark, Mrs. Newton," said I, coming almost involuntarily to her aid. "It throws a flood of light upon the whole subject. True as Gospel! We did not hire you, and have no claim upon a single hour of your time. All that the Church of St. Charity has a right to ask of you is, that you do your duty as a wife and mother."

Mrs. Newton turned to me with a grateful look, and grasping my hand, said,

"Thank you!" in return.

A little while she paused; but no one spoke

in the deep silence. I think some wholesome convictions of truth were finding their way even into the mind of Miss Lane, who, somehow, reminded me of a wilted leaf, or a piece of stiffly starched muslin suddenly drenched with water.

"My husband's duties are clear," very evenly spoke Mrs. Newton — very kindly, yet very firmly and very lucidly. "My husband's duties are clear. He has come to you as a spiritual guide and instructor. His office is to point to Heaven and lead the way. It is a high and holy office. I honor him in it, and sustain him to the best of my ability. My duties are also clear. I am simply a wife and mother; and, God being my helper, I will faithfully discharge a wife and mother's sacred obligations. At present these duties take up all my time; and conscience will not permit me to neglect real duties for the performance of imaginary ones. In doing such duties I best serve the Church. This is my religion, and I have learned it from the Bible."

She paused for a few moments. No one replying to her remarks, she went on:

"It has been alleged that I am not pious enough for the people here. Perhaps not. But of one thing you may all be certain: I am no hypocrite. I shall never put on a pious exterior to hide the want of charity in my heart. As I am you will always see me."

Mrs. Newton paused again; but as none of her visitors showed any inclination to speak, she continued:

"My religion is somewhat peculiar, I believe. I do not keep it as a showy Sunday suit, but wear it every day. My essential worship consists in a daily discharge of my duty as a wife and mother; my formal worship, in the pious prostration of body and spirit before my Heavenly Father at set times, either in my closet or in the public assembly. The Sabbath, to me, is the golden clasp that binds together the circle of weekly duties. It is a blessing and a consolation, just in the degree that the worship of my six days has been essential worship."

"And are we to expect nothing of our minister's wife?" said Miss Lane, in a very subdued voice. She was evidently conscious of having made a great mistake in her estimate of Mrs. Newton's character.

"Nothing more than her duty as a woman. If she have qualities that will give her a leading social influence, and have time to spare from home duties—which are always first—she ought to let these qualities become active for good. But no more can, with justice, be required of her than from any other woman in the congregation. Your contract for service is with her husband, and not with her; and you have no more just claim upon her time, nor right to control her freedom, than you have over the wife of your lawyer, doctor, or schoolmaster. It is this mistaken idea of the people in regard to ministers' wives that is producing so much trouble in societies, and making wretched the lives of hundreds of poor women, who hardly dare say that their souls are their own. It is not enough that the minister's wife is expected to keep her house and clothe her children upon the lowest range of income, that will not allow her competent help, but she must spend half of her time in gossiping around among the idle or well-to-do ladies of the congregation—take part in their sewing circles, and attend all their various meetings for good or doubtful purposes. Now all this is wrong; and if you are not satisfied with my husband, because I will not imitate so bad an example, you must give him notice accordingly; or if you think my services absolutely essential to the prosperity of the church, just state the amount of salary you can afford to give, and if, for the sum, I can procure a person in every way as competent as myself to assume the charge of my children and household, I will take into serious consideration your proposition. Beyond this, ladies, I can promise nothing."

"Thank you again, my dear madam," said I, with a warmth that expressed my real feelings, "for giving this matter its right solution! You have spoken out like a true, independent woman, as you are, and I will see that your views are correctly reported. Consider me as your friend."

She turned upon me a grateful look, and, as she did so, I could see that my earnest words had brought a dimming moisture to her eyes.

"I could wish," she answered, in a lower voice, "to number you all as my friends. I have come among you as a stranger, seeking no pre-eminence, but only desiring to do my duty as a woman, side by side with other women. The fact that my husband is your minister gives me of right no position among you, and gives you no right to demand of me any public service. If my husband fails in his duty, admonish him; but, in the name of justice and humanity, do not establish any supervision over me. Let my private life be as sacred from intrusion as that of any other woman. This I have a right to demand, and I will be satisfied with nothing less."

Silenced, if not convinced, was Miss Phœbe Lane, and she retired in due time with her committee of remonstrance and accusation, their colors trailing upon the ground. I lost no time in giving my history of the interview; repeating almost word for word the clear, strong language of Mrs. Newton, that she might have the full benefit of her own statement of the case. And I am happy to say that there was common sense enough and right feeling enough in the parish of St. Charity to do her ample justice. Her husband is still our minister, active, useful, and beloved; but as no salary has yet been set apart for his wife, she has not assumed any duties in the congregation, and from present appearances, I think, has no intention of doing so. But as a wife and mother her life is beautiful; and her example of far more benefit to the people under her husband's care than all her more public acts could be, had she entered upon every duty that was so generously assigned to her.

DINING, CONSIDERED AS A FINE ART.

A CERTAIN philosopher has divided mankind into two great classes: those who cheat, and those who are cheated. Another has partitioned the animated world into those who eat, and those who are eaten. A third—and, to the mind of the present writer, better—classification of mankind, suggests itself, viz., those (who have leisure, money, and taste) who live to eat, and those (who have a good appetite, little money, and no leisure) who eat to live. Now, considering *Dining* strictly as one of the Fine Arts, it appears evident that both these classes are, more or less, artists; for the members of the first make of dining an art, while those of the second—among whom the writer of this is to be counted—have frequently to use every art to get a dinner.

Every Fine Art has its especial literature. If Ruskin has discussed Modern Paintings and Painters, the lamented Soyer—as great an artist in his way, and a more practical man—has done the same office for Modern Dinners and Cooks. If we have histories of painting, sculpture, and poetry, in various times and nations, so we have a "*History* of *Cookery*, from the earliest period to the present time." And if various of our great men have devoted themselves to the consideration of particular epochs of other arts, have we not been favored with an essay, by an eminent Parisian, "On the Gastronomic Effects of the First French Revolution?" Is there not an energetic remonstrance on the British catalogue, entitled "Thoughts on Roast Pig;" and a critical dissertation on "The Comparative Merits of Male and Female Cooks?" not to speak of various other and more extended works, such as the "Physiologie du Goût," by that great art-critic Brillât-Savarin, who may be called the Ruskin of this department of fine art.

Of 565 Chinese books on Behavior, catalogued by an eminent Chinese scholar, 361 refer directly to the ceremonial of the Celestial dinner-table. The Japanese, Hindoos, and Persians are both luminous and voluminous upon the same point; and to turn to what we are pleased to consider more civilized nations, a French writer assures us that France possesses no less than one hundred and fifty-six works upon Manners—all referring more or less circumstantially to prandial ceremonials, while American, English, Italian, Spanish, German, and even Russian and Dutch writers swell the list of devotees to this the most delightful of the fine arts; which, by-the-way, is dignified by the classical title of "Aristology," the derivation of which the reader may hunt up for himself.

Let us then consider, for a little, some of the peculiarities of Aristology, and the Aristologist, or artistic diner out. First, as to the means necessary for the successful prosecution of the art. Mr. Wellesly Pole used to say that it was impossible to live like a gentleman, in England, under forty thousand pounds a year; and Beau Brummell, when asked by a lady how much she ought to allow her son for *dress*, said that, with *strict economy*, it might be done for eight hundred a year. The art is yet in its infancy in America, and data upon which to form an accurate estimate of the income necessary for an accomplished aristologist are scarce. But we have no doubt that much might be done by a prudent and skillful man with twenty thousand dollars per annum. Of course, the aristologist should, if possible, devote himself entirely to his art. "Generally speaking," says a writer of eminence and authority upon this subject, "a calling of any sort is against a man; for we incline to think that the gentleman *par excellence* [think of this enviable title being monopolized by the Professor of Aristology] should resemble Voltaire's trees, who, when a visitor was complimenting him on their looking so fine, replied, 'They ought, for they have nothing else to do.'"

Good looks are not necessary—happily. Wilkes, a noted and successful diner out, who justly declared that, give him but half an hour's start and he would make a better impression than the handsomest man in the room, was so excessively ugly, that a lottery-office keeper once offered him ten guineas not to pass his window while the tickets were drawing, for fear he would bring ill luck upon the house.

"The finest linen, plenty of it, and country washing," were Brummell's directions to a youthful aspirant to aristological honors. This matter, however, according to a French writer, a member of the Academy, may be carried too far; and he adds that "those who delight in cleanliness change their linen *twice* a week, and their pocket-handkerchief still oftener if they are obliged to blow their noses frequently—especially those who take snuff." This seems a very moderate estimate, even for a Frenchman, who must be either a cleaner or a dirtier man than his neighbors, as you may choose to interpret the above directions. It reminds one of a remark of Sir Henry Ellis. Johnson confessed to Mr. Langton that he experienced an unusual feeling of elation when (on the occasion of "Irene" being brought upon the stage) he first put on a scarlet waistcoat with rich gold lace, and a gold-laced hat. Sir Henry Ellis declared that he never saw a Frenchman in a clean shirt who did not exhibit symptoms of a similar feeling of elation at the circumstance. In fact, a Parisian exquisite reverses Brummell's maxim, and holds that you are not well dressed if people do *not* stop to stare at you.

As for gloves, the student of aristology will bear in mind that they are strictly for ornament—not use. Let him never fall into the error of the navy captain at a ball, when his partner, a distinguished lady, suggested the propriety of his putting on his gloves before they led off the dance. "Oh, never mind me, madame," said the gallant hero, "I shall wash my hands when I've done dancing!"

"But," the patient or impatient reader will

ask, "What has all this matter of clean linen, gloves, etc., to do with the art of dining?"

A great deal, most excellent neophyte! as any proficient in the art will tell you. The sculptor has to carve his image out of marble with a dusty chisel; the painter must daub his on coarse canvas with vulgar oil and filthy paints; the poet is obliged to use ink and paper —and his finger-ends but too often bear witness, in close-bit nails and badly-washed ink-stains, to the partly mechanical nature of his high art. It is reserved for the aristologist—the gentleman *par excellence*, to recur to the words of our before-quoted author—to perfect himself in his art without any of these vulgar adjuncts. He alone combines in his own figure artist, model, and product; he alone develops on his own cherished person all those forms of beauty which vaguely flit through his brain; he alone may be truly said to enjoy what himself creates.

Being prepared to honor the duly received invitation, the artistic diner out proceeds on his way. Among the Sybarites, by-the-way, it was customary to invite ladies to dinner a year beforehand, ostensibly to give them time for beautifying themselves. Those old fellows did not realize how evanescent is true beauty—perhaps they had advanced farther than we in "the mysteries of the toilet." Being arrived at his destination, he is announced. And here is a point: let him be careful to give his name distinctly to the attendant servant. Else may he share the fate of one Mr. Delaflete, of London, who, perhaps supposing that name more generally known than was actually the case, neglected the precaution of distinctness in its utterance, and to his disgust heard himself announced to a crowded drawing-room as Mr. *Hellafloat*.

Being entered, he salutes his host and hostess. Except it be, indeed, that his dinner is in China; where strict etiquette demands that the host leave his house when he has a dinner party.

All writers on aristology agree in terming the salute the touchstone by which any given person's breeding may be instantly and unerringly determined; and the aspirant to prandial benefits and distinctions will, therefore, perfect himself in this important part of his profession. There are, of course, various modes of salutation in different countries. Among the Sandwich Island Kanakas they rub noses; in Timor they pull one another's ears; the Franks plucked out a hair and presented it—an evidence that baldness was, to say the least, unusual among them; the Japanese take off their slippers when they meet. The only salutation permitted to the Carthusian monks of Spain was a slight nod and the lively remark, "We must die;" to which the exhilarating reply was, "We know it." In some of the South Sea Islands they spit in their hands and then rub your face for you; in others, it is the height of politeness to fling a jar of water over your friend. In America, as in England and France, we nod, bow, courtesy, shake hands, and take off our hats. In Germany the men kiss each other. The science consists in knowing on what occasions, and with what persons, these respective modes of salutation are to be used; the art, in attaining perfection in the various genuflexions which, gracefully performed, stamp you an accomplished diner out. Space forbids our going into particulars; but we may mention what an eminent Philadelphian* says of bowing: "If you have remarkably fine teeth, you may smile affectionately upon the bowee, without speaking." Also, he says: "If you meet a rich parvenu whose consequence you wish to reprove, you may salute him in a very patronizing manner, or else, in acknowledging his bow, look somewhat surprised, and say, 'Mister—eh—eh?'" The Philadelphia "Gentleman" informs us farther—and this is a point worth noting—that, "The ordinary custom among well-bred persons is as follows: soup is taken with a spoon. Some foolish fashionables," he adds, "employ a fork! They might as well make use of a broomstick!"—and better, too, we should say.

And oh, neophyte in aristology! you are to eat deliberately. Don't cram, as you would avoid dyspepsia, that greatest bane of the diner out. On which point Sam Slick has a lesson from Abernethy, which is not to be omitted here: "The Honorable Alden Gobble was dyspeptic, and he suffered great uneasiness after eating; so he goes to Abernethy for advice. 'What's the matter with you?' said the Doctor —jist that way, without even passing the time o' day with him—'What's the matter with you?' said he. 'Why,' says Alden, 'I presume I have the dyspepsy.' 'Ah!' said he, 'I see—a Yankee—swallowed more dollars and cents than he can digest.' 'I am an American citizen,' says Alden, with great dignity; 'I am Secretary to our Legation at the Court of St. James's.' 'The devil you are,' said Abernethy; 'then you'll soon get rid of your dyspepsy.' 'I don't see that are inference,' said Alden; 'it don't follow from what you predicate, at all; it ain't a natural consequence, I guess, that a man should cease to be ill because he is called by the voice of a free and enlightened people to fill an important office.' [The truth is, you could no more trap Alden than you could an Indian. He could see other folks' trail, and made none himself; he was a real diplomatist, and I believe our diplomatists are allowed to be the best in the world.] 'But I tell you it does follow,' said the Doctor; 'for in the company you'll have to keep you'll have to eat like a Christian.'

"It was an everlasting pity Alden contradicted him, for he broke out like one moon-distracted mad. 'I'll be d—d,' said he, 'if I ever saw a Yankee that don't bolt his food whole, like a boa constrictor. How the devil can you expect to digest food that you neither take the

* *The Laws of Etiquette; or, Short Rules and Reflections for Conduct in Society.* By A GENTLEMAN. Philadelphia.

trouble to dissect nor the time to masticate? It's no wonder you lose your teeth, for you never use them; nor your digestion, for you overload it; nor your saliva, for you expend it on the carpets, instead of on your food. It's disgusting; its beastly. You Yankees load your stomachs as a Devonshire man does his cart, as full as it can hold, and as fast as he can pitch it in with a dung fork, and drive off; and then you complain that such a load of compost is too heavy for you. Dyspepsy, eh? Infernal guzzling, you mean. I'll tell you what, Mr. Secretary of Legation, take half the time to eat that you do to drawl out your words, chew your food half as much as you do your filthy tobacco, and you'll be well in a month."*

With another hint, and this to ladies, we will drop our Philadelphia "Gentleman," who has, after all, no very refined notion of dining out. He says that "Ladies should be neat in their persons, and keep their nails short [!]; and when at dinner they must not laugh or talk too loud, nor daub their fingers with their food. *They may* wipe their lips on the table-cloth, but *not blow their noses with it.*" Evidently, the Philadelphia treatise is intended merely for nursery aristologists.

And now, before entering in earnest upon the DINNER, let us say a good word for the Diner. Not the glutton. Your true diner out may be an epicure, but never a glutton. Cambles, an ancient Greek, ate up his wife; and in the morning, awakening, found her hands in his throat! Let the glutton take warning! A narrow-minded Scotchman confuses the two terms, and says of the epicure: "He is unmade, and eventually dished by made dishes. Champagne is no longer sham when it begins to affect his system; his stomach is so deranged in its punctuation that his colon makes a point of coming to a full stop; keeping it up late ends in his being laid up early; and the *bon-vivant* who has been always hunting pleasure, finds at last that he has been only whipping and spurring that he might the sooner be in at his own death." This plainly describes the glutton; and applied to the aristologist—the "gentleman *par excellence*"—the statement is as libelous as the puns are bad.

Dr. Johnson wisely observed that a man who is careless about his table will generally be found careless in other matters. The greatest men in all countries have always been the most perfect aristologists. Louis XVI. is said to have been neglectful of his table; and this was, probably, one among the many causes of his fall. Cambaceres, Napoleon's grand chamberlain, was famous for his dinners, regarding dining as *the* business of life; and when his master was especially pleased at the result of a diplomatic conference, he was accustomed to take leave of the plenipotentiaries with, "Go and dine with Cambaceres." Napoleon was himself famous for the nicety of his taste, but, from the hurried manner of his life, he acquired a pernicious habit of eating fast; and this, debilitating his stomach, paralyzed him on two of the most critical occasions of his life — the battles of Borodino and Leipsic. When M. de Suffrein was commanding the French in the East Indies, he was one day waited upon by a deputation of natives, who requested an audience just as he was sitting down to dinner. He desired an aid-de-camp to inform them that it was a precept of the Christian religion, from which no earthly consideration would induce him to depart, never to attend to business of any sort at dinner-time. The deputation departed, lost in admiration at the piety of the commandant, and returned at the proper time, so predisposed in his favor that he was enabled to conclude an advantageous treaty with them. One of Bolivar's first cares, on becoming President of freed Peru, was to intrust to M. Armand de Bremont the delicate mission of sending him from Paris the best cook he could find. A friend of Mr. Thackeray relates that he was once dining with him in Paris, when a *matelotte* (a fish ragout) of surpassing excellence was served up. "My dear fellow," exclaimed the delighted author of "The Virginians," "don't let us speak a word till we have finished this dish!"

Dr. Johnson, though unfortunately extremely coarse in his mode of eating, and not at all orthodox in his tastes, fully realized the importance of the subject. "Women," once observed the sage, "can spin very well, but they can not write a good book of cookery. I could write a better book of cookery than has ever yet been written; it should be a book on *philosophical principles.*" What a loss to the world that the great lion of literature forbore! According to Mrs. Piozzi, Johnson's "favorite dainties were, a leg of pork, boiled till it dropped from the bone, a veal pie, with plums and sugar, and the outside cut of a salt buttock of beef." He has been known to call for the butter-boat containing the lobster-sauce during the second course, and pour the whole of its contents over his plum-pudding.

The cardinals have always been noted for their gastronomic skill. Fesch, the uncle of Napoleon the Great, takes especial rank in the annals of aristology; and there is related of him a story which shows how ingenuity and taste, properly combined, can please the guests, and, at the same time, gain credit for the host. He had invited a select party of clerical magnates to dinner. By a fortunate coincidence, two turbots of singular beauty arrived as presents to his Eminence on the very morning of the feast. To serve them both would have appeared ridiculous; but the Cardinal was most anxious to have the credit of both. He imparted his embarrassment to his *chef.* "Be of good cheer, your Eminence," was the reply; "both shall appear; both shall enjoy the reception which is their due." The dinner was served; one of the turbots relieved the soup. Delight was in every face. The *maître-d'hôtel* advances; two attendants raise the turbot, and carry him off to cut him up. One of them loses his equilibri-

* The Clockmaker. Chapter IX.

um: the attendants and the turbot roll together upon the floor. At this sad sight the assembled cardinals became pale as death, and a solemn silence reigned in the conclave. Intense disappointment was expressed on every priestly face. "Bring another turbot," says the *maître-d'hôtel* to the attendant, with the utmost coolness. And now intense delight took the place of disappointment on each cardinal's face; and the host was conscious of another laurel added to his gastronomic crown.

To return from Diners to Dinners. It matters little at what time dinner and diner meet, if only the appetite is prepared and the business of the day over. Henry IV. of France ate his at half past eleven; Charlemagne, earlier yet—at half past ten. At present the greatest aristologists dine at half past seven — shrewdly enjoying as long as possible the pleasures of anticipation. Punctuality, however, whatever the hour, is indispensable. Lord Dudley used to say that the most unpunctual persons he ever knew were two distinguished brothers—the elder of whom is now a peer of England, and, it is to be hoped, more regular in his habits—"for," said his lordship, "if you asked Robert for Wednesday at seven, you were sure to get Charles on Thursday at eight." Lord Dudley himself was regular as clock-work—not only in his hours, but also in his habits. He could not dine comfortably without apple-pie, which, properly made, is a proper and excellent dish. Dining, when Foreign Secretary, at Prince Esterhazy's—a grand dinner—he was terribly put out on finding that his favorite delicacy was wanting, and kept on murmuring, pretty audibly, in his absent way, "God bless my soul, no apple-pie!"

The true aristologist wisely considers Dinner as *the* event of the day, toward the proper enjoyment of which all other things are subsidiary or accessory. He regards his cook with veneration, and does not think extravagant the language M. Henrion de Pensey addressed to Messieurs Laplace, Chaptal, and Berthollet, three of the most distinguished men of science of their day. "I regard the discovery of a new dish," said this worthy and ingenuous gentleman, "as a far more interesting event than the discovery of a star; for we have always stars enough, but we can never have too many dishes; and I shall not regard the sciences as sufficiently honored or adequately represented among us until I see a cook in the first class of the Institute." Genius is to be drawn out only by judicious praise and discriminating criticism. In the days when Paris was most famous for its cooks—days now past—it was the fashion for each guest at a banquet to place a piece of gold in every dish of more than ordinary merit. To facilitate criticism and individualize responsibility, it is even now the custom, at some Russian and German tables—especially at the royal table of Hanover — to print in the *carte*, a copy of which is placed beside the plate of each guest, the name of the cook by whom each dish has been dressed, like the programme of a concert with the names of the performers. In this way only can the highest inspirations of genius be called forth. Is it too much for the enthusiastic aristologist to hope that, at the distinguished tables of even our democratic land, this wise custom may, by-and-by, be introduced? Then may we see reproduced here those now faded glories of the art which once gave renown to the restaurants and private tables of Paris, and inspired master-cooks with that sense of personal ambition and responsibility which made the great Vatel, *maître-d'hôtel* to the Prince de Condé, throw himself upon his sword, because at a royal supper an insignificant dish was wanting at one of the tables—even as a Parisian notary's clerk killed himself, because, having duly calculated and considered the chances, he did not think it possible for him to be so great a man as Napoleon.

And that the great cook is really a genius every philosophic mind will readily perceive. Dugald Stewart—admirable philosopher!—was struck by the analogy between cookery, poetry, and the other fine arts. He says, in one of his Philosophical Essays, "*Sweet* may be said to be *intrinsically* pleasing, and *bitter* to be *relatively* pleasing; while both are, in many cases, equally essential to those effects which, in the *art of cookery*, correspond to that *composite beauty* which it is the object of the poet and the painter to create!" So Robert, the inventor of the sauce, Rechaud, and Merillion, have been characterized as the Raphael, Michael Angelo, and Rubens of cookery; while Beauvillier was placed by acclamation at the head of the classical school—so called by way of contradistinction to the romantic school, of which the famous Carême used to be considered the chief. And although as of the poet it is said, *Poeta nascitur, non fit*, so it is true of the cook that he is born, not made: yet both poet and cook must go through a long course of training for the proper development of their genius. Thus Carême tells us of himself that he began his studies by attending a regular course of roasting, under some of the leading roasters of the day (how many blockheads have gone through a course of scholastic roasting, without becoming either poets or cooks!); next placed himself under M. Richaut, the famous "*saucier de la maison de Condé*," to learn the mystery of sauces; then under M. Asne, with a peculiar view to the preparation of cold dishes; and took his finishing degree under Robert l'Aine, a professor of *l'elegance moderne*. How thorough this course! and how did industry and perseverance here come to the aid of genius!

Your true cook, like your poet, is an erratic being. Restless and inconstant, he wanders from place to place and depends upon the lucky moment for the grand inspirations of his life. His comfort is one of the chief cares of an appreciative master. The late Marquis of Hertford had a cook who, in his master's opinion, was inimitable in a *suprème*. Dining one day with

an intimate friend, a distinguished privy councilor of England, who had frequently contested the point, his lordship declared the *suprème*, which he was with difficulty persuaded to taste, detestable.

"Now I have you!" exclaimed the Right Honorable. "That dish was dressed by your own *chef*, who is at this moment in my house."

"Then all I can say," replied the Marquis, "is, that you must have spoiled his palate by drinking beer with him."

Colonel Damer, happening to enter Crockford's one evening to dine early, found Ude—Louis Eustache Ude, one of the great cooks of the day—walking up and down in a towering passion, and naturally inquired what was the matter.

"The matter, Monsieur le Colonel! Did you see that man who has just gone out? Well, he ordered a red mullet for his dinner! I made him a delicious little sauce with my own hands. The price of the mullet, marked on the *carte*, was two shillings; I added sixpence for the sauce. That *imbécille* apparently believes that the red mullets come out of the sea with *my* sauce in their pockets!"

Ude's sauce was no better appreciated than some canvas-back ducks once sent by our historian, Prescott, to an English friend. It is related that they were forwarded accidentally to Melton, and eaten by a select party as common ducks—to their intense disappointment when made aware of the facts. And ducks bring to mind a rule to be observed of birds in general: no bird worth eating should be inundated with gravy. The peculiar flavor is washed away. Sydney Smith, who knew a thing or two in the aristological way, on once hearing a lady at table exclaim, "No gravy, if you please!" turned to her and proposed to swear eternal friendship on the instant, saying that he had been looking all his life for a person who on principle rejected gravy.

But enough of the cook. Let us say that with him, as with the poet, simplicity is the acme of perfection. His labors are not to be valued by their cost, but by their intrinsic excellence. We think with disgust of those barbarous Roman banquets, or medieval feasts, which were certainly more remarkable for profusion and costliness than for taste. The sole merit of a dish composed of the brains of five hundred peacocks, or the tongues of five hundred nightingales, must have been its dearness. The Prime Minister of England's first James kept no less than five hundred servants in his town-house; and yet his royal master owned but a single pair of silk stockings, which he was sufficiently generous to lend his noble minister upon occasion when that worthy had to grant audience to a French Embassador. The Duke of Medina-Coeli, contemporary with the famous and cruel Duke of Alba, paid no less than twenty thousand pounds per month as servants' hire alone, yet had not in his spacious palace a room fit to dine in. It somewhat diminishes our admiration of Anne Boleyn's fabled beauty to know that that lady breakfasted each morning on boiled pork and beer. If a mode of swallowing most money in a given time be thought a desideratum, surely Cleopatra, with her pearl, will take the prize; although even she was fairly beaten, in originality and neatness of conception, by a frail fair one, the famous Mrs. Sawbridge, who, to show her contempt for an elderly adorer, sandwiched the hundred pound note which he had laid upon her dressing table between two slices of bread and butter, and ate it in his presence.

And now, having discussed the *Diner* and the *Cook*, let us come—at last, the impatient reader will say—to the *Dinner;* about which we have been hovering for some pages. Unfortunately—or the reverse—the editor of this Magazine is inexorable in the matter of space, and we are compelled by the sternest of fates to cut short the delightful thoughts which crowd to every right-minded man's heart when he contemplates that greatest object of life—a well-served dinner. M. Anthelme Brillât-Savarin, Judge of the Court of Cassation, member of the Legion of Honor, and of most of the scientific and literary societies of France, from whose famous before-mentioned treatise on the "Physiology of Taste" we are about to quote reverently a few rules for the dinner-table, was—to the mind of a true aristologist—one of the most notable men France ever produced. Like all true epicures he was of a sober, moderate, and easily-satisfied disposition; like all men of genius, he was an enthusiast. It is related of him, in confirmation of the latter trait, that during his residence in America (he was compelled to emigrate by the Reign of Terror) he was one day shooting in the Virginia woods. Having had the good fortune to kill a wild turkey, he was returning, when he fell in with Jefferson, who knew him, and who presently began relating some interesting anecdotes of Washington and the war then but just over. Observing the distracted air of M. Savarin he stopped, and was about to take offense at the lack of attention.

"My dear Sir," said the gastronomer, recovering himself with a strong effort, "I beg a thousand pardons—but I was thinking how I should dress my wild turkey."

It is this gentleman—whom, as Democritus was called the Laughing Philosopher, we may call the Dining Philosopher—to whom we are indebted for a short and comprehensive set of aphorisms on dining, by following which he proposes to unite "all things requisite to the highest pleasures of the table." A good cook is, of course, premised. Without him your table enjoyments will be as the apples of Sodom, fair without, in anticipation—but ashes within, in the realization. As was proven by Byron, who, being compelled to celebrate his birthday in Italy, determined on nothing less than a plum-pudding, by aid of which to eat himself a happy return of the day. Plum-puddings are, or were, not so familiar to Italian gastronomes as mac-

aroni, and the noble poet busied himself a whole morning in giving directions for the proper compounding of the British luxury. One can fancy his disgust when, after all his pains and anxious cares, the pudding appeared in a tureen, and about the consistency of soup.

A capable cook being then presupposed, M. Savarin recommends:

That the number of the party do not exceed twelve, that the conversation may be constantly general;

That the eating-room be luxuriously lighted, the cloth remarkably white, and the atmosphere at the temperature of from thirteen to sixteen degrees Reaumur;

That the dishes be exceedingly choice, but limited in number, the order of progression, in fluids as in solids, being from the most substantial to the lightest;

That the act of consumption be deliberate, the dinner being the last business of the day; and that the guests consider themselves as travelers who are to arrive *together* at the same place of destination;

That the party be detained by the charms of society;

That the retreat be not begun before eleven, but

That every body be in bed by twelve.

These recommendations seem to us unexceptionable. We will only add to them three dinner rules given by John Bulwer, a quaint but sensible writer of the seventeenth century: "*Stridor dentium — Altum silentium — Rumor gentium;*" which, being rendered into the vernacular, signifies; Work for the jaws—A silent pause—Frequent ha-has.

DRESS AND DRINK.

SEE that painted spectre,
The vampyre of the streets!
What foul demon wrecked her
Hoard of youthful sweets?
Made a crime of loveliness?
Oh! 'twas Dress—'twas Dress!

Look upon that reeling
Haggard man of care,
Down the back streets stealing,
Roaming any where!
What hath done this? Pause and think!
'Twas Drink!—'twas Drink!

See that fair wife flying
From her husband's wrath,
Her guilty lover lying
Dying in her path!
What hath done this? Can you guess?
'Twas Dress—'twas Dress!

Bloody knife still reeking
In his desperate hand,
Hurried voices speaking
Round him in a band!
What makes thus his comrades shrink?
'Tis the deed—the deed of Drink!

Lying on the pavement,
Dead in her despair,
What 'neath Sin's enslavement
Brought a thing so fair?
Scarcely than a demon less?
What hath wrought this? It was Dress.

In his stony prison,
Waiting for his doom,
When the sun has risen,
Gallows first—then tomb!
Stupored thus on Nature's brink?
What hath wrought this? It was Drink!

Dress and Drink—ye demons twin
Parents of all woe and sin!
Bane of body and of soul!
Shame your path—and death your goal!

THE TEST.

SHE stands in the shadow of the great elm upon the lawn, and flakes of sunshine, sifting through the pendant branches, fall like tremulous gleaming gems upon her fair head with its masses of braided hair. She is *petite*, delicate as a fairy, with smiling lips, and blue eyes that laugh when her lips are still, and a quickly-changing, expressive face, that reflects every phase of feeling, every turn of thought, and restless hands that flutter like white butterflies over each object of desire, and feet that, even in her sleep, move unconsciously with the dancing happiness of her young life.

From the spot where she stands the lawn slopes downward, bordered by a thicket of acacia trees, and lilacs, and wild roses, which guard the little villa from the intrusive gaze of boatmen and pleasure-seekers upon the river. Yes, nearly opposite the elm-tree two large willows, leaning outward, dip their pendant branches in the stream when the ocean tides come, lifting it up to the level of the greensward; and through the space between them the eye ranges outward over the smooth water that throws back the sunshine like a mirror, and keeps all its secret depths unlighted—past the sails of yacht and wherry gliding to and fro—past the gay steamboats with their floating world of travelers—past the forest of masts gathered around the piers—up to the great city with its acres of stone and brick piled upward, and its spires that lift themselves into the sky.

From this distance, these houses and towers which wall the horizon look not unlovely; for the sunshine touches every thing with a tender, golden light, and the few fleecy clouds visible in the fathomless blue air seem like white doves of peace floating with wings outspread in benediction alike over the calm fields and the unreposing city, with its seething, struggling human life.

But the intent gaze of the young girl beneath the elm-tree brings to her mind little thought of field or city, or of the flashing waters flowing in from the sea. She is looking between the willows for a little boat which her eyes alone

could certainly distinguish in the distance, and though she knows he will surely come that way, she watches none the less with a vague idea that her watching brings him more rapidly; and with intervals of dreamy reverie, wherein her eyes, half-vailed by their drooping lids, shine with a softened light, and her lips glow like wet coral as they part in a musing smile. For Alice Girdler is seventeen to-day, and in two more days she will be a bride.

Of what is she thinking as she stands there, her white arms half embracing the marble Fawn she leans upon? Is there any thought in her mind of woman's duty and destiny? Does she revolve the great problem of life as she speculates concerning the future, and, pondering those solemn words of the marriage-service, stand reverently before the great gate she is about to enter, and ask herself if she is fitted to take charge of another's welfare, and to meet the change and trial which is not withheld from the happiest life?

No. Alice Girdler is yet a child, and she lives in the present only, and plays with the delicious happiness of love as a child with a new toy. Never a wish of hers can she remember to have lost ungratified; never a trouble has come to her, but some quick hand relieved her from its pressure, and gave her a new joy instead. Wealth, and love, and pleasure have ministered to her since first her blue eyes opened in this world of ours, and no solemn angels of affliction have even for a little space closed the doors upon gayety and worldliness, and bade her learn the true meaning of this life or the mysteries of the life beyond.

But now through the trees which hide the house behind her come a troop of maidens, sisters, cousins, friends, who have gathered here to make merry over the bridal. They move with elegance and grace, and their jest and laugh at finding her watching her lover's approach are low-toned and restrained, not to transgress the proprieties in which they have been educated. She replies gayly, and a blush mantles her cheek. The little boat is near the willow gateway, and two gentlemen, resting upon their oars, look up the vista with a smile of admiration at the picturesque effect of those airy, graceful forms grouped upon the green, beneath the elm-tree shadows, around the marble Fawn.

"Stay—let us watch them a moment. See Alice! She has such vivacity and such refinement of manner when she is talking, that looking at her is only less delightful than listening to her."

"Ah, Laurance! what it is to be twenty-five, and in love!" replied the elderly gentleman to whom this enthusiastic address had been made; and a half sigh breathed through the smile with which he looked at his companion.

Laurance Grey turned to his friend, his fine face flushed with exercise, and all aglow with happiness which his frank nature had no inclination to deny.

"Ah! you may well envy me," he said. "Is she not charming?"

"She is indeed—very charming."

The words would have satisfied any but a lover's sensitive ear; but that detected an inflection of the voice implying a reservation or a doubt.

"What is it I hear you keeping back?" he said, laughing. "Speak it out, mine ancient friend and Mentor; for the time for giving me advice on this subject will soon be past."

"I fear it is past already."

"Yet speak! Your advice is almost always worth hearing, though one may not want to take it to heart."

"If you will know, I was thinking what a shame it is to make that child love and marry. She should have a little more time to play with her dolls."

"Indeed, getting married shall make no difference. She shall be my doll, and I will turn the whole world into a play-house for her."

"That may do for a while; but life is before you two, and life is something more serious than a play, and the time comes when a man needs that his wife should be something more than a doll. Alice is wholly undeveloped and undisciplined. Have you wisdom, have you strength to guide her?"

"She will not need any guidance. She is full of good impulses and generous instincts."

"But that is not enough in a character so impressible as hers. What she will be in the future only time can show. Will her kindly impulses harden into fixed principles of right? Will her generous instincts become informed and moulded by the spirit of Christian self-denial? Will her sunny good-nature crystallize into a cheerful serenity that smiles beneath the darkest skies? Or is there weakness, frivolity, selfishness, in that untried heart? and will she fail in the hour of trial, and be swayed by the despotism of fashion to accept a false standard of right, a false rule of duty? Pardon these questions; for the husband is the head of the wife, and your character will influence hers—"

"Weakness! selfishness!" interrupted Laurance Grey, indignantly. "Who dares couple those words with the name of my bride? Morton, if you were not my best friend I'd throw you overboard. I won't listen to you another minute."

So saying he seized the oars, and with a few swift strokes brought the boat under the willows, where he leaped on shore. The girls were coming down the lawn to meet them, and reflection was instantly banished by the mirth of the gay party; and as Mr. Morton followed them to the house he half repented of the words he had spoken. Why should he project over their bright thoughtlessness the shadow of his own mature experience? What if they were too carelessly approaching the holy sacrament of marriage, whereof whoso partakes with a heart unpurged from selfishness and vanity perils his own soul! They loved each other, and in that love he hoped as the agent which should

purify and exalt them amidst the discipline of life.

Alice was married, and, as Laurance Grey had said, there was little change in her mode of living. The days flew by velvet-footed; her house was unexceptionable in its appointments; her wardrobe excited the envy of her companions; experienced servants relieved her of every shade of care; petted and flattered, she was for three years the spoiled child of fortune. Then a reverse came suddenly; her husband was a bankrupt, and her beautiful home passed into the hands of strangers.

Mr. Morton, who resided in a distant city, heard that Laurance Grey had failed in business, his liabilities far exceeding his assets, and that his failure had caused considerable pecuniary loss to the father of his wife. It happened that, soon after the intelligence reached him, he had occasion to leave home; and while traveling, at one of the way-stations where connections are made between different trains of cars, he unexpectedly met his young friend. A cordial greeting followed; but Mr. Morton noticed, with pain, the weary, harassed, and anxious expression which immediately returned to the face he remembered so full of hope and courage.

"You heard of my misfortunes," said he, as they walked, arm in arm, down the long platform.

"I did," replied Mr. Morton; "and I wrote you the day before I left home."

"I received your letter, and thank you for your offered aid; but my late experience makes me forever forswear the use of another man's name. Hereafter I will carve out my own fortune, and stand or fall thereby."

"Spoken nobly, like yourself," said Mr. Morton, warmly. "Now tell me your plans."

"I am going to C——, where I have secured a situation as clerk. The salary is but $500 for the first two years; afterward I have a prospect of being admitted as a partner in the firm. There was nothing better for me, and I must be doing something."

"And Alice?"

An expression of deeper pain crossed the pale face of the speaker as he answered, "She remains with her father's family. Of course I could not expect her to go into exile with me."

"Did she prefer to remain behind?"

"Every body advised that she should do so, and she acquiesced. Of course it was best she should stay."

Mr. Morton spoke somewhat savagely. "Yes—of course. What God has joined let no man put asunder until the money is gone!"

"You are too severe," replied Mr. Grey. "Alice has never known care or trouble, and has not the least idea of the labor, the privation, the mortification incident to poverty. Why should she leave the home her father offered her to incur all this? I could not ask such a sacrifice."

"Laurance, I must use my old privilege, and say what I think about this. You are about to make a great mistake," said Mr. Morton, earnestly. "You leave your wife at the time when you most need the comfort of her society. You refrain from taking her into the school which Providence has plainly appointed as a means of discipline for her as well as for yourself, and thereby she will miss the nobleness and strength this lesson was intended to give. You love her with an unwise tenderness, or she loves you too little, and you both err in consenting to this arrangement. A man and his wife should never live apart when it is possible for them to be together. It is either a prolonged pain borne needlessly, or, what is worse, the death of that love which should make no sacrifice so great as that which separates them from each other. For the reason you urge—for more or less of luxury and ease—to divorce yourselves! Oh, miserable infatuation!"

"We only do what is often done," replied Mr. Grey, after a pause. "All our friends said it would be arrant selfishness in me to take Alice away from the society and the luxuries to which she has been accustomed, and subject her to such hardships simply for my own comfort in her."

"And what did Alice say?"

"Poor little thing! she was too much bewildered and overwhelmed to know what she thought. It was terribly mortifying to her—my failure—but she bore it sweetly. She never uttered an unkind word."

"I don't know why she should. You were the greatest sufferer."

"You are unjust to her," said Laurance, coldly.

"*You* are unjust. You do discredit to the nobleness of a true woman's nature!" exclaimed his friend. "No wonder our ears are filled with the clamor of women for their rights, when a good man, with a loving heart, denies to a woman such a right as this. You said your wife should be a doll, and truly you put her away from you, now that play-time is over and the real business of life begins. Except in rare cases, I believe the idea of equality between man and woman has never yet been accepted by this enlightened age. Either the woman is the victim of tyranny, or she is cheated, cajoled, blinded; her judgment never brought to maturity, because never exercised upon important matters; her intellect never stimulated by finding herself an acknowledged aid in moments of perplexity. Men assume that women are weak, and then Heaven knows how much they do to make the assumption just."

"The cars are coming, and we must part here," said Laurance. "Think what you please of the wisdom of our arrangement, but exonerate Alice from all blame. She only did what was thought best."

"It is not for the best," persisted Mr. Morton. "She is young, beautiful; and with her mercurial temperament, will soon again be gay. Will she be in no danger? And with your social tastes, are you quite safe away from

her? Can you support your loneliness unharmed?"

"I believe so. I shall practice the strictest economy, that I may the sooner make a home to which I can invite Alice; and the thought of her will keep me from evil."

The cars came up, and they parted.

Lights, music, the soft crush of silks, the flutter of airy gauze and lace, the low murmur of voices, fashion-toned to monotonous sweetness, and now and then the sound of rippling laughter breaking the silver stream of talk—what was there in all this to cause the heavy frown that gloomed over Mr. Morton's face as he stood apart in the shadow of a bay window and looked upon the gliding throng? Again he was a visitor in the city, and had been compelled by courtesy to attend this scene of gayety. As he stood retired from observation, surveying these busy idlers with a smile half kindly half cynical, his attention was arrested by a conversation going on near him. He knew the speakers were aware of his presence, and therefore had no reason to avoid listening. To his dismay he heard Alice Grey's name, coupled with allusions he could hardly understand, and words that implied more than met the ear. Her conduct and her character were very freely discussed, and a bet was laid regarding the issue of a flirtation then progressing.

Startled and sorrowful, he left his retreat when the pressure of the crowd allowed, and made his way slowly to the room appropriated to dancing. Pausing at the door, he saw that the floor was occupied only by a few waltzers, and as the swift, graceful forms floated by, he recognized Alice and the gentleman whose name he had just heard associated with hers. Excited by the voluptuous music and the rapid motion, she was alive only to the pleasure of the dance. Her sylph-like figure was enveloped in a cloud of lace.

> "Her feet beneath her petticoat,
> Like little mice, stole in and out."

Her beautiful neck and bosom, and her rounded arms, were suffused with a color delicate and warm as that which blushes in the heart of a white rose, and her face, half up-turned, with glowing lips parted and sparkling eyes, was so bewitchingly lovely that Mr. Morton groaned inwardly to think so fair an offering should have been recklessly laid upon the altar of worldliness.

As he looked on some one touched his arm, and, turning, he saw an old and familiar friend. When the first greeting had passed his friend said,

"I suppose you know yonder little lady is the wife of your old friend Laurance Grey?"

"Yes. For a sensible man he did a most foolish thing in leaving that little beauty to be petted and flirted with and spoiled. She seemed warm-hearted, she seemed to love him, and yet she leaves him to bear his dark hours alone."

"Evidently she prefers the sunshine. Well, a butterfly must be a butterfly!"

"You speak in all charity," said Mr. Morton, sadly; "but just now I can not look at the matter through the medium of cool philosophy. Laurance Grey is a man of large, unselfish heart and high sense of honor. If his wife takes advantage of the one to pursue her pleasures, she should at least keep the other unharmed."

"If you have influence with your friend's wife, use it for her good. I believe she is the victim of foolish advice, and of her own gentle temper. A young creature like her can not but be gay. Others are to be blamed for placing her where gayety may lead to folly."

The crowd moving outward separated the two gentlemen, but these last words lingered in Mr. Morton's ear, and confirmed his previous resolution. Since there was no one else to do it, he determined to make one appeal to her love as a wife—to her honor as a woman. He would test her character and save her from the trouble her thoughtlessness might bring. An hour or two passed, and as late in the evening he sought an opportunity to execute this purpose, he chanced to find a small room, unobserved before, charmingly cool and quiet, with its dark green curtains and carpet relieved only by two magnificent myrtle-trees in full bloom, which stood on either side of the window. These attracted him, and as he stood a moment admiring them, he heard a low murmur of voices in the recess of the window. Then there was a rustling, as of some one rising suddenly, and a young voice, sharp and tremulous with emotion, said,

"You must not talk so to me—I will not hear it!"

"Nay—but Alice—sweet Alice!" said the other voice.

Mr. Morton was retreating, but the name arrested him. He turned, and Alice Grey seized his arm as she came out of the recess.

"Take me away," she said, in a whisper, and he felt the little hand that rested on his arm quivering with suppressed excitement, and noticed the proud, indignant glance she cast upon her late companion as they left the room. He led her to the conservatory, and when she sank into a seat sheltered from observation by a group of azalias, she burst into a momentary fit of weeping.

Mr. Morton stood looking down upon her with a grave, sad face. To his nice sense of honor it was not enough that she had repelled evil; she should not have placed herself where temptation could reach her. But when, conscious at length of his strange silence, she looked up, he felt the witchery of her youth and beauty, and in a tone kinder than his thoughts were, he said,

"May I tell you a story?"

"A story? Yes indeed; I delight in stories."

"You need not think that it relates to any one now living," he continued, after a pause. "You may consider that it belonged to the time

when my hair was not gray, and my heart was more hopeful than it now is. I had a friend once who married with the highest anticipations of prosperity, the most flattering prospect of happiness. His wedded life had not numbered many years when sudden reverses swept away all his property, and the lowering aspect of commercial affairs made it necessary for him to remove to a distant city and live in painful economy. His wife was young and had never known a care, and when the crash came each member of her family spoke of her as a victim to her husband's fate, and sought, first of all things, to keep her from being incommoded. In her inexperience she naturally accepted their view of the case: her first generous impulses were stifled, and thinking of the matter chiefly as it affected her own comfort, she acquiesced in the arrangement by which her husband went alone to his new home. A while she wept and was sad; but youth is elastic, and soon she smiled again, and, with every temptation to gayety, she was borne along in the whirl of fashionable amusement unprotected by her husband's presence. Accustomed to admiration and flattery from him, it was natural her young life should miss such sweetnesses when he was gone, and she submitted to receive them from other men. Her heart, deprived of its legitimate sphere, the sanctuary of home-joys and cares, grew restless and sought peace in the external pleasures where it is never found."

A vivid blush flashed over Alice Grey's white shoulders and ran up to her brow, and her eyes were like two wells of tears. "How kindly he speaks of me!" she thought; "and yet I know he thinks I am very foolish and naughty."

Mr. Morton continued: "Meantime her husband lived alone. He was a good man, but he had overrated his strength. Slowly I perceived that his hungry heart was feeding upon itself; his frank nature was becoming cynical; he was losing faith in the existence of a pure friendship in man, or an unselfish love in woman. And as his soul thus darkened his life became less pure. He fled from his lonely chambers, uncheered by woman's presence, unadorned by her graceful skill, to take pleasure and find stimulus in society which otherwise he would never have known."

Alice blushed no more; the tears dried in her eyes; she looked up defiantly, indignantly, and interrupted the speaker.

"Say what you will of me, but not one word against Laurance. He is good; he is true. I will not hear you speak one word against him."

Mr. Morton smiled. "If my story displeases you I will pursue it no longer. But tell me—were my friends wise in living thus apart?"

"No; it is not right, it is not wise," replied Alice, passionately; "but I never realized it until this evening. It is natural for me to do as I am told, and they all said I must stay here; and now I am here I *must* laugh, and dance, and be gay. I *can't* be miserable all the time—I can't bear it. It would be selfish and mean in me to mope and pine when every body tries to make me happy; and because I seem to forget Laurance is away, they think I have forgotten, and men presume upon it—as if I could ever really care for any thing more than for him! I would go to him this minute if he would allow me."

"Would you really go? Could you be happy in a tame and quiet life? Think twice before you answer; for your husband is a poor man, and could give you few pleasures. I think you have never seen so poor a room as he occupies. I was there last week, and looking around on its homeliness and bareness, he said, with a curve of his handsome lips, "Do you think I will ask her to come *here?*"

"Ah—does he think I should mind it! Does he really think I should care so much when I had him there with me! I thought, perhaps, I should be a burden and a trouble to him, and for that reason he did not ask me. Take me to him, Mr. Morton. Papa thinks Laurance and I are two young things who do not know what is best, but he will hear your arguments. Take me to my husband, and you shall see what will make me happiest." Tears were in her beautiful eyes, but her face was all aglow with eagerness and excitement. Mr. Morton forgot that she had ever displeased him, forgot that he had ever thought Laurance Grey foolish in loving her. Her manner was childlike, her expressions ardent: now as much as ever before was she moved by impulse; yet he did not stop to think how evanescent was feeling, and how unstable was impulse. She had won his friendship, and therefore he trusted her.

Mr. Morton had the gift of persuasion. Three days after this conversation Alice had received from her father the consent so long withheld, and under Mr. Morton's care had gone to join her husband. All her early love for Laurance was roused into new life by the thought of again seeing him. She had little dread of the change of life before her. Her fancy amused itself in picturing the happiness she might enjoy in "a cottage;" and while she laughed at her own ignorance of domestic details, she took courage from Mr. Morton's assertion that it was possible to apply chemistry to cooking, and common sense to common life, in a way to obviate all difficulties.

It was a dark, chilly evening in April when they stood on the steps of the house which Laurance Grey had made his temporary home. He had not been informed of their coming, and, to make the surprise more complete, Alice insisted that she should accompany Mr. Morton to her husband's room and there await his return should he be absent. Mr. Morton had prepared her to find no elegance there; yet when the wondering landlady, with many apologies, opened to her the door of her husband's chamber she could hardly suppress an exclamation of dismay. Never had she seen an apartment so forlorn. The rusty grate contained no fire, and the untidy hearth was covered with cinders

and ashes. Scanty curtains hung in the windows, the bed was made up in the uninviting manner noticeable occasionally in cheap boarding-houses, around the table the faded carpet was strewn with bits of torn letters, while on the table books and papers were piled in confusion. Alice felt like crying, but she only allowed herself to laugh. The hostess looked into her face with a suspicious glance, and said something about "poor servants," "a large family," and "Mr. Grey's way of throwing every thing on the floor."

Alice hastened to interrupt her. One glance at Mr. Morton's face as he stood regarding her had restored her courage. He should see that Laurance had a wife, a helper, and not a burden in possessing her. She turned to their irritated companion with a smile so sunny that vexation fled before it. The feminine instinct of housekeeping awoke within her. A few coaxing words to the landlady, and compliments liberally dispensed, a plan rapidly formed and as rapidly sketched to Mr. Morton, who gave it efficient aid, an hour of bustle and activity, and the chamber they had found so repelling in appearance was transformed as by the touch of a magic wand. The carpet and hearth were neatly swept, a bright fire glowed in the grate, the bed had been removed to a corner where it obtruded itself less into notice, and for lack of better curtains Alice had pinned her two large shawls over the windows, where their deep colors and heavy folds, gracefully draped, gave the room an air of comfort. The arm-chair was placed in the corner of the fire-place, and over it Mr. Grey's dressing-gown was thrown in a most enticing manner. The books and papers had been arranged upon the bureau, leaving the table at liberty to display a bright colored cloth, a dish of fruit, and a blooming rose-tree in a china pot. These Alice had supplied. The cost was trifling, but they were grouped artistically, and shed the glamour of their beauty over the meaner articles around.

"Truly you have to some purpose used your power to charm," said Mr. Morton, smiling as he surveyed the change.

Her face glowed as she answered the smile. Success in little things is often more gratifying than in matters which seem vastly important, and Alice possessed the rare gift of being able to seize all the pleasure the present offers and to turn away from its pain. Reared as she had been in luxury, an intuition told her how to avail herself of the most ordinary means to create around her an atmosphere of beauty and grace. There is in some youthful natures a power to live in the ideal which puts to shame the stoical endurance gained in later years from experience, and the novelty of her situation neither depressed nor discouraged her. She was a young wife, awaiting her husband, for whom she had prepared an agreeable surprise. Who will doubt that she said truly, in reply to the commendation of her friend, "I think I never was so happy in all my life as I am now. I only want to see how Laurance will look when he sees what we have done! You may go now and find him; but do be careful what you say, for I wish the surprise to be complete."

Mr. Morton's eyes rested upon her with pleasure. "Ah," he thought, "if I could charm your life so that you would always be as happy and as light of heart as now!"

Vain wish! He had arisen to prepare to go out, and as she talked gayly, he detected an unusual sound in the entry below, and heard an exclamation of surprise or fear. Without saying a word to alarm Alice he went out quickly. Four men were carrying an inanimate form slowly up stairs, and behind them the landlady stood, wringing her hands.

"What is it?" he asked, in a low voice.

It was Laurance Grey. He had been shot, and was scarcely alive.

"How did it happen?" exclaimed Mr. Morton, forgetting his caution.

In a hotel not far from his boarding-house, where he passed an hour or two each evening, he had overheard a young man reading a letter just received from New York, wherein, amidst much gossip, there was repeated the slanderous insinuations against Alice which had moved Mr. Morton to take her away from the city. The friend could not hear them unmoved. They roused the husband to fury. He sprang upon the unconscious reader. There were loud insulting words, rapid blows, shots were fired, and before any one interfered Laurance Grey had received a deadly wound. All this was told in a few blunt words. Mr. Morton heard like one in a dream, and before the story was ended a low moan, a faint sobbing groan told him that Alice also had heard. He turned to her. How would she bear this!

She neither shrieked nor fainted. She had laid her hand on his arm, and still her grasp held there when they carried her husband by her and laid him like a corpse upon the bed, while her hand grew cold and rigid, and her white face had the expression of one suddenly struck blind.

Oh it was too hard! too pitiful! He could have cursed the impulse that led him to bring her here only to endure this great trouble! He spoke to her hurried words full of a hope he did not feel; he bade her be strong and courageous, but she did not seem to hear. Her gaze wandered around the poor room she had taken such care to arrange for her husband's reception. With a bitter feeling of helplessness and despair she thought what it would be to live when he was dead, and then, with a keen pang like a sword-thrust, came the recollection that because of her folly, her imprudence, he had been thus brought low.

She started, she escaped from Mr. Morton's restraining hand, and with a wild cry she threw herself on her knees beside the bed.

"Oh, speak to me!" she moaned, as her arms were wound around her husband's neck—as her kisses were pressed upon the pallid lips that

looked as if they would never again unclose. "Oh, speak to me—I am here—I am true to you—I love you! Laurance, speak to me!"

As if her voice had called him back from death the wounded man looked at her with the light of life once more kindling in his eyes—spoke her name feebly, and tried to take her in his arms; but the blood gushed anew from his wound, and he fell back, like one dying. The physician who was in attendance now interfered, and insisted Alice should leave the room; Mr. Grey's life hung on a thread, and he must not be agitated. The ball must be extracted, and if that could be done he might survive; otherwise—a professional shake of the head finished the sentence.

Alice was led from the room, but she would not leave the door. Outside its threshold she crouched, rejecting aid or solace. She heard footsteps in the chamber, she heard low, cautious tones, and now and then a groan. Oh! would it never end! How slow they were, when each minute might be his last, and she was not beside him! At length, when it seemed as if she could bear the torturing suspense no longer, the door opened, and Mr. Morton came out. She sprang to her feet and grasped his hands, looking into his face with pallid, quivering lips that could not frame the question they trembled with.

"He lives—the ball has been extracted, and he lives—but he is very weak from the loss of blood; and Alice, dear child, you can not see him until you are more calm. Go to the next room and rest. When you have slept you can better compose yourself."

Sleep! oh, mockery! As if sleep was possible to her then, when over the eyes whose love-light had been her life might be stealing the darkness of a long, last slumber! Alice had given way to the first agony of her emotions with the abandonment of youth and an untried heart. But there was beneath that girlish exterior a strength never called forth until now, but which this hour was to prove. She had leaned back against the wall when she heard Mr. Morton's first words, and covered her face with her hands; but when, after pausing a moment, he took her arm to lead her away, she turned and looked at him, and as the lamp-light fell upon her face, he was struck with the change he saw. It was no longer a thoughtless, helpless girl he looked upon, but a woman, fair and pale, yet with a lofty and composed expression that told of self-restraint and of a power to suffer and to endure. The words he was about to repeat died on his lips.

"You are stronger than I thought," he said. "Will you trust yourself to watch with me to-night in there?"

"It is my place—you must allow it," she replied, with a mingled dignity and submission in her manner which disarmed objection. She did not notice how reverently he opened the door for her to pass in, appreciating the queen-like womanhood she had assumed; but she remembered afterward that from that hour he never used that old familiar appellation or treated her like a child.

All night they watched beside Laurance Grey, not daring to hope, but forbidding themselves to despair. Only the most assiduous care—such care as love only gives—could have stimulated the vital forces to rally for the struggle that ensued. With renewed vigor came fever, and pain, and delirium; and for days Alice had the inexpressible grief to know that her presence, her cares, were unheeded, and to hear herself called upon, conjured by every term of endearment or reproach to come to him and free her name from the scandal that stained it. It was a terrible lesson, and, in its prolonged torture, she feared sometimes that heart and brain would fail. On one such occasion, when Mr. Morton entered the chamber, he found her weeping. The hired nurse had gone away to rest, and Alice was alone.

"Oh!" she cried, "how long must this last! How can I endure it! My husband will die, and I shall have killed him! I can not, I can not bear it!"

"Dear Mrs. Grey," said her friend, slowly, with deep feeling, "there is but One who can aid us in these moments, when earthly help fails. That One holds in His hands the issues of life and death. *Look to God* for help."

That thought had crossed her mind before; but, alas! it was unfamiliar, and brought with it no assurance of protection and comfort. She had uttered that great name in ejaculations of distress—the instinctive cry of humanity in its utmost need, "Be pitiful, O God!"—but until this moment she had never realized what it was to call upon the Almighty as upon one present to hear. With a sudden sense of shame and penitence, she replied, "I can not—I can not do so. I have never loved or sought God in my happy hours, and will He hear me now?"

"His ear is ever open. His pity is like a mother's for her child. He knoweth our frame—He remembereth that we are dust."

"Oh, then," she cried, "then He will not try me too utterly. Pray to Him—you know Him—He is your friend—pray that He will be mine!"

Tears flowed from her eyes; feelings new and full of awe, yet strangely sweet, took possession of her heart as she listened, kneeling, while Mr. Morton prayed. His words were few and simple; but they came from lips touched with Spirit influences, through long years of such communing as made him one of those who "have power with God." In her gay and worldly life Alice had given little thought even to that external religion which feeds the hungry and clothes the naked, and joins in the ministration of public worship. She was an utter stranger to that interior life, hidden, unnoticed, and often disbelieved by men, but which is the vital principle that keeps alive all forms—without which charity "profiteth nothing"—which vivifies human happiness with a celestial joy,

and makes all human woe endurable. Of this life she now obtained a glimpse—imperfect, indeed, and soon overclouded—yet her whole soul went out toward it with a deep longing—with a cry like the cry of the famishing for bread—"O God, be merciful to me a sinner!"

Mr. Morton had come to bid her farewell. An emergency in his affairs imperatively required his presence at home; and though he left her but for a few days, and had made every possible provision for her comfort, her heart sank at the thought of being left alone among strangers. Her face revealed her emotion, and Mr. Morton was touched by the generosity that kept her from expressing it. "Laurance was right," he thought, as he recalled their conversation so long ago; "Alice is unselfish—she is devoted—she is strong—she has the germs of a noble womanhood, and her follies were but the weeds that choked their development."

Mr. Morton went away. All that morning Laurance became rapidly worse. The afternoon was dark and lowering. The sick man had fallen asleep, and his slumber was like death, so heavy and so deep. The house was still—every footfall was hushed, every voice lowered to a whisper. The doctor, the nurse, the landlady, came and went with cautious movements; and in every face Alice read the fear no one dared to speak. She sat as in a dream, and felt the minutes slide away, the hours pass on—each hour, each minute so much taken from the brief remnant left her of the life so knit to hers. She looked back through her life with a sad wonder at her former joyousness—she was so wretched now! She reviewed the past, and memory mocked her with its follies. Where had she been, what was she, that until now she had lived wholly upon superficial feelings, and had never known the depths of her own heart? Was the knowledge now too late? While she gathered glittering tinsel, had the stream of Time borne away the precious golden treasure of her life? Would Laurance die, and never know how she could love him—never learn the devotion, the self-sacrifice of which her heart now told her she was capable?

She counted the weak pulses in the hand she held; with a new and wild terror she bent to catch the feeble breath; she looked into the faces of her attendants with such pathetic entreaty that they could not endure to see the woe she felt, and, one by one, withdrew from the bedside. Twilight was gathering, and, in the dim shadow of the low chamber, her husband's face looked white and ghastly, like one already dead. She bowed her head on her clasped hands, and her heart seemed breaking with its grief and its despair.

Suddenly she remembered those words of Mr. Morton which had moved her with such power. Was there indeed One, all-powerful, who would hear her cry for aid, though her whole life had been unthankful, self-seeking, careless of His will? Ah! she was not his child; she had no right to address him as "Father;" and yet she recalled, vaguely, some words which she had heard read in church—"Yes, Lord; yet the dogs eat of the crumbs that fall from the children's table!"

There are those whom God leads to himself through flowery paths, where the thorns, if thorns there be, are hidden by roses; there are others whom He leads through rough places, around whom He must make the silence of the desert before they can hear His voice; and men have walked in a furnace, yea, seven times heated, that they might come forth purified as gold is pure.

Laurance Grey lived. Youth and a vigorous constitution triumphed over disease. He lived, and with returning health resumed the humble labors his illness had interrupted; but his wife never again left him. From that trial of her true nature Alice came forth with the dross which had hidden it utterly consumed. The keen suffering of those days cured her of thoughtlessness, of selfishness, of vanity; and her gratitude for deliverance awakened a religious trust which strengthened and developed all her nobler qualities. In the trials that came afterward, where a weak woman would have fallen, she stood firmly; where a selfish woman would have been careless of others, she showed a rare self-abnegation. She shared her husband's poverty, and lightened it of half its bitterness by a thousand graceful wiles, known only to a loving woman; and, when prosperity came, they had both learned to live for nobler aims than selfish pleasures—for a purer happiness than gold ever bought.

Some years after the scenes I have related, when Mr. Morton was an old man, and white hairs had begun to cluster among Laurance Grey's dark locks, the two, friends of a lifetime, stood upon the piazza of their Western home, and looked down into the garden where Alice was walking. She paused to throw some bits of cake to the gold fishes in a pond, and, as she did so, leaned against a statue which had been placed beneath a tree. Something in her attitude reminded the gentlemen of the evening when they saw her thus leaning against the marble Faun, on her seventeenth birthday. They looked at each other and smiled. "Do you remember?" asked Mr. Grey.

"Yes. Time has touched her lightly. One might almost imagine it was still Alice Girdler, the young bride of a boy-lover."

Mr. Grey smiled again as he answered. "The change has indeed been chiefly of the mind and heart. I thought her perfect then; but I am conscious she has developed into a nobler type of woman than her girlhood promised. Ah, yes; the wife is dearer than the bride!"

He spoke fervently, and his cheek flushed, as his eyes again sought the quiet figure, still resting beneath the tree, unconscious of observation.

"You have a very happy home here," said Mr. Morton, after a pause.

"I have; and my life has been richly blest. Yet I can truly say I thank God most for the

years that seemed sometimes in passing so full of sorrow and care; for then I learned to know the blessing a woman's love can be; and together Alice and I were taught a lesson which remained an unfailing comfort in view of the vicissitudes of human affairs—"*A man's life consisteth not in the abundance of the things which he possesseth.*"

CUPID'S REVENGE.

AN UNPUBLISHED TALE, BY CHARLES LAMB.

[The autograph MS. of this unpublished Tale by CHARLES LAMB came into our hands in the following manner: THOMAS ALLSOP, Esq., who came to this country a few months since in consequence of his alleged complicity in the attempt made upon the life of Louis Napoleon by Orsini, was for many years an intimate friend and correspondent of Coleridge and Lamb. He is known as the author of the "*Recollections, etc., of Samuel Taylor Coleridge*," published nearly a quarter of a century ago. He brought with him in his flight to America a number of manuscripts of his friends. Among these were a volume of "Marginalia," by Coleridge; a series of notes by Lamb, nearly a hundred in all, many of them highly characteristic of the writer; and the Tale of "Cupid's Revenge," which appears to have remained unpublished in consequence of the cessation of the magazine for which it was written. These MSS. have all been placed in our hands. In an early number we propose to publish a selection from the "Letters" of LAMB, and the "Marginalia" of Coleridge.—EDS. OF HARPER'S MAGAZINE.]

LEONTIUS, Duke of Lycia, who in times past had borne the character of a wise and just governor, and was endeared to all ranks of his subjects, in his latter days fell into a sort of dotage, which manifested itself in an extravagant fondness for his daughter Hidaspes. This young maiden, with the Prince Leucippus, her brother, were the only remembrances left to him of a deceased and beloved consort. For *her* nothing was thought too precious. Existence was of no value to him but as it afforded opportunities of gratifying her wishes. To be instrumental in relieving her from the least little pain, or grief, he would have lavished his treasures to the giving away of the one half of his dukedom.

All this deference on the part of the parent had yet no power upon the mind of the daughter to move her at any time to solicit any unbecoming suit, or to disturb the even tenor of her thoughts. The humility and dutifulness of her carriage seemed to keep pace with his apparent willingness to release her from the obligations of either. She might have satisfied her wildest humors and caprices; but in truth no such troublesome guests found harbor in the bosom of the quiet and unaspiring maiden.

Thus far the prudence of the Princess served to counteract any ill effects which this ungovernable partiality in a parent was calculated to produce in a less virtuous nature than Hidaspes's; and this foible of the Duke's, so long as no evil resulted from it, was passed over by the courtiers as a piece of harmless frenzy.

But upon a solemn day—a sad one, as it proved for Lycia—when the returning anniversary of the Princess's birth was kept with extraordinary rejoicings, the infatuated father set no bounds to his folly, but would have his subjects to do homage to her for that day, as to their natural sovereign; as if he, indeed, had been dead, and she, to the exclusion of the male succession, was become the rightful ruler of Lycia. He saluted her by the style of Duchess; and with a terrible oath, in the presence of his nobles, he confirmed to her the grant of all things whatsoever that she should demand on that day, and for the six next following; and if she should ask any thing the execution of which must be deferred until after his death, he pronounced a dreadful curse upon his son and successor, if he failed to see to the performance of it.

Thus encouraged, the Princess stepped forth with a modest boldness, and, as if assured of no denial, spake as follows:

But before we acquaint you with the purport of her speech, we must premise, that in the land of Lycia, which was at that time pagan, above all their other Gods the inhabitants did in an especial manner adore the deity who was supposed to have influence in the disposing of people's affections in *love*. Him, by the name of God Cupid, they feigned to be a *beautiful boy*, and *winged*, as indeed between young persons these frantic passions are usually least under constraint; while the wings might signify the haste with which these ill-judged attachments are commonly dissolved, and do indeed go away as lightly as they came, flying away in an instant to light upon some newer fancy. They painted him *blindfolded*, because these silly affections of lovers make them blind to the defects of the beloved object, which every one is quick-sighted enough to discover but themselves; or because love is for the most part led blindly, rather than directed by the open eye of the judgment, in the hasty choice of a mate. Yet, with that inconsistency of attributes with which the heathen people commonly over-complimented their deities, this blind love, this Cupid, they figured with a bow and arrows; and, being sightless, they yet feigned him to be a notable archer and an unerring marksman. No heart was supposed to be proof against the point of his inevitable dart. By such incredible fictions did these poor pagans make a shift to excuse their vanities, and to give a sanction to their irregular affections, under the notion that love was irresistible; whereas, in a well-regulated mind, these amorous conceits either find no place at all, or, having gained a footing, are easily stifled in the beginning by a wise and manly resolution.

This frenzy in the people had long been a source of disquiet to the discreet Princess, and many were the conferences she had held with the virtuous Prince, her brother, as to the best mode of taking off the minds of the Lycians from this vain superstition. An occasion, furnished by the blind grant of the old Duke, their father, seemed now to present itself.

The courtiers, then, being assembled to hear the demand which the Princess should make,

began to conjecture, each one according to the bent of his own disposition, what the thing would be that she should ask for. One said, "Now surely she will ask to have the disposal of the revenues of some wealthy province, to lay them out—as was the manner of Eastern princesses—in costly dresses and jewels becoming a lady of so great expectancies." Another thought that she would seek an extension of power, as women naturally love rule and dominion. But the most part were in hope that she was about to beg the hand of some neighbor prince in marriage, who, by the wealth and contiguity of his dominions, might add strength and safety to the realm of Lycia. But in none of these things was the expectation of these crafty and worldly-minded courtiers gratified. For Hidaspes, first making lowly obeisance to her father, and thanking him on bended knees for so great grace conferred upon her—according to a plan preconcerted with Leucippus—made suit as follows:

"Your loving care of me, O princely father, by which in my tenderest age you made up to me for the loss of a mother at those years when I was scarcely able to comprehend the misfortune, and your bounties to me ever since, have left me nothing to ask for myself, as wanting and desiring nothing. But for the people whom you govern I beg and desire a boon. It is known to all nations that the men of Lycia are noted for a vain and fruitless superstition—the more hateful as it bears a show of true religion, but is indeed nothing more than a self-pleasing and bold wantonness. Many ages before this, when every man had taken to himself a trade, as hating idleness far worse than death, some one that gave himself to sloth and wine, finding himself by his neighbors rebuked for his unprofitable life, framed to himself a God whom he pretended to obey in his dishonesty; and, for a name, he called him Cupid. This God of merely man's creating—as the nature of man is ever credulous of any vice which takes part with his dissolute conditions—quickly found followers enough. They multiplied in every age, especially among your Lycians, who to this day remain adorers of this drowsy Deity, who certainly was first invented in drink, as sloth and luxury are commonly the first movers in these idle love-passions. This *winged Boy*—for so they fancy him—has his sacrifices, his loose Images set up in the land through all the villages—nay, your own sacred palace is not exempt from them—to the scandal of sound devotion and dishonor of the true Deities, which are only they who give good gifts to man—as Ceres, who gives us corn; the planter of the olive, Pallas; Neptune, who directs the track of ships over the great ocean, and binds distant lands together in friendly commerce; the inventor of medicine and music, Apollo; and the cloud-compelling Thunderer of Olympus. Whereas the gifts of this idle Deity—if, indeed, he have a being at all out of the brain of his frantic worshipers—usually prove destructive and pernicious. My suit, then, is, that this unseemly Idol throughout the land be plucked down and cast into the fire; and that the adoring of the same may be prohibited on pain of death to any of your subjects henceforth found so offending."

Leontius, startled at this unexpected demand from the Princess, with tears besought her to ask some wiser thing, and not to bring down upon herself and him the indignation of so great a God.

"There is no such God as you dream of," said then Leucippus, boldly, who had hitherto forborne to second the petition of the Princess; "but a vain opinion of him has filled the land with love and wantonness. Every young man and maiden that feel the least desire to one another, dare in no case to suppress it, for they think it to be Cupid's motion, and that he is a God!"

Thus pressed by the solicitations of both his children, and fearing the oath which he had taken, in an evil hour the misgiving father consented; and a proclamation was sent throughout all the provinces for the putting down of the Idol, and suppression of the established Cupid-worship.

Notable, you may be sure, was the stir made in all places among the priests, and among the artificers in gold, in silver, or in marble; who made a gainful trade, either in serving at the altar or in the manufacture of the images no longer to be tolerated. The cry was clamorous as *that* at Ephesus, when a kindred Idol was in danger; for "great had been Cupid of the Lycians." Nevertheless the power of the Duke, backed with the power of his more popular children, prevailed; and the destruction of every vestige of the old religion was but as the work of one day throughout the country.

And now, as the Pagan chronicles of Lycia inform us, the displeasure of Cupid went out—the displeasure of a great God—flying through all the dukedom, and sowing evils. But upon the first movers of the profanation his angry hand lay heaviest, and there was imposed upon them a strange misery, that all might know that Cupid's revenge was mighty. With his arrows hotter than plagues, or than his own anger, did he fiercely right himself; nor could the prayers of a few concealed worshipers, nor the smoke arising from an altar here and there which had escaped the general overthrow, avert his wrath, or make him to cease from vengeance, until he had made of the once flourishing country of Lycia a most wretched land. He sent no famines—he let loose no cruel wild beasts among them—inflictions, with one or other of which the rest of the Olympian deities are fabled to have visited the nations under their displeasure—but took a nearer course of his own, and his invisible arrows went to the *moral heart* of Lycia, infecting and filling court and country with desires of unlawful marriages, unheard-of and monstrous affections, prodigious and misbecoming unions.

The symptoms were first visible in the changed

bosom of Hidaspes. This exemplary maiden—whose cold modesty, almost to a failing, had discouraged the addresses of so many princely suitors that had sought her hand in marriage—by the venom of this inward pestilence came on a sudden to cast eyes of affection upon a mean and deformed creature, Zoilus by name, who was a dwarf, and lived about the palace, the common jest of the courtiers. In her besotted eyes he was grown a goodly gentleman. And to her maidens, when any of them reproached him with the defect of his shape in her hearing, she would reply that, "to them, indeed, he might appear defective, and unlike a man, as, indeed, no man was like unto him, for in form and complexion he was beyond painting. He is like," she said, "to nothing that we have seen; yet he doth resemble Apollo, as I have fancied him, when, rising in the east, he bestirs himself, and shakes daylight from his hair." And, overcome with a passion which was heavier than she could bear, she confessed herself a wretched creature, and implored forgiveness of God Cupid, whom she had provoked, and, if possible, that he would grant it to her, that she might enjoy her love. Nay, she would court this piece of deformity to his face; and when the wretch, supposing it to be done in mockery, has said that he could wish himself more ill-shaped than he was, so it would contribute to make her Grace merry, she would reply, "Oh, think not that I jest! unless it be a jest not to esteem my life in comparison with thine—to hang a thousand kisses in an hour upon those lips—unless it be a jest to vow that I am willing to become your wife, and to take obedience upon me." And by his "own white hand," taking it in hers—so strong was the delusion—she besought him to swear to marry her.

The term had not yet expired of the seven days within which the doting Duke had sworn to fulfill her will, when, in pursuance of this frenzy, she presented herself before her father, leading in the dwarf by the hand, and, in the face of all the courtiers, solemnly demanding his hand in marriage. And when the apish creature made show of blushing at the unmerited honor, she, to comfort him, bade him not to be ashamed, for "in her eyes he was worth a kingdom."

And now, too late, did the fond father repent him of his dotage. But when by no importunity he could prevail upon her to desist from her suit, for his oath's sake he must needs consent to the marriage. But the ceremony was no sooner, to the derision of all present, performed, than, with the just feelings of an outraged parent, he commanded the head of the presumptuous bridegroom to be stricken off, and committed the distracted Princess close prisoner to her chamber, where, after many deadly swoonings, with intermingled outcries upon the cruelty of her father, she, in no long time after, died, making ineffectual appeals, to the last, to the mercy of the offended Power—the Power that had laid its heavy hand upon her, to the bereavement of her good judgment first, and, finally, to the extinction of a life that might have proved a blessing to Lycia.

Leontius had scarcely time to be sensible of her danger before a fresh cause for mourning overtook him. His son Leucippus, who had hitherto been a pattern of strict life and modesty, was stricken with a second arrow from the Deity, offended for his overturned altars, in which the Prince had been a chief instrument. The God caused his heart to fall away, and his crazed fancy to be smitten with the excelling beauty of a wicked widow, by name Bacha. This woman, in the first days of her mourning for her husband, by her dissembling tears and affected coyness, had drawn Leucippus so cunningly into her snares, that, before she would grant him a return of love, she extorted from the easy-hearted prince a contract of marriage, to be fulfilled in the event of his father's death. This guilty intercourse, which they covered with the name of marriage, was not carried with such secrecy but that a rumor of it ran about the palace; and by some officious courtier was brought to the ears of the old Duke, who, to satisfy himself of the truth, came hastily to the house of Bacha, where he found his son courting. Taking the Prince to task roundly, he sternly asked who that creature was that had bewitched him out of his honor thus. Then Bacha, pretending ignorance of the Duke's person, haughtily demanded of Leucippus what saucy old man that was, that without leave had burst into the house of an afflicted widow to hinder her paying her tears (as she pretended) to the dead. Then the Duke declaring himself, and threatening her for having corrupted his son, giving her the reproachful terms of witch and sorceress, Leucippus mildly answered that he "did her wrong." The bad woman, imagining that the Prince for very fear would not betray their secret, now conceived a project of monstrous wickedness, which was no less than to insnare the father with the same arts which had subdued the son; that she might no longer be a concealed wife, nor a Princess only under cover, but by a union with the old man become at once the true and acknowledged Duchess of Lycia. In a posture of humility she confessed her ignorance of the Duke's quality, but, now she knew it, she besought his pardon for her wild speeches, which proceeded, she said, from a distempered head, which the loss of a dear husband had affected. He might command her life, she told him, which was now of small value to her. The tears which accompanied her words, and her mourning weeds (which, for a blind to the world, she had not yet cast off) heightening her beauty, gave a credence to her protestations of her innocence. But the Duke continuing to assail her with reproaches, with a matchless confidence, assuming the air of injured virtue, in a somewhat lofty tone she replied, that, though he were her sovereign, to whom in any lawful cause she was bound to submit, yet, if

he sought to take away her honor, she stood up to defy him. *That*, she said, was a jewel dearer than any he could give her, which so long as she should keep she should esteem herself richer than all the princes of the earth that were without it. If the Prince, his son, knew any thing to her dishonor, let him tell it. And here she challenged Leucippus before his father to speak the worst of her. If he would, however, sacrifice a woman's character to please an unjust humor of the Duke's, she saw no remedy, she said, now *he* was dead (meaning her late husband) that with his life would have defended her reputation.

Thus appealed to, Leucippus, who had stood a while astonished at her confident falsehoods, though ignorant of the full drift of them, considering that not the reputation only, but probably the life of a woman whom he had so loved, and who had made such sacrifices to him of love and beauty, depended upon his absolute concealment of their contract, framed his mouth to a compassionate untruth, and with solemn asseverations confirmed to his father her assurances of her innocence. He denied not that with rich gifts he had assailed her virtue, but had found her relentless to his solicitations; that gold nor greatness had any power over her. Nay, so far he went on to give force to the protestations of this artful woman, that he confessed to having offered marriage to her, which she, who scorned to listen to any second wedlock, had rejected.

All this while Leucippus secretly prayed to Heaven to forgive him while he uttered these bold untruths, since it was for the prevention of a greater mischief only, and had no malice in it.

But, warned by the sad sequel which ensued, be thou careful, young reader, how in any case you tell a lie. Lie not, if any man but ask you, "How you do?" or "What o'clock it is?" Be sure you make no false excuse to screen a friend that is most dear to you. Never let the most well-intended falsehood escape your lips. For Heaven, which is entirely Truth, will make the seed which you have sown of Untruth to yield miseries a thousand-fold upon yours, as it did upon the head of the ill-fated and mistaken Leucippus.

Leontius, finding the assurances of Bacha so confidently seconded by his son, could no longer withhold his belief, and, only forbidding their meeting for the future, took a courteous leave of the lady, presenting her at the same time with a valuable ring, in recompense, as he said, of the injustice which he had done her in his false surmises of her guiltiness. In truth, the surpassing beauty of the lady, with her appearing modesty, had made no less impression upon the heart of the fond old Duke than they had awakened in the bosom of his more pardonable son. His first design was to make her his mistress; to the better accomplishing of which Leucippus was dismissed from the court, under the pretext of some honorable employment abroad. In his absence Leontius spared no offers to induce her to comply with his purpose. Continually he solicited her with rich offers, with messages, and by personal visits. It was a ridiculous sight, if it were not rather a sad one, to behold this second and worse dotage, which by Cupid's wrath had fallen upon this fantastical *old new lover*. All his occupation now was in dressing and pranking himself up in youthful attire to please the eyes of his new mistress. His mornings were employed in the devising of trim fashions, in the company of tailors, embroiderers, and feather-dressers. So infatuated was he with these vanities, that when a servant came and told him that his daughter was dead—even she, whom he had but lately so highly prized—the words seemed spoken to a deaf person. He either could not or would not understand them; but, like one senseless, fell to babbling about the shape of a new hose and doublet. His crutch, the faithful prop of long aged years, was discarded; and he resumed the youthful fashion of a sword by his side, when his years wanted strength to have drawn it. In this condition of folly it was no difficult task for the widow, by affected pretenses of honor and arts of amorous denial, to draw in this doting Duke to that which she had all along aimed at, the offer of his crown in marriage. She was now Duchess of Lycia! In her new elevation the mask was quickly thrown aside, and the impious Bacha appeared in her true qualities. She had never loved the Duke her husband, but had used him as the instrument of her greatness. Taking advantage of his amorous folly, which seemed to gain growth the nearer he approached to his grave, she took upon her the whole rule of Lycia; placing and displacing at her will all the great officers of state; and, filling the court with creatures of her own, the agents of her guilty pleasures, she removed from the Duke's person the oldest and trustiest of his dependents.

Leucippus, who at this juncture was returned from his foreign mission, was met at once with the news of his sister's death and the strange wedlock of the old Duke. To the memory of Hidaspes he gave some tears. But these were swiftly swallowed up in his horror and detestation of the conduct of Bacha. In his first fury he resolved upon a full disclosure of all that had passed between him and his wicked step-mother. Again he thought, by killing Bacha, to rid the world of a monster. But tenderness for his father recalled him to milder counsels. The fatal secret, nevertheless, sat upon him like lead, while he was determined to confide it to no other. It took his sleep away and his desire of food; and if a thought of mirth at any time crossed him the dreadful truth would recur to check it, as if a messenger should have come to whisper to him of some friend's death! With difficulty he was brought to wish their Highnesses faint joy of their marriage; and, at the first sight of Bacha, a friend was fain to hold his wrist hard to prevent him from fainting. In an interview which after, at her request, he had with her alone, the bad woman shamed not

to take up the subject lightly; to treat as a trifle the marriage vow that had passed between them; and seeing him sad and silent, to threaten him with the displeasure of the Duke, his father, if by words or looks he gave any suspicion to the world of their dangerous secret. "What had happened," she said, "was by no fault of hers. People would have thought her mad if she had refused the Duke's offer. She had used no arts to entrap his father. It was Leucippus's own resolute denial of any such thing as a contract having passed between them which had led to the proposal."

The Prince, unable to extenuate his share of blame in the calamity, humbly besought her, that "since by his own great fault things had been brought to their present pass, she would only live honest for the future; and not to abuse the credulous age of the old Duke, as he well knew she had the power to do. For himself, seeing that life was no longer desirable to him, if his death was judged by her to be indispensable to her security, she was welcome to lay what trains she pleased to compass it, so long as she would only suffer his father to go to his grave in peace, since *he* had never wronged her."

This temperate appeal was lost upon the heart of Bacha, who from that moment was secretly bent upon effecting the destruction of Leucippus. Her project was, by feeding the ears of the Duke with exaggerated praises of his son, to awaken a jealousy in the old man that she secretly preferred Leucippus. Next, by willfully insinuating the great popularity of the Prince (which was no more indeed than the truth) among the Lycians, to instill subtle fears into the Duke that his son had laid plots for circumventing his life and throne. By these arts she was working upon the weak mind of the Duke almost to distraction, when, at a meeting concocted by herself between the Prince and his father, the latter taking Leucippus soundly to task for these alleged treasons, the Prince replied only by humbly drawing his sword, with the intention of laying it at his father's feet, and begging him, since he suspected him, to sheathe it in his own bosom, for of his life he had been long weary. Bacha entered at the crisis, and ere Leucippus could finish his submission, with loud outcries alarmed the courtiers, who, rushing into the presence, found the Prince, with sword in hand indeed, but with far other intentions than this bad woman imputed to him, plainly accusing him of having drawn it upon his father! Leucippus was quickly disarmed; and the old Duke, trembling between fear and age, committed him to close prison, from which, by Bacha's aims, he never should have come out alive but for the interference of the common people, who, loving their Prince, and equally detesting Bacha, in a simultaneous mutiny arose and rescued him from the hands of the officers.

The court was now no longer a place of living for Leucippus, and, hastily thanking his countrymen for his deliverance, which in his heart he rather deprecated than welcomed, as one that wished for death, he took leave of all court hopes, and, abandoning the palace, betook himself to a life of penitence in solitudes.

Not so secretly did he select his place of penance, in a cave among lonely woods and fastnesses, but that his retreat was traced by Bacha; who, baffled in her purpose, raging like some she-wolf, dispatched an emissary of her own to destroy him privately.

There was residing at the court of Lycia at this time a young maiden, the daughter of Bacha by her first husband, who had hitherto been brought up in the obscurity of a poor country abode with an uncle, but whom Bacha now publicly owned, and had prevailed upon the easy Duke to adopt as successor to the throne in wrong of the true heir, his suspected son Leucippus.

This young creature, Urania by name, was as artless and harmless as her mother was crafty and wicked. To the unnatural Bacha she had been an object of neglect and aversion; and for the project of supplanting Leucippus only had she fetched her out of retirement. The bringing up of Urania had been among country hinds and lasses; to tend her flocks or superintend her neat dairy had been the extent of her breeding. From her calling she had contracted a pretty rusticity of dialect, which, among the fine folks of the court, passed for simplicity and folly. She was the unfittest instrument for an ambitious design that could be chosen, for her manners in a palace had a tinge still of her old occupation, and to her mind the lowly shepherdess's life was best.

Simplicity is oft a match for prudence; and Urania was not so simple but she understood that she had been sent for to court only in the Prince's wrong, and in her heart she was determined to defeat any designs that might be contriving against her brother-in-law. The melancholy bearing of Leucippus had touched her with pity. This wrought in her a kind of love, which, for its object, had no further end than the well-being of the beloved. She looked for no return of it, nor did the possibility of such a blessing in the remotest way occur to her—so vast a distance she had imaged between her lowly bringing up and the courtly breeding and graces of Leucippus. Hers was no raging flame, such as had burned destructive in the bosom of poor Hidaspes. Either the vindictive God in mercy had spared this young maiden, or the wrath of the confounding *Cupid* was restrained by a Higher Power from discharging the most malignant of his arrows against the peace of so much innocence. Of the extent of her mother's malice she was too guileless to have entertained conjecture; but from hints and whispers, and, above all, from that tender watchfulness with which a true affection, like Urania's, tends the safety of its object—fearing even where no cause for fear subsists—she gathered that

some danger was impending over the Prince, and with simple heroism resolved to countermine the treason.

It chanced upon a day that Leucippus had been indulging his sad meditations, in forests far from human converse, when he was struck with the appearance of a human being, so unusual in that solitude. There stood before him a seeming *youth*, of delicate appearance, clad in coarse and peasantly attire. "He was come," he said, "to seek out the Prince, and to be his poor boy and servant, if he would let him." "Alas! poor youth," replied Leucippus, "why do you follow me, who am as poor as you are?" "In good faith," was his pretty answer, "I shall be well and rich enough if you will but love me." And saying so, he wept. The Prince, admiring this strange attachment in a boy, was moved with compassion; and seeing him exhausted, as if with long travel and hunger, invited him in to his poor habitation, setting such refreshments before him as that barren spot afforded. But by no entreaties could he be prevailed upon to take any sustenance; and all that day, and for the two following, he seemed supported only by some gentle flame of love that was within him. He fed only upon the sweet looks and courteous entertainment which he received from Leucippus. Seemingly he wished to die under the loving eyes of his master. "I can not eat," he prettily said, "but I shall eat to-morrow." "You will be dead by that time," replied Leucippus. "I shall be well then," said he, "since you will not love me." Then the Prince asking him why he sighed so: "To think," was his innocent reply, "that such a fine man as you should die, and no gay lady love him." "But you will love me," said Leucippus. "Yes, sure," said he, "till I die; and when I am in heaven I shall wish for you." "This is a love," thought the other, "that I never yet heard tell of: but come, thou art sleepy, child; go in and I will sit with thee." Then, from some words which the poor youth dropped, Leucippus suspecting that his wits were beginning to ramble, said, "What portends this?" "I am not sleepy," said the youth, "but you are sad. I would that I could do any thing to make you merry. Shall I sing?" But soon, as if recovering strength, "There is one approaching," he wildly cried out. "Master, look to yourself—"

His words were true; for now entered, with provided weapon, the wicked emissary of Bacha that we told of; and directing a mortal thrust at the Prince, the supposed boy, with a last effort, interposing his weak body, received it in his bosom, thanking the Heavens in death that he had saved "so good a master."

Leucippus, having slain the villain, was at leisure to discover, in the features of his poor servant, the countenance of his devoted sister-in-law! Through solitary and dangerous ways she had sought him in that disguise; and finding him, seems to have resolved upon a voluntary death by fasting: partly, that she might die in the presence of her beloved; and partly, that she might make known to him in death the love which she wanted boldness to disclose to him while living; but chiefly, because she knew that by her demise all obstacles would be removed that stood between her Prince and his succession to the throne of Lycia.

Leucippus had hardly time to comprehend the strength of love in his Urania when a trampling of horses resounded through his solitude. It was a party of Lycian horsemen, that had come to seek him, dragging the detested Bacha in their train, who was now to receive the full penalty of her misdeeds. Amidst her frantic fury upon the missing of her daughter the old Duke had suddenly died, not without suspicion of her having administered poison to him. Her punishment was submitted to Leucippus, who was now, with joyful acclaims, saluted as the rightful Duke of Lycia. He, as no way moved with his great wrongs, but considering her simply as the parent of Urania, saluting her only by the title of "Wicked Mother," bade her to live. "That reverend title," he said, and pointed to the bleeding remains of her child, "must be her pardon. He would use no extremity against her, but leave her to Heaven." The hardened mother, not at all relenting at the sad spectacle that lay before her, but making show of dutiful submission to the young Duke, and with bended knees approaching him, suddenly, with a dagger, inflicted a mortal stab upon him; and, with a second stroke stabbing herself, ended both their wretched lives.

Now was the tragedy of Cupid's wrath awfully completed; and, the race of Leontius failing in the deaths of both his children, the chronicle relates that, under their new Duke, Ismenus, the offense to the angry Power was expiated; his statues and altars were, with more magnificence than ever, re-edified; and he ceased thenceforth from plaguing the land.

Thus far the Pagan historians relate erring. But from this vain Idol story a not unprofitable moral may be gathered against the abuse of the natural, but dangerous, *passion of love*. In the story of Hidaspes we see the preposterous linking of beauty with deformity; of princely expectancies with mean and low conditions, in the case of the Prince, her brother; and of decrepit age with youth in the ill end of their doting father, Leontius. By their examples we are warned to decline all *unequal and ill-assorted unions*.

THE PRIZE-FIGHT.

HAMMER and tongs! What have we here?
Let us approach, but not too near.
Two men standing breast to breast,
Head erect and arching chest;
Shoulders square and hands hard clenched,
And both their faces a trifle blenched.
Their lips are set in a smile so grim,
And sturdily set each muscular limb.
Round them circles a ring of rope,
Over them hangs the Heavens' blue cope.
Why do they glare at each other so?
What! you really then don't know?
This is a prize-fight, gentle Sir!
This is what makes the papers stir.
Talk of your ocean telegraph!
'Tisn't so great an event by half,
As when two young men, lusty and tall,
With nothing between them of hate or wrongs,
Come together to batter and maul,
Come to fight till one shall fall,
Hammer and tongs!

Round about is a bestial crowd,
Heavily-jawed and beetle-browed;
Concave faces trampled in,
As if with the iron hoof of Sin!
Blasphemies dripping from off their lips,
Pistols bulging behind their hips;
Hands accustomed to deal the cards,
Or strike with the cowardly knuckle-guards.
Who are these ruffianly fellows, I say,
That taint the breath of this autumn day?
These are "the Fancy," gentle Sir.
The Fancy? What have they to do with *her?*
Oh! 'tis their fancy to look at a fight—
To see men struggle, and gouge, and bite.
Bloody noses and bunged-up eyes—
These are the things the Fancy prize.
And so they get men lusty and tall,
With nothing between them of hate or wrongs,
To come together to batter and maul—
To come and fight till one shall fall,
Hammer and tongs!

Grandly the autumn forests shine,
Red as the gold in an Indian mine!
A dreamy mist, a vapory smoke
Hangs round the patches of evergreen oak.
Over the broad lake shines the sun—
The lake that Perry battled upon—
Striking the upland fields of maize
That glow through the soft October haze.
Nature is tracing with languid hand
Lessons of Peace over lake and land.
Ay! but yet is this tranquil spot
Chosen by bully, assassin, and sot

To pit two young men, lusty and tall,
With nothing between them of hate or wrongs,
One with the other, to batter and maul,
To tussle and fight till one shall fall,
Hammer and tongs!

Their faces are rich with a healthy hue,
Their eyes are clear, and bright, and blue;
Every muscle is clean and fine,
And their blood is pure as the purest wine.
It is a pleasure their limbs to scan,
Splendid types of the animal man;
Splendid types of that human grace,
The noblest that God has willed to trace.
Brought to this by science and art,
Trained, and nourished, and kept apart;
Cunningly fed on the wholesomest food,
Carefully watched in every mood;
Brought to this state, so noble and proud,
To savagely tussle before a crowd—
To dim the light of the eyes so clear,
To mash the face to a bloody smear,
To maim, deface, and kill, if they can,
The glory of all creation—Man!
This the task of those lusty and tall,
With nothing between them of hate or wrongs—
To bruise and wrestle, and batter and maul,
And fight till one or the other shall fall,
Hammer and tongs!

With feet firm planted upon the sand,
Face to face at "the scratch" they stand.
Feinting first—a blow—a guard!
Then some hitting heavy and hard.
The round fist falls with a horrible thud;
Wherever it falls comes a spout of blood!
Blow after blow, fall after fall,
For twenty minutes they tussle and maul.
The lips of the one are a gory gash,
The other's are knocked to eternal smash!
The bold, bright eyes are bloody and dim,
And staggering, shivers each stalwart limb.
Faces glowing with stupid wrath,
Hard breaths breathed through a bloody froth;
Blind and faint, they rain their blows
On cheeks like jelly and shapeless nose;
While the concave faces around the rope
Darken with panic or light with hope,
Till one fierce brute, with a terrible blow,
Lays the other poor animal low.
Are these the forms so noble and proud
That, kinglike, towered above the crowd?
Where are the faces so healthy and fresh?
There! those illegible masses of flesh!
Thus we see men lusty and tall,
Who, with nothing between them of hate or wrongs,
Will bruise and batter, and tussle and maul,
And fight till one or the other shall fall,
Hammer and tongs!

Trainers, backers, and betters all!
Who teach young men to tussle and maul,
And spend their muscle, and blood, and life,
Given for good, in a loathsome strife—
I know what the Devil will do for you,
You pistoling, bullying, cowardly crew!
He'll light up his furnaces red and blue,
And treat you all to a roast and stew;
Oh! he'll do you up, and he'll do you brown,
On pitchforks cleft into mighty prongs,
While chuckling fiends your agonies crown
By stirring you up and keeping you down
With hammer and tongs!

CARLYLE'S FREDERICK THE GREAT.*

MR. CARLYLE, it is well for all readers to understand in the outset, will not write history after the fashion of any other man, but after his own mode, which is, perhaps, after all, the best for him. And if, in this History of Frederick, he has condescended to abate somewhat of the peculiarities which have proved such sad rocks of offense in his later works, we can only be grateful, and thankfully accept that which he has been pleased to give us.

Not indeed that he has wholly abandoned those curiosities of style and manner which in a feebler and less earnest writer we should call affectations. Odd turns of phrase, quaint epithets, sentences which, though clear enough in meaning, are fitted to drive all formal grammarians to despair, bristle on every page. Pretended extracts from "Sauerteig," from "Smelfungus," from the "Note-books of one not unknown to us," etc., etc.—all these writers being none other than Mr. Carlyle himself—startle those who would uphold the "dignity of history." Yet, in spite of all these drawbacks, perhaps by means of them, he has produced a life of the "greatest monarch of modern times who has ascended the throne by right of accession," which, for weight of thought, vigor of execution, and picturesqueness of detail, must always rank among the foremost in our literature.

Frederick is, indeed, a man after Mr. Carlyle's own heart. By no means perfect, not altogether lovable, he had yet that clearness of purpose, unflinching determination, and indomitable will, which are, in Mr. Carlyle's estimation, the prime qualities of a hero. He had a work to do, which he performed right manfully; and the world is, on the whole, the better for him.

Mr. Carlyle, by way of Proem, thus shows us what manner of man Frederick had come to be, after some threescore years of labor and battle:

"About fourscore years ago there used to be seen sauntering on the terraces of Sans Souci, for a short time in the afternoon, or you might have met him elsewhere at an earlier hour, riding or driving in a rapid, business manner on the open roads, or through the scraggy woods and avenues of that intricate, amphibious Potsdam region, a highly interesting, lean, little old man, of alert though slightly stooping figure, whose name among strangers was King *Friedrich the Second*, or Frederick the Great of Prussia, and at home among the common people, who much loved and esteemed him, was *Vater Fritz*, Father Fred, a name of familiarity which had not bred contempt in that instance. He is a king every inch of him, though without the trappings of a king. Presents himself in a Spartan simplicity of vesture: no crown but an old military cocked hat—generally old, or trampled and kneaded into absolute *softness* if new; no sceptre but one like Agamemnon's, a walking-stick cut from the woods, which serves also as a riding-stick (with which he hits the horse 'between the ears,' say authors); and for royal robes a mere soldier's blue coat with red facings, coat likely to be old, and sure to have a good deal of Spanish snuff on the breast of it; rest of the apparel dim, unobtrusive in color or cut, ending in high over-knee military boots, which may be brushed (and, I hope, kept soft with an underhand suspicion of oil), but are not permitted to be blackened or varnished—Day and Martin with their soot-pots forbidden to approach.

"The man is not of god-like physiognomy any more than of imposing stature or costume: close-shut mouth with thin lips, prominent jaws and nose, receding brow, by no means of Olympian height; head, however, is of long form, and has superlative gray eyes in it. Not what is called a beautiful man, nor yet, by all appearance, what is called a happy. On the contrary, the face bears evidence of many sorrows, as they are termed, of much hard labor done in this world, and seems to anticipate nothing but more still coming. Quiet stoicism, capable enough of what joy there were, but not expecting any worth mention; great unconscious and some conscious pride, well tempered with a cheery mockery of humor, are written on that old face, which carries its chin well forward in spite of the slight stoop about the neck; snuffy nose rather flung into the air, under its old cocked hat, like an old snuffy lion on the watch, and such a pair of eyes as no man, or lion, or lynx of that century bore elsewhere, according to all the testimony we have. 'Those eyes,' says Mirabeau, 'which, at the bidding of his great soul, fascinated you with seduction or with terror.' Most excellent, potent, brilliant eyes, swift-darting as the

* *History of Friedrich II. of Prussia, called Frederick the Great.* By THOMAS CARLYLE. In Four Volumes. Harper and Brothers.—Vols. I. and II.

stars, steadfast as the sun; gray, we said, of the azure-gray color; large enough, not of glaring size; the habitual expression of them vigilance and penetrating sense, rapidity resting on depth, which is an excellent combination, and gives us the notion of a lambent outer radiance springing from some great inner sea of light and fire in the man. The voice, if he speak to you, is of similar physiognomy, clear, melodious, and sonorous; all tones are in it, from that of ingenuous inquiry, graceful sociality, light-flowing banter (rather prickly for most part), up to definite word of command, up to desolating word of rebuke and reprobation.

"Just about threescore and ten years ago his speakings and his workings came to finis in this World of Time, and he vanished from all eyes into other worlds, leaving much inquiry about him in the minds of men. . . . . For he left the world all bankrupt, we may say; fallen into bottomless abysses of destruction; he still in a paying condition, and with footing capable to carry his affairs and him. When he died, in 1786, the enormous phenomenon since called FRENCH REVOLUTION was already growling audibly in the depths of the world; meteoric-electric coruscations heralding it all round the horizon. . . . . This also is one of the peculiarities of Friedrich, that he is hitherto the Last of the Kings; that he ushers in the French Revolution, and closes an epoch of world-history. Finishing off forever the trade of king, think many who have grown profoundly dark as to kingship and him. . . . .

"It is of this Figure, whom we see by the mind's eye in those Potsdam regions, visible for the last time seventy years ago, that we are now to treat, in the way of solacing ingenuous human curiosity. We are to try for some Historical Conception of this Man and King—some answer to the questions, 'What was he, then? whence, how? and what did he achieve and suffer in the world?'"

Having fairly introduced to us Frederick and his immediate ancestors—with whom we shall have more to do by-and-by—Mr. Carlyle devotes some hundred of pages to the origin and growth of the Prussian State, and especially to Brandenburg, its central core. Two thousand years ago the Baltic shores were "a country of lakes and woods, of marshy jungles and sandy wildernesses, inhabited by bears, otters, bisons, wolves, wild swine, and certain shaggy Germans of the Suevic type." Hither, centuries after, come troops of wild Wends, or Vandals, to fill the void left by the Germans, who had rushed southward upon the decaying Roman Empire. To them for a while fell the task of keeping down the boars, otters, and wolves. Charlemagne builds up his great empire there and thereabouts; his dynasty dies out even to the latest bastard, and anarchy rules. Then Henry the Fowler comes down from the Hartz country, rears castles, builds towns, and posts his Margraves to defend the border. Then comes another long period of anarchy and obscure fighting, a few prominent figures appearing like light marks in the gloom; until Albert the Bear makes his appearance (say in A.D. 1142). He grasps far and wide, raises his Countship of Brandenburg to an Electorate, with a one-seventh voice in the choice of the Kaisar, for the Holy Roman Empire, so-called, has now got on foot again. What is more, he fights victoriously against the barbarous Wends, drives them out or dumps them down, peopling their land with emigrants from Holland, whom an inroad of the sea had rendered homeless. These men, knowing how to deal with bog and sand, taught Brandenburg what greenness and cow-pasture were. The Wends disappear after two hundred and fifty years of turmoil, and wholesome Dutch cabbage is planted over their graves.

An event, small enough to appearance, though notable in its results, comes to pass in these days. Frederick, called Barbarossa or Red-Beard, is Kaiser. To him from an old castle far southward comes a youth in search of employment or preferment. His name is Conrad; he is a younger son of the House of Hohenzollern, with a younger son's scanty portion. "Why should a young fellow stay at home idle and hungry, when a world is waiting to be conquered?" thinks he. Red-Beard has work for him, and promotion. He finds favor also with the heiress of the Vohburg family, and with her gains the Burggrafship of Nürnberg, which he transmits to his sons, who transmit it and much more to their sons—one of whom, twenty generations away, is that "Frederick called the Great," King of Prussia.

A grand heroic figure is this Frederick Red-Beard, which Mr. Carlyle shall sketch for us:

"It was now the flower-time of the Romish Kaisership of Germany, about the middle or noon of Barbarossa himself, second of the Hohenstauffens, and greatest of all the Kaisers of that or any other House—Kaiser fallen unintelligible to most modern readers, and wholly unknown, which is a pity. No King so furnished out with apparatus and arena, with personal faculty to rule and scene to do it in, has appeared elsewhere—a magnificent, magnanimous man, holding the reins of the world, not quite in the imaginary sense; scourging anarchy down, and urging noble effort up, really on a grand scale; a terror to evil-doers and a praise to well-doers in this world, probably beyond what was ever seen since; whom also we salute across the centuries as a choice Beneficence of Heaven. 'Encamped on the Plain of Roncaglia' (when he entered Italy, as he too often had occasion to do), 'his shield was hung out on a high mast over his tent;' and it meant in those old days, 'Ho, every one that has suffered wrong, here is a Kaiser come to judge you, as he shall answer it to *his* Master.' And men gathered round him, and actually found some justice, if they could discern it when found, which they could not always do; neither was the justice capable of being perfect always. A fearfully difficult function, that of Friedrich Red-Beard, but an inexorably indispensable one in this world, though sometimes dispensed with (to the huge joy of Anarchy, which sings Hallelujah through all its Newspapers) for a season.

"Kaiser Friedrich had immense difficulties with his Popes, with his Milanese, and the like—besieged Milan six times over, among other anarchies—had indeed a heavy-laden, hard time of it, his task being great and the greatest. He made Gebhardus, the anarchic Governor of Milan, 'lie

chained under his table, like a dog, for three days;' for the man was in earnest in that earnest time; and let us say, they are but paltry sham-men who are not so in any time—paltry, and far worse than paltry, however high their plumes may be, of whom the sick world (Anarchy, both vocal and silent, having now swollen rather high) is every where getting weary. Gebhardus, the anarchic Governor, lay three days under the Kaiser's table—as it would be well if every anarchic Governor, of the soft type and of the hard, were made to do on occasion—asking himself, in terrible earnest, 'Am I a dog, then; alas! am not I a dog?' Those were serious old times.

"On the other hand, Kaiser Friedrich had his Tourneys, his gleams of bright joyances now and then; one great gathering of all the chivalries at Maintz, which lasted for three weeks long, the grandest Tourney ever seen in this world. He went on the Crusade in his seventieth year, thinking to himself, 'Let us end with one clear act of piety:' he cut his way through the dangerous Greek attorneyisms, through the hungry mountain passes, furious Turk fanaticisms, like a gray old hero. 'Woe is me, my son has perished, then?' said he once, tears wetting the beard, now white enough: 'My son is slain! But Christ still lives; let us on, my men!' and gained great victories, and even found his son, but never returned home—died some unknown sudden death, 'in the River Cydnus,' say the most. Nay, German Tradition thinks he is not yet dead, but only sleeping till the bad world reach its worst, when he will reappear."

Conrad did not follow Red-Beard to the crusade, but remained at home, minding his own affairs. His successors did the like, and went on increasing in power and importance. These Hohenzollerns were a steady, sturdy, stout-hearted race of men—not given to fighting, if it could be avoided, but fighting stoutly when need was—thrifty withal, with money ready to lay out to advantage; and rather fond of laying it out in religious foundations and benefices. We would call them the Yankees of Germany. This possession of ready money did them good service more than once, and especially in certain transactions with Sigismund, who in 1411 became Kaiser, through the special aid of Frederick VI., then Burggraf of Nürnberg. Of this Sigismund Mr. Carlyle has something to say—not altogether complimentary:

"Sigismund is Kaiser, then, in spite of Wenzel. King of Hungary, after unheard-of troubles and adventures, ending some years ago in a kind of peace and conquest, he has long been. King of Bohemia, too, he at last became, having survived Wenzel, who was childless. Kaiser of the Holy Roman Empire, and so much else: is not Sigismund now a great man? Truly the loom he weaves upon in this world is very large. But the weaver was of headlong, high-pacing, flimsy nature, and both warp and woof were gone dreadfully entangled!

"This is the Kaiser Sigismund who held the Council of Constance, and 'blushed visibly' when Huss, about to die, alluded to the Letter of Safe-conduct granted him, which was issuing in such fashion. Sigismund blushed, but could not conveniently mend the matter, so many matters pressing on him just now, as they perpetually did, and had done—an always-hoping, never-resting, unsuccessful, vain, and empty Kaiser; specious, speculative; given to eloquence, diplomacy, and the windy instead of the solid arts: always short of money, for one thing. He roamed about, and talked eloquently, aiming high, and generally missing; how he went to conquer Hungary, and had to float down the Donau instead, with an attendant or two, in a most private manner, and take refuge with the Grand Turk: this we have seen, and this is a general emblem of him. Hungary and even the Reich have at length become his, but have brought small triumph in any kind; and instead of ready-money, debt on debt. His Majesty has no money, and his Majesty's occasions need it more and more.

"He is now (A.D. 1414) holding this Council of Constance, by way of healing the Church, which is sick of Three simultaneous Popes, and of much else. He finds the problem difficult—finds he will have to run into Spain, to persuade a refractory Pope there, if eloquence can (as it can not); all which requires money, money. At opening of the Council he officiated as deacon, actually doing some kind of litanying with a surplice over him, though Kaiser and King of the Romans. But this passage of his opening speech is what I recollect best of him there: 'Right reverend Fathers, *date operam, ut illa nefanda schisma eradicetur!*' exclaims Sigismund, intent on having the Bohemian Schism well dealt with, which he reckons to be of the feminine gender. To which a Cardinal mildly remarking, '*Domine, schisma est generis neutrius* (*Schisma* is neuter, your Majesty),' Sigismund loftily replies, '*Ego sum Rex Romanus, et super grammaticam!*' (I am King of the Romans, and above Grammar!) for which reason I call him in my Note-books Sigismund *super Grammaticam*, to distinguish him in the imbroglio of Kaisers."

The Electorate of Brandenburg had, we must premise, some time ago lapsed to the Empire. Sigismund, greatly in want of money, had pawned it to Burggraf Frederick for 150,000 gulden. Unable to pay the loan, and still in want of more money, he proposed to Frederick that he should advance him 250,000 gulden more, and take the Electorate, lands, titles, sovereign electorship and all. This settlement was adopted, in Sigismund's apartment at Constance, on the 30th of April, 1415; the money was duly paid down, and the Burggrafs of Nürnberg became Electors of Brandenburg. Four hundred thousand gold gulden is nominally equivalent to about a million of dollars; multiply this by four or six to make up for the difference in the value of money, and we have, in current coin, the actual cost of this new acquisition of the House of Hohenzollern.

There were twelve of these Hohenzollern Electors of Brandenburg, some of them men of mark; most of whom we must pass without mention, only noticing that the sixth of them, Joachim II., surnamed Hector, declared himself a Protestant in 1539; that George William, the tenth, came near being ruined in the Thirty Years' War; that his son, Frederick William, styled "the Great Elector," retrieved the fortunes of his House, transmitting his estates and dominions to his son Frederick, who, in 1701,

after long negotiation and many rebuffs, persuaded the Kaiser—not without a "consideration"—to bestow upon him the title of King of Prussia.

This Frederick I. was a crooked little gentleman, whose back had been injured in infancy. He was of an aspiring turn; and seeing that other German princes were getting higher titles—his rival the Elector of Saxony, for example, becoming King thereof—fancied that the regal title would become him as well. He had thirty thousand excellent troops, and Kaiser Leopold, "a little man in red stockings," had no end of wars. The Kaiser, for whom the Elector and his soldiers had more than once done good service, was quite willing to grant the desired preferment; but his ministers said nay, and for seven long years Frederick petitioned in vain. At length the Elector sent 100,000 thalers, by way of bribe, to the chief opposing councilor at Vienna. The money was refused. "Try again," wrote the Elector to his agent, indicating in cipher the name of another councilor who, it was hoped, would be more accessible. The agent, by mistake, read the name to be that of Father Wolf, the Emperor's Jesuit confessor. The confessor took the cash thus accidentally thrown into his hands, and persuaded the Kaiser to grant the accompanying petition.

King Frederick set off, in mid-winter, for Königsberg, four hundred and fifty miles away, to be crowned. He was attended by a cavalcade of eighteen hundred carriages, to drag which thirty thousand extra post-horses were ordered. For the coronation he had a new coat, the diamond buttons of which cost seven thousand five hundred dollars apiece; and other expenses were in proportion. He reigned a dozen years in an expensive way, and then died in a tragical manner.

When advanced in years he had married a third wife, in the hope of making sure that his line should be perpetuated; for his only son, the Crown Prince, after having been married for some years, had only two living children, a daughter, and a feeble infant boy who it is thought will not live. The doctors hint that the Crown Princess will have no more offspring. They were indeed wrong; for that infant grew up to be that little lean, alert old man whom we have seen sauntering on the terrace at Sans Souci; and his brothers and sisters in time amounted to half a score. The new young Queen led the old King a sad life, in many ways, and finally went mad. One day, early in 1713, the poor old monarch is sitting in his cabinet, when the glass door is suddenly shattered, and in rushes a figure clad in white, bleeding and disheveled. The King faints. He fancies that it is the "White Lady" who walks the castle to announce the approaching death of some of its royal inmates. It is the poor mad Queen, who has escaped from her apartments. The old King is borne to his bed, from which he never rose, but dies in a few days.

The accession of Frederick William changed the whole aspect of the Prussian Court. His father was hardly buried when the whole household was reconstructed on the most economical scale. Court-marshals, chamberlains, flunkeys, and lackeys were discharged. Two or three, instead of as many dozen, pages performed duty in the ante-chambers. King Frederick had kept, or at least paid for keeping, a thousand horses; his son retained but thirty for the saddle and a few carriage teams. In two months the household expenses were reduced four-fifths. The pension list was attacked in the same ruthless way. Three-fourths of the names were wholly stricken off, and the remainder cut down to the very bone. By degrees, says Mr. Carlyle—

....."He went over, went into and through every department of Prussian business, in that fashion; steadily, warily, irresistibly compelling every item of it, large and little, to take that same character of perfect economy and solidity, of utility, pure and simple. Needful work is to be rigorously well done; needless work and ineffectual or imaginary workers to be rigorously pitched out of doors. What a blessing on this earth; worth purchasing at almost any price.... It was the task of Friedrich Wilhelm's life to bring about this beneficent result in all departments of Prussian business, great and little, public, and even private. Year after year he brings it to perfection; pushes it unweariedly forward every day and hour. So that he has Prussia at last all a Prussia made after his own image; the most thrifty, hardy, rigorous, and Spartan country any modern king ever ruled over, and himself a king indeed. He that models nations according to his own image, he is a king, though his sceptre were a walking-stick, and properly none other is."

Frederick William's sceptre was literally a walking-stick, of which he made liberal use in the way of governing; any one who displeased him stood a fair chance of becoming practically acquainted with its weight and hardness—most of all his son, toward whom our sketch is slowly tending. Idleness and *loafering* is his special abhorrence. The apple-women must knit at their stalls, or run the risk of the cane being shook in their faces or even laid over their backs if his Majesty sees them idle. Any stout fellow lounging about the corners of streets is liable to be packed off, with peremptory orders to betake himself to some work, and may think himself lucky to escape a sound thwack over the shoulders. Dandy-like personages and idle flaunting women fared in like manner. "Who are you? Look me in the face!" Woe to the wretch who shuffled or prevaricated; but a prompt, decided answer always met with favor. "I am a theological candidate, your Majesty," replied a threadbare youth one day to the King's sharp interrogatory. "Where from?" "From Berlin." "Hm, na, the Berliners are a good-for-nothing set." "Yes, truly, too many of them; but there are exceptions; I know two." "Two! which then?" "Your Majesty and myself." Majesty burst into a laugh; ordered

that the candidate should be examined by proper ecclesiastical functionaries; and, having been found capable, had him appointed to a chaplaincy.

The King was fond of good living, though somewhat coarse in his tastes, bacon and greens being his favorite dish; was given to smoking and drinking beer; and cared for no amusements beyond backgammon, hunting, and drilling his regiments. He was indeed a mighty hunter. In one season he and his party slaughtered 3602 wild swine in the Pomeranian and Brandenburg forests. A great waste of good pork, one would suppose; but no waste at all as he managed it. Not an ounce was lost. Every householder in certain districts was obliged to take so much pork, paying for it the market price in hard cash. Good wholesome meat it was, none the worse or dearer for being killed by royal hands.

The army was his pride and glory. In a few years his economy and good management enabled him to keep on foot a standing force of a hundred thousand men, without exhausting his resources or imposing fresh burdens on his people. These were disciplined and drilled to the last point of perfection. Accoutrements and equipments were in admirable order, so that the whole force of the kingdom was ready for action at a moment's notice. His tall Potsdam regiment was the only whim upon which he lavished money regardless of amount. A man twelve inches above the common height was cheap at any price. To send him a recruit of six feet three was a sure road to favor. He had done some service to Czar Peter, who gave him every autumn a hundred of the tallest men to be found in all Russia. His recruiting agents were busy all over Europe looking out for giants. One James Kirkman, an Irishman, cost more than five thousand dollars to get safely enlisted. His agents scrupled at no means to secure recruits of the requisite inches. For example: In the town of Jülich was a young carpenter of six feet six. One day a well-dressed gentleman walked into his shop, and ordered made a stout chest, with a strong lock. It must be six and a half feet long, perhaps more: "long enough," explains the customer, "to take you in, Herr Carpenter." When the chest is finished, the well-dressed gentleman, who was Baron Hompesch, one of Frederick William's recruiting agents, thinks it is too short. "It is six feet six," says the carpenter, measuring rule in hand. "But it was to be long enough to take you in." "So it is." "Impossible." "I will convince you, Mein Herr," says the carpenter, getting into the chest, and stretching himself out at full length. The Baron slams down the lid, locks it fast, and calls in three stout fellows, who march off with the chest, carpenter, and all. Arrived at a safe place, the chest is opened, and the carpenter is found dead—suffocated for want of air. The Baron gets no thanks this time, but is imprisoned for life. Herr Bentrieder, the Austrian embassador, was long thought the tallest man in Germany. Traveling once in Prussia on diplomatic business, his carriage broke down, and he walked on toward the nearest town. Here he is seized, marched off to the guard-house, and quietly told that he must make up his mind to learn the Prussian drill, with a view to enlistment in the Potsdam grenadiers. Personages of so many inches can not be allowed to march around on foot in Prussia. The embassador humors the joke, until, by-and-by, his suite come up and make known his real character and position. Due apologies were offered and accepted; but trouble finally grew out of the affair. All through Frederick William's reign, indeed, he was involved in continual disputes with neighboring states arising from the proceedings of his crimps in the matter of tall recruits. But what can they do? The men must be had, if not in Prussia, then elsewhere. Procured they were, by fair means or foul; three battalions, each 800 strong, the shortest man six feet and odd inches in height, while Hohmann, the biggest of all, was so lofty that a tall man could not with his hand reach the top of his head—nearer eight feet than seven in his boots, it was said.

Frederick William's government was in form the simplest conceivable. He had no Parliament, Legislative Body, or Cabinet to aid or embarrass him. His Ministers were simply clerks, to put in shape and carry out his orders. The nearest approach to a Council was the famous "Tobacco College." In each of the royal residences a plain apartment, with simple wooden furniture, is fitted up as a smoking-room. Here of an evening sits his Majesty, with a few friends around a long table. Each man has a long pipe in his mouth; at his left hand a pan of burning peat; at his right a jug of bitter beer. Tobacco is at hand for all, and on the sideboard are solid refreshments—cold meats, bread and butter, and the like, with wines and liquors for those who wish them. At the hunting-seat of Wusterhausen, his Majesty's favorite summer residence, this smoking session is usually held in the open air, on the stone steps of the great fountain. Besides the regular attendants strangers of distinction are frequently invited to attend. Every thing is conducted in the most free-and-easy manner. Perfect equality is the rule; no rising or taking notice when any one comes or goes. If any one has any thing to say, let him say it; if not, let him smoke in silence; or if, as now and then happens, tobacco disagrees with him, he may take an empty pipe, and puff away at it to his heart's content. Here, in a wholly informal way, between whiffs of smoke, public affairs and the occurrences of the day are talked over. Talk failing, the newspapers are read aloud; and so his Majesty gets an idea of how the world goes, and what men think of matters and things.

For reader there is some subordinate character, with a good voice, who knows something of

history, geography, and the like. The last and most notable of these readers was one Gundling, a broken-down author, of great erudition, no sense, and much given to liquor. He had been picked up in a tap-room, where he received free quarters and his fill of liquor for the sake of the company attracted by his conversation. His Majesty paid him a moderate salary, and got his full money's worth out of him in many ways. He grew to be the butt of the conclave, and a subject for all manner of coarse practical jokes. Upon a time one Herr Fassmann, a man very much of Gundling's calibre, was introduced into the College, and pitted against the reader. Gundling, worsted in talk, caught up the Dutch smoking-pan, filled with burning peat, ashes, and hot sand, and dashed it in his rival's face. A fight ensued; Fassman got the better of Gundling, brought him across his knee, sitting side uppermost, and, baring the exposed part, belabored it with the hot pan, amidst the shouts and laughter of the conclave. His Majesty suggested that such a quarrel must be settled in the way "customary among gentlemen." Fassmann challenged Gundling, who unwillingly accepted. On the field, King and Tobacco College present, the poor reader's courage forsook him; but Fassmann sternly advanced, fired his pistol—loaded with powder only—point-blank at Gundling's head, setting fire to his immense wig. Gundling fell to the ground, thinking himself mortally wounded; but was brought to, and his blazing wig extinguished by a bucket of water dashed in his face. Gundling held his place for many years. His Majesty at length gave him a wine cask, painted black, with a white cross, which was to stand in his room as a *memento mori*, and be his coffin in the end. It stood there for ten years, its owner often sitting to write in it. He was actually buried in it, his old enemy, Fassmann, pronouncing his funeral discourse. "The Herr Baron Gundling," said he, "was a man of many dignities; of much book-learning; a man of great memory — *expectans judicium*" — "looking for the Judgment," or, "lacking in judgment," as we choose to interpret the somewhat ambiguous Latin phrase: the latter being probably the orator's rendering.

Such was the famous Tobacco College—the Parliament, Congress, and Council Board of Frederick William. Originally intended as a relaxation from severe duties, it came to have a serious function. Business matters often became a subject of colloquy; his Majesty bringing them up that he might learn the different opinions of his Generals and others without their observing it; and might thus profit by their collective wisdom.

These whims and eccentricities formed but a small part of the true character of Frederick William. Taken as a whole, his administration of the government was excellent. Possessed of unlimited power, he rarely interfered with the regular execution of the laws; fond as he was of money, he was ever ready to spend it upon works of public utility; with a territory smaller and less populous than that of any of the other great powers, he maintained the most efficient army in Europe; although he imposed no grievous burdens upon his subjects, his revenues were always greater than his expenses, and every year saw large additions made to the barrels of solid dollars stored away in the vaults of his treasury. While all the neighboring States were in turn overrun and wasted by contending armies, no foreign force ever set foot within his territories, and no disaffection was ever manifested at home. History has heretofore done injustice to Frederick William. Macaulay can see in him only a meddling madman—"a cross between Moloch and Puck." Mr. Carlyle is the first who has presented a fair and comprehensive view of the higher traits which characterized the real founder of the Prussian State.

Frederick, to whom we have at last come, was a year old when his father acceded to the throne. The one idea of Frederick William in the education of his son was to make him, like himself, a thorough administrator and laborious military martinet, and a pious man, in his way, though an odd one according to our notions. His tutors were directed, in the first place, to impress upon his mind "a proper love and fear of God," with a proper abhorrence of all false religious sects, such as "Atheists, Arians, Socinians," and Papists especially. He must be taught French and German, which would be quite sufficient in the way of languages; Latin was especially prohibited. Then — we quote the final and most important directions; with Carlyle's characteristic comments:

3°. "Let him learn Arithmetic, Mathematics, Artillery, Economy to the very bottom," and, in short, useful knowledge generally; useless ditto not at all: "History in particular; Ancient History only slightly (*nur überhin*), but the History of the last Hundred and fifty Years to the exactest pitch. The *Jus Naturale* and *Jus Gentium*," by way of hand-lamp to History, "he must be completely master of, as also of Geography, whatever is remarkable in each Country; and in Histories, most especially the History of the House of Brandenburg, where he will find domestic examples, which are always of more force than foreign; and along with Prussian History, chiefly that of the Countries which have been connected with it, as England, Brunswick, Hessen, and the others; and in reading of wise History-books there must be considerations made (*Sollen beym Lesen kluger Historiarum Betrachtungen gemacht werden*) upon the causes of the events." Surely, O King!

4°. "With increasing years, you will more and more, to a most especial degree, go upon Fortification"—mark you! "the Formation of a Camp and the other War-Sciences—that the Prince may, from youth upward, be trained to act as Officer and General, and to seek all his glory in the soldier profession." This is whither it must all tend. You, Finkenstein and Kalkstein, "have both of you, in the highest measure, to make it your care to infuse into my Son" (*einzuprägen*, stamp into him) "a true love for the Soldier business, and to

impress on him that, as there is nothing in the world which can bring a Prince renown and honor like the sword, so he would be a despised creature before all men if he did not love it, and seek his sole glory (*die einzige Gloria*) therein;" which is an extreme statement of the case, showing how much we have it at heart.

When the Crown Prince was five, a miniature soldier company was organized for his express behoof, so that he might learn his exercise in fellowship with others. In a year or two this was learned, and he was duly fitted out in the Prussian uniform—tight blue coat and cocked hat—and set to drilling the small recruits. From an early age he accompanied his Majesty on his annual reviews. From Memel away toward the Russian borders, down to Wesel on the French, every garrison, marching regiment, and board of management was rigorously reviewed and inspected by the King every year. In these reviews and in hunting excursions the boy accompanied his father. At home his early training was of the most rigid Spartan fashion. Here is an abstract of the work of one day in the week. He is called at six, rises, says his prayers, washes, dresses himself, and breakfasts, all in half an hour; another half hour is given to worship with his preceptor and domestics. From seven till nine Duhan takes him on history; then the learned Noltenius teaches him the "Christian Religion" for a couple of hours. Then he puts on his uniform and goes to the King, with whom he stays till two, at which time his Majesty takes his nap, having dined at noon. The Prince has three hours more of Geography, Morals, and Composition; this brings him to five o'clock, after which "Fritz shall wash his hands and go to the King, ride out, divert himself in the air, and do what he likes if it is not against God."

A very wise system of training, apparently; but, greatly to his Majesty's grief and displeasure, it does not succeed as well as was to be hoped. As Fritz grows up he shows a serious disinclination for the business and sports of his father. He hates drilling and reviews; can not endure tobacco; cares nothing for backgammon or hunting. He exhibits dandyish propensities, affects fine dressing-gowns; calls his uniform a shroud, frizzes his fair hair, instead of having it soaped and tied in a military pig-tail; spends time in fluting, fifing, and reading French books; attempts to learn Latin in a surreptitious manner, in spite of his father's express prohibition; and, worse than all, has doubts of the Christian Religion, as taught by Noltenius, going to the extent of believing in "the horrible doctrine of Predestination." Some of these evil practices of Fritz were dealt with in a summary way. The tutor who taught him Latin was soundly drubbed by the royal hands; the fine dressing-gown was thrown into the fire; the flute was broken and pitched out of the window; the French books were sent to be sold; the court barber was ordered to cut off the frizzled locks in front, and soap the rest into a decorous pig-tail, his Majesty standing by to see that the work was properly done.

These grievances were aggravated by an affair half domestic and half political. The Queen, a sister of George II. of England, was anxious that a double marriage should unite the two families. Her eldest daughter, Wilhelmina, should marry Frederick, Prince of Wales, while her Fritz should wed the Princess Amelia. This double marriage was informally agreed upon by the two sovereigns, to be carried into effect at a proper time. It was an object of the Catholic Emperor to prevent this union between the two great Protestant houses of Europe. Seckendorf, a skillful diplomat, was sent to the Court of Prussia; he insinuated himself into the confidence of the King, and bought over Grumkow, his principal adviser. The palace was full of intrigues and counter-intrigues; Queen and children urging the marriage, Seckendorf and Grumkow opposing it. In the end, Frederick William consented that the marriage of the Prince of Wales and Wilhelmina should take place; but refused to accede to the other. The English King would have both or none; and was quite indifferent about the matter. The affair came to nothing; but while it lasted caused infinite bitterness between Frederick William and his family.

But worse was behind. Frederick was now sixteen. He had touched the period when the great change takes place in the human mind and body; when the boy becomes a man. The Prussian Court was moral and decorous; but the minor courts of Germany were defiled by the most loathsome debauchery. Worst of all was that of Saxony. King Augustus, surnamed "the Strong," was himself the father of 354 illegitimate children. Frederick visited Dresden and was initiated into its manners and morals. For the next four or five years he led a dissolute life, consorting with vicious young officers. Bad health followed; a dangerous lingering fit at first, followed by frequent attacks for some years, with ominous rumors, consultations of physicians, and reports to the paternal Majesty, which produced small comfort in that quarter. Frederick William's old-standing disfavor was converted into open aversion, many times into fits of sorrow, rage, and despair on his son's behalf. More unhappy men than were this royal father and son for four or five years it would be hard to find; and all who had to do with them came in for their share of misery.

About a year after this fatal Dresden visit the King was attacked by the gout. The agony drove him mad. He had acquired some skill in painting, and pictures of his are still extant, done at this time, bearing the inscription "Painted by Frederick William in torment." His fits of rage were terrible, he spared not one who approached him. The Princess Wilhelmina says: "It was a Hell upon earth to us; the pains of Purgatory could not equal what we suffered." The young Princess Louisa was about to be married. One day at dinner the King asked her

how she would regulate her housekeeping. She gave him to understand that she would fare better than at home. The King burst into a passion; but, says Wilhelmina:

"All his anger fell upon my brother and me. He first threw a plate at my brother's head, who ducked out of the way; he then let fly another at me, which I avoided in like manner. A hailstorm of abuse followed these first hostilities. He rose into a passion against the queen, reproaching her for the bad training she gave her children. 'You have reason to curse your mother,' he said to the Prince, 'for it is she that causes you to be an ill-governed fellow!' Getting no answer, he set to abusing us till he could speak no longer. We rose from the table. As we had to pass near him in going out, he aimed a great blow at me with his crutch, which, if I had not jerked away from it, would have ended me. He chased me for a while in his wheel-chair; but the people drawing it gave me time to escape into the queen's chamber."

And so on for months. The Crown Prince, who went on in his evil ways, coming in for more canings and kickings than often fall to the share of a youth of eighteen. His father would not speak to him; seated him at the foot of the table; would not help him to food; so that the queen was obliged to send his food to his own room. For a year and more this continued, matters growing worse and worse.

"'I am in the uttermost despair,' writes Frederick to his mother. 'What I had always apprehended has at last come upon me. The King has entirely forgotten that I am his son. This morning, when I came into his room, he sprang forward, seized me by the collar, and struck me a shower of cruel blows with his rattan. I tried in vain to shield myself, he was in so terrible a rage, almost out of himself; it was only weariness that made him give up. I am driven to extremity. I have too much honor to endure such treatment; and am resolved to put an end to it in one way or another."

This was something different from the cuffs, kicks, and blows to which Frederick was accustomed. It was the first time that he had been beaten like a dog or a slave. It was not the last. At Radewitz, for instance, where they had gone as guests of the King of Saxony, the Prince was beaten before a whole crowd of strangers, and reproached for his pusillanimity in submitting to the disgrace. "If I had been treated so by my father," said the enraged King, "I would have blown my brains out: but this fellow has no honor, he takes all that comes."

Frederick had for some time meditated flight. Two of his associates, Lieutenants Keith and Katte, were in the secret. By borrowing, selling jewels, and the like, he had got together a thousand ducats, which were placed in Katte's hands for safe-keeping. Months passed before an opportunity occurred. At length, in July, 1730, the King set off on a journey to the Rhine country, taking the Prince with him. Now was the time. He would slip across the river; Keith and Katte should join him, with money and horses; he would go to France, thence to England; to the Italian wars; any where, in fact, to escape from that "hell upon earth."

The plot was discovered. Frederick was brought before his father, who upbraided him as a rebel and deserter, beat him in the face till it bled, attempted to run him through with his sword—being only prevented by an officer; and sent him home under guard, with orders to bring him dead or alive.

The King reached Berlin in a white passion. "Your scoundrel of a son has ended at last," were his first words to the Queen. His children approached; but the moment he saw Wilhelmina, whom he suspected of being the Prince's confidant, he foamed with rage, struck her in the face, knocked her down, and tried to kick her as she lay. The Queen shrieked and wrung her hands; the children wept and prayed. All this took place almost in public. A crowd began to gather, which was dispersed by the guards. The Princess was shut up in her room for months, with sentinels posted before the door. Here she was half-starved. "Nothing to eat," she says, perhaps with a little exaggeration, "but a soup of salt and water, and a ragout of old bones full of hairs and slopperies."

Frederick was confined in a bare room in the fortress of Cüstrin. He was clad in the coarsest prison garb; only ten-pence a day was allowed for his diet; his food, bought at this rate from a cook-shop, was to be cut up for him, no knife being allowed. He was to be kept in solitary confinement, with no books except a Bible and Prayer-book. Meanwhile a court-martial was assembled to try him and his accomplices. Keith had escaped—actually deserted, that is. He was sentenced to be hung, cut in four quarters, and nailed to the gallows—all in effigy. "Good," says the King. Katte had intended to desert. His sentence was two years' imprisonment. "Not good," says the King. He had been guilty of treason, and must die. "Better that he die than that justice depart out of the world." As to the Prince, the court say that he, a lieutenant-colonel in the Prussian army, has been guilty of desertion; the punishment for which, by the military law, is death. There may be considerations why this punishment should not be inflicted; but with these the court has nothing to do. It can only pronounce sentence.

Katte was executed, Frederick being brought down from his room to see him led by. For a time it seemed to be the King's determination that the law should take its course upon the Prince. All the courts of Europe were aghast at the impending tragedy. Sweden, Holland, England, and Austria formally remonstrated.

Frederick William during these months was in a state of madness; wandered about by night from room to room; ordered his carriage out at two o'clock in the morning; rushed into the Queen's room at the dead of night, staring wildly, and saying that something haunted him. For weeks together he never went to bed sober. At last he decided that the "considerations"

hinted at by the court-martial should prevail; the Prince should not die; if he would repent, take an oath of submission, promise future obedience, and abjure the "fatal doctrine of Predestination," he should be released from prison and have a chance to show himself worthy of the favor of his indulgent father. As for Wilhelmina, she must be married off-hand to somebody.

Chaplain Müller, who had been appointed to deal with Frederick, reported that he saw the error of his ways; was quite convinced of the falsity of the doctrine of Predestination; and ready to take the oath of obedience. "God, the Most High, give his blessing on it," replied the King: "and as He often, by wondrous guidance, strange paths, and thorny steps, will bring men into the kingdom of Christ, so may our Divine Redeemer help that this prodigal son be brought into his communion; that his godless heart be beaten till it is softened and changed; and so he be snatched from the claws of Satan."

After three months of close confinement Frederick was released; his brown prison garb was replaced by a gray suit—for he must undergo further probation before he could be permitted to resume his uniform. For the present he was to live in the town of Cüstrin, in a very modest way, and busy himself in learning to manage a bit of the domain lands of the crown. His father would not see him yet; he was not worthy of that supreme grace. It was nine months more—a full year since their last meeting when the Prince came so near being run through the body—before father and son again looked upon each other.

Frederick, having every motive so to do, conducted himself well during this long probation; wrote the most dutiful letters to his father, and gradually made way into a kind of favor with him which he had never known before. A husband was at length found for Wilhelmina. In the height of the wedding festivities some one pointed out to her a young man who had just entered the room. It was her brother, but she did not at first recognize him. She had not seen him since he set off, eighteen months before, on that journey which had produced so much misery to all. He was quite pardoned now, and next day made his appearance in uniform. He had served a hard apprenticeship, and had learned much; above all, that it was wise for him not to oppose his father's will.

So, when the King selected a wife for him, though he grumbled and complained to others, he made no opposition to the paternal Majesty. The marriage took place in 1733, Frederick being then about two-and-twenty. The King made adequate provision for his household; by-and-by purchased for him a fine estate at Reinsberg, and gave him money to build him a palace according to his mind. In three years this was completed, and here the Prince passed four tranquil and peaceful years. He had much military and civil work to do; all of which was performed in an orderly, methodical manner, much to the delight of the King, who was moreover, as occasion offered, propitiated by the present of a few tall recruits. In these days he had his first glimpse of war, having made a campaign under Prince Eugene of Savoy, the Generalissimo of the Emperor, in the French and Austrian war. This over, he passed his time at his beautiful Reinsberg palace after his own fashion. He planted gardens, built grottoes and conservatories; fifed and fluted; read much, and wrote prose and verse to a fearful amount; gathered about him a circle of literary men; and, above all, corresponded copiously with Voltaire. "The kindness and assistance you afford to all who devote themselves to the Arts and Sciences," writes Frederick, "makes me hope you will not exclude me from the number of those whom you find worthy of your instructions. . . . . I feel how small are the advantages of birth, those vapors of grandeur with which vanity would solace us. Nature, when she pleases, forms a great soul, endowed with faculties that can advance the Arts and Sciences; and it is the part of princes to recompense his noble toils. Ah! would Glory but make use of me to crown your successes!" So he sends sundry manuscripts to the French apostle, and solicits a return in kind. Voltaire responds. He is delighted to find "that there is now in the world a prince who thinks as a man: a *philosopher*-prince, who will make men happy. No prince, persisting in such thoughts, but might bring back the golden age into his countries; and unless one day the tumult of business and the wickedness of men alter so divine a character, you will be worshiped by your people and loved by the world." A wise reservation this, as the event proved before long. So follow reams of letters, with prose and verse, very good from Voltaire, and very bad from Frederick. Among these is a treatise, the "*Anti-Machiavel*" by Frederick, in which the Prince undertakes to refute the wicked teachings of the subtle Florentine, and to show clearly what a true Prince should be and do. This Voltaire thinks should be published for the good of the world, and gladly undertakes to see it through the press.

The composition of the "Anti-Machiavel" was the chosen work of the year 1739—Frederick's last year as Crown Prince. It was not published till 1740, when its author was King of Prussia. Frederick William had been failing for months. Late in May the Prince was summoned in all haste to Potsdam, if he would see his father alive. He found the King out of doors in his wheel-chair—not so ill, apparently, as had been reported. But next day he was worse. He then gave minute directions for his funeral. He had ordered his coffin made long before. "I shall sleep well in that," he used to say. He would be buried in his uniform, his tall Potsdam Grenadiers following him, and firing three full volleys over the grave; on the way the band was to play the dirge, "Oh, head

all full of blood and wounds!" and so on; every thing being accurately fore-ordered. For the next three days the King had long private conversations with his son; all the old anger and discontent was gone. "Am I not happy," he said more than once, "to have such a son to leave behind me?" He was heard to pray, "Lord, enter not into judgment with thy servant, for in thy sight shall no living man be justified." A hymn was often sung to him, one line of which reads, "Naked came I into the world, naked shall I go."—"No," he would always say at that passage, "not quite naked; I shall have my uniform on."

As the supreme hour approached, he was wheeled from room to room—last to the window, from which he could see his tall Guards going through their evolutions. Laid upon his bed he called for a mirror: "Not so worn as I thought," said he, as he saw the reflection of his face. His agony was terrible. "Feel my pulse," said he to the surgeon, "and tell me how long this will last."—"Alas! not long."—"Say not, Alas; but how do you know?"—"The pulse is gone."—"Impossible," said the King, lifting his arm; "how could I move my fingers so if the pulse was gone?" The surgeon reaffirmed his statement by a mournful look. "Lord Jesus, to thee I live; Lord Jesus, to thee I die; in life and death thou art my portion," replied the dying man. These were his last words.

"Friedrich Wilhelm," says Mr. Carlyle, "at rest from all his labors, slept with the primeval sons of Thor. No Baresark of them all, nor Odin's self, I think, was a bit of truer human stuff. I confess his value to me in these sad times is rare and great. Considering the usual Histrionic, Papin's-Digester, Truculent-Charlatan, and other species of 'Kings,' alone attainable for the sad flunkey populations of an era given up to mammon and the worship of its own belly, what would not such a population give for a Friedrich Wilhelm to guide it on the road *back* from Orcus a little? 'Would give,' I have written; but, alas! it ought to have been written, '*Should* give.' What *they* would give is too mournfully plain to me in spite of ballot-boxes: a steady and tremendous truth from the days of Barabbas downward and upward!—Tuesday, 31st May, 1740, between one and two o'clock in the afternoon, Friedrich Wilhelm died, age fifty-two, coming 15th of August next. Same day Friedrich, his son, was proclaimed at Berlin; quilted heralds, with sound of trumpet, doing what is customary on such occasions."

That portion of Mr. Carlyle's History now offered to the public closes with the accession of Frederick. Thus far Frederick William has been its hero. In the new monarch no man as yet saw any thing but a promising young Prince of fair abilities, with luxurious tastes and a fondness for Arts and Literature. Such a King, thought some, with his vaults filled with good hard dollars, will inaugurate a new Augustan Age. Others, who had heard his talk of moderation and liberty and philanthropy, who had seen the early sheets of the famous "Anti Machiavel," which was slowly passing through the press, awaited in him the *Philosopher*-prince, who would make all men happy—according to the Gospel of Rousseau and Voltaire. Though nothing was further from his own purpose than all this, Frederick was quite content that it should be believed. Only once before he mounted the throne did he lift the vail which concealed his own purposes. This was six years before—not long after he had got through his great troubles. Frederick William was ill; it was said that he could not live a month. Frederick was talking with his sister Wilhelmina: "People will be much surprised," he said, "to see me act quite differently from what they had anticipated. They imagine I am going to lavish all my treasures, and that money will be as plenty as pebbles at Berlin; but they will find that I know better. I mean to increase my army, and to leave all other things on the old footing." Frederick William did not die then. The Prince went on with his fluting and gardening, his poetry and philanthropy, his Voltaire correspondence, and "Anti-Machiavel," until the time came when he could drop the mask.

THE VIRGINIANS.

BY W. M. THACKERAY.

CHAPTER XLIX.

FRIENDS IN NEED.

QUICK, hackney-coach steeds, and bear George Warrington through Strand and Fleet Street to his imprisoned brother's rescue! Any one who remembers Hogarth's picture of a London hackney-coach and a London street-road at that period, may fancy how weary the quick time was, and how long seemed the journey: scarce any lights save those carried by link-boys; badly-hung coaches; bad pavements; great holes in the road, and vast quagmires of winter mud. That drive from Piccadilly to Fleet Street seemed almost as long to our young man as the journey from Marlborough to London, which he had performed in the morning.

He had written to Harry, announcing his arrival at Bristol. He had previously written to his brother, giving the great news of his existence and his return from captivity. There was war between England and France at that time; the French privateers were forever on the look-out for British merchant-ships, and seized them often within sight of port. The letter bearing the intelligence of George's restoration must have been on board one of the many American ships of which the French took possession. The letter telling of George's arrival in England was never opened by poor Harry; it was lying at the latter's apartments, which it reached on the third morning after Harry's captivity, when the angry Mr. Ruff had refused to give up any single item more of his lodger's property.

To these apartments George first went on his arrival in London, and asked for his brother.

Scared at the likeness between them, the maid-servant who opened the door screamed, and ran back to her mistress. The mistress not liking to tell the truth, or to own that poor Harry was actually a prisoner at her husband's suit, said Mr. Warrington had left his lodgings; she did not know where Mr. Warrington was. George knew that Clarges Street was close to Bond Street. Often and often had he looked over the London map. Aunt Bernstein would tell him where Harry was. He might be with her at that very moment. George had read in Harry's letters to Virginia about Aunt Bernstein's kindness to Harry. Even Madam Esmond was softened by it (and especially touched by a letter which the Baroness wrote—the letter which caused George to pack off post-haste for Europe, indeed). She heartily hoped and trusted that Madam Beatrix had found occasion to repent of her former bad ways. It was time, indeed, at her age; and Heaven knows that she had plenty to repent of! I have known a harmless, good old soul of eighty still bepommeled and stoned by irreproachable ladies of the straitest sect of the Pharisees, for a little slip which occurred long before the present century was born, or she herself was twenty years old. Rachel Esmond never mentioned her eldest daughter: Madam Esmond Warrington never mentioned her sister. No. In spite of the order for remission of the sentence—in spite of the handwriting on the floor of the Temple—there is a crime which some folks never will pardon, and regarding which female virtue, especially, is inexorable.

I suppose the Virginians' agent at Bristol had told George fearful stories of his brother's doings. Gumbo, whom he met at his aunt's door, as soon as the lad recovered from his terror at the sudden reappearance of the master whom he supposed dead, had leisure to stammer out a word or two respecting his young master's whereabouts, and present pitiable condition; and hence Mr. George's sternness of demeanor when he presented himself to the old lady. It seemed to him a matter of course that his brother in difficulty should be rescued by his relations. Oh, George, how little you know about London and London ways! Whenever you take your walks abroad how many poor you meet: if a philanthropist were for rescuing all of them, not all the wealth of all the provinces of America would suffice him!

But the feeling and agitation displayed by the old lady touched her nephew's heart, when, jolting through the dark streets toward the house of his brother's captivity, George came to think of his aunt's behavior. "She *does* feel my poor Harry's misfortune," he thought to himself, "I have been too hasty in judging her." Again and again, in the course of his life, Mr. George had to rebuke himself with the same crime of being too hasty. How many of us have not? And, alas! the mischief done, there's no repentance will mend it. Quick, coachman! We are almost as slow as you are in getting from Clarges Street to the Temple. Poor Gumbo knows the way to the bailiff's house well enough. Again the bell is set ringing. The first door is opened to George and his negro; then that first door is locked warily upon them, and they find themselves in a little passage with a little Jewish janitor; then a second door is unlocked, and they enter into the house. The Jewish janitor stares, as, by his flaring tallow torch, he sees a second Mr. Warrington before him. Come to see that gentleman? Yes. But wait a moment. This is Mr. Warrington's brother from America. Gumbo must go and prepare his master first. Step into this room. There's a gentleman already there about Mr. W.'s business (the porter says), and another up stairs with him now. There's no end of people have been about him.

The room into which George was introduced was a small apartment which went by the name of Mr. Amos's office, and where, by a guttering candle, and talking to the bailiff, sat a stout gentleman in a cloak and a laced hat. The young porter carried his candle, too, preceding Mr. George, so there was a sufficiency of light in the apartment.

"We are not angry any more, Harry!" says the stout gentleman, in a cheery voice, getting up and advancing with an outstretched hand to the new-comer. "Thank God, my boy! Mr. Amos here says there will be no difficulty about James and me being your bail, and we will do

your business by breakfast time in the morning."

"Why . . . Angels and ministers of grace! who are you?" And he started back as the other had hold of his hand.

But the stranger grasped it only the more strongly. "God bless you, Sir!" he said, "I know who *you* are. You must be Colonel Lambert, of whose kindness to him my poor Harry wrote. And I am the brother whom you have heard of, Sir; and who was left for dead in Mr. Braddock's action; and came to life again after eighteen months among the French; and live to thank God and thank you for your kindness to my Harry," continued the lad, with a faltering voice.

"James! James! Here is news!" cries Mr. Lambert to a gentleman in red, who now entered the room. "Here are the dead come alive! Here is Harry Scapegrace's brother come back, and with his scalp on his head, too!" (George had taken his hat off, and was standing by the light.) "This is my brother bail, Mr. Warrington! This is Lieutenant-Colonel James Wolfe, at your service. You must know there has been a little difference between Harry and me, Mr. George. He is pacified, is he, James?"

"He is full of gratitude," says Mr. Wolfe, after making his bow to Mr. Warrington.

"Harry wrote home about Mr. Wolfe, too, Sir," said the young man, "and I hope my brother's friends will be so kind as to be mine."

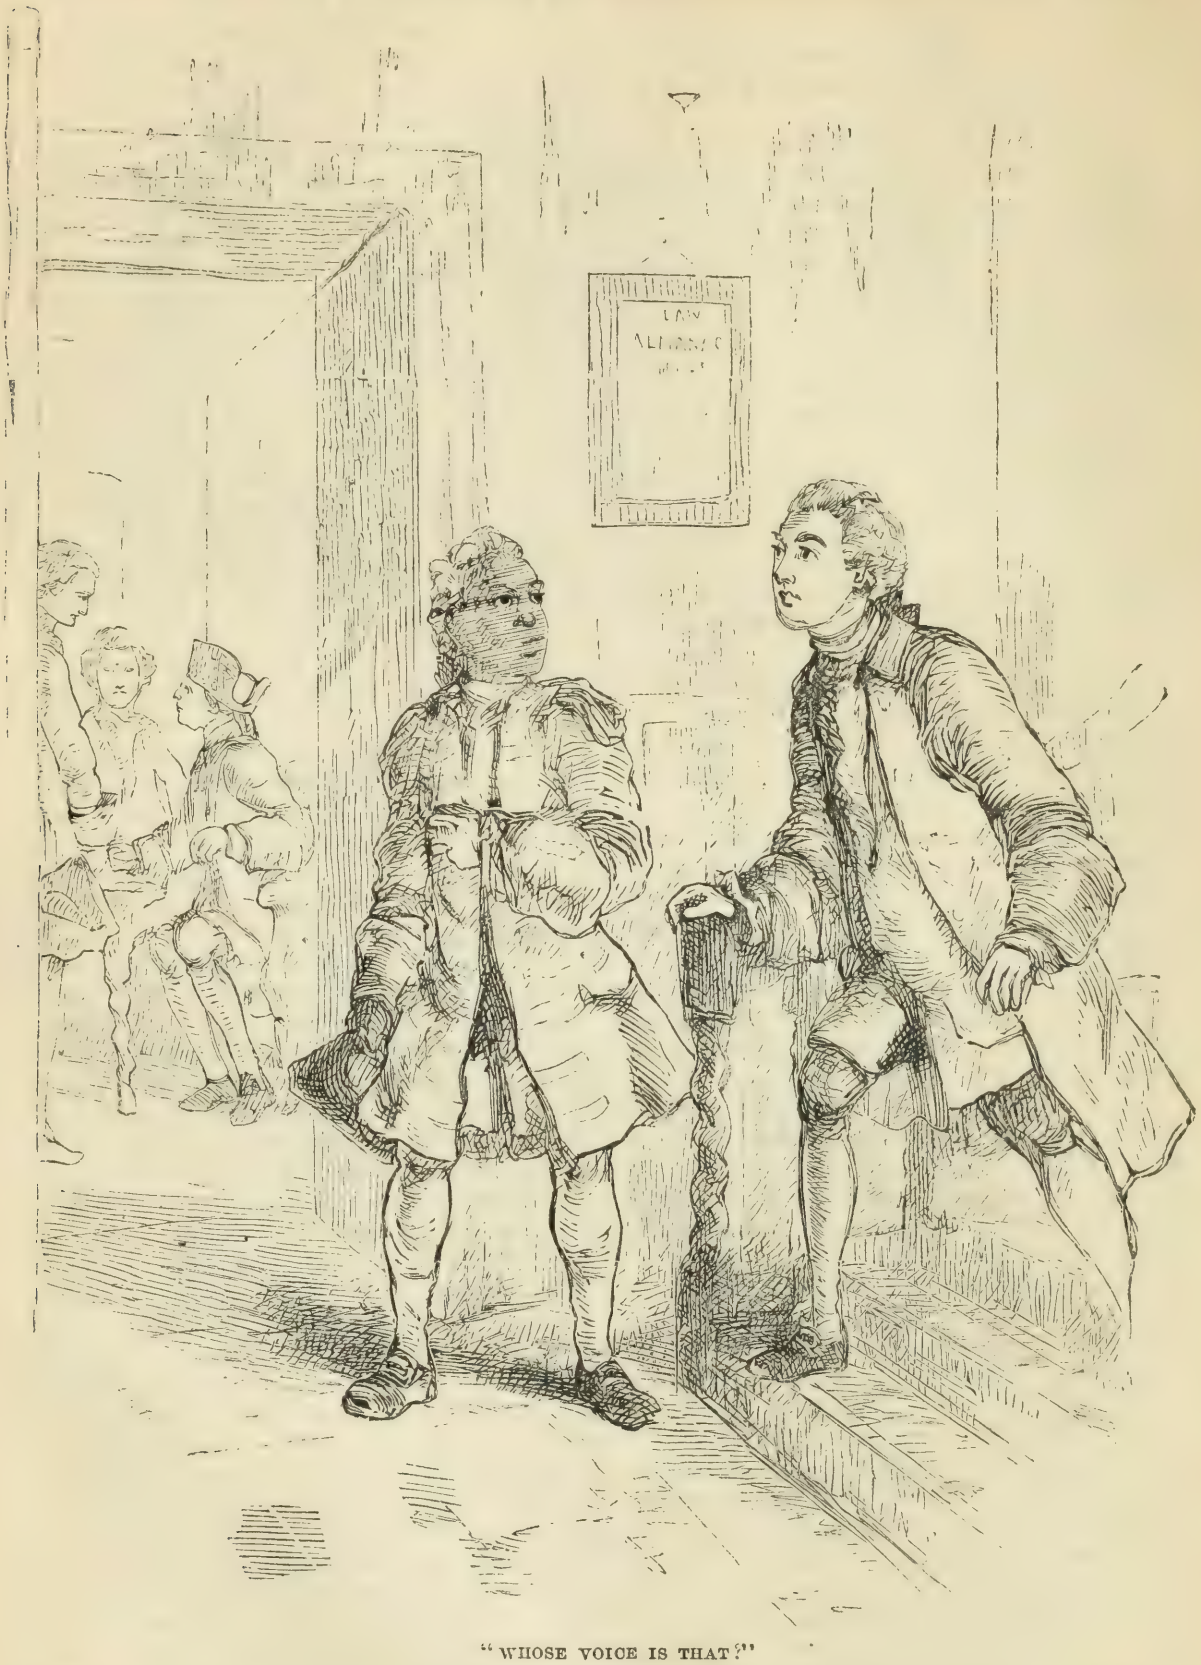
"I wish he had none other but us, Mr. Warrington. Poor Harry's fine folks have been too fine for him, and have ended by landing him here."

"Nay, your honors, I have done my best to make the young gentleman comfortable; and, knowing your honor before, when you came to bail Captain Watkins, and that your security is perfectly—good, if your honor wishes, the young gentleman can go out this very night, and I will make it all right with the lawyer in the morning," says Harry's landlord, who knew the rank and respectability of the two gentlemen who had come to offer bail for his young prisoner.

"The debt is five hundred and odd pounds, I think?" said Mr. Warrington. "With a hundred thanks to these gentlemen, I can pay the amount at this moment into the officer's hands, taking the usual acknowledgment and caution. But I can never forget, gentlemen, that you helped my brother at his need, and, for doing so, I say thank you, and God bless you, in my mother's name and mine."

Gumbo had, meanwhile, gone up stairs to his master's apartment, where Harry would probably have scolded the negro for returning that night, but that the young gentleman was very much soothed and touched by the conversation he had had with the friend who had just left him. He was sitting over his pipe of Virginia in a sad mood (for, somehow, even Maria's goodness and affection, as she had just exhibited them, had not altogether consoled him; and he had thought, with a little dismay, of certain consequences to which that very kindness and fidelity bound him) when Mr. Wolfe's homely features and eager outstretched hand came to cheer the prisoner, and he heard how Mr. Lambert was below, and the errand upon which the two officers had come. In spite of himself, Lambert would be kind to him. In spite of Harry's ill-temper, and needless suspicion and anger, the good gentleman was determined to help him if he might—to help him even against Mr. Wolfe's own advice, as the latter frankly told Harry, "For you were wrong, Mr. Warrington," said the Colonel, "and you wouldn't be set right; and you, a young man, used hard words and unkind behavior to your senior, and, what is more, one of the best gentlemen who walks God's earth. You see, Sir, what his answer hath been to your wayward temper. You will bear with a friend who speaks frankly with you? Martin Lambert hath acted in this as he always doth, as the best Christian, the best friend, the most kind and generous of men. Nay, if you want another proof of his goodness, here it is: He has converted me, who, as I don't care to disguise, was angry with you for your treatment of him, and has absolutely brought me down here to be your bail. Let us both cry Peccavimus! Harry, and shake our friend by the hand! He is sitting in the room below. He would not come here till he knew how you would receive him."

"I think he is a good man!" groaned out Harry. "I was very angry and wild at the time when he and I met last, Colonel Wolfe. Nay, perhaps he was right in sending back those trinkets, hurt as I was at his doing so. Go down to him, will you be so kind, Sir? and tell him I am sorry, and ask his pardon, and—and God bless him for his generous behavior." And here the young gentleman turned his head away and rubbed his hand across his eyes.



"Tell him all this thyself, Harry!" cries the Colonel, taking the young fellow's hand. "No deputy will ever say it half so well. Come with me now."

"You go first, and I'll—I'll follow—on my word I will. See! I am in my morning-gown. I will but put on a coat and come to him. Give him my message first. Just—just prepare him for me!" says poor Harry, who knew he must do it, but yet did not much like that process of eating of humble-pie.

Wolfe went out smiling—understanding the lad's scruples well enough, perhaps. As he opened the door Mr. Gumbo entered it; almost forgetting to bow to the gentleman, profusely courteous as he was on ordinary occasions—his eyes glaring round, his great mouth grinning—himself in a state of such high excitement and delight that his master remarked his condition.

"What, Gum? What has happened to thee? Hast thou got a new sweet-heart?"

No, Gum had not got no new sweet-heart, Master.

"WHOSE VOICE IS THAT?"

"Give me my coat? What has brought thee back?"

Gum grinned prodigiously. "I have seen a ghost, Mas'r!" he said.

"A ghost! and whose, and where?"

"Whar? Saw him at Madame Bernstein's house. Come with him here in the coach! He down stairs now with Colonel Lambert!" While Gumbo is speaking, as he is putting on his master's coat, his eyes are rolling, his head is wagging, his hands are trembling, his lips are grinning.

"Ghost — what ghost?" says Harry, in a strange agitation. "Is any body—is—my mother come?"

"No, Sir; no, Master Harry!" Gumbo's head rolls nearly off in its violent convolutions, and his master, looking oddly at him,

flings the door open, and goes rapidly down the stair.

He is at the foot of it just as a voice within the little office, of which the door is open, is saying, "*And for doing so, I say thank you, and God bless you, in my mother's name and mine.*"

"Whose voice is that?" calls out Harry Warrington, with a strange cry in his own voice.

"It's the *ghost's*, Mas'r!" says Gumbo, from behind; and Harry runs forward to the room—where, if you please, we will pause a little minute before we enter. The two gentlemen who were there turned their heads away. The lost was found again. The dead was alive. The prodigal was on his brother's heart—his own full of love, gratitude, repentance.

"Come away, James! I think we are not wanted any more here," says the Colonel. "Good-night, boys. Some ladies in Hill Street won't be able to sleep for this strange news. Or will you go home and sup with 'em, and tell them the story?"

No, with many thanks, the boys would not go and sup to-night. They had stories of their own to tell. "Quick, Gumbo, with the trunks! Good-by, Mr. Amos!" Harry felt almost unhappy when he went away.

CHAPTER L.

CONTAINS A GREAT DEAL OF THE FINEST MORALITY.

When first we had the honor to be presented to Sir Miles Warrington at the King's drawing-room, in St. James's Palace, I confess that I, for one—looking at his jolly round face, his broad round waistcoat, his hearty country manner—expected that I had lighted upon a most eligible and agreeable acquaintance at last, and was about to become intimate with that noblest specimen of the human race, the bepraised of songs and men, the good old English country gentleman. In fact, to be a good old country gentleman is to hold a position nearest the gods, and at the summit of earthly felicity. To have a large unencumbered rent-roll, and the rents regularly paid by adoring farmers, who bless their stars at having such a landlord as his honor; to have no tenant holding back with his money, excepting just one, perhaps, who does so in order to give occasion to Good Old Country Gentleman to show his sublime charity and universal benevolence of soul; to hunt three days a week, love the sport of all things, and have perfect good health and good appetite in consequence; to have not only good appetite, but a good dinner; to sit down at church in the midst of a chorus of blessings from the villagers, the first man in the Parish, the benefactor of the Parish, with a consciousness of consummate desert, saying, "Have mercy upon us, miserable sinners!" to be sure, but only for form's sake, because the words are written in the book, and to give other folks an example:—a G. O. C. G. a miserable sinner! So healthy, so wealthy, so jolly, so much respected by the vicar, so much honored by the tenants, so much beloved and admired by his family, among whom his story of grouse in the gun-room causes laughter from generation to generation;—this perfect being a miserable sinner! *Allons donc!* Give any man good health and temper, five thousand a year, the adoration of his parish, and the love and worship of his family, and I'll defy you to make him so heartily dissatisfied with his spiritual condition as to set himself down a miserable any thing. If you were a royal highness, and went to church in the most perfect health and comfort, the parson waiting to begin the service until Your R. H. came in, would you believe yourself to be a miserable, etc.? You might when racked with gout, in solitude, the fear of death before your eyes, the doctor having cut off your bottle of claret, and ordered arrow-root and a little sherry—you might *then* be humiliated, and acknowledge your own shortcomings, and the vanity of things in general; but, in high health, sunshine, spirits, that word miserable is only a form. You can't think in your heart that you are to be pitied much for the present. If you are to be miserable, what is Colin Plowman, with the ague, seven children, two pounds a year rent to pay for his cottage, and eight shillings a week? No: a healthy, rich, jolly, country gentleman, if miserable, has a very supportable misery: if a sinner, has very few people to tell him so.

It may be he becomes somewhat selfish; but at least he is satisfied with himself. Except my lord at the castle, there is nobody for miles and miles round so good or so great. His admirable wife ministers to him, and to the whole parish, indeed: his children bow before him: the vicar of the parish reverences him: he is respected at quarter sessions: he causes poachers to tremble: off go all hats before him at market: and round about his great coach, in which his spotless daughters and sublime lady sit, all the country-town tradesmen cringe, bareheaded, and the farmers' women drop innumerable courtesies. From their cushions in the great coach the ladies look down beneficently and smile on the poorer folk. They buy a yard of ribbon with affability; they condescend to purchase an ounce of salts, or a packet of flower-seeds: they deign to cheapen a goose: their drive is like a royal progress; a happy people is supposed to press round them and bless them. Tradesmen bow, farmers' wives bob, town-boys, waving their ragged hats, cheer the red-faced coachman as he drives the fat bays, and cry, "Sir Miles forever! Throw us a halfpenny, my lady!"

But suppose the market-woman should hide her fat goose when Sir Miles's coach comes, out of terror lest my lady, spying the bird, should insist on purchasing it a bargain? Suppose no coppers ever were known to come out of the royal coach-window? Suppose Sir Miles regaled his tenants with notoriously small beer,

and his poor with especially thin broth? This may be our fine old English gentleman's way. There have been not a few fine English gentlemen and ladies of this sort; who patronized the poor without ever relieving them, who called out "Amen!" at church as loud as the clerk; who went through all the forms of piety, and discharged all the etiquette of old English gentlemanhood; who bought virtue a bargain, as it were, and had no doubt they were honoring her by the purchase. Poor Harry in his distress asked help from his relations: his aunt sent him a tract and her blessing; his uncle had business out of town, and could not, of course, answer the poor boy's petition. How much of this behavior goes on daily in respectable life, think you? You can fancy Lord and Lady Macbeth concocting a murder, and coming together with some little awkwardness, perhaps, when the transaction was done and over; but my Lord and Lady Skinflint, when they consult in their bedroom about giving their luckless nephew a helping hand, and determine to refuse, and go down to family prayers, and meet their children and domestics, and discourse virtuously before them, and then remain together, and talk nose to nose—what can they think of one another? and of the poor kinsman fallen among the thieves, and groaning for help unheeded? How can they go on with those virtuous airs? How can they dare look each other in the face?

Dare? Do you suppose they think they have done wrong? Do you suppose Skinflint is tortured with remorse at the idea of the distress which called to him in vain, and of the hunger which he sent empty away? Not he. He is indignant with Prodigal for being a fool: he is not ashamed of himself for being a curmudgeon. What? a young man with such opportunities throw them away. A fortune spent among gamblers and spendthrifts? Horrible, horrible! Take warning, my child, by this unfortunate young man's behavior, and see the consequences of extravagance. According to the great and always Established Church of the Pharisees, here is an admirable opportunity for a moral discourse, and an assertion of virtue. "And to think of his deceiving us so!" cries out Lady Warrington.

"Very sad, very sad, my dear!" says Sir John, wagging his head.

"To think of so much extravagance in one so young!" cries Lady Warrington. "Cards, bets, feasts at taverns of the most wicked profusion, carriage and riding horses, the company of the wealthy and profligate of his own sex, and, I fear, of the most iniquitous persons of ours."

"Hush, my Lady Warrington!" cries her husband, glancing toward the spotless Dora and Flora, who held down their blushing heads at the mention of the last naughty persons.

"No wonder my poor children hide their faces!" mamma continues. "My dears, I wish even the existence of such creatures could be kept from you!"

"They can't go to an opera, or the Park, without seeing 'em, to be sure," says Sir Miles.

"To think we should have introduced such a young serpent into the bosom of our family! and have left him in the company of that guileless darling!" and she points to Master Miles.

"Who's a serpent, mamma?" inquires that youth. "First you said cousin Harry was bad: then he was good. now he is bad again. Which is he, Sir Miles?"

"He has faults, like all of us, Miley, my dear. Your cousin has been wild, and you must take warning by him."

"Was not my elder brother, who died—my naughty brother—was not he wild too? He was not kind to me when I was quite a little boy. He never gave me money, nor toys, nor

rode with me, nor—why do you cry, mamma? Sure I remember how Hugh and you were always fight—"

"Silence, Sir!" cry out papa and the girls in a breath. "Don't you know you are never to mention that name?"

"I know I love Harry, and I didn't love Hugh," says the sturdy little rebel. "And if cousin Harry is in prison, I'll give him my half-guinea that my godpapa gave me, and anything I have—yes, any thing, except—except my little horse—and my silver waistcoat—and—and Snowball and Sweetlips at home—and—and, yes, my custard after dinner." This was in reply to hint of sister Dora. "But I'd give him *some* of it," continues Miles, after a pause.

"Shut thy mouth with it, child, and then go about thy business," says papa, amused. Sir Miles Warrington had a considerable fund of easy humor.

"Who would have thought he should ever be so wild?" mamma goes on.

"Nay. Youth is the season for wild oats, my dear."

"That we should be so misled in him!" sighed the girls.

"That he should kiss us both!" cries papa.

"Sir Miles Warrington, I have no patience with that sort of vulgarity!" says the majestic matron.

"Which of you was the favorite yesterday, girls?" continues the father.

"Favorite, indeed! I told him over and over again of my engagement to dear Tom—I did, Dora—why do you sneer, if you please?" says the handsome sister.

Nay, to do her justice, so did Dora too," said papa.

"Because Flora seemed to wish to forget her engagement with dear Tom sometimes," remarks her sister.

"I never never never wished to break with Tom! It's wicked of you to say so, Dora! It is you who were forever sneering at him: it is you who are always envious because I happen—at least, because gentlemen imagine that I am not ill-looking, and prefer me to some folks, in spite of all their learning and wit!" cries Flora, tossing her head over her shoulder, and looking at the glass.

"Why are you always looking there, sister?" says the artless Miles, Junior. "Sure, you must know your face well enough!"

"Some people look at it just as often, child, who haven't near such good reason," says papa, gallantly.

"If you mean *me*, Sir Miles, I thank you," cries Dora. "My face is as Heaven made it, and my father and mother gave it me. 'Tis not my fault if I resemble my papa's family. If my head is homely, at least I have got some brains in it. I envious of Flora, indeed, because she has found favor in the sight of poor Tom Claypool! I should as soon be proud of captivating a plowboy!"

"Pray, Miss, was your Mr. Harry, of Virginia, much wiser than Tom Claypool? You would have had him for the asking!" exclaims Flora.

"And so would *you*, Miss, and have dropped Tom Claypool into the sea!" cries Dora.

"I wouldn't."

"You would."

"I wouldn't;"—and *da capo* goes the conversation—the shuttlecock of wrath being briskly battled from one sister to another.

"Oh, my children! Is this the way you dwell together in unity?" exclaims their excellent female parent, laying down her embroidery. "What an example you set to this Innocent!"

"Like to see 'em fight, my lady!" cries the Innocent, rubbing his hands.

"At her, Flora! Worry her, Dora! To it again, you little rogues!" says facetious papa. "'Tis good sport, ain't it, Miley?"

"Oh, Sir Miles! Oh, my children! These disputes are unseemly. They tear a fond mother's heart," says mamma, with majestic action, though bearing the laceration of her bosom with much seeming equanimity. "What cause for thankfulness ought we to have that watchful parents have prevented any idle engagements between you and your misguided cousin. If we have been mistaken in him, is it not a mercy that we have found out our error in time? If either of you had any preference for him, your excellent good sense, my loves, will teach you to overcome, to eradicate, the vain feeling. That we cherished and were kind to him can *never* be a source of regret. 'Tis a proof of our good-nature. What *we* have to regret, I fear, is, that your cousin should have proved unworthy of our kindness, and, coming away from the society of gamblers, play-actors, and the like, should have brought contamination—pollution, I had almost said—into this pure family!"

"Oh, bother mamma's sermons!" says Flora, as my lady pursues a harangue of which we only give the commencement here, but during which papa, whistling, gently quits the room on tiptoe, while the artless Miles, Junior, winds his top and pegs it under the robes of his sisters. It has done humming, and staggered and tumbled over, and expired in its usual tipsy manner, long ere Lady Warrington has finished her sermon.

"Were you listening to me, my child?" she asks, laying her hand on her darling's head.

"Yes, mother," says he, with the whip-cord in his mouth, and proceeding to wind up his sportive engine. "You was a saying that Harry was very poor now, and that we oughtn't to help him. That's what you was saying; wasn't it, madam?"

"My poor child, thou wilt understand me better when thou art older!" says mamma, turning toward that ceiling to which her eyes always have recourse.

"Get out, you little wretch!" cries one of the sisters. The artless one has pegged his top at Dora's toes, and laughs with the glee of merry boyhood at his sister's discomfiture.

But what is this? Who comes here? Why does Sir Miles return to the drawing-room, and why does Tom Claypool, who strides after the Baronet, wear a countenance so disturbed?

"Here's a pretty business, my Lady Warrington!" cries Sir Miles. "Here's a wonderful wonder of wonders, girls!"

"For goodness' sake, gentlemen, what is your intelligence?" asks the virtuous matron.

"The whole town's talking about it, my lady!" says Tom Claypool, puffing for breath.

"Tom has seen him," continued Sir Miles.

"Seen both of them, my Lady Warrington. They were at Ranelagh last night, with a regular mob after 'em. And so like, that but for their different ribbons you would hardly have told one from the other. One was in blue, the other in brown; but I'm certain he has worn both the suits here."

"What suits?"

"What one—what other?" call the girls.

"Why, your Fortunate Youth, to be sure."

"Our precious Virginian, and heir to the principality!" says Sir Miles.

"Is my nephew, then, released from his incarceration?" asks her ladyship. "And is he again plunged in the vortex of dissip . . . .

"Confound him!" roars out the Baronet, with an expression which I fear was even stronger. "What should you think, my Lady Warrington, if this precious nephew of mine should turn out to be an impostor; by George! no better than an adventurer?"

"An inward monitor whispered me as much!" cried the lady; "but I dashed from me the unworthy suspicion. Speak, Sir Miles, we burn with impatience to listen to your intelligence!"

"I'll speak, my love, when you've done," says Sir Miles. "Well, what do you think of my gentleman, who comes into my house, dines at my table, is treated as one of this family, kisses my—"

"What?" asks Tom Claypool, firing as red as his waistcoat.

"—Hem! Kisses my wife's hand, and is treated in the fondest manner, by George! What do you think of this fellow, who talks of his property and his principality, by Jupiter!—turning out to be a beggarly SECOND SON! A beggar, my Lady Warrington, by—"

"Sir Miles Warrington, no violence of language before these dear ones! I sink to the earth, confounded by this unutterable hypocrisy. And did I intrust thee to a pretender, my blessed boy? Did I leave thee with an impostor, my innocent one?" the matron cries, fondling her son.

"Who's an impostor, my lady?" asks the child.

"That confounded young scamp of a Harry Warrington!" bawls out papa; on which the little Miles, after wearing a puzzled look for a moment, and yielding to I know not what hidden emotion, bursts out crying.

His admirable mother proposes to clutch him to her heart, but he rejects the pure caress, bawling only the louder, and kicking frantically about the maternal *gremium*, as the butler announces "Mr. George Warrington, Mr. Henry Warrington!" Miles is dropped from his mother's lap. Sir Miles's face emulates Mr. Claypool's waistcoat. The three ladies rise up, and make three most frigid courtesies, as our two young men enter the room.

Little Miles runs toward them. He holds out a little hand. "Oh, Harry! No! which is Harry? *You're* my Harry," and he chooses rightly this time. "Oh, you dear Harry! I'm so glad you are come! and they've been abusing you so!"

"I am come to pay my duty to my uncle," says the dark-haired Mr. Warrington; "and to thank him for his hospitalities to my brother Henry."

"What, nephew George? My brother's face and eyes! Boys both, I am delighted to see you!" cries their uncle, grasping affectionately a hand of each, as his honest face radiates with pleasure.

"This indeed hath been a most mysterious and a most providential resuscitation," says Lady Warrington. "Only I wonder that my nephew Henry concealed the circumstance until now," she adds, with a sidelong glance at both young gentlemen.

"He knew it no more than your ladyship," says Mr. Warrington. The young ladies looked at each other with downcast eyes.

"Indeed, Sir! a most singular circumstance," says mamma, with another courtesy. "We had heard of it, Sir; and Mr. Claypool, our county neighbor, had just brought us the intelligence, and it even now formed the subject of my conversation with my daughters."

"Yes," cries out a little voice, "and do you know, Harry, father and mother said you was a —a imp—"

"Silence, my child! Screwby, convey Master Warrington to his own apartment! These, Mr. Warrington—or, I suppose I should say nephew George — are your cousins." Two courtesies—two cheeses are made—two hands are held out. Mr. Esmond Warrington makes a profound low bow, which embraces (and it is the only embrace which the gentleman offers) all three ladies. He lays his hat to his heart. He says, "It is my duty, madam, to pay my respects to my uncle and cousins, and to thank your ladyship for such hospitality as you have been enabled to show to my brother."

"It was not much, nephew, but it was our best. Ods bobs!" cries the hearty Sir Miles, "it was our best!"

"And I appreciate it, Sir," says Mr. Warrington, looking gravely round at the family.

"Give us thy hand. Not a word more," says Sir Miles. "What? do you think I'm a cannibal, and won't extend the hand of hospitality to my dear brother's son? What say you, lads? Will you eat our mutton at three? This is my neighbor, Tom Claypool, son to Sir Thomas Claypool, Baronet, and my very good friend.

Hey, Tom! Thou wilt be of the party, Tom? Thou knowest our brew, hey, my boy?"

"Yes, I know it, Sir Miles," replies Tom, with no peculiar expression of rapture on his face.

"And thou shalt taste it, my boy, thou shalt taste it! What is there for dinner, my Lady Warrington? Our food is plain, but plenty, lads—plain, but plenty!"

"We can not partake of it to-day, Sir. We dine with a friend who occupies my Lord Wrotham's house, your neighbor. Colonel Lambert—Major-General Lambert he has just been made."

"With two daughters, I think—countrified-looking girls—are they not?" asks Flora.

"I think I have remarked two little rather dowdy things," says Dora.

"They are as good girls as any in England!" breaks out Harry, to whom no one had thought of saying a single word. His reign was over, you see. He was nobody. What wonder, then, that he should not be visible?

"Oh, indeed, cousin!" says Dora, with a glance at the young man, who sate with burning cheeks, chafing at the humiliation put upon him, but not knowing how or whether he should notice it. "Oh, indeed, cousin! You are very charitable—or very lucky, I'm sure! You see angels where we only see ordinary little persons. I'm sure I could not imagine who were those odd-looking people in Lord Wrotham's coach, with his handsome liveries. But if they were three *angels*, I have nothing to say."

"My brother is an enthusiast," interposes George. "He is often mistaken about women."

"Oh, really!" says Dora, looking a little uneasy.

"I fear my nephew Henry has indeed met with some unfavorable specimens of our sex," the matron remarks, with a groan.

"We are so easily taken in, madam—we are both very young yet—we shall grow older and learn better."

"Most sincerely, nephew George, I trust you may. You have my best wishes, my prayers, for your brother's welfare and your own. No efforts of *ours* have been wanting. At a painful moment, to which I will not further allude—"

"And when my uncle Sir Miles was out of town," says George, looking toward the baronet, who smiles at him with affectionate approval.

"—I sent your brother a work which I thought might comfort him, and I know might improve him. Nay, do not thank me; I claim no credit; I did but my duty—a humble woman's duty—for what are this world's goods, nephew, compared to the welfare of a soul? If I did good, I am thankful; if I was useful, I rejoice. If, through my means, you have been brought, Harry, to consider—"

"Oh! the sermon, is it?" breaks in downright Harry. "I hadn't time to read a single syllable of it, aunt—thank you. You see I don't care much about that kind of thing—but thank you all the same."

"The intention is every thing," says Mr. Warrington, "and we are both grateful. Our dear friend, General Lambert, intended to give bail for Harry; but, happily, I had funds of Harry's with me to meet any demands upon us. But the kindness is the same, and I am grateful to the friend who hastened to my brother's rescue when he had most need of aid, and when his own relations happened—so unfortunately—to be out of town."

"Any thing I could do, my dear boy, I'm sure—my brother's son—my own nephew—ods bobs! you know—that is, any thing—*any thing*, you know!" cries Sir Miles, bringing his own hand into George's with a generous smack. "You *can't* stay and dine with us? Put off the Colonel—the General—do, now! Or name a day. My Lady Warrington, make my nephew name a day when he will sit under his grandfather's picture and drink some of his wine!"

"His intellectual faculties seem more developed than those of his unlucky younger brother," remarked my lady, when the young gentlemen had taken their leave. "The younger must be reckless and extravagant about money indeed, for did you remark, Sir Miles, the loss of his reversion in Virginia—the amount of which has, no doubt, been grossly exaggerated, but, nevertheless, must be something considerable—did you, I say, remark that the ruin of Harry's prospects scarcely seemed to affect him?"

"I shouldn't be at all surprised that the elder turns out to be as poor as the young one," says Dora, tossing her head.

"He! he! Did you see that cousin George had one of cousin Harry's suits of clothes on—the brown and gold—that one he wore when he went with you to the oratorio, Flora?"

"Did he take Flora to an oratorio?" asks Mr. Claypool, fiercely.

"I was ill and couldn't go, and my cousin went with her," says Dora.

"Far be it from *me* to object to any innocent amusement, much less to the music of Mr. Handel, dear Mr. Claypool," says mamma. "Music refines the soul, elevates the understanding, is heard in our churches, and 'tis well known was practiced by King David. Your operas I shun as deleterious; your ballets I would forbid to my children as most immoral; but music, my dears! May we enjoy it, like every thing else in reason—may we—"

"There's the music of the dinner-bell," says papa, rubbing his hands. "Come, girls. Screwby, go and fetch Master Miley. Tom, take down my lady."

"Nay, dear Thomas, I walk but slowly. Go you with dearest Flora down stairs," says Virtue.

But Dora took care to make the evening pleasant by talking of Handel and oratorios constantly during dinner.

CHAPTER LI.

CONTICUERE OMNES.

Across the way, if the gracious reader will please to step over with us, he will find our young gentlemen at Lord Wrotham's house, which his lordship has lent to his friend the General, and that little family party assembled, with which we made acquaintance at Oakhurst and Tunbridge Wells. James Wolfe has promised to come to dinner; but James is dancing attendance upon Miss Lowther, and would rather have a glance from her eyes than the finest kickshaws dressed by Lord Wrotham's cook, or the dessert which is promised for the entertainment at which you are just going to sit down. You will make the sixth. You may take Mr. Wolfe's place. You may be sure he won't come. As for me, I will stand at the sideboard and report the conversation.

Note first, how happy the women look! When Harry Warrington was taken by those bailiffs I had intended to tell you how the good Mrs. Lambert, hearing of the boy's mishap, had flown to her husband, and had begged, implored, insisted, that her Martin should help him. "Never mind his rebeldom of the other day; never mind about his being angry that his presents were returned — of course any body would be angry, much more such a high-spirited lad as Harry! Never mind about our being so poor, and wanting all our spare money for the boys at college; there *must* be some way of getting him out of the scrape. Did you not get Charles Watkins out of the scrape two years ago; and did he not pay you back every halfpenny? Yes; and you made a whole family happy, blessed be God! and Mrs. Watkins prays for you and blesses you to this very day, and I think every thing has prospered with us since. And I have no doubt it has made you a major-general—no *earthly* doubt," says the fond wife.

Now, as Martin Lambert requires very little persuasion to do a kind action, he in this instance lets himself be persuaded easily enough, and having made up his mind to seek for friend James Wolfe, and give bail for Harry, he takes his leave and his hat, and squeezes Theo's hand, who seems to divine his errand (or perhaps that silly mamma has blabbed it), and kisses little Hetty's flushed cheek, and away he goes out of the apartment where the girls and their mother are sitting, though he is followed out of the room by the latter.

When she is alone with him, that enthusiastic matron can not control her feelings any longer. She flings her arms round her husband's neck, kisses him a hundred and twenty-five times in an instant—calls God to bless him —cries plentifully on his shoulder; and in this sentimental attitude is discovered by old Mrs. Quiggett, my lord's housekeeper, who is bustling about the house, and, I suppose, is quite astounded at the conjugal phenomenon.

"We have had a tiff, and we are making it up! Don't tell tales out of school, Mrs. Quiggett!" says the gentleman, walking off.

"Well, I never!" says Mrs. Quiggett, with a shrill, strident laugh, like a venerable old cockatoo—which white, hooked-nosed, long-lived bird Mrs. Quiggett strongly resembles. "Well, I never!" says Mrs. Quiggett, laughing and shaking her old sides till all her keys, and, as one may fancy, her old ribs clatter and jingle.

"Oh, Quiggett!" sobs out Mrs. Lambert, "what a man that is!"

"You've been a quarreling, have you, mum, and making it up? That's right."

"Quarrel with *him?* He never told a greater story. My General is an angel, Quiggett. I should like to worship him. I should like to fall down at his boots and kiss 'em, I should! There never was a man so good as my General. What have I done to have such a man? How *dare* I have such a good husband?"

"My dear, I think there's a pair of you," says the old cockatoo; "and what would you like for your supper?"

When Lambert comes back very late to that meal, and tells what has happened, how Harry is free, and how his brother has come to life and rescued him, you may fancy what a commotion the whole of those people are in! If Mrs. Lambert's General was an angel before, what is he now! If she wanted to embrace his boots in the morning, pray what further office of wallowing degradation would she prefer in the evening? Little Hetty comes and nestles up to her father quite silent, and drinks a little drop out of his glass. Theo's and mamma's faces beam with happiness, like two moons of brightness. . . . . After supper, those four at a certain signal fall down on their knees—glad homage paying in awful mirth—rejoicing, and with such pure joy as angels do, we read, for the sinner that repents. There comes a great knocking at the door while they are so gathered

together. Who can be there? My Lord is in the country miles off. It is past midnight now; so late have they been, so long have they been talking! I think Mrs. Lambert guesses who is there.

"This is George," says a young gentleman, leading in another. "We have been to aunt Bernstein. We couldn't go to bed, aunt Lambert, without coming to thank you too. You dear, dear, good—" There is no more speech audible. Aunt Lambert is kissing Harry, Theo has snatched up Hetty, who is as pale as death, and is hugging her into life again. George Warrington stands with his hat off, and then (when Harry's transaction is concluded) goes up and kisses Mrs. Lambert's hand; the General passes his across his eyes. I protest they are all in a very tender and happy state. Generous hearts sometimes feel it, when Wrong is forgiven, when Peace is restored, when Love returns that had been thought lost.

"We came from aunt Bernstein's; we saw lights here, you see, we couldn't go to sleep without saying good-night to you all," says Harry. "Could we, George?"

"'Tis certainly a famous nightcap you have brought us, boys," says the General. "When are you to come and dine with us? To-morrow?" No, they must go to Madame Bernstein's to-morrow. The next day, then? Yes, they would come the next day—and that is the very day we are writing about: and this is the very dinner at which, in the room of Lieutenant-Colonel James Wolfe, absent on private affairs, my gracious reader has just been invited to sit down.

To sit down, and why, if you please? Not to a mere Barmecide dinner—no, no—but to hear Mr. George Esmond Warrington's Statement, which, of course, he is going to make. Here they all sit—not in my Lord's grand dining-room, you know, but in the snug study or parlor in front. The cloth has been withdrawn, the General has given the King's health, the servants have left the room, the guests sit conticent, and so, after a little hemming and blushing, Mr. George proceeds:

"I remember, at the table of our General, how the little Philadelphia agent, whose wit and shrewdness we had remarked at home, made the very objections to the conduct of the campaign of which its disastrous issue showed the justice. 'Of course,' says he, 'your Excellency's troops once before Fort Duquesne, such a weak little place will never be able to resist such a general, such an army, such artillery, as will there be found attacking it. But do you calculate, Sir, on the difficulty of reaching the place? Your Excellency's march will be through woods almost untrodden, over roads which you will have to make yourself, and your line will be some four miles long. This slender line, having to make its way through the forest, will be subject to endless attacks in front, in rear, in flank, by enemies whom you will never see, and whose constant practice in war is the dexterous laying of ambuscades.'—'Pshaw, Sir!' says the General, 'the savages may frighten your raw American militia' (Thank your Excellency for the compliment, Mr. Washington seems to say, who is sitting at the table), 'but the Indians will never make any impression on his Majesty's regular troops.'—'I heartily hope not, Sir,' says Mr. Franklin, with a sigh; and of course the gentlemen of the General's family sneered at the postmaster, as at a pert civilian who had no call to be giving his opinion on matters entirely beyond his comprehension.

"We despised the Indians on our own side, and our commander made light of them and their service. Our officers disgusted the chiefs who were with us by outrageous behavior to their women. There were not above seven or eight who remained with our force. Had we had a couple of hundred in our front on that fatal 9th of July, the event of the day must have been very different. They would have flung off the attack of the French Indians; they would have prevented the surprise and panic which ensued. 'Tis known now that the French had even got ready to give up their fort, never dreaming of the possibility of a defense, and that the French Indians themselves remonstrated against the audacity of attacking such an overwhelming force as ours.

"I was with our General with the main body of the troops when the firing began in front of us, and one aid-de-camp after another was sent forward. At first the enemy's attack was answered briskly by our own advanced people, and our men huzzaed and cheered with good heart. But very soon our fire grew slacker, while from behind every tree and bush round about us came single shots, which laid man after man low. We were marching in orderly line, the skirmishers in front, the colors and two of our small guns in the centre, the baggage well guarded bringing up the rear, and were moving over a ground which was open and clear for a mile or two, and for some half mile in breadth a thick tangled covert of brushwood and trees on either side of us. After the firing had continued for some brief time in front, it opened from both sides of the environing wood on our advancing column. The men dropped rapidly, the officers in greater number than the men. At first, as I said, these cheered and answered the enemy's fire, our guns even opening on the wood, and seeming to silence the French in ambuscade there. But the hidden rifle-firing began again. Our men halted, huddled up together, in spite of the shouts and orders of the General and officers to advance, and fired wildly into the brushwood—of course making no impression. Those in advance came running back on the main body frightened and many of them wounded. They reported there were five thousand Frenchmen and a legion of yelling Indian devils in front, who were scalping our people as they fell. We could hear their cries from the wood around as our men dropped under their rifles. There was no inducing the

people to go forward now. One aid-de-camp after another was sent forward, and never returned. At last it came to be my turn, and I was sent with a message to Captain Fraser of Halkett's in front, which he was never to receive nor I to deliver.

"I had not gone thirty yards in advance when a rifle-ball struck my leg, and I fell straightway to the ground. I recollect a rush forward of Indians and Frenchmen after that, the former crying their fiendish war-cries, the latter as fierce as their savage allies. I was amazed and mortified to see how few of the white-coats there were. Not above a score passed me; indeed, there were not fifty in the accursed action in which two of the bravest regiments of the British army were put to rout.

"One of them, who was half-Indian, half-Frenchman, with moccasins and a white uniform coat and cockade, seeing me prostrate on the ground, turned back and ran toward me, his musket clubbed over his head to dash my brains out and plunder me as I lay. I had my little fusil which my Harry gave me when I went on the campaign; it had fallen by me and within my reach, luckily; I seized it, and down fell the Frenchman dead at six yards before me. I was saved for that time, but bleeding from my wound and very faint. I swooned almost in trying to load my piece, and it dropped from my hand, and the hand itself sank lifeless to the ground.

"I was scarcely in my senses, the yells and shots ringing dimly in my ears, when I saw an Indian before me busied over the body of the Frenchman I had just shot, but glancing toward me as I lay on the ground bleeding. He first rifled the Frenchman, tearing open his coat and feeling in his pockets: he then scalped him, and, with his bleeding knife in his mouth, advanced toward me. I saw him coming as through a film, as in a dream—I was powerless to move or to resist him.

"He put his knee upon my chest: with one bloody hand he seized my long hair and lifted my head from the ground, and as he lifted it he enabled me to see a French officer rapidly advancing behind him.

"Good God! It was young Florac, who was my second in the duel at Quebec. '*A moi, Florac!*' I cried out. '*C'est Georges! aide moi!*'

"He started; ran up to me at the cry, laid his hand on the Indian's shoulder, and called him to hold. But the savage did not understand French, or choose to understand it. He clutched my hair firmer, and waving his dripping knife round it, motioned to the French lad to leave him to his prey. I could only cry out again and piteously, '*A moi!*'

"'*Ah, canaille, tu veux du sang? Prends!*' said Florac, with a curse; and the next moment, and with an *ugh!* the Indian fell over my chest dead, with Florac's sword through his body.

"My friend looked round him. '*Eh!*' says he, '*la belle affaire!* Where art thou wounded, in the leg?' He bound my leg tight round with his sash. 'The others will kill thee if they find thee here. *Ah, tiens!* Put me on this coat, and this hat with the white cockade. Call out in French if any of our people pass. They will take thee for one of us. Thou art Brunet of the Quebec Volunteers. God guard thee, Brunet! I must go forward. 'Tis a general *débâcle*, and the whole of your red coats are on the run, my poor boy.' Ah, what a rout it was! What a day of disgrace for England!

"Florac's rough application stopped the bleeding of my leg, and the kind creature helped me to rest against a tree, and to load my fusil, which he placed within reach of me, to protect me in case any other marauder should have a mind to attack me. And he gave me the gourd of that unlucky French soldier who had lost his own life in the deadly game which he had just played against me, and the drink the gourd contained served greatly to refresh and invigorate me. Taking a mark of the tree against which I lay, and noting the various bearings of the country, so as to be able again to find me, the young lad hastened on to the front. 'Thou seest how much I love thee, George,' he said, 'that I stay behind in a moment like this.' I forget whether I told thee, Harry, that Florac was under some obligation to me. I had won money of him at cards, at Quebec—only playing at his repeated entreaty—and there was a difficulty about paying, and I remitted his debt to me, and lighted my pipe with his note of hand. You see, Sir, that you are not the only gambler in the family.

"At evening, when the dismal pursuit was over, the faithful fellow came back to me, with a couple of Indians, who had each reeking scalps at their belts, and whom he informed that I was a Frenchman, his brother, who had been wounded early in the day, and must be carried back to the fort. They laid me in one of their blankets, and carried me, groaning, with the trusty Florac by my side. Had he left me they would assuredly have laid me down, plundered me, and added my hair to that of the wretches whose bleeding spoils hung at their girdles. He promised them brandy at the fort if they brought me safely there. I have but a dim recollection of the journey: the anguish of my wound was extreme: I fainted more than once. We came to the end of our march at last. I was taken into the fort, and carried to the officer's log-house, and laid upon Florac's own bed.

"Happy for me was my insensibility. I had been brought into the fort as a wounded French soldier of the garrison. I heard afterward that during my delirium the few prisoners who had been made on the day of our disaster had been brought under the walls of Duquesne by their savage captors, and there horribly burned, tortured, and butchered by the Indians, under the eyes of the garrison."

As George speaks one may fancy a thrill of

horror running through his sympathizing audience. Theo takes Hetty's hand and looks at George in a very alarmed manner. Harry strikes his fist upon the table, and cries, "The bloody, murderous, red-skinned villains! There will never be peace for us until they are all hunted down!"

"They were offering a hundred and thirty dollars apiece for Indian scalps in Pennsylvania, when I left home," says George, demurely; "and fifty for women."

"Fifty for women, my love! Do you hear that, Mrs. Lambert?" cries the Colonel, lifting up his wife's hair.

"The murderous villains!" says Harry, again. "Hunt 'em down, Sir! Hunt 'em down!"

"I know not how long I lay in my fever," George resumed. "When I awoke to my senses my dear Florac was gone. He and his company had been dispatched on an enterprise against an English fort on the Pennsylvanian territory, which the French claimed, too. In Duquesne, when I came to be able to ask and understand what was said to me, there were not above thirty Europeans left. The place might have been taken over and over again, had any of our people had the courage to return after their disaster.

"My old enemy the ague-fever set in again upon me as I lay here by the river-side. 'Tis a wonder how I ever survived. But for the goodness of a half-breed woman in the fort, who took pity on me, and tended me, I never should have recovered, and my poor Harry would be what he fancied himself yesterday, our grandfather's heir, our mother's only son.

"I remembered how, when Florac laid me in his bed, he put under my pillow my money, my watch, and a trinket or two which I had. When I woke to myself these were all gone; and a surly old sergeant, the only officer left in the quarter, told me, with a curse, that I was lucky enough to be left with my life at all; that it was only my white cockade and coat had saved me from the fate which the other *canaille* of *Rosbifs* had deservedly met with.

"At the time of my recovery the fort was almost emptied of the garrison. The Indians had retired enriched with British plunder, and the chief part of the French regulars were gone upon expeditions northward. My good Florac had left me upon his service, consigning me to the care of an invalided sergeant. Monsieur de Contrecœur had accompanied one of these expeditions, leaving an old Lieutenant, Museau by name, in command at Duquesne.

"This man had long been out of France, and serving in the colonies. His character, doubtless, had been indifferent at home; and he knew that according to the system pursued in France, where almost all promotion is given to the noblesse, he never would advance in rank. And he had made free with my guineas, I suppose, as he had with my watch, for I saw it one day on his chest when I was sitting with him in his quarter.

"Monsieur Museau and I managed to be pretty good friends. If I could be exchanged, or sent home, I told him that my mother would pay liberally for my ransom; and I suppose this idea excited the cupidity of the Commandant, for a trapper coming in the winter, while I still lay very ill with fever, Museau consented that I should write home to my mother, but that the letter should be in French, that he should see it, and that I should say I was in the hands of the Indians, and should not be ransomed under ten thousand livres.

"In vain I said I was a prisoner to the troops of His Most Christian Majesty, that I expected the treatment of a gentleman and an officer. Museau swore that letter should go, and no other; that if I hesitated, he would fling me out of the fort, or hand me over to the tender mercies of his ruffian Indian allies. He would not let the trapper communicate with me except in his presence. Life and liberty are sweet. I resisted for a while, but I was pulled down with weakness, and shuddering with fever; I wrote such a letter as the rascal consented to let pass, and the trapper went away with my missive, which he promised, in three weeks, to deliver to my mother in Virginia.

"Three weeks, six, twelve, passed. The messenger never returned. The winter came and went, and all our little plantations round the fort, where the French soldiers had cleared corn-ground and planted gardens and peach and apple trees down to the Monongahela, were in full blossom. Heaven knows how I crept through the weary time! When I was pretty well, I made drawings of the soldiers of the garrison, and of the half-breed and her child (Museau's child), and of Museau himself, whom, I am ashamed to say, I flattered outrageously; and there was an old guitar left in the fort, and I sang to it, and played on it some French airs which I knew, and ingratiated myself as best I could with my jailers; and so the weary months passed, but the messenger never returned.

"At last news arrived that he had been shot by some British Indians in Maryland; so there was an end of my hope of ransom for some months more. This made Museau very savage and surly toward me; the more so as his sergeant inflamed his rage by telling him that the Indian woman was partial to me—as I believe, poor thing, she was. I was always gentle with her, and grateful to her. My small accomplishments seemed wonders in her eyes; I was ill and unhappy, too, and these are always claims to a woman's affection.

"A captive pulled down by malady, a ferocious jailer, and a young woman touched by the prisoner's misfortunes — sure you expect that, with these three prime characters in a piece, some pathetic tragedy is going to be enacted? You, Miss Hetty, are about to guess that the woman saved me?"

"Why, of course she did!" cries mamma.

"What else is she good for?" says Hetty.

"You, Miss Theo, have painted her already

A PRISONER.

as a dark beauty—is it not so? A swift huntress—?"

"Diana with a baby," says the Colonel.

"—Who scours the plain with her nymphs, who brings down the game with her unerring bow, who is Queen of the forest—and I see by your looks that you think I am madly in love with her?"

"Well, I suppose she is an interesting creature, Mr. George?" says Theo, with a blush.

"What think you of a dark beauty, the color of new mahogany? with long straight black hair, which was usually dressed with a hair-oil or pomade by no means pleasant to approach, with little eyes, with high cheek-bones, with a flat nose, sometimes ornamented with a ring, with rows of glass beads round her tawny throat,

her cheeks and forehead gracefully tattooed, a great love of finery, and inordinate passion for —Oh! must I own it?"

"For coquetry. I know you are going to say that!" says Miss Hetty.

"For whisky, my dear Miss Hester — in which appetite my jailer partook; so that I have often sate by, on the nights when I was in favor with Monsieur Museau, and seen him and his poor companion hob-and-nobbing together until they could scarce hold the noggin out of which they drank. In these evening entertainments they would sing, they would dance, they would fondle, they would quarrel, and knock the cans and furniture about; and, when I was in favor, I was admitted to share their society, for Museau, jealous of his dignity, or not willing that his men should witness his behavior, would allow none of them to be familiar with him.

"While the result of the trapper's mission to my home was yet uncertain, and Museau and I myself expected the payment of my ransom, I was treated kindly enough, allowed to crawl about the fort, and even to go into the adjoining fields and gardens, always keeping my parole, and duly returning before gun-fire. And I exercised a piece of hypocrisy, for which, I hope, you will hold me excused. When my leg was sound (the ball came out in the winter, after some pain and inflammation, and the wound healed up presently), I yet chose to walk as if I was disabled and a cripple; I hobbled on two sticks, and cried Ah! and Oh! at every minute, hoping that a day might come when I might treat my limbs to a run.

"Museau was very savage when he began to give up all hopes of the first messenger. He fancied that the man might have got the ransom-money and fled with it himself. Of course he was prepared to disown any part in the transaction, should my letter be discovered. His treatment of me varied according to his hopes or fears, or even his mood for the time being. He would have me consigned to my quarters for several days at a time; then invite me to his tipsy supper-table, quarrel with me there and abuse my nation; or again break out into maudlin sentimentalities about his native country of Normandy, where he longed to spend his old age, to buy a field or two, and to die happy.

"'Eh, Monsieur Museau!' says I, 'ten thousand livres of your money would buy a pretty field or two in your native country? You can have it for the ransom of me, if you will but let me go. In a few months you must be superseded in your command here, and then adieu the crowns and the fields in Normandy! You had better trust a gentleman and a man of honor. Let me go home, and I give you my word the ten thousand livres shall be paid to any agent you may appoint in France or in Quebec.'

"'Ah, young traitor!' roars he, 'do you wish to tamper with my honor? Do you believe an officer of France will take a bribe? I have a mind to consign thee to my black-hole, and to have thee shot in the morning.'

"'My poor body will never fetch ten thousand livres,' says I; 'and a pretty field in Normandy with a cottage . . . .'

"'And an orchard. Ah, *sacrebleu!*' says Museau, whimpering, 'and a dish of tripe *à la mode du pays!* . . .'

"This talk happened between us again and again, and Museau would order me to my quarters, and then ask me to supper the next night, and return to the subject of Normandy, and cider, and *trippes à la mode de Caen*. My friend is dead now—"

"He was hung, I trust?" breaks in Colonel Lambert.

"—And I need keep no secret about him. Ladies, I wish I had to offer you the account of a dreadful and tragical escape; how I slew all the sentinels of the fort; filed through the prison windows, destroyed a score or so of watchful dragons, overcame a million of dangers, and finally effected my freedom. But, in regard of that matter, I have no heroic deeds to tell of, and own that, by bribery, and no other means, I am where I am."

"But you *would* have fought, Georgy, if need were," says Harry, "and you couldn't conquer a whole garrison, you know!" And herewith Mr. Harry blushed very much.

"See the women, how disappointed they are!" says Lambert. "Mrs. Lambert, you bloodthirsty woman, own that you are balked of a battle; and look at Hetty, quite angry because Mr. George did not shoot the Commandant."

"You wished he was hung yourself, papa!" cries Miss Hetty, "and I am sure I wish any thing my papa wishes."

"Nay, ladies," says George, turning a little red, "to wink at a prisoner's escape was not a very monstrous crime; and to take money? Sure other folks besides Frenchmen have condescended to a bribe before now. Although Monsieur Museau set me free, I am inclined, for my part, to forgive him. Will it please you to hear how that business was done? You see, Miss Hetty, I can not help being alive to tell it."

"Oh, George!—that is, I mean Mr. Warrington!—that is, I mean I beg your pardon!" cries Hester.

"No pardon, my dear! I never was angry yet or surprised that any one should like my Harry better than me. He deserves all the liking that any man or woman can give him. See it is *his* turn to blush now," says George.

"Go on, Georgy, and tell them about the escape out of Duquesne!" cries Harry, and he said to Mrs. Lambert afterward in confidence, "You know he is always going on saying that he ought never to have come to life again, and declaring that I am better than he is. The idea of my being better than George, Mrs. Lambert! a poor, extravagant fellow like me! It's absurd!"

CHAPTER LII.

INTENTIQUE ORA TENEBANT.

"We continued for months our weary life at the fort, and the Commandant and I had our quarrels and reconciliations, our greasy games at cards, our dismal duets with his asthmatic flute and my cracked guitar. The poor Fawn took her beatings and her cans of liquor as her lord and master chose to administer them; and she nursed her papoose, or her master in the gout, or her prisoner in the ague; and so matters went on until the beginning of the fall of last year, when we were visited by a hunter who had important news to deliver to the Commandant, and such as set the little garrison in no little excitement. The Marquis de Montcalm had sent a considerable detachment to garrison the forts already in the French hands, and to take up farther positions in the enemy's—that is, in the British—possessions. The troops had left Quebec and Montreal, and were coming up the St. Lawrence and the lakes in batteaux, with artillery and large provisions of warlike and other stores. Museau would be superseded in his command by an officer of superior rank, who might exchange me, or who might give me up to the Indians in reprisal for cruelties practiced by our own people on many and many an officer and soldier of the enemy. The men of the fort were eager for the reinforcements; they would advance into Pennsylvania and New York; they would seize upon Albany and Philadelphia; they would drive the Rosbifs into the sea, and all America should be theirs from the Mississippi to Newfoundland.

"This was all very triumphant: but yet, somehow, the prospect of the French conquest did not add to Mr. Museau's satisfaction.

"'Eh, Commandant!' says I, 'tis *fort bien*, but meanwhile your farm in Normandy, the pot of cider, and the *trippes à la mode de Caen*, where are they?'

"'Yes; 'tis all very well, my *garçon*,' says he. 'But where will you be when poor old Museau is superseded? Other officers are not good companions like me. Very few men in the world have my humanity. When there is a great garrison here, will my successors give thee the indulgences which honest Museau has granted thee? Thou wilt be kept in a sty like a pig ready for killing. As sure as one of our officers falls into the hands of your brigands of frontier-men, and evil comes to him, so surely wilt thou have to pay with thy skin for his. Thou wilt be given up to our red allies—to the brethren of La Biche yonder. Didst thou see, last year, what they did to thy countrymen whom we took in the action with Braddock? Roasting was the very smallest punishment, *ma foi*—was it not, La Biche?'

"And he entered into a variety of jocular descriptions of tortures inflicted, eyes burned out of their sockets, teeth and nails wrenched out, limbs and bodies gashed— You turn pale, dear Miss Theo! Well, I will have pity, and will spare you the tortures which honest Museau recounted in his pleasant way as likely to befall me.

"La Biche was by no means so affected as you seem to be, ladies, by the recital of these horrors. She had witnessed them in her time. She came from the Senecas, whose villages lie near the great cataract between Ontario and Erie; her people made war for the English, and against them; they had fought with other tribes; and, in the battles between us and them, it is difficult to say whether white skin or red skin is most savage.

"'They may chop me into cutlets and broil me, 'tis true, Commandant,' says I, coolly. 'But again, I say, you will never have the farm in Normandy.'

"'Go get the whisky-bottle, La Biche,' says Museau.

"'And it is not too late, even now. I will give the guide who takes me home a large reward. And again I say I promise, as a man of honor, ten thousand livres to—whom shall I say? to any one who shall bring me any token—who shall bring me, say, my watch and seal with my grandfather's arms—which I have seen in a chest somewhere in this fort.'

"'*Ah, scélérat!*' roars out the Commandant, with a hoarse yell of laughter. 'Thou hast eyes, thou! All is good prize in war.'

"'Think of a house in your village, of a fine field hard by with half a dozen of cows—of a fine orchard all covered with fruit.'

"'And Javotte at the door with her wheel, and a rascal of a child or two, with cheeks as red as the apples! Oh, my country! Oh, my mother!' whimpers out the Commandant. 'Quick, La Biche, the whisky!'

"All that night the Commandant was deep in thought, and La Biche too silent and melancholy. She sate away from us, nursing her child, and whenever my eyes turned toward her I saw hers were fixed on me. The poor little infant began to cry, and was ordered away by

Museau, with his usual foul language, to the building which the luckless Biche occupied with her child. When she was gone we both of us spoke our minds freely; and I put such reasons before Monsieur as his cupidity could not resist.

"'How do you know,' he asked, 'that this hunter will serve you?'

"'That is my secret,' says I. But here, if you like, as we are not on honor, I may tell it. When they come into the settlements for their bargains, the hunters often stop a day or two for rest and drink and company, and our new friend loved all these. He played at cards with the men: he set his furs against their liquor: he enjoyed himself at the fort, singing, dancing, and gambling with them. I think I said they liked to listen to my songs, and for want of better things to do, I was often singing and guitar scraping: and we would have many a concert, the men joining in chorus, or dancing to my homely music, until it was interrupted by the drums and the retraite.

"Our guest the hunter was present at one or two of these concerts, and I thought I would try if possibly he understood English. After we had had our little stock of French songs, I said, 'My lads, I will give you an English song;' and to the tune of 'Over the hills and far away,' which my good old grandfather used to hum as a favorite air in Marlborough's camp, I made some doggerel words: 'This long, long year, a prisoner drear; Ah, me! I'm tired of lingering here: I'll give a hundred guineas gay, To be over the hills and far away.'

"'What is it?' says the hunter, 'I don't understand.'

"''Tis a girl to her lover,' I answered; but I saw by the twinkle in the man's eye that he understood me.

"The next day, when there were no men within hearing, the trapper showed that I was right in my conjecture, for as he passed me he hummed in a low tone, but in perfectly good English, 'Over the hills and far away,' the burden of my yesterday's doggerel.

"'If you are ready,' says he, 'I am ready. I know who your people are, and the way to them. Talk to the Fawn, and she will tell you what to do. What! You will not play with me?' Here he pulled out some cards, and spoke in French, as two soldiers came up. 'Milor est trop grand seigneur? Bonjour, my lord!'

"And the man made me a mock bow, and walked away shrugging up his shoulders, to offer to play and drink elsewhere.

"I knew now that the Biche was to be the agent in the affair, and that my offer to Museau was accepted. The poor Fawn performed her part very faithfully and dexterously. I had not need of a word more with Museau; the matter was understood between us. The Fawn had long been allowed free communication with me. She had tended me during my wound and in my illnesses, helped to do the work of my little chamber, my cooking, and so forth. She was free to go out of the fort, as I have said, and to the river and the fields where the corn and garden-stuff of the little garrison were brought in.

"Having gambled away most of the money which he received for his peltries, the trapper now got together his store of flints, powder, and blankets, and took his leave. And, three days after his departure, the Fawn gave me the signal that the time was come for me to make my little trial for freedom.

"When first wounded, I had been taken by my kind Florac and placed on his bed in the officers' room. When the fort was emptied of all officers except the old lieutenant left in command, I had been allowed to remain in my quarters, sometimes being left pretty free, sometimes being locked up and fed on prisoners' rations, sometimes invited to share his mess by my tipsy jailer. This officers' house, or room, was of logs, like the half dozen others within the fort, which mounted only four guns of small calibre, of which one was on the bastion behind my cabin. Looking westward over this gun, you could see a small island at the confluence of the two rivers Ohio and Monongahela, whereon Duquesne is situated. On the shore opposite this island were some trees.

"'You see those trees?' my poor Biche said to me the day before, in her French jargon. 'He wait for you behind those trees.'

"In the daytime the door of my quarters was open, and the Biche free to come and go. On the day before she came in from the fields with a pick in her hand and a basketful of vegetables and pot-herbs for soup. She sate down on a bench at my door, the pick resting against it, and the basket at her side. I stood talking to her for a while: but I believe I was so idiotic that I never should have thought of putting the pick to any use had she not actually pushed it into my open door, so that it fell into my room. 'Hide it,' she said; 'want it soon.' And that afternoon it was she pointed out the trees to me.

"On the next day she comes, pretending to be very angry, and calls out, 'My lord! my lord! why you not come to Commandant's dinner? He very bad! Entendez-vous?' And she peeps into the room as she speaks, and flings a coil of rope at me.

"'I am coming, La Biche,' says I, and hobbled after her on my crutch. As I went into the Commandant's quarters she says, 'Pour ce soir.' And then I knew the time was come.

"As for Museau, he knew nothing about the matter. Not he! He growled at me, and said the soup was cold. He looked me steadily in the face, and talked of this and that; not only while his servant was present, but afterward, when we smoked our pipes and played our game at picquet; while, according to her wont, the poor Biche sate cowering in a corner.

"My friend's whisky-bottle was empty; and he said, with rather a knowing look, he must have another glass—we must both have a glass

that night. And, rising from the table, he stumped to the inner-room, where he kept his fire-water under lock and key, and away from the poor Biche, who could not resist that temptation.

"As he turned his back the Biche raised herself; and he was no sooner gone but she was at my feet, kissing my hand, pressing it to her heart, and bursting into tears over my knees. I confess I was so troubled by this testimony of the poor creature's silent attachment and fondness, the extent of which I scarce had suspected before, that when Museau returned I had not recovered my equanimity, though the poor Fawn was back in her corner again and shrouded in her blanket.

"He did not appear to remark any thing strange in the behavior of either. We sate down to our game, though my thoughts were so preoccupied that I scarcely knew what cards were before me.

"'I gain every thing from you to-night, milor,' says he, grimly. 'We play upon parole.'

"'And you may count upon mine,' I replied.

"'Eh! 'tis all that you have!' says he.

"'Monsieur,' says I, 'my word is good for ten thousand livres;' and we continued our game.

"At last he said he had a headache, and would go to bed; and I understood the orders too, that I was to retire. 'I wish you a good night, mon petit milor,' says he; 'stay, you will fall without your crutch'—and his eyes twinkled at me, and his face wore a sarcastic grin. In the agitation of the moment I had quite forgotten that I was lame, and was walking away at a pace as good as a grenadier's.

"'What a vilain night!' says he, looking out. In fact, there was a tempest abroad, and a great roaring, and wind. 'Bring a lantern, La Tulipe, and lock my lord comfortably into his quarters!' He stood a moment looking at me from his own door, and I saw a glimpse of the poor Biche behind him.

"The night was so rainy that the sentries preferred their boxes and did not disturb me in my work. The log-house was built with upright posts, deeply fixed in the ground, and horizontal logs laid upon it. I had to dig under these, and work a hole sufficient to admit my body to pass. I began in the dark, soon after tattoo. It was some while after midnight before my work was done, when I lifted my hand up under the log and felt the rain from without falling upon it. I had to work very cautiously for two hours after that, and then crept through to the parapet and silently flung my rope over the gun; not without a little tremor of heart, lest the sentry should see me and send a charge of lead into my body.

"The wall was but twelve feet, and my fall into the ditch easy enough. I waited a while there, looking steadily under the gun, and trying to see the river and the island. I heard the sentry pacing up above and humming a tune. The darkness became more clear to me ere long, and the moon rose, and I saw the river shining before me, and the dark rocks and trees of the island rising in the waters.

"I made for this mark as swiftly as I could, and for the clump of trees to which I had been directed. Oh, what a relief I had when I heard a low voice humming there 'Over the hills and far away!'"

When Mr. George came to this part of his narrative, Miss Theo, who was seated by a harpsichord, turned round and dashed off the tune on the instrument, while all the little company broke out into the merry chorus.

"Our way," the speaker went on, "lay through a level tract of forest with which my guide was familiar, upon the right bank of the Monongahela. By daylight we came to a clearer country, and my trapper asked me—Silverheels was the name by which he went—had I ever seen the spot before? It was the fatal field where Braddock had fallen, and whence I had been wonderfully rescued in the summer of the previous year. Now, the leaves were beginning to be tinted with the magnificent hues of our autumn."

"Ah, brother!" cries Harry, seizing his brother's hand, "I was gambling and making a fool of myself at the Wells and in London when my George was flying for his life in the wilderness! Oh, what a miserable spendthrift I have been!"

"But I think thou art not unworthy to be called thy mother's son," said Mrs. Lambert, very softly, and with moistened eyes. Indeed, if Harry had erred, to mark his repentance, his love, his unselfish joy and generosity, was to feel that there was hope for the humbled and kind young sinner.

"We presently crossed the river," George resumed, "taking our course along the base of the western slopes of the Alleghanies; and through a grand forest region of oaks and maple, and enormous poplars that grow a hundred feet high without a branch. It was the Indians whom we had to avoid, besides the outlying parties of French. Always of doubtful loyalty, the savages have been specially against us since our ill-treatment of them and the French triumph over us two years ago.

"I was but weak still, and our journey through the wilderness lasted a fortnight or more. As we advanced the woods became redder and redder. The frost nipped sharply of nights. We lighted fires at our feet, and slept in our blankets as best we might. At this time of year the hunters who live in the mountains get their sugar from the maples. We came upon more than one such family camping near their trees by the mountain streams, and they welcomed us at their fires and gave us of their venison. So we passed over the two ranges of the Laurel Hills and the Alleghanies. The last day's march of my trusty guide and myself took us down that wild, magnificent pass of Will's Creek, a valley lying between cliffs near

a thousand feet high—bald, white, and broken into towers like huge fortifications, with eagles wheeling round the summits of the rocks and watching their nests among the crags.

"And hence we descended to Cumberland, whence we had marched in the year before, and where there was now a considerable garrison of our people. Oh! you may think it was a welcome day when I saw English colors again on the banks of our native Potomac!"

Monthly Record of Current Events.

UNITED STATES.

THE November elections have generally resulted unfavorably to the Administration. In *New York*, where an unsuccessful attempt had been made to unite the entire Opposition vote upon a common State ticket, the following nominations were made for Governor: E. D. Morgan, Republican; A. J. Parker, Democrat; L. D. Burrows, American; Gerrit Smith, Abolition and Temperance. The vote was as follows: Republican, 247,000; Democratic, 230,000; American, 60,000; Abolition, 5000: Mr. Morgan's plurality being about 17,000. The whole Opposition vote was concentrated upon Congressional candidates, electing 27 out of 33 members. The entire Opposition majority for members of Congress is about 70,000. In the State Legislature the Opposition have a decided majority in both Houses.—In *New Jersey* the Opposition candidates for Congress succeeded in every district.—In *Massachusetts* N. P. Banks, Republican, was elected Governor by a majority of about 29,000; all the members of Congress being of the same party.—In *Ohio* the Republican State ticket succeeded by a majority of about 21,000; for Congress 15 Republicans and 6 Democrats were chosen.—In *Michigan* Moses Wisner, Republican, was elected Governor, by about 7000 majority; the Democrats gaining one member of Congress.—In *Illinois*, where Mr. Douglas took ground against the Kansas policy of the Administration on the one hand, and the Republican party on the other, the main interest of the canvass was concentrated upon the candidates for the State Legislature, as this involved the question of the re-election of Mr. Douglas to the United States Senate. The result is still uncertain; the probability being that a majority of Democrats favorable to Mr. Douglas have been chosen.—In *Delaware* the Democrats succeeded by a small majority.—Elections for members of the next Congress have now been held in eighteen States, having 152 members. It is impossible to classify the members with perfect accuracy, some being elected as "Republicans," some as "Americans," some as "Democrats," and others as "Anti-Lecompton Democrats." Classing Republicans, Northern Americans, and Anti-Lecompton Democrats as "Opposition," and Democrats and Southern Americans as "Administration," the result in these States, as compared with the present Congress, is approximately as follows:

	Adm.	*Opp.*
Present Congress	66	86
Next Congress	39	113

Elections are yet to be held in fourteen States, having 84 Representatives. Of the members from these States in the present Congress 64 are Administration and 20 Opposition.

A project for another filibustering expedition to Nicaragua has been set on foot by Walker and others, and the President has issued a proclamation in which he states that "One of the leaders of a former illegal expedition, who has been already twice expelled from Nicaragua, has invited, through the public newspapers, American citizens to emigrate to that republic, and has designated Mobile as the place of rendezvous and departure, and San Juan del Norte as the port to which they are bound. This person, who has renounced his allegiance to the United States, and claims to be President of Nicaragua, has given notice to the collector of the port of Mobile that two or three hundred of these emigrants will be prepared to embark from that port about the middle of November. For these and other good reasons, and for the purpose of saving American citizens who may have been honestly deluded into the belief that they are about to proceed to Nicaragua as peaceful emigrants, if any such there be, I, James Buchanan, President of the United States, have thought fit to issue this my proclamation, enjoining upon all officers of the Government, civil and military, in their respective spheres, to be vigilant, active, and faithful in suppressing these illegal enterprises."

From *Utah* the latest accounts represent every thing as quiet. Trains of goods were continually arriving from California and the East. The troops under command of General Johnston were consolidated in one encampment. His command, including employés, numbered 7000 or 8000; there were also 4000 at Fort Bridger.——The Indians on the frontiers are troublesome. In an action, near Wachita Village, between a detachment of the 2d Cavalry and a party of Comanches, five of the former and forty of the latter were killed. The Navajos in New Mexico are hostile, and two engagements have been fought with them. The agent has formally suspended all relations with them. He says that their wealth consists of 250,000 sheep and 60,000 horses, the loss of which would drive them to desperation, and give rise to a long war, like that in Florida. It has been found necessary to raise a body of troops in Texas to protect the frontiers from the incursions of the savages. In Oregon the Indians are suing for peace, which Colonel Wright, who commands our troops, has refused to grant, unless they will surrender unconditionally, and bring in all their women and property. The soldiers are destroying the grain-fields and provisions of the savages, who are reduced to great distress.——The inhabitants of *Dacotah* have completed a temporary government, to continue till Congress shall organize a regular Territorial Government.——The Frazer River gold excitement has entirely subsided, and the miners are rapidly returning to California. The river had fallen so as to permit mining, and considerable gold had been taken out; but as early as the 1st of October the weather had become too cold to permit of work.——The reports of the discovery of gold near Pike's Peak in Kansas are confirmed. The Kansas *Weekly Press* of October 23, states that

a miner had just reached Elwood with $6000 or $7000 in gold dust, which had been gathered by three men in two months. The latest intelligence describes the country as very inviting to emigrants, large numbers of whom are preparing to make the journey in the spring.

SOUTHERN AMERICA.

General Vidaurri, who was marching toward the capital with every prospect of success, was surprised near San Luis by the Government troops under Miramon, and totally defeated, with a loss of 400 killed and 1500 prisoners. He then issued a proclamation calling upon several merchants along the northern frontier to pay $150,000, without asking any questions, or leave the country. Many foreign merchants began preparations to leave, when Vidaurri revoked the proclamation, resigned the command of his remaining army to Colonel Zaragoza, and departed for parts unknown. The new commander was at the latest dates endeavoring to reorganize his forces, with considerable success. The defeat of the "Liberals" is partly balanced by a victory obtained near Guadalajara, by General Degollado, over the Government forces under Casanova. The condition of the country is deplorable; both parties seem to plunder and murder indiscriminately; and gangs of robbers infest every section. A letter from the capital says: "Day after day we hear of nothing but robbery after robbery, sack after sack. The ordinary circumstances of the robbery of a diligence, the plundering of a small town, and such like small affairs, excite little attention. It is estimated that six or eight thousand persons have taken refuge in the capital. The number already driven from house and home is estimated at more than a quarter of a million; and still the work goes on."—The Tehuantepec route is announced to be open, the first company of passengers commencing the passage on the 30th of October, with the prospect of proceeding without delay or trouble to the Pacific side.——*Bolivia* is in an unsettled state. An attempt has been made to assassinate the President, Señor Linares. Two persons who stood by his side were shot down; the barracks were attacked at the same time, but without success; the leader of the insurgents was shot dead, and his followers fled.——In *Peru* new disturbances have broken out—insurrectionary movements at home, and hostilities with Bolivia on the frontiers.

EUROPE.

There is little European intelligence which demands record. The British Parliament was prorogued on the 19th of October.——On the 20th some intelligible signals were received at Valentia from Trinity Bay, through the Telegraphic cable. The words were, "Daniells now in circuit." Authority was at once given to use the Daniells battery at Valentia. Mr. Saward, the Secretary of the Company, says that this result, though encouraging, must not be looked upon as permanent; for it is clear that there is a serious fault in the cable, and it is not certain that any efforts except such as would be dangerous to the cable can overcome the obstacles in the way of perfect working.——The Company owning the *Leviathan* steamship has been dissolved, and a new one is projected to purchase the vessel at less than half its original cost. The capital of the new company is filed at £330,000.——Mr. Staunton, the champion chess-player of England, has declined to fulfill his promise to play a match with Mr. Morphy, on the ground that his literary engagements will not leave him time for the amount of practice necessary in order to regain his old strength. Mr. Morphy has been invited to play before the Emperor.——A serious misunderstanding has occurred between France and Portugal. A French vessel, the *Charles et Georges*, was seized by the Portuguese on the coast of Africa as a slaver. The French Government demanded that it should be given up, and an indemnity paid for its seizure; after some delay the Portuguese acceded to the demand, avowedly on the ground that they had no means of resisting the force threatened to be employed by the French.——The *Correspondent*, a Parisian journal, has been seized, and the editor and publisher prosecuted, on account of an article by Count Montalembert, which is said to attack the right of universal suffrage and the authority of the Emperor.

THE EAST.

The insurgents in Oude continue to give considerable trouble, although their numbers are greatly diminished. The famous Nena Sahib has disappeared altogether; but another chief, Tantia Topee, keeps the field at the head of the Gwalior mutineers, moving with great celerity from place to place, and making his assaults when wholly unexpected. In an attack upon the town of Jahlra Patun, just after having been defeated by General Roberts, he got possession of a large amount of treasure and forty guns. Of these, twenty-five were shortly after retaken in an action, in which he was again beaten. Orders were given that the native troops at Mooltan, thirteen hundred in number, should be disbanded and sent home in small detachments. These men, supposing that they were to be divided in order that they might be easily cut to pieces, rushed upon the artillery barracks, occupied by six hundred European troops, with the purpose of seizing the guns. They were armed only with clubs and stones. The troops fired into the frantic mob, killing three hundred and fifty at the first discharge. The remainder fled, but were hotly pursued; and of the thirteen hundred only one hundred and fifty escaped alive. A successful attack was made on the 19th of September upon a body of three thousand insurgents posted on an island; two boats loaded with fugitives attempting to escape were sunk by the artillery; one thousand in all were slain. Several minor engagements have taken place, the British proving victorious in every instance.——The French and English at Canton are still harassed by the Chinese, who are exhorted by proclamations to cut off the barbarians, man by man, notwithstanding the treaty made by the Emperor. A large number of piratical junks had been sunk or captured by the English. The rebel cause is apparently declining. They seem to have suspended operations as soon as they encountered men who were willing to fight.——Lord Elgin has concluded a favorable commercial treaty with Japan, by which five ports are to be opened to the English, who are to have a resident minister at Jeddo. Cotton and woolen goods are to pay a duty of only five per cent.; other articles generally to pay twenty per cent.—Mr. Harris, the American consular agent, has also negotiated a new treaty, which was signed at a place near Jeddo on the 28th of July, conferring important privileges. Among these is the abolition of the government monopoly of trade and the right of diplomatic residence at the capital.

Literary Notices.

The Courtship of Miles Standish, and Other Poems, by HENRY WADSWORTH LONGFELLOW. (Published by Ticknor and Fields.) In the main poem of this volume Mr. Longfellow has again made use of the hexameter verse, which he handled with such graceful facility in the charming idyl of Evangeline. Whatever may be decided as to the adaptation of this measure to English poetry, it can scarcely be denied that he has moulded it into an appropriate medium for his quaint, primeval narrative, and that the fortunes of Miles Standish, renowned in love as well as in war, form a singularly attractive picture in this rustic frame-work. Mr. Longfellow's plastic power is shown not only in the dexterity with which he produces harmonious effects from his naturally prosaic hexameter, but in the skill with which he shapes the intractable materials of his theme into images of sweet and winning loveliness. The old Puritan soldier certainly presented an unpromising subject for poetical description. Nor could the worthy John Alden, or the good, frank-hearted Priscilla, have ever dreamed that their brows should be encircled with the halo of romance. Plymouth Rock, too, is more heroic than poetic; though it must be admitted that many a wild flower of rare fragrance and beauty finds shelter in Plymouth woods. The author has turned to admirable account all the imaginative elements of his theme, while he has clothed it with new charms from the fertile associations of his own mind. The passages in the poem which dwell the longest in the memory and produce the most agreeable effect are those descriptive of the local scenery, which, by their freshness and natural coloring, are entitled to a place among the most pleasing specimens of Mr. Longfellow's composition.—The smaller poems contained in this volume comprise the favorite fugitive pieces with which readers have been familiar as they passed the rounds of the periodical press. No one can ever weary of the stately ring of the "Warden of the Cinque Ports," or the solemn pathos of the "Two Angels."

Vernon Grove; or, Hearts as they Are. (Published by Rudd and Carleton). The plot of this novel —which we understand is by a new writer, though it by no means needs the indulgence due to a first attempt—is founded on the influence exercised by a thoughtful, right-hearted, and sympathetic feminine character on a disposition naturally impetuous and jealous, prone to self-absorption, and soured by a succession of almost ruinous disappointments. The hero is a man of great energy of intellect and will, in possession of ample wealth, of a nature demanding devoted affection and sympathy, but with the misfortune of having lost his eye-sight in early manhood, and finding none in his immediate family circle from whom his life-long sorrow could receive solace. The growth of a tender attachment between him and an admirable young maiden whom a rare good fortune has brought to his side forms the pivot of the story. In the unfolding of incident and the delineation of character, the writer exhibits both originality and insight; and without any violation of the natural and probable sequence of events, imparts perpetual vivacity and interest to the narrative. The story affords a promising augury for the future career of the writer.

The History of Prostitution, by WILLIAM W. SANGER, M.D. (Published by Harper and Brothers.) The resident physician of Blackwell's Island has here collected a mass of information on one of the most prominent social evils of the civilized world, in the form of a Report to the Governors of the Alms-house of the City of New York. He has treated the subject in its historical relations, as well as in its bearings on public morals and hygiene, and has brought forward a variety of suggestions that challenge the attention of the political economist no less than of the philanthropist.

The Cosmopolitan Art Journal commences its third volume with the Number for December. It fully maintains its high character as a record of art and literature. In typography and illustration it is admirable, and in its literary character will compare favorably with any journal published in this country. The *Art Journal* is furnished gratis to subscribers to the "Cosmopolitan Art Association." (Published at 548 Broadway, New York.)

Wells's Natural Philosophy. Our notice of this book in the last number of the Magazine has elicited from the author a second reply, which, although prolix and containing much irrelevant matter, we nevertheless insert without abridgment. The following is the author's reply:

"*To the Editor of Harper's Magazine:*

"Your second criticism upon 'Wells's Philosophy,' occupying nearly four columns of your November Number, by its renewed charges of error and incompetency, requires, as indeed it in terms challenges, a reply. As we can not expect sufficient space in your columns for a full discussion of all the points cited by the critic, we shall take up the most important, and treat them as briefly as the nature of the subject will allow.

"And first, as to the corrections alluded to in our last. They *were made* in the plates of the book, as then stated, before the appearance of your criticism. Probably an earlier edition of the book was sent you by mistake.

"1. HURRICANES.—The critic charges that the statement of the 'Philosophy,' p. 286, that, 'the mass of air in a hurricane is driven *outward* from the centre toward the margin,' is erroneous. As the critic here contravenes an almost universally accredited principle, it would have been more appropriate for *him* to support *his* position, than to call on us to defend ours. He might as well 'challenge us to make good' a hundred other acknowledged principles in physics. In support of our position we refer him to the writings of Reid and Redfield, *passim*. So also Brocklesby, in his 'Meteorology,' p. 58–59, ed. of 1858, after stating that hurricanes are rotary storms, says: 'If the hurricane is a vast whirlwind, the atmosphere constituting the body of the storm will be driven outward from the centre toward the margin, just as water in a pail which is made to revolve rapidly flies from the centre, and swells up at the sides.' Brocklesby continues to discuss this principle, and concludes with the assertion that '*amid all the phenomena of storms, no fact is better established than this, that an extraordinary depression of the barometer, in tropical climates, is a sure forerunner of a hurricane.*'

"2. CAPILLARY PHENOMENA.—'Wells's Philosophy' asserts that, in capillary phenomena, glass *repels* mercury, and *attracts* water. The critic, without noticing that we were discussing *capillary* phenomena, says that 'the attraction of glass for mercury is *far stronger* than its attraction for water;' and, in support of his position, cites the experiment of lifting a *horizontal* plate of glass from the surfaces of mercury and water respectively. We admit that more force is required to lift the glass from the mercury than from the water; but this experiment is not to the point, as other principles are involved in it. It is a universally admitted fact that when a plate of glass, or a glass tube, is plunged vertically in mercury and in water, respectively, the surface of the mercury next the glass is *depressed*, and the surface of the water is *elevated*. The critic can not deny that this is the result. Now, as to the principle involved in it. The 'Encyclopedia Britannica,' last edition, says: 'In a capillary tube the greatest depression will take place when a solid has *no attraction* for the particles of the fluid.' Any amount of testimony might be quoted in support of our position.

"3. COLORS.—Upon the question, 'What color will be produced by mixing powders of the seven colors?' the critic's attack is, after all, upon the author's expression

relative to a small variation in the shade of color. The 'Philosophy' says it is not white or grayish white. Against this the critic cites half a column from Sir Isaac Newton, stating that the color thus produced is a *dusky, obscure, dark* white, such as might arise from a *mixture of white and black.* Sir Isaac Newton further states that it was only under peculiarly arranged circumstances as to full sunlight through an open window, and at a distance of 12 to 18 feet, that the mixture appeared white. Furthermore, Robert Hunt, 'Physics,' page 408, says: 'It is very common in books of science to find it stated that by mixing powders of the colors of the rays of light, a gray, approaching to white, is produced; this is an error which has been again and again repeated, evidently without examination. A neutral lavender may be formed; but the usual result is a deep brown—with some colors an absolute black—but never any advance toward whiteness.' The author has only to add that actual experiment, as ordinarily performed, shows the result to be, not white, but a dark gray, or dirty brown: and yet this is what the critic terms 'a dignified rebuke to Sir Isaac Newton' (whose name, however, is not alluded to in the book in that connection), and a 'glaring and fundamental error.'

"4. Complementary Colors.—The critic says the following is 'absurd in theory, as well as false in fact,' viz.: 'Each color of the solar ray has its complementary color; for if it be not white it is deficient in certain rays that would aid in producing white; and these absent rays compose its complementary color. The law of complementary colors is this: *The complementary color is always half the spectrum.* Thus if we take half the length of the spectrum by a pair of compasses, and fix one leg on any color, the other leg will fall upon its complementary color, or upon the one which, added to the first, will produce white light.'

"Now compare this 'absurd' and 'false' passage with the language of Sir David Brewster (see Brewster's 'Optics,' last English edition, p. 431), which is as follows: 'In order to find the accidental color of any color in the spectrum, take half the length of the spectrum in a pair of compasses, and setting one foot in the color whose accidental color is required, the other will fall upon the accidental color. If the primitive color is reduced to the same degree of intensity as the accidental color, we shall find that one is the complement of the other, or what the other wants to make it white light; that is, the primitive and the accidental colors, when mixed together, make white light.' May we not, therefore, adopt the language of the critic, and retort that he 'administers a dignified rebuke' to Sir David Brewster?

"Now it does not meet this point to say that 'Sir Isaac Newton says that *no two* colors of the spectrum combined will form white light;' for we have never said that they would. But we said that two *complementary* colors combined produce white. Of course one of two complementary colors in the spectrum is always formed by the combination of *two* others, as orange, which is the complementary color of blue, is formed by the overlapping of red and yellow. To put the point more specifically: Will the critic deny that the red of the spectrum, added to its complementary color, bluish-green, will make white light? or that blue, added to orange-red, will produce white?

"5. Concave Mirrors.—It is stated in the 'Philosophy' that 'the *general* effect of concave mirrors is to produce an image larger than the object.' The critic twice insinuates that this is erroneous, yet does not deny it specifically, since the experience of every one who has ever used a magnifying toilet-glass would refute him. It does not affect the truth of our statement to show that this effect is not produced when the rays proceed from a distant body, as in the case of the reflecting telescope. Furthermore, *this very point* is fully discussed and explained in the 'Philosophy,' in immediate connection with the general statement first quoted, and it is also illustrated by an engraving. We ask, Is such criticism fair?

"6. Variation of the Compass.—We are charged with a grave error in asserting that 'there are two lines of no variation' (*i. e.* of the needle). 'These two lines,' says the critic, 'unquestionably form one continuous line surrounding the globe. It is true that in the neighborhood of either pole this line has not been traced.' So then, according to his own admission, the connection at either pole can not be affirmed; and the statement of the book is therefore fully justified by the fact. It is also justified by the language of almost every reputable writer on the subject—the two lines being invariably designated as the eastern and western, or the American and Asiatic lines of no variation. See Draper, Harris, Hunt, Brande, 'Encyc. Useful Arts,' and 'Encyclopedia Britannica, last edition.'

"We now wish to call special attention to the charge immediately following the above, viz.: 'He (Mr. W.) also says the eastern line of no variation begins in the White Sea, descending south until it reaches the latitude of 71°. Now according to our map no part of the White Sea extends so far north as 69°. Will Mr. Wells explain to us how far south one must travel from 69° N. latitude before he reaches 71° N. latitude?'

"So much for the charge, to which we reply that there is in the book no ground whatever for the gross imputation of ignorance of geography which the critic makes. The text reads as follows: 'The eastern line of no variation begins on the north in the White Sea, makes a great semicircle, descending south, until it reaches the latitude of 71°. It then passes along the Sea of Japan,' etc. It is thus apparent that the 'descending south' qualifies the expression 'a great semicircle' (*which has been singularly omitted by the critic*), and is intended to indicate the direction of the curvature, as is obvious from the succeeding reference to the continuation of the line in the Sea of Japan. In other words, the equivalent of the text is, that the line of no variation stretches from the White Sea to the parallel of 71°, and that the course of the line is circular, with a curvature descending south. Moreover, the identical words which we used occur in Hunt's 'Physics,' p. 319, last London edition; also see 'Encyclopedia Britannica,' last London edition, vol. xiv., p. 49. Will the critic deny that there is such a semicircular line, beginning in the White Sea, curving downward, and then reaching up to latitude 71°? Why the misquotation on the part of the critic?

"The criticism upon the statement on page 428 is founded on an erroneous quotation of part of a sentence dissevered from its conclusion, and entirely altering the meaning of the text, as any reader will perceive by referring to the entire passage. The critic's innuendo is, that the author ignored the fact or degree of the variation of the compass; yet the identical sentence quoted from, while stating the *general* correctness of the needle for ordinary purposes (instancing wanderers who had lost their way), closes with the caution that '*for more accurate purposes it is necessary to apply a rule of correction.*' Moreover, the context for several pages immediately preceding is devoted to the explanation, nature, degree, and rule of variation.

"7. Spherical Aberration.—The critic says, 'Mr. W.'s statement respecting spherical aberration shows that he has no clear ideas' on the subject. The 'Philosophy' states that the spherical aberration of a lens is owing to 'a difference in the convergence of the rays coming from the centre and the edges of the lens.' The critic says, 'This is entirely erroneous.' [This is *not* the statement which the critic pronounced erroneous.—Ed.] Now Brewster's 'Optics,' last London edition, p. 52, defines spherical aberration to be due to the fact that 'the rays nearest the axis (centre) of the lens are refracted to a focus *more remote* than those which are incident at a distance from the axis' (that is, nearer the edges). Is Sir David Brewster also 'entirely erroneous?' And as to the use of a concave screen as a familiar illustration of a mode of correcting the aberration, we aver that it is not only perfectly legitimate, but often used in lectures; though it is not, nor have we alleged that it is, the ordinary practical way. On the contrary, the text expressly says, in the same connection, that spherical aberrations are practically overcome by a combination of lenses of different refracting powers.

"If the critic should desire to continue the discussion, we will cheerfully take up the other points noticed by him.

D. A. W.

"*October* 27, 1858."

Upon receipt of the preceding communication we again requested the publishers to furnish us a copy of the *last edition* of Mr. Wells's book, and a copy was immediately sent us. We have compared this copy with the former editions of the same work, and find that the passage on page 61, which we have heretofore criticised, has been changed so as to read as follows: "A pendulum that will vibrate once in nine seconds must have a length of 81 *feet greater than one vibrating once in one second.*" Now a pendulum vibrating once in one second is *less* than four feet in length. Hence a pendulum vibrating once in nine seconds must be *less* than 85 feet in length. This result is too small by *nearly two hundred feet.* We recommend to Mr. W. to "peck his flint and try it again."

Mr. W. has replied to seven of our criticisms, and we will review them in order.

1. Hurricanes.—In our September number we challenged Mr. W. to name a single example of a violent storm in which the general motion of the air was *outward* from the centre of the storm; we did *not* challenge him to state from what author he borrowed his paragraph. It will be observed that Professor B.'s statement is hypothetical, beginning with an *if*. Mr. W.'s statement is absolute, and omits the "if." The question at issue between Mr. W. and ourselves is a simple question of fact. Does the mass of air which constitutes the body of a violent storm move *outward* from the centre toward the margin? Now numerous observations have been collected respecting a large number of storms, and the direction of the wind at each station has been exhibited by an arrow upon a map, from which we are able to see at a glance whether the air tends outward from the centre. Mr. Espy's Report on Meteorology, in 1843, contains more than twenty such charts, and in nearly all we see a prevalent tendency of the wind *inward*, toward the centre of a violent storm; and in *no case* do we find any general tendency outward. The same tendency is distinctly seen in the storms investigated by Redfield and Reid. Although both of them contend that the air moves in *circles* around the centre of a violent storm, and, therefore, that there is no tendency either outward or inward, yet the observations which they have themselves collected show a prevalent tendency *inward* rather that *outward;* and we have never yet seen observations of a single violent storm which indicated any general movement outward from the point of least barometric pressure.

2. Capillary Phenomena.—As Mr. W. appears to be groping sadly in the dark respecting capillary attraction, we will give him the results of Laplace's demonstrations as developed in the "Mecanique Celeste," vol. iv., p. 693–4. If the attraction of an open glass tube for a liquid be exactly one half the attraction of the particles of the liquid for each other, the surface of the liquid in the tube will be horizontal. If the attraction of the glass for the liquid be *greater* than half the attraction of the liquid for itself, the liquid will be elevated in the tube, and its surface will be concave; if *less* than half, the liquid will be depressed, and its surface will be convex. The statement which Mr. W. copies from the "Encyclopedia Britannica" is in entire accordance with Laplace. If glass had *no* attraction for mercury, the depression would unquestionably be greater than what we now observe; but neither here nor in Laplace will he find any countenance for his doctrine that glass *repels* mercury.

3. Colors.—In our September number we stated: "At the bottom of page 327 Mr. W. administers a dignified rebuke to Sir Isaac Newton." The following is a simple statement of the facts. Newton, in his "Optics," says that by mixing powders of the seven different colors he *has often produced a grayish-white mixture;* and he contends that this was a *true white*, requiring only sufficient illumination to render it as white as a sheet of the whitest paper. Mr. W. says "this is not the fact." We therefore feel that Sir Isaac Newton has been rebuked. If the passage in question were original with Mr. W. we should admire him for his boldness; but it seems, from his own account, that the passage was borrowed.

4. Complementary Colors.—Mr. W. has contrived to envelop the subject of complementary colors in a fog which we will endeavor to clear up. One color is said to be complementary to another when the two, if combined together, would form white light. Now if we wish to know what color is complementary to a given color (suppose the middle ray of the red part of the solar spectrum), we have but to combine together *all the other rays* of the spectrum; and this may be done by transmitting them through an achromatic lens. We shall find that the rays in question, thus combined, form a *peculiar bluish-green*. The complementary color of red is therefore a peculiar bluish-green; but this color *does not correspond* to that of any single portion of the solar spectrum, although its predominant tint is found in that part of the spectrum which is intermediate between the blue and green. We will then give a categorical answer to Mr. W.'s pointed question. The red of the spectrum, added to that part of the spectrum which is intermediate between the blue and green, and which is distant from the first color by half the length of the spectrum, *will not produce white light*, but the mixture will have a ruddy tint.

There is no discrepancy between our views and those of Brewster. Brewster wrote his "Optics" professedly for popular readers; and in the chapter from which Mr. W.'s quotation is made, he was treating of *accidental* colors, which are always extremely faint, and he gives a rule which is sufficiently exact for indicating what color is accidental to any given color; but when we compare together the brilliant tints of the solar spectrum we need a more exact definition of complementary colors, and Mr. W.'s error arose from substituting the word "complementary" where Brewster wrote "accidental." Mr. W.'s statement that "*the complementary color is always half the spectrum*" is arrant nonsense.

5. Concave Mirrors.—The image formed in the focus of a concave mirror may be less or greater than the object, according to the distance of the object from the mirror. In most cases where a concave mirror is employed in optical instruments, the image is *less* than the object. It is not true that the *general* effect is to produce an image *larger* than the object.

6. Variation of the Compass.—We do *not* admit that it is in any respect doubtful that the American line of no variation is continuous with the Asiatic line. In the North Atlantic ocean the variation of the needle is westerly; in the North Pacific ocean it is easterly. Suppose, then, a traveler starts from the North Atlantic, and goes by the North Pole into the North Pacific, he goes from a region where the variation is westerly into a region where the variation is easterly; and this can only happen by passing over a line where the variation is *zero*. The American and Asiatic lines of no variation, therefore, certainly form portions of one continuous line surrounding the globe. We do not object to the expressions "American and Asiatic lines of no variation," but we do object to the absurd idea that these lines are distinct and discontinuous.

Mr. W. contends that in his description of the eastern line of no variation, the words "descending south" are to be read parenthetically, and are not to be connected with the words "until it reaches the latitude of 71°," which immediately succeed. We candidly admit that this interpretation never

occurred to us until we read Mr. W.'s reply, and we must regard his language as laboriously obscure. The entire description of the line of no variation is singularly infelicitous, and is none the better because it was borrowed. We would ask for no other test of the obscurity of this description than that a dozen pupils should each be furnished with a map of the world, and be required to trace the lines of no variation from the description here given. We had supposed that our difficulty in understanding this passage arose from some typographical error, and that the error probably consisted in the number 71°. According to the magnetic maps of Barlow and Berghaus the line of no variation north of Japan does not extend as high as latitude 71°.

7. Spherical Aberration.—The error in Mr. W.'s book consists in his statement that an image may be rendered perfect—that is, free from spherical aberration—by making the screen concave. We assert not only that this is not the ordinary practical way of correcting spherical aberration, but that, even with a concave screen, the image can not be made perfect; and we consider it sufficient to state that in an astronomical telescope, when the object is a mere point (as in the case of a fixed star), the image, which should be a mere point, is nevertheless rendered indistinct by spherical aberration.

It thus appears that Mr. W. has failed to show the inaccuracy of a single one of the criticisms contained in our September number. In that notice we remarked that, "during a hasty perusal, we had marked over a hundred errors, few of which could be charged to the carelessness of the printer." This statement was not a rhetorical flourish, nor was it made at random. In proof of this we will briefly indicate a few more errors in the "Philosophy," confining ourselves to the *last edition* furnished us by the publishers.

On page 23 Mr. W. says that "steel, India-rubber, and ivory, are specially elastic; while glass and lead are elastic in a limited degree." We will inform Mr. W. that glass approaches nearer to perfect elasticity than steel, ivory, or India-rubber.

On page 58 he informs us that "the escapement-wheel of a clock commonly has 60 *teeth*." We have often examined escapement-wheels, and have never found more than 30 *teeth*.

On page 59 he says, "The sum of the momenta of all the portions of a pendulum rod on each side of the centre of oscillation will be equal;" and on page 65 he informs us in what sense the word momentum is to be taken. Now, not to insist upon the impropriety of employing a scientific principle which is only explained in a subsequent part of the book (a fault which we have repeatedly noticed in this work), we remark that the above statement respecting the centre of oscillation is *entirely erroneous*. The momenta on opposite sides of this point *are not equal*.

On page 120 he confounds the *springing* of an arch with an *abutment!* On page 123 he states the average depth of the ocean at 3000 feet, or about *half a mile!*

On page 198 he says, "An echo in a building near Milan, Italy, is said to repeat a loud sound audibly." This statement is so incredible as to excite our unqualified amazement!

On page 226 he says, "Air is not heated to any extent by the direct rays of the sun." If Mr. W. will refer to the Report of the British Scientific Association for 1840, p. 64, he will find proof that more than one fourth of the sun's rays are absorbed by the atmosphere when they traverse it vertically, and a much greater portion when they traverse it obliquely.

On page 228 he says, "Iron wire increases only $\frac{1}{802}$ in bulk when heated from zero of the thermometer up to 212." This statement contains at least two errors. Instead of zero it should read 32°; and instead of *bulk* it should read *length*. The increase in bulk is three times the increase in length.

On page 263 he says, "In summer time, when *no* fire is made in the chimney, the column of air in it is generally at a *higher* temperature than the external air." If this statement is true may we not conclude that in winter, when fire *is* made in the chimney, the column of air in it should be at a *lower* temperature than the external air?

On page 279 he informs us that "Arabia and Persia lie *west* of the great desert of Africa!"

On page 282 he says, "The *general* direction of the wind is from tracts of ocean toward tracts of land." The direction of the wind is sometimes from ocean to land, and sometimes the reverse. There is no propriety in calling either of them the *general* direction.

On page 290 he says, "The majority of shooting stars appear to emanate from a point in the constellation Leo." This remark is only true of a particular season of the year. At other seasons of the year the majority of shooting stars emanate from a very different part of the heavens.

On page 317 he represents it as *peculiar* to the undulatory theory of light that "refraction is due to an alteration in the velocity with which a ray of light travels." Now it is a fact, conceded by those who reject the undulatory theory of light as well as by those who adopt it, that light experiences a change of velocity in passing from a rarer to a denser medium. This supposition, then, is by no means peculiar to the undulatory theory.

On page 321 he says, "The focal distance of a double convex lens is equal to the radius of the sphere of which the lens is a portion." This is only true of a lens made of a substance whose index of refraction is 1·5, which is *nearly* true of crown glass; but with flint glass or diamond the focal length is very different.

On page 327 he informs us that "rays of light, when once refracted by a prism, are not capable of being refracted again." This doctrine is certainly novel, and we must believe original with the author.

On page 353 he informs us that "convex lenses remedy long-sightedness, by increasing the *convergence* of rays of light passing through them." No distinct image can be formed upon the retina by means of *convergent* rays, even with the assistance of a convex lens.

We have thus devoted to Mr. W.'s book an amount of space to which its importance does not entitle it. Mr. W.'s publishers have advertised that "Professors Bache and Henry have certified to his peculiar qualifications for writing a text-book on Natural Philosophy." If either Professor Bache or Professor Henry will give his opinion that any one of our criticisms is erroneous, we will cheerfully make room for its insertion in our Magazine; otherwise we must decline publishing any thing further on this subject.

Editor's Table.

GLIMPSES OF THE AMERICAN FUTURE.—Professor Guyot, in his celebrated work entitled "Earth and Man," brings out prominently the great fact that America is destined to be the continent of the future. The geographical march of civilization, according to his view, points to the New World as the scene for the full and final development of humanity. A more beautiful and instructive argument, so far as the science of physical geography is concerned, has never been presented to the public mind. The following paragraph, taken from the closing pages of his volume, will furnish the reader with an idea of his theory, viz.: "Asia, Europe, and North America are the three grand stages of humanity in its march through the ages. Asia is the cradle, where man passed his infancy under the authority of law, and where he learned his dependence upon a sovereign master. Europe is the school where his youth was trained, where he waxed in strength and knowledge, grew to manhood, and learned at once his liberty and his moral responsibility. America is the theatre of his activity during the period of manhood; the land where he applies and practices all he has learned, brings into action all the forces he has acquired, and where he is still to learn that the entire development of his being and his own happiness are possible only by willing obedience to the laws of his Maker." The sound principle is laid down and amply illustrated that "the entire physical creation corresponds to the moral creation, and is only to be explained by it." Agreeably to this law the western continent, "founded on a plan widely departing from Asia-Europe," is characterized by "simplicity and unity," and by "its vast extents, its fruitful plains, its numberless rivers, the prodigious facility of communication, nowhere impeded by serious obstacles, its oceanic position," is pre-eminently fitted to be a "most magnificent theatre" for the consummation of human history.

With these views, so forcibly and eloquently expressed by the learned author, we most heartily sympathize. Coming to us from a science that, a century since, was not known—a science presenting such illustrious men as Humboldt and Maury among its laborers and expounders, they are the more welcome from the fact that they are the independent results of manly thinking, learned from intelligent communion with nature as nature is revealed in the light of God. They serve no artificial theory. They have no taint of partisanship. Statesmanship and diplomacy have not concocted them as expedients to sanction conquest and robbery. But by silent, patient, earnest workers in the vast realms of God's power and wisdom, they have been slowly and carefully wrought out for the thought and hope of humanity. Nor can we withhold the utterance that to us, moving on the busy arena of life, and blessed with few pauses in the struggle and battle of the world, there is something sublime in this deciphering of the prophetic symbols long ago stamped on the mountains and prairies, the forests and mineral beds, of this great continent. Prophets are no more. The last of the inspired race was the Apostle of Love, as if it were needful for us to know that love, in closing the volume of futurity, left us the assurance of a continued watchfulness, an eye of mercy, a hand of protection over the interests of humanity. But though prophets are gone there are prophecies left on record in iron and marble. Over the length and breadth of continents, and far down in ancient strata, and along the beds of majestic rivers, are they written in a language that was not confused at Babel, and requires no "gift of tongues" to set forth its meaning. Witnesses are they to a divine wisdom and glory still present among the affairs of men, ready to meet them at every step of progress toward the sovereignty of this lower creation, arming them with new vigor for new victory, and assuring them in every doubtful hour of the awaiting certainties of a complete and perfected triumph. Who shall say, then, that science is a secular thing? Who shall say that Newton in the far off regions of the heavens, Davy over his safety-lamp, Watt with his steam-engine, Bowditch among the stars, Owen with his comparative anatomy, Kane among the Polar icebergs, or Maury with the Gulf Stream, are engaged in secular work? The reproach of materialism is always ready with some people for men of science. But in our judgment the ideal of science is as divine as poetry and art. It is doing God's work. It is magnifying God's handiwork. Depreciated as they are, stigmatized with atheism and pantheism, the true men of science are bringing every year the attributes of God, as displayed in the material universe, more vividly and impressively before the human mind. Never have the Psalms of David had such a commentator as Isaac Newton; and sometimes, after reading the Nineteenth Psalm and similar outbursts of poetic praise, it seems to us that we hear Newton, as he returns from a remote excursion amidst those material wonders that lie almost in sight of God's throne, breaking forth, on behalf of science, in response to the hymns of Israel's rapt monarch.

Nor are those prophecies that science finds in the hills and valleys the only exponents of coming ages. The future, if it had no types in the present, would be no future. It is nothing more than the progress of the race according to a preordained plan. The only idea we can form of it is, that the earth will be a nobler abode for man, and man a nobler occupant of earth, while both shall better symbolize the glory of God. A general conception of that future is given to mankind, and, agreeably to the divine scheme, it is a conception steadily enlarging. Outward things are not its exclusive adumbrations. If the future of the world is pictured in the bosom of the globe, it is also indicated in those instincts that lie beneath the surface-mind of men. They are a part—a significant and momentous part—of every truly cultivated human being. Unconscious as we too often are of them, buried under the crust of our worldliness and vanity, they are yet the divine monitors of what we are called to be—the legislators of that higher thought and feeling which belong to the privileged estate of humanity, and which palpable organic law only serves to shadow forth. Every great truth is a prophecy of better days. Every new fact makes a brighter to-morrow. Year after year, as genius or goodness, taught of God, announces some lofty sentiment, or calls to some endeavor more heroic than before attempted, the future opens a broader and more luminous vista. Farther back retreat its clouds, leaving fair forms of stately height, and

serene looks, that answer to ideals, born of imagination in hours when prayer and praise throbbed through it, and yet, in our hesitating faith, not fully trusted until other voices had interpreted their meaning. Ordinary life, as we follow it, seldom calls out these spiritual instincts. We plow, sow, reap, without thinking of them. Trade and commerce occupy the outside man; and the inward, the divine, is left to its solitude and silence. Yet all of us have moments when we see more in wheat and corn than the miller takes knowledge of and ships transport across the waters. Matter, as such, can not satisfy us. The instinct of childhood, by which the boy puts a soul into his hobby-horse, and the girl breathes life into her wax doll, never forsakes us. Matter reveals the perfections of God, and men can not be content until it discloses somewhat of themselves. The great instincts of humanity, which carry the future of the race in them, are ever struggling to utter themselves in speech or act. Germs of coming generations are hidden within them. Souls are now living that have vaster empires in their yet unfathomed depths than have hitherto been conceived.

Do not charge such thoughts with phantasy. The degree of one's faith is not enthusiasm; for enthusiasm is not a question of intenseness but of kind, not of the quantity of confidence but of the quality. There is infinitely more of the future in our instincts than we apprehend, and through them, in connection with outward movements, God is striving to show us the approaching ages in a clearer manner than we are wont to believe. It is not his will that realities should suddenly burst upon the world without the preparatory work which anticipation is designed to perform. Humanity is educated, in no small measure, by means of its anticipations. Among all our teachers none are so sublime as foreshadowings of futurity, for they give lessons to the intellect, not through the senses but the heart. They are teachers sent from God. The world can not do without them. Did we trust them as their worth merits, we should have a wisdom better than scholarship, and a power greater than armies or navies. Nor let it be supposed that these prophetic intimations are limited to our private personal interests. National instincts, operating through inward sentiments and outward forms, are constantly indicating the character of the future; and statesmanship is never more sagacious than when by native force of insight rather than by logical methods it seizes the ideas and hopes that represent coming events.

The time has come for a higher order of thought and feeling in regard to the future of our country than has hitherto prevailed. Indeed the great want of the day, so far as American thinkers are concerned, is an American philosophy that shall truthfully embody our relations to the world. By this we do not mean that we should deliberately propose certain definite ends and lay down the means to accomplish them. Too much of that kind of work is already found among men. There is generally a spirit of earthly pride in it, a spirit of self-competency and self-seekingness, a spirit that forgets the Ruler of the Universe and legislates in advance of providential tokens. But we mean that American instincts should be clearly apprehended, our peculiarities of capacity and condition thoroughly understood, and, above all, that our position in the providential economy of the human family should be adequately comprehended. No doubt the special agents of Divine Providence —men like Columbus and Luther—have clear views of the work assigned them. But nations, in this respect, are unlike individuals. All that they can ordinarily have is the ideal set before them which they are to cultivate and follow. Hence, when we speak of an American philosophy, we wish to convey the idea that we are to encourage such motives, cherish such principles, and pursue such aims as a people intrusted with a grand mission for the benefit of humanity ought to feel and obey.

The modes of thought and opinion current among us are not at all satisfactory. Not that they are inherently defective, but they are too low, too limited, too much occupied with the mere externals of our life. The prominent attributes of American mind, such as shrewdness, sagacity, inventiveness, prudence, a ready facility in the use of means, a sharp eye to circumstances, a wonderful adaptation to contingencies, practical skill, indomitable energy, are dwelt upon and intensified by our thinkers and writers as if they really were the exponents of our intellect and character. But what are these except the surface-marks of American mind; the top-soil, catching the sunshine and producing fruits that husbandmen gather into barns? They are striking and effective peculiarities of our people; but we insist that this is no standard by which to measure the true scope, the genuine depth, the distinctive forces of our mind. What would be thought of a geologist who should confine his investigations to the mere face of the globe, penetrating no lower than a plow-furrow, pulverizing rocks and examining soils that lie before men's eyes? Yet this sort of superficiality has contented American thinking. Our tone of thought has been taken from the merest materialities. We have consented to be known by our axes and rifles, by plows and reapers, by cotton-gins, by steamboats and railroads. Insensibly to ourselves the spirit of thinking derived from these things has extended itself over our whole mind, and depraved us even in the higher departments of thought. The large mass of the American people talk of education as if it had no other aim but to manufacture decent, thriving, respectable men. It is simply a matter of outward citizenship, a badge of gentility. Nor has the sacredness of religion escaped this corrupting virus. Thousands among us emphasize religion because of its essentiality to the republic, and never advance beyond the idea that it is a good substitute for constables and jails. Now, that these moral agencies have a high economic value no man can doubt. Nor ought we to overlook for an instant their relation to the outward welfare of society. But the evil lies in resting on these secondary aspects as if they were the main points for consideration. Viewed in this light, these modes of thought, prevailing more or less among all ranks of our countrymen, have done incalculable harm. They have shamefully lowered the standard of American mind, and unfitted us to form a broad, comprehensive, manly estimate of the true dignity and matchless superiority of our position.

What, then, is the just opinion we should cherish of ourselves? What are the leading elements that should enter into a calm, sober, Christian-like appreciation of our circumstances and character? How should we contemplate the future? How qualify ourselves for those fearful struggles, those internal strifes, that must inevitably tax our statesmanship, our patriotism, our virtue?

Looking to the future of our country, we see that certain great causes now at work must have a prodigious agency in the formation of its character. We are devoted, for instance, to material pursuits. A money-loving, money-getting, money-spending people, we think of the world as a huge work-shop filled with the machinery of labor. Every thing is coined into money. There are more mints than can be counted. Not a year passes that scores of them are not originated and set to coining and stamping. Granite and ice, bones and hoofs, rags and offal, dust of dead men and hearts of living women, are hurried into these mints and converted into wealth. Our resources, in prospect, are fabulous. The possibilities of prosperity dazzle even the imagination. Arithmetical intellect, not unused to great achievements, pauses before its figures and profoundly hopes that some clever genius, equal to the emergency, will invent a calculating machine suited to a world of Californias and Australias. That this state of things is extraordinary can not be doubted. Nor is it surprising that so many thoughtful men should be filled with alarm lest luxury overspread the land and ingulf all its fairer forms of virtue and spirituality. Doubtless there is cause for anxiety. Human nature, always frail and feeble, is peculiarly liable to the corruptions of prosperity. Let it not be forgotten, however, that we are now contemplating that nature in one of its aggregated forms. For it is vital to the question to remember that humanity, however exposed to certain evils in its individual attitude, may have safeguards, in its social state and corporate capacity, calculated to preserve it from these dangers. Prosperity, even great and wonderful prosperity, if viewed in connection with masses, does not strike us as a threatening ill. It is precisely what they need; and although numbers may abuse it, yet, on the whole, a high degree of physical and worldly success is no foe to popular virtue. Poverty has done the world more harm than prosperity, and to-day the masses of society, were they in a better external condition, would be much less the prey of ignorance and crime. Diffuse wealth and it ceases to be the glittering badge of a class. Social pride and ambition are not then so likely to be stimulated. Moreover, wealth loses much of its corrupting tendency when it takes its place among the blessings of the multitude. There was a time when learning was the privilege of the few, and it generated a false, pernicious aristocracy. The barriers that shut out the multitude were thrown down; knowledge became the inheritance of the many; and the baleful effects, which resulted from its limitations, were altogether removed. Political power, likewise, in passing from the few to the many has purified itself. Looking to these facts, it would seem to be a social law, that as masses interact among themselves, developing their activity in such forms as balance one another and allowing a free, full, forcible interchange of sentiment and energy, there is a healthful spirit of conservatism, a public virtue created, that unfailingly tends to the welfare of communities. Nor must another thing be forgotten. American wealth, taken as a whole, rests on a broad, substantial basis. It is not a fiction. It is not a false, inflated, unreliable tenure. Industry, toiling in God's own fields, working beneath His sky, and using the means which His wisdom has instituted and His power sanctions, has enriched itself with the conveniences and comforts of bountiful living. If industry is God's law—if it is a firmly-fixed ordinance of His government—it is a necessary sequence that the fruits of labor are His providential appointment; and that men, acting in obedience to His statutes, are entitled to enjoy them. Without doubt they are prone to forget Him and abuse His gifts; but it is equally certain that the more natural and simple the methods adopted to secure wealth, the less liability exists that it should prove a curse.

For our part, we view this remarkable prosperity of the American people as a most hopeful sign. We hear much, indeed, of the "Almighty Dollar," of a purse-proud aristocracy, of the enervating luxury of the successful classes, of lordly mansions built by sarsaparilla and pills, and the country teems with invective and denunciations leveled at the sordid spirit of the day. There is confessedly some reason for this exclamatory eloquence, hurling forth its interjections as thickly as barbed arrows. Excesses have been committed. Follies have stalked abroad. But what of it all? The head of the whole nation has not been turned, nor have we played the harlequin on the theatre of a continent. A few, comparatively very few, have made blockheads of themselves, but they have shown such surprising facility in the saturnalia of folly that one rather suspects they were born to it. The true question is, How has this unprecedented degree of prosperity affected the mind of the American people? We deny outright that it has been an evil. We unhesitatingly aver that, on the whole, it has made us a wiser, nobler, better community. Look at the North. Hundreds of men who were once poor apprentice-boys have struggled upward and acquired honest fortunes. Look at the South. Hundreds of men who were formerly overseers have made themselves wealthy. The social status of these men is most honorable. They are among our best citizens, the backbone of our institutions. Trade has no more intelligent and liberal merchants and manufacturers; colleges have no more generous patrons; churches have no purer members; and public spirit has no finer representatives than are they. Men who make money and therewith make the wisdom to use it, are pillars of strength in any land. The main thing is, *how* it is made. With us, labor has been the parent of prosperity. With us, God's soil and sunshine have been converted into charming homes, extensive enterprises, flourishing commerce, and wealthy capital. The laws of Nature have not been violated, the purity of society has not been outraged, as a general thing, in the acquisition of worldly good. And, therefore, we repeat, the tendency of American prosperity is, on the whole, salutary and beneficial. We hope it will continue, we hope it will increase; not the prosperity of lawless speculation and reckless sharpers — not the prosperity of wild enterprises and hap-hazard adventures — not the prosperity that sacrifices the soul to the senses and puts Mammon on the throne of God; for all such prosperity is earthly, sensual, devilish: but the true prosperity of honest, hearty, and hard work—the work that lives and thrives by patience, endurance, steady aims, and steady steps, we profoundly trust that such prosperity will multiply manifold.

How, then, does our prosperity bear on the future prospects of the country? A large number of right-minded persons think that it threatens us with ruin. We take the opposite view. Admit-

ting the extravagance, the fashionable follies, the wasteful expenditures of the day, we must still insist that the great mass of the American people are a sober-minded race, standing firmly on their own good feet, and not to be lifted up and borne aloft by those petty, atmospheric, street-corner whirls in which the light-headed and the empty-hearted so ludicrously gyrate. We are now in the first flush of success. Every year new territories are opening, fields of enterprise enlarging; so that novelty has hardly time to thrill with a suddenly-vivid impression before another startling object presses on its sensitive nerve. But this era of development can not long continue. Business will assume regular channels, and trade adjust itself to regular laws. And as circumstances thus change we may look for less excitement and more power; less of the spasm, and more of uniform and vigorous action. The ratio of prosperous men, so far as our native population is concerned, is evidently increasing, and this must tend to enhance the conservatism of the country. Aside from these facts, it can not be denied that public thought is much more turned to the moral uses of money than ever before. The faithful preaching of the Gospel on this subject is doing incalculable good. Ministers are much more attentive to this branch of Christian morality. A new literature, too, has recently grown up, unfolding this vast topic with an amplitude, a pungency, a close grappling with the souls of men that can not be too highly commended. A few years since how rare were such works as Stowell's Model for Men of Business; Budgett's Life, by Arthur; and the biographies of Frederick Perthes, Lawrence, Curtis! The idea of business in its moral and religious aspects, the responsibilities of trade and commerce, the vast importance of benevolence as a Christian duty, are not new doctrines. Nevertheless, it is certain that a much greater prominence of late years has been given to them. On these points opinion and practice are still defective. But a great change has been commenced. Men of means can not cushion their slumbering souls quite as softly as hitherto. There are many uneasy stewards who are anxious to make to themselves "*friends of the mammon of unrighteousness;*" and, moreover, outside of religious circles, wealth is not as complacently callous as it once was. A simultaneous movement within and without the Church is now in progress. The one is distinctly and definitely marked; the other is not so palpable, and far less trustworthy, even on humanitarian grounds; but the awakening is obvious. A most striking feature in modern society is the wonderful combination of influences that are operating on the cultivated and prosperous classes. All of these are reminding them of their duties to others. Wealth can not insulate itself. It can not darken its windows and bolt its doors. It can not shut its eyes on the outside misery of the world. A thousand avenues are opening into its privacy, and voices, tuned to strains of far-reaching pathos, are trembling all through the air it breathes. The selfish enjoyment of wealth, if men will persist in it, can not longer be undisturbed. Luxury must now pay for its privileges. If it will not give a liberal portion of its means to advance the interests of needy humanity, it must suffer a corresponding diminution of its peace. Few things are clearer to our mind than that the capacity to enjoy wealth as a private, selfish thing—a treasure for individual hoarding and holding—is steadily decreasing. Setting aside the sentiments of Christianity—never so earnest, never so trumpet-tongued, since the age of the Apostles, in pleading for sympathy, kindly brotherhood, and active charity—dismissing all this from the account, the laws of everyday life are sternly arrayed against heartlessness in wealth. If a rich man is determined, at this day, to devote his opulence to personal gratification, there is but one condition on which it can be done, which is, to commit his soul to the vaults of a bank, and have it put under lock and key, safe from the intrusion of newspapers, literature, and social intercourse. One and all, they are most merciless disturbers of his peace. One and all, they are leagued against the monopoly even of his own estate. What, then, is the conclusion from these facts? Simply and surely this, viz., Wealth is becoming more and more amenable to the usages of society. Public opinion, public feeling, and public morality are acting with augmented potency on its reserve, its seclusiveness, its independence, its isolation, and forcing it to acknowledge an authority greater than itself. And what is yet more vital to the argument, Christianity is forming a conscience of money, and training the sensibilities of its subjects to feel the infinite meaning there is in being intrusted with the riches of the world. Dull are the ears of the multitude, heavy their hearts, beneath the worldliness that bears on them. But the ancient voice of the Psalmist, swelling with the sublimer tones of Christianity, is again pealing forth among the mountains, crowned with their musical forests, and along the valleys, where golden harvests wave beneath the rolling strain, and the burden of the cry is—"*The earth is the Lord's, and the fullness thereof; the world, and they that dwell therein.*" It is a cry of joy—a cry of terror. It is the intensest utterance of the Christianity of the nineteenth century. It is the specific revelation to our day of the Revelation of an elder day. Amidst the wonders of the age there is nothing more wonderful than the breadth and closeness of man's contact with material nature. With what kindness she receives him; with what tenderness she takes him to her bosom, as one long lost and late returning to her love! But the power and grandeur of the outward universe are being incorporated more and more into the practical workings of Christianity, and giving a deeper import to the truth that "*The earth is the Lord's, and the fullness thereof.*"

Another great element in the civilization of the future is Womanhood. Judging from present indications, we are warranted in concluding that it is destined to perform an important part in the progress of American society. America has often been called the Paradise of Woman—a rhetorical extravagance it is true, but standing for a fact of vast significance. The position of woman in our country is as marked a peculiarity of its domestic life as republicanism is of its political life, nor is it an over-statement of the truth to say that, in its sphere, the influence of the sex is as essential as republicanism itself to the character and power of the nation. American womanhood is a new fact. We are scarcely aware ourselves of the functions it is soon to perform in the history of our progress. Its development has just begun. We see only the infancy of the movement, but it is enough to assure us that womanhood is ordained to fulfill a momentous task in the fortunes of our country. Whether it will demonstrate itself in art, literature, science, is altogether indifferent to the question.

Give womanhood the intellectual and social freedom it is entitled to enjoy; give it such scope, means, and opportunities as it requires for the activities of its nature; give it culture and sympathy, and it will instinctively select its own fields of effort, and accomplish its appointed work. The ideal of woman, taken in its social relations, presents her as the natural check on those material pursuits, which, unrestrained, tend to degrade manhood. She is the gentle but powerful antagonist of whatever hardens and brutalizes men; and especially in a commercial age, in a country of business enterprise like ours, her influence is essential to counterbalance the excesses of outward activity. If it were not for the intense love of home-life, which we have inherited with Anglo-Saxon blood, our present system of business, with its engrossing cares, its absorbing claims, its feverish excitements, would soon prove fatal to all real manhood. Woman, in this sphere, is a vast power over our countrymen. But we are not disposed to think that her agency will be limited to its boundaries. Of necessity it must be her greatest and happiest scene of action. It were folly, however, to contend that she has no other work, no other responsibilities, no other connections, save such as belong to the household. The more home-like her spirit, the better are her qualifications for society. If she have cultivated talents or original genius, the domestic beauty of her nature will pre-eminently fit her to render a most invaluable service to the mind of the world. There is nothing to be feared, we think, from womanly activity in the open walks of life, if she have a happy domestic position, an educated mind, and the generous sympathies of men. Secure her these, and you secure the conditions of an ennobling philanthropy, of a wise and truthful devotion to all intellectual and moral interests. Acknowledge her womanhood, and she will never sacrifice its dignity and worth. Believing, then, that the civilization of the future will be characterized by a greater prominence of womanly mind and activity, we hail as a most auspicious omen the high estimate, the warm and even enthusiastic appreciation, that our countrymen cherish for womanhood. No doubt it has its weaknesses and defects. But time and experience may be trusted to correct the errors of a sentiment that, in itself, is truthful and noble. Womanhood always repays our respect and love. No law in all the operations of mind is surer. Womanhood is an axiom in American civilization. It is a first truth that our sentiments and usages take for granted, and ignore all questionings. There is somewhat of an exaggeration about it as it now stands. But it is comfortable to know that what is an exaggeration today will be no exaggeration to-morrow. Certain, then, are we of this fact, that American womanhood can and will make good the hopes of American faith in its intellectual, moral, and social capacity, and continue to vitalize our private and public heart with a constantly increasing force of knowledge, beauty, and love.

If the limits of this article permitted we should like to discuss the various relations of trade, commerce, science, education, and religion, to the future of our country. But omitting these in their formal treatment, we proceed to touch a few points and dismiss the subject.

American mind has grown to its present vigor in the midst of circumstances that have been peculiarly calculated to develop not merely freshness and force, but a breadth of view, a diffusiveness of spirit, a resistance to the stringency of local habits, a congeniality with all modes of life, that rarely display themselves in a high state of civilization. Strangely enough, the civilized man of this continent has been brought in contact with circumstances that are just opposite to what civilization usually deals with. Ordinarily, man has been a sort of counterpart to physical nature. Acquiring slowly the command of his faculties, learning step by step the use of means, he has gradually elevated outward things to his own level, and made the material creation subservient to his wants. But here the civilized man has exerted his sovereignty at once, confronted the forest, prairie, and flood, with an instant summons to obedience, demanded submission without delay, and installed his royalty in the plenitude of its prerogatives. Is there no future meaning in all this? Is it a mere fact of the past and present? Has it no bearings on to-morrow? Now, nothing is easier than to generalize one's self into pleasant illusions and very witching absurdities. But it would really appear that American mind had been educated to be the pioneer-mind of the world in coming stages of progress. This looks like bombastic pretension. It smacks of Fourth of July rhetoric. Perhaps it is an extravagance. But, nevertheless, we venture to say that there is truthfulness in our position.

The aim of American institutions is to restore man to his original relations. That idea predominates in the whole structure of American society. There is no law of primogeniture between him and the soil; no nobility, with its immense landed estates. The fields are open to him. If he choose, the wages of a day can purchase a lordship over the soil. Starting with this simple principle, which puts man on fair and easy terms with nature, we have developed a system of industry that makes him a cheerful, willing, prosperous laborer. Nowhere is labor so well rewarded; nowhere is it so generally successful. And, finally, every man is a portion of the government, exercising his sovereignty in its affairs, and contributing to its strength and permanence. Such an organization of society must incorporate the entire mass into an economy of progress. It must form a living, moving, triumphant race—not a few prosperous classes, but a prosperous race. It must make a nation of thinkers and actors. All other countries place a premium on the small minority, and a heavy discount on the vast majority. With us, the whole people constitute the practical nation. Trade and commerce, education and religion, represent the million. The necessary effect of such a state of things is to stimulate and vitalize a vast and aggregated mass of mind to its utmost capacity of action—to impel it to the farthest limit of enterprise. Wherever a channel of activity is opened, it is the recipient of a mighty stream, fed by a thousand tributary rills. The whole nation drives forward every thing. Send a whale-ship to the Pacific, and millions are interested in it, for millions want oil and candles. Invent a sewing-machine, and the buyers are counted by tens of thousands. Pianos sell by the hundred thousand. Publish a popular book, and every family must read it. The whole country is a spectacle of the multitude, conscious of a birth-right exceeding its actual possessions—alive with those everyday instincts that busy themselves with better food and raiment than were en-

joyed on yesterday—eager for prizes, clamorous for what belongs to man as God's freeman, wearing in his bosom the charter of the universe. A foundation for greatness, far superior to nationality, is laid in these facts. Americans are not, like Englishmen, representatives of institutions. The latter personage, built up by the contributions of centuries—a composite of Celt, German, Norman, and, yet more, a product of home-creativeness—working him into a type of fixed forms, usages, and traditions, is an artificial wonder—the greatest, as such, that walks the earth. Americans stand for a personality above all their institutions. Pour the hot fluid into your snug, conventional mould, and it overflows outside and describes a new pattern—very offensive sometimes to artistic taste, but, for all that, there is a ring of the true metal about it. The old law-books can not hold their jurisprudence, and much of their politeness is independent of Chesterfield. In certain styles of greatness they have shown few grand thoughts. Their orators knock at the outside door, and seldom present themselves before the portals that open into the deeper recesses of the heart. Their poets sing like musical birds—a momentary strain, and a painful silence to follow—rather than like the angels of song, filling the atmosphere with long-swelling waves of melody. But in other things they are full of clever and striking originalities. The best of their genius—not regardless of art and literature, but postponing these intellectual glories for coming leisure—believes in something to be done; and in this homage to the practical, three-fourths of them would consider Cyrus W. Field, as he lays a path for the lightning beneath the waters of the Atlantic, a greater man than Milton, Shakspeare, or Bacon.

Let it be granted that the present form of American greatness is not, when viewed abstractly, the loftiest kind of greatness. An argument on that point is worth nothing. What we insist on is, that American mind, in its wonderful power and progress, is the mind for the world. It is just such a mind as the advancing civilization of the age demands—the best possible sort of mind to rouse the latent energies of other nations—the best to carry out a system of trade, commerce, international comity, that shall promote peace and brotherhood—the best to upset those manifold sophistries that lead men to trust in patronage, usages, governments, for the encouragement of business, science, and art—the best to divorce men from all fictitious alliances, to break the unholy bonds uniting Church and State, and to unloose those other ties that foster a weak and enervating dependence on legislation and opinion for what brave wills and strong arms ought to do for themselves. This is the extent of our claim for American mind; this is the attitude of that mind—bold, erect, fearless—toward the future. A character in the people higher, nobler, better than nationality—a simplicity of instinct that speaks the vernacular of the heart, and not the dead languages of fossil literature and ancestral traditions—a grasp of means that skill finds or makes plentiful—a heroic will, consulting itself, and not the false oracles of circumstances—a capacity to be and to do much beyond the paltry aid of books and people; these are the tokens which indicate our leadership of the world. What momentous significance this imparts to our position and prospects! A man's soul is never so much his own as when he feels that he holds it in trust for others as well as for himself; and a nation never really transcends the dignity of a clan or tribe unless it opens its heart to the truth that it lives not merely for its private fortunes, but for the brotherhood of humanity.

Editor's Easy Chair.

THE fields are stripped by this time, and the trees stand bare. That rich murmur of a myriad insects is gone, and the silence which distinguishes January from June even more than the heat, falls, the precursor of snow, upon the landscape. But, as if to resist the bitterness and sadness of the failing year, the most genial and kindly of all our festivals occurs at the end of November. Its very name, Thanksgiving, betrays its pious origin—and an origin unmixed with any prior tradition. The great Christian festival of Christmas stretches backward to yule logs and mistletoes, to Scandinavian and Briton heathenry; nor does it lose by the graceful, happy association. But Thanksgiving is purely Puritan. It is the good warm human heart conquering the tough head and ascetic manner of the old pilgrims.

In Elliott's *New England History* you may read that, in 1623, after the harvest, Governor Bradstreet sent out a company to shoot game to furnish a dainty feast of rejoicing after the labors of the colony. Having followed the directions of the Governor, and the principle of the excellent Mrs. Glass, they cooked their game, and invited Massasoit and some ninety other savages, and all fell to and devoured the feast, thanking God "for the good world and the good things in it."

Think of that little shivering band clustered on the bitter edge of the continent, with the future before them almost as dark as the forest behind them, many of them with such long lines of happy memories in Old England flashing across the sea into the gloom of their present position like gleams of ruddy firelight that stream far out of the cheerful chimney into the cold winter night—and think of the same festival now! when twenty Governors invite millions of people to return thanks to the great Giver of harvests, and millions of people, obeying, sacrifice hecatombs of turkeys and pumpkins, and pour out seas of cider and harmless wines.

It might be dangerous to stake one's reputation upon the assertion that Thanksgiving is a strictly religious feast. It is a day of practical rejoicing in the good things of this world, and there may even be people whose mouths are fuller of turkey than their hearts of thanks. But every year the area of the kindly feast enlarges. Every year there are more States which sit down to "groaning board," as reporters so happily express it upon occasions of civic festivity.

Dear old Thanksgiving!—whose arms are a turkey roasted and a pumpkin *or*—long may his blessed reign continue! Long and long his hospitable table be spread! Long and long may he stand, benignant, at his door, calling in the poor and the weary, the blind and the lame, even as the old Puritans called in Massasoit and ninety other savages! Long and long may he send the young people, smiling and blushing and whispering, into corners and under curtains, where what is said and what is done only the couples themselves know—while the grave elders sit chatting by the fire, and live again their vanished years in the quick young life around them! Rich in blessings and reverend in years, may good old Thanksgiving

last with the continent, knitting closer the ties of family and friendship: its cheerfulness beaming like the smile of a patriarch—its charity burning like a central fire, warming all the year and lighting up every dark day of care and sorrow.

—And now, Biddy, bring in the turkey. Master Joshua, you will content yourself with four plates full of plum-pudding and half a pumpkin pie. My dear, I trust you will see that the fiddler has as much as he wants, for his arms will not be spared to-night; and, cousin Jerusha, the mulled wine will test your skill. Only let there be plenty of it, and remember solemnly to observe the recipe. This is it: One table spoonful of powdered sugar and one egg for every person, carefully beat up together. One wine-glass of wine, and, if the ladies are many, two wine-glasses of water to each person. The liquid to be put in a saucepan with a bag of cinnamon. When the egg and sugar are well beaten the saucepan must be placed upon the fire. The moment it boils take it off, and, with infinite care, O Jerusha! slowly and calmly pour it into the egg and sugar, which must be rapidly and incessantly stirred. Then, my young friends, you will be summoned from your dance; Hebes and Ganymedes shall you be, and in the yellow, creaming, delicious drink, you shall pledge and promise what you will—remembering only that it is Thanksgiving, that it is holy-tide, and that whatever is promised to-night must be performed to the utmost letter.

—What is that you are both saying, you Nathan and you Nancy? You do not answer. But I heard, as if you were following the parson, "I will," and "I will."

"New Orleans.

"Dear Easy Chair,—Will you oblige me by stating which of these two is correct?

"'Great wit to madness nearly is allied,'

or

"'Great wits to madmen oft are near allied.'

You have it the latter in your August Number.

"I am with respect,

"Yours very truly, E. A. S."

In Dryden's "Absalom and Achitophel" E. A. S. will find the line of which he writes. It is the 163d line of the first part of the poem, in the description of Achitophel, or Lord Shaftesbury:

"Great wits are sure to madness near allied,
And thin partitions do their bounds divide."

Thackeray's "Virginians" is now about half completed. The Easy Chair has so often and so strongly commended it—not because they appear in the same uniform, but because the story is so intrinsically excellent—that it is not from the desire of saying something new that it speaks of it again.

The singular and profound skill in delineation of character which marks Thackeray always, does not desert him in his new work. It is a perfectly finished and living picture of English society of a century ago. For the details of court and fashionable life which make the substance and the charm of the endless memoirs and letters of that period, no other book is comparable with it in thoroughness and picturesqueness. The Earl of Chesterfield, Lord March, the King, Lady Yarmouth, Dr. Johnson, General Wolfe, and others, move across the scene with vivid reality. We have all had our fight about what he says of the youth of Washington. But none of us can fight about Madame de Bernstein, the Beatrix Esmond of "Henry Esmond." She is one of the completest, and, artistically speaking, satisfactory figures in late literature. The dramatic veracity in which Thackeray is superior to Scott and Dickens, in which he may be likened, in a degree, to Shakespeare, and which makes all his characters profoundly consistent, is nowhere displayed more finely than in "The Virginians."

And in none of his stories is his intellectual independence more apparent. Having strongly defined feelings about life and character, he strongly expresses them. Harry Warrington, like Clive Newcome, does a great many naughty things; but the historian warms off the moralist. He is a young man, with the errors and weaknesses of many young men; but he has a candor of character, a stainlessness of soul, which the novelist will have preferred not only to official gravity, but even to a goodness which, being in a different position, may be less tempted.

Nowhere, also, is the old fling against Thackeray apparently more sustained than in "The Virginians," and less really confirmed. He always treats us to fools and knaves, we are told. He always introduces us into the worst possible society, and sits sneering in our ears about the very people with whom he has made us acquainted, and whose company he always frequents. Here he has brought us to Tunbridge Wells, and it is a very saturnalia of sin. What men! What women! What does the man mean by such conduct?

Well, now, if he brings us to Lady Yarmouth and her crew, are there not also the Lambert girls? If we have Lord March, have we not also Colonel Lambert? If we have Castlewood, have we not Colonel Wolfe? Besides this, and instead of arranging his scene with all the good people on one side, and the bad on the other—like the division of sexes in a Quaker meeting—he shows us the human traits that reveal themselves in people we can not like, but who are not altogether base—as flowers spring up among desolate fields, as finer veins of ore thread barren earth—not enough to make a nosegay of, not rich enough nor deep enough to work.

Does any reader suppose that Lady Maria has no regard at all for the sweet racy youth of her lover? that she is only devoted to his supposed money? It is clear enough, as now appears, that she will transfer her young affections, and not persist in holding Harry to his vows; but will she relinquish him without an honest regret? Under Madame de Bernstein's worldliness is there no tender longing, no sweet regret of other years and purer feeling—like a stream winding under a hard volcanic crust? Of course there is. Of course the old age of the Lady Beatrix could not be all hard and wicked. How beautiful this character is, as a whole, in the two books! In the triumph of youth insolent and mercenary; but, after a long life, the deeper and tenderer points appearing—and so much material, so much possibility, always.

In truth, like all novels that are worth reading, because they are the portraits of human characters painted by great literary artists, "The Virginians" should be read, as it is written, from month to month—sitting, if you please, with a friendly circle who began with you, who know all the people in the book—who follow their fortunes as we hang upon the careers of real persons—who speculate, and wonder, and plan—who sympathize,

and regret, and condemn; and who justly take a deeper interest in many of the characters than in many acquaintances, because they know them better—not to say because they are better worth knowing.

The ordinary novel-reader will be impatient at the slow progress of events in "The Virginians." But even he must be charmed with the exquisite facility and felicity of the portraiture in the story.

"SPRINGFIELD, ILLINOIS, *Oct.*, 1858.

"DEAR OLD EASY CHAIR,—I am a schoolmistress out West, and it is a bright day when *Harper* comes. I have raised a little club here, and send you our yearly subscription for nine copies. I could better spare a new collar than the *Monthly*. ——."

And so, with many friends, old and new, commences a new volume of the Magazine. Whoever will turn over the long range of volumes, forming a little library, will see what a miscellany of entertaining literature those years of the *Monthly* have accumulated. There has been no weariness on the part of the Magazine or of its readers. No such work has ever had so generous and continuous a welcome. It is that which stimulates and inspires its conductors to be worthy of its immense public—to tell the pleasantest stories that are told any where, both by the most famous authors and those who are becoming so—to photograph the world, in every aspect, both by the pencil and the pen—to chat cheerfully and seriously of every current topic, grave or gay—to be the friend of old and young—and, while there are a thousand things upon which men and women differ, to entertain the solitary reader and the domestic circle with those things upon which all agree.

The Easy Chair, for its part, as it stumps about upon its four legs, which seem even younger than ever (such are the fond delusions of age!), rejoices to know that every month it speaks to friends of every condition every where, whom it shall never know by name, but whom it feels that it knows by heart.

THE Easy Chair is delighted to make public the following correspondence. The thoughtful humanity, the profound architectural knowledge, and the readiness of resources under difficulties displayed in the letter to the Chair, are beyond its praises. They cover themselves with glory. But as the weighty affair in question most deeply interested the interesting cherub so well and favorably known to the friends of *Harper*, the Easy Chair lost no time in bringing it to the attentive consideration of that ornament of the Magazine. His reply was duly received, and, as is only his duty, the Easy Chair presents it to the public, bows, and wheels itself away:

"MR. E. Z. CHAIR,—*Dear Sir:* I make bold to appeal to six or seven of the finer feelings of your nature in behalf of a young person in 'Harper's' employ, who has long been compelled to remain in a very painful and precarious position. I allude to a poor deformed boy—whom you must have kidnapped from the docks—who, with scarcely a rag to cover himself, has been forced by you to sit on the North Pole and blow soap-bubbles for eight long, weary years.

"'What kind of charge am I making?'

"'What absurd complaint is this?'

"Turn to the vignette of your title-page and see for yourself!

"There he straddles, poor fellow! just launching his eighth bubble—frozen to his Arctic seat (or else he would certainly slip off)—heroically faithful to the absurd task to which you have appointed him. See how he has ruined his nose in his exertions at blowing through that huge pipe, which is nearly as long as his arm! See how the big toe of his right foot has pushed the Equator clear down to Capricorn in its weary attempt to maintain equilibrium! Look at the muscles of his right arm, long since cramped and distorted by holding out that heavy and ungainly goblet, which seems, by-the-way, to contain a brick! Look again, and see how long the nail has grown on the *sixth* finger of his left hand—the *sixth* finger, mind you, which is a compensatory addition of nature, making up for his having *only four toes on his right foot!*

"Infelicitous boy! Condemned at once to amuse and grieve the million readers of 'Harper's;' fortunate only in his unconsciousness of the fate which awaits him! For the time must come when the Irish boys on either column, weary of scattering meaningless chips on nothing, will take their tired toes away from the ends of the scrawly scrolls which seem to support the egg-shaped sphere, and *down* will tumble the baseless fabric! *Then*, whither the boy, ah, whither! Fall he must, through the sharp-angled 'HARPER'S,' the slippery, dripping 'MONTHLY,' the shag-barked, cross-grained 'MAGAZINE,' upon the rough corners of the huge 'half-shell' below!

"What wreck then, oh E. Z. Chair, of your 'Table' and Contents! The big ink-stand with its huge pen—'mightier than the sword' and about as long—the tottleish piles of badly-bound books, the slipping letters and falling scrolls, the thick pallette—made of 'half-inch stuff' at the thinnest—*all* together, in dire confusion mingling, will be jammed against the bases of the 'morfodite' columns, dislodging and overturning them, and bringing down the other Irish boys and their chip baskets, *ker-flummux!*

"I began, Mr. Chair, with an appeal to your finer feelings. I did intend to persuade you to act from humane and Christian motives, and *take down* that poor boy. I hope my remarks *may* have an influence with you. May I *not* hope that you will at least give ear to my warnings and to the following suggestions?

"Unless something be done *immejiate*, that boy will fall! I propose, therefore, assisted by hints from an architectural friend who shares my anxious solicitudes:

"1st. That the bunting be stripped from the columns and employed in strengthening their uprightness. By tying this around them just below their tops, and making it fast from one to the other, the strain caused by the impending weight of the globe may be temporarily counteracted. The columns will thus be stripped of their wreaths, but since whatever of architectural meaning there is about them is Egyptian, it will not be at variance with any laws of taste to remove these incongruous surroundings.

"2d. Temporary safety being now secured, that the columns be stayed by 'shores' placed against them to the right of one and left of the other. It will be convenient to have these shores in the form of ladders, so that fresh supplies of chips and soap and water may be sent up to the boys—that is, if you can not be persuaded to take them down. And, in this connection, my friend suggests that a plank be laid from the top of the left-hand column to the equator of the sphere—and stout spikes must immediately be driven into this, below the equator, to keep that important and useful line from slipping any farther down. This plank would make connection between 'Chips' and 'Bubbles,' the latter of whom, it is evident, can not reach across the chasm for 'more soap' without danger of falling.

"3d. That since 'HARPER'S NEW MONTHLY MAGAZINE' has no visible means of support, a frame-work be erected like those on which fire-works are displayed; the letters might be fastened upon this with tacks. This frame-work, resting securely on the table, might apectuate at the South Pole of the globe, and aid in supporting it.

"4th. The safety of the whole structure having now been attended to, a few details must be looked after. The boys should be decently and warmly clothed. Winter is at hand, and although you may say that they are 'tough,' having been exposed in this dress for eight winters, yet I can assure you, Sir, that the modesty and hu-

manity of your million of readers can not with impunity be much longer disregarded. Your books should be piled up properly, and your letters filed and laid away. If you will remove that immense and meaningless 'half-shell'—suggestive only of oyster-suppers, which should never be served in a library—you will have more room on your table, and can dispose of your books and papers more conveniently.

"Oh, my dear Chair, be 'easy' with me! I'm afraid I've spoken too plainly, but I rely *so* much on your good nature and your good sense that I think you won't be offended. *Are* you, now?"

"The sweet little cherub that sits up aloft" upon the cover of *Harper* (and he hopes he may be pardoned for calling himself by a name which is precious to him, as having been conferred upon him by his amiable old friend, the Easy Chair) begs to present his compliments to every body, and to avail himself of this opportunity of replying to the utterly uncalled-for, inhuman, unjust, and disagreeable—not to say unpleasant—letter addressed to his kind old friend.

Let the candid reader turn to the cover and find the answer to this insolent communication brightly blazoned there. Behold him (me) clasping the world with kindly legs; with one hand grasping a generous beaker, with the other holding a pipe and blowing rainbow bubbles! What does that picture—in itself so cheerful and exhilarating—suggest? Viewed only as a radiant youth riding a globe it is worth two years' subscription to the Magazine; but to the eyes and minds of thoughtful, poetic, and imaginative people—yes, anonymous author, poetic and imaginative people!—what does it symbolize beyond its merely outward beauty?

Just this: that genius—ever joyous, ever young in the pages of *Harper*—rules the entire world, but by the kindliest sway; on the one hand cheering it with the sweet wine of song, on the other illuminating it with the most graceful and perfect creations of fancy, in which every aspect of nature is exquisitely mirrored. Not drugging it with dull polemics—not stinging it with violent debate—but, in soft inebriation, winning the world with rainbow fancies from sorrows and cares. It is the very genius of exhilarating amusement, recreating, while it rules, the world.

And why is the equator somewhat depressed? Simply to show that the same charitable genius conquers the languors of the tropics and extends the temperate zone of rational recreation; that the industry, and intelligence, and calmness which mark the temperate zone of our Magazine, are spread by the Magazine around the world; that no equator is so hot and fixed, no north pole so cold and fatal, that the sweet little cherub of kindly sentiment and story and song may not push aside one barrier with his foot, and sit supreme and unharmed upon the other.

And even if it were true—which, upon the faith of a cherub, I deny—that the hand of which this captious critic complains had six fingers, instead of the usual human allowance of five—what then? What would it symbolically set forth, but only to *the imaginative and poetic mind*, except that the hands which assisted in the weaving of the sweet spell which delights the world were not liable to the imperfections of ordinary hands, but were unlimited and phenomenal?

Likewise of the foot, equally objurgated, *the refined and perceptive mind* instantly notices the beautiful significance. Even if there were but four toes (whatever that may mean, Madame), what would the design delicately insinuate but the fact that, with even less expenditure of force than is ordinarily necessary, all obstacles are overcome, and fall before the all-conquering genius?

Again presenting his compliments to every body, the cherub begs them to remark the inhumanity of the flings against those two estimable and industrious beings who are united with the other (me) in the work of charity and love. What are they doing—what have they done—that they should be so insolently commiserated? Will a kind public attend and give ear?

What are those two youths doing? They are scattering flowers. From baskets, ever full, they throw roses that never wither on both sides of the globe. To *the sensitive and refined mind* they symbolize the immortal spirit of peace and good-will that drop blossoms so that, whichever way the world rolls, it may roll in beauty and freshness and fragrance. They symbolize the resolution, never slumbering nor sleeping, which takes care that the Magazine shall do its share to make the world's journey pleasant and fair. Like the

> "Happy melodists, unwearied,
> Forever chanting songs forever new,"

they stand, tireless and cheerful, by night and day, in summer and winter, and foretell the flowery path in which the reader will run. Are they cold and scantily clothed? Ah! dear Public, you know—whatever the knowledge of the author of this anonymous slander may be—that the air of happy occupation is always a summer air—that the sun of hilarity rises with every new number of *Harper*—and that those two charming children live forever in the full light of that luminary. Co-workers with the cherub, they are neither cold nor hungry nor naked. For they are warmed with their constant happy activity; they feed forever upon pleasant thoughts, and they are clad with the grace of generosity.

There is a volley of trumpery advice about changing, and propping, and supporting, and other architectural arrangements. The bunting around the columns is to be removed, and appropriated to some other purpose. Now, dear Public, there is but one other object to which it could be so well devoted as at present, and the achievement of that object would also effect a change in the cover. Every *discerning mind* sees at once what is meant. It is to take the drapery and hang the pestilent complainer where his head may constantly hit the "sharp-angled *Harper's;*" his unavailing hands slip upon "the slippery, dripping *Monthly;*" his legs chafe "the shag-barked, cross-grained *Magazine;*" and his toes be utterly worn away upon "the rough-corners of the huge half shell below."

Then justice will be done. Then peace and harmony will be avenged and satisfied. Then—like the heads upon Temple Bar, grinning and dreadful preachers of the consequences of treason—will the suspended figure of this ill-omened critic show the folly of *little minds*, and the futility of *captious complaints.*

But leaving him, be it yours, most sweet Public, to look at the picture in the light I have shed upon it; and it shall be mine to remain the symbol of the hearty desire of providing a monthly and an unfailing pleasure, which animates my anonymous friend the Editor of the *Magazine.*

We have all been disgraced by the fight near

Buffalo. It is to be expected, of course, that brutal men will behave like brutes, and tear each other's eyes out when they have occasion. It is to be expected, also, that men whose tastes are bestial will support them in so doing. But what has the public, as such, to do with it?

Will you say, "Nothing at all?" Will you say that it is only the bruisers and "the Fancy" who were interested in the contest for the "championship?"

Will you then please to explain the fact that the leading newspapers in New York considered it necessary to have a long and detailed history of the disgusting business, after having printed "Postscripts" and "Extras" to announce the result?

In this country there is no indication of the direction of popular interest so unerring as the newspapers. When they devote several leading columns to any subject, we may be very sure that it is not a matter of private scope, but of wide and general attention. So, with the daily papers in his hand, a man may say with simple truth, we have all been disgraced by the Buffalo fight.

Fighting is always wretched business enough; but although Christ expressly forbade it, and although we all claim lustily to be Christians, a man loses consideration in a Christian community if, under some circumstances, he does not fight. In defense of the life or honor of those dear to us, fighting certainly loses its offensive character. In moments of hot passion, too, the deadly or sudden blow has some kind of extenuation or excuse. But to put the human body into perfect order solely in order that it may be a battering-ram to pound another body in equal order into a jelly, is the most loathsome and sickening of all enterprises. And that this should be a matter of such general sympathy as to justify the publication of elaborate reports is a most humiliating and alarming fact.

There is a great deal said about the manly art of self-defense and physical vigor. But those are excellences that have nothing to do with such brutalities as this fight. It is the disgrace of England that its manners allow a certain toleration of the prize ring. It is covered up under a talk about sinew and muscle and heartiness. But there is nothing so disgusting in a bull-fight as in a prize-fight, nor more inhuman in the old gladiatorial shows than in the spectacle of two human beings deliberately beating each other blind and bloody. And this is to be noticed to our shame, that while in England the thing is hedged with a sort of honor in itself which excludes deadly weapons, and is only stealthily acknowledged as a matter of public concern, and printed in "sporting" papers—yet here the ring is surrounded with revolvers, destroying all chance of "fair play," and the affair is blazoned upon the breakfast-table.

Does any man suppose that the London *Times* would ever publish the details of any contest of this kind, as the New York papers have published them? John Bull may be brutal enough, but he is decent enough to respect times and places. If he has a dirty story to tell, he will not choose a lady's boudoir for the telling; and if he likes to see a brutal set-to, he will steal off and see it, and hold his tongue.

And that last paragraph leads any well-behaved Easy Chair to ask the question, on what ground the papers justify the publication of such stuff? There are plenty of fights every day between brutal bullies, which decide the "championship" as much as this Buffalo one; why are they not paraded at great length and with every facility and ornament of type in the newspapers?

The general answer, intended to cover the whole ground, is that a newspaper is a sheet of which the purpose is to circulate the news, to tell whatever has happened, without regard to its character or influence. Hence we have disgusting details of crimes and trials, which, if published as books, would be sued and suppressed as indecent.

Now the argument is very clear that, if the conductor of a newspaper has only to provide news for his readers, and may call any thing of which they have not heard, or with which they are not familiar, news, there is nothing, however salacious, which does not fall strictly within the rubric. There are a thousand details of a thousand places in the city of New York which are just as interesting as the fight near Buffalo. They are no more criminal, they are no more indecent, and they would make the paper sell. If the conductor of a paper abdicates all moral responsibility in his relations with the public, and is only bound to provide something that the public will buy, let him spare the correspondence from Caracas and give us the latest bulletins from the Five Points.

Is it said, that the very fact that there are no bulletins from the Five Points shows that there is a restraining sense?

To this the reply is, that it is a restraint only in degree, not in kind. Twenty-five years ago such a report of the late fight as was given us in the papers would never have been seen, not only because the papers of those days would not have sent competent reporters, but because the good sense and feeling of the readers would not have allowed it. And how long is it likely to be before a public whose taste justifies such reports will not also justify accounts of other matters with which prize-fighting and prize-fighters are intimately connected, and which are really no more unmanly, indecent, and dishonorable?

The Easy Chair has always claimed that there is no essential relation between Dirt and Democracy, that a man may be a Democrat and yet be a decent gentleman, and that to violate every feeling of propriety is not to prove one's orthodoxy in principle.

The Easy Chair is now prepared to assert that it does not follow that a man is insincere in moral or political effort because he dresses well. "My dear Sir, your coat fits much too well for a philanthropist!" Heavens! then it *is* true that bad habits are essential to good morals.

The Easy Chair was once conversing with a friend enthusiastic about a popular poet. But there was a vein of sadness and regret in all the praise. There was evidently something reserved into which the Chair, at last, delicately inquired.

"Ah! dear Easy," was the reply, "is it not melancholy to reflect that this poet of whose sincerity the heart can no more doubt than the ear of his sweetness, with all his humanity and pathos, and grace and simplicity, *wears the best fitting coat in the State!*" And it was clear that the coat presented a full faith in the qualities which it was impossible not to perceive and enjoy.

There was a mystic and profound significance in Carlyle's Philosophy of Clothes, and in a very

literal and exact sense. If Carlyle himself should step into the desk, jeweled and ringed, velveted and exquisitely gloved, his wisdom would not seem so wise as if it were uttered in a careless coat, an unanxious cravat, and trowsers bulging at the knees. Yet we figure Pericles* as the glass of fashion and the mould of form; and the great English orators have usually been punctiliously dressed.

Of course the feeling arises from confounding good dressing with careful dressing. But many a man dresses well with less care than many another clumsily and slovenly. It is generally safer to judge every man *not* by the outside, and to measure sentiments by their intrinsic justice, and not by the pantaloons of the orator—just as it is dangerous to suppose, because a man is dirty, that, *therefore*, he is a Democrat or believer in the equal rights of all men.

"Dear Mr. Easy Chair,—I write for information. Is Mr. Van Wartenberger in earnest when he proposes to keep seven servants, horses, and last, but not least, a dear wife, with the moderate sum of ten thousand a year? If he is seriously in earnest, beg of him, if he have any regard for his domestic happiness, to curtail the number of servants. He can not possibly accomplish what he proposes. I tremble at the thought of his fleeting wedded bliss, and am ready to prove to him the impossibility of his scheme, out of regard to his future happiness and that of the inestimable Mrs. Van Wartenberger.

"Now, Mr. Easy Chair, you understand my disinterestedness, and will promise to take my part in case that my husband, Mr. Fitzbubble, should censure me for bringing his affairs before the public. I repeat that I take this step solely for the benefit of the young couple. We, that is Mr. Fitzbubble and myself, reside in a brown stone house, elaborately finished after the Chincherbred style of architecture. I scarcely need to mention this, as the Fitzbubbles have, time out of mind, been noted for their showy residences. By practicing the greatest economy we are enabled to keep a bland cook, not too fat; a genteel and graceful colored boy; a chambermaid, not given to airs; a lady's maid, the spread of whose skirt is less than that of her mistress; and a coachman, of ruby face and proboscis, upon ten thousand a year. Two servants less than Mr. Van W. proposes, and this with the most rigid economy! By rigid economy I mean that Mr. Fitzbubble denies himself all such useless luxuries as fast horses, cigars, dogs, etc.; also such amusements as sporting, boating, and the like. In fact he spends less upon himself than any man that I have ever known. He is conscientious about patronizing extravagant tailors, and never enters the doors of a club-house. Would Mr. Van W. willingly follow in such footsteps? I tremble to think of the consequences should he not. I could shed tears when I reflect upon the loves of shawls and bonnets which she will stand in actual need of (and which need will be the prolific source of many an altercation between her husband and herself), if he persists in keeping seven servants upon only ten thousand dollars a year. I feel a great admiration for Mrs. Van W., whose amiability is fully manifested by the relinquishment of her preferences, and whose good sense is evident by her approval of the discriminating selection of servants which her husband has made. I see at a glance the difficulties which she will labor under by dispensing with the footman and the housekeeper; but upon ten thousand a year, dear Mr. Easy Chair, she can never keep more than five and do justice to herself. Respectfully yours,

"Frivole Fitzbubble.

"*P.S.* Mr. Fitzbubble has such a funny definition of a husband, I would like so much to have Mr. Van W. hear it, that he may be prepared for his destiny. Def.—'A man who does errands and pays bills.' You see, not keeping any more servants, I am obliged to employ Mr. Fitzbubble occasionally."

---

* What is fame? A clergyman was about to deliver a lecture upon "the Age of Pericles," and some gentlemen were speaking of it.

Smith. "Jones, what *are* Pericles?"

Jones. "Well, Smith, I don't exactly know. But its a kind of shell fish."

Smith. "Ah! then, of course, 'the age,' has reference to the time they have been out of the water."

OUR FOREIGN GOSSIP.

It is a blank month for grand news. The *Austria*, carrying down its five hundred, has startled even the Paris world—and, unfortunately, the enrollment of the *Austria*, in popular talk, is among American steamers—another dreadful proof, they say, of the transatlantic waste of life. The story makes a gloomy paragraph; and the fumigating tar of the Hamburg seamen is classed with the bowie-knives of Arkansas, the duels of Mr. Arrowsmith, and the burning of the Quarantine. More and more our home civilization is regarded, by the idle observers of Europe, as a kind of fierce *sauvagerie*, under which cheap meats are eaten half-cooked—a President washes his hands in greasy tavern basins, in his shirt-sleeves—and horse-stealers or abolitionists, when caught, garnish the limbs of wayside trees.

"And do they ever bury these men?" hints an inquiring Frenchman.

The American quidnunc expresses grave doubts.

"But then," says the Frenchman, "don't you fear the effects of putrefaction?"

Quidnunc replies, "We are used to that."

"*Mon Dieu!* but the yellow fever: isn't it a cause, perhaps?"

"Very probably."

And the philosophic Frenchman embraces at once the somewhat gloomy theory that our yellow fever may be traced directly to the miasma arising from the putrefying victims of Lynch law!

A bit of real gloom belonged, a few evenings since, to the quarter of the Madeleine. The Prince Ghika, of the Danubian Principalities, whose interests have so recently engaged the attention of the European Congress, was thrown from his carriage, as he was returning from a drive in the Bois de Boulogne, and died two hours thereafter. He was just about leaving Paris for Wallachia, where he hoped, through French influence and his personal popularity, to secure his election as Hospodar. To this end his horses, of which he had a considerable number, had been advertised for sale. But his reputation as one of the most daring whips of the metropolis made purchasers coy. His teams were restive to a degree that frighted even the jockeys; yet it is worthy of notice that, on the occasion of the accident, he was driving with a well-broken team, belonging to his wife, the Princess.

The coachman, a Wallachian, lost command of them, the Prince stepped forward to assist him, a rein broke, and the poor fellow was thrown to the pavement.

The Princess is represented as a charming person, of French birth, formerly known as a pleasant *feuilletoniste*, and the companion of Balzac, Gauthier, Gavarni, and others. A recent pamphlet of hers, calling attention to the condition and attitude of Wallachia, has revived recollection of her old status. The funeral obsequies have crowned the week with a sad pomp of plumes and sable hangings.

The circumstances of the death recall vividly the last hours of the Duke of Orleans; and this memory brings to mind the recently published will

of the Duchess—full of piety, tenderness, and royal resolve. We may venture to cite a portion of it:

"This is my will. In the name of the Father, and of the Son, and of the Holy Ghost. In dying I commend my soul to God, and in the name of Jesus Christ I implore His infinite mercy, praying him to receive me in the eternal abode, there to reunite me to those for whom I have mourned upon this earth. I leave my maternal blessing to my beloved sons, and pray the Lord to guide them through this life, to give them prosperous days, and to grant them eternal felicity when they shall have nobly fulfilled their destinies here below. I bid them here a last adieu, while thanking them for the happiness they have contributed to my existence. I entreat the Queen to accept the last expression of my respectful gratitude. I bid farewell to my mother, to whom I owe so much; to my brothers and sisters, for whom I have ever felt sincere affection; to my mother's family, whose tender hospitality has lightened the bitterness of exile of my sons and myself; to my friends and servants, whose fidelity in the midst of misfortune has inspired me with grateful attachment; and, finally, I bid farewell to France, which I have loved so much, and where the happiest years of my life have glided away. I recommend my sons never to forget that the fear of God is the beginning of all wisdom, that it is a guide and beacon in prosperity, and a stay amidst misfortune; to remain ever faithful to the precepts of their childhood, and continue steadfast, likewise, in their political faith. May they observe it both by their constancy in adversity and exile, and by their firmness and devoted patriotism when the course of events shall restore them to their country. May France, restored to her dignity and liberty, may constitutional France reckon upon them to defend her honor, her grandeur, and her interests; and may she find once more in them the wisdom of their grandfather and the chivalrous qualities of their father. They should ever bear in mind the political principles which have made the glory of their House, which their grandfather faithfully observed upon the throne, and which their father, as his will and testament bears witness, had ardently adopted. His last directions have been the guiding rule of their education."

And in conclusion she says: "Whatever the place of exile where my days may close, and whatever the tomb I may happen to find, I request my sons, and in their default, my heirs, to have my remains conveyed to France whenever our family may return to it, there to deposit them in the mortuary chapel of Dreux, beside the tomb of my husband. I here close my last will with an assurance of pardon to all such as may have offended or afflicted me, and with an entreaty to all those I may in my turn have offended or pained, not to retain the memory thereof. My last words are for my beloved sons—a prayer and a blessing.

"HELENE, DUCHESSE D'ORLEANS."

We read this will in a Paris paper. Do the censors sleep? Or has the Breton ovation quieted any Imperial distrust?

You have read of that triumphal progress—how Brittany and all La Vendée forgot their traditional loyalty and became Napoleonist. You have read, if you have kept in the track of the Paris correspondents, of the fête days at St. Cloud, at Compiegne, and of the gay bathers and the bull-fights at Biarritz. You have seen, too, how the long-promised ruin which, in the opinion of some of your overwise journalists, was to overtake the Mobilier and France, and make such financial crash as should carry all despotic Europe with it into bankruptcy, has been staved off, and off, and lingered and retired, till now even shrewd income-seekers are placing faith in French stocks, and the Bourse is all sunshine.

The revival of trade here must be a sad disappointment to those who prophesied with such large and ludicrous persistency the utter hollowness of French credit. Of course a great many fond and amiable old gentlemen must find their political economy theories blighted; it was made so very clear that M. Pereire was another Law, and the Mobilier another South-Sea scheme, and Louis Napoleon a despotic trifler with edge tools. Now we are not going to annoy or provoke good republican susceptibilities with any defense of oath-breaking, or Louis Napoleon's conduct generally; but we do say that he has put a large sagacity and a most unwavering firmness into his pilotage of France through the year past; and though the army and outsiders may have been more struck by his adroitness and shrewd policy during the progress of the Eastern war, yet the wonderful stanchness and far-sightedness of the man have been put to a far more critical test, and won a larger triumph, in combating the threatened monetary crisis of the year past. To call him knave persistently may gratify a certain red zeal for republicanism; to call him simply Mr. Bonaparte, as some comical Democrats religiously do, shows pretty cherishment of crushed hopes; but to call him fool and simpleton implies a besotted ignorance that would be pitiable if it were not malicious.

WE shift the topic. We have a little story to tell of the daughter of a French beggar—showing that beggars are sometimes rich. Every beggar must have his permit in France, and wear his medal, with official stamp, authorizing his vocation. Thus much of preface. The story, which is, after all, only an incident, is magnified as the French only know how to do, and begins in this romantic way:

A *curé* (which means priest) came up one day from his country parish to Paris, weary and footworn. He was neither afraid of railways nor had dread of coachmen or steamboats; but he was poor. Yet our priest brought with him fifteen hundred francs in gold. He presided over the little parish church of San Clothilde, and in San Clothilde he trusted; he prayed to San Clothilde; San Clothilde was his saint of saints. He decked her altar as he could; fresh flowers withered before it; cheap tinsel ornaments were lavished on it. But one day, in the little poor-box which one may see iron-bound and iron padlocked in all the country churches of France, the *curé* found a little packet containing fifteen hundred francs in gold pieces, and a line written upon the paper which inclosed it, saying, "For San Clothilde."

So, with this money scrupulously unbroken, the parish priest walked to Paris to purchase a marble statue of his patron saint.

It is a small sum to pay for a marble statue—most of all in Paris. But this the *curé* did not know. He went straight to a young sculptor, who was a son of an old parishioner of his, and told him how the money had come in strangely, and

how much he desired a marble statue of the saint.

The sculptor consented to supply it, and to send one of his pupils down to the village on the Loire (we had forgotten to say the priest came from the Loire banks) to prepare the chapel for its reception.

The good priest went his way gratefully. A month after the pupil of the sculptor came down to prepare the chapel: the statue was to come in a fortnight's time. The young sculptor had wrought the subject before the visit of the *curé*, and availed himself of the occasion to dispose of—lost labor. A Paris sculptor's student would be young, of course, and gallant, of course. So it happened that, "as he worked at the vault of the chapel of San Clothilde, there came there for worship more village maidens than ever before;" but chiefest among them one brown-eyed girl, with more the air of Paris *salons* about her than of Loire banks, found place in the regard of the young sculptor.

He was awed by the earnestness of her devotions, but he was bewitched by her beauty. From looking he grew to loving; and she from looking to liking.

So the chapel reparations went gayly on: the brown-eyed girl constant at her devotions; the sculptor constant at his work. The statue in due time came down from Paris, and was inaugurated with all the festal attractions which the old priest and his parishioners could plot in aid of the ceremony.

The young sculptor, a looker-on now, saw the brown-eyed girl duly make her appearance, alighting now from a sumptuously-furnished carriage, and attended by a gray-haired old gentleman, who walked with a crutch, and escorted her to the shrine of San Clothilde.

Was this to be the last feasting of the eye upon that fairy figure?

The ceremony ended, he came forward to bid the old priest adieu; that very evening he must turn his back upon the Loire banks, perhaps forever.

The good priest said, not so soon: he must go with him to dine with the excellent M. Marcel, the richest patron of the parish: he must see Mademoiselle, who was another Saint Clothilde. "Hist! there she goes!" and the priest pointed out the brown-eyed fairy who had tempted his stolen glances from the chapel scaffolding.

Of course he staid: admired, of course: trembled, of course—as what should a poor sculptor, not yet established in reputation, have to say with the daughter of a rich *proprietaire* upon the Loire banks?

Yet the glances in the church had paved the way for acquaintance: the good priest engrossed the good Monsieur Marcel: and the lover and the loved—what should they do?

Yet the time for leave-taking came, and the young man had not yet conquered his timidity: she always the heiress; he always the poor sculptor.

How is all this to end?

Fortunio, who writes the Courrier in the *Nord* newspaper of Brussels, ends it in this way:

Good Monsieur Marcel takes the young sculptor's arm. "You love my daughter there?"

"Madly."

"You are afraid to speak?"

"She is rich; I am poor."

"This is all your objection?"

"Absolutely."

"What if she were a beggar's daughter?"

The young sculptor does not lose his self-command; the brown eyes forbid. "I would ask her hand."

Brown-eyes come nearer.

Papa Marcel says, "You can take her; but first see—here is my medal. My name is upon the books of the police; I am a licensed beggar; my fortune has come in this way. The fifteen hundred francs which bought the marble statue of San Clothilde came thus. I could not marry my daughter to a duke, though she is rich enough. There is a prejudice against beggars. You are young, clever; we are both artists—you with the chisel, I with my crutch. Will you marry my daughter?"

The brown eyes fell.

But they lifted again; and the pretty *paroissienne* became a sculptor's wife.

And out of such flimsy material as this our Paris *confisseurs* will cook a story; and we, for want of better, repeat it.

Let us skip suddenly to England, to Lord Derby and his sale of horses. It is an affair that has made talk. You know, or should know, that Lord Derby is a lover of the turf; that without any triumphant successes he has for nearly a quarter of a century bet largely upon stock of his rearing. Indeed his losses within a twelvemonth past have been put down at an enormous figure. The other day he advertised sale of his stud. We do not recall the particular wording of the announcement, but the understanding seemed general that he was about to retire from the turf, and dispose of his whole stock. Whereupon the *Times* (which is fighting his administration with desperate lunges) moralizes, and preaches (editorially) in this fashion:

"Lord Derby's Stud.—*Serious Imputations.*—No inconsiderable portion of the English public will feel sincerely rejoiced to hear that the Prime Minister has determined to quit the turf, and no longer give the sanction of his high office to the very questionable people and transactions whose existence is wrapped up in that simple and rustic monosyllable. We have nothing to do with Lord Derby's private concerns, and if when he quits the Treasury Bench he likes to return to the turf, that is a matter for his own good taste and feeling on which we shall never venture to intrude. But we must say we have felt it as very greatly to be regretted that a nobleman occupying the position of Prime Minister of this country should lend the influence, not only of his high rank, but of his political station, to patronize and promote among the people of this land a taste for an amusement to which is directly traceable more misery, more ruin, and more demoralization than to any other lawful pastime. When the Prime Minister shall have retired from the turf, the apprentice who robs his master's till, the clerk who embezzles his receipts, or the butler who pawns his plate can no longer allege in excuse for their peculation their devotion to a sport which they carry on under the sanction of the name of the Prime Minister of England. Something, therefore, has been gained, on the supposition always that Lord Derby is sincere in his resolution to retire from the turf, at least till the term of his Ministry is expired. We say on the supposition that Lord Derby is sincere, for there are circumstances connected with the sale to

which persons familiarized by some experience with the ways of this wicked world might tend to cast a doubt on the subject. Our readers may remember some time ago a bitter complaint in our columns from a correspondent who seemed to be not without some reason for his exasperation. The complaint of our correspondent was that the possessors of celebrated studs were in the habit of advertising the sale of the whole of them, that by this means a large assembly was collected, and persons were induced to travel long distances to attend the sale, which turned out only to be a means of getting rid of all the inferior stock, every thing that was good being bought in on account of the owner."

It sounds not a little curiously to hear the *Times* newspaper, which devotes annually so much of space and of money to the heralding and illustration of affairs of the turf, taking suddenly this grave, Scotch turn; quite as extraordinary, indeed, as if we were to find one of our own newspapers at home, which had been constant and earnest in its condemnation of a pugilism and dead-rabbitism generally, suddenly illuminating its columns with full telegraphic reports of the last fight between Jem Hyer and Dick Poole.

Yet such things happen. The *Times* has a heart (if it can only be reached) to sigh over the brutalities of horse-racing. Our papers, too, have hearts; at least they say they have. The Palmerston journals all kept alive this sudden morality for a week; the administration organs meantime commending the patriotism of a Peer, who, for the better fulfillment of his ardent public engagements, was willing to forego the ennobling pleasures of the turf. They congratulated the country, while they condoled with "the Derby."

At the end of a week, however, it appeared from actual account of sale, that his lordship had no intention whatever of retiring from the ring, and that all the horses that had any chance at all of securing winnings had been bought in by his lordship, who had succeeded in disposing of his inferior animals at a very handsome figure.

The *Times* has ceased preachments against horse-racing, and the Derby organs are silent.

The whole matter has made very abundant talk in the Jockey Club. This turf talk reminds one that Fox, the rival of Pitt, was as much addicted to sporting as the present Premier; almost as unlucky too; yet it is recorded that, on a famous Newmarket day, in April, 1772, he won something over fifteen thousand guineas. On becoming a member of Lord North's administration, in 1783, Fox, too, advertised the sale of his stud, and professed to retire from the turf. The sale was in his case a *bona fide* one; but only a few months after he purchased a new stud, and appeared again upon the Newmarket course in October of the same year: and here a king's messenger found him to command his presence at court.

Apropos of betting—do you hear (it is true) that one hundred and fifty thousand francs are staked upon the chess match between Morphy and Harrwitz among the denizens of the *Café de la Regence* alone? The last game won by Morphy, being sixth in their order, has particularly delighted Parisian observers. "He electrified," say they, "every one by giving the Prussian checkmate *par une série de coups foudroyants.*" Needless to say that the chess *Café* (*de la Regence*) has been thronged latterly past endurance. The illness of the Prussian player leaves us, as we write, still in doubt as to the issue of the match.

Shall we say any thing of the fearful establishment of a Russian force in the near port of Villafranca, upon the Sardinian coast? Essentially a very unimportant business arrangement between the governments of Russia and of Sardinia; but by the noisy hue and cry of the lesser London journals bloated into a transitory importance. A Mediterranean port had been ceded; a new Sebastopol was to be founded; the highway to India cut off; and unceasing gasconade of this sort, until knowledge of the simple facts of the case shamed the alarmists into reason.

The truth is, for the better training of steam commanders, or for damage to Austrian lines, Russia has determined to establish steam communication between Odessa and various ports in the Mediterranean for the transport of mails and passengers. The boats of the line will very naturally stop at Constantinople and the Greek ports, perhaps also at Smyrna; they will thus be thrown into direct competition with the long-established line of the Austrian Lloyds.

An entrépôt for refitment, etc., was needed in the West, and Villafranca, which has a pleasant harbor lying a few miles east of Nice, was solicited for this purpose of the Sardinian Government, and the necessary right secured.

The affair has been the occasion of a good many gallant periods, but has now faded entirely from view.

Now that all is so dull hereabout in the war way, it is pleasant to refresh one's self from time to time with the piquancies of life in India or in China. Just now we have been regaling ourselves with this private letter of an English woman at Hong-Kong.

What a very sorry time her husband must have had of it! She says:

"He has a friend living about one mile and three quarters off, whom he often goes to see before breakfast, and takes a short cut across the hill to his residence; but he always goes armed with his revolver and prepared for emergencies, knowing well the temper of the Chinese just now. Last Tuesday (June 15) he set off for his morning walk, and I was sorry to see it begin pouring with rain soon after he started. Toward nine o'clock I was made aware of his return by our little dog (who had accompanied him) rushing up stairs; and soon after he himself walked in, but such an object that I never can forget—the blood streaming down both sides of his white face, and the color of his hair quite hidden in a mass of blood and dirt, though he had taken the precaution of going to the bath-room first, and changing his clothes and washing himself, so as to frighten me as little as possible. Moreover, he was bent double with pain, and could scarcely move from some extensive injury in his side. I sent for a medical man at once, who came very quickly and examined him; but the side was such a complete smash and so swollen that he could not then tell if any ribs were broken. It seems that three Chinamen suddenly set upon him, though he was in a measure prepared for them too, and even had his hand on his pistol at the time he met them; but, he says, their agility of movement quite astonished him, and, with a most instantaneous spring, the first man was pinioning both his hands by the wrists. But with a strong wrench

he threw him off, and started back a pace or two to fire. His pistol was almost close to the wretch's breast when he pulled the trigger, and the cap missed fire. With a yell of triumph they all rushed toward him, when he sprang down the side of the mountain path to gain time to recock his revolver; and in turning round to fire his revolver a second time, his foot slipped, and he rolled over and over down the side of the ravine into a watercourse, all among the bed of rocks, and was completely stunned and wedged in there. One of the gang fell too, and, to make matters worse, came down with his whole weight on his chest. The two other men followed very quickly, and of course he was at their mercy then. The wretches first began pounding his head with stones, and broke it open in several places. Then they put mud in his eyes to prevent his seeing their faces, and so recognizing them afterward, and one—the man at whose breast he had fired—hit him a violent blow with his fist just between his eyes; but, strange to say, he did not lose his consciousness for more than a few seconds, and kept his senses clear to the last. Two men held down his hands, and one knelt on his chest and rifled his person. Of course they took every thing—pistol, watch, ring, even his handkerchief—and I only wonder they left him any clothes, or left him alive to tell the tale; but I suppose they were satisfied with their booty, and so made off before they were surprised. One circumstance seems to me most providential. The Chinaman who fell down the hill, when he got up, had a huge knife handle in his hand, but no blade—that must have been broken off in the tumble—and he spent some time in looking for it among the grass. Had that weapon been whole and sound, he might have cut off my poor husband's head with it, taken it to Canton, and obtained the head-money. Since this attack he has made up his mind to have a good big dog at once from England, to be his walking companion. Fire-arms are not to be depended upon in this damp climate, and if he had only had a faithful dog with him on this occasion, I fancy it would have created a diversion in his favor. So will Mr. —— be so good as to be on the look-out for a thorough-bred Newfoundland pup, and by next mail I hope Mr. —— will be able to write to him himself about shipping and forwarding it. My mind seems so full of this one subject that I can scarcely think of any thing else; but I can not finish my letter without saying how sincerely I hope you are all well. What nice weather and delicious spring produce you must be having at home now, while we are grilling out here."

It is wrong to smile at such a letter; but really if the poor fellow could take his walk home after the pommeling, and step into the bath-room for a wash and a change of clothes before appearing to his wife, with his head "broken open in several places," we have great hopes of his ultimate recovery.

We trust, at any rate, that the Newfoundland pup may arrive early.

And while we are upon letters we will give you sight and reading of another in different strain. You have heard of poor British curates; perhaps you have pitied them; but here comes forward a resolute man, who not only refuses our pity, but insists that it would be highly injudicious to raise the pay of curates lest the Church might be overrun with drapers' clerks! Hear him:

"I am, Sir, a curate receiving £130 a year for taking the sole charge of a parish, the rector of which receives from £800 to £1000 a year, and as it is rent of land, it has increased very considerably of late, and is worth, in the opinion of competent judges, from £1200 to £1400 a year; and for doing the whole duty of that parish, since my rector is an invalid or absent, I receive £130 a year, and yet I consider myself well paid. I am almost in the position of a gentleman having a private fortune of £130 a year; I am my own master; my work is undefined, to be measured solely by my own conscience; and as I have an objection to cross-questioning my parishioners, prying into their affairs, or intruding into the privacy of their homes, it becomes very light indeed—no more than what at college I should have called 'taking a constitutional.' I have, perhaps, a funeral once a week, which takes half an hour at the most, and as I fix the time when it is to be in the churchyard, it need not interfere with any arrangements of mine, or cut up my morning, afternoon, or evening. I can go away for a few days at any time, but must be at home on Sunday, and go to church twice on that day, which if I were not a clergyman I should do, and, when there, it is surely no great hardship to read aloud the prayers, instead of mumbling them, as I should do if I were a layman; and as for the two sermons, if I am able to compose them, it is an agreeable amusement or employment in the evenings, something like writing half a dozen long letters, two sheets crossed; if I am not able to compose them, the copying two out will take perhaps six hours. My work, therefore, resolves itself into my being obliged to be in church punctually to the time appointed twice every Sunday—and for that work I receive £130 a year. If your correspondents can inform me what profession, trade, or labor will, thus, independently of ability, pay its followers more liberally, not only I, but many hundreds of thousands in England will, I am sure, feel obliged. And now, Sir, I don't know whether you are aware that it is possible for almost any man, provided his known character is reputable, whether he be draper's assistant, lawyer's clerk, journeyman tailor, carpenter, butcher, or farm-laborer (I mention these, for I am personally acquainted with such men now in the church—men of no genius, and of still less education and cultivation), to get ordained a minister of the Church of England with no more than a three years' preparation, which preparation need not, I think, cost more than £50 a year. Suppose, therefore, that every curacy was raised, as is proposed by some writers, to an average which would, I believe, make them £250 a year—so that any body, provided he could get ordained, would be certain for life of an annuity of £250—what would be the result in the present pressure of an overcrowding population? Why, such an expedient in fifty years would ruin the kingdom or burst like a bubble; for nowadays, since 'the schoolmaster has been abroad,' every body is a clerk, and to buy such an annuity could easily find three £50 or £150."

We should think this a man not likely to have his forenoons "cut up" by funerals. And if his sermons are "something like two *such* letters crossed," we should fancy them more "agreeable" in the writing than the hearing.

We hope his "known character is reputable," and can entirely agree with him when he says that the work he does "is very light indeed."

YET another letter we have here, of a truly tragic cast. It is from an artist in Algeria, who conceived the strange idea of photographing an execution. It appears that a family of Arabs (one of them a Sheik) had been convicted, and very properly condemned to death, for a most atrocious murder in the vicinity of Algiers.

Our letter-writer says:

"The crowd of men was immense, and as the rays of the rising sun fell upon their upturned swarthy faces it was painful to see the earnest and even frightened expression of their countenances. I had been present not long before at an execution in France, which thousands had assembled to witness; and the recollection of the jests and laughter I had then heard made the dead silence on the present occasion more impressive. I at first thought that this silence was owing to the number about to be executed, yet I could not reconcile this interpretation of it with the reports I had heard of the indifference of the natives to human life. I asked the driver of the wagon if such silence was usual, and learned from him, half a native himself, the reason. The Arabs are followers of Mohammed, and believe that their bodies after death will, by means of the tuft of hair they leave on their otherwise shaven heads, be conveyed by their prophet into paradise. Now the head, which is completely separated from the trunk by the action of the guillotine, can alone, according to their belief, be placed in paradise; and as the body must be left on earth, they conclude (what is perfectly natural, seeing the nature of their paradise) that this arrangement will not contribute much to the owner's gratification. I have since heard that when the native chiefs executed a man by cutting off his head the executioner invariably left it attached to the body by a bit of flesh, with a view to obviating the inconvenience referred to above. . . . . The criminals were not brought on the scaffold together, but led up one at a time. The first was the Sheik, who seemed perfectly indifferent to his fate. So rapidly was he bound to the plank and thrust under the axe that I had barely time to insert the plate-holder, and get the instantaneous movement into order before the sharp edge descended and his head rolled into the basket. This picture was quite successful, and so was the second, but the third presented a dim appearance; the fourth was nearly, and the fifth and sixth were wholly invisible. How to account for this I know not, unless the atmosphere around the scaffold became in some way affected by the blood, the odor of which was distinctly perceptible to me."

FROM this odor of blood let us relieve ourselves by a little sketch, from personal observation, of Mr. Spurgeon, and his preaching. You have heard enough of him, surely, and have enough of curiosity to read our notice kindly:

"In person, Mr. Spurgeon is short and stout; his face is large and soft, well-developed in the lower part, and with an overhanging forehead. His countenance is devoid of color, and he has a quantity of neatly-arranged black hair. His voice is penetrating and powerful, but strongly accented with an English provincial twang, and he uses a profusion of gesture and dramatic action. Lately, Mr. Spurgeon preached without any gown, and was not assisted by notes or MS. Mr. Spurgeon's pulpit style is eminently theatrical. He uses his hands and arms forcibly, frequently alters his position, addressing himself now to the right hand, now to the left, and occasionally turning almost entirely round in the pulpit. In the colloquial and conversational parts of his sermon—which are of constant recurrence—he changes his voice, and gives the dialogue in varying tone and accent, to suit the circumstances of his *dramatis personæ*. The discourse, consequently, becomes more of an oration, or of a lecture illustrated with action, than a sermon. The words are embellished with a profusion of gestures, starts, sudden uprisings, and downward movements, which seem very remarkable to those accustomed to the gravity of demeanor which is generally presented in a Presbyterian pulpit. The introduction of two stanzas of poetry into the prayer was generally remarked as a very singular feature. In the course of his sermon Mr. Spurgeon presented the following picture of the Day of Judgment: "I think I see the judgment-seat and the resurrection-day. A mother with her children are standing there. Three or four of her little babes are saved for endless glory. Their little bodies have put on immortality and life; and where are you who have been permitted to live longer? The stars are falling from heaven, the sun is changed to darkness, and the moon into blood. But, lo! there is silence in heaven, and a voice is heard, 'Gather my elect from the four winds of heaven!' Your mother is about to be taken into the company of the blessed forever. 'Mother!' shrieks the son, 'I can not be separated from you forever. Save me! Oh, save me! make intercession to the Judge for me. He will hear thy cry, though he will not hear mine!' 'My son,' she will reply, 'I directed thy feet to God when thou wast young. On my breast you lay when my prayers went up to God for your soul. I taught you to lisp the name of Jesus, and your lips to utter his precious name. Do you not remember how, when you grew older, I taught you the way to heaven? But the time came when you scorned a father's prayers and mocked a mother's tears. But now your mother says, now, my son, it is changed. I can weep no more now, for I am glorified. I can pray no more for you now, for prayers are useless here. You are justly lost. You are damned, and I must say Amen to your condemnation.'"

THERE has been latterly an International Congress at Brussels, to discuss questions relating to literary and artistic property. You know this, of course. You know it has been in no sense governmental; you know its proceedings have carried no more weight with them, legally considered, than if they had been held in the chamber of a private publisher of Edinburgh or of New York.

And yet those proceedings have a weight: they have a weight as embodying masses of opinion, and opinion of those supposed to be best entitled to speak in regard to the subject at issue. These international congresses are, in fact, the committees of nations, made up of those specially informed, and eager to bring to light all that may have a bearing upon the particular object of the assemblage.

It is not a little remarkable that the kingdom of Belgium should have become the arena for these international meetings. Within the past ten years there have assembled within her borders the great Peace Congress, the Statistical Congress, the Health Congress, and now the Literary and Artistic Congress.

It has been alleged that, in causing to be summoned in Brussels this last Congress, Belgium has desired to make honorable amende for her old sins of book piracy; for in this matter you must know that the publishers of Brussels have, in years gone, out-pirated all the publishers of the world. We can recall well the time when, as we journeyed eastward from France, we found in the delightful little capital over which King Leopold presided the last book of Lamartine, or of Dumas, as the case might be, for one fourth or one fifth of its price at Paris. To us, who made no books, it seemed a charming cheapness; but the Didots and the Balzacs were righteously enraged.

Yet Belgium did no worse than the rest of the world, save that she did a bad thing more promptly and better. Surely a nation was never better situated to seize upon and reproduce the literary work of a neighbor. Separation was by an imaginary line; distance was nothing; language was the same. Only across the channel, in England, were half a million of readers at least who desired French books, and who could procure them from Belgium at one fourth the price demanded in France.

Naturally enough the publishers of Belgium, who had invested largely in presses, were startled at the project of an international copyright. But justice prevailed, and French authors were secured their own.

What was the result? Did the trade of Belgium break down? We have a few statistics for answer. In the year 1845, the year of largest business prior to the Copyright Act, the book exportations of Belgium amounted to the value of 1,667,000 francs. In the year 1856, the first after the establishment of an international law upon the subject of literary property, the exportations of Belgium amounted to the value of 1,305,710 francs.

Does any one suppose for a moment that fewer books would be printed in America if British authors were allowed right in their works? Does any one suppose that the profits of publishers would be less?

But we are not going to plunge into any argumentation upon so dry a subject, so far gone as we are with our gossip.

We defer talk till we see the *Compte-rendu* of the Congress; and all further talk till the month to come.

Editor's Drawer.

IN this, the first Number of the new Volume, the Drawer would be pardoned for a brief interview with its troops of contributors and friends. The talking must be, like the handle of a pitcher, all on one side; but if the Drawer understands itself —and, as the Court said, "she thinks she do"— the interview can be made agreeable.

The Drawer is very grateful to its friends all the world over for their favors. The life of it is in the kindness of those who love good things, hear them, tell them, write them, and send them to the Drawer. The source is inexhaustible. Of this we need no better evidence than the increasing supply which pours in with every returning month; so that, from the rich stores that are furnished, the labor is to select those that are the most refreshing to the reader. Some of this abundance overflows into *Harper's Weekly*, a Journal of Civilization, that is fast finding its way into every nook and corner, so that it carries the same cheerful face and sunny smiles abroad that the Drawer wears and gives. Good-humor is one of the first elements of civilization. The Drawer is therefore a true civilizer, and a better reformer than many who wear the name.

The Drawer has on hand a large number of admirable contributions — capital anecdotes, incidents of young and old—from the bench, bar, and pulpit; from senates, fields, and streets; the humors of the day—which will appear as soon as circumstances will admit. In the mean time, send every thing that will make this winter glorious summer; every thing to cheer and not inebriate; every thing to make the heart merry, which the Bible says is good, and we believe it all the way down to the bottom of the Drawer. But send us nothing that will give even a momentary pain to a living soul; nothing to wound the sensibilities of relatives or friends; nothing that will be regretted by-and-by, when old accounts are settled. The Drawer is to gladden, not to grieve. It will not intentionally hold a line that any good man reads with regret. It means to be sunshine in every house it enters; to be welcomed always with a smile. And here it opens itself and another volume.

MR. EDWARD EVERETT was not known as a humorist until he made so many good hits at the Springfield Horse Fair last fall. It is due to the distinguished statesman and orator that at least one of his witticisms should go down to posterity in the Drawer, and we therefore cite the following passage from his speech on that occasion:

"The noble qualities of the horse seem, indeed, to have made an impression upon the most brutalized of our own species. I suppose it is this, if it were worth while to attempt to account for the freaks of a madman, which led the Emperor Caligula to erect a marble stable for his horse, Incitatus, to provide him with an ivory manger, with housings of imperial purple, a breast-plate studded with diamonds and pearls, and then to elevate him to the dignity of the consulship. This seems, to be sure, a mere freak of madness; and yet, I am inclined to think that at that time it was a better choice than could have been made out of the venal courtiers and factious pretorians of the imperial court; and I believe, Sir, had it been put to the vote throughout the Roman empire, then coextensive with the civilized world, they would have decided that they had a better consul in the horse than in the Emperor. [Laughter and applause.] Sir, they had been too familiar with the rapacity of the tyrants who chased each other over the stage, dagger in hand, not to be pleased with the elevation of a ruler who took nothing but oats out of the public crib—[Laughter]—a ruler, Sir, who, while the reins were with him, would at least have given them a 'stable' administration. [Renewed laughter.]"

A NORTH CAROLINA contributor enters next:

"Hamilton C. Jones, our Supreme Court reporter, is not unknown to the world of humor beyond the borders of the Old North State. His 'Cousin Sally Dillard' has been read and enjoyed almost every where, and has outlived numberless imitations. Mr. Jones is now well advanced in years, yet he is an active, laborious man, and as genial a companion as ever. Like all true humorists, he has a keen perception of the genuine arti-

cle, and enjoys the severest joke when made even at his own expense. He tells the following on himself; and although it has suffered in its present hands, I think it worthy of preservation:

"The Calabria settlement in Rowan County, North Carolina—rather contemptuously denominated 'Callobry'—in former days was a wild, helter-skelter, unlettered people, true to their old *Dutch ways*, and true as steel to the candidate of their choice on election-day. Ham had several times been elected to the State Legislature, and always with plumping majorities from 'Callobry.' Presuming upon his personal popularity, in the contest between Judge White and Mr. Van Buren he took the field for White, and *stumped it* through the county. At the hatter's shop, the head-quarters of Calabria, he addressed a large concourse of the *natives;* and having his whole soul in the business, he laid himself out—told his best jokes, ridiculed the 'little bald-headed magician,' rung the changes upon extravagance and taxation, and played on his harp of a thousand strings to catch the popular ear. But, as he told us himself, he soon found it was *no go*.

"Never was any thing more flat that the Presidential election of 1836. Nowhere could the people be waked up to take an interest in it; and eminently so was it on the occasion to which we refer.

"Finding all efforts vain to get up a breeze, our friend fairly gave up the effort in despair. One of his old friends—a leader and main stake—sympathizing in his friend's evident mortification, and thinking it necessary to make the *amende*, or explanation, beckoned him off, and opened the subject thus:

"'Old hoss! we don't know nothing down here about White and Van Borem, nor we don't care a bit fur 'em; but s'pose you cum out yourself?'

"'What! for President?' said Ham.

"'To be sure,' said his friend; 'why not?'

"Well, Ham said it would never do for *him* to say he was not fit for the office, for his friend would have sworn he knew better than that; and being aware that, in those days, nothing could be done without treating, he replied that he was 'too poor a man.' 'Cris,' says he, 'my money would give out before I had treated half the nation.'

"'Egad,' said Cris, 'I didn't think of that! I s'pose it does take a sight of money to go the rounds in one of these big elections?'

"He looked as if he thought a hopeless darkness was about to settle on the fate of all concerned. At length his face brightened up as a new hope dawnen upon his fancy.

"'Egad,' says he, 'Jones, I have it! If you can't come out for President, s'pose you come out for Sheriff!—we'll all go for you down here.'

"Ham didn't canvass much more in that campaign; but it is said he made amends for it in the next. He had lots of fun with Cooney, but whether he was laughing at his comrades or with them never could be determined."

MISSOURI follows with some fine sketches:

"My piscatory friend, Bob, had never been out of sight of our majestic Mississippi River until last fall, when the notion strongly possessed him that a trip through the Atlantic cities would be pleasant and profitable. On reaching New York he straightway put up at Gunter's. Among his friends in St. Louis he had frequently asserted that his principal object in visiting 'the East' was for the purpose of eating some salt-water fish fresh from the ocean. Accordingly he took the earliest opportunity to enter the restaurant, and, with nervous haste, called for 'fish.'

"'Salt or fresh, Sir?' asked the waiter.

"Bob, imagining that the distinctive terms implied salt-water or fresh-water fish, with some impatience replied,

"'Why, *salt*, of course!'

"During the waiter's absence to fill this order, Bob smacked his lips with joyful anticipation at the prospect of soon realizing his brightest gastronomical hopes. The dish was speedily prepared and set before him, when, to his utter chagrin and sore disappointment, he recognized the well-known form and snuffed the familiar odor of a dastardly pickled MACKEREL! Fearing (as he honestly alleges) to expose his ignorance, he philosophically swallowed his indignation *and* the fish, firmly resolving to make up for his mistake at dinner-time. With exemplary patience Bob awaited the arrival of one o'clock, at which hour he seated himself at the same table at which he had taken breakfast, and being waited on by the same waiter—Mike—he called for the same dish:

"'Fish!'

"'*Mackerel*, Sir?' inquired Mike, innocently enough.

"'No! consarn you! Give me some *fresh* fish!' at the same time inwardly muttering, 'You can't catch this sucker a second time with *that* bait.'

"An enumeration of the various kinds of ocean fish on hand resulted in the choice of halibut. And on nothing but 'halibut' did Bob luxuriate during the balance of his stay in New York. He 'allows' that there is a vast difference between fish fresh from the 'briny deep' and fish fresh from the *brine*.

"THIS affair of Bob's was brought to my mind the other day when I happened to be looking over a parcel of old letters written by a young American friend on his travels in Europe. With your permission, dear Drawer, I append a couple of extracts from his correspondence, showing one of the difficulties to be encountered by tourists who enter *la belle France* without possessing the slightest knowledge of its language:

"'On reaching Paris I took up my abode at the Hôtel de Blanque, where a comfortable apartment is furnished me at the cost of several francs per diem. My meals I take at the restaurant that happens to be nearest at hand when I feel hungry. This arrangement works admirably; for I may stroll throughout the city without troubling myself about being home at meal-times, as eating-houses abound. In many of the streets every other house is a restaurant or a *café*. On the second day of my arrival, finding myself in a remote part of the city at my usual dinner-hour, I stepped into one of these establishments, that announced itself, in gilt letters over the door, as the "Restaurant du Cheval." A bill of fare was handed me. I selected a dish styled "*potage de fourrage*," which I found to be excellent; then a "*cheval fricassée*," which was delicious; winding up with a "*pâté de cheval*," which was superb. I retired from the house well pleased with my meal; but for the life of me I couldn't guess whether the dishes I had been devouring with so much gusto were beef, mutton, or pork. To satisfy a natural curiosity, I brought home one of the bills of fare,

and consulted my French and English dictionary on the doubtful points. You may imagine my horror and disgust on discovering, after a careful examination of my lexicon, that I had actually been enjoying an unusually hearty dinner composed entirely of *horse-meat!*

"'I assure you that in future I will give the "Restaurant du Cheval" a wide berth. As a matter of precaution I have purchased a small pocket-dictionary, which I shall hereafter always keep about me. I have already learned to eat *frogs*, and to relish them; but this French fashion of dining on *horses* doesn't exactly suit my ideas of the uses to which that noble animal should be put.'

"In a subsequent letter my facetious and unfortunate friend describes his ingenious escape from a similar fate to that above narrated:

"'Then toward the north of France by the Brussels Railroad. Took dinner at Amiens. This city is noted for many things, the principal of which are its *pâtés de canards*. On seating myself in the restaurant I called for one of those pies, and was about to dive into it with avidity when the idea struck me that I might as well find out what the word "*canard*" signified. My horse-meat dinner was fresh in my memory, and I had no notion of being caught again in the same way. Accordingly I took the precaution to consult my pocket-dictionary. As sure as I'm a sinner the following definition appeared therein:

"'CANARD—A Duck; a *Water-Spaniel!*

"'I congratulated myself upon the foresight that had provided me with so convenient an interpreter as a pocket-dictionary; yet now was in nervous doubt whether in reality a "duck" or a "water-spaniel" lay hidden beneath the crust of the tempting pie under my nose. I naturally hesitated about tasting the dish—my hunger almost overcoming my scruples. Several times I was on the point of digging into the savory mess, *dog or no dog;* but the power of principle invariably overcame the promptings of appetite, and at length I pushed the suspicious *pâté* out of reach of my susceptible olfactories. Vainly I looked around the room in search of somebody to whom I could confide my dilemma, and from whom I could get an answer in plain English as to the materials which composed my intended meal. None but jabbering Frenchmen met my view. I had not eaten a bite since breakfast—it was now three o'clock—and the gnawings of my stomach excited my envy toward the frog-horse-and-dog-eating people that surrounded me. I felt inclined to "lick" some of them on the spot; but, my better judgment intervening, I merely licked my chops instead.

"'Necessity is the mother of invention. My ravenous appetite finally suggested to my mind a method of settling my doubts on the point in question. I sagaciously hit upon the original and excellent plan of cutting the pie open in order to discover its contents. I did so. An undeniable "drum-stick" and an unmistakable duck-wing were immediately disclosed. Setting my remarkable reasoning faculties to work upon these facts, I speedily arrived at a triumphantly satisfactory conclusion. As fowl's wings and drum-sticks do not, as a general thing, appertain peculiarly to water-spaniels, I shrewdly decided in my own mind that the dish before me must be—something else.

"'Whereupon I demolished the duck-pie, and left upon my plate a monument of bones in commemoration of my victorious solution of a very difficult problem.'"

THE Old North State sends again:

"Governor S—— was a splendid lawyer, and could talk a jury out of their seven senses. He was especially noted for his success in criminal cases, almost always clearing his client. He was once counsel for a man accused of horse-stealing. He made a long, eloquent, and touching speech. The jury retired, but returned in a few moments, and, with tears in their eyes, proclaimed the man not guilty. An old acquaintance stepped up to the prisoner and said:

"'Jem, the danger is past; and now, honor bright, didn't you steal that horse?'

"To which Jem replied:

"'Well, Tom, I've all along thought I took that horse; but since I've heard the Governor's speech I don't believe I did!'"

THE city of Cincinnati is the source of the following, which is as well done as any thing we have had in many a month:

"DEAR DRAWER,—I have been one of your most 'devoted admirers' from the day you commenced *drawing* in the good things from all parts of our 'glorious Union,' *pushing* them to every quarter of the globe, and *leaving* them to make glad the hearts of your millions of readers. I have often noticed that the 'Queen City' was far behind in furnishing contributions for you. I hope you will notice this letter some day (don't care which way), for the express purpose of seeing if your readers in 'Porkopolis' can pen any thing better than pigs. Do urge them to try something besides lard, and if they have not many ribs to attend to they will spare a little time for you, and then smoke hams and Havanas in peace. I have not seen any thing lately in the Drawer about the 'little folks,' and the next time you fill a page or column about them, perhaps you will insert the following:

"Little Johnny was the pride and pet of his parents—a bright, blue-eyed 'six year old.' His father, one morning after reading a chapter in the Bible, asked him what a famine was. His quick reply was: 'A cob without any corn on it.'"

FROM Virginia we have the following:

"At a meeting of our Legislature several years ago, some scheme of internal improvement was under consideration. A member from one of the Valley Counties, who, though an intelligent man, was rather fond of making long speeches, had taken the trouble to write out a speech upon the question, filling thirty or forty pages of foolscap paper, which he proposed to deliver. Unfortunately for him, however, the question was called up one day while he was absent and disposed of. Determined that his labor should not be in vain, and that the public should not lose the benefit of his views, he took occasion a few days afterward, while the House was in Committee of the Whole upon some other measure, to 'deliver himself.' As he proceeded the members, one by one, rose and left the house, until finally there was quite 'a beggarly account of empty boxes.' Some five or six members had remained, and one of them arose to a point of order. At this juncture Mr. N—— arose and remarked: 'I hope the gentleman will not insist upon the point of order, but will permit the gentle-

man from —— to finish his *soliloquy*.' Strange to say, the gentleman from —— did finish his speech.

"A MARRIED woman was brought before one of the justices of the county in which I reside, charged with the larceny of some pewter plates. After hearing the evidence, and deciding that the woman was guilty, he ordered that ten lashes should be inflicted upon her husband, who was then and there present, giving as a reason that the Scriptures declared that man and wife were one flesh, and as the wife was the weaker vessel, it was right that the man should bear the penalty. For the honor of my native county I am glad to be able to say that this happened a long time since; but it undoubtedly did happen, as the records of the county show that a suit was brought by the husband against the justice for damages."

THIS is from away down South, and is darky all over:

"Some time in the spring of '57 the steamer *St. Nicholas* 'opened' in this city with a caliope—the first one ever heard in these parts—causing the greatest consternation among the servants, most of whom supposed they must now give an account of their sins sure enough. But one of them, a girl, stood and listened for some time, and at last walked into the house and expressed her opinion thus:

"'Missus, I don't b'leve dat ar's Gabriel, 'cause I a'nt 'feard a bit; *but if it is him, he's playin'* "*Wait for the Wagin,*" *sure's you're born!*'"

AN ODE

ON THE WRECK OF THE SCHOONER "MEDORA," WITH THE LOSS OF ALL ON BOARD, FEBRUARY 29, 1836.

COME all kind husbands, now behold
A scene which makes my blood run cold.
All loving wives, pray now appear,
In solemn mourning, drop a tear.

Come, let us weep for those that weep
For their lost friends plunged in the deep;
And let us now all take some part
In grief which breaks the tender heart.

'Tis now these lines I bring to view,
The captain and his vessel's crew,
* * * * * * *
And how and when they lost their lives.

On Tuesday morning, as we do hear,
The *Medora* from the canal did steer;
'Twas east-northeast they her did steer,
Bound for Oswego, as we do hear.

They had not sail-ed long before
The winds did blow, the sea did roar,
Which caused each heart to lament full sore,
And strive to gain some port on shore.

The winds increas-ed all the night,
Which did the seamen much affright;
The captain says, "With us 'tis o'er:
We never more shall reach the shore!"

Thus one by one on board was lost,
Till eight poor souls were drowned at last;
Were drown-ded, buried in the deep,
Which causes many for to weep.

On Thursday morning 'twas cold and clear,
The 12th of November, as you shall hear,
'Twas early at the dawn of light,
When the *Medora* appeared in sight.

Scarce could one to the *Medora* go,
The billows over her did flow;
Her people plunged in the deep,
Which causes many for to weep.

Her masts were broke, her men were gone,
Her hull was left to face the storm,
The people from the country round
Came flocking to the doleful ground.

The shores were lined both far and near,
To see what they could find and hear;
At last some friends they did appear,
Inquiring for their children dear.

Near little Stony Creek were found
These bodies four, which there were drowned;
Were drown-ded, buried in the lake,
Which causes many a heart to ache.

On Wednesday morning, at break of day,
Two men were found upon the lake,
And from the water we did them take,
And carried them to a solemn place.

Their names we now would here describe,
One Thaddeus Clark we can't deny,
There was Mr. Hezekiah Morse,
Who from the water we took first.

The other names you soon shall hear,
'Twas Charles M'Dade as doth appear,
Lay in the *Medora* all the while,
We searched upon the shore for miles.

There's one more name for to describe,
'Tis Mr. Doozenbury drowned;
He was the last that came on shore,
But yet we looked and searched for more.

And when their bodies we did find,
It was a dreadful solemn time,
To see the people flocking round,
To see the corpses on the ground.

But oh! how dreadful to relate,
There's *four more* men lays in this lake,
Lays floating this wide lake all o'er!
Which grieves their parents' hearts full sore.

But oh! how dreadful 'tis to hear
The parents mourning far and near,
For their poor children lies in the deep,
Which causes many for to weep.

Altho' these lines which I've enrolled,
'Tis not one tenth that can be told,
Who lost their lives in all that gale,
And found at last a watery grave.

Upon our upper lakes, we hear,
There's many a friend and parent dear
Was swept into the foaming deep,
Which causes many for to weep.

Come all ye seamen far and near,
Come listen to these lives so dear,
Before with you it all is o'er,
You sink at last, to rise no more.

I hope you will in time prepare
To meet your God, where'er you are,
Whether by water or by land,
When he shall give the dread command.

A CALIFORNIA gentleman writes to the Drawer a little one that is very good:

"At a Democratic meeting held here last night, a certain windy orator was introduced to the crowd, and began a speech. A sturdy miner persisted in calling out, at the top of his bent, 'Jones! Jones! Jones!' This was the very man who was speaking, and the President so informed the calling miner, who, with great disgust, replied, 'Oh, git out! *He's* the same little skeesick that told me to call for *Jones!*'

"Jones was not the least disconcerted by this revelation; but, when order was restored, pushed on."

A BOSTON barrister mentions a court incident that will bear repeating here:

"A young lawyer before Judge —— had occasion, in support of a motion that he made, to con-

tend that his client was dead. The Judge asked him what reason he had for believing that his client had deceased. The young limb of the law mentioned several very unsatisfactory reasons, and wound up by saying: 'And furthermore, your honor, I received a letter from him a few days since, in which he stated that he was dead!' The Judge smiled, the bar smiled, and the young lawyer subsided."

This is very well for five years old. It comes from Louisiana, where the happy mother writes:

"When Willie was five years old I often amused him by taking from its shelf a 'Pictorial History of America,' showing him the illustrations, and relating the incidents they were designed to represent. One day a quantity of cotton-wool was lying near us. Willie had been busy with the snowy heap, and presently he came to my side, a paper soldier-cap on his head, a wooden sword in his hand, and the bosom of his frock—for he had not yet been advanced to the dignity of 'unmentionables'—filled with cotton.

"'Look, sister!' he cried, 'I am General Jackson at the Battle of New Orleans!'

"'General Jackson!' I exclaimed, laughing at the comical appearance he presented. 'How so, Willie?'

"'Why,' he said, his blue eyes spreading with wonder as he clapped his little hand on his well-wadded chest, '*don't you see my cotton breast-works?*'

"The same dear little fellow said to his sister one night when he saw a mist around the moon: 'Oh, Eee'—a pet name for her—a sadness stealing over the little uplifted face, 'the moon has its crown of thorns on to-night!'"

And this is good for Charley, a California youngster:

"Winney, the District Attorney, rode up to a tavern at the county town when Court was in session, and Charley was on the piazza ringing a bell right lustily. The lawyer was powerful hungry, and observing that the people did not go in to dinner at the first ringing of the bell, asked Charley if they rung two bells for dinner at that house.

"Charley looked at the bell, and then at the lawyer, and then at the bell again; and with eyes all aglow, answered,

"'They ring *this* bell two times.'"

A version of the following story appeared some years since in the St. Augustine *News*. It has died with the *News*. It is "true as holy writ," and too good to be lost in oblivion:

"Some days after the 'corps d'armée,' led by General Gaines from Louisiana to Florida, was relieved from the log-pen in which they had been cabined and cribbed by the Seminoles, and was safely encamped at Fort King, while the valiant Captain Thistle—who, at the head of a 'gallant band of heroes bold,' had come all the way from the Opelousas—was taking his matutinal walk in the environs of the encampment, as usual, 'like Turk or Tartar, armed to the teeth,' double-barreled-gun in hand, rifle-carbine slung over his shoulder, a brace of double-barreled pistols (this was before the days of revolvers), bowie-knife and tomahawk in belt, and two small pistols in the breast-pocket of his hunting-shirt, he met with General Clinch.

"'Good-mornin'! good-mornin', Gineral!' says the Captain.

"'Good-morning, Captain!' replied the General. 'Why you are a complete walking armory, Captain!'

"'Yes, Gineral, so they calls me in camp.'

"'Well, Captain,' says the General, 'I should really like to know how you manage to fight all your guns.'

"'Gineral,' answered the Captain, 'you do me proud; I'll examplify it to you immedintly.'

"So, without more ado, he fired his gun right and left, laid it down before him, unslung carbine and fired direct in front, then drew bowie-knife with his right hand, with the left drew a double-barreled pistol, fired to the right, and was in the act of half-facing to the left to fire the other barrel, when the General, almost convulsed with laughter, cried out,

"'Stop, stop, Captain, for Heaven's sake, stop; you'll alarm the camp! I see it now, I see it all; but, Captain, tell me what do you do with the little pistols?'

"'Oh, Gineral,' says the Captain, 'them's for the little Ingins.'

"The redoubtable Captain was subsequently made Uncle Sam's guardian angel of live oak and other ship stuff, in East Florida, and while in that capacity cut such pranks before high heaven as made his brother angels sometimes laugh, and sometimes cry.

"He, that is the Captain, '*first invented*' a gun or swivel to be carried on and fired from the back of a horse or mule; and when it was suggested by an artillery officer that the recoil would be distressing to the animal, he answered that 'it would not rekile a bit, or if it did, the rekile would be more for'ards than back'ards.'"

"A great-uncle of mine, one of the early graduates of Dartmouth College, used to relate the following:

"'In some of the earliest days of the college, during the presidency of one of the venerable Wheelocks, it was frequently unsafe for any one to ride outside the town to any considerable distance on account of the danger of attack from hostile Indians, as well as from wild beasts, as the town was still closely hemmed in by the dense, primitive forest. But one pleasant afternoon in autumn, the venerable President was observed jogging out of the village on his little *poddy* black horse, on one of the thoroughfares leading into the woods; no further notice was taken of the circumstance until just before dark a noise of alarm heard in the street attracted all the citizens to see what was the matter, when, behold, the Doctor hove in sight, bending over his horse's neck, his hat off and his white hair streaming in the wind, and belaboring his horse's sides with a stout cudgel, at the same time shouting at the top of his voice, "*Bear and nine cubs! bear and nine cubs!!*"

"'As soon as he could recover his breath he hastily explained to the alarmed by-standers that at the corner of a certain corn-field, but a little distance from the village, they would find the objects of his terror, which had disputed his further progress and for more than an hour kept him *at a stand*, afraid even to turn and fly. The citizens hastily armed themselves and proceeded to the well-known spot to secure the game, and avenge this outrage on the highest dignitary of the place. But no bear

was to be seen; the field had been newly cleared up, and the tree tops and limbs burned on the ground; and at the corner indicated by the Doctor stood, in threatening attitude, the blackened stump of a large *white birch*, with those of several smaller ones immediately around it, and which, from one point of view, did indeed *bear* a close resemblance to the varmints in question.

"'Thus ended the affright, and, in the multitude of similar alarms at that day, both real and false, the affair was soon forgotten. But the President was, at the time, filling the chair of Professor of Mental Philosophy in the college, and the recitation of the senior class in this department, a few days after the above incident, chanced to be on the *emotions*, the particular topic of the day being the emotion of *terror*. As was his wont in conducting these exercises, the Doctor called upon each member, in due order, to give *extempore* an illustration of the emotion of terror. Accordingly, one named a ship foundered on a lee-shore, the surf beating around her, passengers and crew hanging to the bulwarks and shrieking for help, when no help could be afforded them. Another named a burning house, and a delicate female on the roof with outstretched arms, begging for succor when no ladder could be found to reach her. Some drew their illustration from the bloody scenes of savage warfare so common and so true, too, at that day; and so on, some one thing and some another, to the end of the list, except one, a lazy little wag, the youngest in the class, a mere stripling, who had never made his voice heard in that department of study; but the President, noticing an unwonted look of intelligence in his bright eye, in his very blandest tone of voice, said, "Now, George, can you give us an illustration of this emotion that will compare with those we have just heard?"

"'The boy instantly sprang to his feet, and hastily running his fingers through his hair to dishevel it, he bent forward and threw himself into a position, as he well knew how to do, to imitate "old prex," and, with both hands raised and fingers spread, exclaimed, with his eyes and every feature and muscle fixed as in extreme terror, "*A bear and nine cubs! bear and nine cubs!!*"

"'Even the Doctor was forced to admit that this, manner and matter included, was the best illustration of the emotion that had been given, and the poor boy's standing was not a little elevated by this his first success.'

"The same great-uncle, before mentioned, was, in his day, a Baptist clergyman, and was a good deal distinguished for his gift at off-hand or *extempore* sermonizing, which peculiar kind of preaching many of that persuasion, even at the present day, deem the only kind of preaching that *is* preaching. At a meeting of his Association once, in the town of W——, a young and aspiring brother, and not a little conceited withal, had contrived to obtain the appointment as preacher of the annual sermon. Elder M——, as the oldest minister in the Association, was seated in the pulpit and assisted in the preliminary exercises. Soon the time came for the sermon. The youngster arose, opened the Bible, read his text, and, with a great flourish, made a *splurge* to begin his discourse, but, after several trials, became confused and finally broke down entirely, whispering in the ear of the aged elder as he sank back on the sofa beside him, '*You* must speak to them, Father M——, I can't say a word.'

"The old gentleman immediately arose to the desk, and without opening the Bible or naming the chapter and verse of the text, said, 'Give us of your oil, for our lamps are gone out,' and merely added, 'It isn't necessary to enlarge upon this subject, brethren, the application is obvious.' It *was* an entire sermon of itself."

Old Jacob J—— was a shrewd Quaker merchant in Burlington, New Jersey, and, like all shrewd men, was often a little too smart for himself.

An old Quaker lady of Bristol, Pennsylvania, just over the river, bought some goods at Jacob's store, *when he was absent*, and in crossing the river on her way home, she met him aboard the boat, and, as was usual with him upon such occasions, he immediately pitched into her bundle of goods and untied it to see what she had been buying.

"Oh now," says he, "how much a yard did you give for that, and that, and that?" taking up the several pieces of goods. She told him the price without, however, saying where she had got them.

"Oh now," says he, again, "I could have sold you those goods for so much a yard," mentioning a price a great deal lower than she had paid. "You know," says he, "I can undersell everybody in the place;" and so he went on criticising and undervaluing the goods till the boat reached Bristol, when he was invited to go to the old lady's store, and when there the goods were spread out on the counter, and Jacob was asked to examine the goods again, and say, in the presence of witnesses, the price he would have sold them at per yard, the old lady, meanwhile, taking a memorandum. She then went to the desk and made out a bill of the difference between what she had paid and the price he told her; then, coming up to him, she said,

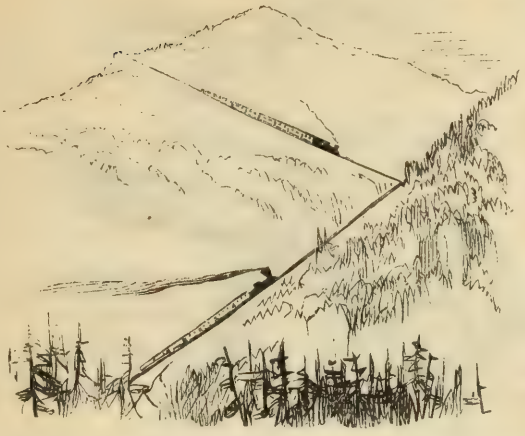
"Now, Jacob, thee is sure thee could have sold those goods at the price thee mentioned?"

"Oh now, yes," says he.

"Well, then, thy young man must have made a mistake; for I bought the goods from thy store, and, of course, under the circumstances, thee can have no objection to refund me the difference."

Jacob being thus cornered, could, of course, under the circumstances, have no objection. It is to be presumed that thereafter Jacob's first inquiry must have been, "Oh now, where did you get such and such goods?" instead of "Oh now, how much did you pay?"

The late General John M'Niel, brother-in-law of President Pierce, formerly surveyor of the port of Boston, talked of for Governor for New Hampshire, a prominent politician, was Major-General of the militia of that State, and a man of high military bearing. In the war with Great Britain he had received an honorable wound in the knee that caused it to be stiff during his life. Like all other war-wounded veterans, he was proud of his scars. At one of his military reviews a distinguished politician, who had recently risen into notice, observing the General's lameness, remarked:

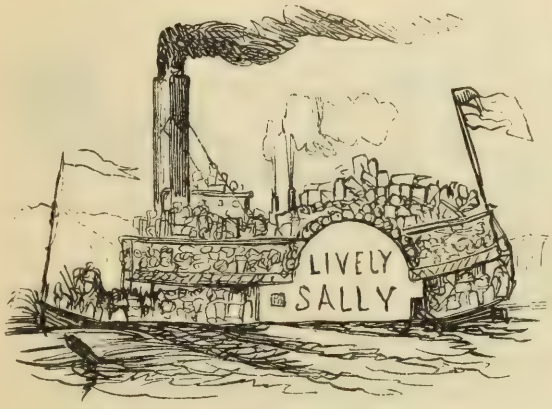


"I perceive you have a stiff knee, General. How did you injure it?"

The General was piqued to think that any body should be ignorant of so memorable an event as his wound, and, looking at him with great contempt, responded:

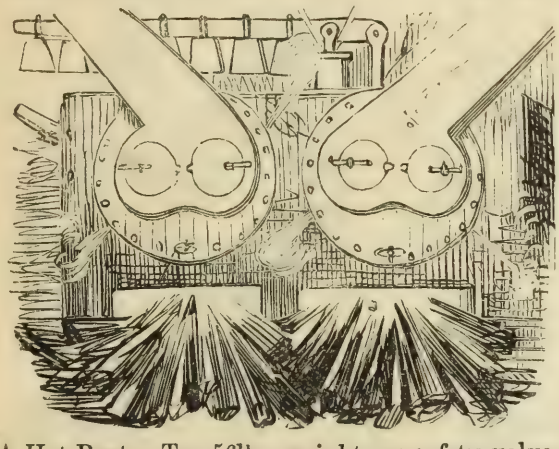
"Fell off a horse, Sir! You never read the history of your country, did you?"

Arrowsmith's Panorama of Western Travel.

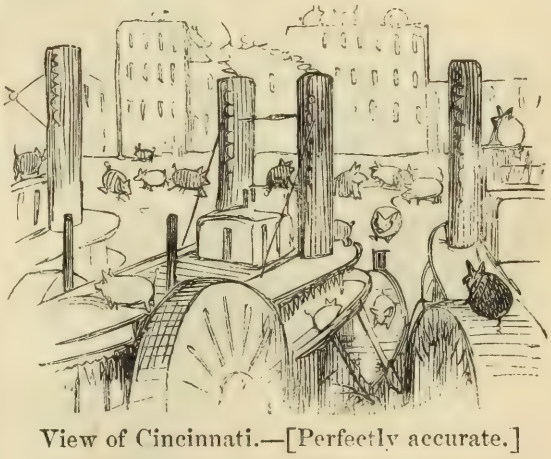


[*DESIGNED FOR EXHIBITION IN ENGLAND.*]

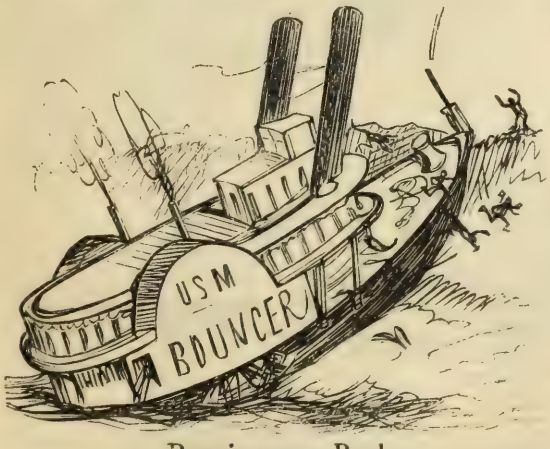
The Alleghany Mountains.—Railroad in distance.



Pittsburgh on a clear morning.



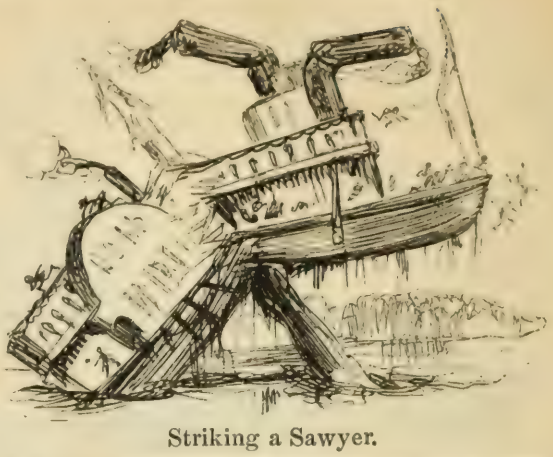
Western Steamboat, with full cargo.



Engineer on duty: two feet water on lower deck.

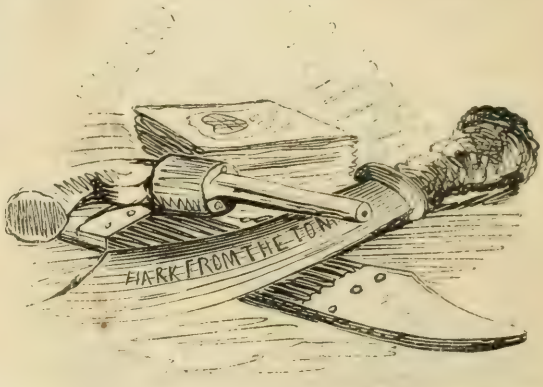
A Hot Boat.—Ten 56lbs. weights on safety-valve.

View of Cincinnati.—[Perfectly accurate.]



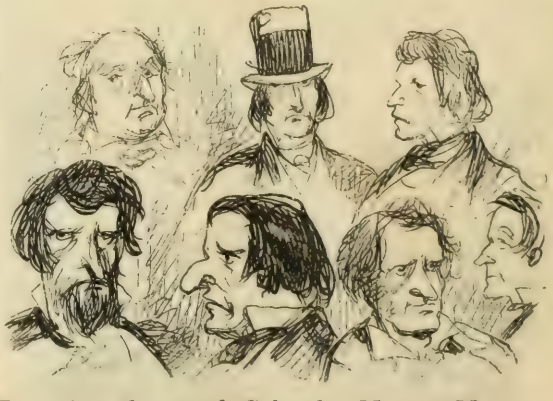
Running on a Bank.

Going over Falls of Ohio.—[Not exaggerated.]



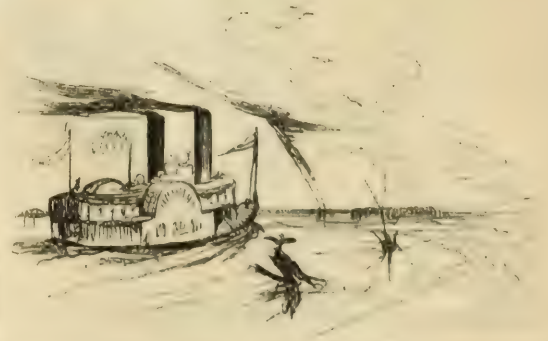
Crossing Flint Island Bar at low water.

Striking a Sawyer.



Curious effect produced on Steamer by running aground.—[A frequent occurrence.]

Sketch of Baggage belonging to Southern Gent, who occupied Stateroom with Arrowsmith.



Scene at Dinner-table.—Every man for himself.—[This sketch is very correct.]

Portraits of several Colonels, Majors, Members of Congress, etc.—Found on board Steamer.

View of Steamer's Bar.—[Have we a Bourbon among us?]

Panoramic view of Scenery of the Mississippi, from Cairo to New Orleans.

Fashions for December.

Furnished by Mr. G. Brodie, 300 *Canal Street, New York, and drawn by* Voigt *from actual articles of Costume.*

Figures 1, 2, and 3.—Dinner Costume, Children's Dresses.

THE DRESS illustrated on the preceding page is adapted for a dinner, carriage, or opera toilet, or any occasion where full dress is not required. It is of pearl-colored taffeta. The corsage is half high, closely fitting, and with round waist. The skirts are double and very full; the upper one made tunic-fashion; the under one, deep behind, is rather short in front, so as to display the slippers. The ornaments consist of a plaiting *à la vieille* of the same material as the dress, bordering the neck, sleeves, and the edges of the upper skirt, and *bretelles*, formed in the same manner. This trimming is made of graduated width. The sleeves are full and long, falling below the tips of the fingers, and are cut to a point, which is finished by tassels. The shoulders are ornamented in the same way at the point of the openings, on the outside of the sleeves, which are divided through their entire length. The sides of the opening are connected by crossings of ribbon to match, which form lozenges on the under-sleeves; *passementerie* buttons are placed on the crossings. The under-sleeves are of muslin, very full, with narrow insertions, running lengthwise.

The BOY'S COSTUME consists of a black velvet jacket, cut with rounded corners, and confined only at the neck. The sleeves, rather short, and full below, are trimmed with fancy buttons; the cuffs being of plaided velvet, with a waved edge. The skirt is of plaid, with a deep border of black velvet; gaiters, and plaided stockings. A salmon-colored sash, with long ends, passes over the shoulder. The collar is turned over a cord and tassels. The sleeves are puffed, with English cuffs turned over. The pantaloons are of Nansook. The cap has a white plume.

The GIRL'S DRESS is of blue-bird-egg-colored merino, with a V-shaped plastron. It is trimmed with silk *passementerie* fancy buttons and a "Tom Thumb" fringe. The skirt has a border of silk to match, with pipings of the same, arranged as shown in the illustration. The sleeves are short, and frilled.

DRESS CAP.—A triangular piece of black velvet, bordered with a cherry and black satin ribbon, in blocks, with a deep frill of black lace thrown over it in front. A loose twist of cherry and black ribbon is placed on the crown, circular shaped, ending in a tie with long floats.

HOME CAP.—Of blonde and crape. The front of crape, gathered; narrow blonde edging; Marie Stuart point, formed by a plaiting *à la vieille*. A crape bow is placed on the crown, with long strings edged with lace.

Gray silks, so much hitherto in vogue, are giving way to those which are plaided, or checked, in bright colors—apropos of which, we should mention a very unique *sortie de bal*. It is of white merino, circular, with two plaided scarfs, tied in a bold bow at the back; thus forming a *hood*, which is faced with white silk. The unequal lengths of the scarf droop down the back, ending in rich fringe. In front they fall at each side of the neck; and if the garment is closed, may have a bow or a cord loop over a button to match.

We have seen a very pretty collar for gaslight, made of an open net-work of white bugles, with the centre of each mesh occupied by a large white bead, and fringed with bugles.

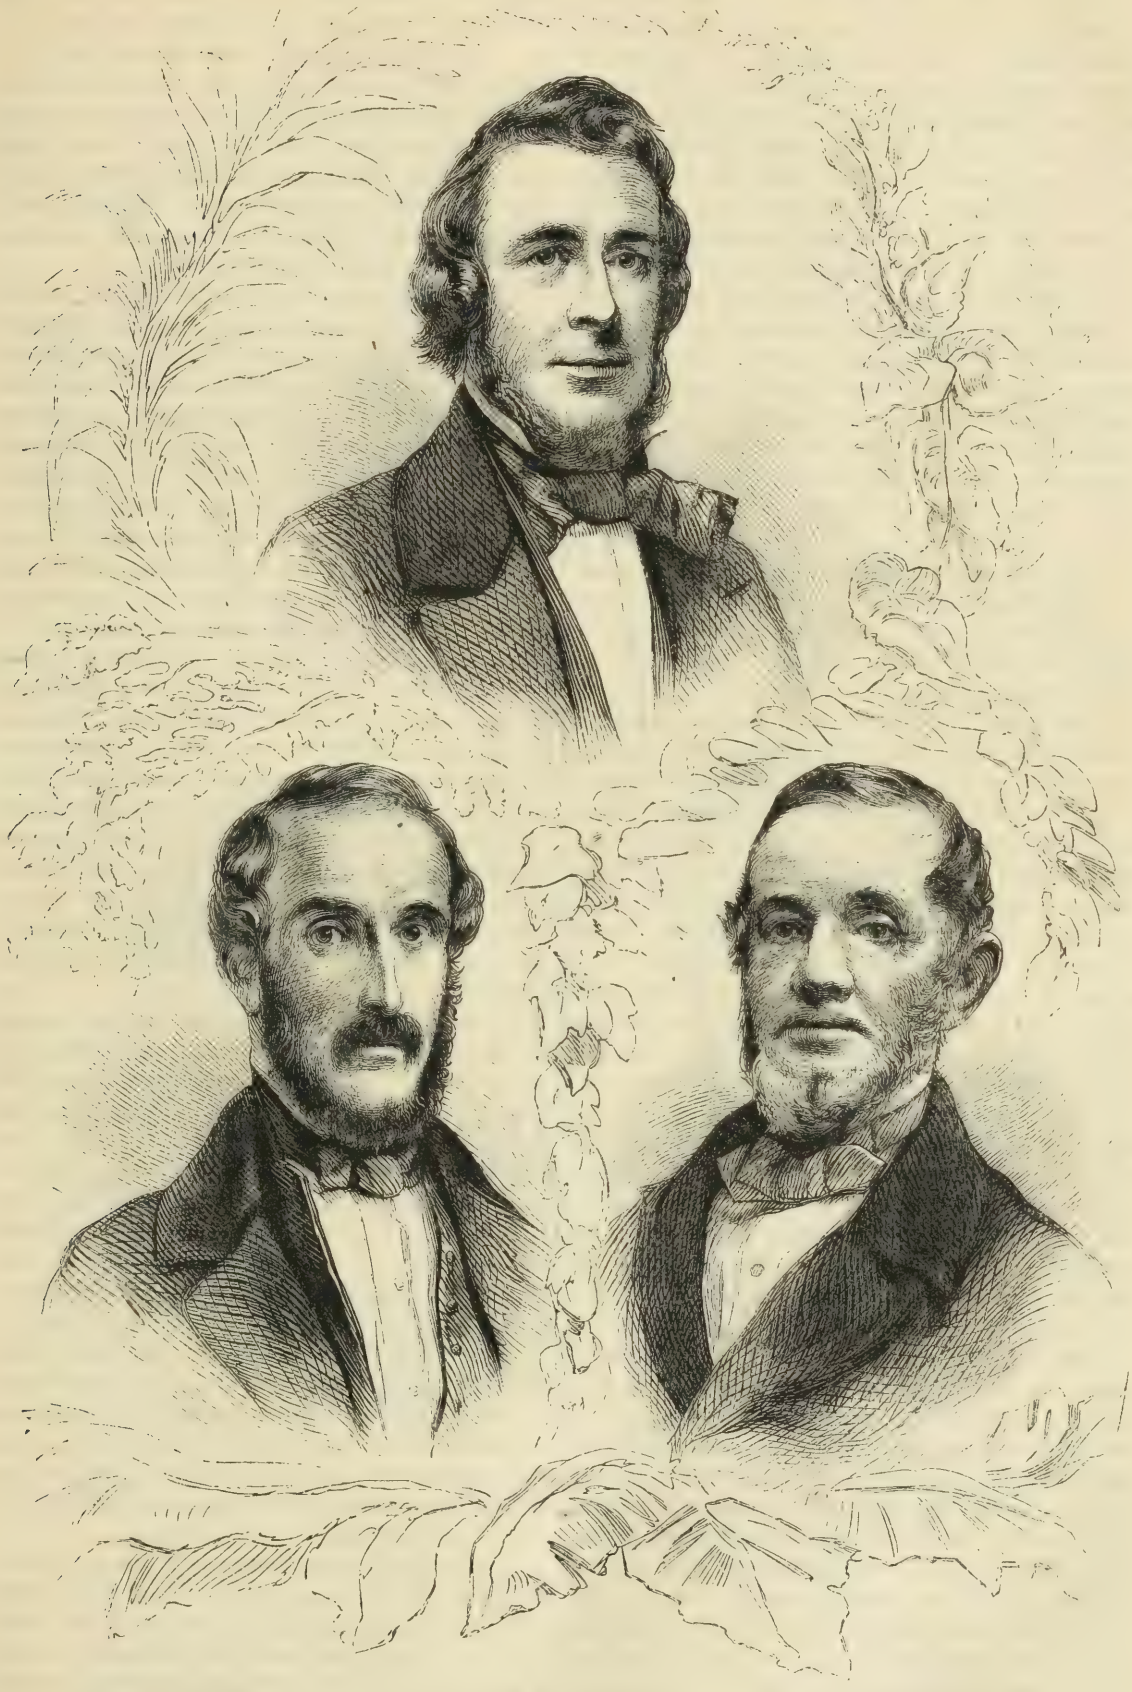
HARPER'S
NEW MONTHLY MAGAZINE.

No. CIV.—JANUARY, 1859.—Vol. XVIII.

TROPICAL JOURNEYINGS.—By ORAN.

THE return from Portobello to Aspinwall was accomplished with a dash of the pen. We set sail——we arrived. But embodied in that dash were certain incidents which it will be necessary to relate in order to the full understanding of certain circumstances which are to follow. Of first importance was an acquaintance formed with Colonel Totten, the Chief Engineer, and Mr. Center, the General Superintendent, of the Panama Railroad.

Entered according to Act of Congress, in the year 1858, by Harper and Brothers, in the Clerk's Office of the District Court for the Southern District of New York.



Every body ought to know what the Panama Railroad is, and where it is—for *every body* reads the papers. Every body may have had either a neighbor or a friend, and perhaps dozens of them, who have traveled over that road. Perhaps the reader has been over it himself. He may know that, in the year of our Lord one thousand eight hundred and forty-eight, three bold merchants of the city of New York, after obtaining a contract from the Government of New Granada, memorialized Congress on the subject, and obtained a charter for the protection and prosecution of the work, and that in seven years afterward the road was completed. But *every body* does not know the stupendous and almost desperate character of that undertaking, the means by which it was accomplished, the perils and privations encountered, the labors undergone, the skill, energy, and courage displayed by the pioneers and builders of the Panama Railroad.

Colonel Totten was one of the pioneers of that work. From its inception to its completion upon him rested the responsibility of its location and construction. He shared the dangers and the sufferings of the builders, and led in the labor and the toil. During the voyage just alluded to I had an opportunity of conversing freely with him upon the subject of this road. I listened with deep interest to its history from the early times to its glorious and successful present. From that and subsequent conversations with him and with Mr. Center—who had been engaged upon the work for several years, first as Vice-President, and more recently as Superintendent—and from documents, letters, books, and sketches, to which I had access through their united kindness, I am enabled to impart the results in the form of a brief history, which, before traveling over the road with the reader, I shall take the liberty of laying before him.

The project of a great interoceanic communication across the Isthmus of Panama had been agitated for centuries, the whole commercial world was alive to its importance, and coveted its advantages. New Granada, unable herself to attempt so great a work, had freely offered the privilege of so doing to any nation rich and brave enough to undertake it, well knowing the benefits which must accrue to her own citizens thereby. England had looked toward the project with longing eyes, but quailed before the magnitude of the labor. France did more, surveyed and entered into a contract to establish it; but too many millions were found necessary for its completion, and it was lost by default.

Events at last occurred which turned the attention of the American people to this transit, viz., the settlement of the northwestern boundary, by which we came into possession of Oregon, and the war with Mexico, which added California to our possessions. But while the accession of these territories was of the highest importance to us in a national point of view, their distance rendered them almost inaccessible to the class of emigrants who usually settle our new domains, as well as inconvenient to the proper administration of law and government. Still, urged on by that pioneering spirit which seems inherent in the blood of the American, and invited by the prolific soil and genial climate of these distant possessions, and a prospect of a new and enlarged field for commercial pursuits, large numbers of our people migrated thither around Cape Horn. Congress, however, in 1848, in order to render these countries more accessible, authorized contracts to be entered into for the establishment of two mail lines of steamships, the one from New York and New Orleans to Chagres, and the other, to connect with this by the Isthmus of Panama, from Panama to California and Oregon. The inducements to invest in these projects were not sufficient to attract the favorable attention of capitalists, and the contracts were taken by parties without means, who offered them for sale, and for a long time without success.

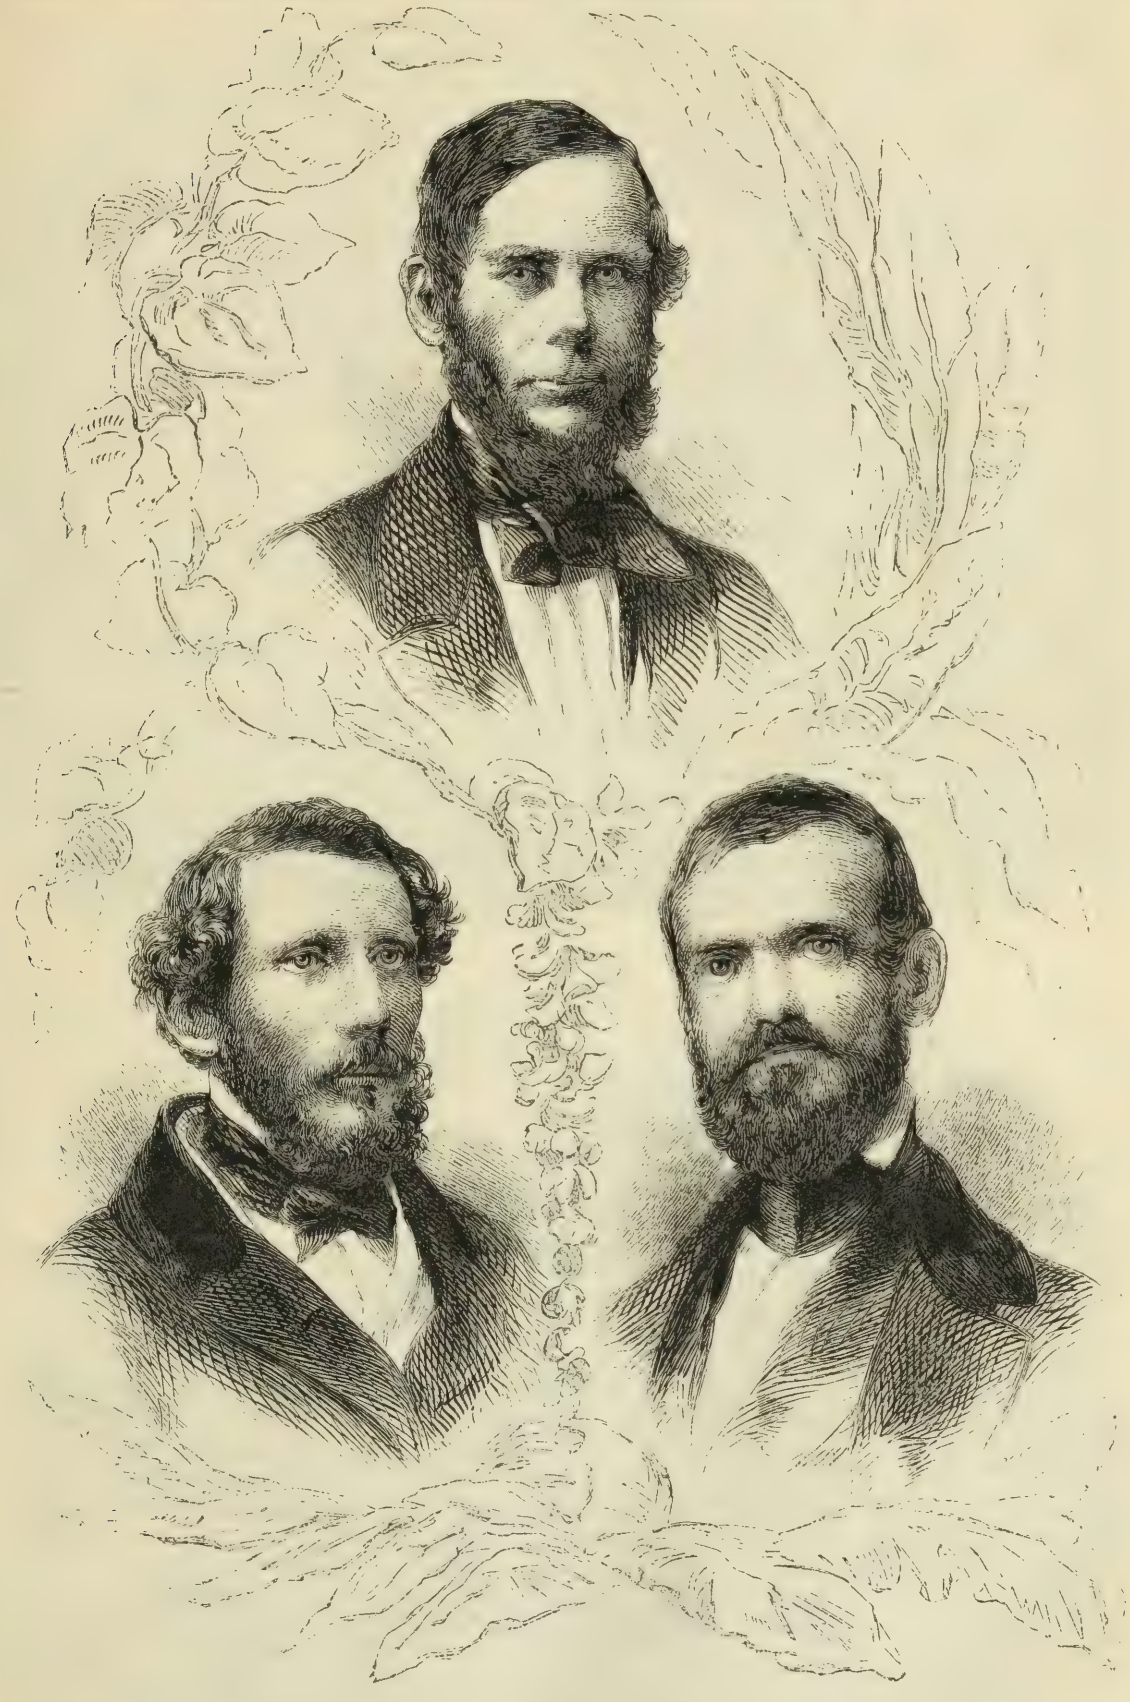
Men were at last found bold enough to venture upon the enterprise. Mr. William H. Aspinwall secured the line on the Pacific side, and George Law that on the Atlantic. In the Atlantic contract there was comparatively little risk, and a promise of almost immediate remuneration, as it connected with the cities of Savannah and New Orleans, and terminated at the portals of the Pacific Ocean. But the Pacific contract was looked upon by the generality of business men as a certain sequestration of a large amount of property for an indefinite time, with a faint prospect of profit; and the wonder seemed to be that so sound a man as Mr. Aspinwall should have engaged in it. But it soon became evident that he expected no great profit from the steamship line, *per se;* but that, with those enlarged and far-reaching views for which he is so justly noted, this line was only a part of the great plan which he had conceived, the remainder being embraced in the bold design of a railroad across the Isthmus of Panama. And at this time he, with Mr. Henry Chauncey and Mr. John L. Stephens, entered into a contract with the Government of New Granada for the construction of that work. Mr. Chauncey, like Mr. Aspinwall, was a large-minded and public-spirited capitalist, whose integrity and straight-forwardness were undoubted. Mr. Stephens possessed an experience in the country through which the road was to pass, and a knowledge of its geography and its inhabitants, gained by practical study and observation. These three gentlemen were associated together for the prosecution of this great enterprise, and shortly after, Mr. Stephens, accompanied by Mr. J. L. Baldwin, a skillful and experienced engineer, made an exploration of the route, and decided upon its entire feasibility, dissipating the fears entertained by many that no line could be established without such heavy grades as would interfere materially with the paying character of the undertaking, by the discovery

JOHN L. STEPHENS. WILLIAM H. ASPINWALL. HENRY CHAUNCEY.

of a summit gap no more than three hundred feet above the ocean level.

A formal contract was then entered into with the Government of New Granada, on the most favorable terms, for the exclusive privilege of constructing a railroad across the Isthmus of Panama. Among the most important concessions by the terms of this contract was one guaranteeing that all public lands lying on the line of the road were to be used gratuitously by the Company; also a gift of 250,000 acres of land, to be selected by the grantees from any public lands on the Isthmus. Two ports, one on the Atlantic and the other on the Pacific

(which were to be the termini of the road), were to be *free* ports; and the privilege was granted of establishing such tolls as the Company might think proper. The contract was to continue in force for forty-nine years, subject to the right of New Granada to take possession of the road at the expiration of twenty years after its completion, on payment of five millions of dollars; at the expiration of thirty years, on payment of four millions; and at the expiration of forty years, on payment of two millions. Three per cent. was to be paid to the New Granadian Government upon all dividends declared. The entire work was to be completed within eight years, and a sum of one hundred and twenty thousand dollars was to be deposited at its commencement, as security for the fulfillment of the contract, but to be refunded, with interest, on the completion of the road within the given time.



Up to this period calculations for the ultimate success of the undertaking were based upon the advantages it would afford in shortening, by many thousand miles, not only the route to California and Oregon, but to China, Australia, and the East Indies, and in the development of the rich, but then almost inaccessible, countries bordering the whole Pacific coast. At this time, however (the latter part of 1848), the discovery of gold in California, with its accompanying tide of emigration across the Isthmus of Panama, changed the prospects of this projected road; and, from an enterprise which looked far into the future for its rewards, it became one promising immediate returns from the capital and labor invested, and in which the people, as well as the Government of the United States, must be immediately and deeply interested. A charter was now granted by the Legislature of the State of New York for the formation of a stock company, under which one million dollars of stock was taken—the original grantees having previously transferred their contract into the hands of this Company. A large and experienced party of engineers, under the command of Colonel G. W. Hughes, of the United States Topographical Corps, were sent down, in the early part of 1849, to survey and locate the line of the road. The result of their work not only confirmed the previous reconnoissance in regard to the entire practicability of the railroad, but another summit gap was discovered by Mr. J. L. Baldwin, thirty-seven feet lower than that previously established by him, and a line was run from ocean to ocean not exceeding fifty miles in length. The Pacific terminus of the road was located at the city of Panama, on Panama Bay, and the Atlantic terminus at Navy Bay, on the Atlantic shore.

The character and geographical position of the country through which the line of the road had been carried was such as might well have made the hardiest projectors shrink from attempting its construction. The first thirteen miles, beginning at Navy Bay, was through a deep morass, covered with the densest jungle, reeking with malaria, and abounding with almost every species of wild beasts, noxious reptiles, and venomous insects, known in the tropics. Further on, though some of the land was so fair and beautiful that the natives called it *Paraiso*, the greater part of the line was through a rugged country, along steep hill-sides, over wild chasms, spanning turbulent rivers and furious mountain torrents, until the summit ridge was surmounted, when it descended abruptly to the shores of the Pacific Ocean.

Situated between the parallels of 8° and 9° north of the equator, a sultry tropical heat prevailed throughout the year; nearly half of which time the country was deluged with rains that, if they would not seriously damage the works, were certain to impede their progress, and add greatly to the arduous character of the undertaking. The whole Isthmus, though covered with the most luxuriant vegetative growth, possessed little or no timber sufficiently durable to be of use in the construction of a permanent work. The native population, composed of a mongrel race of Spaniards, Indians, and Negroes, were too indolent and unaccustomed to labor to be depended on to any great extent. The resources of the country were entirely inadequate for the support of laborers. Men, materials, and provisions were to be transported thousands of miles. And yet, despite all these obstacles, the dim glimpses of which had, at a previous time, caused European capitalists to shrink back with fear, our bold operators at once, and earnestly, pushed forward this stupendous enterprise.

In the early part of 1849 a contract was entered into with Messrs. George M. Totten and John C. Trautwine for the construction of the road. The services of these gentlemen had been solicited by the Company, not only on account of their previously established reputation as skillful and successful engineers, but from having only a short time before been engaged upon a work of considerable magnitude in a neighboring province—the "Canal del Dique," connecting the Magdalena River with the Caribbean Sea at Carthagena—they had, consequently, a large experience in the character and resources of the country, and the conditions necessary to the success of such a project. The contractors at once proceeded to the Isthmus with a large force, and commenced the final location of the road.

Basing their operations upon the reconnoissance of Colonel Hughes and party, a native town called Gorgona, on the Chagres River, about thirty miles from the Atlantic, was selected as a point for the commencement of the work. This place was chosen on account of the facilities it afforded for communication with the Atlantic by the River Chagres, which was supposed to be navigable to this point for vessels of light draught, by which men, materials, and stores could be transported to a central point on the proposed road; and, on the completion of the Pacific section, traffic between

JAMES L. BALDWIN. GEORGE M. TOTTEN. JOHN C. TRAUTWINE

the two oceans could at once be established, while the Atlantic section might be completed at the leisure or convenience of the Company. To this end two steamboats of very light draught were dispatched to Chagres for the navigation of the river. It was soon ascertained, however, that it was impossible to make use of these boats, drawing only from fourteen to eighteen inches of water, and that even the native bongoes and canoes were capable of the service only by great labor and exposure. In addition to this, the rush of California travel, which was then directed through this river as far as Gorgona, had so raised the hire of the native boat-

men that the expense of river transportation was enormously increased. It was, therefore, determined to change the point of beginning to the Atlantic terminus of the road.

Mr. Trautwine, after a careful survey of the whole line of coast from the mouth of the Chagres to the harbor of Portobello, had located this terminus at the Island of Manzanilla, on the eastern shore of the Bay of Limon, or Navy Bay, where the city of Aspinwall now stands. It was also found that—instead of a secluded and rarely visited region where laborers and materials such as the country afforded were comparatively inexpensive, as was the case when the contract was framed, and had been time out of mind—it was now swarming with emigrants from all parts of the globe, *en route* for the land of gold. The conditions under which the contract was entered into were changed, the whole *morale* of the country had assumed an entirely different aspect, and it was evidently impossible to continue the work under the arrangement agreed upon. A fair representation of these things being made to the Company by Messrs. Totten and Trautwine, they were released from their obligations as contractors, and retained as engineers; the Company having determined to take charge of the construction themselves.

The plan of commencing at the Atlantic terminus being approved, Colonel Totten left for Carthagena to make arrangements for procuring an increased supply of laborers. Mr. Trautwine, in company with Mr. Baldwin, as chief assistant-engineer, then proceeded to Manzanilla Island with a small party, and commenced clearing in the month of May, 1850. This island, cut off from the main land by a narrow frith, contained an area of a little more than one square mile. It was a virgin swamp, covered with a dense growth of the tortuous, water-loving mangrove, and interlaced with huge vines and thorny shrubs, defying entrance even to the wild beasts common to the country. In the black, slimy mud of its surface alligators and other reptiles abounded; while the air was laden with pestilential vapors, and swarming with sand-flies and mosquitoes. These last proved so annoying to the laborers that, unless their faces were protected by gauze vails, no work could be done, even at mid-day. Residence on the island was impossible. The party had their quarters in an old brig which brought down materials for building, tools, provisions, etc., and was anchored in the bay.

Thus situated, with a mere handful of native assistants — most of the original forty or fifty having previously deserted, on account of the higher wages and easier life promised them by the Transit—Messrs. Trautwine and Baldwin struck the first blow upon this great work. No imposing ceremony inaugurated the "breaking

RUNNING THE LINES

THE FIRST SHANTY.

ground." Two American citizens, leaping, axe in hand, from a native canoe upon a wild and desolate island, their retinue consisting of half a dozen Indians, who clear the path with rude knives, strike their glittering axes into the nearest tree; the rapid blows reverberate from shore to shore, and the stately cocoa crashes upon the beach. Thus unostentatiously was announced the commencement of a railway, which, from the interests and difficulties involved, might well be looked upon as one of the grandest and boldest enterprises ever attempted.

Work upon the island was now fairly commenced. A portion was cleared, and a temporary store-house erected from the materials on board the brig. On the 1st of June Colonel Totten arrived from Carthagena with forty natives of that province as laborers for the work. These were descendants of the old Spanish slaves, a peaceable and industrious race, and, from having been employed on the works in Carthagena for several years, proved a valuable accession to their forces. He was accompanied by Mr. John L. Stephens, the President of the Company, who was on his return from Bogota, where he had been to obtain some important revisions in the contract. With their increased corps the clearing progressed rapidly; but the rainy season soon setting in, the discomforts to which they were subjected were very great. The island was still uninhabitable, and the whole party were forced to live on board the brig, which was crowded to its utmost capacity. Here they were by no means exempt from the causes which deterred them from living on shore, for below decks the vessel was alive with mosquitoes and sand-flies, which were a source of such annoyance and suffering that almost all preferred to sleep upon the deck, exposed to the drenching rains, rather than endure their attacks. In addition to this, most of their number were kept nauseated by the ceaseless motion of the vessel. Labor and malarious influences during the day, exposure and unrest at night, soon told upon their health, and, in a short time, more than half the party were attacked with malarious fevers. Having neither a physician nor any comfortable place of rest, their sufferings were severe. At this time the hull of a condemned steamboat—the *Telegraph*—lying at Chagres, was purchased, and sent down as a residence. This proved a vast improvement upon the accommodations afforded by the brig, but still annoyance from the insects was at times almost insupportable.

In the latter part of June Mr. Totten again left for Carthagena to procure more men, and Messrs. Stephens and Trautwine returned to New York to digest further plans of procedure. The work was left in charge of Mr. Baldwin, who continued the clearing with his crippled forces until the latter part of the following month, when Mr. Totten returned with fifty

more laborers. Surveys of the island and adjacent country were now pushed vigorously onward. It was in the depth of the rainy season, and the working parties, in addition to being constantly drenched from above, were forced to wade in from two to four feet of mud and water, over the mangrove stumps and tangled vines of the imperfect openings cut by the natives, who, with their *machetas*, preceded them to clear the way. Then at night, saturated and exhausted, they dragged themselves back to their quarters in the *Telegraph*, to toss until morning among the pitiless insects. Numbers were daily taken down with fever; and notwithstanding that the whole working party was changed weekly, large accessions were constantly needed to keep up the required force. The works were alternately in charge of Messrs. Totten and Baldwin—one attending to the duty while the other recuperated from his last attack of fever. In the month of July Mr. Trautwine returned with a surgeon—Dr. Totten, a brother of the Colonel—and several assistant-engineers. About fifty Irishmen also arrived soon after from New Orleans.

The line had already been located for two and a half miles, and decided upon for two miles farther. It was so laid out as to strike a range of small hills half a league from the terminus, when it again stretched into the deep morass. The distance now required to be traversed from the work to the terminus was so great, and attended with so much fatigue and loss of time, that it was determined to erect a shanty for Mr. Baldwin and party in the swamp. The lumber for this was dragged on the backs of the men for more than three miles. Here was erected the first dwelling-house, built of rude boards, high upon the stumps of trees, to raise it above the waters of the swamp; and in the heart of this dank, howling wilderness our hardy pioneers took up their abode.

Large parties of mechanics and laborers were now constantly arriving from Jamaica, Carthagena, and the United States, so that the quarters on board the hulk were no longer adequate to house them. The insects had greatly diminished in numbers as the clearing progressed, and shanties were erected on the high ground before alluded to for the accommodation of the laborers. In August, 1850, the work of construction was commenced at this place. Another station was also established eight miles distant, opposite to the native town of Gatun, on the bank of the Chagres River, which was navigable to this point; and two of the Company's vessels arriving, laden with machinery, building material, and stores, they were debarked here, and the work of piling and grading was carried on from this station toward the terminus. The number of men now employed on both stations was between three and four hundred, among whom were many mechanics. The construction and surveys for a time progressed with vigor, and comfortable dwellings and hospitals were erected; but sickness, caused by exposure to the incessant rains, working waist-deep in the water, and in an atmosphere saturated with malarious poison, soon made such sad inroads among them that, in a few weeks, more than half their number were on the hospital records, and, either frightened by the fevers or seduced by higher wages offered on the California Transit, so many of the remnant deserted that the work came to a pause. Here the bravest might well have faltered, and even turned back from so dark a prospect as was then presented to the leaders of this forlorn hope; but they were men whom personal perils and privations could not daunt, whose energy and determination toil and suffering could not vanquish. Even in this apparent cessation of labor they were not idle; but pushing off into the neighboring islands and provinces, they collected recruits in such numbers that but a few weeks had passed before the work was again forced onward. Colonel Totten now assumed the direction of the work, and Mr. Center, the vice-president of the Company, repaired to the Isthmus to co-operate with him in the rapid advancement of the enterprise, so that by December over a thousand laborers were employed. With the commencement of the dry season the sickliness abated, the hospitals were soon cleared, and by April, 1851, a large portion of the road between the terminus and Gatun was completed. The line had been located to Barbacoas, sixteen miles farther on, while Mr. J. C. Campbell, assistant-engineer, was actively employed in extending the location toward Panama, and work had been commenced at several intervening points.

Docks had been constructed at Navy Bay, and vessels were almost daily arriving from Jamaica and Carthagena with laborers, and from New York with stores, machinery, and materials for the road. On the first day of October, 1851, a train of working cars, drawn by a locomotive, passed over the road as far as Gatun. In the following month two large steamships, the *Georgia* and *Philadelphia*, arrived at the open roadstead of Chagres with passengers from the United States *en route* for California *via* the Chagres River transit; but the weather was so tempestuous that, after several lives had been lost in attempting to effect a landing, they were forced to take refuge in the harbor of Navy Bay. It was then proposed that, instead of waiting for fair weather in order to return to Chagres, the passengers should be transported over the railroad to Gatun, from whence they could proceed up the river in bongoes as usual. There was not yet a single passenger car on the road; an accident like the present had never been included in the calculations of the Company. Every objection was, however, soon overruled by the anxious emigrants, over one thousand in number, who were then disembarked and safely transported on a train of working cars to the Rio Chagres at Gatun.

At about this time the affairs of the Company

in New York looked very dark and unpromising. The first subscription of one million dollars of stock was expended, and the shares had gone down to a low figure. The Directors were obliged to keep the work moving, at an enormous expense, on their own individual credit. Never since the commencement of the undertaking had its supporters been more disheartened; but on the return of the *Georgia* to New York, carrying news that the California passengers had landed at Navy Bay instead of Chagres and had traveled over a portion of the Panama Railway, its friends were inspired with renewed hope, the value of its stock was enhanced, and the steadfast upholders of the work were relieved from the doubts and anxieties that had well-nigh overwhelmed them.

Up to this time the settlement around the terminus at Navy Bay had been without a distinctive name: it was now proposed by Mr. Stephens, the President of the Company, that it should commemorate the services of one of the originators and unswerving friends of the road. On the 2d of February, 1852, it was formally inaugurated as a city and named ASPINWALL. The works during this season progressed with rapidity, for great numbers of laborers were constantly arriving, and the mail-steamers, which now came regularly to Navy Bay, as regularly, on their return, carried away the sick and disabled. By March the road was completed to a station on the Rio Chagres called Bujio Soldado, eight miles beyond Gatun, and passenger trains ran in connection with every steamer; by the 6th of July it was pushed on to Barbacoas, at which point the course of the road was intersected by the Chagres River, making a total distance from the city of Aspinwall of twenty-three miles.

Thus far the work had cost much more than was anticipated; and in the hope of constructing the remainder more economically, it was decided by the Board of Directors to complete the road from Barbacoas to Panama by contract. Accordingly an agreement was entered into with Minor C. Story, as principal, to complete the work. The death of the lamented President of the Company, Mr. John L. Stephens, took place at this time. From the very inception of the original contract he had devoted to the enterprise his active and intelligent mind with a zeal that knew no faltering. Much of his time had been spent amidst the dangers and hardships of the wilderness through which it was projected, and his loss was deeply deplored by the Company. Mr. William C. Young was appointed his successor.

The work under the contract for construction had been commenced by the attempted erection of a bridge across the Chagres River at Barbacoas. The river at this point was about three hundred feet in width, flowing through a deep and rocky channel, and subject to sudden and resistless freshets often rising forty feet in a single night: the bridge was nearly completed when one span was swept away. Work was again commenced upon it, as well as upon several sections of the road between this point and the Pacific terminus. At times there was a force of several hundred men employed; but they were mostly Irish, unable to endure the effects of the climate, and being also badly cared for, their numbers were soon so thinned by sickness and death that the contractor found himself unable to accomplish any part of the contract for the price agreed upon. The work faltered, and at last stopped almost entirely; so that when a year had expired, not only was the bridge still unfinished, but not a tenth part of the work under the contract was completed, and the Company were obliged again to take the enterprise into their own hands and carry it on by the same system pursued before the unfortunate contract was entered into. Mr. Young now resigned the Presidency, and Mr. David Hoadley (the present President) was appointed his successor—a gentleman who deservedly enjoys the respect and confidence not alone of the company which he represents, but also of the entire commercial community.

Valuable time had been lost from the delay occasioned by the non-fulfillment of the late contract. Not disheartened, however, the Company now redoubled their exertions, determined if possible to retrieve the error. Their working force was increased as rapidly as possible, drawing laborers from almost every quarter of the globe. Irishmen were imported from Ireland; Coolies from Hindostan; Chinamen from China. English, French, Germans, and Austrians, amounting in all to more than seven thousand men, were thus gathered in, appropriately as it were, to construct this highway for all nations. It was now anticipated that, with the enormous forces employed, the time required for the completion of the entire work would be in a ratio proportionate to the numerical increase of laborers, all of whom were supposed to be hardy, able-bodied men. But it was soon found that many of these people, from their previous habits and modes of life, were little adapted to the work for which they were engaged. The Chinamen—one thousand in number—had been brought to the Isthmus by the Company, and every possible care taken which could conduce to their health and comfort. Their hill-rice, their tea and opium in sufficient quantity to last for several months, had been imported with them—they were carefully housed and attended to—and it was expected that they would prove efficient and valuable men. But they had been engaged upon the work scarcely a month before almost the entire body became affected with a melancholic, suicidal tendency, and scores of them ended their unhappy existence by their own hands. Disease broke out among them, and raged so fiercely that in a few weeks scarcely two hundred remained. The freshly imported Irishmen and Frenchmen also suffered severely, and there was found no other resource but to reship them as soon as possible, and replenish from the neighboring provinces and

Jamaica, the natives of which (with the exception of the Northmen of America) were found best able to resist the influences of the climate. Notwithstanding these discouragements, and many others too numerous to be narrated within the compass of this brief sketch, the work continued to advance, so that by January, 1854, the summit-ridge was reached — distant from the Atlantic terminus thirty-seven miles, and eleven miles from the city of Panama.

Simultaneously with the operations toward the Pacific, a large force was established at Panama, under the superintendence of Mr. J. Young, one of the Company's most efficient and energetic officers, and the road was pushed rapidly onward, over the plains of Panama, through the swamps of Corrisal and Correndeu, and up the valley of the Rio Grande, to meet the advancing work from the Atlantic side; and on the 27th day of January, 1855, at midnight, in darkness and rain, the last rail was laid, and on the following day a locomotive passed from ocean to ocean.

DAVID HOADLEY, PRESIDENT ALEXANDER J. CENTER, VICE-PRESIDENT.

During the dry season the early morning of the Isthmian climate is indeed delicious. So I thought as I sallied forth for a walk on the one following our arrival from Portobello. Heavy dews had deepened and brightened the rich hues of the landscape, and permeated the air with their grateful coolness; the sun had not yet risen, and the golden colors of the Eastern horizon, where they joined the deep purple of the mountains, appeared like a great conflagration, burning paler and paler as the eye followed it upward, until it faded into the cool blue of the surrounding sky.

My course soon brought me to that part of the island shore where the railway leaves it and crosses over the frith to the swamps of the main. At this point the channel was about two hundred yards in width, broadening rapidly to the eastward into a miniature archipelago, with a dozen little islands lying upon its surface, like emeralds upon a mirror. To the westward it again expanded into a wide placid basin, only separated by a narrow belt of foliage from the waters of the bay. The shores on every hand were skirted with a dense growth of mangrove bushes, which drooped deep into the water; while, looking directly onward through the vista opened by the railway, a tangled forest was seen that seemed interminable.

The track crossed the channel on an artificial isthmus built originally of piles and cribwork, and afterward filled in with stones and earth. At about its middle was a sluice-way several yards in width, through which a connection between the waters of either side was maintained. By the edge of this sluice-way sat a little native boy fishing, who, as I came near, displayed a string of a dozen little fishes, brilliant with all the colors of a rainbow. In shape and size they resembled the sun-fish of our Northern lakes. Some were bright blue, striped with silver and gold; others crimson, barred with blue; some with irregular dark spots upon a silver ground; some entirely green, and

others of a delicate orange color. Scarcely two were marked alike; but all were curious and beautiful, and the little fisher, turning them around in the sun cried, "*Flores del mar! dos reales por todas!*" and swashing them down into the water, he again held them out, dripping and glittering, for inspection. *Two rials for the "Flowers of the Sea!"* I gave him a *medio* for the beautiful name, and pushed on toward the main land shore for an exploration among the mangroves; but soon found that, with the most strenuous efforts, only a few steps could be accomplished. Growing like the banyan of India, the branches of the mangrove frequently turn downward, and, interlacing again, take root and form a barrier, requiring the stout hatchet or *machete* to overcome. Many branches of those trees overhanging the water were loaded with a sort of crustaceous deposit, which proved, on examination, to be genuine oysters, varying in size from half a dime to a quarter of a dollar, and as sweet and palatable as "Shrewsburys." Several pounds often hung upon a single bough. Submerged by every tide, they were as fat and jolly as possible, and no doubt if, instead of being suspended, they were put to bed like our Virginian oysters, their increased size would soon leave no fault to be found with them.

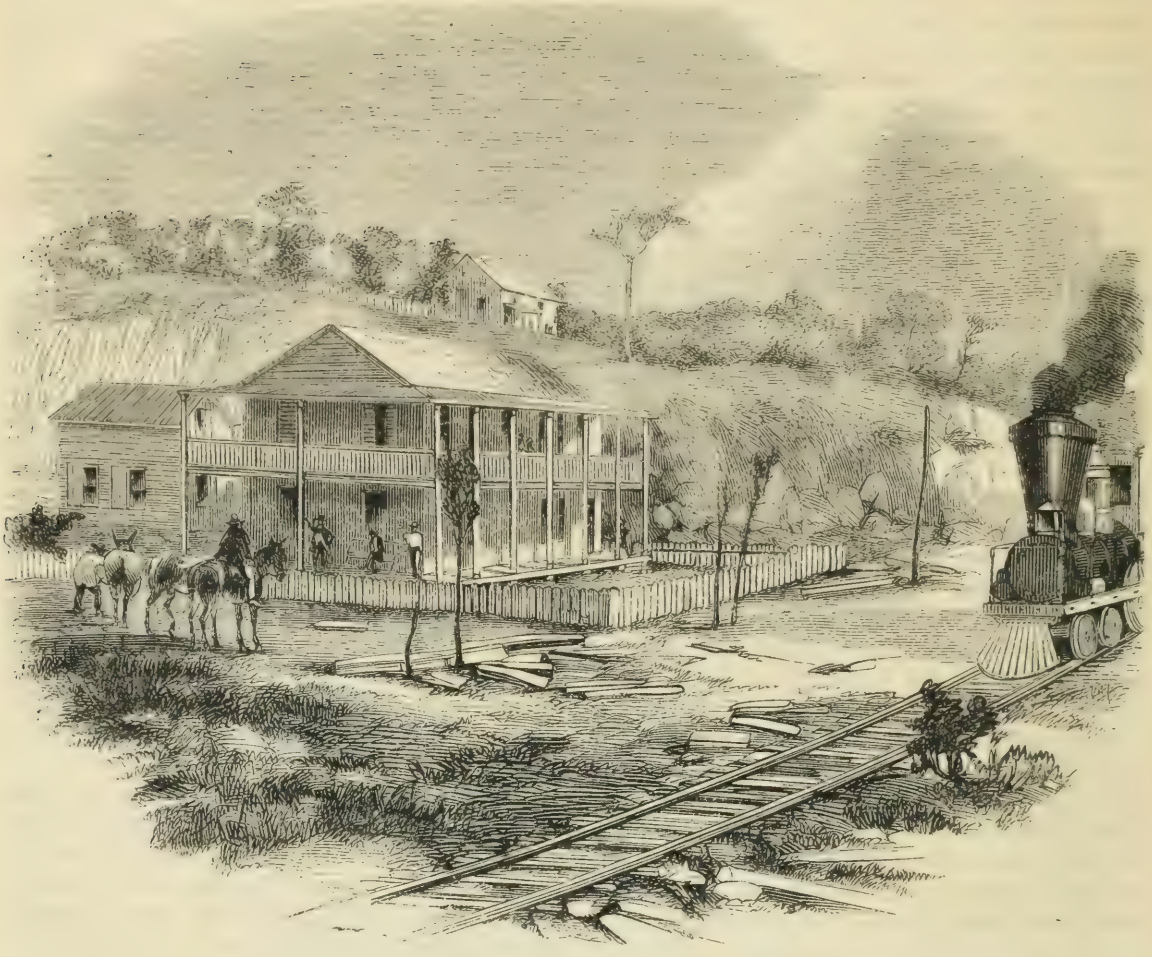
It was my purpose to have taken the regular nine o'clock train this morning for Panama; but on visiting the office with that view, I had the fortune to meet there my recent *compagnons de voyage*, Messrs. Totten and Center, who suggested that, while my luggage could go on in the usual way, I might accompany them on a tour of inspection which they intended making over the road in a hand-car immediately after

THE HAND CAR.

the departure of the train. To this proposal I gladly assented, and at about half past nine a comical little low-boxed car, about six feet square, was rolled up in front of the office. Two brawny natives, stripped to the waist, standing on the after-part, worked a double crank, attached to the axles, by an upright contrivance in the centre. In front was a single seat, just raised enough to permit the pedal extremities of its occupants to swing clear of the track. Mounting upon this, with our faces set toward the Pacific, away we skimmed over the ground at the rate of ten or twelve miles an hour. It would be difficult to conceive a mode of conveyance more exhilarating than a well-manned hand-car. Seated on the front, and out of sight of the propelling power, you seem almost to fly by your own volition; by a word you go swiftly or slowly, and when you add beautiful scenery, pleasant companions, and a perfect day, the enjoyment passes expression.

Away we sped, over the frith and through the swamp, until the tall forest of Mount Hope came into view. This was upon a spur of highland, through which the railway passed by a deep, long cut. On the left, near to its summit, a space of a couple of acres, flecked with small white points, revealed the site of Mount Hope Cemetery. Dense foliage surrounded it on every side, marked by the mourning plumes of the cocoa and the palm. The place was selected for a burial-ground shortly after the commencement of the road, and many victims to the hardships of the work and the climate were borne and buried there by their heavy-hearted comrades. But those days of trial have passed, and the long grass waving over their graves tells of the years since then. A few were recent, and marked by simple stones; among them several of strangers, and two or three of the officers of the U. S. Home Squadron. One at the lower side, under the shade of a lofty palm, was pointed out to me as the grave of the lamented Strain, whose sufferings and heroism, as the leader of the ill-fated "Darien Expedition," are still fresh in the memory of his countrymen. Strange was the providence that returned him, almost to the very scene of his terrible experience, to finish his journey of life.

Whirling through the hill, which was cleared at several points and bore marks of recent cultivation, we again stretched away into the marsh, and began to bring into view the wondrous wealth of the Isthmian forest. For a space of fifty feet on either side of the solid track embankment the original growth had been swept away, and was replaced by a rich display of



MOUNT HOPE.

aquatic plants, through whose broad, shining leaves myriads of callas and long, slim-petaled pond lilies struggled out to fill the air with delicious perfume. The low and recent vegetation along the track was walled in by a primeval growth of a variety and luxuriance that almost defies description. Palm-trees, slender and tall, from under whose crowns hung long scarlet and yellow tassels; palms, low and huge, with trunks scarce lifted above the slimy ooze, sending out graceful pinnate leaves half a dozen yards in length; great cedro and espabe trees, towering up like giants for a hundred feet, then sending out strong arms that almost grasped each other across the clearing, their trunks covered with thick vines and parasites; these, and many other varieties, were so closely set and interwoven together that the eye failed to penetrate into the depths of the forest. The great number and variety of parasitic growths constantly attracted my attention. Almost every tree and shrub supported more or less of these treacherous leeches, in form and size ranging from what appeared a simple tuft of grass to an enormous growth whose branches often exceeded in magnitude the poor victim from which its nourishment was drawn. One specimen had wound itself around what must have been a large and thrifty tree; but unable to support itself under the close embrace and exhausting demands of the parasite, it had decayed and fallen, leaving the well-conditioned leech, though a mere shell, upright, and so like the original tree, that, except for occasional apertures which disclosed the hollowness within, this villainy might at a little distance have escaped detection. Many bore beautiful and fragrant flowers. There was one curious variety, the seeds of which, deposited in the ordure of birds upon the highest trees, sent long fibrous tendrils, without a single twig, down to the earth, where it again took root, growing until it occasionally attained a diameter of five or six inches. Often trees so decayed that otherwise they must have fallen, were, by these supports, retained in position for many years. The smaller ones, combining pliability with great strength, are much used for cordage by the natives. Trailing vines and blossoming creepers were in great profusion and luxuriance, enwrapping the trees, and hanging in variegated festoons from their branches.

As we proceeded, every moment new, and, if possible, richer varieties of vegetation passed in quick review, until I almost lost myself in wonder and admiration. At about three miles from the terminus we cut off a bend in a small, sluggish stream called the Mindee River; its waters, almost concealed by the overhanging verdure, were said to be swarming with alligators. Along its banks the tall and graceful bamboo, that giant of grasses, added a new beauty to the scene. In the immediate vicinity of this stream some of the lands were dry enough to be susceptible of tillage. Two or three native huts were seen on a little clearing near the road, surrounded by patches of plantains, bananas, Indian corn, and sugar-cane; but it was only a moment before we were again scouring through the marsh.

The vegetation was now varied and enriched by a species of the palm, from the fruit of which the palm-oil of commerce is extracted. It differed but little from the tasseled variety, except that it attained a greater size, and instead of the gaudy tassel bore immense clusters of scarlet nuts about as large as a lime. The clusters, shooting out from the trunk of the tree just underneath its foliage, hung by a single stem, and were often two and three feet in length, contrasting vividly with the surrounding verdure. Riding along at our ease upon a firm, well-ballasted track, the gorgeous vegetative display that met our eyes on every side was enjoyable to the last degree; but, underlying it, the slimy pools and yielding ooze upon which, by almost incredible expense and suffering, it had been built, were too often seen not to realize how differently it must have impressed the hardy men who sacrificed health, and even life, in carving through this wild region, and constructing a solid causeway upon its treacherous surface.

At a little after ten o'clock the seventh mile-post was passed, when we emerged from the swamp, and came out upon the eastern bank of the Rio Chagres, which stream is here about fifty yards in width, and making a great curve, opens beautiful vistas through the dense forests, up and down its course. This bank of the river is formed by a ridge of low hills across the foot of which the railway runs. A few yards from the road, on the high ground to the left, were the buildings of the Gatun station; on the opposite shore of the river was the ancient native town of Gatun, composed of forty or fifty huts of cane and palm, situated on the edge of a broad savanna that extended back to a range of hills a mile or two distant. This place is principally worthy of mention as a point where, in the days by-gone, the bongo loads of California travelers used to stop on their way up the river for refreshment; where "eggs were sold four for a dollar, and the ground rent for a hammock was two dollars a night." It was also here that the native inhabitants of the country had their first view of a locomotive engine. On the completion of the road to this place a day was appointed for running an engine over it. The natives on the work having informed their friends far and near of the expected event, an immense concourse of men, women, and children were assembled at the station on tip-toe of curiosity, to see the fabled monster, concerning whom their ideas were by no means definite. The growling of the engine was at last heard in the distance, and in a moment more it came in sight, coughing out volumes of black smoke, and spirting jets of steam from its sides; the excitement was intense, when the engineer suddenly turned on his whistle, and the entire multitude took incontinently to their heels and plunged into the river

GATUN STATION.

and the depths of the surrounding forest. In a few moments, however, finding no one killed, they rallied, and from a respectful distance sent forward their native priest to examine and report upon *el animal*. The padre soon returned with an assurance that it was no *animal*, but a *machina*, in the interior of which, securely chained, a veritable demon worked the crank by which it was propelled. This solution proved entirely satisfactory, and is said to pass current among many in the interior to this day.

Pursuing our course, which lay along the base of an irregular line of high lands that rise up from the eastern side of the valley of the Rio Chagres, we came in a few moments to the Rio Gatun, a tributary of the Chagres, and crossed it by an iron truss girder bridge of ninety-seven feet span; the dense swamp foliage continued to wall us in, while, rising out of it close on our left, two fine conical peaks, four or five hundred feet in height (called Tiger and Lion hills), attracted the eye by their regularity of outline and the dense and gorgeous character of the forests with which they were covered. We occasionally passed small gangs of natives engaged in clearing away recent growths along the track with their *machetas*. The *macheta* (a sort of hiltless broadsword, from two and a half to three feet in length, and about two and a half inches in width, heavy, straight, and pointed, with a handle of wood or bone) is a universal accompaniment of the native of this country—with it he cuts his path through the tangled forest, builds his hut, clears his little plantation, plants his crops, cultivates and reaps them. It is usually his only weapon of defense or offense; and, from the boy of fifteen to the old and gray-headed man, you seldom find one waking or sleeping without his cherished *macheta*. The rapid growth of vegetation upon the road was said to be a source of no little trouble, as it required clearing along the whole line several times during the year; but it eventually proved beneficial, as stout roots were sent out in every direction, interlacing underneath and around the embankments, adding greatly to their firmness and stability.

At the base of Lion Hill we passed another station with a fine clearing on the high ground behind it. The stations on the road, uniform in size and appearance, are located four miles apart across the whole line, each occupied by a small party of men under a superintendent who has charge of the work and repairs of his particular section.

Leaving Lion Hill the vegetation became less dense and more decidedly aquatic in its character. Large patches of canebrake, liliaceous plants, huge ferns, low palms in great variety, and scrubby mangroves rose out of the dark pools by the roadside until we came to the next station called Ahorca Lagarto, where the land, still low and level, was again covered by a noble forest growth. Just beyond the station we

halted beneath the shade of a huge *ceiba*, known as "Stephens's tree." This Titan of the tropics measured not less than five yards in diameter at its base, including the broad plane-shaped roots that extended out on every side like buttresses, and towering up without a branch for nearly a hundred feet, supported a canopy of foliage full fifty yards in diameter. A luxuriant growth of vines decorated the trunk, and, winding out upon its branches, hung down like a thickly woven curtain upon the tree tops below. A little reconnoissance rewarded us with several fine specimens of the *orchidaceæ* with which the trunks and branches of many of the trees were studded. Scarlet and purple passion-flowers were occasionally seen, and the delicate

STEPHENS'S TREE.

sensitive plant, with its feathery pink blossoms, covered the cleared ground like a carpet.

Occasionally, during our journey, we had been regaled with the notes of sweet singing birds, or the harsh screams of the parrot and the toucan; but the sun, being now near the meridian, pouring down his rays in true intertropical style, the most profound silence prevailed. With one consent all things animate had sought the deepest shades of the forest. Even the quivering leaves seemed to shrink from the fervent heat; but our stalwart natives, although exposed to its full glare, to which was added severe and continued exercise, were, with their half-hour rest, apparently as fresh as ever.

Again pushing onward, in a few moments I was startled to find ourselves passing through what appeared the overgrown ruins of some ancient city. Walls, watch-towers, tall columns, and Gothic arches were on either hand; and it was really an effort to realize that Nature alone, with a lavish and fantastic hand, had shaped this curious scene out of myriads of *convolvuli*. Whole groves of trees were covered in by them so that they appeared like huge fortifications. Tall stumps of palm, thirty or forty feet in height, were firm columns of verdure, and when they leaned together, as in several instances was the case, great Gothic arches were formed. So dense was this enshrouding web of creepers that not a tree nor a branch could be recognized through it over a space of several acres; and the whole of this wondrous display was decorated with bright blue trumpet-shaped flowers.

Leaving behind us the city of verdure, we brought into view a chain of high, densely-wooded hills on our left, and, winding along its base, passed a new station called Bujio Soldado, opening on our right a fine view of the Rio Chagres; and, about a mile farther on, passing through a fine quarry of freestone, where thirty or forty natives were at work blasting and hewing it for building purposes, we came to a pretty little cottage on the edge of the steep river bank by the road-side, which, from having been a favorite residence of the late J. L. Stephens when on the Isthmus, still bears his name. Here we stopped for a moment. The cottage was a low, wooden building, almost buried in by flowering vines. A stately palm cast its shadow across the little garden, rich in fruits and flowers, with which it was surrounded. From the piazza in the rear beautiful views up and down the river were visible; while, across, the high opposing bank stretched back in a broad plateau, covered with low palm, from among which occasional tall trees shot up, until it met a range of distant hills. It was here that Mr. Stephens, whose fame as a traveler and writer is world-wide, and whose later life was spent in developing this great railway enterprise, loved in his intervals of labor to rest in his hammock

AT BUJIO SOLDADO

STEPHENS'S COTTAGE.

and enjoy the luxuriant beauties of the surrounding landscape.

Continuing our course with occasional view of the river, which winds like a great serpent along this tortuous valley, we soon came to the native town of Bueno Vistita ("Beautiful Little View"). This was a collection of thirty or forty rude palm huts skirting the track, and occupied by the families of native laborers on the road. A few native women, bareheaded, in long heavily flounced muslin dresses (off at the shoulder), and a naked "picanniny" astride the hip, formed the principal feature of the population; while the balance seemed made up of pigs, chickens, and children, in a charming state of affiliation. Very few of the aborigines of the country are found on this portion of the Isthmus, the inhabitants being for the most part a mixture of Spaniard and Indian There are, however, many Africans and half-breeds, descended from the old Spanish slaves of this province, or imported from Carthagena and Jamaica. The former, usually peaceable and industrious, cultivate little patches of land, and occasionally raise a few cattle. But the latter are a restless, turbulent set, requiring a strong hand to keep them in subjection; being, however, hardy and athletic, they have been much employed as laborers on the road.

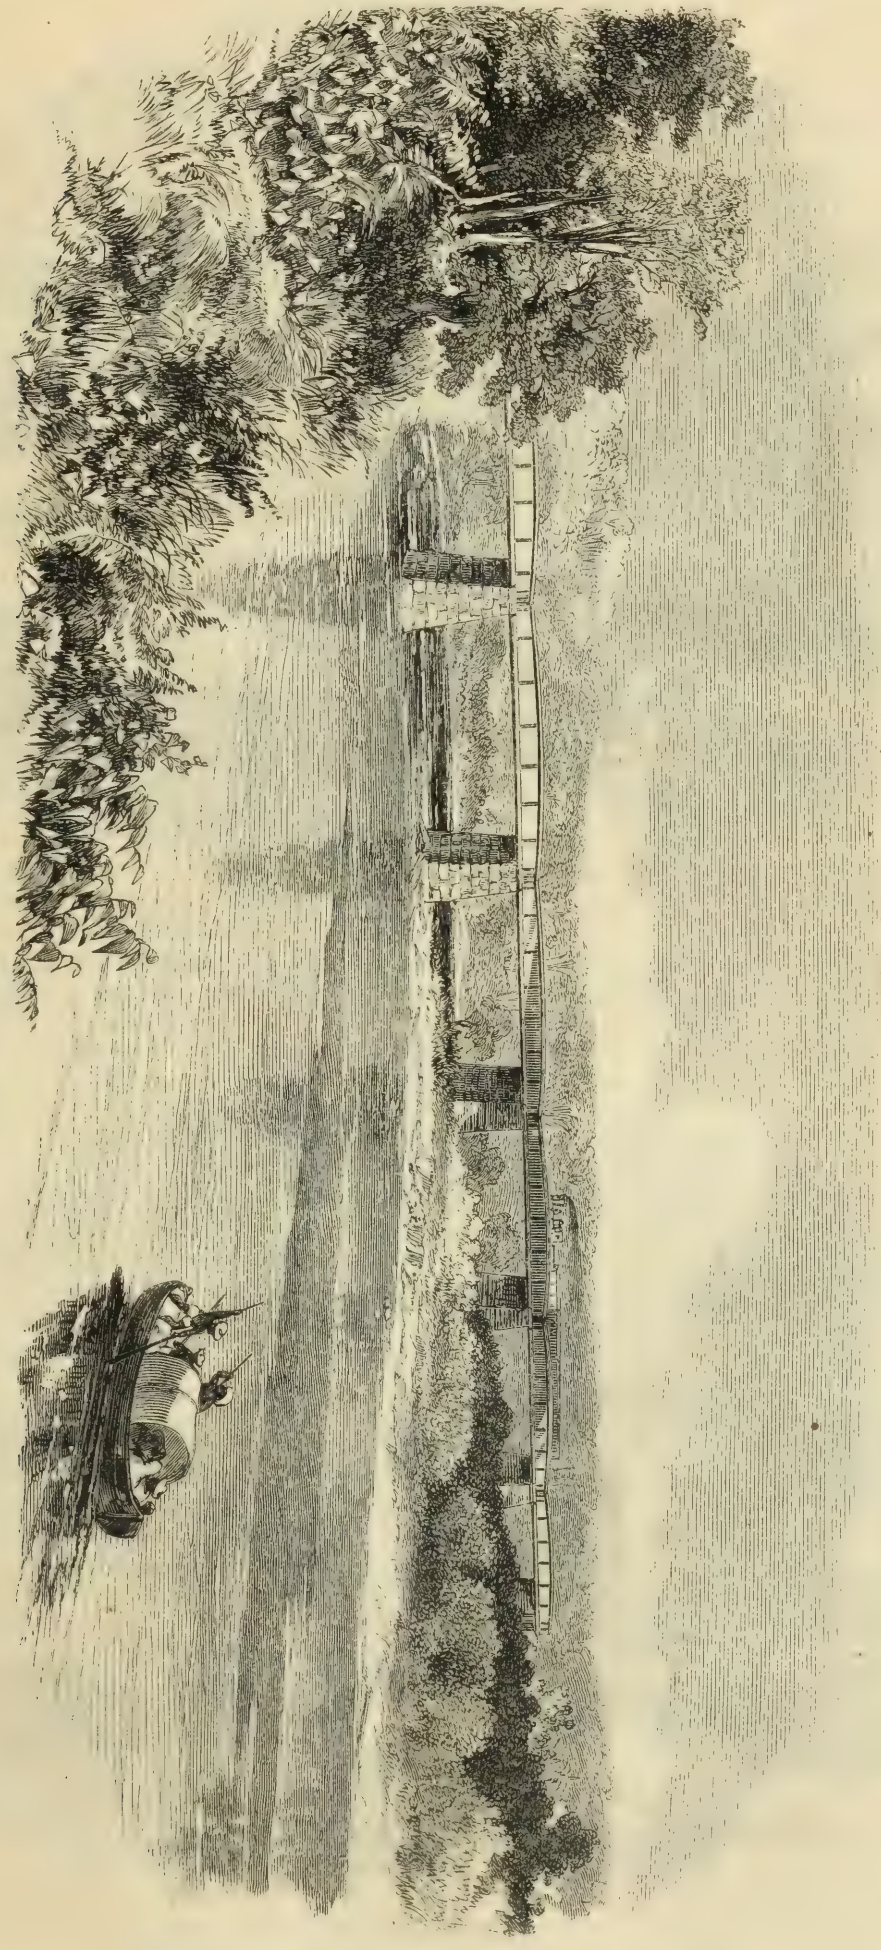
A couple of miles more of forest, intersected by one or two small tributaries of the Chagres, and we arrived at Frijoli. This station was superintended by a Mr. M'Clellan, famed along the line as a taxidermist and general collector of *curios*. As we were momently expecting to meet the train from Panama, and as lunch-time appealed stoutly to each one of us, it was determined to unship our car from the track and test the hospitality of the superintendent—also, if possible, to explore his collections.

Here, as well as at most of the stations, was a bright little garden where the roses and rhododendrons, pinks and pansies of our northern clime defied comparison with the orchids, fuschias, and passifloras of the tropics; and there were radishes, lettuces, and cucumbers that had no competitors. The first object that met our eyes on entering the gate was a *small boa constrictor* about ten feet in length, lying directly across the path. After the first shudder, it was gratifying to notice a couple of deep *macheta* cuts through the neck of the beast, and to assure ourselves that life was extinct, though a vicious quivering of the tail secured to the reptile a wide berth. M'Clellan met us at the door with the air of a man laboring under considerable excitement, which was naturally attributed to his encounter with the specimen in the garden. Nothing could have been farther from the fact; he had discovered, only a few yards from his house, a rare variety of the humming-bird in the act of forming its nest. True, the *boa* turned up on his way thither; but a couple of his natives soon dispatched *him*. That was a common affair; but the *hummer* was probably still at his work—if we liked he would show us. Catching his enthusiasm, we followed to a jungle of low palms, where, upon cautiously pushing aside a few branches, he discovered to us a brilliant crested *trochil* spinning swiftly around a bent leaflet of palm in circles of a foot radius, that soon narrowed to the centre, when the bird darted out of sight. Drawing near to examine the result of these novel movements, we found that the ingenious little fellow had weighed down the end of his

AT WORK.

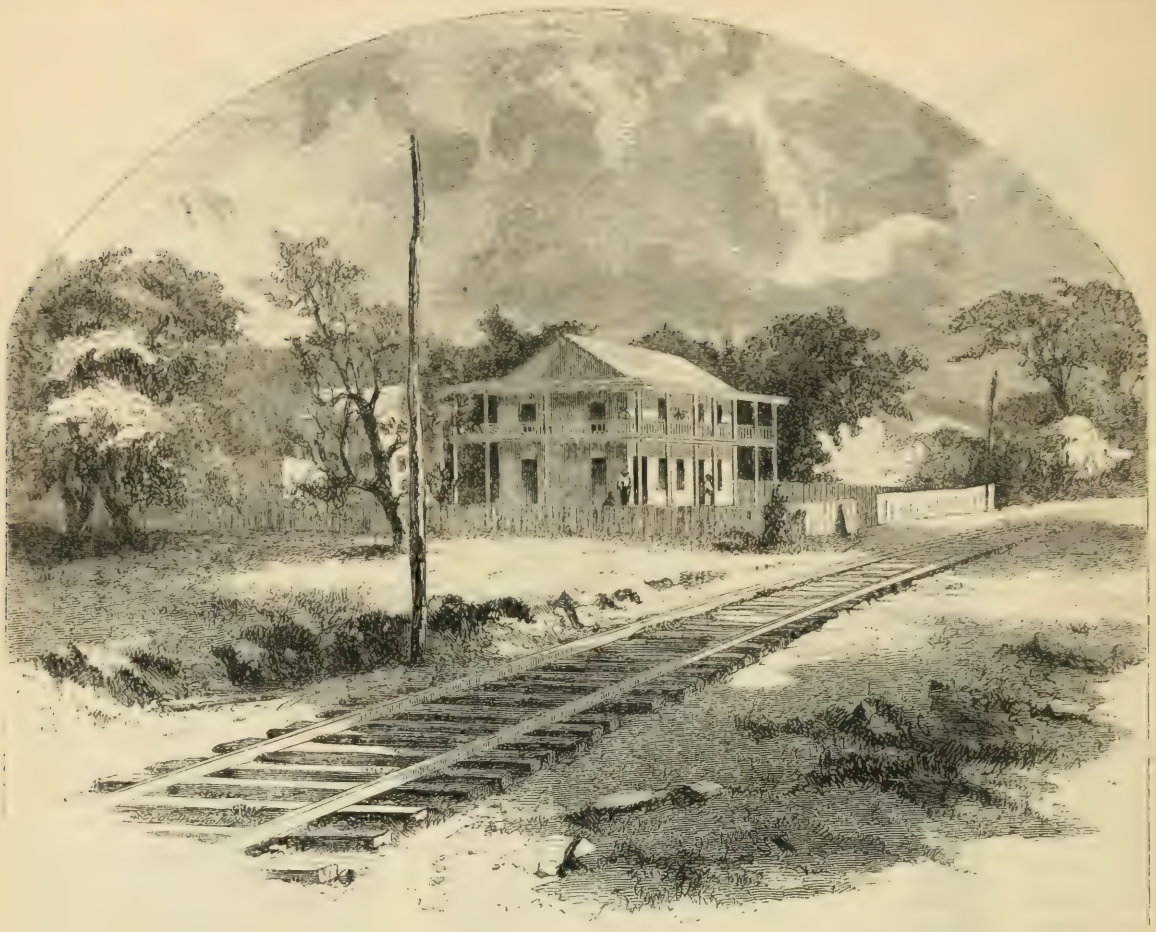
THE SINGING HUMMER.

leaflet with bits of mud until it was sufficiently bent to form a shelter, and secured them by serving it around with threads drawn from the fibrous spatha of the palm. It had already begun to form its tiny nest upon the inner surface. If this was not the result of experience and calculation, how wonderfully like it were the ingenious instincts here displayed! As we retraced our steps toward the station a steam whistle was heard in the distance, and in a moment the expected train swept by, leaving us a comparatively clear track for the rest of our journey.



After a satisfactory lunch we had the pleasure of examining stuffed specimens of several richly-colored varieties of parrots, toucans, orioles, trogans, tangers (blue and scarlet), and hummers. Among the latter was a little dark-brown specimen said to have a beautiful song. A singing humming-bird has not been generally noticed in works upon ornithology; but I was led the more readily to credit its existence from having heard an account from Mr. J. Bell, the celebrated American taxidermist, of a singing hummer which he discovered on the Isthmus of Panama a year or two previous. Its notes were said to be somewhat like those of the wren, and exceedingly sweet and musical. All of Mr. M'Clellan's birds were procured in the immediate vicinity of his station. He had also a live toucan—a dark scarlet-breasted bird about the size of a pigeon, with a heavy serrated bill measuring seven inches in length. Its manner of feeding was very curious. Picking up a bit of banana on the point of its huge beak, by a sudden jerk he would throw it up half a yard, and as it fell catch it, deep in his throat, with perfect certainty. It also made extraordinary motions over the water-dish when attempting to drink. The habits of the toucan in this respect were noticed by the early Spanish American priests, who, averring that this bird in drinking made the sign of a cross over the water, called it "*Dios te de*" ("God gives it thee"). We also saw several fine skins of the *cougar* (or Isthmus lion, as it is popularly called), of the *tiger cat*, and *tapir;* but these animals, though common in the vicinity, were seldom seen near the line of the road.

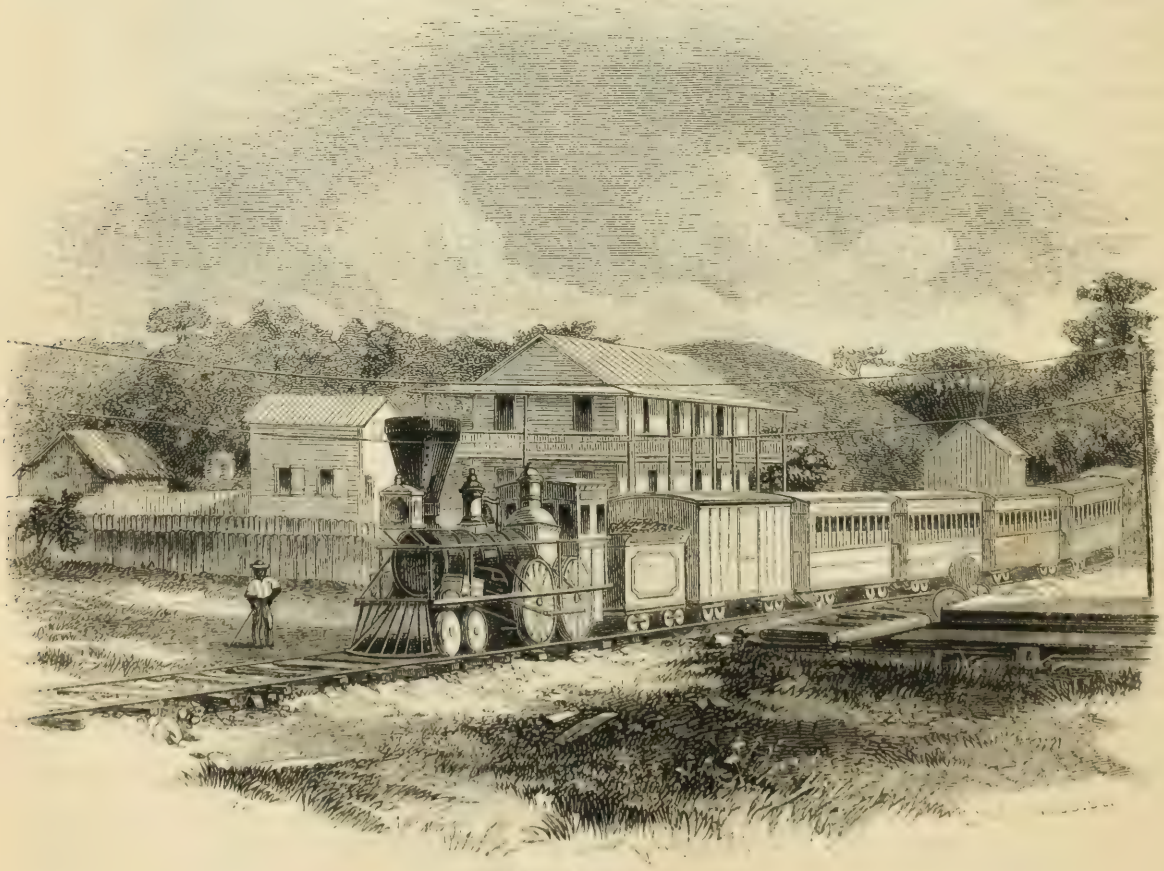
A curious encounter with a large male cougar was related as having occurred a short time previous—Dr. Gallaer, surgeon-in-chief of the line, while driving over the road in a hand-car one morning, suddenly turned a curve near this place, and discovering a full grown *puma* standing upon the track only a few yards off. The headway of the car was so great that retreat was impossible. Driving on with increased speed, the animal was stricken down and so injured as to be incapable of resistance. On a careful examination the poor creature was found to have been *stone-blind.*



Leaving Frijoli, we passed several fine fields of Indian corn nestled under the hills, and, towering up amidst the overhanging forest trees, whose tops, crowned with scarlet flowers, appeared like great bouquets set into the surrounding verdure. Dense groves of palms, loaded with fruit, and superb displays of convolvuli, were also seen along this section for a couple of miles, when we approached the lofty banks of the Chagres River at Barbacoas, and crossed over it by a huge wrought-iron bridge six hundred and twenty-five feet in length, and eighteen feet in breadth, standing forty feet above the surface of the river.

This bridge—said to be one of the largest and finest iron bridges in the world—was composed of six spans, of over a hundred feet each, built of boiler iron, with a top and bottom chord two feet in breadth and one inch in thickness, and joined together by a web of boiler iron nine feet in height at the centre, and seven feet at the ends. The track was laid on iron floor-girders, three feet apart; and the whole structure was supported by five piers and two abutments of hewn masonry, twenty-six feet wide and eight feet in thickness, increasing in the proportion of an inch to the foot down to their foundations, which were constructed of piles and concrete.

After crossing the Chagres, instead of low grounds and virgin forests, a beautiful stretch



BRIDGE ACROSS THE RIVER CHAGRES, AT BARBACOA.

MAMEE STATION.

of meadow land, bounded by high, precipitous hills, met our view; while the river, broad and swift, curved around like a horse-shoe through its deep channel on the left and behind us, dis-

SAN PABLO STATION.

AT MATACHIN.

playing along its banks groups of a gigantic species of the caoutchouc-tree, that broke the outline of dense palm and cocoa groves. The cultivation of the land at this point is said to date back more than a century, and to have been worked originally by the Jesuits.

At about half a mile from the bridge we passed the San Pablo Station, and a little farther on a fine quarry of recent volcanic rock; from thence, through occasional cleared and cultivated land, to the station at Mamee and the native town of Gorgona, noted in the earlier days of Chagres River travel as a place where the wet and jaded traveler could worry out the night on a raw hide, exposed to the insects and the rain; and in the morning, if he was fortunate, regale himself on jerked beef and plantains.

The road then leaving the course of the river, passed on through deep clay banks and rocky cuts, presenting little novelty beyond the magnitude of the labor expended upon them, until sweeping around a hill the beautiful meadow lands of Matachin were opened to our view. Here, rising in their stateliness, the classic sheaves of the royal palm shed an air of Eastern beauty over the landscape. A native village dotted the foreground. On our left, the waters of the Chagres, broadened at this point by its greatest tributary, the Rio Obispo, was seen through the ceiba groves that skirted its banks; while on our right, and before us, the scene was bounded by a group of conical hills, covered with short grass and studded with palms. The completion of the Panama Railroad in 1855 was here celebrated with great ceremony and rejoicing, and the corner-stone of a monument to its originators and constructors was erected upon the crest of the highest and most beautiful of these hills.

The railway has several side branches at Matachin, and is the usual point of meeting for the trains from either terminus. As there is usually a little delay on such occasions, the natives take advantage of it to traffic with the passengers. Almost every hut displayed something for sale. One had a couple of tiger-kittens tied to a stake near the entrance; another, a sloth and a pair of ant-eaters; a third rejoiced in the ownership of a pet crocodile; while monkeys, parrots, and parrakeets, cakes, *dulces*, and a variety of tropical fruits, were exposed for sale on every side. Nor was this all; near the track on our right was a little cottage, containing a Yankefied combination of saloon, variety store, and dwelling, kept by a Frenchman, who was supposed to keep every thing that every body wanted.

From Matachin, passing along the base of "Monument Hill," we entered the narrow valley of the Rio Obispo, and, crossing its waters twice by stout iron bridges within the distance of a mile, passed the Obispo Station, and continued along the course of the Obispo River over a fine rolling and luxuriant woodland, where the delicious wild mango, the zapote, the nispero, and the guava were frequently seen; also occasional native huts, surrounded by cultivated fields.

From the station at Obispo we had been gradually ascending on a grade with a maximum of sixty feet to the mile. Continuing to rise, we passed the Empire Station, and reached the "summit," or highest elevation of the rail-

MONUMENT HILL.

way above the mean level of the two oceans. Here was a little native settlement called Culebra, noted as the terminus of the railroad in 1854. Then, passengers arriving at this place by the cars from the Atlantic shore were compelled to mount upon mules and flounder on through heavy sloughs and rapid streams, along the borders of deep ravines, and over precipitous mountains; exposed to drenching rains in the wet season, and a broiling sun in the dry; not unfrequently attacked and plundered by banditti, by which the road was then infested, until, after a whole day's labor and peril, they arrived at Panama, only twelve miles distant.

Culebra at that time was a thrifty place, boasting of two or three hotels imported ready-made from the United States, into which often more than a thousand men, women, and children were promiscuously stowed for a night. There were also twenty or thirty native huts, about twelve feet square, each of which was considered of ample dimensions to house a dozen wayworn travelers, only too thankful to find a spot of dry ground upon which to spread their blankets. But its glory had departed, and not a vestige of its former prosperity remained except an old sign that some pitying hand had rescued from the ruins, and stuck in the crotch of a neighboring tree. Painted in large, grotesque characters, it ran thus:

THIS WAY GENTLEMEN, FOR WARM MEALS
I AM GOING TO OLD JOE PRINCE'S

"Old Joe" was the enterprising negro owner of the largest hotel in Culebra, and his curious old sign alone remains to mark a spot never to be forgotten by the Isthmus travelers of that time.

From Culebra, pursuing our course through a deep clay cutting, from twenty to forty feet in depth and nearly a third of a mile in length, we entered upon the Pacific slope by a descending grade of sixty feet to the mile. As we advanced the surrounding scenery was bold and picturesque in the highest degree. Lofty conical mountains rose on every side from among the irregular ridges that form the upper boundaries of the valley of the Rio Grande. Our course lay across steep rocky spurs, and deep ravines between them and along their precipitous sides. High embankments and heavy cuttings were frequent. Here, also, the vegetation was profuse and gorgeous. Tall forests covered

BASALTIC CLIFF.

the whole landscape as far as the eye could reach.

At about a mile from the summit the road plowed along the side of a huge basaltic cliff, whose great crystals (nearly a foot in diameter, and from eight to twelve feet in length), lying at an angle of about forty degrees, with a clear though broken and jagged outline, seemed almost to overhang and threaten the track below. This curious formation can not but strike the beholder with admiring wonder, from the regularity and beauty of its crystallization; and with awe, when he reflects upon the gigantic internal forces that have resulted in its upheaval. It is one of the few known examples in the world where the natural perpendicular which basaltic formations always assume (which is so beautifully seen in the celebrated Fingal's Cave at Staffa) has been so rent and displaced. But this whole region gave evidence that great, and comparatively recent, volcanic forces had been instrumental in its formation. There was no continuity in the mountain ranges. Conical peaks rose up on every side; marine shells and coral were found on their summits; the strata of the rocks they exhibit, exposed by the cuttings of the railroad, were all volcanic. Those great crystals of basalt—firm and compact, but easily dislodged—had been made to form the foundation and ballasting of a large portion of the road along this section.

The Rio Grande, at this place a narrow and noisy torrent, was winding along through the dense forests below us. The caoutchouc-tree, with its tall, gum-stained trunk and verdant crown; the caoba and the malvicino trees rose up, like lords of the land, over the endless growths of palm and the innumerable varieties of other tropical woods that interwove below them. After nearly three miles of this, we came to the beautiful undulating valley of *Paraiso* (or Paradise), surrounded by high conical hills, where nature, in wild profusion, seemed to have expended its choicest wealth.

On we went, over ravines, and curving around the base of frequent conical mountains, gradually descending, until low lands and swamps, with their dense growths, were around; and we saw, looming up before us, the high, bald head of Mount Ancon, whose southern foot is washed by the waters of the Pacific Ocean. On our left rose *Cerro de los Buccaneros* (or, "the Hill

PARAISO STATION.

of the Buccaneers"), from whose summit the pirate Morgan, on his marauding march across the Isthmus in 1670, had his first view of ancient Panama, and where he encamped on the

TERMINUS AT PANAMA.

PARAISO.

night previous to his attack and pillage of that renowned city. Crossing by bridges of iron the San Pedro Miguel and Caimitillo, narrow tide-water tributaries of the Rio Grande, we passed the Rio Grande station; and from thence, through alternate swamp and rolling savanna, until the muddy bed of the Rio Cardenas was crossed; where, leaving the Rio Grande to the eastward, we brought into view a fine stretch of undulating country around the base of Mount Ancon, enlivened by native huts and cultivated fields. A mile beyond us the long metallic roofs of the railroad buildings at the Pacific terminus were seen peeping out from a grove of cocoa-trees; and a little beyond them, and to the right, the cathedral towers, the high tiled roofs, and dilapidated fortifications of the city of Panama; while, through the intervening foliage, occasional glimpses of the "ever-peaceful ocean" assured us that our transit across the Isthmus was nearly accomplished; and in five minutes more we were safely housed in the spacious passenger dépôt of the Railroad Company at Panama.

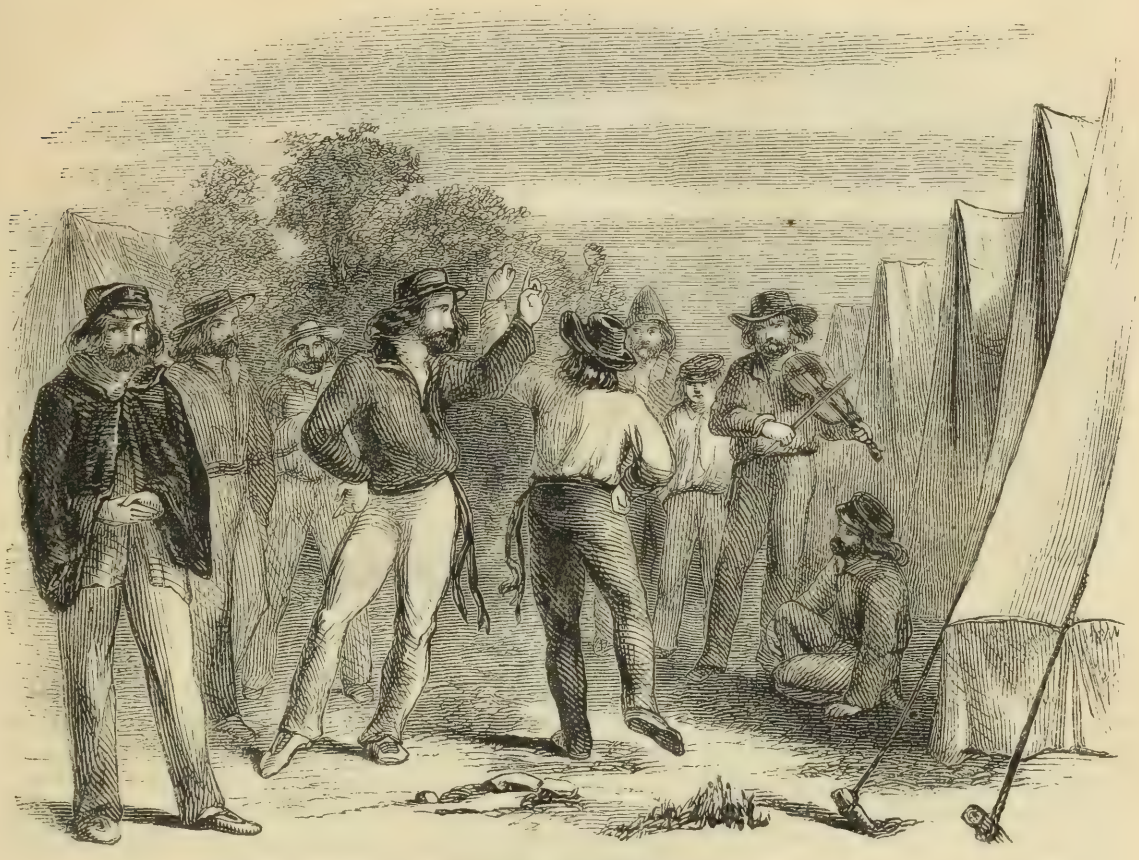
THE PEOPLE OF THE RED RIVER.

NOW, while all eyes are turned toward the Northwestern gold discoveries, and a route overland is under discussion, a few facts regarding the intervening country between the Rocky Mountains and the Mississippi, and illustrations of its people, have an additional interest above their novelty.

For the last two months our streets in St. Paul have been filled with the wild, picturesque groups of our northern neighbors, the Pembinese and Selkirkers. We see their strangely-accoutred ox-trains, shaggy ponies, and wolfish-looking dogs; but there is a something in the air of their free, firm step, and bold, yet graceful, abandon of carriage, with their nobility of stature, that awakens, at the first glance, an interest in their story. That they have a story you can read in their bronzed features and the long floating *chevelure* that waves around their shoulders. Their dark, coarse blue coats, glittering with a savage profusion of enormous buttons of polished brass; their long, waving sashes of the brightest red, and jaunty little caps, half Tartar and half French; even their loose trowsers of English corduroy or some dark woolen stuff, if not of elk or bison skin, down to the quaint and dingy moccasins wherewith they clothe their feet, savor of the wild, wondrous, and romantic. Such, indeed, their story is. No novel ever written upon the scenes of the far Western wilds and hunter life could equal the thrilling wildness and strange truth of their brief history.

The various hues of their complexion, from that of the dusky Indian with his arrowy raven

ENCAMPMENT NEAR ST. PAUL.



hair, up through all the intervening tints of dingy browns, to the ruddy cheek and blue eyes of the fair-haired Gael, proclaim the intermingling of the Caucasian with the blood of the aborigines. Within the circle of their camp is heard a strange melange of languages, as diverse as their parentage. You may hear French, Gaelic, English, Cree, and Ojibewa, with all the wild accompaniment of mingled accent, soft and musical, abrupt and guttural, in such strange, startling contrasts as flings an additional interest about the mysterious people. With their mother's blood they inherit all the native love of the wild and adventurous life incident to the savage; while to the blood of their fathers can be traced those demi-social habits and inclinations which they evince although entirely shut out from contact with enlightened society by their remote geographical position.

There is a vast country, beautiful, fertile, and pleasant, stretching far away from around the sources of the Mississippi and Red Rivers to the head fountains of the Saskatchewan. This great valley, between the Rocky Mountains on the left, and the high plateau on the right that divides the waters of the Hudson's Bay from those flowing north into the ocean by the River M'Kenzie, is the great Buffalo Range of North America. It is wealthy in soil, vegetables, minerals, and game; and is the home, for part of each year, of these semi-civilized Americans.

More than a century ago the French traders, enterprising and eager to extend their traffic and their dominion over the New World, had penetrated beyond the tributaries of Lake Superior to Lake Winnepeg. On an old English map "by Thomas Jefferys, Geographer to his Majesty," dated in 1762, we see that the French had a fort called La Reine at the junction of the Red and Assinaboine rivers; but on the map of De L'Isle, Paris, 1703, fifty-eight years earlier, we see their forts scattered all along the

PEMBINESE AT SUPPER.

CANADIANS AND BOIS BRULES.

tributaries of Hudson's Bay. The commanders, or clerks, as they were called, who occupied these isolated forts or posts scattered through the interior of the vast wilds of the northwest, lived in all the barbaric dignity of the feudal barons, and ruled with no less despotic sway over their retainer-like bands of *voyageurs* or *courriers du bois*—as their Canadian employés were called. There were times, however, when, released from all restraints, these men gathered at the posts—seasons of rest between their arduous duties of collecting peltries or transporting supplies. To such times, when indeed they held high revel, they looked forward as a reward for the many hardships and difficulties they had to encounter during their excursions into the depths of the boundless wilds.

Then the song rang out in clearest notes upon the air, and strange wild tales of hair-breadth escapes and wonderful exploits were told; then, too, to the stirring music of the violin, they danced with Indian maidens. The bowl went freely round, till mirth grew furious and fast, and only the end of night ended their orgies and mad debauchery. Intermarriage with the natives was encouraged by the officers of the fur trade, as it made the *courriers* more dependent upon them, and was a sure way to keep them in the country. The offspring of these *courriers du bois*, who were quite numerous, together with the descendants of the *gens libres*, or free people, as the Canadians who had deserted from the French traders called themselves, were styled *Bois-brulés* (Burnt-woods), from their peculiar complexion.

After the English possessed themselves of Canada there was a Saxon element mingled in this new race. In the beginning of the present century Lord Selkirk, a Scottish noble, conceived the idea of peopling this vast and fertile valley with a colony of his countrymen. In 1811 he obtained a grant of land from the Hudson Bay Company, of which he was a member. The pioneers, to prepare for the main colony, began, in 1815, to build some houses and a mill; but a rival to the Hudson Bay Company, known as the Northwest Company, sent men disguised as savages, who drove the colonists from the place. They retreated southward, within the United States boundary, to a place called Pembina (pronounced Pem-bin-naw), an abbreviation of the Ojibewa word *Anepembinan* (high-bush-cranberry—*Oxycocus verburnum*, which thereabouts grows in abundance). They returned to their lands in the spring, but again to be repulsed; and only after years of bloodshed and shocking cruelties were they permitted to enjoy their lands in quiet.

The bitter strife was stopped by the union of the rival fur companies in 1821. The colony numbered 200 souls in September, 1815, says Mill, in his History; now they number over 10,000, by natural increase and immigrations—chiefly Scotch, Swiss, and English. While this country was in possession of the French traders they carried their commerce along the valleys of the great rivers of Lake Winnepeg, and thence, descending the tributaries of Lake Superior, made their way through the natural channels of the great lakes to the Atlantic

CHURCH AND MISSION-SCHOOL AT PEMBINA.

coast. When the English, or Hudson Bay Company, took possession of the traffic, the outlet of the fur trade was turned northward, by the more difficult and unnatural channel of Nelson River, which empties into Hudson's Bay.

But as the great wave of Western emigration rolled up the valley and tributaries of the Mississippi, leaping the barriers of prejudices purposely heaped by the fur-trading monopolies to debar settlers from the rich fields from which they were reaping such golden harvests, and our settlements approached the frontier, the nearness of a market for their furs and peltries induced the Red River colonists and hunters to seek a new outlet, over the level prairies and down the Valley of the Mississippi, to St. Paul. Within the last few years this trade has increased, from one or two trains of thirty or forty carts each, to long winding caravans of hundreds of carts drawn by oxen and horses. This season over eight hundred carts, loaded with furs and skins, came into St. Paul from those far northwestern valleys.

Even the Hudson Bay Company have at last availed themselves of the superior facilities of the heretofore ignored routes to our market, by sending over sixty packages of furs and pelts, taking in return cattle, mules, and implements of agriculture. This is a great concession, and argues well for the future increase of traffic with this vast country, stretching away to the very base of the Rocky Mountains.

BOIS-BRUILÉ BOYS.

CAPTAINS OF TRAINS

While they were encamped near St. Paul, in my frequent visits and conversations, I became quite well acquainted with many of the Bois-brulés, Frenchmen, and Selkirkers, as the Scotch are called. I found them gay, cheerful, and sprightly, full of fun and frolic, hearty laughers, fond of singing and dancing, and withal having a childlike unaffectedness of manner and conversational *naïveté*, really as fascinating as unexpected. One day when wending my way to the camp, noticing an old, gentlemanly-looking Bois-brulé, with a handsome face, toiling like myself through the hot sunshine toward the prairie, I loitered purposely for him to overtake me. He returned my salutation very politely, and we began to chat. He was tall, with silvered hair, and although a little bent by age, stood quite six feet. He had a soft and musically sweet voice, and spoke English with elegance.

After a few minutes' talk by way of mutual introduction, he told me, with childish simplicity, that early that morning he had bought a trunk of a dealer at the far end of the town, and had carefully suspended by a cord from his neck the key, as the trunk locked with a spring, to prevent the key being locked inside. But, unfortunately, the very precaution he took was the means of doing what he wished to avoid; for while reaching over the trunk in packing the lid fell and caught the key within. He was just returning from the dealer's, where he had been to borrow a key, as he had other trunks with locks similar. But, to the old man's surprise and mortification, the shopman refused to lend him one, fearing he would not return it; but invited him to send his trunk down, and have it unlocked there. There was no alternative. But the old man's *honor* was touched sorely; and his eyes flashed fiercely as he said, "I suppose he thought I would *steal* the key; but I would not *do* it—*I would not do* it!"

I went to his camp with him, and the trunk was brought out of the tent; but, to his great disappointment, none of my keys would fit it. While one of the camp boys was catching and harnessing an ox in the shafts of the wooden cart, fortunately—by the help of the cord which was still attached to the key, and by a little ingenuity—I succeeded in drawing it out, much to the old man's delight and gratitude; and when I placed it in his hands, they were tremulous with pleasure. From him I learned many interesting little facts about their manner of life, hunting, camping, trading, etc.

At the settlements at Red River farming and the usual avocations of civilized life engage about one-half of the population, who are mostly of Scotch or European blood. Their religion is usually Protestant, the greater number being Presbyterians; the rest, Methodists and Episcopalians. The Bois-brulés and Canadians, with their descendants from their more recent intermarriages with Indian women, are of the Catholic faith, and gain their subsistence by hunting.

Their dwellings, as well as those of the agricultural portion of the colony, are scattered over

BAKING BREAD.

the country between and along the banks of the Red and Assinaboine rivers, from their confluence southward, beyond the international boundary, into Minnesota. The neat little white frame and log cottages, with their well-cultivated garden spots and field inclosures, have an air of charming and quiet repose, while, in the distance, the grazing troops of cattle and horses dot the plains with gentle animation. Here and there a wind-mill, or a pointed church-spire, lends an additional and suggestive beauty to the landscape. Here they live in peaceful simplicity, and in all the rural quiet of their ancestral village hamlets among the Highlands of Scotland.

The life of the hunters is just the reverse of this quiet simplicity; their time is alternately spent in the excitements and adventures of the chase, or in indolence and festivity. While the products of their last excursion holds out, they are the gayest of the gay. They nightly dance to the fiddle or to the drone of the bagpipe; or with gambling, drinking, song, and amatory sports, help the whirling hours speed by.

As spring advances, however, they go to work in real earnest, to be ready for the opening ex-

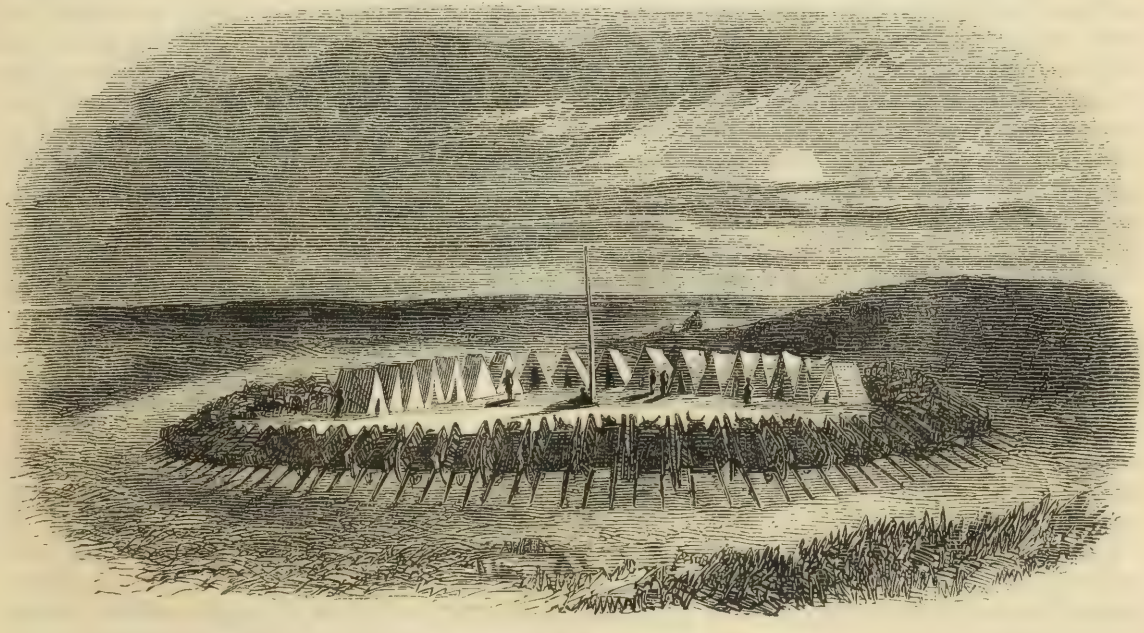
IN CAMP.

AN OX-TRAIN.

pedition against the buffalo. As they are all taught the use of their rude implements, the building of new carts and repairing of old ones, fill the settlements with the rattling of a thousand hammers. These carts are curious and ingenious contrivances, built entirely of wood; not a nail, or screw, or particle of metal being used in their construction. But such is their strength and durability that they last for several years, and carry heavy loads on journeys of a thousand miles every season. Harnesses are manufactured of raw hide cut into strips and adjusted to fit any ox. The old ones are mended up; buffalo skins are stitched into tents, and put in readiness for the long trip and sojourn across the plains.

At length, usually about the 1st of June, the appointed day for starting arrives. Sometimes over a thousand of their carts are gathered together and go out in a single train, stretching far off over the waste of prairie, like the caravans in the Eastern stories. They are accompanied by the women and children, who pitch the tents, and attend to the cooking and other light duties about the camp.

The hunters elect captains, and the camp is divided into bands under them; while a chief captain, or commander, controls the whole company. The captains form a council, and adopt rules to govern the camp, which are usually obeyed to the letter. The following were some of the rules of the camp, as determined at Pembina, in 1840:



"1. No buffalo to be run on the Sabbath-day.

"2. No party to fork off, lag behind, or go before, without permission.

"3. No person to run buffalo before the general order.

"4. Every captain, with his men, in his turn to patrol the camp and keep guard.

"5. For the first trespass against these laws, the offender to have his saddle and bridle cut up.

ENCAMPED FOR THE NIGHT.

"6. For the second offense, the coat to be taken off the offender's back and cut up.

"7. For the third offense, offender to be flogged.

"8. Any person convicted of theft, even to the value of a sinew, to be brought to the middle of the camp, and the crier to call out his or her name three times, adding the word '*Thief*' at each time."

When they halt at night the carts are arranged in the form of a circle, with the shafts projecting outward; and within this wooden cordon the tents are pitched at one end and the animals tethered at the other extremity. Sentinels, who are regularly relieved at intervals, patrol the camp; and not unfrequently the hunter's sound slumber is broken by the alarm-cry to repel the stealthy attack of the treacherous Yanktons. Raising the flag is the signal for starting in the mornings, and when struck at evening is the signal to halt and encamp.

Thus regulated, they proceed to the "buffalo ranges" upon the Cheyenne, or the plains of the more distant Saskatchewan, where thousands are frequently met with in a single herd. The avant-couriers or scouts ascertain their probable numbers and position, and report to the commander. The camp is formed, and the hunters prepare for the onslaught. Mounted upon their fleetest and best-trained horses, they advance regularly under command of a leader, cautiously covering themselves from the herd by every advantageous inequality of the ground till near enough, when the cautious tread is changed to a dashing "Charge!" At full gallop they sweep down upon the unsuspecting and startled troop, pouring a deadly broadside volley into their shaggy flanks. The frightened beasts scatter, mad with terror. The scene that ensues does indeed baffle description. It has been likened to a field of battle. The sward is torn up, and great clouds of dust rise from beneath the beating hoofs of flying buffalo and pursuing horsemen; the roaring of the fleeing herd and the mingled trampling of their many feet pervades earth and air, while the ground trembles as if from an earthquake shock. In the course of a day sometimes more than a thousand are slain. The hunters follow the herd at full gallop, loading and firing at full speed. The hasty charge of powder is settled by a blow against the saddle, and the bullet is dropped from the mouth upon it without any wad.

The wake of the hunters is marked by mounds of dead buffalo, and the torn and trampled plain is deluged with blood. The carts follow and remove the carcasses to the camp. The hides and tongues are first removed, and such of the meat as can be used, for much is unavoidably spoiled by the heat, is secured. Part is dried, and the balance is made into pemmican, by boiling the tallow of the buffalo, and mixing with it shreds of meat. Sacks of raw hide are then made, into which the preparation is poured in a fluid state.

After the tongues are cured and the robes dressed the labors of the expedition are ended. They return to their homes, where they remain till the opening of the September hunt, which lasts till they can carry the meat home frozen. Then they indulge in another season of luxurious indolence.

QUEBEC.

IT was a warm, hazy morning in July when, with portfolio and pencil, I sallied out of Palace Gate and sauntered down through the suburb St. Roch toward the banks of the St. Charles, to make my first of a series of sketches of notable things and places in and around Quebec, that quaint old town in the far northeast, partly lying upon a rocky cape within solid walls built long ago by cautious Frenchmen, and partly spreading out over the neighboring slopes and levels.

To the visitor from the States every thing in Quebec appears queer and strange. There is so much unlike the objects of his daily experiences at home, that he feels a consciousness of being in a foreign country. The men and women, though wearing familiar faces and bearing familiar costume, appear unlike the men and women of his own land, for their ways are different; and the language that falls upon his ear is a salmagundi, composed of all British tongues, largely mixed with the corrupted Gallic spoken by the *habitans* all over the selvedge of Canadian settlements along the St. Lawrence from the Thousand Islands to Anticosti. Narrow, tortuous streets bewilder him; the high-peaked roofs, with great projecting eaves all glittering with tin, speak to him of deep winter snows; the modest *calèche* is clustered with associations of by-gone years when the lordly Governor, or Intendant, rode out from his palace in a vehicle no more stately; the priest and the soldier, met upon every highway in the town, remind him continually of the prime elements of power in Church and State; and the massive walls that inclose the old city, with their five ponderous and dissimilar portals, the grand battery of heavy cannon, and the almost impregnable citadel crowning the loftiest eminence, present pictures of a rude age, full of the coarser sentiments of feudal power and barbaric life. All these external novelties, combined with the unfamiliar ideas of the internal mysteries of nunneries, and cloisters, and monastic life, wedded to the most stirring historical associations and natural scenery extremely beautiful and picturesque, render Quebec the most attractive city on the continent for the curious, pleasure-seeking appetite of the traveler.

We (two young ladies and the tourist) had just returned from a voyage up the Saguenay, the *Chicoutimi*, or "bottomless river" of the Algonquins, that wonderful river whose deep, black waters flow into the St. Lawrence many a league below Quebec, through towering mountains, bold and bleak, that in ages past were evi-

JAQUES CARTIER'S WINTER HARBOR.

dently cleft by an earthquake for more than sixty miles to make a channel for this cold and solitary stream. The impressions of that grand scenery — scenery which no summer tourist should omit to view—were yet vivid in our memories; and the works of men's hands in the old city, so angular, imperfect, and commonplace, appeared painfully tame for a while. But a new pleasure came with the associations of past times, and a sojourn of a few days in Quebec, looking, listening, and sketching, produced exquisite enjoyment. The limited space allotted to a Magazine article compels me to omit more than half of my sketches of interesting objects in Quebec and its vicinity. In choosing from them subjects for publication, I have, with the exception of two or three, selected only those that have historical relations.

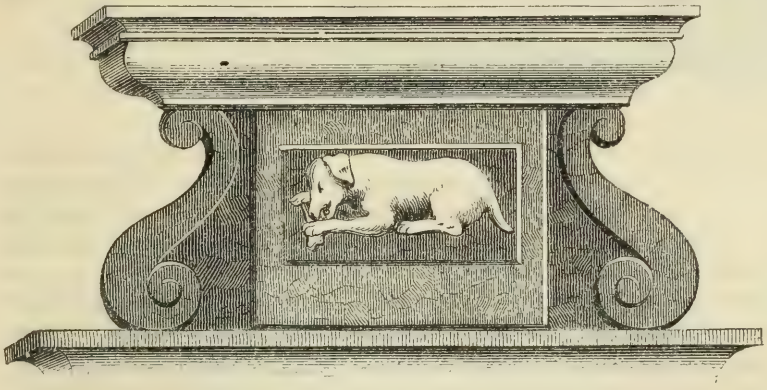
The first point of interest to which my steps were directed was the peninsula of Stadaconé, formed by a great bend of the St. Charles River, and where, in a little estuary, Jaques Cartier, the discoverer of the St. Lawrence, passed the winter of 1535–'36, and in the spring left one of his small ice-shattered vessels to rot in the ooze. On my way I stopped to sketch the Marine Hospital, a magnificent building of cut stone, standing on the neck of the peninsula near Cartier's Bay. The foundation was laid by Lord Aylmar, in 1832. The edifice cost over one hundred thousand dollars. The exterior is of the Ionic order, having the proportions of the Temple of the Muses near Athens. It contains Roman Catholic and Protestant chapels, apartments for the respective clergymen, and wards for six hundred and twenty patients. The institution is supported by a tax of one penny a ton on each vessel arriving from sea, and a portion of the emigrant tax. In front of the building are ample promenade grounds for the convalescents, inclosed by a stone wall and iron railing. The entire premises contains an area of six acres.

Leaving the Marine Hospital, I went to the General Hospital near by, one of the oldest of the public establishments in Quebec, whose character and history we shall consider presently. While sketching its front I was joined by a resident of Quebec, who, the evening before, had kindly offered to guide me to the spot where a part of the Indian village of Stadaconé stood, and where Cartier and his companions wintered and suffered. Leaving my sketch unfinished, we crossed the St. Charles in a log-canoe, made our way through the ship-yards to

the open plain of the peninsula, and sat down to rest upon the bank of Cartier's winter harbor, whose margin was fringed with a hawthorn hedge. It seemed hardly sufficient to have contained within its bosom that seed of French empire in America.

Cartier anchored in the St. Lawrence, opposite the present village of Beauport, in September, 1535, and Donnacané, the King of the neighboring savages, proceeded from Stadaconé with twelve canoes filled with a train of warriors, to hold a parley with the mariner of St. Malo. The interview was mutually agreeable. Donnacané took Cartier's arm and placed it gently over his own neck in token of confidence and regard. Cartier returned the compliment in the same form, and after they had partaken of bread and wine together they separated. Donnacané, pointing toward the narrowing of the great river between the lofty promontory of Stadaconé, whereon the ancient capital of Canada now stands, and the high banks of Point Levi opposite, pronounced the word Quebec (Ke-bec), which, in the Algonquin language, signifies "narrowing." From that hour the word became a proper name in history and geography.

Cartier proceeded with his ships into "a little river," which he called St. Croix, the St. Charles of to-day. In the bay which forms the subject of our sketch he moored his small vessels for the winter, and Donnacané came from his town with a train of five hundred Indians to welcome him. Cartier did not tarry long. He was told of a larger village far up the great river, called Hochelaga (now Montreal), and, in spite of the dissuasions of Donnacané, who portrayed great perils that would surely beset him, the mariner proceeded, in one of his smallest ships and other vessels, to explore the mysterious regions. It proved a most interesting voyage, and Cartier and his followers returned to the St. Croix at the middle of October, highly delighted with their knowledge and adventures. Those who had remained had, meanwhile, erected quite a strong stockade at the foot of the rocky promontory of Stadaconé, on the spot where the old church of Nôtre Dame, in the Lower Town, now stands.



A terrible winter ensued. Five-and-twenty of the Frenchmen perished with cold and sickness, and all were prostrated at one time. And before spring Cartier had reason to doubt the sincerity of the friendship of Donnacané; so, one day, at the beginning of May, he seized the chief, the interpreters, and two other Indians who had come on board his ship, hoisted sail, and departed with them for Europe, leaving one of his smaller vessels behind. Ten years ago some money-diggers, searching in the bottom of the bay for treasures supposed to have been lost by Cartier, brought up, from far down in the mud, some timbers of that ship. They were carefully preserved in the Quebec Museum

RUINS OF THE INTENDANT'S PALACE.

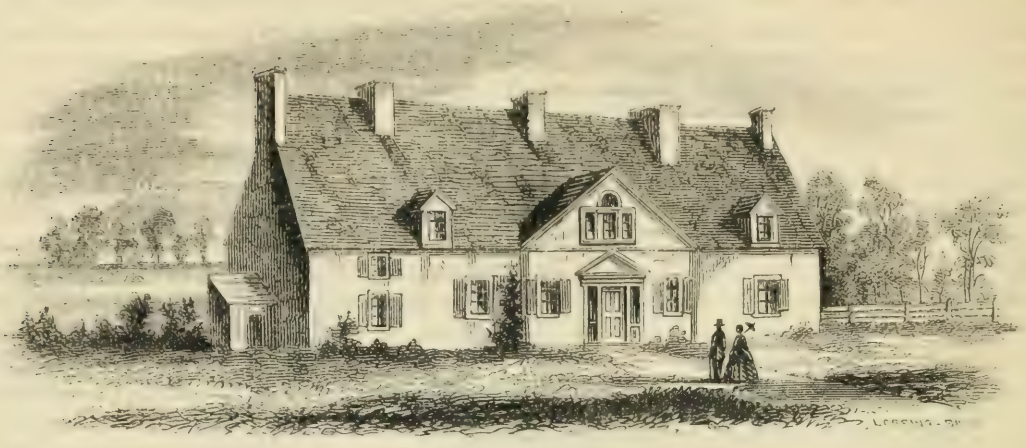
for a while, when they were accidentally destroyed by fire.

[Since writing the foregoing I have received from Mr. John Laird, of Quebec (who was building the ship *Storm King*, seen in the sketch of Cartier's Winter Harbor), a piece of the oak timber of Cartier's vessel, lately taken from this bay. In his letter accompanying the wood, Mr. Laird says, "There is not the least doubt of its being what it is supposed to be, as the man found, at the same time, a small *chain plate* of very ancient pattern that could not have belonged to any modern vessel." I have deposited a part of this timber among the collections of the New York Historical Society, where the curious may see it.]

THE GOLDEN DOG.

When passing up Craig Street, on my return to breakfast, I observed quite extensive ruins upon an open space in the rear of some stores, and was informed that they were the remains of the palace of the Intendant—an officer who was next in power and influence to the Governor-General. It was not, indeed, a palace, but its comparative size entitled it to the name. It was built of the black lime slate with which the locality abounds. The roof was covered with tin, and its wood-work was solid oak, within and without. On the north side, and extending to the St. Charles, was a fine garden. On one end was the store-house of the Crown, and on the other the colony prison. In this palace all the deliberations concerning the province were held; and when those who had the chief management of the police and civil power met there the Intendant presided. When affairs of great consequence demanded a general council the Governor-General usually attended. After the conquest of Quebec by the English, in 1759, this building was neglected. It fell into decay, and its ruin was completed in 1775, when Arnold was blockading the city. He established a body of troops in it. These were soon dislodged by shells thrown from the garrison which set it on fire. It was nearly all consumed; and in the great conflagration of the suburb St. Roch, in 1845, the destruction of its wood-work was completed.

One of the most noted (and the last) of the Intendants, next to M. Talon, was Bigot, who was distinguished for his avarice and public frauds. Many traditions of him yet exist, and apocryphal stories concerning him have assumed the form of history. Bigot made exorbitant drafts upon the French treasury for the ostensible purpose of carrying on the fortifications of Quebec, until one of the queens of France, it is said, began to suspect that the walls, commenced during a former Intendant's administration, were built of gold. His estimate for the annual expenses of the colony, in 1759, was over three millions of livres.



Among other traditions connected with Bigot, is one concerning the *Chien d'Or*, or Golden Dog, that may be seen over a window of the Post-office, near Prescott Gate. The gilded dog, in high relief, is upon a slab of black lime-stone, upon which is the following inscription:

> "Je suis un Chien qui ronge mon os,
> En le rongeant, je prends mon repos,
> Un jour viendra qui n'est pas venu,
> Ou je mordrai, qui m'avra mordu."

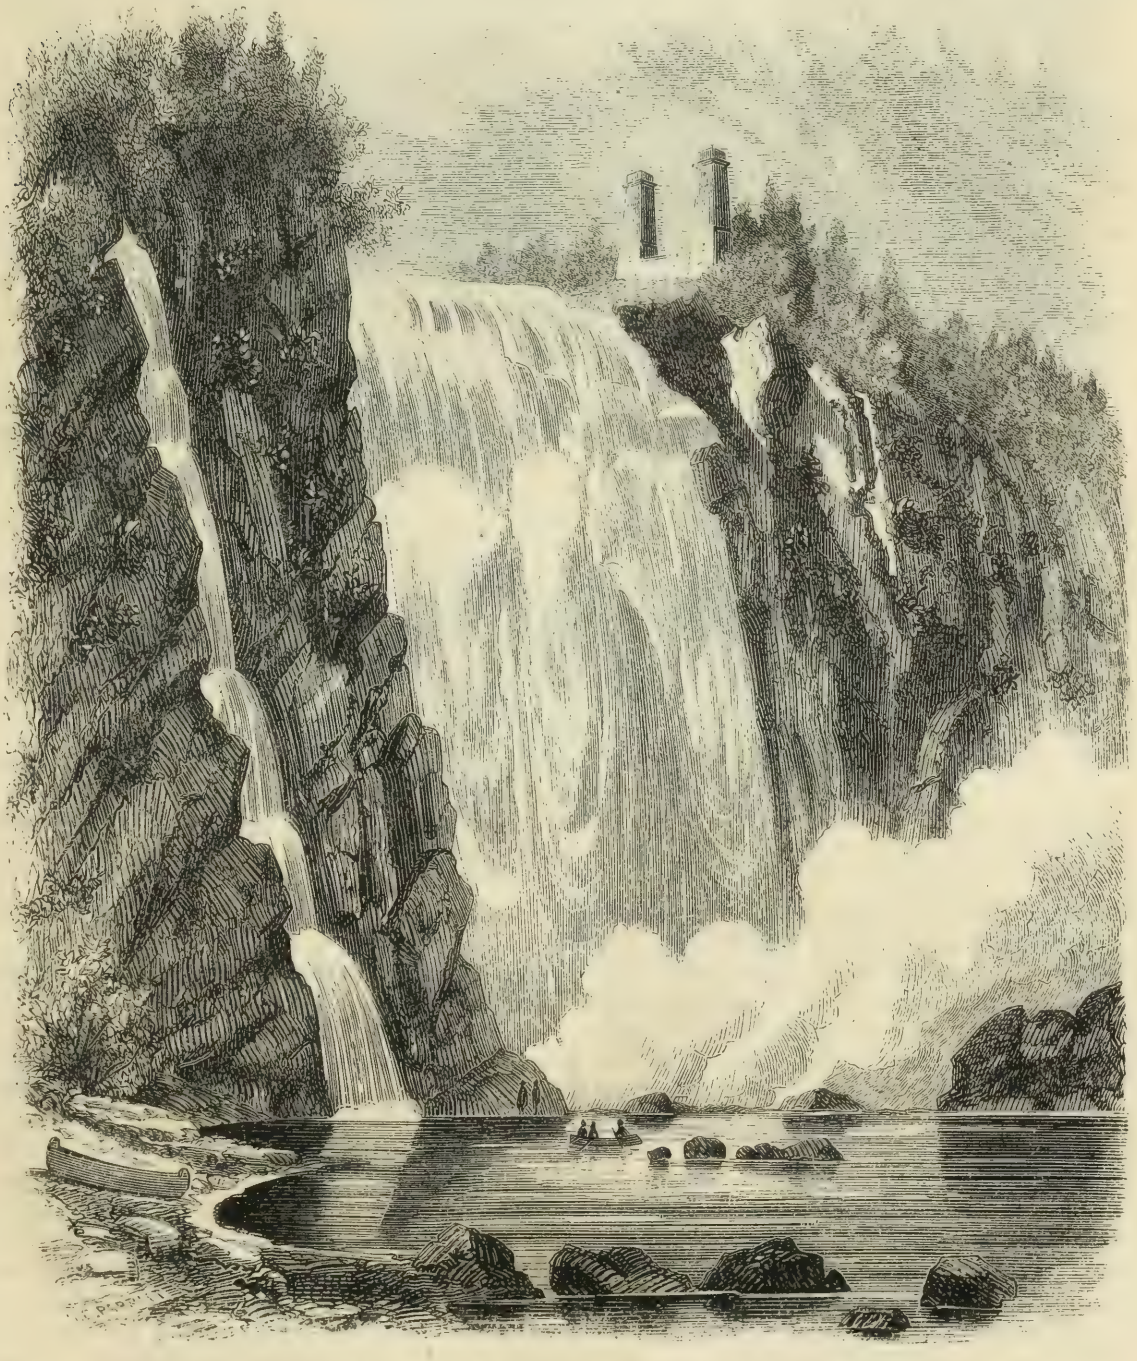
It is said that the house was built by Monsieur Philbert, a wealthy Bordeaux merchant, who lived in Quebec when Bigot was Intendant, and that the figure of the dog, and the inscription, were intended as a lampoon aimed at Bigot, whom Philbert hated. The exasperated Intendant was revenged. He hired an officer of the garrison to stab the impertinent merchant. The murderer was pursued by a brother of the

THE HERMITAGE.

MONTCALM'S HEAD-QUARTERS BEAUPORT.

victim to Pondicherry, in the East Indies, and there slain.

A better authenticated story than this is that of the Hermitage, or *Chateau Bigot*, the ruins of which may be seen in the forest about two miles from the hamlet of Bourg Royale, at the foot of the mountains seen northward of Quebec. It was built by Bigot as a residence for his mistress. Being deep in the wilderness, he believed her to be secure from all intrusion. But the jealous and watchful wife of the Intendant discovered the secret, and soon found means to have her rival poisoned. The house was then abandoned; and during the siege of Quebec by Wolfe, in 1759, the ladies of the capital found safe refuge there. Bigot went to France at that time, where he lost his fortune and his liberty, and the chateau of his mistress fell into decay. Thick shrubbery has grown up around and within its broken walls, and nothing but the lines of some walks and a few very old current bushes show that the hand of cultivation was ever there.



After breakfast we started in a barouche for the Fall of the Montmorenci. The lowering aspect of the morning had changed to bright sunshine, and the ride upon that fine road was delightful. After crossing the St. Charles over Dorchester Bridge, the road is Macadamized all the way. On both sides are pleasant embowered residences for about two miles, where, crossing a stream, the old Canadian village of Beauport is entered at a gentle slope. The one-storied houses are nearly all alike in size, form, and feature. They stand obliquely to the street, to let the drifting snow pass by; and to each is attached a narrow strip of land, extending in the rear, and each containing thirty acres. The village is upon an elevation known as the Heights of Beauport, whereon Montcalm established his fortified camp in 1759. The house which he occupied at that time as his head-quarters is yet standing and inhabited, upon the land of Colonel Gugy, a short distance eastward of his Beauport Mills. It is a stone building covered with stucco, and commands a

MONTMORENCI HOUSE.

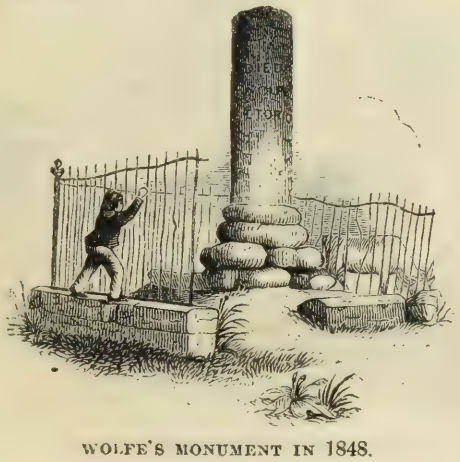
fine view of Quebec and its environs. In the vicinity of this house, and near the Montmorenci, are slight traces of the French works.

Near the west bank of the Montmorenci is a restaurant where refreshments may be had at prices ruinous to a shallow purse, and sparkling ice-water for only half a dime a glass. The keeper hires from the owner of the property the legal right to charge each visitor twenty-five cents for the privilege of following a pleasant pathway through sloping meadows and along shaded fences, to a zigzag road that leads to the bottom of the almost perpendicular bank of the St. Lawrence, near where General Monckton with grenadiers and other troops of Wolfe's army landed, and had the first conflict with the forces of Montcalm. We paid all charges, and, guided by a lad a dozen years of age, made the descent, and by a winding way among lumber and along the river's edge, an eighth of a mile, we reached an admirable position to view the Montmorenci Fall from below. Recent rains had filled the river to the brim, and the cascade was both beautiful and grand. The waters descend in a bright fleecy sheet, twenty-five yards in width (unbroken except by an enormous rock half-way down), into a gulf about two hundred feet below. From brink to base the sheet is covered with sparkling foam; and from the caldron rises mist continually. This, in winter, forms a huge cone of porous ice, sometimes a hundred feet in height, and when the river below is hard frozen a lively spectacle is exhibited, for scores of people may be seen upon the mist-hill slowly climbing to its summit or shooting down it upon sleds with arrowy swiftness. The banks on each side of the fall rise many feet above the crown of the

FALL OF THE MONTMORENCI, FROM BELOW.

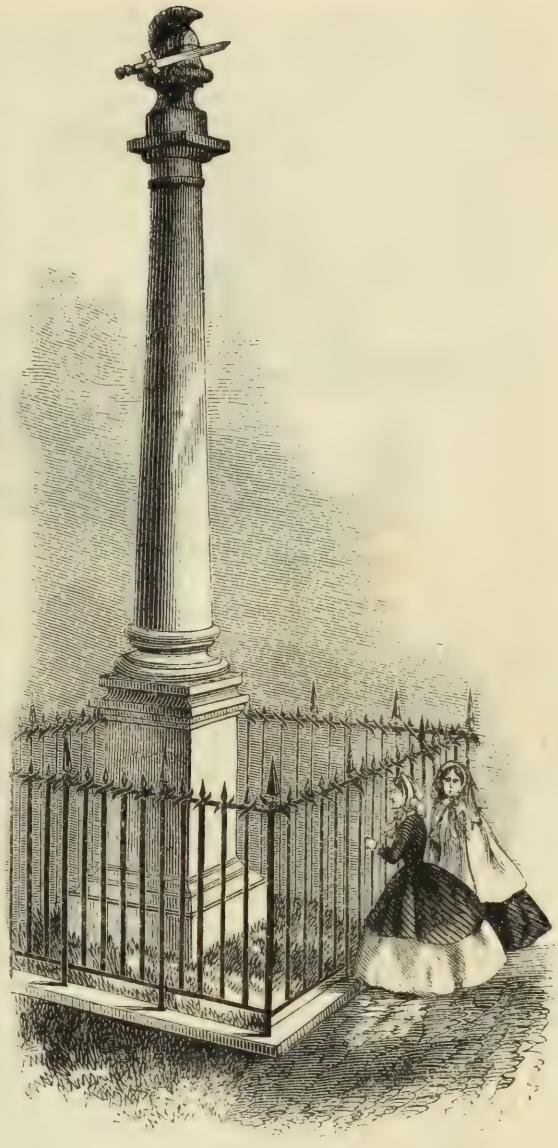
THE NATURAL STEPS, MONTMORENCI.

cataract, and are nearly perpendicular, presenting bare rocks at the base and covered with vegetation and shrubbery on the summit.



Two or three years ago a suspension-bridge was constructed over the fall by which passengers might look into the gulf below. It hung over that fearful spot but a short time. The first persons (a man and his wife and child, in a cart, on their way to visit a daughter in one of the nunneries in Quebec) who attempted to pass over it after it was opened to the public lost their lives. The supporting cables were drawn from their shore-fastenings by the weight upon them, and the whole structure, except the towers, with its living burden, fell into the boiling caldron and disappeared forever. The towers yet stand, mementoes of a sad calamity.

We climbed the steep banks along the zigzag road in the meridian heat of the sun, and rested in the shade of a pleasant grove near the residence of the Seigneur of Beauport. It is an elegant old mansion, close by the bank of the Montmorenci, at the fall. It was built by General Haldimand, the last Governor of the Province of Quebec, before the union of the Canadas, and was named Montmorenci House. There the Baroness Reidesel (wife of the Brunswick general who came to Canada with Burgoyne in 1776) and her family were entertained for several weeks by General Haldimand in the summer of 1782; and there the Duke of Kent,



father of Queen Victoria, resided while he was a sojourner in the province. It is a most delightful spot, commanding a fine view of Quebec and the country on the south side of the St. Lawrence, the harbor, and the beautiful fertile Isle of Orleans, which divides the river into two broad channels.

After making a sketch of Montmorenci House we returned to the restaurant, and proceeded through fields and down a wooded slope, led by the same boy-guide, to the Natural Steps, a section of the banks of the Montmorenci, three-fourths of a mile above the fall. The rocks are so called because they exhibit a series of rectangular gradations resembling stairs. They are composed of shaly limestone, and supposed by some to have been formed by the abrasion of the waters, and by others to be original in their shapes. For an eighth of a mile the river rushes in irregular cascades among these rocks, in a very narrow and tortuous channel, its surface white with foam, and here and there sending up fleeces of spray. On the bald rocky bank we sat, watching the rushing waters, and made an early dinner of sandwiches.

We were leisurely ascending the wooded slope from the river, picking wild flowers by the way, when the rumbling of distant thunder warned us of an approaching storm. We hastened to the barouche and started on our return. Darker and nearer grew the clouds in the northwest, but I ventured to make the sketch of Montcalm's house in the presence of the coming shower. A favoring current bore it northward, and we escaped; but other clouds now came rolling up from the horizon, some audible with thunder, and others beautiful and magnificent in form and hue, until all the firmament westward of the zenith presented a glorious aerial panorama of grand moving shapes and wonderful combinations of colors, for the bright sun was blazing behind the gorgeous screen. Our day's journey was not finished, and we kept on, not without apprehensions of a drenching, for away beyond Lorette on one hand, and over the Chaudière on the other, we saw the rain-vails upon the hills. But "fortune favors the brave," and under its wings we were sheltered. We recrossed Dorchester Bridge, and ascending to the *Chemin de la Grand Allee*, the destined Fifth Avenue of Quebec, we alighted at the toll-gate and walked out to Bonner's Field, on the Plains of Abraham, to view the new monument erected upon the spot where Wolfe fell at the moment of his victory, on the 13th of September, 1759.

WOLFE'S MONUMENT IN 1848.

WOLFE'S MONUMENT IN 1858.

This monument stands upon the site of the old one which the public-spirited Lord Aylmar caused to be erected a quarter of a century ago, but which had become shamefully defaced by the hands of relic-seekers, who were carrying it away in their pockets and reticules. It was of granite, about ten feet in height, surrounded by an iron railing. I give a sketch of it as it appeared when I visited the spot in 1848. The new monument is a beautiful Doric column made of granite blocks, crested with a Roman sword and helmet, and bearing upon the eastern side of its pedestal the following inscription, which records its history: "This pillar was erected by the British Army in Canada, A.D. 1849. His Excellency Lieutenant-General Sir Benjamin D'Urban, G.C.B., K.C.H., K.C.T.S., etc., Commander of the Forces, to replace that erected by Governor-General Lord

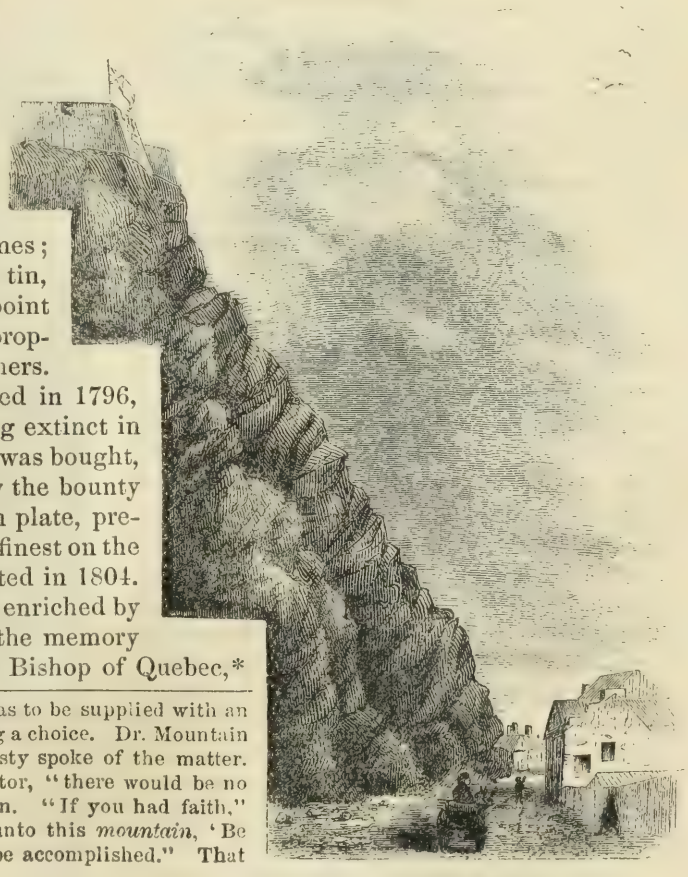
MARTELLO TOWER.

Aylmar, G.C.B., in 1832, which was broken and defaced, and is deposited beneath." On the western side is the inscription upon the old monument: "Here died Wolfe victorious, September 13, 1759." It is surrounded by an iron railing, so constructed with sharp hooks and spears as to prevent any future incursions of the Goths and Vandals.

Nearer the old city walls and the bank of the St. Lawrence the mounds and ditches of the French lines are visible, and these are all upon that elevated plateau that remain to tell the student of history that this is classic ground. The level ground occupied by the English army early in that eventful struggle when Gallic power gave way to British strength, is now devoted to the barbarous sport of horse-racing, and occasional parades of the soldiers of the garrison.

We did not linger long upon the Plains of Abraham, for the sun was near the horizon when I finished my drawing of the monument, and I wished to make a sketch of one of the four Martello towers erected at different distances across the heights of Quebec from the St. Lawrence to the St. Charles. These towers have cannon mounted upon their summits, with which the Plains might be swept, and are so constructed that, if taken by an enemy, they can easily be laid in ruins by heavy shot from the garrison; while on the opposite side, facing the open country, the walls are of immense thickness. We passed the one here delineated on our return to the city, and entered the town by St. Louis's Gate at early twilight, hungry, and wearied by our day's rambling, and thankful for the bounteous table, parlor sofas, and soft, tidy beds that we knew awaited us at Russell's. It was Saturday night, and we rejoiced in the approach of a day of rest.

Sunday morning dawned gloriously. The air was cool and invigorating, and no cloud was in the sky. At nine o'clock we went to the French Cathedral on Market Square, and found scores of worshipers and strangers thronging the vestibule, the aisles, and stair-cases. An officer in the appropriate uniform led us to a gallery fronting the nave, from which we had a comprehensive view of the whole magnificent interior. This church edifice was erected under the auspices of François de Laval, the first Bishop of Quebec, who was a zealous prelate and judicious patron of learning. It was consecrated in the summer of 1666, with imposing



CHURCH OF NÔTRE DAME DES VICTOIRES

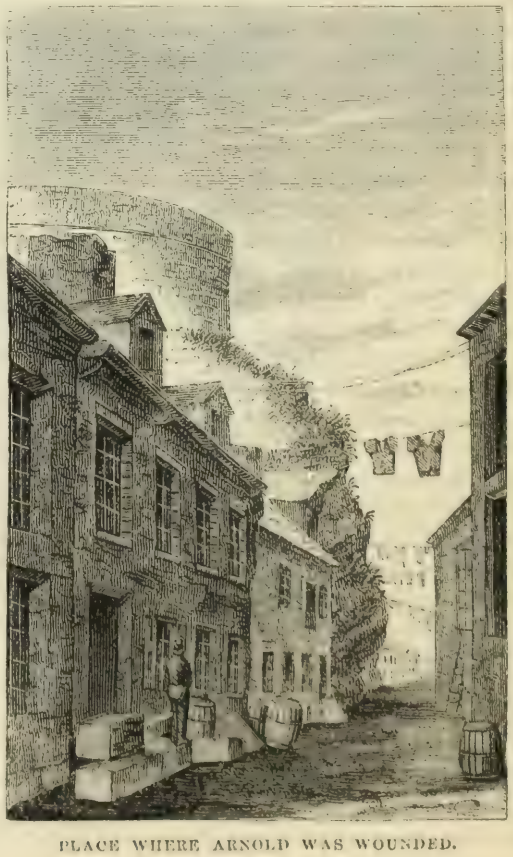
ceremonies, under the title of the *Immaculate Conception.* The building is two hundred and sixteen feet in length, and about one hundred and eighty in width, and has within it four chapels, two in each aisle. The lofty ceiling is elegantly vaulted in stucco, and the floor and galleries are sufficiently spacious to accommodate a congregation of four thousand souls. This church suffered severely when the English batteries at Point Levi hurled shells upon the town previous to the battle that gave Wolfe the victory in 1759. Much of the Lower Town was destroyed, and the Cathedral was set on fire and so shattered that it was almost a total ruin. Of all the interior decorations and many fine pictures only one of the latter was saved from hopeless mutilation. That was the present grand altar-piece, representing the Conception, after the style of Le Brun. After the Province was ceded to Great Britain the church was renovated, and the pictures that now enrich it were placed there. Among them the finest are, the Apostle Paul in his ecstatic Vision, as related in 2d Corinthians, painted by Carlo Maratti; the Saviour ministered unto by Angels, by Restout; the Flight of Joseph and Mary, a copy; the Redeemer on the Cross, by Van Dyke; the Nativity of Christ, copied from Annabel Carracci; the Saviour outraged by the Soldiers, by Fluret; the Day of Pentecost, by Vignon; the Holy Family, by Blanchard; and portraits of St. Anna and the Holy Family.

We remained in the French Cathedral during the performance of the ritual service, and then repaired to the Cathedral of the Church of England, near by, whose chief front, with an inclosed and shaded area, is on Garden Street. This is said to be one of the most perfect and pleasing specimens of architecture in the Province. It is built of gray sandstone, one hundred and thirty-six feet in length, and seventy-five in breadth. It stands upon high ground, with one front upon the Place d'Armes; and its tall spire, covered with bright tin, is a conspicuous object from every point of view. The ground was once the property of the Récollet or Franciscan fathers. Their church and convent were burned in 1796, and the order soon afterward becoming extinct in Canada, this portion of their property was bought, and the church edifice was erected, by the bounty of the Government. The communion plate, presented by George III., is said to be the finest on the continent. The church was consecrated in 1804. It contains very little ornament, but is enriched by two fine marble monuments, one to the memory of Dr. Mountain, the first Protestant Bishop of Quebec,* and the other to the Duke of Richmond, one of the governors-general, who died of hydrophobia. A fine chime of eight bells summons the people to worship, and as we entered the area in the front we saw the performers busy with the ropes, making a harmonious tintinnabulation.

In the afternoon I strolled alone out of Hope Gate, down to the Lower Town, and visited the ancient church of *Nôtre Dame des Victoires*, which fronts upon the little market-place. This church, as we have observed, stands upon the site of the fort constructed by Cartier's men in the autumn of 1535. The ground is much lower than it was at that time. It is one of the oldest church edifices in the city, and was erected previously to 1690, for in that year, amidst the joy caused by the defeat of the English forces under Sir William Phipps, who besieged Quebec, the fête of *Nôtre Dame de la Victoire* was established, and ordered to be annually celebrated in this church on the 7th of October, that being the day on which the first intelligence of the coming of the English was received. On that occasion M. De la Colombière, the Archdeacon, preached an eloquent discourse. Twenty-one years later, when news of the shipwreck of an English fleet under Sir Hovenden Walker, on its way to attack Quebec, was received, this second victory, as the inhabitants called it, was celebrated as little less than miraculous. Again the eloquent voice of Colombière was heard, and the church received the name of *Nôtre Dame des Victoires*. Kalm, who visited Quebec in 1749, says of this church:

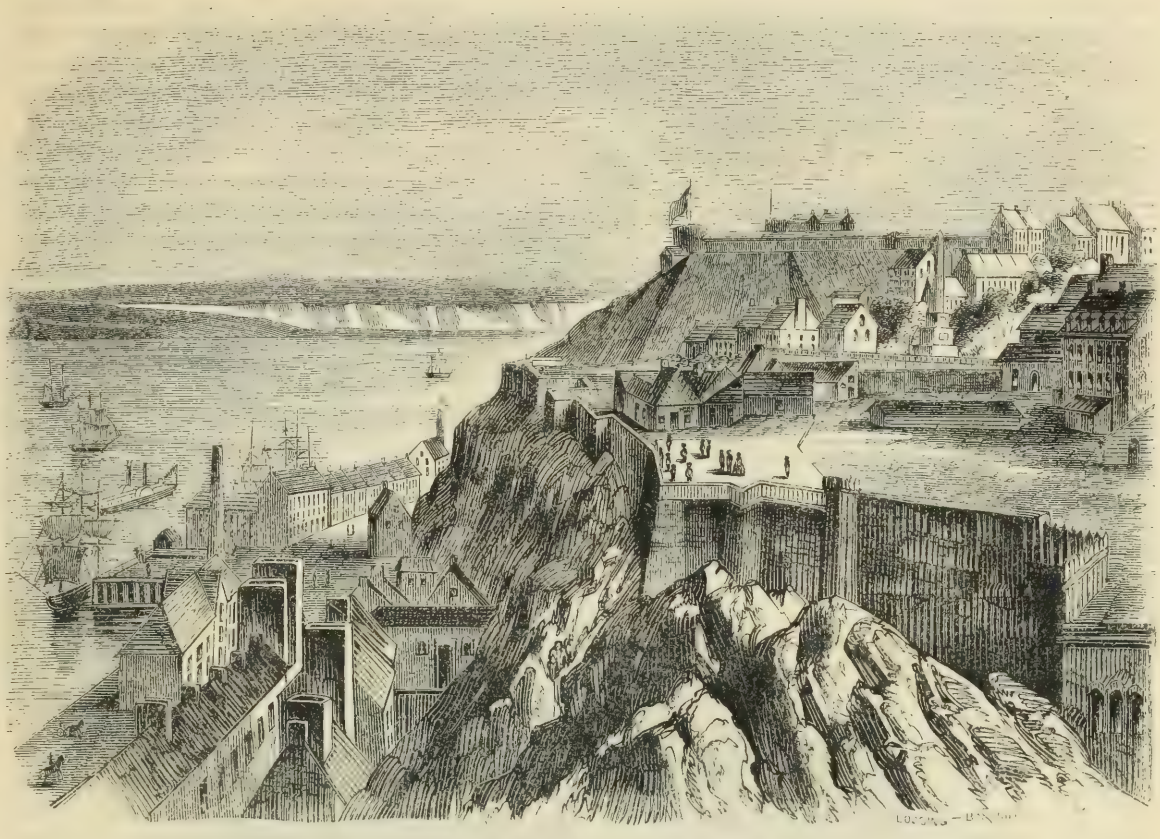
CAPE DIAMOND.

* It is said that when the See of Quebec was to be supplied with an incumbent the King was perplexed in making a choice. Dr. Mountain was present on one occasion when his Majesty spoke of the matter. "If your Majesty had faith," said the Doctor, "there would be no difficulty." The King asked him to explain. "If you had faith," replied the witty divine, "you would say unto this *mountain*, 'Be thou removed into that *see*,' and it would be accomplished." That Mountain was moved accordingly.



PRESCOTT GATE (OUTSIDE).

"It has a small steeple in the middle of the roof, square at the bottom and round at the top." It was nearly consumed by fire during Wolfe's bombardment, when a great portion of the Lower Town was destroyed. It was afterward repaired, and assumed its present form. It is the only church in the Lower Town. The interior is quite plain. In a little chapel in a northern wing is a full-size figure of Jesus entombed, and upon the walls are a few inferior paintings.



I continued my walk in the Lower Town to Champlain Street, and along that avenue at the foot of Cape Diamond to the Ordnance Wharf, at Pres de Ville, the place where General Montgomery was killed when attempting to carry a British battery there, on the morning of the 31st of December, 1775. The declivity of black limestone slate, sparkling with quartz crystals and crowned by the citadel, is here about three hundred feet in height; and the space between its base and the St. Lawrence was so narrow that some of the precipice has been cut away to make room for the street. It was at this narrow place that the British had erected a battery. Montgomery had formed a plan of assault upon Quebec that promised success. General Arnold, with one division, was to pass through the suburb St. Roch, and carrying a battery on the St. Charles, at the *Sault au Matelot*, make his way into the Lower Town; while Montgomery was to lead the other division down Wolfe's ravine, and along the St. Lawrence, take the battery under Cape Diamond, and, making his way into the Lower Town, also join Arnold in forcing a passage into the Upper Town through the portal since called Prescott Gate. At the head of his men, in the face of a driving snow-storm, just at dawn, Montgomery was making his way. He had passed the palisade in front of the battery, when a single discharge of grape-shot killed him instantly, and slew or mortally wounded several of his officers and men. Arnold, on the other side of the town, was wounded, and carried to the General Hospital; and after a desperate struggle for several hours, during which time many of the Americans were killed or made prisoners, the conflict ended, and Quebec was saved to the British.

I intended to continue my walk to Wolfe's Cove, where that commander landed his invading army, some distance further up the St. Lawrence; but evening was approaching, and I made my way back through the Lower Town to St. Paul Street, and visited the place, under the Grand Battery, where Arnold was wounded. The then open shore of the St. Charles is now covered with streets and houses, connecting the Lower Town with the suburb St. Roch. Nothing of its former aspect may be seen except the rugged declivity.

I walked to the Roman Catholic Church of St. Roch—a modern edifice, very spacious, and situated upon an open space fronting toward the *Vacherie*, former possessions of the Jesuits. It is well finished within, and contains several good pictures from the pencils of Restout, Virmond, Chalis, Vignon, Blanchard, and other

PLACE WHERE ARNOLD WAS WOUNDED.

DURHAM TERRACE AND THE CITADEL.

French artists. In the sacristy is a portrait of Bishop Plessis, a great benefactor of the church. Here I rested for a while in the midst of a score of men and women on their knees in prayer, and then entered the city through Palace Gate, the portal that opens toward the St. Charles.

At evening, accompanied by my traveling companions, I went up to Durham Terrace, the resort of the citizens during the summer twilights. It occupies the site of the old Castle of St. Louis, the residence of the governors-general of Canada for more than two centuries. It was destroyed by fire in 1834, and since then the spot has been reserved as a public promenade. The old castle was a fine stone building, over two hundred feet in length. It stood near the precipice; and on that side its walls and spacious gallery were supported by solid stone buttresses. These yet remain; and the platform of Durham Terrace, from which fine views down the St. Lawrence, and of the shores opposite, are obtained, occupies the place of the old broad gallery. We were there just at sunset, when the terrace was filled with men, women, and children; and we lingered until the vesper light had faded, for the evening air was delightful.

Monday morning was as bright and beautiful as that of the Sabbath; and at four o'clock I was upon the wing. When the first rays of the sun flashed over the hills of Point Levi I had finished a sketch of the Place d'Armes and its surroundings. The most notable of these is the Court-house, the English Cathedral, and the large building containing the Quebec Library, the Collections of the Historical Society, and the Museum. The Court-house, on the north side of St. Louis Street, is a large modern structure, its arched entrance approached by two flights of steps, and its interior arrangements ample for the accommodation of the courts and appropriate offices. The Quebec Library, which contains upward of six thousand volumes, was founded in 1779, when Governor Haldimand contributed one hundred volumes of valuable works as a nucleus. This library and the Collections of the Historical Society and Museum were in the Parliament House when it was destroyed by fire, and both suffered severely.

From Durham Terrace I went to the Palace Garden, a little southward, where stands a tall monument of granite, erected to the memory of the opposing heroes, WOLFE and MONTCALM, who both perished in battle near by, a hundred years ago. This garden was formerly a part of the grounds attached to the old Castle of St. Louis, and the portion where the monument stands is finely shaded with ornamental trees. The corner-stone of the monument was laid, with imposing ceremonies, on the 20th of November, 1827, when Earl Dalhousie was Governor-General of Canada. It was erected under his auspices, and the ceremonials were chiefly conducted by the Freemasons. These were invested with peculiar interest by the presence of the venerable Master Mason, James Thompson, one of the few survivors of the battle in which the two great leaders fell. He was then in the ninety-fifth year of his age, and walked firmly to the spot, wearing the regalia of his mystic order. At the request of the Governor

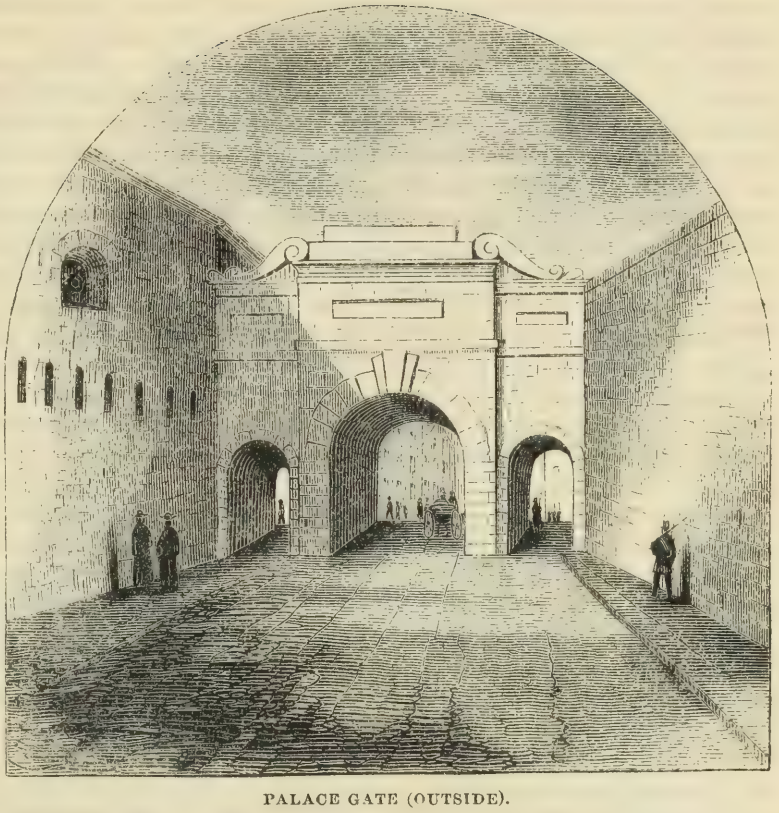
he performed the usual ceremony of giving three raps with a mallet upon the corner-stone, and then retired, leaning upon the arm of Captain Young, of the 79th Highlanders, whose pencil produced the chaste design of the monument. The apex is sixty-five feet from the earth, and upon the pedestal is the following inscription, written by Dr. J. C. Fisher, then a Quebec editor:

WOLFE. — MONTCALM.
MORTEM VIRTUS COMMUNEM
FAMAM HISTORIA
MONUMENTUM POSTERITAS
DEDIT
A.D. 1827.

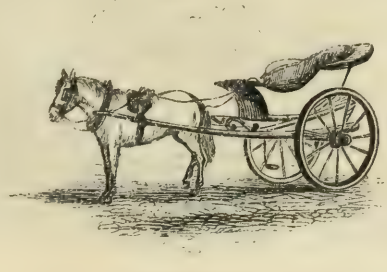
For these few lines, which mean in English, "Military Virtue gave them a common death; History, a common fame; Posterity, a common monument," Dr. Fisher was awarded a golden medal.

After breakfast we left the city for another ride into the country. The Indian village of Lorette, eight miles distant, was our destination. We crossed Dorchester Bridge, and, turning to the left, followed the winding course of the St. Charles three or four miles along a fine road fringed with hawthorn hedges, and leading us by many pleasant mansions. There are two villages at Lorette, occupying both sides of the St. Charles at the Fall, one containing French *habitans*, the other half-breed Indians, who claim to be lineal descendants of the ancient Hurons who welcomed Jaques Cartier more than three hundred years ago. The former village had but little interest for us; and I stopped and sketched the Lorette Fall before entering the latter, and viewed the water-works near by, from which Quebec is supplied with wholesome beverage.

The Indian village of Lorette is upon part of a reservation of sixteen hundred acres, owned



WOLFE AND MONTCALM'S MONUMENT.



in common by the tribe, which numbers now about four hundred souls. The village exhibited evidences of thrift and comfort. In addition to the proceeds of their cultivated lands, the Indians derive quite a revenue from traffic, and each person receives annually from the Government one blanket, three yards of cloth, and some powder and shot. They are all Roman Catholics, and speak the corrupted French language of the province. They have a neat parish church, similar in form to that of *Nôtre Dame des Victoires*, in the Lower Town of Quebec; and upon the green in front of it is a small cannon.

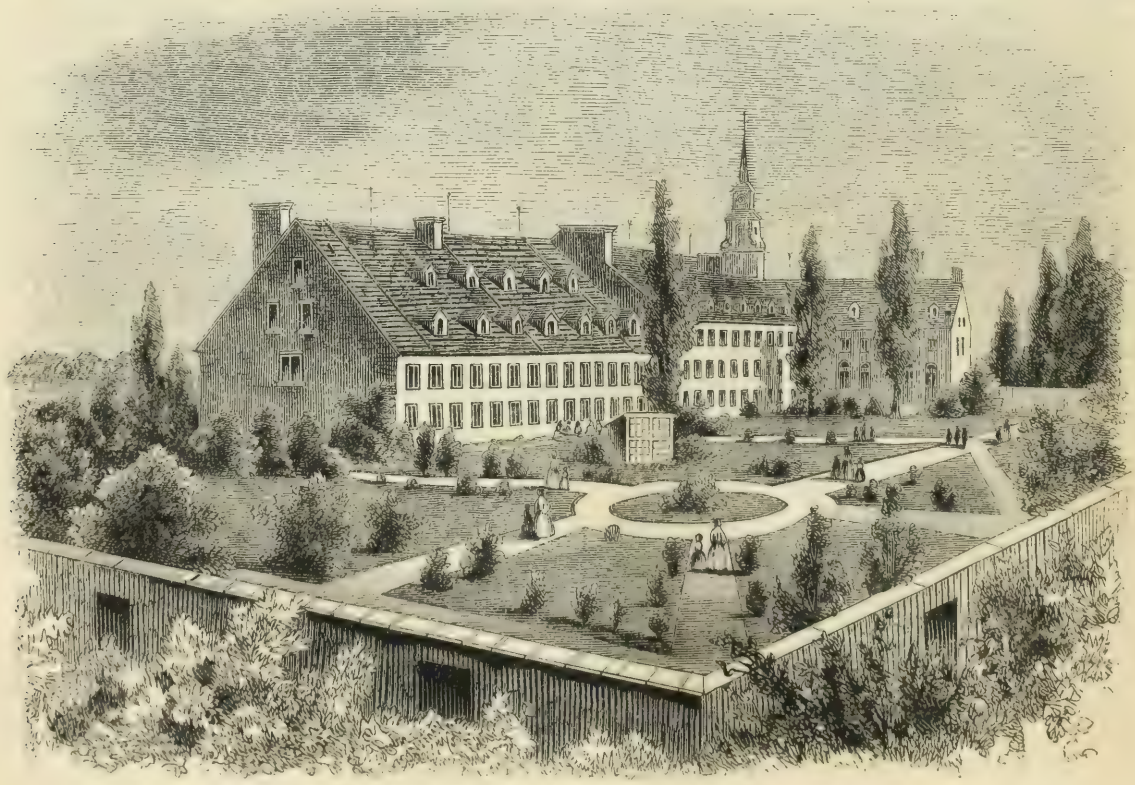
The chief of the tribe, Paul Ondawanhout, was absent, but returned just as we were about to leave the village. He is seventy years of age, but appeared as robust and youthful as most men at fifty. His queen, Marguerite Lawinonke, aged seventy-one, was at home, and kindly sat for me to sketch a full-length portrait of her. They live in a comparatively fine house, and are reported to be rich. Upon the table in the reception-room were various articles of Indian manufacture for sale, and thereon lay a splendid cap, made by the queen for her husband. It had a blue skull and scarlet band ornamented with silver and bead-work, and decked with a profusion of swan, owl, and eagle feathers. Their son, Paul Tahourhenche, was present, and placed the cap on his own head that I might sketch it. In so doing I delineated a profile of the heir-apparent to the throne of Lorette, who may worthily wield the sceptre, for he is an intelligent man, and a graduate of the Seminary at Quebec.

While I was sketching the "palace" nearly all the women and children of the village flocked around me with wide-open eyes of wonder; and when they saw the features of the queen and prince upon my paper they indulged in much quiet merriment. One of them appeared to be the wit of the village (and she was quite a belle in relative appearance), for her remarks always elicited abundant laughter. In one of these merry moods we left them, and returned to Quebec by the way of Charlesbourg, through a beautiful and highly cultivated country, with the glittering capital continually in view, delighted and edified by the events of the morning.

PALACE GATE (OUTSIDE).

A CALECHE.

The calèche is an "institution" of Lower Canadian cities and villages, and my companions were desirous of a ride in one. To accompany them myself implied the necessity of being the driver, for the narrow seat of Jehu upon the splashboard will not permit companionship upon it. So, engaging a gentle horse, I assumed the elevated position of coachman, and, with as much skill as possible, drove out at Palace Gate, not without some secret misgivings as to the result of my adventure. I experienced too much of a baby-jumper motion, without its ease, to be comfortable, but gallantry forbade an abandonment of my position. A dyspeptic man might have been benefited, but I felt too conscious of having worked my passage to desire a repetition of the service. Fortunately, the road we took was smooth. It was the way toward Beauport, and the termination of our ride in that direction was the Lower Canada Lunatic Asylum, near that village, where we were politely received by Mr. Wakeham, the warden of the establishment, who first conducted us over the premises, and then to the palatial residence of Dr. Douglass, one of the principal proprietors of the institution.

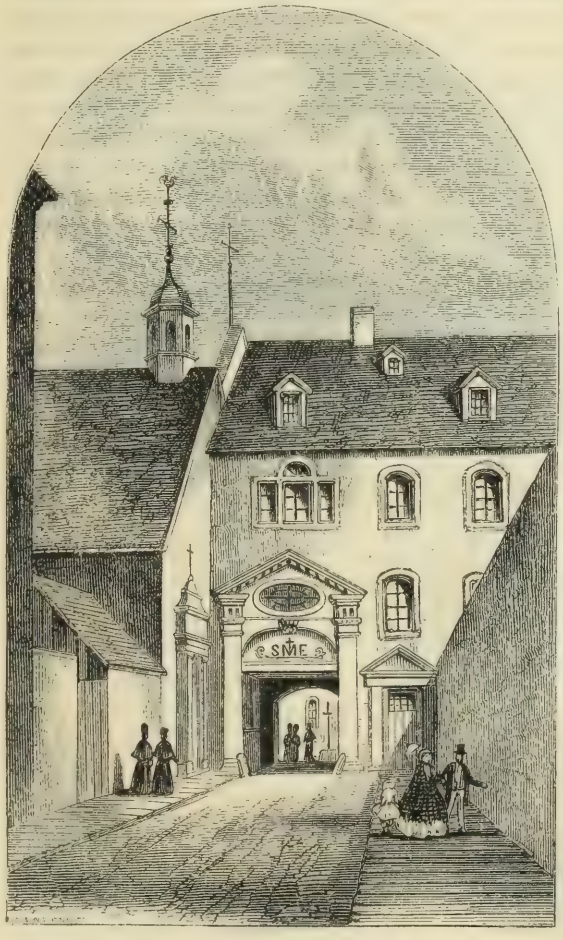


The Asylum edifice is very spacious, thoroughly ventilated, lighted, and heated by the best modern arrangements for the purpose, and stands in the midst of a beautifully shaded lawn. It is enlivened, on three sides, by a considerable stream called the *Rivière des Tau-*

pières, which affords an inexhaustible supply of water. Every arrangement for the health and comfort of the patients appears to have been adopted. The system of treatment seems to be perfect and efficacious; and we were informed that the number of cures effected there is equal to those in any similar establishment in the world. There were between 350 and 400 patients under the roof, and cleanliness and order every where prevailed. We left the establishment deeply impressed with the holiness of that Christian charity which furnishes these homes for the unfortunate.

From the Insane Asylum we rode back to the suburb St. Roch, and down Prince Edward Street to the General Hospital, on the bank of the St. Charles, opposite the peninsula of Stadaconé. It is one of the most ancient and interesting of the semi-religious benevolent institutions in Quebec. It was founded in 1693 by Monsieur St. Vallier, Bishop of Quebec, whose portrait, hanging in one of the private rooms of the hospital, I was permitted to copy. The object of the institution was the relief of sick and disabled poor of all descriptions. It is in charge of the nuns of St. Augustine, a separate and independent community.

It was toward evening when we reached the public court-yard of the Monastery of the General Hospital. I left the ladies in the calèche, and entered the building to obtain some desired information. With some difficulty I made my wants known to a swarthy old French invalid, who led me to a small upper room, with a grated partition on one side. He rang a bell and retired, when a beautiful nun, of Irish birth, appeared behind the screen. After a few moments' conversation, I asked and obtained the privilege of introducing the young ladies into the establishment. We were directed to another apartment; and at the entrance to a large ward, wherein were many infirm women, we were met by four nuns, dressed in the white summer costume of the order, their foreheads entirely concealed by a white vail. One of them was the Mère St. Catherine (the Lady Superior), a young French woman, who could not understand English. Two of the other sisters could, and they were our interpreters. They all kindly accompanied us to the Chapel of the Sacred Heart, and other parts of the establishment, except those wherein a strange foot never enters.



Within the chapel lie the remains of the founder of the hospital, and also those of the Reverend Mother, Louise Soumand, the first Superior of the convent; and in a small court adjoining it is the cemetery for the nuns, where we saw many graves, with small black crosses at the head of each. At the present there are sixty-three professed nuns in the establishment; and all that we saw appeared happy. They have the entire charge of the hospital and school. In the former, there are between seventy and eighty inmates; and, in the latter, from sixty to eighty boarders. In addition to these duties the nuns make church ornaments, from which a considerable revenue is derived. They are not allowed to go out of the establishment, but have a large garden attached, in which they recreate. This is seen in our picture of the Monastery of the hospital, which shows the appearance of the building as long ago as the siege of Quebec by the Americans, when Gen-

MONASTERY OF THE GENERAL HOSPITAL.

eral Arnold, and many of his companions in arms, were carried thither from the field of battle, and experienced the kindest treatment.

After spending an hour very pleasantly with these ministering angels of mercy, we returned to Russell's, and, early the next morning, we were again upon the wing. We first visited the Chapel of the Seminary of Quebec, to view the fine paintings there, and were highly gratified. These are sixteen in number, all religious subjects, of course, and all exhibit great excellence in design and execution. I had a letter of introduction to one of the faculty of the seminary, who, after my companions had left for a second visit to the French Cathedral, conducted me over the whole establishment, including the new college buildings, which are of immense size and superb design, and not yet finished. This institution was founded in 1633, by Monseigneur de Laval de Montmorenci, the first Bishop of Canada, and was intended chiefly as an ecclesiastical institution. When the order of Jesuits was extinguished the members of the seminary threw open its doors to the youth of the country generally, and secularized the establishment in a great degree. Twice during the lifetime of the founder the buildings were burned, and the older ones now bear marks of great age. Attached to them is a beautiful garden, covering between six and seven acres of ground in the heart of Quebec, and filled with an abundance of fruits and flowers. The limits of this brief article will not allow even an outline sketch of the character of this great establishment, and it must be sufficient to say that, as an institution of learning, it ranks among the first on the continent.

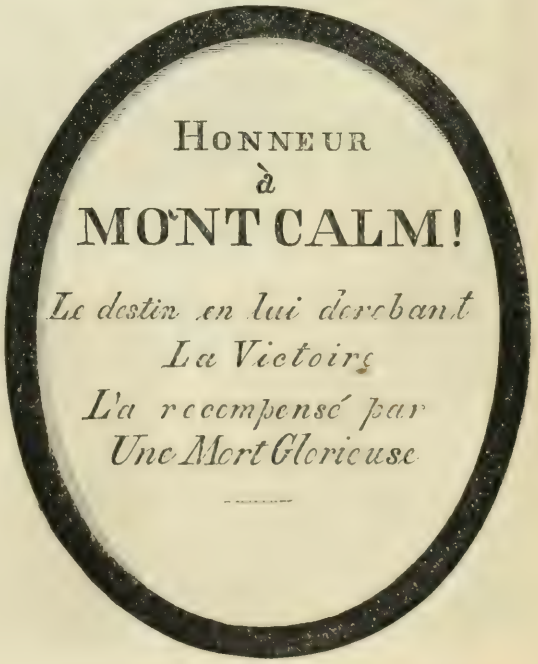
ENTRANCE TO THE SEMINARY OF QUEBEC.

On leaving the seminary I sketched the picturesque narrow entrance to it from Market Square, in which, on one side, the high inclosure wall of the French Cathedral is seen, and then made a drawing of the Jesuits' barracks, an immense pile on the other side of the square, which was formerly a college of that order, but is now used by the Government as a lodgment for soldiers. Kalm, speaking of this building (which occupied a great quadrangle with a large court within), as he saw it in 1749, says: "It has a much more noble appearance in regard to its size and architecture than the palace itself, and would be proper for a palace if it had a more advantageous situation. It is about four times as large as the palace, and is the finest building in the town." It was forfeited on the suppression of the Jesuits. At the Conquest it was regarded as Crown property, and most of the noble old trees of the surrounding gardens were destroyed, that a parade-ground for troops might be made.

Being joined by my companions, we went to the Ursuline Convent, furnished with an admission key in the form of a letter of introduction from one of the priests at the Bishop Palace. But the chaplain of the institution was engaged at the confessional, and we ascended the *glacis* near the precipice of Cape Diamond, whence we obtained a magnificent view of the St. Lawrence and its vicinity below Quebec. Traversing the pathway upon its summit, along the margin of the dry moat, we obtained glorious views also of the country beyond the St. Charles, and through an opening in the hills of Bonhomme and Tsounonthuan caught distant glimpses of the bleak and solitary ranges through which the gloomy Saguenay flows.

By perseverance we found our way to the walled avenue leading to Dalhousie Gate, the massive portal to the citadel. There we were placed in charge of a young soldier from the Crimea, who pointed out every place of interest within the walls. The highest point is Dalhousie Bastion, from which is obtained the finest view of the city, harbor, and surrounding country. The St. Charles is seen winding through a beautiful undulating plain at the northward; and the spires of the parish churches of Beauport, Charlesbourg, and Lorette, with the white cottages around them, form a pleasing feature in the landscape. The citadel and its ravelins cover about forty acres; and the fortifications, consisting of bastions, curtains of solid masonry, and ramparts twenty-five to thirty feet in height mounted with cannon, extend entirely around the Upper Town. Upon the cliff called *Sault au Matelot* is the grand battery of eighteen thirty-two pounders, commanding the basin and harbor below. At the different gates of the city sentinels are posted day and night, and in front of the jail and oth-

THE URSULINE CONVENT.



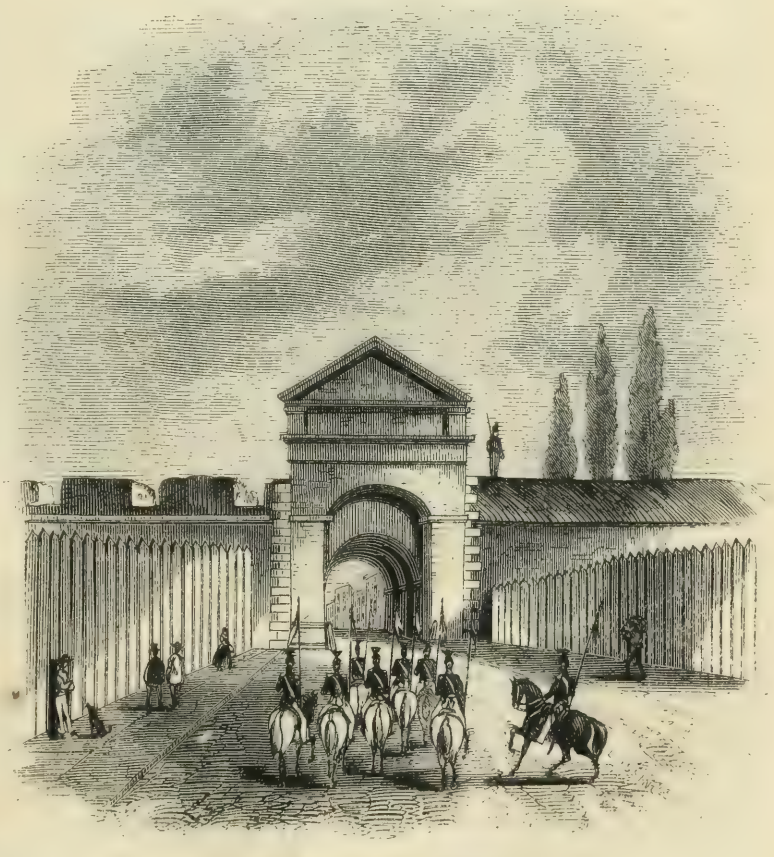
er public buildings the solemn march of military guards is seen.

From the citadel we returned to the Ursuline Convent on Parloir Street at an appointed hour, and were courteously received by Father Le Moyne, the chaplain, who invited us to his parlor, where many pleasing works of art, most of them executed by the nuns, were shown to us. Among the most interesting pictures was one of the original building of the convent, surrounded by the forest that then covered most of Cape Diamond and its slopes, and dotted with Indian wigwams. We were also shown some very fine water-color sketches made by the pupils of the school; and one, representing the entire group of buildings in bird's-eye perspective, drawn by one of the nuns, was kindly presented to me by the chaplain. From it our engraving was made. In a glass case upon a table was the skull of the Marquis de Montcalm, with its base inclosed in a military collar. His remains were buried in the garden of the convent, and when they were disinterred a few years ago the skull was thus preserved.

From the chaplain's parlor we were conducted to the chapel of the convent to view the fine

MONTCALM'S SKULL.

MONTCALM'S MONUMENT.



paintings upon its walls. Some of these are considered the best works of art in Quebec. One of great size, high merit, and immense value, by Champagne, represents Christ sitting down at meat in Simon's house; and over the grand altar is another meritorious picture of the Birth of Immanuel. Upon the wall of the chapel is a small mural monument, erected by Governor Lord Aylmar in memory of Montcalm, containing in French the following inscription: "Honor to Montcalm! Destiny, in depriving him of victory, recompensed him with a glorious death!"

This convent, as well as that of the Hôtel Dieu, situated near Palace Gate, owes its origin to the appeals of the Jesuits in Canada. It was founded in 1641 by Madame de la Peltrie, a young widow of Alençon of rank and fortune, who came to Canada for the purpose in 1639. On a cold winter's day, nine years after the building was completed, it was destroyed by fire. The nuns, then fourteen in number, escaped, and were generously received into the convent of the Hôtel Dieu. In 1686, during the performance of High Mass, the convent again caught fire, and was consumed. Nothing was saved, and again the nuns, then twenty-five in number, became pensioners upon the bounty of those of the Hôtel Dieu, with whom they had made a solemn covenant of friendship. Their home was soon rebuilt, for, being an institution especially devoted to the education of females, its prosperity was considered to be a matter of public importance. Such is still the chief business of the establishment, and its school has long been considered one of the best in the province. Their system of education embraces all the higher branches, with various accomplishments, together with domestic economy. There are now about two hundred and forty pupils, one half of whom are boarders. Attached to the institution is an elementary charity school, of about one hundred and sixty scholars. The house of the foundress, into which the nuns were received while the convent was first rebuilding, remained upon the premises until 1836.

After leaving the convent of the Ursulines I proceeded to make sketches of the five gates of the city. I had that of St. Louis about half finished when a couple of soldiers came along and informed me that no one was allowed to take views of any portion of the fortifications without consent of the town major. "Then I will ask his consent," I said, as I closed my portfolio. But that resolution was changed when one of the soldiers, as they turned away, said, in a low tone, "He'll not get it." Believing the prohibition to be the fossil of some ancient necessity, suspended by red tape, I chose to disbelieve the soldier and to remain in ignorance of the regulation. So I kept away from the town major, secretly resolving to play Samson, and carry off the gates of the city, "bar and all," while the Philistines slept. At peep of day next morning I went out, and before the red-coats were stirring sketched the other four portals, commencing with Hope Gate, which overlooks the mouth of the St. Charles. At noon I went up to finish my drawing of St. John's Gate, and had just completed it, when a sentinel upon the wall again enlightened me concerning the prohibition. "All right," I replied, as I closed my portfolio; "I have the whole five;" and jumping into a calèche, was soon taking a quiet lunch at Russell's, totally unconscious of having wronged the realm of England. Be assured, most loving cousins, that no barbed Russ or cuirassed Gaul shall know the momentous military secrets which I obtained while delineating those portals of your walled provincial city; for—

"England, with all thy faults, I love thee still."

We of the "States" have no idea of ever storming Quebec again. We have learned to our hearts' content that those gates and walls are very strong. Lamb's thunder-bolts, hurled from his ice-battery in bleak December, '75, fell as harmlessly upon the gates of St. Louis

ST. LOUIS GATE (OUTSIDE).

HOPE GATE (INSIDE).

and St. John as those from heaven upon the forehead of the great bull mammoth; and the leaves of Palace Gate were only opened to allow a detachment of the garrison to rush out and capture the surprised Dearborn and his party, who were keeping watch and ward over it until strength should come to open it from without.

And here the pen and pencil of the tourist must rest. It would be delightful to allow

ST. JOHN'S GATE (INSIDE).

them to travel on, for we visited many other things and places in and around Quebec. But I may not here delineate or describe them all. On the pages of a volume only could full justice be done to the subject. And so I will conclude these brief sketches of our impressions of the ancient capital of Canada by advising all summer tourists to spend a week there; for, as I said at the beginning, Quebec, in its actualities and associations, is the most interesting town on the continent.

ONLY A WOMAN'S HAIR.

I.

IN the fall of 1848 I was traveling on horseback in Kentucky.

One evening, just as the sun was sinking beyond the finely tinted woodlands, I observed, at some distance before me, a traveler of tall and distinguished appearance pursuing the same road with myself. He was clad in black, a wide hat drooped above his forehead, and his shoulders were nearly covered with long, dark locks of hair. I was looking at him with some attention, when all at once my gaze became riveted to his figure. He had paused upon a little hillock, removed his drooping hat, and bowed low and gravely to the vacant field extending to the right of the road! Ten steps further I became aware, however, that in this I was mistaken—his grave and ceremonious salutation seemed to have been directed to a fine old mansion which rose above the woods at the distance of half a league.

Having accomplished his bow, which was full of grace and dignity, the stranger replaced his hat upon his head, and slowly disappeared at a turn of the road which led into a little wooded dell. I followed, vainly puzzling my brain for the solution of this singular adventure, when, having reached the bottom of the hollow, I all at once perceived the horse of the strange traveler tied to the bough of an oak-tree near the road. A moment afterward I caught sight of the unknown. He was kneeling beside a tombstone within a small brick inclosure overgrown with moss and creeping plants.

I have had too much grief myself not to respect the exhibition of it in others; and, despite my curiosity and surprise, was about to ride on in silence, when, suddenly rising from his knees, the stranger turned toward me, and in a moment we had recognized each other. It was my old friend and school-fellow, Henry Hastings.

Our greeting was warm and cordial. To my surprise I discovered in him not the least indication of mental alienation, and a quarter of an hour after our meeting I had accepted his invitation to spend the night with him, and had reached his abode. It was a species of hunting lodge, buried in the wildest depths of the hills; and here—forgetting for the time the entire outer world, listening to no sound but the subdued growl of some noble deer-hounds, or the low, sad murmur of the great oaks and pines—here, I spent an entire week, which I shall always look back upon with a strange interest.

At first Hastings preserved a complete silence upon the events of his life since our former acquaintance, and I respected his calm sadness too much to directly question him. He doubtless divined my curiosity, however; and one dreamy afternoon, while we were sitting upon a peak of the neighboring mountain, he gave me the relation which I was so anxious to hear. Drawing from his bosom a locket which was attached to a slight steel chain, he opened it and showed me a tress of golden hair.

"In this curl is clasped the history of my life, friend," he said, with calm sorrow. "'Tis only a woman's hair,' as poor Swift wrote once; yet it is this which has made me what I am. God rules us all. He makes us very weak, that, in our weakness, He may make His own strength perfect. To one comes joy and laughter; to another tears. I accept my part, and bow to Him who is Lord of all."

After a moment's silence, which nothing interrupted but the patter of the golden leaves as they tinkled away, my friend proceeded with his narrative.

II.

"I came of what is called in England 'a good family gone to decay.' My pockets were quite empty, that is to say, but I was a gentleman. Do not let us deride it; it is something.

"At twenty-one I found myself an orphan without connections; the small resources which had given me my education expired with my father. I looked around for the means of daily bread. Through the kindness of some friendly people, who, no doubt, pitied the poor orphan boy, I obtained the situation of teacher in the family of Colonel Singleton, of Singleton Hall, the old mansion which you saw me bow to some days since.

"I was received on my arrival with great cordiality by Mrs. Singleton and the younger members of the family, Colonel Singleton and his eldest daughter being temporarily absent. The Hall, as you saw, was a spacious old mansion, with numerous dependencies; and the estate upon which it stood was of great extent and value, though burdened, as I afterward heard, by a large debt. Mrs. Singleton exerted herself to make me feel perfectly at home, like the excellent and tender-hearted lady which she was. and I awaited tranquilly the appearance of the lord of the manor and Miss Singleton.

"They returned in three or four days, riding in a fine chariot and four, then still in fashion. Colonel Singleton was a stately, pompous old gentleman, and his greeting to me was scrupulously ceremonious and courteous; but there was something, I know not what, of a disagreeable character in his manner. But I did not look at him; a vision which appeared behind him absorbed my whole attention. It was the figure of a young lady half reclining upon a pillow, and framed, as it were, in the wide door-way of the chariot. I have seen much beauty in my life,

but never any human creature half so lovely. The girl was apparently about seventeen; her figure slender, but exquisitely graceful. Her hair, curling in profuse ringlets of a pale gold color, brushed against cheeks almost as white as snow, and just tinted with a faint red. My gaze was riveted above all, however, to the eyes of the young lady—large, melting, violet eyes—filled with the rarest nobility and sweetness. Indeed, every feature of this face expressed something beautiful and noble; an unspeakable truth and innocence glowed in eye and lip. As I think of her now my poor, cold pulses leap; then my heart sinks—for she is gone.

"But to my narrative. From that moment I loved Phœbe Singleton with my whole heart and soul, as the knights of the Middle Ages loved. Do you think it strange? There are those who discredit love at first sight, who deny its reality. To such my experience has been denied. I loved this woman from that instant with unspeakable earnestness; out of her presence I scarce lived. I loved her with my whole heart and soul and being; from that autumn evening when she passed before me like a beautiful dream the young girl was my fate.

"And what was I? The question came to me often like a bitter fiend, and touched my shoulder, and laughed and jeered at me. I was a poor, homeless orphan, without friends or 'social position' of any possible description. I loved with a deep, unchangeable devotion—whom? The daughter of the rich and influential gentleman who paid me for work done for him! But then my pride rose up, and the sneering fiend retreated. Was I not as good a gentleman as Colonel Singleton; and did he not know as much? Was I poor? It certainly was unfortunate; but there the matter ended.

"The world laughs at pride, friend, and laments the fate of its possessors. But it is the shield of many a homeless chevalier!

III.

"Two days after Colonel Singleton's return a new actor in the drama appeared at the Hall. This was a gentleman of the neighborhood, named Fitzhugh, who drove up in a splendid equipage drawn by a magnificent pair of bays, and from the first moment I discerned in him a dangerous and determined rival.

"He was certainly not to be despised. Of elegant person, possessed of greater wealth than any other gentleman in the county, and bearing a worthy name, he was a suitor of whom any young lady might have been proud; and, if rumor spoke the truth, more than one damsel had been anxious to become Mrs. Fitzhugh. Scheming dames had paid court to him—scheming mademoiselles lavished on him their most seductive smiles—but Mr. Fitzhugh had nearly reached his fortieth year, and was still unmarried. No damsel had possessed sufficient skill to entrap him, and induce him to relinquish his splendid bachelor existence for the more sober delights of matrimony. He still hunted the fox, and drank deep, and drove fast horses, and laughed at the elderly ladies and the young damsels. He would speak of the former to his cronies in a manner which they would scarcely have relished; the latter would have liked his allusions to them even less.

"Just before my arrival, however, the fortunate and persecuted gentleman had found his feelings all at once strangely interested and moved. He saw Phœbe Singleton, and for the first time encountered a young lady who did not care to attract his attention, and exhibited no desire even to make his acquaintance. I think his love grew from pique in the first instance—he desired to reduce this sole rebellious fortress—but finally his feelings became seriously engaged. To know her intimately, and find out all the rare and exquisite delicacy of her organization, was to wonder at and love her deeply, and this love now possessed Mr. Fitzhugh.

"I soon found—as Fitzhugh paid visit after visit at brief intervals—that in Colonel Singleton he had a powerful friend. That gentleman was strongly in favor of the match, and at times exhibited his approbation in a way which must have made the cynical Fitzhugh, on his return home, more than once shrug his shoulders and sneer. As to Mrs. Singleton, this serene lady preserved toward the suitor of her daughter a calm politeness simply; the keenest observer could not have declared whether she approved or objected to his attentions. I fancied I heard more than once in the drawing-room, after his departure, the voice of Colonel Singleton raised in stately and irate remonstrance with his wife, but the lady was perfectly tranquil and immovable. She continued to treat Mr. Fitzhugh with something very much like a polite indifference.

"Such were the feelings of Colonel and Mrs. Singleton, and now you will probably be curious to know in what light the attentions of Mr. Fitzhugh were regarded by the young lady herself. Did she encourage or discourage him?—did she love him, or was he indifferent to her?—and what was the result of that private interview which Mr. Fitzhugh one morning solicited and obtained in the great drawing-room? All these questions, friend, are answered by three simple words: *Phœbe loved me!* Yes, yes, she loved me! Yes, this supreme joy has been my portion—this, at least, has been my treasure!—and though fate wrest from me my brain, my memory, my life, yet this will still remain the crowning glory, lighting up the 'deepest deep' of misery and despair! I break out into rhapsody, but bear with me. This is the sole oasis in a life arid as the deserts of the East. How such a gift as this pure woman's love was mine I know not; doubtless a kind Heaven sent it me. Perhaps this tender heart was filled with pity for the poor orphan without kindred blood, alone in the wide, wide world; and doubtless from this pity and sympathy ripened to flower and fruit her faithful love. I know not, however; but this I do know: at the end of three months the heart of this true woman was my

own. I had never uttered a single word of love; we rarely met, and then for an instant only; but in the fresher color of her cheek, the light of her eyes, the buoyancy of every movement, I discerned with inexpressible delight the secret of my happiness.

"With this change in Phœbe's appearance, with her increasing beauty and freshness, so to speak, Mr. Fitzhugh's passion more than kept pace. His visits grew rapidly more frequent, and at last scarcely a day passed in which he did not make his appearance. I think he believed his suit prosperous, such was the high estimation in which a long series of victories had induced him to hold himself.

"The decision soon came. One morning he requested a private interview in the drawing-room: an hour afterward he came out and rode away. Phœbe did not appear at dinner, alleging a violent headache, and I read the result in Colonel Singleton's frowning face.

"Mr. Fitzhugh had been discarded!

IV.

"For some days Colonel Singleton's ill-humor amounted almost to ferocity. Every trait of his overbearing character had been enlisted in favor of Phœbe's match with Fitzhugh—his pride, ambition, love of wealth, and doubtless, also, the encumbered state of his own property, had magnified in his eyes the value of the suitor's.

"His treatment of Mrs. Singleton was almost rude. Nothing but self-pride and shame prevented him from treating the lady, who seemed to regard the result indifferently, with actual want of common courtesy. As to Phœbe, he would not so much as look at her; and this alienation of father and daughter, caused, I was firmly convinced, by myself, plunged me into the most cruel suffering and indecision.

"What ought I to do? For a week, during which Mr. Fitzhugh did not renew his visits, I debated daily, hourly, the proper course for me to pursue. Should I stay at Singleton Hall? Was it honorable for me to remain thus in a false position, tacitly practicing a deceit upon *my patron;* regarded by him as a simple employé, but really loving and beloved by Miss Singleton? I was not long in coming to the conclusion that to remain longer would be wholly inconsistent with sincerity and uprightness, with that honor which my father had taught me; and I sternly resolved to tear myself away from this great temptation. I made this resolution, I think, at least a score of times. But, alas! the weak heart, the trembling nerve recoiled. You will never know, unless you are placed in a similar position, the whole weakness of the human heart—the inability of aught whatsoever to oppose the strength of a deep, all-absorbing love. The bare thought of going away forever, and never looking again upon the woman I loved, made my cowardly heart die within my breast. At an earlier period I might have conquered by a tremendous effort, and sternly performed my duty; but now, when the presence of this young girl had become a necessity, as it were, of my existence—when her smile, her greeting, the chance touch of her hand as she leaned upon my arm in entering or issuing from the chariot, were the life-blood of the passing days for me, now I had no longer any strength. I could not leave her! With clenched teeth and heaving bosom I acknowledged my cowardly weakness, and revolved some other scheme for reconciling my conscience and my love.

"I saw but one. It was to acquaint the young lady with my feelings; to formally demand her hand from Colonel Singleton, and then—I dared not think of the result. But, at least, I should place myself in my true position; in either event Phœbe would be bound by nothing that I would refuse to hear of, and fate might determine the rest. This was the course I would pursue. Two weeks afterward I was in the same state of sullen excitement. I had not had courage to carry out my plan. Had it not been for one of those accidents, as they are called, which so often decide human affairs, I might have gone on in the same way for a lifetime.

"One evening I was walking in a wild part of the forest stretching around the Hall—indeed it was not far from this place, friend—when suddenly raising my eyes from the ground, upon which they had been moodily fixed, I saw Phœbe a few yards from me. She had strolled away, like myself, without any definite object, and that fate—call it what you will—had brought us to the same spot. Even now, after the lapse of so many years, I recall every detail of her dress perfectly. A light hood drooped over her forehead, framed, as it were, in sunny curls, and the blue dress she wore defined clearly her exquisitely graceful figure. When she became aware of my presence a quick blush invaded her cheek, and the unconscious movement of her hand, held out toward me, showed that the encounter was not displeasing. Thus commenced this interview, which determined the complexion of my entire after-life; and thus, far from the outer world, alone by ourselves, we wandered for hours through the dim pine forest—this forest here, which even now seems haunted ground to me, for I hear in every whisper of the mountain trees a voice that is gone.

"Of the details of that interview I shall not speak—I could not. There are treasures of the memory too sacred to be revealed to the dearest friend—secrets which should never be unvailed. The sighing wind bore away into the depths of the forest the whispered words which told me that I had long been dear to one of the purest hearts that ever beat in human bosom; and I knew then that it was my homeless and lonely life which had touched the true woman's heart.

"She was weeping on my shoulder when a furious exclamation startled me, and, raising my head, I saw Fitzhugh standing before me. He had evidently been hunting, for his gun was in his hand, and some hounds followed him. Chance had thus directed *his* steps, too, to the spot.

"What followed his exclamation occurred, it seemed to me, in a single instant. I was only conscious of a wrathful shout, of my reply in a tone far more haughty than his own, for the devil of rage was aroused in me, and then we closed in a mortal struggle. As we grappled a loud explosion shook the forest, a burning iron seemed to pass through my shoulder, and a scream so piercing that it rings still in my ears followed like a terrible echo. I fell at full length on my face, losing all consciousness; but as my senses left me I thought I saw Phœbe fall covered with blood, Fitzhugh attempting, without success, to catch her fainting form in his arms.

"Two days afterward I became conscious for the first time. I woke from my stupor in a darkened room of the Hall. I awoke, but it was only to toss and turn, burned up by a horrible fever. This fever lasted nearly a month; then slowly I returned to life, as weak as a child, but with my senses about me. From good Mrs. Singleton, who nursed me with grave care, I learned what had followed the accidental or intentional discharge of Fitzhugh's gun. The charge had passed through my shoulder, a chance shot slightly drawing blood from Phœbe's neck. Some laborers in an adjoining field had borne me to the Hall. Phœbe was unhurt. I drew a long breath of relief at this intelligence; and soon after the departure of the good lady the young girl herself appeared at my bedside.

"In a moment she had caught my thin pale hand, pressed it to her lips, and covered it with tears and kisses. Falling upon her knees at the bedside, she buried her face in the counterpane, and a long, deep sob forced its trembling way from the bottom of her heart.

"I was about to speak, and beg her not to be disturbed upon my account, when suddenly the door again opened, and Colonel Singleton, motionless, flushed with passion, and with lips tightly compressed, stood upon the threshold. The next moment he had entered the chamber.

V.

"Suppressing every exhibition of anger, and assuming an air of cold ceremony, he approached, and bade me good-morning. Phœbe rose hurriedly to her feet, and threw upon her father a glance of the most tender entreaty. I knew that her look was an appeal to him in favor of myself.

"'I desire to have a few moments' conversation with Mr. Hastings, my daughter,' was his sole reply, 'and must beg you to retire.'

"'He is very weak—his fever has not yet—pray do not excite him, father—' were her broken words, as she slowly retired. And I was left alone with my visitor.

"'So you are recovering, are you, Sir?' he said, between his teeth; 'you are recovering?'

"'I believe so, Sir,' I replied, looking calmly at him.

"'Don't you think it would have been better if you had died, Sir?' he continued, in a tone of bitter sarcasm; 'then, perhaps, the grave might have hidden your dishonor.'

"'I have been guilty of no dishonor,' I said, coldly; for his tone began to arouse in me a scorn and passion which was more than a match for his own.

"'Not guilty!' he cried. 'Do you presume to say, Sir, that you have not taken advantage of your position in my family to practice upon the innocent and unsuspecting nature of a child? Do you deny that you have held clandestine meetings with my daughter? Do you think to trick me into the belief that you have not, for your own sordid ends—'

"'Colonel Singleton!' I said, haughtily, 'do you realize our respective positions? Have you forgotten whom you are addressing, and where you are?'

"'Don't bandy words with me, Sir!' he cried, wrathfully; 'and do not presume to think that I am the dupe of your acting! You've a long story ready, I have no doubt—your "feelings were beyond your control"—you "are not responsible!" I tell you, Sir, that your deception is useless! You have dishonored an honorable name; your father, if he was alive, would spurn you from his presence! Sooner would I let my daughter look upon a felon than ever see your face again!'

"He paused in his passionate outburst; with purple cheeks, flashing eyes, and lips writhing feverishly. My own passion was growing with his own. I felt my pale cheeks suffused with blood; my nerves seemed to stretch, and tingle, and grow strong; the blind rage which I felt, thus lying powerless before insult and unmanly outrage, for a time deprived me of the power of utterance. At last this anger yielded to scorn; a haughty coldness succeeded; and, raising my finger, I said: 'Colonel Singleton, you have addressed me as gentlemen do not usually speak to sick men, lying powerless before them in their own houses. You have charged me with sordid motives, with dishonor. I scorn to bandy insults with you, Sir; I make a simple statement. I entered your house as an honest gentleman, agreeing to perform an honest employment for my daily bread. I saw your daughter, and loved her before I was aware of it; was there crime in that, Sir? As soon as I discovered this feeling I determined to leave your house, fearing the appearance even of deception more than misery or death. I was weak—young men have been weak before, Sir, in this world—I staid; but never did the slightest indication of my feelings pass my lips. The meeting with Miss Singleton in the woods was wholly accidental—a statement you may or may not believe, as seems proper to you. I told her what I had always concealed—that I loved her. It was the result of sudden feeling, not of sordid calculation, Sir; an hour later I should have asked her hand of her parents. You would have refused. I should have left your house. That is all, Sir; I foresee your reply, an insult. Well, Sir! insult me! strike me! Take advantage

of my weakness, and of the fact that you are her father! I shall not resist, Sir; but woe to this would-be-murderer, my rival!'

"His reply was a passionate outburst. 'False! every word false! No, Sir, you can not trick me! Don't lie there frowning at me, Sir! I say I am not to be wheedled by your falsehoods—the forged explanation of a designing adventurer! And, pray, what do you mean to do now, Sir? Perhaps to inflict chastisement upon *me?*'

"These abrupt words were caused by a movement on my part. Sick with scorn and anger, I left the bed, feeling a supernatural strength, and began to dress myself.

"'And pray what does your lordship design now?' repeated the enraged old man; 'so your sickness was all a sham?'

"'I design leaving your house, Sir,' I replied, faintly, but with inexpressible disdain. 'Were I to stay, your roof would fall and crush me!'

"'And where are you going?' he said, gruffly, but less violently; for I think my miserable weakness shamed the little manhood in him.

"'That is my own affair—any where, so it be out of your house.'

"'Your money shall be sent—'

"'Send nothing, Sir. The bread it bought would choke me!'

"And I went on dressing—feebly, but moving with a strange strength. In fifteen minutes I had completed my toilet, taken my hat, and left the chamber. As I passed Colonel Singleton I saw in his eyes a sullen anger, shame and pity mingled; but he did not arrest me with a word of opposition or apology. At the foot of the great stair-case I staggered from weakness, and, striking against the wall, made my wounded shoulder bleed afresh. By an immense effort I still stood erect, however, and tottered onward, smiling bitterly.

"Then commenced a sort of dream-life. I walked in my sleep, as it were, and saw strange visions. Faint and staggering, I was about to issue from the front door when I was aware of figures crowding around me. One of these figures was that of a young girl, who hastened quickly to my side with a wild, terror-stricken look, unutterably anxious and miserable. In an instant I felt her soft arms around my waist, and my head drooped, like a wounded bird's, on her bare white shoulder. Then, through the mist which enveloped every object, I saw the flushed and angry face of an old man, and the sad, unhappy face of a lady. The man and the woman seemed to carry on a violent altercation for some moments, in the midst of which the bosom upon which my pale forehead leaned was shaken by wild and passionate weeping. Next some servants hastened to me—the young girl fainted in the arms of the elderly lady—and then I was placed in a chariot and driven some miles. Suddenly, in passing a tall gate-way, I recognized the residence of Fitzhugh, and before I knew it I was standing in the fine drawing-room. The master of the mansion entered as though prepared to greet some stranger, but when he saw me started and trembled.

"'What do you wish, Sir?' he said.

"I pointed to two old Revolutionary broadswords, arranged in the form of a trophy on the wall, and muttered hoarsely:

"'I wish to return this wound in my bleeding shoulder, which you treacherously gave me.'

"'Treacherously, Sir!'

"'Yes, treacherously! The swords!'

"And I staggered toward him.

"'Impossible!' he muttered.

"'Coward!' was my answer.

"'I will not fight with you,' the figure seemed to say, retreating as I advanced. 'You look like a ghost, Sir, if you are not one in reality.'

"'The swords! the swords!' was all I could articulate.

"'Sir, I have naught against you,' was the coldly ceremonious reply; 'naught but your greater success with a lady. You have naught against me. The discharge of my gun was wholly accidental, as you may understand from the fact that it wounded Miss Singleton. With that young lady, or her affairs, I have nothing to do. We are no longer enemies, Sir. Go—I will not fight with you. Or, as you are plainly laboring under fever, stay here in my house as long as it may suit your pleasure. I'll not fight with an invalid.'

"My reply to these haughty and ceremonious words was a vague grasp at the swords, which threw me from my balance, and I would have fallen had not the figure caught me. At the same moment the coachman came in hurriedly, and I heard him say that I had ordered him to stop for a moment at Mr. Fitzhugh's. He was anxious about me. His master had bade him convey me to the country tavern near by.

"And thither I was conveyed.

"I lay tossing for a month with a horrible return of my fever, and I had many visions. More than once these visions took the shape of her whom I loved more than my life; and at such times an inexpressible calm diffused itself through my agitated pulses—I lived.

"One day I rose, pale and weak, but grew rapidly stronger. I found my trunk in my apartment, and the landlord delivered me a sum of money from Colonel Singleton, which I sealed up and directed to the parson of the parish—marked 'Charity.' Three days afterward I entered a stage which passed, gave my last piece of money to a servant-maid who had nursed me, and left the place.

"My only treasure was a piece of paper which I had one day found in my clenched hand when I awoke. On this paper was written, in Phœbe's hand, the word 'Forever.'

VI.

"So ended this portion of my life.

"From that moment I became a wanderer in many lands, following many employments such as my education fitted me for. All I desired

was daily bread. 'Tis enough, friend, when it is honestly earned.

"My life had settled down into a tranquil sadness; once only had I reopened my bleeding wounds. It was when I wrote upon a sheet of paper, 'Forever,' inclosed the slip containing the same word in Phœbe's handwriting, and directed it to her at Singleton Hall. Thus I was bound to her, but she was free.

"Then one day, after four long years had passed, I came to this part of the country again. As I passed the old Hall looked forlorn and deserted. I stopped at the tavern where I had lain in my illness. The landlord had quite forgotten me. While I was talking to him a fine equipage drove up, and Fitzhugh descended. He was much stouter; indeed he seemed bloated by over-indulgence in wine. He did not recognize me, and soon departed with his letters, which he had stopped to procure at the wayside post-office.

"In reply to my careless questions in reference to him, the landlord informed me that he was the richest man in all the country, and was going to be married soon to Miss Singleton. 'Miss Singleton?' I asked; 'who was she?' 'Well, she was Colonel Singleton's daughter; he lived at the big house I had passed on the right of the road. He had spent the winter with his daughter in Cuba for her health, and they were coming back in two or three months, when the young lady was going to marry Squire Fitzhugh.' I thanked the landlord for his information, and retired to my apartment.

"Once alone, I gave myself up to the most cruel despair. It may seem strange to you, but as long as I was convinced that Phœbe would never marry I was calm, even happy. But now she was about to become the wife of my rival. When I saw her again, if I ever saw her, she would be *Mrs. Fitzhugh*. The thought goaded me to despair, and, taking a desperate resolution, I determined to go straight to Cuba, demand her hand, and then if I was refused—but I did not resolve further. This, at least, I would do. And now you will ask, why had not I taken this step before? Alas! I know not. True, my whole proceeding was irrational, contradictory, senseless. But when has man acted with consistency? Shakspeare is criticised for the indecision and inconsequence of Hamlet's career. It is inexplicable, we are told. Friend, if it were explicable it would be false to nature. For man is not a rock; he is the foam on the wave, tossed hither and thither by every wind.

"My indecision was conquered by the intelligence I had received. Not for an instant did I imagine that Phœbe had forgotten or proved false to me; and on this conviction I would act. I would go to her father, tell him that I loved her and that she loved me, and ask her hand in marriage. In the far-away land whither they had gone perhaps the prejudices of the home neighborhood would not act so strongly. The love of a faithful heart might move even the callous breast of age and worldliness. At least I would go, and leave the result to Heaven.

"I had means sufficient for my purpose, and, obtaining from the landlord the address of Colonel Singleton in the island, hastened to the sea-board.

"Fortune favored me. On the day after my arrival at the port a quick-sailing bark set out for Cuba, and I stood upon her deck. A full breeze bore the vessel onward like a sea-gull, and we were soon out of sight of land.

VII.

"I come now to a portion of my life—to an event—which I never look back to without a nervous tremor. If my voice trembles, bear with me.

"'God is great!' say the Orientals, summing up their fatalistic doctrine in three words. May He who reads all hearts preserve me from this terrible and awful refuge of despair! But once I was a fatalist.

"To finish with my narrative, however. The bark sped on her voyage, and with every passing hour I discerned more and more the balmy softness of the south, the languid and dreamy influences which hover over the tropics. Stretched upon the matting of the deck I would gaze at the grand sunsets, trace out the brilliant constellations—the Archer, the Great Bear, the Pointers, indicating the eternal guide of mariners—or, lost in dreamy reverie, let my thoughts wander far away to the sunny land where a maiden of the north was roaming amidst orange-blossoms, and musing, it might be, of one who loved her better than his life. Many days thus passed, and we neared the tropics with favoring winds and a clear sky. One morning, however, when I rose, the captain informed me that we would probably have a storm in the course of the day, and advised the passengers to carefully secure their loose effects to prevent injury from the ship's rolling. An old sailor standing near declared, after an examination of the heavens, that the storm would be nearer a 'harricane,' and as the day passed on his prediction seemed about to be realized. The storm grew gradually from a cloud no larger than a man's hand to an immense murky canopy torn by furious winds, and laced with dazzling flashes of lightning. When night came on, the ship was scudding under bare poles before the tempest which every moment increased in fury.

"The greater number of the passengers went below, terrified by the vivid lightnings and the awful crashes of thunder; but a few hung about the hatches with fearful curiosity. I alone remained beside the captain; for in this wild disorder of the elements I experienced a strange pleasure. I followed the rapid and skillful evolutions of the sailors with deep interest; but ere long this interest was directed toward another object with painful intensity. This was a disabled bark, which bore toward us with frightful rapidity, and which every flash of lightning revealed rushing closer and closer—tossed into the air like a leaf, or wallowing like

a wounded animal in the trough of the sea; but ever nearer, nearer!

"I gazed at the unfortunate vessel, which the fury of the tempest had thus left almost a perfect wreck, with gloomy curiosity. One of the masts had been cut away, or had gone by the board; and this huge piece of timber, which hung by a mass of the rigging, beat like an immense battering-ram against the half-submerged gunwale, threatening every instant to stave in the side of the vessel. The deck was filled with sailors and passengers, some of whom had climbed the prow, and clung there in spite of the fury of the waves; and I could almost see the pallor of death upon their features. That pallor was not greater than my own. A strange, wild thought came to me. It seemed to me that more than mortal vision was given me. My heart sank, and then throbbed like an engine. Nearly fainting, I clung to the shrouds, and dashed my hand across my forehead to clear away the horrible imagination which racked me with torture.

"Suddenly I heard the stentorian voice of the captain shouting a quick order to the sailors.

"'What will you do?' I cried, as the disabled bark darted toward us like lightning.

"'Down with the helm! If she strikes us, both are gone!'

"It was too late. Before the helm would obey the wheel a tremendous roar was heard—one of our masts crashed by the board—and then, in the twinkling of an eye it seemed, our cut-water struck the laboring bark midships.

"I was hurled into the tangled rigging of the broken mast; and then, by a blinding flash of lightning, I saw—may Heaven preserve me from another such spectacle!—I saw the ill-fated bark, with its swarm of awe-struck faces, go down; and among those faces—the realization of my wild and horrible fancy—among those faces I saw those of Phœbe, her father, and her mother!

"I can scarcely tell you what passed thereafter. The sight of that delicate form standing upon the deck of the doomed vessel, then the bursting asunder of the bark beneath her feet—this almost deprived me of my senses. One thing I discerned, however, clearly: it was in my power to die with her.

"As the vessels struck I threw myself toward the woman I loved better than my life. I caught a portion of her dress and drew her into my arms. Then the hurricane, with its mighty surges, its thunder, lightning, and wild revel of death, passed over me—a crash, a roar as if the foundations of the earth were rent asunder—and clasping the inanimate form to my heart, an immense wave rolled over me, and I lost consciousness.

"In ten minutes, which seemed as many centuries, I opened my eyes. I was lying on the deck of the bark. Some of the sailors had drawn me on board by a portion of the rigging, which had become twisted around my body—and, with me, they had drawn what my grasp, vice-like as fate, inexorable as death, had clung to and strained to my bosom—the body of a woman!—the form which—

"There, friend—don't mind me. But at times comes this swelling in my throat—I seem to see her again—I—I—you see, friend, a spar had struck her bosom—it was all dabbled with blood—her dress and pure white bosom—and she nestled to me even in death, smiling. I had in my grasp a tress of her hair—that beautiful golden hair—"

As he uttered these broken words the voice of my poor friend faltered and shook, his bosom heaved, and, turning away, he covered his eyes with his hand, from beneath which rolled two large tears. I preserved the silence of sympathy and respect, and in a few moments the anguish of the narrator had spent itself, and he was calm again. He concluded his relation in the following terms:

"You have all now, friend. A few words will fitly terminate this history, in relating which I have experienced a bitter pleasure. With that stormy night ended my life on earth—the only life which is life indeed—the life of the heart. The tempest abated, the ship held her course, and we arrived at our destined port, from which I immediately took ship back to my native land. Ere long I reached this spot; but on the way, as here, I saw nothing but that one image—only that dead woman lying by my side—only the pale sweet face close to my own, with its smile—as it smiled when we committed her to the wandering deep.

"From that southern voyage I brought back but one recollection—this smile; but one memento—the tress of hair which had remained in my hand when I fainted. I stopped before the tavern yonder, and the first face I saw was that of Mr. Fitzhugh.

"'Good-morning, Sir,' I said, calmly. 'I see you do not recollect me.'

"A sudden flash of his eye showed me that my voice had recalled every thing.

"'Perfectly, Sir,' he said, with great hauteur—'Mr. Hastings.'

"'Have you heard lately from Miss Singleton?' I said, inclining.

"'I have not, Sir,' was his reply, in a tone of greater hauteur than before.

"'No wonder,' I added; 'poor thing! she was lost, with all the crew of the vessel in which she sailed, including Mr. and Mrs. Singleton. See, Sir, this is a lock of her hair. I tried to save her.'

"I held the tress up before him: the bright golden ringlet shone in the sunshine. He almost staggered.

"'Sir, are you sane?' he cried, turning as pale as death.

"'Yes,' was my reply. And I related all that had occurred. He left me in silence, and I think he loved her too. A year afterward he died of the saddest intemperance.

"And now, friend, you have my life, such

as it is. I thought I would relate it, for it is an experience unusually sorrowful. Yet I do not mourn—I think I am even content. I came hither and bought this little lodge—I salute, every day, the house in which she lived, remembering happier hours—I kneel by the grave-stone which I have erected yonder in the little family burying-ground, with its simple inscription, 'Phœbe—Forever.' She is with me still.

"I do not complain. All the bitterness of my grief has passed—the sad and soothing recollection of a true woman's love remains. I live here with my hounds and my books—I try to be useful when I can—to be innocent. I know not: I do my best. I wait for the moment when the Master shall call me, and hope to see in heaven her who should have been my wife—who nestled to my bosom in that perilous hour of shipwreck, and died in my arms, resting upon my heart."

Such was the narrative of Henry Hastings. Strange human life!—and sad as strange!

OUR CHRISTMAS PARTY.

TWENTY-FIVE years ago the villages that whiten the rocky and deeply indented coast of Massachusetts were not as they are now. No telegraph wires stretched above them, and no iron rails ran through them, to drop idlers in their most secret places. Each village was an isolated community, governed by its social necessities. Little visiting passed between it and its neighbors. Now and then one of its young men would stray away, and come back with a strange wife; or a young woman would induce some inhabitant of another region to settle down by her for the sake of marrying her. But the parties were considered foreigners to the day of their death, and then were generally carried back and buried in their native place.

Where I lived there were no Christmas legends. No stories came down to us of the mistletoe bough, the Yule-log, the wassail-bowl, and boar's head. "Baxter's Saint's Rest," and "Edwards on the Will," were the standard books for the old; and we young ones had primers, "The Christian Drummer," "The Penitent Robber," and "Milk for Babes, or a Catechism in Verse." Little Christmas cheer we found in any of them!

On the 25th of December, 1620, English mothers might have wished each other and their children, with a smile and a tear, "Merry Christmas!" At any rate the mild sarcasm was in vogue with us children, their descendants. We rose early in the morning of that day, and clamorously wished "Merry Christmas" to every body. We received many pennies in return, but the pastime was soon over, and the day became as dull as any other day; duller to me, for I was forced to celebrate it after a fashion which my mother, who was a Lady Bountiful, had devised.

She had a list of friends who seldom sat at rich men's feasts. Their sphere was narrow—they were perhaps what Kingsley calls "minute philosophers"—but their hearts were better than the hearts of the heroes which the world has anatomized and impaled in songs and epics. They were alike fervent and impartial on the annual measles and fevers, the corn crop and the religious revival. They could expatiate with equal interest on a birth or a death; whether the child was "marked," or the coffin mahogany!

Christmas, at our house, was set apart for their entertainment; and I, a child, was lugged into the day's duties. If the weather was fine the day before, my mother sent me in the chaise, with Bill, our hired man, for a driver, with the invitations. They were always accepted, for they were always expected.

From year to year the party changed. One of the old people in the interval might die, but a new member would be added, and the list was always full. As it is with the king who never dies, so with the poor. They die! They live! I remember all those festivals. But here is one in its particulars.

Invitations had been sent to Miss Polly Le Brun; to the widow Chandos and her sister, Miss Carter; to Mrs. Saunders; to Jane Buck, and her grandfather, Mr. John Buck; and George Washington Jones.

The day began well for me. Mother had given me a bead work-bag, in blue and red, as a reward for the merit she expected me to attain before night. It was hilarious weather. A white frost cobwebbed the frozen ground; the passing wheels chinked a pleasant music as they rolled through the ridged ruts; and horses and oxen were enveloped in powdery clouds of vapor. The old red barn glistened with sun and frost, and the gray walls of the house looked modestly glad. It was very cold, and log fires of oak and birch were snapping and blazing in the lower rooms. All the rocking chairs in the house were ranged round the parlor hearth, their chintz-covered cushions well shaken and their frills smoothed. Two new snuff-boxes—with beautiful pictures of the Prodigal Son, in a blue dress coat and knee breeches; and Joseph and his Brethren, all respectably dressed—filled, one with yellow snuff, the other with black, had been placed on the mantle-shelf. The kitchen chamber had been arranged for me and for what mother called "my company"—to wit, Jane Buck and George W. Jones, both of whom were young people. The kitchen was well cleaned, for chance visitors were expected there; and sundry bundles were piled up in the buttery waiting their arrival. Mother and I were dressed and ready for the company. She had on a dark merino dress, with sleeves very full at the shoulder, and wadded, and tight to the arm from the elbow to the wrist; a long, full, black silk apron; and a lace handkerchief tucked about her throat. Her beautiful hair was simply twisted, and held up by a huge fan-topped comb of filagreed tortoise-shell. I wore a claret-colored glazed woolen frock, trimmed with gilt buttons, and a high-necked white cam-

bric apron. My hair was "shingled," and the white skin contrasted with the short black bristles. Mother had sent Bill with "Old Gray" and the yellow-bottomed chaise for the guests; and by half past ten they had all arrived.

Miss Polly Le Brun came first, as she lived the greatest distance from us. She was arrayed in a black satin bonnet, trimmed with great bows, and a somewhat frayed black silk cloak. Underneath it was a bright figured coarse calico dress, fashionably made. She wore high-heeled morocco shoes, and her feet were very small. She was a favorite at our house, and generally staid with us a few weeks every winter. Miss Polly was a decayed gentlewoman, and had connections which were her pride. She had traveled too, for in her younger years she had visited rich relatives in Connecticut and Maine. These visits were the romance of Miss Polly's innocent life. She had picked up bits of family history—a love affair or so, and some tragic morsels that she never was tired of repeating to me after we retired at night; for it was my privilege to sleep with Miss Polly, and I was never tired of hearing her, although I generally fell asleep in the middle of each story. She was very small in person, and very neat. How she contrived to dress herself nicely, for six weeks together, with the contents of a small blue-and-white cotton handkerchief, which comprised her baggage, was a great mystery to me. Her nose looked like the beak of a parrot, and her breath whistled through it very loudly when her mouth was shut; her finger nails were always in a moulting condition. Nobody enjoyed our dinners more than Miss Polly. She was the kindest-hearted creature in the world, but she could not help feeling superior to the rest of our visitors.

Mrs. Chandos came next, with her maiden sister, Carter. Mrs. Chandos was a large, coarse-featured woman. She wore list shoes, and made no more noise than a cat in walking. The sisters were dressed alike in mourning calico, with white streaks running over the ground like lightning. They wore stiff muslin caps, bound on with black ribbon. Miss Carter was an echo of Mrs. Chandos. When she said "Yes," Miss Carter said "Yes" too. And if one laughed, so did the other. They were always knitting mixed yarn, and I had to wear the shapeless stockings—and ugly enough they were. Mrs. Chandos seated herself in the best corner, adjusted her knitting sheath, and took snuff—not by smelling it, but by laying it up in large pinches inside her nose. She then said to mother, "This ere is the tenth Christmas, marm. Your father, that helped my old man to his pension, invited me to his house just ten Christmas-days, too; and then he died, good as he was. Lord-a-marcy! how much better the punkins were then than they are nowadays!" Miss Carter said "the punkins were dreadful poor nowadays; but the squire's garden sarse always tasted better than other folks'." Mother sent to the corn-house for a specimen of the great Cape Horn squash to show them. She told them that the kind of squash was as good as the ancient pumpkin, and that they should have some of the seed to sow in their garden patch. Said patch was nearly as large as a bed-blanket, and its space was much encroached on by the old well, whose sweep towered above their humble roof. "The marvelous man!" said Mrs. Chandos; "what won't they have next!" and "*What* won't they have next!" said Miss Carter. I left them simmering in happiness, and went in search of Mrs. Saunders. I found her in the kitchen. Good Mrs. Saunders! Thou wert a noble and patient martyr! Were I a Catholic I should call thee Saint Saunders! What a nice smell of pennyroyal and spear-mint there was about her! Even when she came in the spring to make our annual mess of soft soap, and dabbled in bones and ashes, and hung over the witch-like caldron, the herby smell never quite left her. "It hung round her still." With what tenderness she called me her "little dear!" and smoothed, or tried to smooth, my stubbed hair with her hard hands. She felt any kindness shown her, and tried to repay it. She had brought my mother some little presents from her two or three starveling acres which she tried to take care of herself, while her lazy, ugly husband smoked his pipe and hiccoughed, the day through, on the old settle in their red-raftered kitchen. The presents were lumps of turpentine in clam-shells, which she said was good for inflammation and bruises, and for drafts for the feet when any of us had a fever, which the Lord forbid! and turkeys' wings, bound with red flannel, which she thought would save boughten brooms, and answer for sweeping the ashes in the chimney corner. A few gnarled sour apples and some sweet herbs completed the gift. Mrs. Saunders wore a blue woolen gown, spun and dyed by herself. Her gray hair was not covered by a cap. Her face shone with soap and water; and she beamed all over with goodness. She tried to conceal her cares and troubles, and met every eye with a smile. She had only two long eye-teeth to show her friends; and the contrast between her forced smile and her care-worn face was indeed pitiable. She would not sit in the parlor, but wanted to help in the kitchen, and was very much in every body's way, she was so flurried and anxious. Old Mr. Buck, the miller, was there too, and was regaling himself with cheese and gingerbread, his favorite relish. He was a captious old man, and found great fault with the "select men" of the town. "They didn't do right, according to Scriptur." George Washington Jones had not ventured from his chair by the door. In case of any great embarrassment he could rush out. He was a lad of twenty, the son of a brutal father, who had nearly cuffed his wits out. Mother presented him with a two-bladed jack-knife soon after he came, and he changed it from pocket to pocket continually; he was so delighted with it, he was

almost miserable. Jane Buck I carried up stairs, and placed in a chair by the fire. She was in a chilly condition; her fingers were long and red, her face pinched and blue, and her figure drawn up as if she were in misery. Her hair was almost white, and tied so tight at the back of her head that its roots round her forehead were turned into pimples. She wore a new red-and-yellow calico frock, and a little shawl was pinned over her shoulders.

I brought out my small dishes and all my treasures, but she yawned over them. I could detect no expression of interest in her face, except when the fire blazed up a little higher, and her hands, which she held over the blaze, turned still redder with the heat. No one had ever told me that the poor girl was half demented; but I had the feeling which children always have for that class of unfortunates. She was repulsive to me; but I did my best to amuse her, although I thought it very hard on my mother's part to expect so much of me.

I was in despair, and on the point of crying, when the thought struck me of inviting George Washington up stairs. I found him in the barnyard, whittling. He accepted my invitation reluctantly. Jane blushed a little when he came in; he dropped his hat under his chair, and giggled. He eyed my playthings with contempt, and said, "Them's for little gals." He offered Jane a red apple, but she shook her head; so he took a great bite from it and put it back in his pocket. He edged up to the fire by degrees, and kicked the brands spitefully, and then grew talkative, and finally succeeded in interesting Jane in an account of what he called a "blind bile," which he had had on his arm, and which kept him from hunting rabbits for a month.

I was glad when we were called down to dinner. It was all arranged on the table at once. There was chicken stew and chicken pie, a roasted goose and spare rib. The vegetables were mashed, and the sauces very strong and sweet. We had for dessert boiled custards, apple-dumplings, dried fruit stewed in sugar, and currant and elderberry wine.

Gran'ther Buck and Jane sat together. Mrs. Saunders sat as far back from the table as she dared to without the fear of toppling from her chair, and losing her dinner between the table and her mouth. George Washington held up his knife and fork, resting the handles on the cloth. Mrs. Chandos and Miss Carter looked solemn and longing, and Miss Polly watched my mother, eager to help her, as she was the carver and waiter. It was pleasant to see the hunger of the company. Gran'ther Buck, the edge of whose appetite had been dulled by his relish of cheese and gingerbread, was very polite, and handed the dishes about unremittingly, upsetting one now and then. Mrs. Chandos and Miss Carter accepted every thing, and Mrs. Saunders refused every thing. She had no occasion for any thing, she said; but she ate all that my mother quietly put on her plate.

"Gran'ther," said Jane Buck, "the mill's going to-day; I hear it."

"She's a poor creetur," said Gran'ther, apologetically, from behind a chicken leg.

Miss Polly made a hasty motion, and laid her knife down; but she caught my mother's pitying eye, and took it up again.

"Marm," said George Washington, "gimme more cramberry sarse. I'm going to Nickerson's Swamp next week, and I'll fetch you a peck on 'em." And, "Marm, would you like a skunk? Dad says they are better'n goose when they are stuffed with sage and innions, and apple sarse goes along."

Mother said she would like the cranberries, but declined the skunk.

Mrs. Chandos asked mother if she had forgotten how to make Injun meal dumplings; they ought to have been in the chicken stew, she said, instead of flour dumplings. Still, Mrs. Chandos had eaten heartily of the light crust which composed part of the stew.

"I am sure, Marm, you have got plenty of yeller meal," said Gran'ther, "for your Bill took away ten bags yesterday from my mill. But corn ain't what it used to be; it's only fit for creeturs' feed."

The dinner was finished at last. They all rose together, and put their chairs against the wall, and then looked at mother. She told them that at five o'clock tea would be ready; in the mean time they must make themselves comfortable.

Miss Polly, who, like most mercurial people, needed little naps, went up stairs to indulge herself with one. Mrs. Chandos went into the parlor, followed by Miss Carter; they resumed their knitting.

Gran'ther and George strolled off somewhere to take a nap—probably in the hay-mow—and Mrs. Saunders went into the kitchen to help wash the dishes. I begged mother to send for one of my schoolmates to come and pass the afternoon with me. She consented; and when Emma came we went up stairs together with Jane Buck, and our play amused the poor girl. When we got tired of playing (it was after four o'clock, and the shade of evening was creeping over the house), Jane Buck was snoring in her chair, and Emma and I went down stairs. Mrs. Saunders was in the kitchen fanning herself with a turkey's wing, and mother was cutting out some garments for her to take home and make up. I went into the parlor. Miss Carter was by the window. She nodded her head toward Mrs. Chandos, not wishing me to disturb her. I looked at Mrs. Chandos, and felt impelled to get near her. Her eyes were wide open, and her hands were clenched; her yarn was broken, the ball had rolled on the floor; the snuff-box had fallen from her lap, and the spilled snuff made me sneeze violently. But Mrs. Chandos did not stir—she was dead! I looked at Miss Carter. She caught my scared eyes and came forward quickly. The sight broke her heart, but she made no noise; she

only wrung her withered hands, and then she picked up the ball of yarn and tried to wind it again. I called my mother. She gently led Miss Carter from the room, and all that could be done was done for the bereaved woman. She died before the next Christmas, and the family, whose name was in the "Memorial," became extinct.

Miss Polly hurried down stairs, full of compassion, but with a look which seemed to say, "What could we expect? she was so very old!" But Miss Polly was only three years younger than Mrs. Chandos!

Gran'ther Buck wiped his forehead when my mother told him of Mrs. Chandos's death.

"John Chandos was a good Christian man, though he *was* fond of Hollands; but I guess Mrs. Chandos will meet him in the 'fields beyond the swelling flood.'"

Gran'ther enjoyed his tea, drinking four cups scalding hot, and eating much sweet-cake. Poor Jane trembled with fear, but she brightened up when mother gave her a new bed blanket with a red rose in each corner. Mrs. Saunders went home crying with thankfulness.

And so ended our Christmas Party. Before I went to bed that night mother asked me if I did not think it a happiness to be able to bestow pleasure on those poor friends of hers? I said I was very tired of Jane Buck, and asked her when she thought Gran'ther Buck would die? Whereat she smiled, and sent me to bed. And I heard that night the story of cousin Nancy's marriage, and her bridal present of a silver porringer from Miss Polly.

HINTS ON SELF-CULTURE.

SELF-CULTURE consists in the growth and enlargement of our spiritual nature. If mind is the distinctive attribute of man, the capacity of that mind for self-cultivation is its most characteristic feature. Our Creator has given us great faculties. They are instinct with his life; they bear his image; but in themselves they are mere germs that need wisdom, effort, and watchfulness to secure fullness, harmony, and success of action. Insensibly to ourselves, and without the exercise of voluntary power, it is possible for these faculties to attain a certain measure of development. This degree of expansion, however, is so limited and imperfect as not to interfere with the general law of self-culture. Indeed, it sets forth the fact more prominently that the steady, earnest use of means, sanctioned by the judgment and supported by the will, is the divine method for our advancement. When we see that the mind expands in seasons of unconsciousness—that even dreams perform a mysterious office in arousing latent susceptibilities of the soul or in quickening the spirit of some decaying truth—there is not, in reality, an exception to the law of self-culture. Had not the energy of the will and other active functions of the soul been previously excited and disciplined, we have no ground to suppose that this kind of unconscious growth would have been within the scope of experience. On this subject Nature has not left us in doubt. As God's representative she emphatically utters his will, teaching us that our spiritual faculties are committed to us in stewardship, and that the main purpose of life is to cultivate them for their worth to our personal being, for their service to humanity, for the glory of our Maker.

Accepting this truth, it is well for us to pause on the threshold of so important a discussion and cast our eyes over the range before us. It is the province of self-culture to determine what we shall be; what rank among thinking, acting, moral agents we shall assume; what obstacles shall be removed, what triumphs secured, what immortal glories won. No humbler task is devolved upon it than the execution of God's will as respects the growth of strength and purity in the soul. Whether it shall enrich itself with the treasures of truth, beauty, and goodness in the universe, or sink into eternal bankruptcy—this is the issue to be made, the problem for a life-long solution. Can we conceive of any outward trust so solemn, so momentous? Were we invested with the office of an archangel; were we ordained to exercise a watchful superintendence over a section of God's universe; were the bloom and blessedness of many worlds suspended on our skill—that would not compare with the work assigned us. For no external relation can equal in depth, intensity, and grandeur those nearer and dearer ties that bind the soul to the infinite and eternal. Self-culture looks to the soul as the greatest of created objects. For it, all things exist. For it, stars hold their courses and systems revolve around the throne of Jehovah. For it, Christ died. Taking this broad view of its trust, self-culture, if faithful to its responsibility, embraces all duties, interests, and aims within its grasp. Nothing is too low, nothing too high, to escape its eye. All forms of matter know it as their rightful master, and hasten to yield it service. It is the kingly authority of mind laying its taxes on the whole field of creation, and reaping a revenue that shall add to the magnificence of eternity.

Viewed, then, in this light, self-culture covers the whole scope of intellectual, moral, and religious effort. It involves whatever acts on thought, sentiment, will, taste, affection. It concerns the sensibilities and the conscience. Over what a surface are its means extended! To correspond with the dignity of the work, self-culture has been denied nothing that can promote its end. Divided as material nature is into various departments, and distributed through many shapes of effective instrumentality, they all meet—in their relation to this work—as in a centre, and, with perfect unity, co-operate to accomplish it. The dew-drop and the ocean, the atom and the world, the sphere and the system, science and art, history, philosophy, poetry, experience, religion—all bring their resources into this common treasury. Self-culture, therefore, must be regarded as the chief end of human life. Knowledge, virtue, good-

ness, are not mere conditions of mind, but personal attainments wrought into the texture of our being—made our own breath and blood—by the assimilative processes that self-culture maintains. It is not the abstract idea of knowledge, virtue, goodness, that the imagination is here fixed on; it is these things as our property—elements and constituents of our existence—that we appreciate. Hence, along with the sentiment of veneration for these immortal qualities, there comes another sentiment no less beautiful and inspiring. That sentiment is the feeling of an energetic will, of a mighty struggle, of hardships endured, of antagonistic circumstances subdued, of a resolute and unyielding force calmly and patiently put forth in securing these acquirements.

Every man who devotes himself to the work of self-culture ought to possess his mind with such views as shall fortify him against discouragement and defeat. Obstacles he must encounter, dangers he must meet, sorrow and suffering he must experience. Apart from these no discipline can be complete, no strength developed. But, on the other hand, he must remember that his Creator has bestowed on him a plenitude of power to perform the task. Looking within himself, he finds a soul conscious of a capacity not to be measured. The more this consciousness is cultivated by inward thought, the more acute and intense is its idea of the possible enlargement of its being. Every accession to its knowledge enhances the power of knowing. Every result of experience absorbed into the soul swells the conception of attainability. Thus the faculties of the mind are not only invigorated, but the consciousness that presides over all their functions, and momentarily feeds them with its own vital force, is also quickened into more vigorous activity.

To cultivate ourselves thoroughly and properly, we must devote time and effort to the education of consciousness. By this we mean that the instinct of the soul itself—the instinct of a spiritual existence superior to all its functional exercises, and grander than all its manifested forms—the instinct to which Nature, Life, and Religion make their appeal—is to be strengthened and perfected. The idea of what the soul is—what it is capable of becoming—what it may realize by virtue of the freedom and glory of its inherent spirituality; this central idea is to be brought out into clear, ample, inspiring recognition. And when that is done its rightful authority is to be acknowledged. The nature of this sentiment is such as to give it a commanding power over the operations of the mind, and subordinate every outward agency to its firm sway. It is just here that so much self-culture is defective. The roots of progress do not penetrate sufficiently deep into consciousness. One faculty and another of intellect are cultivated; this or that function is adequately discharged; but the all-pervading temper of a spiritual being is wanting. Knowledge stops short of its end. Experience touches only the surface. The depths of vitality in the soul are not reached. And men become shrewd men, sharp men, competent and available men; but it is all at the expense of the soul. True culture is a different thing. Every step in its progress deepens the assurance of the native grandeur of the soul, and gives a more piercing insight into the vastness of its birth-right. A genuine experience does not rest complacently in a well-poised judgment, a mathematical accuracy of perception, a firmly-braced will, and an executive energy that goes boldly and straight to the determined mark. Faculty and force can not satisfy its demands. Behind all is the sovereign soul, conscious of an infinite stretch beyond these narrow limits, and scorning to be imprisoned within the boundaries of a practiced skill, a delicate tact, a masterly common sense, and nicely-fitted habits.

How, then, does self-culture act on this great reserved force of consciousness? It takes hold of the primal feelings of the soul in its relations to truth, beauty, power, love, and goodness. It throbs a mighty heart into its silent and solitary communings with the universe, that finds its counterpart every where amidst the magnitude and splendor of God's works. In joy, it awakens strange thoughts that tremble through the brain, and stranger feelings that flow forth in tears. In sorrow, it is not crushed, for it has faith in the sorrow that God sends, and it calmly hopes in the awaiting sunshine. Every man of profound experience knows that much of his knowledge penetrates deeper than the faculties that strive to use it. Indeed no small part of it is left unused, so far as outward practicalness is concerned. And feeling transcends faculty still more. Words fail, acts fail to embody any thing beyond a fragmentary portion of our nature. The capacity of the soul is adapted to an ideal life, which, although in unison with the real life around us, yet far overleaps its stern, cramped limitations. Are these hidden agencies lost? If the best part of all we have learned—if the divinest fruits of toil and trial—if the priceless wealth of experience can not be converted into commodities to enrich the world, are they therefore useless and vain? No; the growth of consciousness is worth more than external service. It is a nobler growth than the maturing of intellectual faculties and the perfecting of their social service. To be a man in the hush of the soul beneath the pressure of Infinity—to be a man in the silent, rapturous attitude of thought and sensibility in their heaven-ward look toward God and his Christ—is greater than any exhibition of the purest and truest self to the world. This is the greatness which springs from the growth of consciousness, and all forms of outward manifestation are but faint types of its inward grandeur.

A man ought to enter on the work of self-culture with the conviction that his Creator has given him more power in this direction than in any other. The facts of human life, no less than the principles of religion, sustain and con-

firm the truth of this sentiment. Placed amidst the economy of material nature to perform the two-fold office of supporting our animal existence and contributing to the abatement of the curse on the earth, in so far as Providence contemplates its diminution, man is favored with such aids and auxiliaries as make him competent to subdue the world and enjoy the utmost of its advantages. It is not merely to be a home for his physical and social being. It is to be a home suitable to his probationary condition, a theatre for the exertion of the high attributes of a redeemed spirit, a "*footstool*" to the Throne of Grace. Viewing man in this aspect, we behold him furnished with the amplest endowment of means to gratify his earthly wants. Labor, directed by intelligence, secures its ends, and material nature obeys its mandate as if man were the vicegerent of God. Winds and waters serve him. The exhaling moisture and the returning dew alike fulfill his purpose. And at every step of progress he avails himself of a yet remoter agency, a more recondite fact, a more subtle law, to execute the decrees of his earthly sovereignty. The humblest mechanic now wields a mightier power, by means of machinery, than the kings and queens of antiquity ever exerted, and a factory-boy can perform a task that would have startled Greece and Rome as a miracle of skillful strength. Admit all this; but still the truth stands out that man is a greater agent, working on the materials of his own nature, forming himself in the likeness of Infinite Beauty, training his intellect and affections to the nobility of a redeemed character, than in any of his triumphs over the outward world. The progress of a single mind from childhood to age, if it fulfill the divine plan, presents wider extremes of contrast and suggests the completeness of success much more than all the material advancement made from the rude ages until the nineteenth century. Boast as we may of steam-engines and lightning-telegraphs, the primer of the infant, a nursery-song, a simple token of a work within the soul, is a prouder vindication of man's nature than the wisdom of design and adaptation which they display. Man changes the forest-trees into a habitation of beauty, transforms cotton and wool into clothing, multiplies wonders more rapidly than trade and commerce can diffuse them; and yet, in an hour of thoughtful meditation, of earnest self-searching, of profound moral abasement, he experiences a greater change, and walks forth among his fellows a more impressive wonder than the whole realm of materialism can show. For whatever he does in the outward world bears his earthly image, but the work within his mind is stamped with the image of the Infinite. In the former we call him mechanic, inventor, artist; in the latter we discard the terms designative of genius, and borrow such titles as distinguish the hierarchies of immortality.

But it is not sufficient to feel the presence of a divinely-granted power to effect the work of self-culture. Wisdom is needed to direct its use. There must be a clear, distinct perception of the end to be attained and the means requisite to reach it. What, then, is the true theory of self-culture? A short answer might be given to this question by stating that self-culture consists in the development of the mental faculties in relation to their appropriate objects. No doubt this is true. But it is a partial view of the subject. No discipline, and no perfection of faculty, as such, can meet the claims of a philosophic and spiritual self-culture. Nevertheless this sort of functional education has a great office to fulfill in the history of mental growth, and especially, as a preparatory means of culture, it is invaluable. We know that mathematics and metaphysics cultivate the reasoning faculty. We also know that poetry and other arts appeal to the imagination. There are facts in life that address the sensibilities; while other facts concern us as common-sense, prudential, everyday people. But one should never forget that he has much more to do than to improve a particular faculty. It is not the abstract intellect, trained to discern truth; nor the imaginative intellect, able to perceive and enjoy beauty; nor the expressive intellect, rich in the gifts of a manifold utterance, that can, by itself, constitute him a large and liberal-minded man. Any one of these forms of intellect may give him a specific value in accordance with the scale of appreciation which the world sees fit to apply to talent and genius. True culture looks beyond the utility that fixes the marketable price of brains, and it has a nobler impulse than to make an almanac, grace a college-chair, or fill a place in the world's eye. It feels that mind has higher uses than to get daily bread for the body and serve the purposes of economy and thrift. In the same spirit it aims at something more than the favorable opinions of mankind. Neither worldly success nor worldly distinction is undervalued or neglected, but it rests on the conviction that the soul has an infinitely grander work to perform than to nurse the animal structure or gratify the tastes of society. And in this moral temper it strives to improve the intellect by disciplining all its faculties, by elevating its range of contemplation, by habituating it to communion with great objects. It values facts not for what they are, but because they conduct to principles more valuable than themselves. It lifts itself above the narrow, the local, the minute. It delights in broad, comprehensive ideas; and in a philosophy that seeks to embrace all science, in a philanthropy world-wide and world-encircling, it rejoices with exceeding joy.

The man of true culture is a man in all his faculties. He has insight, reason, imagination, sensibility, conscience, affection. All these are fresh, vigorous, active within him by virtue of the general spirit of intellectual life which animates and informs them. His aim is to develop himself, and in working to this end the whole intellect shares in the sympathy and strength

of a growing nature. On intellect alone he would rely in nothing. He is not a thinking machine, but a thinking soul. To be a calculating piece of apparatus does not satisfy his aspirations in mathematics; nor can he be content to reduce his logical power to the mercantile level of a "counterfeit detector" of bad bank-bills and base coin. A vital spirit he will have in every thing. Taught by experience how fallacious the best reasoning may be that is the product of mere intellect; taught, too, that even beauty changes into deformity if it be simply the creature of imagination, and that conscience easily degenerates into superstition when deprived of the aid of other inward functions; knowing and feeling these spiritual facts, he must carry a great, genial, purified heart into all the operations of the understanding, into every search after truth, into every pursuit of life.

Now this is certainly the method of culture which Nature indicates. It is not its aim to form a handicraftsman of intellect that shall win no higher praise than dexterity, sagaciousness, tact. Good mathematicians, annalists, metaphysicians, artists, are not its heroes and saints. On them and their works it lays no superlative stress. Hence Nature is no formalist. It refuses to put things together in such systematic order as would please our devotees of mechanical mind. Whenever it appeals to the intellect, it is not to the intellect only, nor is it to the intellect for its own sake. But it addresses the whole being of man; and as in what we eat there is a provision for bone, muscle, nerve, blood, and brain, so in its action on thought there is a subtle spirit in its agency that vivifies and strengthens every portion of our character and constitution. Where it offers poetry, there it offers philosophy. Where it has a record of the past, there it has a prophecy of the future. It is no separatist; it tolerates no divorce; it offers to the eye a vast spectacle of unity; and such as it is in itself it is in its influence, calling out the entire mind to its companionship, and stimulating the different organs of sense as well as the various faculties of the intellect to accompany one another in their action. The eye loves the association of the ear. Reason welcomes the fellowship of imagination, and in all the higher class of minds, such as Plato, Shakspeare, Milton in literature, Burke and Webster in statesmanship, they are always found side by side to aid and invigorate each other.

But men love to disintegrate. They must put up truths and facts in parcels, and label them according to their idea of use and value. We try to arrange Nature as we do our libraries—such an alcove for history, the next for law, a third for theology. But Nature will not be forced. Here are the dew-drops; you can frame a system of physical philosophy out of them, and then a beautiful poem. Here are flowers; science turns them to economic advantage, art ministers to the luxury of the rich and to the sufferings of the poor with them, while the Great Teacher finds images for his gospel in their frail loveliness. Nature studies completeness in presenting its phenomena to the mind; and no man can be on fair terms with it, as an instrumentality of culture, except every thing within him respond to its approach.

And how forcibly this method is illustrated in the Bible! Paul never writes as a mere logician. Amidst his closest and compactest arguments how often the great heart, stirred by the pathetic mystery of the Cross, sends a pulsating thrill through the fingers that guide the pen! And if we take the finest specimens of his thought and style—such, for instance, as his speech on Mars Hill, or his eloquent summary of the fruits of charity—we are instantly struck with the fact that no one faculty of the mind more than another is exercised in receiving their wisdom and appreciating their excellence. John, the beloved disciple, is a perfect exemplification of the same law of mind. He is in full contact with the reader. Intellect and affection, reason and sentiment, are summoned into his presence and held under his sway. No one faculty is excited, but the whole nature is moved. With him argument embraces appeal; tenderness blends with strength. The childhood of the kingdom of heaven breathes through that manly voice which proclaims the majesty of love; and the head that lay on the heart of Jesus when the pressure of the world's guilt was there, caught its mighty throb and prolonged its pulses in all its eloquence.

If we would cultivate our minds aright, the methods prescribed by nature and religion must be adopted. And in advance of our efforts we must first have correct views of intellectual power. Too many suppose that intellectual power is located in a fine memory, in a brilliant imagination, in command of language, or extent of knowledge. And so it would be if a beautiful eye were equivalent to a handsome face, or if a good stomach were the necessary consequence of healthy lungs. Strength in one faculty is frequently at the expense of other faculties, like those trees in which an overgrown branch enfeebles the vigor and destroys the symmetry of the remaining boughs. The aim of nature and religion is to build up a force of mind that may distribute itself through any faculty, flow out in any channel, reach any end that is desired. Hence, as culture progresses, the more distinct and definite forms of faculty lose their prominence. We have the clear, convincing reason, but not in mechanical shape and logical routine. So, too, we have beauty and sublimity; but the imagination, in its appreciative or creating offices, disguises itself as a subtle, diffused element, and while its energy is not abated, it yet seems to operate through the other functions of the intellect rather than adhere to its earlier modes of action. The tendency of all sound culture is in this direction; and although it is only the privilege of the select few to attain it fully, yet the instinct of progress is steadily toward it. How little of

the mere dialectician appears in Chalmers, Hall, Burke! How these men transcend the scholastic forms of thought, and seize the great substance for which these meagre signs stand! And if we recur to Demosthenes, what an instant degradation to his intellect should we feel if, instead of the combined force of argument, demonstration, impulse, we had the precise and graceful evolutions that oration-mongers delight to practice?

Our study, then, should be to get at the heart of things, and not rest in their outward shapes. A fact appeals to the understanding. Is it to penetrate no deeper than the comprehending faculty? Is it exhausted when it is received, measured, classified? Facts degrade the mind, if they do nothing more than report the phenomena of materialism and life. They are to advance farther than the outer court of the soul; their best work just begins when the utilities of intellect have been answered. The same truth governs the imagination. Our books teach that the object of images is to give pleasure. Is pleasure the final law of mind? Is there nothing behind the beauty? And is not beauty itself but the passing expression of something more beautiful? If beauty be rested in for its own sake or for the sake of pleasure, it may sensualize the mind, and rob the Creator to magnify the creature. Thus the world is full of the idolatry of facts and the idolatry of beauty. The practical reason and the active fancy are made the slavish ministers to an intellect seeking its own good and rejoicing in its own glory. But God's law rises supreme above all such groveling ways. True culture abides by that law; for it is a law of thought as well as of action. It is a law for the growth of wisdom, no less than for the performance of work. Culture obeys its mandate. Wherever it finds a fact, whether in the clod, in the grass, in gravitation, in electricity, in statesmanship, in literature, it accepts its earthly significance, puts it to economic uses, organizes it in science or morals. But this is not the end. It sinks deeper than the intellect; and, absorbed into the soul, is made the means of lifting it nearer toward the Infinite. Beauty, if faithful to its instinct, follows the same ascending path. Viewed in its relation to mere art, it is earthliness in an attractive garb; it is carnality, separated from grossness, but carnality still in its essential features. But let beauty be taken in connection with the soul; let its office for the intellect be simply a preparation, a girding up of its strength, a flowering forth of its charms for the soul itself; let the image shining in the sky, glistening in the dew-drop, whispering in the wind, deliver the thought, and then inspire prayer and praise with a more wondrous meaning and a diviner rapture, and beauty is transfigured into one of the elect servants of piety, and fulfills an apostleship for Christ.

Let it not be forgotten that the culture of intellect, with reference to its own powers and its practical use in the business and social aspects of life, is one thing, and its culture, viewed in its bearing on the soul, is another thing. We must keep this broad distinction in the foreground of all our thoughts, else our efforts to improve will lack the element of vitality. Nor is it possible for us to attach too much importance to this truth, lying as it does at the root of a rational, consistent, Christian theory of human nature. Culture of the intellect for its own sake proceeds on a false and corrupting idea. It embodies a selfishness that shuts up a noble part of our spiritual being within limits, forbidding all freedom of sympathy and breadth of sensibility. It lowers the mind to the level of a worldly instrument for worldly ends. A man who adopts and acts upon it can never rise above his trade or profession. He may become an adept in his work, make money, attain distinction, but how far superior is he, estimated by the standard of moral excellence, to the dog that churns the butter or the horse grinding the bark? When one's business shows no other productiveness than outward gains, what more has he done than the clods of the field are doing every season? Now it is this use of intellect that characterizes most of the culture of the day. Trades and professions, high and low, learned and unlearned, are actuated by the same spirit. Prudence is mere thrift. Common sense is another name for the instinct that takes the ox or the ass to his master's crib. Tact consists in a quick glance of the eye, a fast step, and a long-fingered hand. Even the higher movements of the age are vitiated by the same sentiment. Three-fourths of the arguments and appeals with which American mind is plied on the subject of education have reference solely to education as a means of temporal prosperity. And many people value godliness more for its promise of the life that now is than for that which is to come.

True culture is actuated by a different motive. It holds the intellect, in all things, subordinate to the soul. Whether that intellect is devoted to trade or literature, whether it concerns itself with mechanical or professional pursuits, whether it writes books or merely reads them, it appreciates skill, knowledge, experience, talent, genius, by its worth to spiritual life. Not that it is unmindful of humbler interests. It values the daily virtues of industry, sagacity, and economy; and if these are not engraven on "tables of stone," it is because they are stamped on all objects around us. Six days of the week preach them. But its faith declares that worldly wisdom needs the presence and power of the spiritual, the infinite, the eternal, to preserve it from decay and death. The knowledge and discipline acquired in contact with men and things, if turned to best account in point of temporal advantages, are yet more valuable in moral use. Business quickens sagacity, opens the mind to instantaneousness of impression, trains to ready action, and establishes a most solid relationship between outward things and inward sentiments. Social ties, ex-

tending over a broader surface and penetrating far deeper into the heart, work to a higher end. The former give to the latter strength and substantialness; the latter give to the former grace and sensibility. But business and society can not employ the ability which they create. The highest wisdom of its highest men it can not make available. Indeed it can not find occupancy and scope for inferior talents. There is always a surplusage of mind that capital, commerce, government confesses its inability to use. Why is this? Why does providence ordain the world to be a means of development, and then, as seemingly dissatisfied with its own plans, refuse to let it gratify the taste, sensibility, power, which it has awakened and formed? Every year the materials of character, of force, of mighty manhood, are produced in greater abundance than all the agencies and activities of the world can engage in their service. Nature delights in mental fertility as well as in material abundance. The counterpart of the luxuriant forest and the teeming plain, of ocean, air, and firmament, crowded with the tokens of overflowing bounty, exists in the spiritual world. Why this apparent waste? Why this vast contrast between possibility and reality? Why are we awakened to a far deeper sense of power in consciousness than of power in action? Why is every sentiment so much more intensified as a sentiment than as a source of outward influence? Why is the soul grander than its revealed life? Providence is in this as in every thing. By such sure signs we are taught that nothing earthly or human can have more than a partial and imperfect agency in awakening and controlling the immortal mind; and furthermore, that when this spiritual principle, trained to a sense of its high offices, seeks to expend itself in work worthy of its grandeur, it is at last driven back on its consciousness of a divine end, on its own heavenward aims and aspirations as the original and final sphere of thought and action. If, therefore, our culture of intellect terminate in intellect, it is a vain and feeble thing, destitute of all genuine vitality, doomed to disappointment and death. What nature teaches must raise us above nature. If by means of knowledge and experience thought and feeling are elevated and chastened, they must in turn elevate and chasten the manhood of our being. The future mind lies latent in the heart; and hence no culture of the intellectual faculties can reach the great fountain of growth. Progress has its reason and end in the moral nature, and intellect depends for its capacity of expansion on sentiment and affection. Nothing is really truth to us until it passes through the intellect and penetrates the very soul. Nothing from without becomes a power within until it enthrones itself in the centre of our nature and blends with the moral majesty of our being. Short of this it must not stop, else the benefit is lost. A book is mere paper if it fail to enter into character. Science, art, philosophy, are childish amusements unless they enlarge and ennoble the spirit, teaching it to be more spiritual. Men may idolize the intellect; but the soul, robbed of its rights, will punish the pride that invades its sovereignty. In that worship no sacrifice is offered, no prayer heard, no praise accepted. It is the worship of self, the most criminal, as it is the most debasing, of all idolatry. A man had better determine to be a demon than try to be a god.

We have seen that the philosophy of culture requires the outward means which nature and providence employ for our personal growth to penetrate through the intellect and grasp the moral consciousness. We have seen that intellect, trained and exercised on worldly grounds and for worldly ends, may succeed in securing both the pleasure and the power which spring from the relations of matter to mind. A compliance with the conditions of thrift, enterprise, skill, talent, has its reward; and by such instruments the showy splendor of a material civilization rise around us. At the same time the separation of the intellect from the moral nature, its concentration in itself, abates its force, perverts its agency, and renders it unfit to accomplish the work allotted to it in the economy of the universe. But there is another view of this subject. Mind is capable of giving as well as receiving. It not only has susceptibilities that are acted on, but it has motives, impulses, volitions, originating within itself and impelling it toward external objects. By virtue of this organization the mind has power to intensify its own action. After placing itself in an attitude to embrace the facts that are embodied in outward things, it can form these materials into new shapes and compel them to subserve higher purposes. It can rearrange and reconstruct, modify and change. By the simple force of suggestion it can argue from the known to the unknown, from the visible and tangible to the abstract and ideal. A hint suffices to open a new world. Above all, it can breathe a wondrous vitality into its own acquirements, and make them much more than mere acquisitions. There is a point in the history of every mental effort at which the receptive exercise of intellect ceases, and at that point all earnest and profound cultivation begins. Then we rise from particular to general ideas, escape from the lower region of the senses, and ascend to the realm of pure and permanent sentiments; see all things less as they appear, and more as they are. Now this is a noble faculty of mind. It is the source of most of our greatest thoughts, and from it proceed the highest energy of will, the most spiritual aspirations, the grand, heroic deeds that renew the wasting heart of the world, and seal its hopes as born in heaven.

It is certainly of no small importance to possess this invaluable faculty. A man who has formed this habit stands on vantage-ground. Poet or not, he has something akin to the "*vision and the faculty divine.*" There is in him a clearness, a force, a depth of insight, to which every thing within the scope of legitimate

thought must yield. Able to discriminate between the incidents of an object and its real features; to mark accurately the line dividing circumstance from character; to take broad, genial, satisfying views, and rest serenely in them; to cast out a prejudice, and realize the sudden widening of the area of inward being; to conquer a falsehood, and feel exultant that one enemy less lurks in the shadows of threatening ill; to soar to the native sphere of truth, and see it in an atmosphere that no cloud has darkened, no storm disturbed—a man able to sustain, control, and direct his faculties in this way, has the heart of nature in his hand, and the resources of the universe stand ready to enrich him. Thinking is to him not so much a labor as a pleasure; and apart from the value of discovering the wisdom of creation, and analyzing the laws of objects around him, he experiences a joy in such investigations that is worth more than the practical results of intelligence. The consciousness of growth, the sense of enlarging strength, is far more inspiring than the assurance of knowledge. In the former, one's manhood lives; in the latter, it finds aids and servants. In the one, it enjoys lordship over itself; in the other, over its circumstances. In this, it walks the earth, feeling the returning gladness of sovereignty over humbler objects, while in that, its whole nature opens to the companionship of higher beings. Not only does "*beauty pitch its tents before him*," but goodness invites him within its tabernacle, and there, amidst those folds that are more gorgeous than hangings of gold and purple, and more resplendent than the many-hued drapery of sunset clouds, he finds the consummation of thought in the silent raptures of spiritual feeling.

Now this power of the mind to animate its faculties, to transfuse a new and mightier life into all its operations and efforts, must be kept prominently in view in all culture. It is not a passive thing, for outward influences to shape and form. It has a self-moulding, a self-stimulating, a self-directing energy, always fresh, always elastic, so long as it is obedient to the laws of its moral nature. Give such a mind the most common materials, and out of them it will rear a sublime architecture. Give it a great thought, and it will organize an institution that shall stand for the creed of ages. A word will swell beneath its impulses until it becomes the faith and hope of nations. A "*still, small voice*" heard in the whispering night, in lonely meditations, in dreams, will be repeated in some oratorio of song, in some outburst of eloquence, and startle the slumber of centuries. No gift does God confer on men like this, the power to incarnate themselves in whatever they do. It is more than talent. It is more than genius. It is the special prerogative of great souls, redeemed from sin, redeemed from self, redeemed from all outward alliances of bondage, standing in a might mightier than themselves, and anointed to the championship of God's high sway over a recovered world.

How does the culture of the day compare with this standard?

Look at the movements of our time, and see what they represent. Look at our patent offices, our trade and commerce, our professions, our institutions, and you mark a wonderful display of intellect, in all its sharpness, rivalry, eagerness, tact, enterprise, and comprehensiveness. Modern civilization is a gigantic demonstration of what can be done, when men are fairly harnessed together in serving each other's wants and promoting common ends. The result is, that social power is vastly augmented, and individual power, except as tributary to society, is diminished. We are educated for mechanical pursuits, for the bar, for the church. Our measure is taken, and we are fitted to our place. Fashion rules every where and in every thing. The gay woman, who adopts every fashionable style of dress, furniture, equipage, is only a type of men in schools, in colleges, in literature, at the bar. All of them recognize the supremacy of fashion, and bow down to it; all of them are believers in the doctrine that they must live for the public, and keep on the kindest terms with its tastes and caprices. This spirit rules the most of our culture; and, to some extent, it must prevail. But in the excess it now exhibits it is a fearful evil, because nearly all our personal power is absorbed in social power. Too many have more reliance on society than on the principles which constitute the strength and safeguard of society; too many have more faith in the church than in God. Our feebleness is thus converted into a means of complacency; we rest on others and are satisfied. In our dependence on machinery we forget its motive power, and in our homage to civilization we put the Gospel out of sight. But what sort of culture is that which is simply and exclusively adaptive to the needs of a fugitive hour; which forecasts the appetites and passions of next year, and labors to suit them; which has no higher moral in its procedures of thought, and in its ambition of action, than in the cut of a coat or the color of a cravat? A true manhood is always more glorious than any present glory. A true manhood, by the necessity of its instincts, its prophetic yearnings, its imperishable ideals, is ever in advance of all existing things. A true manhood is in God's keeping, not at the nod and beck of the world. No grand deeds are the product of the day which they immortalize. No magnificent institutions are from the wedlock of auspicious circumstances. Not by looking at what society wants, but by a profound study of what our nature wants, are we developed in the stature of men. The force of ages combined could not create an impulse sufficient to produce a "Paradise Lost;" but a dream of childhood in its cradle-sleep, a vision of youth in its first ecstasy of love, an image of manhood in some sacred pause of struggling life, may go forth, if God touches the hearts that hold them, and people the firmament with the radiant forms of archangels.

THE RANSOM OF A HERITAGE.

THE coachman drew up the reins, with a long "Whoa!" and said, "Here we are, Sir;" and I stepped for the first time upon the pavement of Ilchester. It was dark out of doors, being eleven o'clock at night, the winter season, and foggy. There was a bright welcoming gleam through the open door-way of the inn, and a companionable radiance with it of all sorts of agreeable supper savors; but I paused on the sidewalk, and while the stage went under its moist archway to lie by till the morning, I turned considerately around several times, as one who has leisure for observation.

And it could not be denied I had leisure. For I had not come to Ilchester to try the sulphur water, to sell by samples for some jobbing-house, to pay a visit of friendship—to do any thing temporary—but to stay the rest of my life.

Not that I was an old man either. My hair was still glossy raven; my eye clear and piercing; my step, allowing for the cramp of a sixty miles' ride in the stage, resolute and elastic. In fine, as years go, I was thirty years old.

Yet, in arriving at Ilchester, I had come to the terminus of my life. My existence still a comparatively new book, but already at the beginning of its last long chapter. And this is such a strange fact in the history of so young a man that it demands explanation, and I give it.

From early childhood I had been looking upon trouble as a familiar household face. Trouble was the Lar of my poor poet-father's melancholy hearth-stone! debt, sickness, failure—yes, absolute want—these were the genii that hovered over his widowed head, and watched my motherless cradle. I was too young when she who bore me died to recall her face; but I ever heard her name mentioned in our sad house with a loving and respectful mournfulness which taught me she was one of the rarest, noblest of women. My father at one time had been well off. A year before my birth he had lived in a home far more comfortable, more luxurious than any thing my infancy knew. As poet, as author, he had been blessed with much more than the usual success of such people. His works had brought him more than fame—money; and I call *that* more than fame, believing that I will be sympathized with by even the most unselfish of bards and head-workers in this world who have felt how infinitely dearer love and home are than glory, and sighed to think how valuable that unattainable gold is, regarded as something which might make love and home possible to them.

Always economical and fond of those simple happinesses which are cheap in the market, my father had saved enough at twenty-nine to enable him to marry a woman of his own tastes, and take her to a cottage on the eastern bank of the Hudson and about forty miles above New York, which was not great in cost, profusely ornamental, or any thing except exquisite in the river view from its piazza and its warm heart-scenery within. His income was enough to give ample answer to the present wants of two such people; and both because God in His goodness might give them more mouths to feed, and because, like the birds, he could not help singing, he continued to make books, poems, reviews, and all the products which bring pay and pleasure. Under these circumstances my father called himself happy. He had reached that sweet place in life where a man meets rest while his day's sun is still behind him, coming up into the zenith, and so does not feel falling over him rest's bad shadow, idleness.

Then, three things happened to my father in one month.

In the first place—I was born. Of a bright June morning the little helpless creature of their love fell on those two young people's breast, and as my father lifted me up into the sunlight that sifted through the viny windows, I seemed so gladdened by it, so quickened, that his poetic mind was struck with the idea that it was a prophecy that I would be a sunbeam to them, a thing of happiness and sunshine to myself. And they called me "Eliodore"—a name scarce ever heard on this side of the sea—"the gift of the sun."

Hardly was the little Eliodore yet seven days old when event the second came to the house of the Armours.

The twenty thousand dollars which my father's industry had saved had been intrusted by him to the care of a man high in his confidence and of large credit with others who were far better financially educated, a broker and banker in New York. He had written my father that this whole sum was invested in bond and mortgage of the utmost reliability. He had made one quarterly payment of interest; but when the next became due, Lionel Armour discovered how, all the time, he had been the dupe of a liar and a villain. For, one happy evening, there was brought to his wife's bedside, where he was sitting with me, the babe, in his arms, a letter, which stopped his caresses and made him turn deathly pale with agony. His banker, turning every item of trust property in his hands into money, the all of widows and orphans, the scanty scrapings of day laborers, my father's long and painfully earned little fortune, had absconded, God knew whither—let us rather say, the Devil—to batten on his villainy.

Nobly did Lionel Armour keep the great darkness of that discovery from the eyes of the woman he loved. It might have killed her.

An old nurse, who staid many years after by the remnant of our family until it had no longer any name to shelter, told me once how my father bore it.

"He kept cheerful in his look," said she; "he used to laugh and play with you by the mother's bed more, if any thing, than he had before; but I used to hear him praying for you both, in his little study, before daybreak, by the hour together, with a voice all stopped up and shaky, which brought the tears into my eyes.

Oh, many a time! many a time! First he'd say, 'O God! my poor wife!' and then, 'Pity—pity the little child!' I tell ye it was too much for me. And every night at nine o'clock he'd bid your mother 'good-night,' and make believe he was tired and must go to bed. Then he'd send the woman that staid to take care of her up to the room, and go and lock himself up in his study, and work among big books and papers, writing—writing often till the sun rose again. I caught him at it once, and took the liberty to ask if it wouldn't sicken him. But he only lifted his pale, painful face, and shook his finger at me and said, 'Not a word of this, Barbara — remember!' Oh, he must have written books on books, those times!"

Such was the story of my old nurse. And when I look at all the old MSS., and the magazines, and the books of that period which bear his impress, I can understand how the necessities of his dark hour burned out his mind and body, like a candle in oxygen, to give light and life to those unconscious unfortunates whom he loved. Well, he has gone to his reward!

Then came the third event. My mother was recovering—she had risen—the physician encouraged her with the hope that she would soon be out again. All at once a relapse took place —fever set in—and with the going out of the month of June she went out from us also—a spirit set free into God's endless summer, before earth's transient one could die and leave her behind for the frosts.

And after this I have heard that my father was a broken man. Her love had been enough for him; when all other things went he was able to say, "How far from the worst which might be!" But now the worst had come; and having no soul left that at the same time could love and understand him, he cared no longer to labor for the maintenance of a house which sheltered only vacancy; and taking me, the ignorant babe scarce yet a month among the troubles it did not know, he retired, with my nurse, to cheap and narrow lodgings in a country town, selling the cottage as one casts away the husk out of which all sweet and fruit have gone.

And in those lodgings did I begin to learn my first lessons of life.

As I had not had imparted to me any thing of the past, and probably should have comprehended it but little if I had, I passed my early childhood as happily as most boys.

Naturally my father was no longer a buoyant man. He did not play with me like some fathers, but he was always kind, and taught me by his side far more than children learn generally until they are children no longer. With his help Latin and Greek became familiar to me. I grew to enjoy the marrow which was inside of those crooked characters that form the dry bones of the old poets and historians. I learned many of the most beautiful things by heart; and by the time I was fourteen, having never been to school nor mixed with boys, I was pretty well fitted for an opening manhood in any state of existence where simple pure-mindedness was a fashion, and bread came for the love of truth and beauty.

But Lionel Armour had cause enough to know that no such existence stood waiting for his son. And seeing him, at the age of fourteen, as I have said, with the promise in his character of such a life of sensitiveness and agony as he, the poet, had been always leading, he determined, as gently as he could, to open the eyes of his child, and prepare him for the future.

One day when he had kissed me approvingly, after a fair translation of Theocritus, and given me one of those gentle, sad smiles which in my good conduct now found almost their only occasion, he took me on his knee and told me this same story which I have been telling you; from beginning to end, interrupted only by my childish tears or outbursts of astonishment, and the choking of his own voice.

Having been reared in that atmosphere of most concentrated passion—books and solitude —when he finished I sat with my little pocket-knife in my hand and its blade opened.

"Father," said I, in a stifled voice of emotion, "what is the name of the man who took away every thing you had in the world?"

"It will do no good to tell you, my son. You must not know. But why ask the question?"

"Because," I answered, my face pale and my lips trembling, "because I will look for him, and when I find him—though they kill me for it—I'll put this in his heart!" And bursting into tears, I held up my little knife.

"Oh, my son! don't speak—don't think so!" said my father, soothingly. "If what I have said affects you in this way, I shall be sorry I have told you. God takes care of vengeance. We must leave it to him. And even were it ours, it is now years since we have heard any thing of the man, and can not possibly find him. So peace, my boy, peace!"

I governed myself with a great effort, and my father went on to tell me a piece of news which was to be my first grief as well as my first start in life, and to which his story had been a preface.

I was not to be such a man as he had been—so ignorant of the world, so unbusiness-like, so ideal, and therefore always poor, distressed, and heart-sick. I was to leave him, to enter the counting-house of a merchant in New York who had consented to take me, and I should gradually work my way up to a fortune, and be, oh! such a rich and happy, such a benevolent and useful man! I should come home every holiday I could get to see him, and then we would have such delightful times together. And meanwhile I must work hard, and try to please God, and my employer, and him; and he would see that I had every thing I needed to make me comfortable.

So my father proceeded, painting in as bright colors as he could the advantages, and lightening the shades of the pain of our separation,

until, to my yet untried boy-mind, curiosity in regard to this novel change somewhat hushed the cries of the young heart that well-nigh broke to leave its only loved one.

In due time the change came. I know now as I could not then what it cost him to pack my little new trunk with a womanly care and tenderness, to see it strapped behind the stage, to hug me as if he would never let me go, and then to hurry from my last kiss into the house, not daring to trust himself with one smile at me from the window.

So I came to New York and began to acquire mercantile habits. I have no doubt that my master, his family, my fellows in business, every body, were as kind to me as the world ever is to boys. But just what to the ancient martyrs was the torture of being flayed and then dropped into boiling water, was the process to me, the shrinking, world-ignorant, unpractical child, of being brought in contact with the rough forms and hard souls of the life at large. It is an old agony; orphans are learning it every day; poor gentlemen's sons know it by heart; it is in the *feuilleton*, the book, the lecture, but it is not hackneyed of its agony yet.

I passed three years—the misery of each cut in two by a semi-annual visit to my father—and at the age of seventeen received my first promotion. I put off the errand boy and his jacket—I put on the collecting clerk and the business paletot appropriate to that youth.

I was proud for my father's sake of this advancement. I thought how cheerfully he would say, "One more step on the road up, my boy!" and as Christmas was approaching I looked forward rejoicingly to the week at home, and saved from my monthly allowance enough to get a present for him in the shape of a very handsome new German work upon Greek Literature, which, of all things, he would most admire.

With a letter, testifying his approval, from my employer, this present of mine for my father, and the same little trunk with which I had left home three years before, I went back to the old village of West-Alton.

The servant that came to the door stepped softly. The family that let the lodgings were in the parlor, but they all talked in undertones; and I felt the blood rush back to my heart as my nurse stole down stairs and kissed me tenderly, saying,

"He is very sick, dear, but we hope he will soon be better."

Ah! and before I went away my father was better; well—quite well—but after that sort which makes not the friends of those who love a man congratulate them, and which opens no mouth to say, "Thank God! thank God!"

Back from the ruins of all I lived for, too mad to know where I was going, I returned to New York, hugging to my breast through all the journey the book that he had never read, but which it seemed as if he must read, and which, therefore, was some sort of a solace to me as connected with him.

And the next day after my return I recommenced my duties as collecting clerk. It was a business which might seem ill suited to such a mourner as I; but I had reached such a state of almost unconsciousness through the stupefaction of the blow that I could have done any thing, great or trivial, without asking whether it was fitting—even without knowing that I did it.

There was a debtor of our house who was just about leaving that morning in a bark bound for Canton, and I must go to him on board the vessel to receive some payment which had been neglected up to this eleventh hour.

I made my way mechanically down to the foot of Old Slip, and passed on board the *Arrow*. All on deck was bustle and noise; the yards were being squared; stevedores were stowing the last parcels of cargo; provisions were passing down to the store-room; and here and there were groups of landsmen bidding good-by to sailors and passengers. Pushing through this throng without knowing, in my bitter abstraction, that I touched them, I entered the after-cabin and found my man. He made the payment I expected, and then, as I turned to go, said, abruptly,

"Young man, will you go to China with me?"

I don't remember whether I knew what I said, but as briefly I answered, "Yes."

There was no time to return to the office. I passed my collection-book ashore to a porter whom I recognized, with orders to leave it at the counting-room of the firm. And they told me on board, days afterward, that the next thing I said was—

"Let me lie down and sleep."

And then, from utter exhaustion, I fell to the deck.

When I woke we were two hours out of sight of land. My benumbed brain was quickened by the bracing air and the novel motion, and for the first time since my father's death I shed tears.

I believe that voyage saved me from death, or, worse still, insanity. Realizing that I had taken an utterly unconsidered step, whose results would be of the most serious bearing upon my future life, I was roused to a sort of compulsory activity of thought. I made inquiries of my friend of the abrupt question as to the place he wished to invite me to in China; and he answered me that he needed a shipping clerk in his office at Hong-Kong—had noticed me in my discharge of the duties of my last situation—was pleased with me, and therefore offered his vacancy. By that strange power of life which the thoughtless call chance was a stranger thus raised up to help me, and to lead me by a way I knew not of into the possibilities of success.

I spent twelve years in China. I reached the age of twenty-nine, and by slow degrees I had risen to a place in the firm, while by business operations of my own I had acquired about fifteen thousand dollars. I had no desire to be

richer; I was weary of the barbarism around me; every muscle, mental and physical, was tired with the ceaseless struggle of amassing, and there was no one in the world whom I loved or who loved me. The only end I now proposed to myself was rest. Not love—not home; those desires had been harrowed out in childhood with their objects by the iron teeth of affliction. If I could but get back to America, seek out some place where I might stay unnoticed, and be quiet there until I had waited my time out—that was all I wished.

I settled my partnership affairs and left China. Reaching America, I heard of the town of Ilchester. It was dead as to business; its society was not disposed to be exacting on the subject of etiquette; and, moreover, it was not many miles from those graves whither, in reverence and mourning, I had resolved henceforward to make my only pilgrimages.

I determined, therefore, to make Ilchester the retreat of the rest of my days. And so I come back to the beginning of my story, where, as you may remember, I stood looking around me as far as I could see in the night, with the air of conscious leisure for a lifetime.

Even in the dark I began to be satisfied with Ilchester. In all the long, wide street—the only one in the place—there was no sound of rattling carriages or night wassailers, though eleven o'clock at night would have been still early and noisy in a city. The dim forms of the long-built houses lay far apart, remote from the sidewalk, at the backs of their deep, elm-shadowed yards, and they all wore a slumberous air—an air of never being searched and vexed by the prying fingers of daylight. Their windows were all black and candleless, telling of dreamless sleep—and this seemed perfectly to fit my mood. What I wanted was at last to stop tossing—to lie down, finally, in forgetfulness of the rough world I had been always grinding against, and Ilchester promised me this oblivion.

Then I followed my baggage into the tavern. But, wonderful to say, even in Ilchester they dream. For in spite of the fatigue of that long stage-journey, and the all-suffusing atmosphere of quiet which characterized the place, as I lay buried in the vast gulf of my great country bed, I saw strange shapes begin to gather themselves out of the fire-light from the hearth which flickered through the shadows of the room, and they grew more and more distinct. At length a limitless sea disclosed itself rolling, tumbling lawlessly all about me, and in my horror I felt myself adrift—tossed I know not whither, without a shore, without a star. But suddenly a little strip of land appeared far in front as sight could reach—forward, still forward it grew toward me, broadening on the sea. At last I was floating in a shallow stream which a lamb might ford, and on the bank stood a pure young girl, with dove-like eyes, and against her bosom leaned a lofty cross. So patient was she, yet so slender—so frail to bear up that toppling weight alone—that my strong heart yearned toward her long-suffering weakness, and in a moment I was by her side, sharing her burden upon my own breast. And as we looked into each other's faces tenderly, lo, the cross began to grow! New beams stretched out from it on every side—it changed shape with weird quickness—it was no longer a cross but a house. And I cried out, in astonishment, "Woodbine Cottage!" Yes; over us both spread the roof under which I was born—the restored home of my father and my mother! Then the young girl and I joined hands, and began to sing a refrain which ran like this:

> "Years unravel what years have spun;
> The web of Ill shall be undone;
> After the shadow comes the sun!"

I remember having dreamed several dreams in the course of my life in which I heard poetry. Once I recollect that I listened, delighted in my sleep, to several cantos of a heroic poem. I have heard songs also, and joined in them; but this is the only dream-rhyme that I was ever able to carry out into the waking life with me. And with this one still breaking, like a fountain, from my lips and my heart, I awoke from excess of joy. Awoke all alone, long after midnight, in that ghostly Ilchester tavern room, and felt myself a changed man. Awoke in all senses—to the rest of faith, sweeter far than the rest of sleep; to hope; to a conviction that something better, holier than I had yet known, was possible in life.

For several hours after I rose in the morning the outlines of that dream were more or less distinct. But they faded out with the growing sunlight, as such delicate night-pencilings always do. Is it well or ill that we so easily lose our conviction of the truthfulness of dreams? I have often asked myself this question, when I thought how the inevitable conclusions of midnight become mere remembered fanciful speculations at noon. The wicked man laughs in the sunshine of his drinking garden at the fearful vision of warning which froze his blood in last night's mysterious stillness and darkness. Perhaps, if its lineaments were still sharp-cut for a day longer, he might be awed into repentance. But, on the other hand, the hypochondriac would become incurably insane if the precipices of *his* dream yawned all day at his feet. The average of all facts is good—doubtless it is best that dreams should fade when we strike the balance of dreamers. In my particular case, however, it was a pity that the first sweet, peaceful thoughts I had known for years should be so transient. At breakfast I mused over their memory, and cherished them sadly, while I knew their promise could never be fulfilled.

Would I like to ride? The Sulphur Springs were but six miles off on a magnificent road; the company was all gone, of course, it being December, but it had cleared off finely since last night, and the drive might please the gentleman. No; I thanked the inn-keeper; I preferred to walk a little about Ilchester.

Should a boy go with me to show the way? Much obliged; but I preferred being alone.

So, with some astonishment at the idiosyncrasy of a man who preferred going on foot to a carriage, and solitude to company, Boniface let me have my own way.

The air was keen but deliciously clear and sweet, and the paths were firm and frosty. I took my walking-stick, wrapped myself in furs, and set out down the long street of the town for my first winter-day stroll since boyhood. Every thing seemed new to me after my dozen years in the tropics. The great, robust, bare elms owning no kindred with those perpetually green ailanthuses and oranges in their suits of papery leaves that I had been so long accustomed to—rosy, warm-clad children replacing the half-naked little sandal-wood urchins of the Sampan women—houses that would not blow over, not being sewed together of bamboos—farm-wagons instead of palanquins. Everybody, every thing was a surprise, a trait in a new world. This novelty was at least a diverting sensation, and I sought refuge in it from my long habit of introversion.

I came at last to the end of Ilchester—the point where the street began to be the country-road again, and there was no longer any defined foot-path by its side. And just at this spot, inside of a neat fence of stone-colored pickets, a modest little house of one story lay half-hidden among bushes and clambering vines. It had an air of refinement and unpretentious reserve which did not characterize the rest of the Ilchester houses, and I began to think seriously of buying it for my hermitage.

I stood still for a moment and looked at it. The front door opened quietly and two persons came out upon the little veranda. I turned away, not to make my observation intrusive, and was about retracing my steps up the silent Ilchester street, when I heard a short, sharp cry of pain, and looked to see that one of the couple upon the veranda had fallen. Instinctively I opened the gate and ran in to offer my unasked assistance.

The prostrate figure was a man, apparently as old as seventy, very much crooked and wrinkled, and of an almost ghostly pallor. His eye, too, had that painful stare of vacancy which told of a mind just flickering in its socket. His unavailing efforts to rise were assisted by a young girl who bent over him, grasping his poor, lean, trembling hands, and trying with all her strength to lift his dead weight from the floor. As I ran toward her the ringing of my feet on the frosty stones of the yard caught her ear, and, throwing back the thick hood which hid her face, she stood erect to see who was coming. At first sight she would not have been called beautiful. Her features were delicate and regular, but they were toned into an expression of premature gravity—a look as of one who has patiently watched long and suffered much. And it takes a great while for a man, even if he can sympathize in the trials which form this style of face, to see any thing like beauty in it. We do not warm toward the saintly girl—a certain earthliness and air of having been in the dew and sunshine are necessary to charm us in a woman. Otherwise—she was perhaps twenty, of middle size, and very gracefully formed, in spite of the testimony given in her face of cares which might have bowed her too early.

I sprang up the steps, and saying, "Permit me!" lifted the decrepit old man in my arms as I would an infant, and followed her into the house.

"Please to lay him on the sofa, Sir," said the young girl, in a musical, almost childish voice. I obeyed, and she continued in a tone of sadness,

"My poor, dear father! I am very much afraid he will never be able to go out any more. For the first time in six weeks I thought it would do for him to take the air. He seemed strong enough to bear a little walk as far as the gate and back, leaning on my arm; but we had hardly got out of the door before his knees bent under him, and he fell as you saw. Oh, you're very kind, Sir, to take such pains. I hope he wasn't heavy?"

"Oh no! very light indeed. Do you think the fall hurt him?"

"I'm afraid it jarred him very much. Father, dear, this kind gentleman wants to know how you feel. Are you hurt, dear?"

The poor old wreck stared at us both, as if trying to collect his senses for a moment, and then uttering an incoherent word or two, became as vacant as ever.

"He's failed very much lately. I see it more and more every day," said the young girl; and though she tried hard to command herself, the tears came into her eyes, and she delicately turned half away to hide them.

"He has had two strokes of paralysis already. You can't think, Sir, how he's changed in the last year. He has been what they call an old man for several years now, but he's not the same being he was last winter. He could walk and speak, and his memory was good; and in the evening, when I read to him, he took as much interest in the books or the papers as I did."

And again the thought of the change was too much for her.

The old man was now beginning to forget his mishap in a quiet, childish sleep, and I saw the immediate necessity of my assistance was past. So fearing lest, the excitement of her distress being over, the young lady should begin to get embarrassed at the needless presence of a total stranger, I begged her pardon for having been so abrupt with my help, and was bowing myself out, when she said, timidly,

"May I ask the name of the gentleman who has been so very kind to my father? I thank you very much, and when he is well enough to speak, he will."

I handed the lady my card. She read it, and her face lighted up so that she was really beautiful, as she said,

"I have often seen that name before—the surname I mean. My father once had friends called so, who lived near Cold Spring on the Hudson. Were you ever there?"

"Is it possible? My father's first name was Lionel."

"I declare! just wait one minute, please;" and the lady's face exchanged its untimely saintliness for a happy, rosy beauty as she clapped her hands and bounded out of the room. In an instant she returned, and smilingly held out a book open by the title-page.

It was my father's first novel! And on the fly-leaf, in that well-known, beloved hand, was written: "With the love of Lionel Armour, the author, to his cherished friend, Stephen Gaston."

"So we are old acquaintances!" spoke we both together in glee, as we shook hands warmly; and I felt the first thrill of sweet, home feeling I had known since the bitter night I came back to New York with my ungiven Christmas present, a waif on the world.

"My name is Eliodore—"

"And mine is Annie."

"I shall always live at Ilchester. We will see each other very often."

"Oh, this is delightful! Before this morning my father and I were all, all alone."

"And so was I. We are none of us so any more."

Promising to come back in the afternoon or evening and see how Mr. Gaston was doing, I went briskly back to my inn, with several more leaves in the last—the Ilchester chapter of my life.

I kept my promise, and called at the Gastons that evening. Nor that alone; for when my stay in the quiet, dead town had grown to weeks, and in spite of overtures from many good and vulgar people who had heard I was a person of some fortune, I made few acquaintances and connected myself with no families, cliques, or congregational bodies. I rewarded myself for this general isolation by spending almost every evening in that little cottage at the end of the street.

And people said that Annie Gaston and myself were going to be married. By people I mean every body but ourselves. Old women, with from two to a dozen daughters lying on their hands in that flat, dull market of Ilchester, out of which, as out of every dead American town, all the enterprising young males who might have been buyers had gone to seek their fortunes in places yet alive, like New York or the "Out West." And these old women said it with a sneer. In their mouths I was somebody whom nobody knew; an adventurer; a person whose pretensions to property (this was true) were greatly exaggerated; and that stuck-up Gaston girl, who thought herself too good to go with Ilchester young ladies, would find out too late what a fool I had made of her. If I had capitulated by marrying the daughter of one of my aged female foes I should have gained nothing, the others being thereby made still more inveterate. Such is the pleasant peculiarity of social relations in Ilchester.

The young girls said we were to be married. They talked of it at school, at their little parties, gossiping over the flounces they sewed the days "they had the dress-maker"—that village oracle, of such means of knowing, such universal circulation, such discreet and delicate mystery. And I had just as lief have the young creatures talk as not, they do it so prettily, so harmlessly. And the few men who, as rare specimens of a race almost extinct, were cherished for memory's and mild flirtation's sake at Ilchester—the little clerks of the two stores where they sold every thing, bedsteads, candy, plows, fans, molasses, and letter-paper—they talked about it, speculating whether the dresses would be bought at Dobb's or Cobb's.

In thus stating the fact that every body said we were to be married, how mortified I am; how much more so I should be! For looking at the matter with the uninitiated eyes of a stranger, how natural, how beneficial and proper does it seem on the face of it, that two persons, gentleman and lady, who liked and admired each other, should be able to walk, talk, and read together, be assisted by each other's counsel, and refined by each other's taste, just as freely and unsuspiciously as if they were of the same sex! And how astonished would this uninitiated one be to hear that, whenever the formation of any such beautiful relations of cultivation and support was attempted, it was not only the young lady's maid and the gentleman's man who bantered one another, as would be expected of such vulgar people, upon their employers' "sparking," but matrons and fathers, advanced virgins and *passé* beaux of society followed their subordinates' elegant example and smelt matches in the kindly association of the friendly young pair! Faugh! Truly this habit of social thinking is a vulgarism to be abandoned to scullions.

But Annie Gaston and I were very little troubled by the gossip of Ilchester. If in the book of Destiny we were indeed entered as "Eliodore Armour and Wife," we did not see it yet, or read any date opposite the entry in the margin. We had become very necessary to each other as friends and advisers, the contingency that might make us lovers had not arrived.

Besides moreover, had we loved, there were two objections which might have been quite serious to our marriage. I had come back to America, not rich by any means, but with just enough to secure me by its interest that rest from worldly contact which was agony to me. And I was still so proud, so morbid, that I could not bear the thought of giving any woman upon whom I imposed my name comforts merely. Moreover, Annie Gaston had duties to her decrepit and imbecile father which seemed to forbid her absorption in wifely cares and pleasures.

But I have taken too long a time to answer the gossipers of Ilchester.

That body of amiable people, gifted with eloquence and leisure, were still more certain that they had guessed right when, toward the coming in of spring, I changed my quarters, leaving the tavern and going to live at the little cottage at the end of the street.

There was abundant reason for doing so besides my own heart-sickness at the public solitude of an inn. My only friends in the world were under the Gastons' roof, but they needed me as much as I longed for them.

Mr. Gaston was every day growing more feeble and childish, and so becoming a burden more and more difficult to be borne alone by the young shoulders of the sensitive and prematurely grave girl, his daughter. She was able to keep but one servant, and that one in every sense a hireling. I therefore resolved that I would share her trial with her. I had done little in my life that could be of service to any body; it was time to begin, that even through pain and self-denial I might make myself worthy of being missed and wept for when I had gone.

Annie consented to let me help her, and I fitted up a little room in the cottage, where I might be within call at all hours of the day and night to soothe her father in his irritable moments; to fetch and carry for him; humor his vagaries, and be his staff to lean upon in the tottering journeys his restless feet were forever making from his bed to the fire, from his sleeping-room to the parlor, and back again. His desire for motion was as likely to be strongest at midnight as at noon, and this eccentricity had nearly worn his daughter to a shadow. Though she was still as patient and uncomplaining as an angel, and would have died without asking to burden other strength than her own, if I had not pressed my help on her.

It was not until I had become quite settled in my new lodging that I began in the least to realize what Annie Gaston was. As a visitor, I had known her as the ever-buoyant little woman in a modest blue-and-brown delaine, with an apron of such spotlessly white nature that it seemed to shed dust and soil as the duck's wing sheds water. I had known her the ever-smiling, the shiningly clean girl, her most tried moments only toning her inextinguishable cheeriness with a patient gravity which made it seem deeper and more lasting, never forgetting to be tidy because she was worried, always fresh and simple, and adorned more with the jewelry of her sweet manners than by any thing born of Tiffany. And on this very account I had greatly undervalued her. I think it is our natural tendency to despise *very* clean and cheerful people. And I suppose I had despised her in a modified, brotherly sort of way.

Not long after I made my abode under the same roof with Annie Gaston did her nature, the real woman in her, begin to vindicate itself. When I came to perceive what she had been bearing night and day for all the years past alone—when I felt myself, the stout, indignant buffeter of bad fortune, the rough-faring stepchild of this world, almost shrinking from the sights, and sounds, and associations that she had met bravely with love in her eyes and prayers in her mouth, it was then that I repented for having ever likened Annie Gaston's soul to a flat, pleasant meadow, and in the exaggeration of my atonement for the wrong set her among the highest of heroic spirits.

Nor was it so much of an exaggeration after all. The girl of twenty who neglects the early blossom of her womanhood, secludes herself from all society where she may love and be loved, puts every dream of a happy home and congenial friendships in the hand of a providence which seems almost certainly taking them to exhale them utterly, and does all this knowingly, with a most refined nature that has the depth to be aware of the measure of its sacrifice, and because she will not let rude hands do a single office for an imbecile, passionate father, is a noblest heroine.

Not a word of complaint—none of fatigue, save when I extorted it—ever helped me to the record of what Annie Gaston had been doing through all her young womanly life. But as gradually the old man became accustomed to my presence, and found me lovingly trying to follow her example of gentleness and self-denying service, he permitted me to share with his daughter many of those labors for his comfort and those forbearances with his strange disposition which had hitherto been devolving upon her alone. And in this experience with him he unconsciously showed me the greatness of that young girl's suffering.

Stephen Gaston was not entirely idiotic. The work paralysis had done for him was rather to make him partially insane, leaving his brain strown in confused masses rather than quite crushed out. At times he would ask to have the newspaper read to him, and sit by the hour with a vacant stare of attention while one of us went through column after column of any thing, no matter what, not comprehending it evidently, but pleased with an occupation which he remembered as an old habit. The Bible, too, he frequently asked for a chapter from. Almost always he said to us—

"Read, 'Have mercy on me, O God!'"

For a whole week together, sometimes, he never spoke at all, but sat in his large easy-chair, with his feet resting on an ottoman, and stroked himself with his shriveled, trembling hands up and down constantly, as if feeling for pockets into which he had put something and lost it. Again, he would be all unrest, listening to no entreaties to spare himself, giving no peace to those poor, tottering legs of his, but wandering, supported by my arm, from room to room, forcing himself painfully up and down stairs, and peering, with a helpless, speechless anxiety, behind beds and under tables. Ask him what he wanted, and he invariably stopped—tried to think—uttered, half-coherently, "Nothing—oh, nothing at all!" and began his wan-

derings again. Stout as I was, at nightfall I was often tired enough to ask myself, with amazement, how Annie Gaston had ever lived through this till I came.

But this mere bodily weariness which my charge entailed upon me was nothing compared with another infliction that accompanied it. At times Stephen Gaston was visited by hallucinations of so ghostly and awful a character that to be with him in the night when they came on was a terror to have appalled any one.

Having had the care of him during one entire day, which Annie spent by my entreaty on her bed—for she was threatened with a lingering fever brought on by her fatigue for him—I undressed him at nightfall, and saw him sound asleep before I left his room. He had been all day more than usually vacant and feeble, and so very easily managed. I congratulated him and myself inwardly on our both having a peaceful night.

At twelve I retired myself, leaving my door ajar that I might hear him if he needed me. My lamp also stood on the table by the looking-glass, with one wick burning dimly. I was soon fast asleep.

It must have been nearly two in the morning when I awoke, with a start, and heard a knocking, at quick intervals, on my door. I leaped from my bed, and right by my side stood Stephen Gaston. He had never come into my room before; some great exigency must have nerved him to the work of tottering all that way without support. I ran to the lamp, lit both wicks, and in the full light saw him with the most fearful expression of madness I ever beheld on human face. His immense black eyes, hitherto so utterly leaden and soulless, now almost swelled out of their fiery-red lids; his long white hair streamed almost upright from his head, and his nostrils were dilated to their utmost.

For the first time in months he had dressed himself; and in such a horrible masquerade! Over his day-clothes he had tightly swathed a sheet about his now almost perfecty erect long figure; a napkin was bound under his chin, and he carried a cane in his hand. But for that face of his, swollen into scarlet fullness and brutality, he would have seemed like one of the dead who walk in wild legends. And he kept hoarsely growling to me, "Come! come! come! Are you ready? I say, come!"

I took him by the arm; I said, soothingly,

"Oh, you have been dreaming; let me help you into bed; lie down here and let me take care of you."

"No!" he answered, savagely; "I will go! Come, I say!"

"Go where? It is raining, and you are not well."

"I am going to the grave-yard. God has just sent for me!" And with a face of the most fearful despair, he added, "I must meet him, and give up my account."

I could not ask further what he meant. Yes—I am willing to confess I was afraid to ask. If his half-palsied tongue had been able to unvail to me more of a mind in such an awful state as that demoniac terror showed it to be, I would not for any reward have seen it. The only method I had was almost with force to make him sit down; and there, all night, I sat up with him, reading the gentlest and most compassionate parts of the Bible to soothe him, and most of all, "Have mercy upon me, O God!"

Toward daybreak he fell asleep. I stole into his room, and saw what his horror must have been when he thought God's awful message came to him; for, to light up the darkness, he had caught up a whole box of matches and fired them all upon the floor. Happily, they had gone out, stifled in their own gas, or he would most like have been burned to death—to say nothing of all the others who slept.

For days afterward, when he spoke at all, it was in language which showed that he believed himself dead and judged. And when this hallucination seemed to be forgotten, other horrid ones succeeded it. Thus, far into the summer did Annie Gaston and I dwell in an almost contagious atmosphere of imbecility or madness.

Truly, after all my long pinings for Lethe, for unbroken quiet, and my hope that I had come to it at last when I was tossed back on this American land, I was far enough from it in this house of the shattered Stephen Gaston.

But, thanks be to God! I came by degrees to know a better rest—the rest which Annie Gaston had dwelt in through all her over-tasked, heart-broken, and blighted young womanhood—the rest which I learned from her—to be merciful and pitiful like God, and therefore, like Him also, never to weary.

It was a new emotion, that rest. I had not included it in my prayer for peace while I wandered. I had meant to be a hermit. God made me a laborer, but gave me sweet wages in the thought that I was taking thorns out of the pillow of one of his most miserable sons. And without a single change in my outward circumstances—no richer, with no more of a home of my own, no less, but still more laborious than ever—not even thanked by the poor old man for whom, for mercy's sake, I did even servile offices daily—I awoke one day to find that a sad, sweet happiness and peace had lit upon me unpursued. I was a thoroughly changed man.

I began even to feel an affection for the wretched, repulsive old man to whom I was making life less terrible. I had even loathed him at first—helped him only because he was one of my father's early friends, and because my manhood could not endure the idea of a mere slender girl bearing his burden alone; and because, perhaps, I was desperate, and let chance lead me to any thing that would keep my thoughts from devouring me. But now I loved him even. It was then that I learned the double lesson which, put in practice, would

make a heaven for us every where. Love the world, if you would do it good; do it good, and you *will* love it.

When was it—my free and out-speaking life-muse goes on to sing—when was it that into the current of this pure peace of thine, this unselfish self-outpouring for the well-being of another, yet another stream of motive than the love of *Stephen* Gaston glided, debouching through an almost imperceptible rill-inlet to which it had come winding unseen over a wide circuit of unexplored territory, hidden between low, overarching, shadowy banks that almost met above it all the way? When was it, Eliodore Armour?

It would be very difficult to say. For as the good master architect does not set the doors that open on his grand high-vaulted chambers and long fair-vistaed galleries swinging around great monumental pillars all blazing with inscriptions, but rather hangs them on the delicate pivots of the small and unobtrusive hinge, so He who builds up the symmetry of our human lives seldom turns the portals to their most beautiful and far-leading passages on the bearing of any conspicuous event, preferring more to hinge them on slight unnoticed circumstances, and make them surprises instead of expectations.

Thus it is given seldom to the soldier to say, "This or that certain exploit was the cause of my glory;" to the poet, "This or that song put me on my height among the immortals;" to the lover, "On such a day, and for such a defined reason, I began to love the beloved."

We often set up monuments to mark what we call memorable critical places of our lives; but rarely are they topographically correct. Our Arcs de l'Etoile are not the true standing-places of our star—they are good only to remind us that we have a star, which shines, however, in far other place and time. Our broken shafts, set up to the memory of dead hopes, are oftenest cenotaphs—the hopes died and were buried many leagues off by the road-side, long ere we had traveled to the point where we have strength enough to raise a column to them.

And I have said all this as a preface to the answer that I can not tell where, when, and how I began to love Annie Gaston, and to know it. It may have been when, on handing me a peach, her soft little hand touched mine, and, though our hands had many a time touched before, for the first gave me an indescribable thrill. Or when we kissed one another good-night, after having often kissed before (for we had been made very intimate by our common labors for the one poor being, her father), and first felt it altogether new and conscious and painfully pleasurable. Be this as it may, there did come a time when I loved her and knew it.

My whole life, with its disappointments, its mistakes, its betrayals, had taught me a lesson of caution and reserve which even my being in love could not make me wholly unlearn. I did not go to Annie Gaston directly, as I would have done in those days before I had exchanged the candid transparent garment of my younger soul for the world's steel-mail, and say to her, simply and passionately, "I love you!" and then bear "No," or thank God for "Yes."

If she valued me as the friend—was grateful to me as the benefactor—loved me as the brother—or either or all of these only—the simple fact of being so regarded by any human creature whom I loved so tenderly would have been the last hold I had on earthly happiness. For she on earth was dear to me alone—the one being I had left from my wrecked life to care for. And the measure of her care for me was necessarily then the measure of my happiness. I was jealous, therefore, of gauging it precisely, since, if I by chance found it upon inquiry less than mine, its real and existing value would be just so far diminished. I shrank from the possibility of paining us both—of infusing a distance and reserve into our relations—and so waited until I could see.

The autumn came, and we were beginning to have fires, I remember, and to sit almost always through the evening with lamps lit and the sashes down. The doctor said that Stephen Gaston would hardly last till the snow fell.

So Annie went about her household duties with a step even more noiseless than before, and a face of fixed sadness. We both expected, from the doctor's view of the symptoms, that another and final attack of paralysis was hanging over the broken old man, and therefore watched his chair and his bed with almost sleepless anxiety, to meet the chill silent-comer Christianly and unsurprised.

It surprised us greatly when we saw a far other change passing over Stephen Gaston in the earlier part of October. His occasional moroseness entirely disappeared. His sleep was more unbroken, and lasted a little longer every night; but the hours of his wakefulness were altogether quieter, more natural, and attentive to things external. His speech, too, became greatly less incoherent—his eye lost its alternating vacancy and wild fire—and I noticed that he seemed to understand what we read him from the Bible, and his lips sometimes moved as if he prayed silently. Annie and I began to congratulate ourselves wonderingly over the doctor's false prophecy—he was even getting as well as ever, we said, and would soon be about again. So the young girl went about singing once more as she took care of the house.

But with all this change in Stephen Gaston, I was totally unprepared to have him call me into his room, as he did one morning, and say, in a gentle, altogether unprecedented tone of affection,

"You have been very kind to me for a long time, *my dear friend.*"

"Have I? Well—I have tried to be—I am glad if it has made you happy."

"Happy?—No, no—I'm not happy; but I love *you*. You're very good—very! Oh, are you a minister?"

"No, I am not—I was never good enough; but why, my friend?"

"Because I feel as if I wanted—to tell a minister something that's on my mind. I'm sorry you aren't one. But let me see—you've been very good to me—God sent you to be—why, that's being enough of a minister! I'll tell *you*."

Seeing how earnest he was, and anxious to unburden himself of some trouble, I let him go on in spite of the fear that so much use of his partly regained powers would exhaust him, and drew my chair closer to his pillow, taking his hand tenderly, as a son might, in my own. He continued:

"I'm a poor, ruined old man. I wasn't always as I am now. I was rich. I lived in New York, and had houses and lands and money. My own old mother was alive then.

"By-and-by she died. After that I didn't care for any thing. She must have kept on praying for me where she'd gone, but I didn't hear her. I wasn't held in by any thing. I forgot her and every thing good.

"I did something awfully wicked. So wicked, I don't know whether God has any mercy for me. Oh! say, do you think he has?"

"For all—for every thing. His name is Love."

"Hear me, then, and I'll tell you what I did. I was a banker."

"I started. What did he say! He did not notice me, but went on."

"I had left with me to take care of a great deal of money—thousands and thousands. It was trusted with me by merchants and servants and poor people, widows, orphans, young people just starting in this world for themselves. *And I ran away, taking it all.* There was one young man, my friend, just a year married."

"What was his name?" I almost shrieked at Stephen Gaston's ear, in an intolerable throe of fierce passions and memories.

The old man covered his face with his hands, and the tears of a half-manly, half-childish grief began to run down his cheeks as he answered, sobbing,

"Lionel Armour."

I jumped up from my seat and ran out of his room. I seemed to be hurried back to the day when I sat on my father's knee, and hearing all his wrong, drew out my little knife and said, "I would stick this in his heart!" And blush not, Brother Man, to own me brother if I tell thee that for one small moment only I questioned with myself if I should not rush back and take the vengeance on that dying old man out of God's hands. I shut myself in my own room. I strode up and down, taking wild, long paces, talking to myself with my teeth shut tight.

But coming by the centre-table, my eye, almost by fascination (so it seemed to me in that state), fell upon the Bible lying there. It was open at the place where I had last read for Stephen Gaston,

"Have mercy upon me, O God!"

And in my soul there came a voice—"It is God that showeth mercy. Who art thou that revengest?"

I turned from the table and leaned against the window-frame, half-stilled. Lucy Gaston, picking the few last asters in the garden for her father's room, looked up at me sweetly with her smiling, pure brown eyes; and the rest of the work was done. The Good—the God-like in me had triumphed.

I went back to Stephen Gaston's room.

"Where have you been?" said he, reproachfully.

"I have been in my room—seeking and finding mercy for you and for me. Forgive me, my friend. I will not leave you again; go on, please."

"Where was I? Oh, yes—Lionel Armour. As I told you, he was my friend. My loving, true friend. He trusted in me—I took his all—all he had made in a hard-working life. O God, forgive me! He is dead, and never can. Never! never! The rest I wronged I do not know; I don't remember even their names. But *his* name—my friend's—it has been eating into my soul these years! It will be the last thing I see when I die! Oh! oh!"

And the old man shook with the power of his anguish. A thought came over me. Perhaps I might comfort him.

"Suppose, Mr. Gaston," said I, gently caressing his forehead, "that his only son were still living, and should come to you, telling you that up to the last night of his life his father never had a thought of hate to you, but prayed you might be forgiven. Suppose the son himself should say that he, too, from the bottom of his heart forgave you, what then?"

The old man looked up with streaming eyes, and said, brokenly, "I should die in peace. But no, no; it can never be. His son is dead; not a word has been heard of him for years."

"Mr. Gaston, look at me! From the bottom of my heart I forgive you; and I am Lionel Armour's only son!"

Stephen Gaston drew his hand across his eyes as if to wipe away a mist—his breath stopped—then he half rose from his pillow, and, taking both my hands in his own, he regarded me for a full minute with a searching gaze out of which all the old vacancy had gone. And at length he said, solemnly,

"Are you telling a dying man falsehood or truth?"

"Truth, as God liveth!" answered I, with the same solemnity.

"And where are your proofs, young man?"

I thrust my hand into my breast-pocket and drew out an old wallet which had lain there every day, close-hugged for those many years. For it was that which my father had carried—the small receptacle of all that very little which his unworldly soul had ever had to do with the profit and loss of human business—the memoranda, the notes, the bills—in all amounting to

perhaps a dozen papers. But it contained the voucher of Stephen Gaston's trust; and when the eyes of Lionel Armour were closed on my utter desolation, I kept it for a monument with me of his sad life and wrongs, oftentimes, in all my wanderings by sea and land, opening it, reading that one receipt with burning lids, and feeding thereby that only human emotion which seemed left me—indignant, silent bitterness.

I culled out the receipt and held it before Stephen Gaston's eyes. He read it, trembling and breathless. And then I folded it and tore it fine, saying to myself,

"For God's mercy's sake—the commemorated forgiveness of the dead—for the sake of Annie Gaston, and my own better spirit."

"Vain! vain!" said the old man, his voice choked to a whisper. "It has gone before me up to judgment."

"But with it your repentance, God's pardon, and the forgiveness of the Armours! Be at peace, my friend."

For a moment he remained with closed eyes, and his lips only moving as if in prayer, then said:

"The blessing of a wicked old man would but curse you, noble child of my bitterly wronged friend! I do not bless you, then; his blessing be upon you; yes, and this hour it is upon you; and the Great One's goes with it. But listen: I right the Armours late, yet much as can be—I right you! *I have never touched a farthing of that money!* It is invested—well, securely; and when the profits came in I said, 'I fear them; they are the price of holy blood!' and I invested them also. The bonds for all your heritage and its increase are in my safe; this key restores them to you."

And as he drew a small worn key from beneath his pillow and placed it in my hand I learned the meaning of all that jealous, wary fumbling, that search from corner to corner which had perplexed me in his more crazed and darkened days.

After a while he continued,

"I seem better—you and Annie—oh, poor, poor child!—think I will live. No! I shall not. This time of better light and speech I know has been given to me only in mercy for this reparation's sake. What if I had died in the dark! what if you were not here! Oh, God! to think of it! It is finished, and I am called. Bring Annie to me."

She came to his bedside, and, with much weeping, heard her father say solemnly that his time was at hand. And then he looked me fixedly in the face and asked,

"Speak truly. I have thought—was I mistaken?—that you love one another?"

"Better than the whole world and life!" I broke forth now for the first, most passionately.

But her only answer was to bury her tearful eyes in my bosom as I clasped her to me.

"I am right, then," said he. "Be kind to each other. Annie, be every thing to him—be life—be happiness—be soul! You know not what we owe him."

Nor should her clean spirit ever know. I put my finger on my lip and shook my head warningly, lest he should impulsively say too much more. And as our lips met in the first love-embrace beside her fainting father's bed, the mark of the secret long burned into my soul, and Stephen Gaston's was wiped out by the daughter's kiss, and I became as though I knew it not.

A week from that day and I alone on earth was left to her. God knows how it has been in my soul to make that all all-sufficient, with much care, and deep tenderness, and idolizing love. For her own, chiefly—yes, also for her forgiven father's sake.

Thus I saw the strange, long-forgotten, and disrespected dream of my first Ilchester night at length fulfilled. And I blessed God for those days and nights of weariness passed for Christian charity and her love beside Stephen Gaston's tottering footsteps, knowing that that light affliction had wrought for me my blessedness in her, and been therefore doubly, yea, unspeakably, the Ransom of my Heritage.

FOUND DEAD.

WHO can walk through bright Broadway
On a sunny noon in May,
When the gorgeous flowers of spring
Bloom and blossom on its pave;
When the gay, unthinking crowd
Rolls in one unceasing wave—
Who can walk nor bless the day
That gave them beautiful Broadway?

Who can? On a cold, clear night,
When the gas sheds bounteous light,
When the shops like brilliant gems,
Set in dark, enameled shrines,
Sparkle forth their many hues
On the golden-lettered signs—
Who through fairy-land would stray,
Walk the pavement of Broadway.

When the yellow sunlight falls
On her cloud-capped marble halls;
When the clash of countless wheels
Mingles with a hundred bells;
When the tramp of hurrying feet
Drowns the marching music swells:
Moonlight, sunlight, morning gray—
All are glorious on Broadway.

* * * * *
* * * * *

It is midnight deep, the time grows old;
It is raining, and sleeting, and very cold.
The slush lies ankle-deep in the street,
And hushed are the sounds of the hurrying feet.
Hushed is the clang of the noisy bells,
And hushed is the sound of the music swells.
Moonlight, sunlight, morning gray—
It is none of these on bright Broadway.

It is midnight deep, and the gas burns low
With a flickering light through the falling snow.
Snow, and hail, and wind, and rain,
Flooding the eaves, and choking the drain.
He who has roof that is weather-tight
Goes not abroad on this dreadful night.
Carriage, nor horse, nor laden dray
Clatters this night through bright Broadway.

Even the beggar a shelter has found;
Not a policeman is heard on his round;
Not a stray light from a cellar shines out,
Nor heard is the sound of a reveler's shout.
Silent and dark as the gloom of the grave,
Chilling the heart be it ever so brave;
Chilling the heart till it ceases to pray,
And heaps only curses on bright Broadway.

* * * * *
* * * * *

Sweep on, ye bitter winter's wind,
Like a fiend on your errand of death!
Strike every living thing you find
With your knife-like, icy breath!
I was cold and hungered an hour ago,
But that has passed away;
The snow may fall, and the winds may blow,
To me it is nothing but play.

I have walked the pavement nights before
As dank and as deathly cold,
When a spot to lie on the naked floor
Would have been a wealth untold.
To-night I am warm, and a dreamy sleep
Is lulling my hunger to rest;
Under this pile of boxes I'll creep,
With the rats an unbidden guest.

Oh, mother! my own, my undying love!
Oh, mother! my lost and true!
Look from your home of light above,
To-night I am thinking of you.
Oh, that this weary life were done!
Oh, that I were with thee!
That the Lord would receive, through his only Son,
A chastened sinner like me!

* * * * *
* * * * *

'Tis the first faint tinge of the morning's dawn
That heralds the birth of a sunshiny morn;
The air is still, and the frozen street
Begins to awake with the patter of feet—
To awake with the sound of the milkman's shout,
As he passes along on his daily route;
But one there sleeps, on the frozen way,
Who will never awake to bright Broadway.

They have found him lying there at rest—
His hands are crossed on his silent breast;
An icy mantle is round his form,
It has covered him in from the pitiless storm.
With a pick and a shovel they loose the hold
Of the ice and the snow on his garments old;
And, staring and stiff, they bear him away
From the sight of the people on bright Broadway.

A cart is his hearse, and a canvas shroud
Hides his pale face from the gaping crowd;
And the jury who come to the dead-house to see,
With a look of disgust take the *usual* fee;
And the Coroner says, in a business tone,
That the body they viewed is—A Man Unknown!
And the verdict is entered the *usual* way—
Found Dead!—in the morning on bright Broadway.

AN AMERICAN IN JAPAN IN 1858.

A CHANGE has come over the spirit of the Japanese dream! When I was a child I had an undeveloped idea that the Japanese were a species of semi-cannibal race, who indulged also in an annual practice of "trampling upon the Cross"—*vide* most school geographies. Three years since it was my good fortune to visit most of their more northern ports, and during those visits I was most agreeably enlightened. I left them with the impression that, though certainly unwarlike in their nature—possibly even timid—they were nevertheless cleanly in their persons, polished in their manners, and well informed as to a despotic form of government and the general preservation of order and quiet. I return now to have these impressions confirmed, and to conceive still higher ideas of their manners, of their social qualities, of their civilization, and of their intellect. I except only the Persians when I say that they are, *par excellence*, *the* nation of the East.

We sighted the high lands about Nagasakie bay at daylight of the 10th July, and as the sun rose, and we continued steadily to near them, their densely-wooded or terraced hill-sides presented a most refreshing contrast to the low land about the mouth of the Pei-ho, at which we have been gazing for the last month. There was quite a sea running as we thus stood in for the narrow entrance, and the ship had considerable motion; but as we shot into the mouth, and found the beautiful heights within half a mile of us on either hand, it seemed as if we were entering upon the bosom of a mountain lake. I can scarcely describe this harbor; it must be seen to be appreciated. Imagine a perfectly straight valley, with high hills on each side, and with an average width of three-quarters of a mile. The ridges of some of these hills run at right angles with the course of the valley, project into it, and thus form other small valleys which, like their ridges, run also at right angles with the harbor. Some parts of these numerous hill-sides, and all of their ridges and peaks, are densely covered with pines, cedars, bamboo, etc., but the most of their area is terraced and kept under constant cultivation. Here and there you see hamlets running back from the surfless beach, and in every direction isolated houses meet the eye. About four miles from the mouth of this valley it takes a short turn, and ends in front of the city of Nagasakie. Now imagine this valley a fourth filled with clear sea-water, and you have the

best idea my pen can impart of "the harbor of Nagasakie." As we steam up its motionless waters the curious Japanese crowd the beach to see the unusual sight, for Nagasakie was only opened to us on the 4th instant, and the *Mississippi*, which arrived a few days ahead of us, is, I suppose, one of the first steamers they ever saw. There she is now, anchored within pistol-shot of the town, and as we round-to near her a boat pushes off to board us.

Our anchor is no sooner down than a Japanese boat is also seen approaching, and as she comes alongside curious eyes look through the ports to examine her strange-looking occupants. The officer of the *Mississippi's* boat comes on board, and then orders his boat to drop out of the way to make room for the Japanese officials. One by one these latter ascend to the quarter-deck, the inferiors first, the superior last. The former range themselves in a line by the gangway, and as the latter steps upon deck they bend gracefully and almost reverently before him. Then they look toward us, as much as to say, "Here is a high personage who is entitled to your respect."

One of the inferiors, the first who came on board, is Kichizuro—Nichi Kichizuro—the Governor's interpreter. He is a fine-looking, honest-visaged Japanese, who speaks Dutch very well, and who has learned enough English, *from books*, since Commodore Perry's treaty, to make himself fairly understood.

We call a Dutch seaman who shipped with us in Norfolk *as an American*, and put him in communication with Kichizuro. The latter bows with Eastern politeness, and says that the high officer, his superior, has come on board with the Governor's compliments to welcome us to Nagasakie. The Dutch seaman translates this, and the captain replies appropriately on the part of the Commodore. Several complimentary speeches now pass back and forth, after which the high officer and suite are asked down into the ward-room, and regaled with two bottles of Frontignac—a sweet wine from the Cape of Good Hope. They now take their departure, with the understanding that the Commodore and suite will do themselves the honor to call upon his Excellency Arawa Ywaminokami, the Governor, in a few days.

In addition to the *Mississippi* we find three other foreign-built vessels at anchor. One of these is a Dutch bark lately arrived from Batavia with a mixed cargo for the Dutch Company who for the last two hundred and fifty-eight years have been allowed to inhabit the artificial island of Desima, and the other two are Japanese vessels-of-war, which were built a year since to order in Holland. One of these is a steam-propeller of about 400 tons, and the other a smaller sailing vessel. As we go on shore and make the acquaintance of the Dutchmen, I will show why these vessels are here, and how the giant Steam is "changing the spirit of the Japanese dream." Come, then; let us go to Desima.

A large crowd got into this our first boat which was to land us upon the soil of Japan. We pulled a few hundred yards over the smooth surface of the harbor and then ran alongside of a stone embankment which the Dutch had built to facilitate the landing of their semi-annual cargoes. Here we got out, walked up the inclined masonry, and were received by a dense throng of Dutch and Japanese. One of the former introduced himself as Mr. Basley, the head of the Company. Another, as Mr. Hardie, engineer of the propeller; and a third as Lieutenant Wichers, of the Dutch Navy, and also an officer of the propeller. The Japanese gazed upon us with friendly and respectful curiosity. Our Dutch friends walked us over their little island and then into the house of Mr. Basley, where they gave us schnapps and hock in abundance.

We were pleased with our walk over Desima. We found it to be a point of land seven or eight hundred feet long by about three hundred wide, around the inshore part of which a curved moat had been dug, and entirely around which a stone wall had then been built. This moat is not very deep, so that Desima is only an island at high water. A single stone bridge spans the twenty-feet-wide moat and connects the island with Nagasakie, and a single wide street runs its entire length and terminates in a beautifully shady and neat flower-garden. Upon the right of this street, as you walk up, is a long range of two-story houses inhabited by the Dutch, and upon the left is a similar row, used partly for dwellings and partly for warerooms. Both of these rows end at the garden, and with it and the broad street constitute "the island of Desima." And it is upon this little spot that "the Dutch in Japan" have lived for the last two hundred and fifty-eight years. There are now about fifty of them here, including the officers and crew of the propeller. As we drank our hock I learned from Lieutenant Wichers and others some interesting items. After bringing their propeller to Nagasakie, the officers and crew remained attached to her for the purpose of giving lessons in steam, navigation, and seamanship, to Japanese officials and others expressly designated by the Emperor. In the mean time they get their regular pay from the Dutch Government, as well as a double amount from that of Japan. Every day they have their different classes, where Japanese are taught the above branches, and where they themselves acquire a fair insight into Japanese tastes, manners, etc. There is no telling how long they may be engaged upon this duty, or how much valuable information they may thus obtain.

"Come out here on the back porch and look on the other side of the harbor," said Mr. Hardie. "See that new frame building with the smoke-pipe rising over it; that is *my* establishment. I have a steam-engine there which was ordered out by the prince of this province, to pump the water out of his coal-mines; but after it arrived, and he found that we should have to go to the mines to put it up, he changed his

mind. They are still so averse to foreigners penetrating the country. I have a brick-kiln over there also, various workshops, etc., etc. You must come over and see me."

We promised to do so, and then got up to visit the bazars and purchase some of the beautiful lacquer ware, etc., for our friends at home. I can not pretend to describe these bazars. I can only say that they are second-floor rooms near the Desima Garden, that they are filled with every thing that is beautiful, and that dozens of Japanese shopmen stand behind their counters to laugh and make signs with you instead of talking, and to sell you their gorgeous ware at marvelously low prices. When I was at Simoda, three years since, we thought every thing was very cheap; now it is infinitely more so. What we then paid a dollar for, we pay thirty-three cents for now. To what is this great difference owing, do you ask? To the difference between the brains of our Government officials. When Commodore Perry made his famous treaty, he was so blind as to stipulate that our dollar should be equal to a Japanese itzabu, the intrinsic value of which coin is about thirty-three cents. Thus a dollar would only buy an article that was worth thirty-three cents. Lately, however, our Consul-General, Mr. Harris, has effected a second treaty, which provides that our money shall compare with theirs according to *weight;* thus a dollar is now worth about *three* itzabu. Hence the difference in prices. It may be imagined that we are taking advantage of this state of affairs to fill our rooms with beautiful and (at home) costly presents for our friends. Were I here now as a merchant captain in command of a small vessel and $10,000 (Mexican), I could load my ship with the most costly ware—ware that would easily realize $70,000 in Europe or America. This rare "opening" has, however, doubtless reached you before this, and we are hourly expecting to see some wide-awake American merchantman sailing into the harbor to take advantage of it.

Would the reader like to see how we buy from these shopmen? In the first place, we take our Mexican dollars to a Government official, who counts them and gives us their equivalent in the paper money of *Nagasakie*—not of *Javan.*

"You must spend it all here," says the interpreter, "for it will not pass at Simoda."

Of course we will take his advice. This paper-money is worth a passing word, if nothing more. It is about as long as a bank-note, half as wide, and is stamped on both sides. It is as thick as thin pasteboard, is made from the bamboo, and is very durable. Upon one side of it is stamped its value in Japanese, and upon the other in Dutch. These values range from ten thalers down as low as the hundredth part of a thaler; and the entire amount of money "out" is called in yearly by the Government, and redeemed with *new* notes. Should the Japanese, however, prefer metallic currency at any time, the Government will take their paper-money in exchange; but such a thing as a "panic" being out of the question in Japan, they prefer the notes, as being more portable.

"Thaler" is the Dutch for a dollar; but the reader must not imagine that they give us but one of them for a Mexican dollar. We get four, plus eight cents, Mr. Harris's admirable treaty having determined that very positively. Our dollar may, therefore, be said to be equal to about $3 25, for the Dutch here are paid in thalers at the rate of 75 cents each; while one of our Mexicans, plus 15 cents, is equal to five thalers. For instance, I and a Dutchman purchase similar articles that cost 20 thalers. I pay $4 60; while he pays $20 \times 75 = \$15\ 00$. Thus we pay but 23 cents for a thaler, and they 75 cents. It may readily be imagined that the Hollanders would not long remain under such a disadvantage. They at once ordered Mexican dollars from Batavia, and are now as well off as we are. Now for the shopping. Attention, ladies!

"*Ycoo-rá?*" ("How much is this?") sings out the owner of a pile of ten-thaler notes at my elbow. The reader must know that we are in the large bazar in Nagasakie (not of Desima), the centre of which is a vast open court (square), and the sides of which are made up of the stalls of the different shopmen, neatly roofed over. Thus we have abundance of light to see the gorgeous wares that are spread before us.

"*Ycoo-rá?*"

The shopman, who has a pleasant face, and who seems more intent upon examining our clothes and buttons than upon effecting a sale, takes out a one-thaler note, and holds up the five fingers of each hand eight times.

"Eighty thalers!" we murmur. "Only *eighty* thalers! only $18 40."

What is that which we think so cheap at $18 40? It is the most magnificent centre-table that can be imagined—such a table as is seen nowhere but in Japan. The Dutch formerly exported them; but as they cost them sixty dollars, and had to be offered in Europe, consequently, at a much higher price, the demand for them was limited. Therefore the exportation ceased; therefore only eight or ten are now made annually throughout the whole empire.

"There are only two of those in Nagasakie!" says the head of the Dutch Company. "If you want any thing in the table line you had better take it."

My friend with the ten-thaler notes having passed on to something else did not hear this remark. Instead of calling him back to enlighten him, I asked where the other was, and bought them both—one to the order of a friend in Shanghai, and the other for myself. I must describe one of them, if only to give the reader an idea of the ware by which we were surrounded. It was a large octagonal centre-table, the surface of which was divided into three equal parts, each one of which furnished a perfect

specimen of one of the three different kinds of "lacquering." Brilliant and massive mother-of-pearl composed the borders which separated these divisions, and contrasted vividly, though not glaringly, with the adjoining grounds. One of these divisions represented the sea; another the cultivated valley; the third the forest, with its beasts and birds. Through the transparent sea fish were to be seen chasing each other, while junks sailed over its rippled surface. In the valley there was a rice-field, with long-legged cranes approaching unwary frogs; and upon the trees of the forest sat brilliantly-plumaged birds. And such a polish as the entire surface had upon it! It seemed almost dangerous to touch it; and yet you might scrub it with a rough brush and sand without leaving a scratch that could not be polished off in five minutes. Truly it is a beautiful specimen of art! It has but one drawback: it is so grandly brilliant that, even in our most elegant drawing-rooms, good taste would say "Cover it with a cloth, to avoid too strong a contrast." Of course all the other work is not as splendid as this; but as soon as *it* is packed away you fail to notice the difference.

Here are other tables that now look as fine, and they only cost ten dollars. Here are glove-boxes, card-cases, lace-boxes, waiters, trays, punch-bowls, cabinets, work-tables, toilet-boxes, writing-desks, cigar-boxes, card-boxes, jewelry-cases, India-ink boxes, and, in short, every kind of box and case that the most vivid imagination can depict. They have all been fashioned after samples imported by the Dutch; and are, consequently, unlike most Japanese wares, as useful as they are ornamental. Then look at these silks and crapes! Dresses which could not be bought at home for thirty dollars here selling for three. Hurrah for the married men! We'll fit out our absent halves for the next ten years, by which time they'll be too old (?) to want a farther supply of fine feathers.

"Don't believe that!" I hear some one laugh; and I therefore put the note of inquiry after "old." Let us purchase some of *the cheap* things. Here are a hundred sticks of fine India-ink at $2 40;* a massive and rich china bowl for 20 cents; three boxes of rose-colored tooth-powder, with looking-glasses in the upper lids, for 2½ cents; silk tassels, cord, scarfs, etc., at $1 50 per pound; beautiful bronze ornaments for a song; and an *infinite* variety of other things that would occupy as much room here as they would in our limited cabins. We will therefore leave them with the remark that it would be hard to select one from even *their* midst which would not be regarded as a "pretty present" by any one at home. I find my pockets emptying so fast that we must also leave the bazar. We are on our way to the Governor's palace to pay an official call. It is the third day after our arrival.

The party consisted of eleven—the flag officer, the captains of the *Mississippi* and *Powhattan*, the fleet-surgeon, the purser, the first lieutenant, the marine officer, the chief engineer, the chaplain, the flag lieutenant, and the flag officer's secretary, and we were all rigged out in epaulets and swords.

We did not land at Desima this time. We pulled past the mouth of the narrow moat which separates it from Nagasakie, and stepped on shore at the stone embankment known as "the Governor's landing." An immense crowd of men, women, and children received us in respectful but curious silence, and followed us wonderingly as we walked leisurely up the clean, wide street. We came first to a wide flight of fifty-eight stone steps, which we ascended, and then found ourselves at the beginning of a long, straight street, which, as usual, was both clean and wide. We walked up this about three-fourths of a mile, and then turning to the left approached a densely wooded hill-side at the base of which was the palace, approachable only by several other flights of stone steps. While passing up our straight street we had two-story houses on either hand, the doors and windows of which were crowded by the excited inmates; for it must be remembered that, although the Dutch have occupied Desima for two hundred and fifty-eight years, still they never left it, nor were Japanese allowed to visit *them*. Hence, with Europeans at their very doors, the people of Nagasakie remained as ignorant of our appearance as if Japan had been a country of the moon. I do not mean that no Japanese ever entered Desima; on the contrary, every Dutchman was allowed a wife, and she, in turn, a female servant; but once entered, they came out no more, except it were to a small house at the gate, where they conversed a short time with the *female* members of their families. The only persons who could enter and depart, as usual, were a selected number of officials, who transacted their business *under each other's eyes*, and then departed at once. The one was a spy upon the other, and every thing that transpired was faithfully reported in writing to the Government.

It was strange to see how even the very animals recognized in us something unusual and alarming. Dogs would bark at us a hundred yards in advance, and then disappear to emerge again and bark fifty yards in our rear; cats, with their singular stumpy tails and startled eyes, watched us from the beautifully tiled walls and roofs; and bulls of burden and horses snorted and became uneasy at our approach. These burdened animals move over the hard street with the noiseless gait of so many huge mice. We were surprised at this until we looked at their feet and saw them shod with grass shoes, which we are told "wear astonishingly long." Nothing can be imagined more neat and cleanly than the houses along our route; or more totally wanting in propriety than the general costume of their inmates. Shocked modesty is an emotion unknown to the Japanese woman,

* The Japanese ink is the best in the world; in value it ranges from one cent to a dollar and a half per stick.

and with the men it is even worse. Clothing seems only to be worn here as a protection from the temperature, or as adding to their appearance; and when any thing occurs to render a change desirable, it is removed with as natural an indifference as attends the pulling off of one's gloves. This total absence of every thing like self-respect is the only unpleasant feature I have observed in these otherwise amiable and remarkable people. Of course I have been speaking of the middle and lower classes—the men of the higher classes being always clothed in rich silks and satins: their wives and daughters we have not seen.

Let us stop at this house and examine its arrangement. We step from the street into a square space about as large as the half of a mattress, upon the ground flooring of which are several pairs of shoes, and three sides of which are formed by the first-story floor. This floor is raised a foot above the ground, and is covered with a beautiful species of matting. Not such matting as comes in rolls from China to be sold in Broadway or Chestnut Street in the spring; but a yielding, thick, cushion-like matting that I never saw any where but in this country. It is made in the shape of a mattress, being *invariably* six feet three inches long, three feet two inches wide, and four inches thick. Rice or wheat straw is first plaited lightly together until the required dimensions are arrived at, and then the top is securely covered by a soft and flexible mat. They are then fitted closely together upon the floor, and this fitting is so perfect as to show a surface as smooth as any carpet. As you walk over them the foot sinks an inch or so, which is any thing but unpleasant. The reader will readily notice one great beauty about this style of matting: should one of them become soiled another is bought for twenty-three cents and put into its place. There is never any danger of their not fitting, for, as I have already observed, they are all of the same size. Nor is this all. When a man wishes a house built he simply says, "I want a house built which shall be of two stories and nine rooms. One room is to spread forty mats, four rooms twenty each, and four fifteen each." Thus is the size of the house regulated by the number of mats. Indeed, in speaking of the length of any thing, they say—"It is five, or six, or seven mats long." A *mat* with them answers the same purpose as a *yard* with us.

I remarked a few lines back that we saw several pairs of shoes upon the ground of the square hole into which the front door opens, or, rather, from before which it *slides back*. Those shoes *belong to persons who are now in the house;* for the Japanese always leave them at the edge of the matting to avoid soiling it, and resume them again when they go out. In the mean time they go in their "stocking-feet." I wonder if the reader ever saw a pair of Japanese stockings? They are made of wadded and quilted cotton, and reach nearly to the knee. They fit very snugly, and, mitten-like, have a slit so that the great toe has an apartment to itself. The thong of their sandals fits into this slit, and, assisted by another across the instep, keeps it from slipping off. Upon the whole the Japanese are infinitely more sensibly rigged about the feet than we are, and, consequently, seldom or never stand in need of the services of the chiropodist. Let us hasten on to the palace!

The extensive flight of heavy stone steps, already mentioned, which leads to the portal of a large court fifty feet above us, is shaded by a magnificent tree, which would not suffer by comparison with our grandest live oaks. Its wide-spreading and grotesque limbs extend their irregular lengths over the entire stone-work, and project even over a portion of the court. As we pass under their grateful protection we close our umbrellas, breathe a fresh, cool breeze, and walk through the open gateway. Crossing the court, which is neatly graveled, we leave walled buildings, appropriated to soldiers, on either hand, and step upon the polished and covered piazza which opens into the outer room of the palace. This piazza is about twenty feet wide, and where it joins the outer room the usual matting commences. This outer room is about fifty feet square, and is occupied by the officers of the body-guard of the Governor. There they sit now, upon the spotless matting, with their pipes, fire-bowls, and tobacco before them, taking it quite easy. Against the partition in their rear is a lacquered rack, supporting the most beautiful spears and pennant staffs; and ranged upon the left side of the door by which we are entering are Yashero and Kichizuro, the two interpreters, who, with several high officers, receive us with profound bows and conduct us through different ground-floor apartments to that in which the Vice-Governor awaits us. There we meet several other profound bows, pass through another room, and finally stand face to face with a tall and aged man, who looks every inch the gentleman, as well as "the one in authority." In his rear is his sword-bearer and a large crowd of two-sworded officials, who follow his example by saluting us with other profound bows; and in *our* rear, and upon our left, crowd the Vice-Governor and others who met us as we entered. Stretching away forty or fifty feet to our right runs the oblong apartment, opening upon a piazza, which, in turn, is elevated some ten inches above a small garden, at the opposite side of which is a miniature lake covered with lilies and overhung by a perpendicular hill-side supporting a dense growth of pines, cedars, and undergrowth—a most refreshing sight for sea-faring eyes.

I must remark here that some portions of the walls of Japanese houses, and most of the partitions which separate the rooms, are composed of sliding panels, which enables them to *throw the whole ground floor into one room* if desirable, and to regulate the size of their windows according to the temperature of the weather. In this case the whole end of the room had been slided back, so that we had abundance of light

and air as well as a beautiful view. These sliding walls are all *papered*, more neatly in many cases than with us. Every day I find that the Japanese have little to learn from us in their social economy.

Between us and the edge of the piazza now ran a long, low table, covered with a snow-white cotton cloth, and having eleven cane-bottomed arm-chairs ranged along between it and the partition. Opposite to the far end of this table were two others, the one a fourth as large as ours, the other smaller. Two arm-chairs were between the first of these and the opposite partition, and one at the latter. The space intervening between the first table and these two latter was about ten feet, and perfectly unoccupied. After bowing the Governor waved his hand with a courtly dignity, motioning the Commodore to the far seat at the long table. We passed up and seated ourselves according to rank. The Governor and a high officer seated themselves at the double table, and the Vice-Governor at the single one. The rest of the officials remained standing in the back-ground, and Kichizuro seated himself upon the matting between the Commodore and the Governor, while Yashero took up a similar position in his rear, between the Vice-Governor and us who were seated lower down. In the rear of the Governor stood his sword-bearer. A Dutch seaman from the *Mississippi* stood near the Commodore to put his words into Dutch to Kichizuro, who then transferred them into Japanese for the Governor. I have already remarked that Kichizuro spoke a little English; but as he was much more at home in Dutch we had brought the seaman to assist in that language.

The Governor was the first to speak. He bent gracefully forward and spoke in almost a whisper. Kichizuro, with inclined body and eyes fixed upon the floor, listened in motionless attention to his smooth-flowing speech. When it was ended he lifted up his head and addressed the seaman. The latter then translated to the Commodore, who replied with happy readiness. The conversation which now followed would doubtless be interesting to the reader, but I must content myself with condensing its sense. It seemed, then, that his Excellency was very glad to see our ships arrive at Nagasakie, and still more pleased to see our particular selves in his mansion. Of course we were equally glad to find ourselves in his country, and greatly pleased to be in his particular society. Smiles, bows, and a general clearing of throats followed this exchange of compliments.

In the mean time oblong lacquer boxes, twice as large as one's head, have been brought in by a long string of noiseless servants and placed before each of us, as well as before the Governor, the high officer (who proves to be the Secretary of the Navy), and the Vice-Governor. They are all alike, and when you see one you see the others. The one before me has four divisions: in one of which is a pipe, with a bowl only half as large as a lady's thimble; in another, a copper brazier containing live coals in ashes; in the third, fine smoking tobacco, very much like the Turkish; and in the fourth, a little copper vase for knocking your ashes into. The Governor takes a pinch of the silky tobacco, rolls it a moment between the thumb and forefinger of his right hand, puts it in the diminutive bowl, applies the latter to a coal, takes three whiffs, knocks out his ashes, replaces his pipe, and—is done smoking. We follow his example, but upon a more extended scale.

The conversation now recommenced, just as the noiseless attendants re-entered with a second edition of lacquer trays. The Governor inquired with interest as to the present struggle between the allies and Chinese, and evidently had his sympathies enlisted upon the side of the latter. Notwithstanding this, however, there are no one people who despise another more than the Japanese do the Chinese. I have seen this exemplified myself years since, when our Chinese mess boys would be walking through the streets of Simoda with their heavy shoes, and long tails dangling behind; and I have lately had the impression confirmed by conversation with Kichizuro. The Commodore told the Governor that we were ourselves friendly to China, and that we had only been to the Pei-ho to give both parties the benefit of our friendly advice; at which the old gentleman smiled most pleasantly, and, filling a sakie glass from the last tray, desired the pleasure of drinking our combined healths.

This over, we turned our attention to the contents of trays No. 2, which we found to consist of iced sponge-cake, a second kind of cake, which was any thing but unpalatable, several pieces of brilliantly-colored candy, and a wine-glass for sakie. It may be well here to remark, that this cake and candy combined, of each separate dish, was sufficient in quantity to have overcome even the appetite of a boarding-school boy lately arrived at home, and in quality equal to the best things of the kind which we have in the United States. This sounds strange, but it is true. The Japanese know how to make good things as well as we do.

Being ignorant of the fact that our entertainment was but just commencing, and it being our regular tiffin hour, we entered largely into the examination of the sponge-cake and sakie before the arrival of the third course. Then we were horrified to discover that we had commenced our lunch by eating cake, while delicious stews of mushrooms, chicken-breast, minced partridge meat, etc., now appeared before our blunted appetites.

"Hillo! we've commenced at the wrong end!" exclaimed an alarmed voice. Nevertheless we managed to discover that the different stews were all *delicious*.

Course after course now followed in regular succession, each one being upon fourteen different trays, one of each of which was placed before the Governors, the Secretary, and our-

selves. Finally the arrivals ceased, though not until the long table was entirely covered, and we unable to do any thing but drink sakie and fill our diminutive pipes. This sakie was so fine that I determined to learn all about it. I therefore asked Yashero to tell the Vice-Governor my opinion of it, and to ask him how old it was, and how it was made. The reply was, that it was three years old, that it was made from a peculiar kind of rice, and that there was very little of it. I feared from this last reply that they imagined my object was to get some of it, but subsequently learned that the Governor had contemplated making us a present of several firkins, which caused the discovery of its scarcity. I next told him that in America we had wine that was one hundred years old, and that its age gave it such a value that few people could afford to drink it. At this he seemed greatly interested, remarking that sakie also improved with age, but that it was difficult in Japan to keep it so long. The fleet-surgeon, at this stage of the action, took a package of different kinds of seeds from his pocket, and handing it to Kichizuro, told him to present it to the Governor, enlightening him at the same time as to how they were to be planted, worked, etc. This necessarily occupied some time, and when the Governor had returned his thanks the Commodore got up to take his leave. His Excellency, however, begged us to remain longer, as his opportunities for conversing on such subjects were rare and far between. We therefore resumed our seats and filled our glasses once more with the rare old sakie.

An idea now crossed my mind that was eventually productive of the most happy result. It is against the laws of Japan for the national metallic currency to leave the country; but I knew that said laws had been violated in the case of Commodore Perry, and argued that it was thence not impossible for them to be similarly violated in the case of the present writer. I knew also that the Governor had been one of the most determined opponents of the liberal party who had advocated the opening of Japan, and that the Vice-Governor had occupied the opposite ground with equal firmness. I determined, therefore, to ask the Vice-Governor's permission to purchase specimens of the national coin, and addressed myself to Yashero as follows:

"Yashero, tell the Vice-Governor that in America many gentlemen have cabinets containing specimens of the money of all nations. Some of this money is three thousand years old, and is still in as good a state of preservation as when it was coined. None of these cabinets, however, possess any *Japanese* money, and I should consequently like very much to get a specimen of each of the gold, silver, and copper coins of the country."

Yashero bent himself low, and gave the Vice-Governor a faithful (judging by the length) translation of what I had said; to which the latter smiled pleasantly, and replied, "Certainly; with pleasure!" The next day I paid the following prices for the following coins:

One gold cobank, or "four-itzabu piece" (intrinsic value, $7 16), $1 38 (flat and oval in form); one gold itzabu (intrinsic value, $1 79), 34 cents (oblong); one gold half-itzabu (intrinsic value about 40 cents), 17 cents (oblong silver coin *gold-plated*); one silver itzabu (intrinsic value, 33 cents), 34 cents (oblong silver coin); one silver quarter-itzabu (intrinsic value, 8¼ cents), 8½ cents (oblong silver coin); one copper cash (intrinsic value, ⅛ of a cent), 1 cent (round, with square hole).

Thus I paid only $2 32½ for coin which is intrinsically worth about $9 76. How a Wall Street broker might turn over his Mexican dollars were he here with his bags, and *were there no law against the export of Japanese gold!*

About the time that the Vice-Governor was smiling pleasantly and saying, "Certainly; with pleasure!" the Commodore made a second move, and this time we took our departure. As he was shaking hands and bowing, the Governor remarked that he should like very much to visit our ship, upon which he was begged to fix a day, and the next but one was finally determined upon. We were now shown out with the same attention and form that had attended our entrance; and passing under the shade of the heavy old oak, returned toward our boats.

And now I must say a few words as to the *manners* of these Japanese, upon whom many of our best informed countrymen look down so ignorantly. Our inferiors *as a people* they doubtless are, but they are equally our superiors in general dignity of bearing, in self-possession, and in some of the arts. Look at a Japanese gentleman under any and every circumstance in which you see him, and he is calm, dignified, affable, graceful, and completely self-possessed. People harp loudly upon the quiet air of good-breeding which seems natural to the frequenters of the courts of Europe. Some of our flurried countrymen approach crowned heads with nervousness, and envy those who are *accustomed* to their society their air of easy and polished *savoir faire*. I should like such people to see the manners that we have seen within the last few days.

As we return toward our boats by the same long and straight street which conducted us up, we see a sight which looks much more like Broadway or Chestnut Street than like Japan. What do you suppose it is, reader? Nothing more or less than *a street book-stall*. There are novels (many of them profusely illustrated), works upon the different kingdoms, histories, etc., all ranged one against the other to display them to the best advantage, and at the same time to get as many on the table as possible. I must confess that this sight took us by surprise. We stopped alongside of it, and began turning over leaves, while a curious crowd collected around us.

One must not stop in the streets of a Japanese city unless he is content to be surrounded by a crowd. They are harmless crowds, however, and never take a fancy to your pocket-

book or handkerchief. Sometimes they pull at our buttons; but should one be loose and come off, they look scared, and hand it back to you. I never saw such a passion as there is here for buttons—bright ones. As you walk along the streets women and children rush after you, crying out, "*Boton cashay! Boton cashay!*" (Give me a button!) and even the men often hold out their hands and say the same thing. The consequence is that we often take whole papers of them on shore with us to gratify their simple longing, and—to save our coats. Where they get the word "*boton*" from I do not know. I suppose it, however, to be a corruption of our word. Some of the books at which we now looked were really valuable. There were birds and fish of which the European naturalist has, I suppose, never dreamed. Two of them, a bird and a fish, had a double tail, and were otherwise singular. One of the party said they were *fancy sketches;* but Kichizuro subsequently told me they were from nature. The reader may judge between the two. While upon this subject I may mention that I afterward showed some Japanese friends my fifteen volumes of *Harper's Magazine.* They could not tire of admiring the illustrations, representing so many objects entirely novel to them. But the fashion plates seemed to afford them the greatest amusement. They understood their purport easily, and seemed especially amused with the figures delineated since the introduction of hoops.

Upon reaching our boats we found the tide so low that to get into them we should have to wade through the mud. They were consequently sent on board, while we returned a second time to the bazars. Two hours later we made a second attempt and got on board. Upon gaining the ship we found that the Governor, true to Nipon custom, had *sent the entire remains of our feast after us.* The messenger-boys were therefore called aft and informed that they were at liberty to attack it, and the onslaught that ensued promised several cases of juvenile surfeit.

The day after our visit to the Governor a friend and myself landed upon the side of the harbor opposite to Nagasakie for a ramble over the hills—or rather up the ravines. Each of these ravines has its little stream following a rocky and winding bed, its hamlets along the hill-sides, and its terraced patches of cultivation on either bank of the gurgling stream. The path generally follows the stream, branching off here and there to houses, and finally taking you over the ridge to the commencement of an opposite ravine. They make beautiful and shady walks, and offer interest at every turn. Rare flowers and bushes are on every hand, with here and there some familiar leaf. One of the latter was a singular plant, known in California as "the rock plant." We found it growing in profusion from the side of a stone wall, and gathered several roots.

"If it *is* the same as our California rock plant," said my friend, "the leaves will curl up into a ball, and you may keep it for a year in its apparently dead state; then if you put it in a saucer with water it will soon spread out again and recover both its form and color. They make beautiful evergreens to scatter about a parlor on a winter's evening." That same night we had the pleasure of seeing them all curling up, and the next morning they were like so many half-blown roses. To test them still farther we placed one in a saucer of water, and before the lapse of two hours it had expanded again.

In reading of this ramble which we had now started upon the reader must remember that every thing was strange to us, and that we were strange to every thing. For two hundred and fifty-eight years semi-annual Dutch vessels—one at a time—have been in the habit of anchoring here; but the most that the people could do was to look at them from the beach. *The appearance of Europeans at a distance* may, therefore, be said to have comprehended their knowledge of us; and it is, consequently, not surprising that we should now have been objects of curiosity. As we ascended our broken and rugged path men, women, and children left their fields and houses to gaze wonderingly at us, starting back in alarm if we made a jump toward them, and then laughing and looking ashamed of their groundless fright. The men were the bravest, the children next, then the grandmothers, and finally the younger women. Many of these latter had pretty faces, and all of them were smiling and good-natured. When they thus smiled some of them showed fearfully black teeth, while others might have illuminated a dark room—were it *possible.* I already knew the reason for this difference; it is this: As soon as a woman marries she stains her teeth a brilliant and polished black. If her husband dies she waits a reasonable time, and then cleans them off. This is as much as to say, "Come on, gentlemen! Here's a dashing young widow in the market!" And the gentlemen do "come on" often, as well here as in other parts of the world. Thus it is that every woman in Japan with black teeth is married, while every one with white teeth is either a widow, an old maid, or a young ditto.

I have already remarked that the old maids, as well as their younger companions, were among the last to approach us. It was in vain that we held out the brightest buttons, that we nodded our heads and sang out "*Ohio!*" (Good-morning) in the most pleasant tones; there they remained, displaying their beautiful white teeth and shaking their black hair at us, ready for a run at the first attempt of ours to approach them. I do not wish it to be understood here that we thought them remarkable for beauty. On the contrary, the only attractive points about them were their generally amiable and pleasant faces, their small hands and feet, their white teeth, their black hair, and *their indisposition to approach us.*

"Hold on!" I exclaimed to my companion. "Hold on! Take a seat quietly on this rock, and I'll inveigle them. I'll start their curiosity."

So we seated ourselves, stowed away the remaining buttons, and then I drew out my watch.

"*He! he! he! Ah-h-h!*" exclaimed the crowd, pressing around our rock eagerly. I touched the spring (it was a hunting-watch) and displayed the white porcelain face.

"*A-h-h-h! Ah-a-a-a! A-h-h-h!*"

"*Yoka! yoka!*" (very good) isn't it, John?" queried my companion.

"*Ah-ha-a! Yoka! yoka!*" assented the crowd, from every quarter. I now looked toward the alarmed ones. They had overcome half the distance, but retreated a step as they caught my eye.

"Come on!" I exclaimed. "*Yoka! yoka!*" But they only retreated another step. We therefore pretended to be thinking of any thing else but them, and proceeded to open the back part of the case.

At this point the admiring exclamations became so general, and the crowding around us so energetic, that I knew they must be having their effect. As a grand *finale*, therefore, we opened the works, confident of the result. Nor were we disappointed. The perfect uproar of admiration which followed seemed to dissipate every fear and attract them irresistibly toward the confused centre. They now soon lost all feeling of alarm, and became as free in examining the texture of our clothes, the brightness of our buttons, and the nature of our shoes, as any one else. They all seemed particularly struck with our linen drilling trowsers, with our grass-cloth jackets, and with the stitched bosoms of our shirts. We returned their attentions by making signs that the white teeth of the unmarried women were very pretty, while the stained ones of the married were just the reverse. At this they all laughed, and finally became so sociable and *crowding* that we began to feel unpleasantly warm. We therefore shut up our show, made a feint of catching the nearest child, created thus a temporary panic, and made our escape. We now followed the mountain stream to its elevated source, crossed the ridge, and began to descend the opposite ravine. After walking a few minutes we overhauled three old women, with baskets on their heads, and these tried at first to run from us; but finding their burdens too heavy, they quieted down and suffered us to overtake them. At first they would not look at us, and trembled violently, but after we had given them a button each, and smiled pleasantly as they received them (it is astonishing how far a kind smile goes with these people), they became very communicative, making signs to us that we should accompany them to their village. This we could not do, however, for it was getting late, and we were to meet the boat at sunset. We therefore bade them "*Sarana!*" (Good-by!) and retraced our steps.

As we returned through the little ravine village we were absolutely besieged by the population, all crowding around us, and clamoring loudly for buttons. "*Boton cashay! boton cashay! boton cashay!*" came from every quarter. Old men and small boys, mothers with infants in their arms, and little girls with ditto strapped upon their backs, all threw themselves in our path, and joined in the common cry. The result of all this was, that, when we got on board, we found that we had not only given away all the buttons we had carried for that purpose, but also a number from our coats.

Reader, what do you think of "cut-glass wares" being made here in Japan as well as in Europe and America? Upon one occasion, being invited to lunch with the Dutch commanding officer at Desima, he showed us as nice a cut-glass decanter and tumbler as one would wish to see.

"You don't mean to say that they make such work as this in Japan!" I exclaimed, incredulously.

"Yes I do! Let me tell you all about it. On the south end of this island of Kiu-Siu there is a small inland sea called Kagosima Bay (Deer Island Bay). At the head of this bay is a city of four or five hundred thousand inhabitants, the capital of the province of Sats'ma. The Prince of Sats'ma is a fine-looking, intelligent fellow, liberal in his ideas, and of vast wealth. It is his daughter who is now the *Empress* of Japan. The Emperor has other wives truly, but she is the first, *the Empress*. Well, we obtained permission from Yeddo to visit this city of Kagosima, and took passage in the *Japan*, which I command. We steamed down in a couple of days, and were kindly received by the Prince. He took us over his large foundery, where he has eight hundred workmen employed casting cannon, etc., showed us his glass-factories, where he presented me with these two pieces, and made our time generally pleasant. Yes! cut-glass is made also in Japan."

THE MOUNTAIN ROAD.

I CAN not write the story with my own hands, but I shall dictate it to a tried and trusty friend; for I must have the public know all that I can tell respecting that strange and mysterious death. My name is Henry Wilde, and I was present when *it* happened. It was a week ago, and in body I have been utterly helpless since that day. I do not think that my intellect was much disordered by the shock; and yet I seem to have lost, in some degree, control over my mind — the power of condensation. Therefore I must tell this story in my own way. If I am prolix—if I linger too much over detail not connected with the act itself—it must be pardoned me.

I am not a young man. I have known Steven Cranston for more than forty years—ever since he and I went to school together in our pinafores. I am forty-eight now. Last week I should have said that he was two years younger; but he stands, to-day, where they do not

reckon ages by earthly measurement. Many who will read these words know what he was as a man—stern, dark-browed, silent, and mysterious. He was all this even as a boy.

At the district school we attended together he seemed to like no one. He might have been a favorite if he would; for he had the most physical courage I ever knew any boy to possess. He literally feared nothing. He had no equal in the various athletic games with which we whiled away our noonings; and these two traits, of daring and agility, are potent to win the suffrages of boys. Any one else possessing them to such extent would have become a loved and recognized leader; but Steven Cranston was too silent, too forbidding and unsocial. No one would have dared in any wise to interfere with him, but he had none of those dear boy-friendships, those brotherhoods of the soul whose memory, in after years, has power to thrill so many old men's hearts and make them happy boys again.

I said he seemed to like no one. I should have made one exception. Nearly opposite to him, on the "girls' side" of the long red school-house, sat Lucia Reynolds, the daughter of one of our wealthiest men. She did not owe her popularity to this circumstance, however. Looking back through the mists of twenty-eight years, I can see Lucia Reynolds as she was at fifteen, and I know that I never saw a fairer face. I met her the other day—a woman of forty-three she is now, and older than her years, with a look of patient waiting in her eyes, a settled sorrow round her lips; a woman to whom you would not even pay that saddest compliment —"She must have been beautiful once"—and I turned my eyes away, and back through the fair country of the past, till I could see her, as I saw her twenty-eight years ago, bending over her desk in Ryefield school-house.

Slight, girlish figure; small but perfect features; eyes of the bluest; delicate rose-tint on the dimpled cheeks; full, smiling mouth—I saw them all in the light and glory of youth, untouched by time. She had a clear, ringing voice, a dancing step, and, better than all, a heart full of love for every living creature; and so every body loved her, and every body included misanthropic Steven Cranston. Indeed, his sentiment for her seemed no mere childish liking. It was more the blind devotion of a Romanist for his patron saint. He would sit and watch her for hours with a look of rapt adoration. Lucia had the heart of a woman, and she could not help recognizing and liking this homage. She accepted, with the graciousness of a gentle queen, the rare flowers and fruit he used constantly to seek for her, and she befriended him in her turn. She was his warm defender when any one censured his coldness and misanthropy, and more than one predicted he would some day win her for his wife.

I never thought so, however. I was five years older than Lucia, and I think I understood her. I felt certain that *he* must be very different from Cranston who would arouse her heart from its long, delicious, dreaming girlhood, and quicken it into womanhood's passionate yet steadfast love. And yet I used sometimes to fancy that he loved her with a man's passion even then. If she could have returned it how different might have been the current of his future! Does it not seem as if there were some lives to which Destiny is pitiless? lips from which the only cup in all the spheres which could work their healing is dashed remorselessly?

When Lucia Reynolds was sixteen I left the place, and for many years I went back there but seldom. I kept up, however, a constant correspondence with my sister Bell, and through her was made *au courant* in all the gossip of Ryefield.

Two years after I left a stranger came to live there—a Colonel Eastman—whose family consisted of an invalid wife and a son, a young man who had nearly finished his collegiate course. When this latter personage came home for his first long summer vacation after the establishment of the family, Bell's letters were quite full of him—he was so handsome, so gallant, so generous and gentlemanly! Soon she wrote that he had made the acquaintance of Lucia Reynolds. She believed that it was nearly a case of love at first sight on both sides. She wrote me that they were always together, that they seemed just suited to each other, and Lucia was growing prettier than ever in her happiness. To one of these descriptions she added, playfully:

"I suppose I'm too bad to break your heart, brother Harry! I remember your old admiration for Lucia; but I seriously hope you won't look as glum as Steve Cranston did when Robert Eastman first came. You would have thought he'd lost his last friend; but he seems to have gotten bravely over it now, and is more cheerful and good-humored than I've ever seen him before. Indeed, I don't know but I shall lay siege to his heart myself!"

I don't remember that I thought much of what Bell said of Steven's glum looks, but I did smile at her allusion to breaking my heart. I could afford to laugh at such things in those days. I loved—no matter; I am not telling my own story. There is a little white stone in Weymouth church-yard, and it is the sole memorial of the only dream I ever dreamed of love and woman! Yet I have not lived a sad or gloomy life. After death comes heaven; and I shall find my virgin bride *there*.

It was early autumn when I received a letter from Bell full of tragic gloom—of sorrow—of desolation. Young Robert Eastman, whom every body liked, had been found dead in the Mountain Road, near the Black Pool—murdered, evidently. No blood had been spilt, but the marks around his throat showed that he had been strangled. He was robbed also, and had doubtless been killed for the sake of a considerable sum of money which he had drawn

from the bank the day before, and was carrying home to his father. As yet, she said, suspicion was directed to no one; but it was so sad—so terrible—just as he had become engaged to Lucia too! It would break her heart; and his poor sick mother had not spoken since.

I was too happy in those days for the story of this tragedy to sadden me as deeply as it might have done at another time; still I felt it keenly for the sake of Lucia, my dear friend and school-mate.

From time to time Bell wrote me of the apprehension of several persons faintly suspected of the dreadful crime, but no evidence could be brought against any of them, and they were all discharged. It was not long before I heard that the poor young man's mother had followed him to his long home in Ryefield church-yard; and, soon after, Colonel Eastman, unable to live on and bear his sorrow in the scene of his double bereavement, sold out and moved away.

It was not till three years after, when my own life's trouble had already come to me, that I saw Lucia Reynolds again. She seemed nearly as old then as she does now. Her mouth was rigid; the look of patient waiting had grown into her far-seeing blue eyes. She never laughed, and she spoke low and seldom.

At the same time I saw Steven Cranston. Over him too had passed some inexplicable change. More glum, forbidding, and unsocial than of old he could scarcely be; and yet there was something in his face, in his manner, which seemed to say that, whereas Hope and he knew each other once, they had parted company forever now.

I did not see much of him or Lucia after that until this summer. I came to my old home last June an invalid. I felt that the free winds blowing over the Connecticut hills would bring me health and healing; and, though my dearest hope is in the Beyond, still I love life—I cherish no misanthropic longing for death. Coming back to Ryefield, I found Lucia Reynolds and Steven Cranston the only ones of all my school-mates who were unmarried and in their old homes. You must bear in mind that nearly twenty-five years had gone by since young Eastman's sudden and terrible death. Lucia had passed all these in Ryefield very quietly. She had not mingled at all in society so-called, but her face was known in the abodes of the poor, the sick, and the sorrowful. She had done much good in her own unobtrusive way.

Steven Cranston had led, rumor said, a wild life during these twenty-five years. A little more than three years after Robert Eastman's death he had gone to sea, and most of his life since had been passed on the ocean and in the different ports to which he had sailed. He had grown rich, though I heard hints of unlawful gain, to which I did not pay much heed. Country neighborhoods are usually more or less given to gossip, and ours was no exception to the rule.

At all events he had come back the autumn before my return to Ryefield, and given out that he had been to sea long enough, and was going to settle down now and end his days among his own townsfolk and kindred. I think people liked him somewhat better than they used. He was a trifle more communicative and neighborly. I can't say that I, however, felt much real regard for him. Yet he entertained me sometimes by his reminiscences of hair-breadth escapes on the high seas and in far-away lands. He was a link between memory and the dead and buried boyhood days, and so we were a good deal together.

It is just a week ago to-day that he rode into the yard on his strong bay horse. I was sitting under the apple-tree.

"Come, Harry," he called to me, "get your horse saddled, and ride out on the Mountain Road. I've a story to tell you madder and jollier and merrier than any of 'em. It's a nice time to tell it, this September morning. Let me see, September the 17th, 1858, isn't it? Yes, it's the best time in the world to tell *that* story."

It struck me while I was throwing the saddle on Black Richard that his manner was very peculiar. It was said that he was a hard drinker, though I had never seen any signs of it before. I thought the brandy might have flown to his head. However, I got ready, and we started on our ride.

If any, unfamiliar with the locality, should read this story, perhaps they would like to understand better the physiognomy of the Mountain Road. In the northwestern part of the town is a very high hill, known in that region as "The Mountain." A road was laid out, in the town's infancy, along the base of this hill. It was the nearest cut then to some of the neighboring towns, but a better one was made a few years ago on the other side of the hill. In some portions of the way it is as utterly solitary as a wilderness. To the right hand rises the mountain, overhanging it, high and steep and frowning. To the left stretch away rugged pasture lots, used only for sheep, rocky, and here and there interspersed with wood. On this road there is little travel, and for nearly two miles there is not a single house save one, ruinous and dilapidated enough now, but which used to be, in my boyish days, the residence of a solitary man called old Wrath Spaulding—a bad and reckless man, in whose very name lurked terror. He died long ago, and I have never heard but that he sleeps quietly enough in his lonely grave in the rear of his old tumble-down house. A little beyond this place—the halfway house in those desolate two miles—and just concealed from it by a turn in the road, is a deep pool at the base of the hill, known to all the townspeople as the "Black Pool." It looks as if it might have been dug out by the giants of dead centuries. Its waters seem fathomless in depth, and one can not gaze down on them as they lie there, black, still, treacherous, without a shudder. It used in other days to be separated from the road by a sort of paling, but

this has fallen down now, and the way is so seldom traveled that no one has taken the trouble to replace it. There is a strange charm in the ruggedness of the scenery, the very desolation of this untrodden road, and I looked around me with a keen sense of pleasure as we slackened our reins and turned into it.

Though it was September, the landscape was still as fresh and verdurous as in July. You could understand the poetical license of the term "living green" as you looked at it. You could almost see the trees grow and the grass spring up. The sky was blue, deep, cloudless, untroubled. The mist, golden and white and rosy, was melting away over the hill-tops, and, it seemed to me, earth, air, and sky were as glorious as when the Father first pronounced them "good." Absorbed in my own thoughts I had almost forgotten Cranston's presence until he spoke.

"I promised you a story," he said, riding up close to my side. "It'll be a queer one—a love story about murder," and he grinned a ghastly grin. "I don't think you ever heard just such a one—a tale with its hero for the teller."

He paused a moment, and the September morning seemed to grow very cold; I think his manner chilled me. Pretty soon he spoke again.

"I don't know as you ever mistrusted that I loved Lucia Reynolds. There was a time, I think, when people imagined that we took a kind of fancy to one another, but nothing came of it, and they gave up the idea. I don't know as there was ever any foundation for it on her side. She must have returned such devotion as mine was with at least a kindly liking. I think she did like me, and on that I built wild hopes. Love does not at all express what I felt for her. I worshiped her. Sullen and morose and gloomy as every body thought me, one smile of hers would make a light bright as heaven in my heart. I would have died, I used to think, for the sole hope that she would weep over my grave. I have kissed, when no one saw me, the very grass that had bent under her light footsteps. I have treasured, like something sacred, a flower that had dropped out of her pretty hair. It was nothing short of madness, but if she *could* have loved me back again I might have been a good man. With her for my guardian angel, I believe I could have won through and scaled heaven. Well, now, I suppose, I shall go to company that's more of my kind than saints and angels.

"I went to see her one day when she wasn't quite eighteen, and told her what she had been to me all my life, ever since the days when she used to sit opposite to me in school, a little eight years old child, in her red dresses and white aprons. I tried to show her the height, and breadth, and depth of my love. I think I made her understand it, as well as her gentle nature could understand the wild passion of mine. She heard me all through, and then she began to cry. I have heard of women weeping at such times, for love and joy and bashfulness, but I knew well enough her tears were not of that kind. They fell fast. They were born of her tender pity—her sorrow at giving me pain—and they answered me as well as words.

"Soon she commanded herself and spoke. She talked like an angel. She told me how much she had always thought of me, and always should. She would be my sister, she said; a fond, loving sister, but such love as I asked for she could not give me.

"*I* wept then, too. It was the last time any tears ever fell from my eyes, but I bowed my head on her lap—I was kneeling at her feet—and the flood broke loose.

"Even after that I did not quite give up all hope. Time, I thought, might work wonders. Any way, she had been the life of my life too long for me to shut her out of my heart. I went on worshiping her, and I comforted myself—it was the only comfort I had—with thinking that even if she did not love me she loved no other. It was just before then that Colonel Eastman had moved to Ryefield, and very soon his son Robert came home to pass the summer. He met Lucia, and they seemed at once greatly interested in one another. It was not strange. He was of her kind—generous, genial, and loving. I suppose they were just suited to each other. Well, I hated him. That was not strange, either. I hated his handsome face, his social manners. I gave to every one of his good qualities a distinct and separate hate; and, because her eyes looked on him with favor, this still, deadly hate grew daily deadlier and more murderous. But I dissembled. I even cultivated his friendship. I was more social and good-humored than I had ever been before, and I began to gain popularity. But the smiles I wore were like flowers growing over a volcano.

"After a while I heard that he and Lucia were engaged, and then I resolved that he should die. I met him just as usual, with this deadly purpose in my heart. I even congratulated him on his happiness. But I watched his every movement, close, close. Soon after there came a time which placed him in my power. He was to come from Windham, one day, with five hundred dollars he had drawn from the bank the day before. He would come this way. I resolved to meet him here. He was not expected until afternoon, but I came early in the morning—I was determined he should not escape me. I stationed myself behind that clump of poplars, near the Black Pool. Lightning has blasted them since. No wonder! I had not been there very long before I heard a horse's footsteps. I looked out, cautiously. It was he. He had started early—perhaps to make the journey in the coolness of morning; perhaps—I gnashed my teeth in silent fury at the thought—perhaps he was in haste to see again his fair betrothed.

"I had laid my plans as coolly as I tell them to you now. I had armed myself, and resolved, as soon as he should reach me, to spring from

my concealment, fell him from his horse, and murder him then and there. Of course there was always the chance that he should defend himself and master me—the yet more dreadful chance that, if I killed him, I should expiate my crime upon the gallows; but, physically, I am no coward. I had made up my mind, and there was no fear that I should flinch.

"But it happened better than I had planned. For once Satan favored his own. Before he reached me he dismounted and tied his horse to the fence on the other side of the way. The animal looked tired, and, I suppose, his master was in the mood to be merciful. Then he came across the road, and sat down in the very shadow of the poplars behind which I, his deadly enemy, was hid. He took off his cap and bared his forehead to the September morning air. Then he drew from his pocket a miniature, and bent over it, lovingly. I was almost near enough to hear him breathe. I could see the features as well as he. Lucia was there—Lucia, with her soft hair, her eyes of violet blue, her bewildering smile. After a moment he pressed it passionately to his lips, murmuring, fondly,

"'Oh, Lucia, my bride, my darling, my dear, dear love!'

"If I had meant to spare his life before, I should have killed him then. *I* might never win her love, but *he* should not live to bask in her smiles—to claim her—to hold her in his arms.

"Softly as a cat I stole from my concealment. Absorbed in his happy thoughts, he neither saw nor heard me, until I stood behind him and my hands were clasped around his throat—tight, tight. Then, indeed, he struggled madly for his life. But I never relaxed my hold. All hell could not have shaken it off. Soon he fell down at my feet—still and stiff, struggling no longer—*dead.*

"I was calm still. I rifled his pockets. I took the five hundred dollars and his watch and tied them, together with a heavy stone, in his pocket-handkerchief and dropped them into the Black Pool. They cleft the dark waters and sank heavily. In an instant they were lost to sight forever. I left the miniature—which I longed but did not dare to keep—upon his person. I gave him, as he lay there, one long, triumphant gaze, and then quietly walked away home.

"But not even yet was my hatred satisfied. The dead man lying there, stark and cold, with his face upturned to the September sun, was yet, to my thinking, better off than I. Gladly, ay, gladly, would I have taken his place, and lain there, dead, but to have once heard *her* lips call me the beloved of her soul—to have carried the memory of her kisses into the hereafter of spirits.

"For a time I half expected to suffer for my crime a felon's doom, but suspicion never seemed to point my way. That afternoon his horse, which I had left as he had tied it, broke from its fastening, and rushed, riderless, home. Then they found his body. The robbery which had been committed seemed to indicate the money he had with him as the motive of the deed, and led to the apprehension of two or three persons hitherto suspected of theft. But they were all discharged; and after Mrs. Eastman had died, and the Colonel moved away, the matter pretty much ceased to be talked of.

"The first pang of remorse I ever suffered was when I saw Lucia standing at Mrs. Eastman's grave. I had not seen her before since *that* day. She had changed in those few weeks so that you would hardly have known her. Her whole face seemed frozen. Her cheeks and lips were ashen; the smiles had all died out forever from her face; the joyous light from her eyes. I loved her so that I would have died, even then, to bring back to her happiness; but I would have seen her die before, if the power had been mine, I would have restored her lover to life.

"Three years after that I went to see her. In all this time I had never once seen her alone. Now I could wait no longer. I had not much hope, yet I longed to tell her again of my love. She came into the room where I waited for her, and stood before me. A mortal terror seized upon me, and seemed to chill the blood in my veins. I read in her cold eyes that she knew my secret.

"'Listen to me, Steven Cranston,' she said, in her low yet distinct voice. 'You have come here to ask my love. Hear what I have to say, and consider whether I am likely to give it. I loved Robert Eastman better than my own life. Every hope I had for all the future centred in him. I saw Heaven itself through his eyes. If lightning had struck him, if sudden fever had drunk up his life, or slow disease wasted it, I would have been faithful to his memory forever. How much more now! You, you who professed to love me and care for my happiness, you murdered him. You took away all the hope I had in the world. I know this from my own sure instinct—the instinct which makes every pulse quiver with loathing at the sight of your face or the sound of your voice. But I could not have proved it against you. Even if I could I would not. I had rather you should live, that, perchance, in some eleventh hour, even your soul may find mercy of God. Besides, the time will come when worse than any mere physical death will be the torture of your spirit. He will be avenged by the remorse which shall dog your footsteps like a fiend.'

"As she said these words her cold gray eyes flashed fire upon me—as you have sometimes seen the lightning flash from the cold gray depths of a winter's cloud. I did not answer her a word—contrite confession, bold denial, were alike impossible. I slunk out of the house like a coward. I have never entered it since.

"Soon after that I went to sea, and I have followed it for more than twenty years. Oh! could I ever tell you what I have suffered?

Nights when I would look into the waters and see, plain as I see it now, this Mountain Road, always with Robert Eastman lying dead and ghastly under the poplars — noons, when the winds going by me would shriek with wild, accusing voices in my ears, and I would wonder that those around me did not hear that pursuing cry, and hang me in their midst as a murderer. Sometimes, where the figure-head of the vessel should have been, I seemed to see Lucia stand —that same withering fire in her cold eyes, and her thin hand pointing down, ever down, to the depths below, and the tortures that waited for me there. Do you wonder I fled from such visions? I came here for rest and quiet, but *he* pursues me still. Night and day his voice calls for blood, for blood. I have told you my story because I could not die with my crime unconfessed, and I am too tired of life to keep my secret any longer. Now you may go and deliver me up to the Philistines."

He stopped. His voice had risen, in the latter part of his confession, to a wild, fierce shriek. A glare as of madness was in his eyes. It seemed to me that it would be but a short step from this excitement to utter frenzy. I strove to soothe him.

"No," I said, "I will not betray you. Heaven is infinite, and there may be mercy yet, even for you. *She* spared you, and so will I. Cry to God, and He may yet hear you."

A wild gleam shot across his face.

"No," he cried, "God's mercy I ask not for —man's mercy I will not have. My hour of doom has come. Fiends wait for me. Twenty and five years ago this seventeenth of September Robert Eastman died by my hand. To-day, to-day his unquiet ghost shall be avenged!"

Our horses had been standing still for half an hour under the trees; but as the last words fell from his lips he struck the one he rode a sharp, quick blow, and dashed away from me. Breathless with terror, I hurried after him. I was only in time to see him throw himself from his horse and plunge into the Black Pool. I sprang to the ground, and rushed to the chasm's brink. As I looked in I had one momentary glimpse of a white, ghastly face on which sat the impress of everlasting despair; I heard one wild cry, "Lost—lost—lost!" and the waters closed over him forever.

I hurried to the proper authorities and told my story. No one dreamed of questioning it. Then I came home and threw myself on this bed, from which I may not soon arise. There are few who could bear such a scene unmoved; and to me, with my nerves already weakened and disordered by illness, it had well-nigh proved fatal. It will be long before I shall cease to see that wild, despairing face—to hear that last cry of mortal agony; but calmness will come back to me in time—if not in this life, in the land where there is no work and no device—where the yew and the willow wave forever over the great city of the silent.

A SONG FOR NEW-YEAR'S EVE.

BY WILLIAM CULLEN BRYANT.

STAY yet, my friends, a moment stay—
Stay till the good old year,
So long companion of our way,
Shakes hands and leaves us here.
Oh stay, oh stay,
One little hour, and then away.

The year, whose hopes were high and strong,
Has now no hopes to wake;
Yet one hour more of jest and song
For his familiar sake.
Oh stay, oh stay,
One mirthful hour, and then away.

The kindly year, his liberal hands
Have lavished all his store.
And shall we turn from where he stands,
Because he gives no more?
Oh stay, oh stay,
One grateful hour, and then away.

Days brightly came and calmly went,
While yet he was our guest;
How cheerfully the week was spent!
How sweet the seventh day's rest!
Oh stay, oh stay,
One good hour more, and then away.

Dear friends were with us, some who sleep
Beneath the coffin lid:
What pleasant memories we keep
Of all they said and did!
Oh stay, oh stay,
One tender hour, and then away.

Even while we sing he smiles his last
And leaves our sphere behind—
The good old year is with the past;
Oh be the new as kind!
Oh stay, oh stay,
One parting strain, and then away.

THE VIRGINIANS.

BY W. M. THACKERAY.

CHAPTER LIII.

WHERE WE REMAIN AT THE COURT END OF THE TOWN.

GEORGE WARRINGTON had related the same story which we have just heard to Madame de Bernstein on the previous evening—a portion, that is, of the history; for the old lady nodded off to sleep many times during the narration, only waking up when George paused, saying it was most interesting; and ordering him to continue. The young gentleman hemmed and ha'd, and stuttered, and blushed, and went on, much against his will, and did not speak half so well as he did to his friendly little auditory in Hill Street, where Hetty's eyes of wonder, and Theo's sympathizing looks, and mamma's kind face, and papa's funny looks, were applause sufficient to cheer any modest youth who required encouragement for his eloquence. As for mamma's behavior the General said 'twas as good as Mr. Addison's trunk-maker, and she would make the fortune of any tragedy by simply being engaged to cry in the front boxes. That is why we chose my Lord Wrotham's house as the theatre where George's first piece should be performed, wishing that he should speak to advantage, and not as when he was heard by that sleepy, cynical old lady, to whom he had to narrate his adventures.

"Very good and most interesting, I am sure, my dear Sir," says Madame Bernstein, putting up three pretty little fingers covered with a lace mitten to hide a convulsive movement of her mouth. "And your mother must have been delighted to see you."

George shrugged his shoulders ever so little, and made a low bow, as his aunt looked up at him for a moment with her keen, old eyes.

"Have been delighted to see you," she continued, dryly, "and killed the fatted calf, and —and that kind of thing. Though why I say calf, I don't know, Nephew George, for you never were the prodigal. I may say calf to thee, my poor Harry! Thou hast been among the swine sure enough. And evil companions have robbed the money out of thy pocket and the coat off thy back."

"He came to his family in England, madam," says George, with some heat, "and his friends were your ladyship's."

"He could not have come to worse advisers, Nephew Warrington, and so I should have told my sister earlier, had she condescended to write to me by him, as she has done by you," said the old lady, tossing up her head. "Hey! hey!" she said, at night, as she arranged herself for the rout to which she was going, to her waiting-maid. "This young gentleman's mother is half sorry that he has come to life again, I could see that in his face. She is half sorry, and I am perfectly furious! Why didn't he lie still when he dropped there under the tree, and why did that young Florac carry him to the fort? I knew those Floracs when I was at Paris, in the time of Monsieur le Régent. They were of the Floracs of Ivry. No great house before Henri

IV. His ancestor was the King's favorite. His ancestor—he! he!—his ancestress! Brett! entendez vous? Give me my card-purse. I don't like the grand airs of this Monsieur George; and yet he resembles, very much, his grandfather—the same look, and sometimes the same tones. You have heard of Colonel Esmond when I was young? This boy has his eyes. I suppose I liked the Colonel's because he loved me."

Being engaged, then, to a card-party — an amusement which she never missed, week-day or Sabbath, as long as she had strength to hold trumps or sit in a chair—very soon, after George had ended his narration, the old lady dismissed her two nephews, giving to the elder a couple of fingers and a very stately courtesy; but to Harry two hands and a kindly pat on the cheek.

"My poor child, now thou art disinherited, thou wilt see how differently the world will use thee!" she said. "There is only, in all London, a wicked, heartless old woman who will treat thee as before. Here is a pocket-book for you, child! Do not lose it at Ranelagh to-night. That suit of yours does not become your brother half so well as it sat upon you! You will present your brother to every body, and walk up and down the room for two hours at least, child. Were I you, I would then go to the Chocolate House, and play as if nothing had happened. While you are there, your brother may come back to me and eat a bit of chicken with me. My lady Flint gives wretched suppers, and I want to talk his mother's letter over with him. Au revoir, gentlemen!" and she went away to her toilet. Her chairmen and flambeaux were already waiting at the door.

The gentlemen went to Ranelagh, where but a few of Mr. Harry's acquaintances chanced to be present. They paced the round, and met Mr. Tom Claypool with some of his country friends; they heard the music; they drank tea in a box; Harry was master of ceremonies, and introduced his brother to the curiosities of the place; and George was even more excited than his brother had been on his first introduction to this palace of delight. George loved music much more than Harry ever did: he heard a full orchestra for the first time, and a piece of Mr. Handel satisfactorily performed; and a not unpleasing instance of Harry's humility and regard for his elder brother was, that he could even hold George's love of music in respect at a time when fiddling was voted effeminate and unmanly in England, and Britons were every day called upon by the patriotic prints to sneer at the frivolous accomplishments of your Squallinis, Monsieurs, and the like. Nobody in Britain is proud of his ignorance now. There is no conceit left among us. There is no such thing as dullness. Arrogance is entirely unknown. . . . Well, at any rate, Art has obtained her letters of naturalization, and lives here on terms of almost equality. If Mrs. Thrale chose to marry a music-master now, I don't think her friends would shudder at the mention of her name. If she had a good fortune, and kept a good cook, people would even go and dine with her in spite of the *mésalliance*, and actually treat Mr. Piozzi with civility.

After Ranelagh, and pursuant to Madame Bernstein's advice, George returned to her ladyship's house, while Harry showed himself at the club, where gentlemen were accustomed to assemble at night to sup, and then to gamble. No one, of course, alluded to Mr. Warrington's little temporary absence, and Mr. Ruff, his ex-landlord, waited upon him with the utmost gravity and civility, and as if there had never been any difference between them. Mr. Warrington had caused his trunks and habiliments to be conveyed away from Bond Street in the morning, and he and his brother were now established in apartments elsewhere.

But when the supper was done, and the gentlemen, as usual, were about to seek the macco-table up stairs, Harry said he was not going to play any more. He had burned his fingers already, and could afford no more extravagance.

"Why," says Mr. Morris, in a rather flippant manner, "you must have won more than you have lost, Mr. Warrington, after all said and done."

"And of course I don't know my own busi-

ness as well as you do, Mr. Morris," says Harry, sternly, who had not forgotten the other's behavior on hearing of his arrest; "but I have another reason. A few months or days ago I was heir to a great estate, and could afford to lose a little money. Now, thank God! I am heir to nothing;" and he looked round, blushing not a little, to the knot of gentlemen, his gaming associates, who were lounging at the tables or gathered round the fire.

"How do you mean, Mr. Warrington?" cries my Lord March. "Have you lost Virginia, too? Who has won it? I always had a fancy to play you myself for that stake."

"And grow an improved breed of slaves in the colony," says another.

"The right owner has won it. You heard me tell of my twin elder brother?"

"Who was killed in that affair of Braddock's two years ago? Yes. Gracious goodness, my dear Sir, I hope in Heaven he has not come to life again!"

"He arrived in London two days since. He has been a prisoner in a French fort for eighteen months; he only escaped a few months ago, and left our house in Virginia very soon after his release."

"You haven't had time to order mourning, I suppose, Mr. Warrington?" asked Mr. Selwyn, very good-naturedly; and simple Harry hardly knew the meaning of his joke until his brother interpreted it to him.

"Hang me if I don't believe the fellow is absolutely glad of the reappearance of his confounded brother!" cries my Lord March, as they continued to talk of the matter when the young Virginian had taken his leave.

"These savages practice the simple virtues of affection—they are barely civilized in America yet," yawns Selwyn.

"They love their kindred, and they scalp their enemies," simpers Mr. Walpole. "It's not Christian, but natural. Shouldn't you like to be present at a scalping-match, George, and see a fellow skinned alive?"

"A man's elder brother is his natural enemy," says Mr. Selwyn, placidly ranging his money and counters before him.

"Torture is like broiled bones and pepper. You wouldn't relish simple hanging afterward, George!" continues Horry.

"I'm hanged if there's any man in England who would like to see his elder brother alive!" says my lord.

"No, nor his father either, my lord!" cries Jack Morris.

"First time I ever knew you had one, Jack. Give me counters for five hundred."

"I say 'tis all mighty fine about dead brothers coming to life again," continues Jack. "Who is to know that it wasn't a scheme arranged between these two fellows? Here comes a young fellow who calls himself the Fortunate Youth, who says he is a Virginian Prince and the deuce knows what, and who gets into our society—"

A great laugh ensues at Jack's phrase of "our society."

"Who is to know that it wasn't a cross?" Jack continues. "The young one is to come first. He is to marry an heiress, and, when he has got her, up is to rise the elder brother! When did this elder brother show? Why, when the younger's scheme was blown, and all was up with him! Who shall tell me that the fellow hasn't been living in Seven Dials, or in a cellar, dining off tripe and cow-heel until my younger gentleman was disposed of? Dammy, as gentlemen, I think we ought to take notice of it: and that this Mr. Warrington has been taking a most outrageous liberty with the whole club."

"Who put him up? It was March, I think, put him up?" asks a by-stander.

"Yes. But my lord thought he was putting up a very different person. Didn't you, March?

"Hold your confounded tongue, and mind your game!" says the nobleman addressed: but Jack Morris's opinion found not a few supporters in the world. Many persons agreed that it was most indecorous of Mr. Harry Warrington to have ever believed in his brother's death; that there was something suspicious about the young man's first appearance and subsequent actions; and, in fine, that regarding these foreigners, adventurers, and the like, we ought to be especially cautious.

Though he was out of prison and difficulty; though he had his aunt's liberal donation of money in his pocket; though his dearest brother was restored to him, whose return to life Harry never once thought of deploring, as his friends at White's supposed he would do; though Maria had shown herself in such a favorable light by her behavior during his misfortune: yet Harry, when alone, felt himself not particularly cheerful, and smoked his pipe of Virginia with a troubled mind. It was not that he was deposed from his principality: the loss of it never once vexed him; he knew that his brother would share with him as he would have done with his brother; but after all those struggles and doubts in his own mind, to find himself poor and yet irrevocably bound to his elderly cousin! Yes, she was elderly, there was no doubt about it. When she came to that horrible den in Cursitor Street and the tears washed her rouge off, why, she looked as old as his mother! her face was all wrinkled and yellow, and as he thought of her he felt just such a qualm as he had when she was taken ill that day in the coach on their road to Tunbridge. What would his mother say when he brought her home, and, Lord, what battles there would be between them! He would go and live on one of the plantations—the farther from home the better—and have a few negroes, and farm as best he might, and hunt a good deal; but at Castlewood or in her own home, such as he could make it for her, what a life for poor Maria, who had been used to go to Court and to cards and balls and assemblies every night! If he could

be but the overseer of the estates—Oh he would be an honest factor, and try and make up for his useless life and extravagance in these past days! Five thousand pounds, all his patrimony and the accumulations of his long minority squandered in six months! He a beggar, except for dear George's kindness, with nothing in life left to him but an old wife—a pretty beggar, dressed out in velvet and silver lace forsooth—the poor lad was arrayed in his best clothes—a pretty figure he had made in Europe, and a nice end he was come to! With all his fine friends at White's and Newmarket, with all his extravagance, had he been happy a single day since he had been in Europe? Yes, three days, four days, yesterday evening, when he had been with dear dear Mrs. Lambert, and those affectionate kind girls, and that brave good Colonel. And the Colonel was right when he rebuked him for his spendthrift follies, and he had been a brute to be angry as he had been, and God bless them all for their generous exertions in his behalf! Such were the thoughts which Harry put into his pipe, and he smoked them while he waited his brother's return from Madame Bernstein.

CHAPTER LIV.

DURING WHICH HARRY SITS SMOKING HIS PIPE AT HOME.

The maternal grandfather of our Virginians, the Colonel Esmond of whom frequent mention has been made, and who had quitted England to reside in the New World, had devoted some portion of his long American leisure to the composition of the memoirs of his early life. In these volumes Madame de Bernstein (Mrs. Beatrice Esmond was her name as a spinster) played a very considerable part; and as George had read his grandfather's manuscript many times over, he had learned to know his kinswoman long before he saw her—to know, at least, the lady, young, beautiful, and willful, of half a century since, with whom he now became acquainted in the decline of her days. When cheeks are faded and eyes are dim, is it sad or pleasant, I wonder, for the woman who is a beauty no more, to recall the period of her bloom? When the heart is withered, do the old love to remember how it once was fresh and beat with warm emotions? When the spirits are languid and weary, do we like to think how bright they were in other days, the hope how buoyant, the sympathies how ready, the enjoyment of life how keen and eager? So they fall—the buds of prime, the roses of beauty, the florid harvests of summer—fall and wither, and the naked branches shiver in the winter.

And that was a beauty once! thinks George Warrington, as his aunt, in her rouge and diamonds, comes in from her rout, and that ruin was a splendid palace. Crowds of lovers have sighed before those decrepit feet, and been bewildered by the brightness of those eyes. He remembered a fire-work at home, at Williamsburg, on the King's birthday, and afterward looking at the skeleton wheel and the sockets of the exploded Roman candles. The dazzle and brilliancy of Aunt Beatrice's early career passed before him as he thought over his grandsire's journals. Honest Harry had seen them, too, but Harry was no book-man, and had not read the manuscript very carefully; nay, if he had, he would probably not have reasoned about it as his brother did, being by no means so much inclined to moralizing as his melancholy senior.

Mr. Warrington thought that there was no cause why he should tell his aunt how intimate he was with her early history, and accordingly held his peace upon that point. When their meal was over, she pointed with her cane to her escritoire, and bade her attendant bring the letter which lay under the inkstand there; and George, recognizing the superscription, of course knew the letter to be that of which he had been the bearer from home.

"It would appear by this letter," said the old lady, looking hard at her nephew, "that ever since your return there have been some differences between you and my sister."

"Indeed? I did not know that Madam Esmond had alluded to them," George said.

The Baroness puts a great pair of glasses upon eyes which shot fire and kindled who knows how many passions in old days, and, after glancing over the letter, hands it to George, who reads as follows:

"Richmond Virginia, *December 26th*, 1756.

"Honoured Madam! and Sister!—I have received, and thankfully acknowledge, your ladyship's favour, per Rose packet, of October 23 ult.; and straightway answer you at a season which should be one of goodwill and peace to all men: but in which Heaven hath neverthe-

less decreed we should still bear our portion of earthly sorrow and trouble. My reply will be brought to you by my eldest son, Mr. Esmond Warrington, who returned to us so miraculously out of the Valley of the Shadow of Death (as our previous letters have informed my poor Henry), and who is desirous, not without my consent to his wish, to visit Europe, though he has been amongst us so short a while. I grieve to think that my dearest Harry should have appeared at home—I mean in England—*under false colours*, as it were; and should have been presented to His Majesty, to our family, and his own, as his father's heir, whilst my dear son George was still alive, though dead to us. Ah, Madam! During the eighteen months of his captivity, what anguish have his mother's, his brother's, hearts undergone! My Harry's is the tenderest of any man's now alive. In the joy of seeing Mr. Esmond Warrington returned to life, he will forget the worldly misfortune which befalls him. He will return to (comparative) poverty without a pang. The most generous, *the most obedient* of human beings, of sons, he will gladly give up to his elder brother that inheritance which had been his own but for the accident of birth, and for the providential return of my son George.

"Your beneficent intentions toward dearest Harry will be more than ever welcome, now he is reduced to a younger brother's slender portion! Many years since, an advantageous opportunity occurred of providing for him in this province, and he would by this time have been master of a *noble estate* and negroes, and have been enabled to make a figure with most here, could his *mother's wishes* have been complied with, and his father's small portion, now lying at small interest in the British funds, have been invested in this most excellent purchase. But the forms of the law, and, I grieve to own, *my elder son's scruples*, prevailed, and this admirable opportunity was lost to me! Harry will find the savings of his income have been carefully accumulated—long, long may he live to enjoy them! May Heaven bless you, dear sister, for what your ladyship may add to *his little store!* As I gather from your letter that the sum which has been allowed to him has not been sufficient for his expenses *in the fine company* which he has kept (and the grandson of the Marquis of Esmond—one who had so *nearly* been his lordship's *heir*—may sure claim equality with any other nobleman in Great Britain), and having a sum by me which I had always intended for the poor child's establishment, I entrust it to my eldest son, who, to do him justice, hath a most sincere regard for his brother, to lay it out for Harry's best advantage."

"It took him out of prison yesterday, madam. I think that was the best use to which we could put it," interposed George, at this stage of his mother's letter.

"Nay, Sir, I don't know any such thing! Why not have kept it to buy a pair of colors for him, or to help toward another estate and some negroes, if he has a fancy for home?" cried the old lady. "Besides, I had a fancy to pay that debt myself."

"I hope you will let his brother do that. I ask leave to be my brother's banker in this matter, and consider I have borrowed so much from my mother, to be paid back to my dear Harry."

"Do you say so, Sir? Give me a glass of wine! You are an extravagant fellow! Read on, and you will see your mother thinks so. I drink to your health, Nephew George! 'Tis good Burgundy. Your grandfather never loved Burgundy. He loved claret, the little he drank."

And George proceeded with the letter.

"This remittance will, I trust, amply cover any expenses which, owing to the mistake respecting his position, dearest Harry may have incurred. I wish I could trust his elder brother's prudence as confidently as my Harry's! But I fear that, even in his captivity, Mr. Esmond W. has learned little of that *humility* which becomes all Christians, and which I have ever endeavoured to teach to my children. Should you by chance show him these lines, when, by the blessing of Heaven on those who go down to the sea in ships, the Great Ocean divides us! he will know that a fond mother's blessing and prayers follow both her children, and that there is no act I have ever done, no desire I have ever expressed (however little he may have been inclined to obey it!) but hath been dictated by the fondest wishes for my dearest boys' welfare."

"There is a scratch with a penknife, and a great blot upon the letter there, as if water had fallen on it. Your mother writes well, George. I suppose you and she had a difference?" said George's aunt, not unkindly.

"Yes, ma'am, many," answered the young man, sadly. "The last was about a question of money—of ransom which I promised to the old lieutenant of the fort who aided me to make my escape. I told you he had a mistress, a poor Indian woman, who helped me, and was kind to me. Six weeks after my arrival at home the poor thing made her appearance at Richmond, having found her way through the woods by pretty much the same track which I had followed, and bringing me the token which Museau had promised to send me when he connived to my flight. A commanding officer and a considerable reinforcement arrived at Duquesne. Charges—I don't know of what peculation (for his messenger could not express herself very clearly)—had been brought against this Museau. He had been put under arrest, and had tried to escape; but, less fortunate than myself, he had been shot on the rampart, and he sent the Indian woman to me with my grandfather's watch, and a line scrawled in his prison on his death-bed, begging me to send *ce*

que je sçavais to a notary at Havre de Grace in France to be transmitted to his relatives at Caen in Normandy. My friend Silverheels, the hunter, had helped my poor Indian on her way. I don't know how she would have escaped scalping else. But at home they received the poor thing sternly. They hardly gave her a welcome. I won't say what suspicions they had regarding her and me. The poor wretch fell to drinking whenever she could find means. I ordered that she should have food and shelter, and she became the jest of our negroes, and formed the subject of the scandal and tittle-tattle of the old fools in our little town. Our Governor was, luckily, a man of sense, and I made interest with him, and procured a pass to send her back to her people. Her very grief at parting with me only served to confirm the suspicions against her. A fellow preached against me from the pulpit, I believe; I had to treat another with a cane. And I had a violent dispute with Madam Esmond—a difference which is not healed yet—because I insisted upon paying to the heirs Museau pointed out the money I had promised for my deliverance. You see that scandal flourishes at the borders of the wilderness, and in the New World as well as the Old."

"I have suffered from it myself, my dear!" said Madame Bernstein, demurely. "Fill thy glass, child! A little tass of cherry-brandy! 'Twill do thee all the good in the world."

"As for my poor Harry's marriage," Madam Esmond's letter went on, "though I know *too well, from sad experience*, the dangers to which youth is subject, and would keep my boy, *at any price*, from them, though I should wish him to marry a person of rank, as becomes his birth, yet my Lady Maria Esmond is out of the question. Her age is almost the same as mine; and I know my brother Castlewood left his daughters with the very smallest portions. My Harry is so obedient that I know a desire from me will be sufficient to cause him to give up this imprudent match. Some foolish people once supposed that I myself once thought of a second union, and with a person of rank very different from ours. No! I knew what was due to my children. As succeeding to this estate after me, Mr. Esmond W. is amply provided for. Let my task now be to save for his less fortunate younger brother: and, as I do not love to live quite alone, let him return without delay to his fond and loving mother.

"The report which your ladyship hath given of my Harry fills my heart with warmest gratitude. He is all indeed a mother may wish. A year in Europe will have given him a polish and refinement which he could not acquire in our homely Virginia. Mr. Stack, one of our invaluable ministers in Richmond, hath a letter from Mr. Ward—my darling's tutor of early days—who knows my Lady Warrington and her excellent family, and saith that my Harry has lived much with his cousins of late. I am grateful to think that my boy has the privilege of being with his good aunt. May he follow her councils, and listen to those around him who will guide him on the way of *his best welfare!* Adieu, dear madam and sister! For your kindness to my boy accept the grateful thanks of a mother's heart. Though we have been divided hitherto, may these kindly ties draw us nearer and nearer. I am thankful that you should speak of my dearest father so. He was, indeed, one of the best of men! He, too, thanks you, I know, for the love you have borne to one of his children; and his daughter subscribes herself,

"With sincere thanks,
"Your ladyship's
"Most dutiful and grateful sister and servant,
"RACHEL ESMOND WN.

"P.S.—I have communicated with my Lady Maria; but there will be no need to tell her and dear Harry that his mother or your ladyship hope to be able to increase his small fortune. The match is altogether unsuitable."

"As far as regards myself, Madam," George said, laying down the paper, "my mother's letter conveys no news to me. I always knew that Harry was the favorite son with Madam Esmond, as he deserves indeed to be. He has a hundred good qualities which I have not the good fortune to possess. He has better looks—"

"Nay, that is not your fault," said the old lady, slyly looking at him; "and, but that he is fair and you are brown, one might almost pass for the other."

Mr. George bowed, and a faint blush tinged his pale cheek.

"His disposition is bright, and mine is dark," he continued; "Harry is cheerful, and I am otherwise perhaps. He knows how to make himself beloved by every one, and it has been my lot to find but few friends."

"My sister and you have pretty little quarrels. There were such in old days in our family," the Baroness said; "and if Madam Esmond takes after our mother—"

"My mother has always described hers as an angel upon earth," interposed George.

"Eh! That is a common character for people when they are dead!" cried the Baroness; "and Rachel Castlewood was an angel, if you like—at least your grandfather thought so. But let me tell you, Sir, that angels are sometimes not very *commodes à vivre*. It may be they are too good to live with us sinners, and the air down below here don't agree with them. My poor mother was so perfect that she never could forgive me for being otherwise. Ah, mon Dieu! how she used to oppress me with those angelical airs!"

George cast down his eyes, and thought of his own melancholy youth. He did not care to submit more of his family secrets to the cynical inquisition of this old worldling, who seemed, however, to understand him in spite of his reticence.

"I quite comprehend you, Sir, though you

hold your tongue," the Baroness continued. "A sermon in the morning: a sermon at night: and two or three of a Sunday. That is what people call being good. Every pleasure cried fie upon; all us worldly people excommunicated; a ball an abomination of desolation; a play a forbidden pastime; and a game of cards perdition! What a life! Mon Dieu, what a life!"

"We played at cards every night, if we were so inclined," said George, smiling; "and my grandfather loved Shakspeare so much that my mother had not a word to say against her father's favorite author."

"I remember. He could say whole pages by heart; though, for my part, I like Mr. Congreve a great deal better. And, then, there was that dreadful, dreary Milton, whom he and Mr. Addison pretended to admire!" cried the old lady, tapping her fan.

"If your ladyship does not like Shakspeare, you will not quarrel with my mother for being indifferent to him too," said George. "And indeed I think, and I am sure, that you don't do her justice. Wherever there are any poor, she relieves them; wherever there are any sick, she—"

"She doses them with her horrible purges and boluses!" cried the Baroness. "Of course, just as my mother did!"

"She does her best to cure them! She acts for the best, and performs her duty as far as she knows it."

"I don't blame you, Sir, for doing yours, and keeping your own counsel about Madam Esmond," said the old lady. "But at least there is one point upon which we all three agree—that this absurd marriage must be prevented. Do you know how old the woman is? I can tell you, though she has torn the first leaf out of the family Bible at Castlewood."

"My mother has not forgotten her cousin's age, and is shocked at the disparity between her and my poor brother. Indeed, a city-bred lady of her time of life, accustomed to London gayety and luxury, would find but a dismal home in our Virginian plantation. Besides, the house, such as it is, is not Harry's. He is welcome there, Heaven knows! more welcome, perhaps, than I, to whom the property comes in natural reversion; but, as I told him, I doubt how his wife would—would like our colony," George said, with a blush, and a hesitation in his sentence.

The old lady laughed shrilly. "He, he! Nephew Warrington!" she said, "you need not scruple to speak your mind out. I shall tell no tales to your mother: though 'tis no news to me that she has a high temper, and loves her own way. Harry has held his tongue, too; but it needed no conjurer to see who was the mistress at home, and what sort of a life my sister led you. I love my niece, my Lady Molly, so well, that I could wish her two or three years of Virginia, with your mother reigning over her. You may well look alarmed, Sir! Harry has said quite enough to show me who governs the family."

"Madam," said George, smiling, "I may say as much as this, that I don't envy any woman coming into our house against my mother's will: and my poor brother knows this perfectly well."

"What? You two have talked the matter over? No doubt you have. And the foolish child considers himself bound in honor—of course he does, the gaby!"

"He says Lady Maria has behaved most nobly to him. When he was sent to prison she brought him her trinkets and jewels, and every guinea she had in the world. This behavior has touched him so, that he feels more deeply than ever bound to her ladyship. But I own my brother seems bound by honor rather than love—such, at least, is his present feeling."

"My good creature," cries Madame Bernstein, "don't you see that Maria brings a few twopenny trinkets and a half dozen guineas to Mr. Esmond, the heir of the great estate in Virginia—not to the second son, who is a beggar, and has just squandered away every shilling of his fortune? I swear to you, on my credit as a gentlewoman, that, knowing Harry's obstinacy, and the misery he had in store for himself, I tried to bribe Maria to give up her engagement with him, and only failed because I could not bribe high enough! When he was in prison I sent my lawyer to him, with orders to pay his debts immediately if he would but part from her; but Maria had been beforehand with us, and Mr. Harry chose not to go back from his stupid word. Let me tell you what has passed in the last month!" And here the old lady narrated at length the history which we know already, but in that cynical language which was common in her times, when the finest folks and the most delicate ladies called things and people by names which we never utter in good company nowadays. And so much the better, on the whole. We mayn't be more virtuous, but it is something to be more decent: perhaps we are not more pure, but of a surety we are more cleanly.

Madame Bernstein talked so much, so long, and so cleverly, that she was quite pleased with herself and her listener; and when she put herself into the hands of Mrs. Brett to retire for the night, informed the waiting-maid that she had changed her opinion about her eldest nephew, and that Mr. George was handsome; that he was certainly much wittier than poor Harry (whom Heaven, it must be confessed, had not furnished with a very great supply of brains), and that he had quite the *bel air*—a something melancholy—a noble and distinguished *je ne scais quoy*—which reminded her of the Colonel. Had she ever told Brett about the Colonel? Scores of times, no doubt. And now she told Brett about the Colonel once more. Meanwhile, perhaps her new favorite was not quite so well pleased with her as she was with him. What a strange picture of life and manners had

the old lady unvailed to her nephew! How she railed at all the world round about her! How unconsciously did she paint her own family—her own self; how selfish, one and all; pursuing what mean ends; grasping and scrambling frantically for what petty prizes; ambitious for what shabby recompenses; trampling—from life's beginning to its close—through what scenes of stale dissipations and faded pleasures! "Are these the inheritors of noble blood?" thought George, as he went home quite late from his aunt's house, passing by doors whence the last guests of fashion were issuing, and where the chairmen were yawning over their expiring torches. "Are these the proud possessors of ancestral honors and ancient names; and were their forefathers, when in life, no better? We have our pedigree at home with noble coats-of-arms emblazoned all over the branches, and titles dating back before the Conquest and the Crusaders. When a knight of old found a friend in want, did he turn his back upon him; or an unprotected damsel, did he delude her and leave her? When a nobleman of the early time received a young kinsman, did he get the better of him at dice, and did the ancient chivalry cheat in horse-flesh? Can it be that this wily woman of the world, as my aunt has represented, has inveigled my poor Harry into an engagement—that her tears are false, and that as soon as she finds him poor she will desert him? Had we not best pack the trunks and take a cabin in the next ship bound for home?" George reached his own door, revolving these thoughts, and Gumbo came up yawning with a candle, and Harry was asleep before the extinguished fire, with the ashes of his emptied pipe on the table beside him.

He starts up, his eyes, for a moment dulled by sleep, lighten with pleasure as he sees his dear George. He puts his arms round his brother with a boyish laugh.

"There he is in flesh and blood, thank God!" he says; "I was dreaming of thee but now, George, and that Ward was hearing us our lesson! Dost thou remember the ruler, Georgy? Why, bless my soul 'tis three o'clock! Where have you been a gadding, Mr. George? Hast thou supped? I supped at White's, but I'm hungry again. I did not play, Sir—no, no; no more of that for younger brothers! And my Lord March paid me fifty he lost to me. I bet against his horse and on the Duke of Hamilton's! They both rode the match at Newmarket this morning, and he lost because he was under weight. And he paid me, and he was as sulky as a bear. Let us have one pipe, Georgy!—just one."

And after the smoke the young men went to bed, where I, for one, wish them a pleasant rest, for sure it is a good and pleasant thing to see brethren who love one another.

CHAPTER LV.

BETWEEN BROTHERS.

Of course our young men had had their private talk about home, and all the people and doings there, and each had imparted to the other full particulars of his history since their last meeting. How were Harry's dogs, and little Dempster, and good old Nathan, and the rest of the household? Was Mountain well, and Fanny grown to be a pretty girl? So Parson Broadbent's daughter was engaged to marry Tom Barker of Savannah, and they were to go and live in Georgia! Harry owns that at one period he was very sweet upon Parson Broadbent's daughter, and lost a great deal of pocket-money at cards, and drank a great quantity of strong waters with the father, in order to have a pretext for being near the girl. But, Heaven help us! Madam Esmond would never have consented to his throwing himself away upon Polly Broadbent. So Colonel G. Washington's wife was a pretty woman, very good-natured and pleasant, and with a good fortune? He had brought her into Richmond, and paid a visit of state to Madam Esmond. George described, with much humor, the awful ceremonials at the interview between these two personages, and the killing politeness of his mother to Mr. Washington's young wife. "Never mind, George, my dear!" says Mrs. Mountain. "The Colonel has taken another wife, but I feel certain that at one time two young gentlemen I know of ran a very near chance of having a tall step-father six feet two in his boots." To be sure, Mountain was forever match-making in her mind. Two people could not play a game at cards together, or sit down to a dish of tea, but she fancied their conjunction was for life. It was she—the foolish tattler—who had set the report abroad regarding the poor Indian woman. As for Madam Esmond, she had repelled the insinuation with scorn when Parson Stack brought

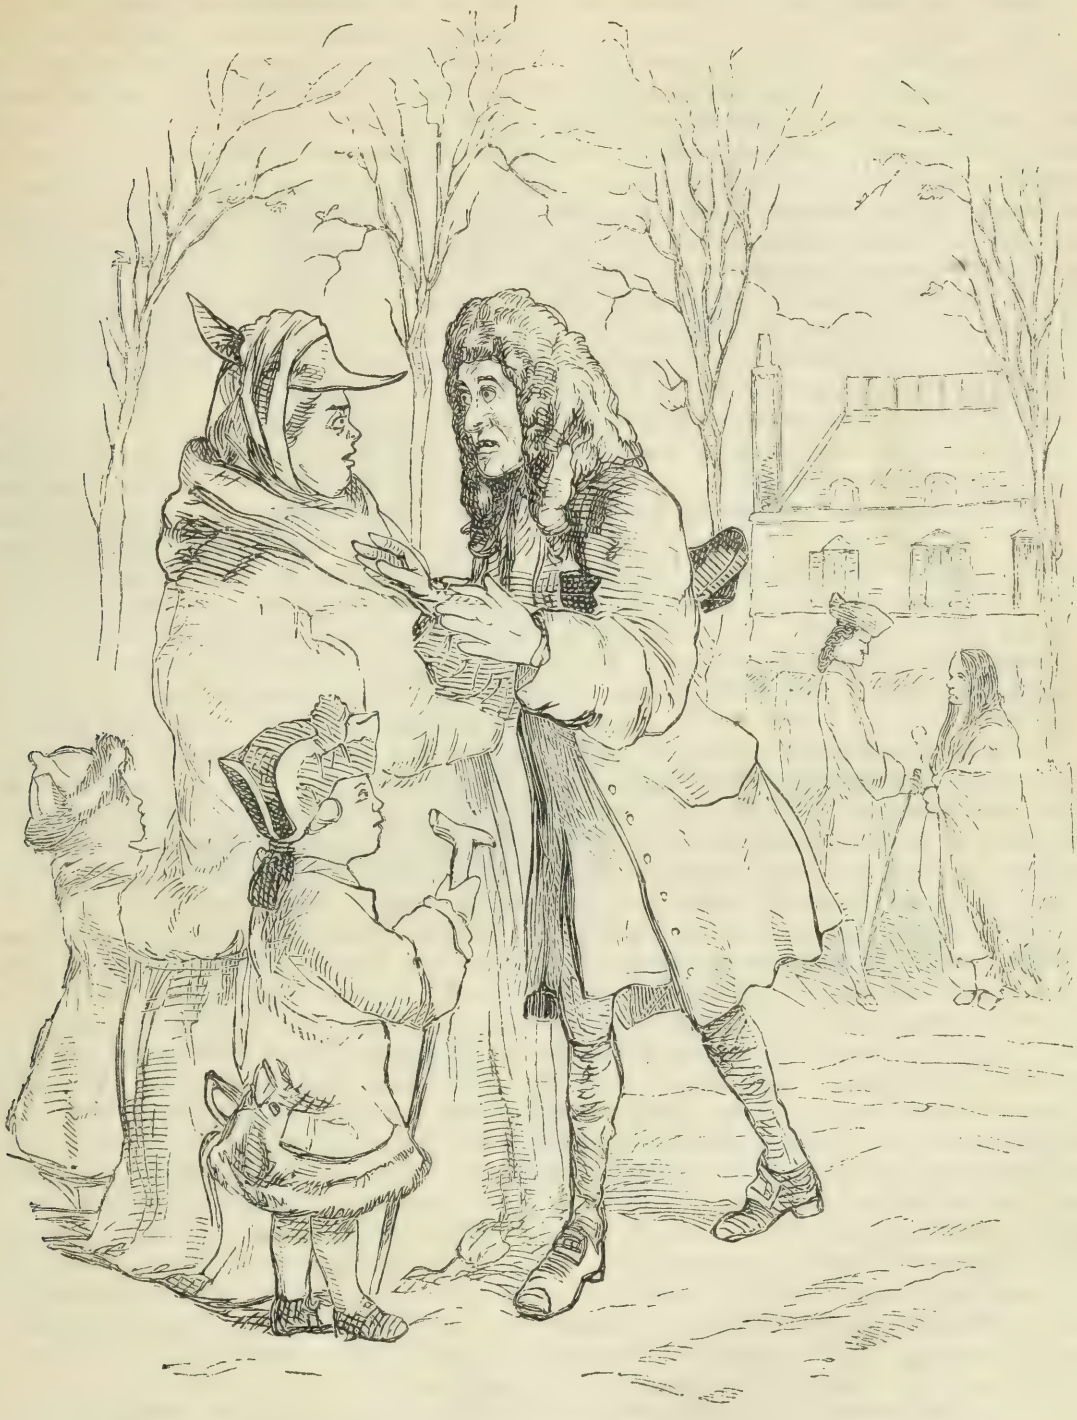
A PRESENTATION TO MADAM ESMOND.

it to her, and said, "I should as soon fancy Mr. Esmond stealing the spoons or marrying a negro woman out of the kitchen." But though she disdained to find the poor Biche guilty, and even thanked her for attending her son in his illness, she treated her with such a chilling

haughtiness of demeanor, that the Indian slunk away into the servants' quarters, and there tried to drown her disappointments with drink. It was not a cheerful picture that which George gave of his two months at home. "The birthright is mine, Harry," he said, "but thou art the favorite, and God help me! I think my mother almost grudges it to me. Why should I have taken the *pas*, and preceded your worship into the world? Had you been the elder, you would have had the best cellar, and ridden the best nag, and been the most popular man in the country, whereas I have not a word to say for myself, and frighten people by my glum face: I should have been second son, and set up as lawyer, or come to England and got my degrees, and turned parson, and said grace at your honor's table. The time is out of joint, Sir. Oh cursed spite, that ever I was born to set it right!"

"Why, Georgy, you are talking verses—I protest you are!" says Harry.

"I think, my dear, some one else talked those verses before me," says George, with a smile.



"It's out of one of your books. You know every book that ever was wrote, that I do believe!" cries Harry; and then told his brother how he had seen the two authors at Tunbridge, and how he had taken off his hat to them. "Not that *I* cared much about their books, not being clever enough. But I remembered how my dear old George used to speak of 'em," says Harry, with a choke in his voice, "and that's why I liked to see them. I say, dear, it's like a dream seeing you over again. Think of that bloody Indian with his knife at my George's head! I should like to give that Monsieur de Florac something for saving you—but I haven't got much now, only my little gold knee-buckles, and they ain't worth two guineas."

"You have got the half of what I have, child, and we'll divide as soon as I have paid the Frenchman," George said.

On which Harry broke out not merely into blessings but actual imprecations, indicating his intense love and satisfaction; and he swore that there never was such a brother in the world as his brother George. Indeed, for some days after his brother's arrival, his eyes followed George about: he would lay down his knife and fork, or his newspaper, when they were sitting together, and begin to laugh to himself. When he walked with George on the Mall or in Hyde Park, he would gaze round at the company, as much as to say, "Look here, gentlemen! This is he. This is my brother, that was dead and is alive again! Can any man in Christendom produce such a brother as this?"

Of course he was of opinion that George should pay to Museau's heirs the sum which he had promised for his ransom. This question had been the cause of no small unhappiness to poor George at home. Museau dead, Madam Esmond argued with much eagerness, and not a little rancor, the bargain fell to the ground, and her son was free. The man was a rogue in the first instance. *She* would not pay the wages of iniquity. Mr. Esmond had a small independence from his father, and might squander his patrimony if he chose. He was of age, and the money was in his power; but she would be no party to such extravagance, as giving twelve thousand livres to a parcel of peasants in Normandy with whom we were at war, and who would very likely give it all to the priests and the pope. *She* would not subscribe to any such wickedness. If George wanted to squander away his father's money (she must say that formerly he had not been so *eager*, and when *Harry's benefit* was in question had refused to touch a penny of it!)—if he wished to spend it now, why not give it to his own flesh and blood, to poor Harry, who was suddenly deprived of his inheritance, and not to a set of priest-ridden peasants in France? This dispute had raged between mother and son during the whole of the latter's last days in Virginia. It had never been settled. On the morning of George's departure, Madam Esmond had come to his bedside, after a sleepless night, and asked him whether he still persisted in his intention to fling away his father's property? He replied in a depth of grief and perplexity that his word was passed, and he must do as his honor bade him. She answered that she would continue to pray that Heaven might soften his proud heart, and enable her to bear her heavy trials: and the last view George had of his mother's face was as she stood yet a moment by his bedside, pale and with tearless eyes, before she turned away and slowly left his chamber.

"Where didst thou learn the art of winning over every body to thy side, Harry?" continued George; "and how is it that you and all the world begin by being friends? Teach me a few lessons in popularity—nay, I don't know that I will have them; and when I find and hear certain people hate me, I think I am rather pleased than angry. At first, at Richmond, Mr. Esmond Warrington, the only prisoner who had escaped from Braddock's field—the victim of so much illness and hardship—was a favorite with the town-folks, and received privately and publicly with no little kindness. The parson glorified my escape in a sermon; the neighbors came to visit the fugitive; the family coach was ordered out, and Madam Esmond and I paid our visits in return. I think some pretty little caps were set at me. But these our mother routed off, and frightened with the prodigious haughtiness of her demeanor; and my popularity was already at the decrease before the event occurred which put the last finishing stroke to it. I was not jolly enough for the officers, and didn't care for their drinking-bouts, dice-boxes, and swearing. I was too sarcastic for the ladies, and their tea and tattle stupefied me almost as much as the men's blustering and horse-talk. I can not tell thee, Harry, how lonely I felt in that place, amidst the scandal and squabbles: I regretted my prison almost, and found

A YOUNG REPROBATE.

myself more than once wishing for the freedom of thought, and the silent ease of Duquesne. I am very shy, I suppose: I can speak unreservedly to very few people. Before most, I sit utterly silent. When we two were at home, it was thou who used to talk at table, and get a smile now and then from our mother. When she and I were together we had no subject in common, and we scarce spoke at all until we began to dispute about law and divinity.

"So the gentlemen had determined I was supercilious, and a dull companion (and, indeed, I think their opinion was right), and the ladies thought I was cold and sarcastic—could never make out whether I was in earnest or no, and, I think, generally voted I was a disagreeable fellow, before my character was gone quite away; and that went with the appearance of the poor Biche. Oh, a nice character they made for me, my dear!" cried George, in a transport of wrath, "and a pretty life they led me, after Museau's unlucky messenger had appeared among us! The boys hooted the poor woman if she appeared in the street; the ladies dropped me half-courtesies, and walked over to the other side. That precious clergyman went from one tea-table to another preaching on the horrors of seduction, and the lax principles which young men learned in Popish countries and brought back thence. The poor Fawn's appearance at home, a few weeks after my return home, was declared to be a scheme between her and me;

and the best-informed agreed that she had waited on the other side of the river until I gave her the signal to come and join me in Richmond. The officers bantered me at the coffee-house, and cracked their clumsy jokes about the woman I had selected. Oh, the world is a nice, charitable world! I was so enraged that I thought of going to Castlewood and living alone there—for our mother finds the place dull, and the greatest consolation in precious Mr. Stack's ministry—when the news arrived of *your* female perplexity, and I think we were all glad that I should have a pretext for coming to Europe."

"I should like to see any of the infernal scoundrels who said a word against you, and break their rascally bones," roars out Harry, striding up and down the room.

"I had to do something like it for Bob Clubber."

"What! that little sneaking, backbiting, toad-eating wretch, who is always hanging about my lord at Greenway Court, and sponging on every gentleman in the country? If you whipped him, I hope you whipped him well, George!"

"We were bound over to keep the peace; and I offered to go into Maryland with him and settle our difference there, and of course the good folk said, that, having made free with the seventh commandment, I was inclined to break the sixth. So, by this and by that—and being as innocent of the crime imputed to me as you are—I left home, my dear Harry, with as awful a reputation as ever a young gentleman earned."

Ah, what an opportunity is there here to moralize! If the esteemed reader and his humble servant could but know—could but write down in a book—could but publish, with illustrations, a collection of the lies which have been told regarding each of us since we came to man's estate—what a harrowing and thrilling work of fiction that romance would be! Not only is the world informed of every thing about you, but of a great deal more. Not long since the kind postman brought a paper containing a valuable piece of criticism, which stated, "This author states he was born in such and such a year. It is a lie. He was born in the year so and so." The critic knew better: of course he did. Another (and both came from the country which gave MULLIGAN birth) warned some friend, saying, "Don't speak of New South Wales to him. He has a brother there, and the family *never mention his name*." But this subject is too vast and noble for a mere paragraph. I shall prepare a memoir, or let us rather have *par une société de gens de lettres*, a series of Biographies—of lives of gentlemen, as told by their dear friends whom they don't know.

George having related his exploits as champion and martyr, of course Harry had to unbosom himself to his brother, and lay before his elder an account of his private affairs. He gave up all the family of Castlewood—my lord, not for getting the better of him at play; for Harry was a sporting man, and expected to pay when he lost, and receive when he won; but for refusing to aid the chaplain in his necessity, and dismissing him with such false and heartless pretexts. About Mr. Will he had made up his mind, after the horse-dealing matter, and freely marked his sense of the latter's conduct upon Mr. Will's eyes and nose. Respecting the Countess and Lady Fanny, Harry spoke in a manner more guarded, but not very favorable. He had heard all sorts of stories about them. The Countess was a card-playing old cat; Lady Fanny was a desperate flirt. Who told him? Well, he had heard the stories from a person who knew them both very well indeed. In fact, in those days of confidence, of which we made mention in the last volume, Maria had freely imparted to her cousin a number of anecdotes respecting her step-mother and her half-sister, which were by no means in favor of those ladies.

But in respect to Lady Maria herself, the young man was stanch and hearty. "It may be imprudent; I don't say no, George. I may be a fool: I think I am. I know there will be a dreadful piece of work at home, and that Madam and she will fight. Well! We must live apart. Our estate is big enough to live on without quarreling, and I can go elsewhere than to Richmond or Castlewood. When you come to the property you'll give me a bit—at any rate, Madam will let me off at an easy rent—or I'll make a famous farmer or factor. I can't and won't part from Maria. She has acted so nobly by me that I should be a rascal to turn my back on her. Think of her bringing me every jewel she had in the world, dear brave creature! and flinging them into my lap with her last guineas—and—and—God bless her!" Here Harry dashed his sleeve across his eyes, with a stamp of his foot; and said, "No, brother, I won't part with her, not to be made Governor of Virginia to-morrow; and my dearest old George would never advise me to do so, I know that."

"I am sent here to advise you," George replied. "I am sent to break the marriage off, if I can: and a more unhappy one I can't imagine. But I can't counsel you to break your word, my boy."

"I knew you couldn't! What's said is said, George. I have made my bed, and must lie on it," says Mr. Harry, gloomily.

Such had been the settlement between our two young worthies, when they first talked over Mr. Harry's love affair. But after George's conversation with his aunt, and the farther knowledge of his family which he acquired through the information of that keen old woman of the world, Mr. Warrington, who was naturally of a skeptical turn, began to doubt about Lady Maria, as well as regarding her brothers and sister, and looked at Harry's engagement with increased distrust and alarm. Was it for his wealth that Maria wanted Harry? Was it his handsome young person that she longed after? Were those stories true which Aunt Bernstein had told of her? Certainly he could not advise Harry to break his word; but he might

cast about in his mind for some scheme for putting Maria's affection to the trial; and his ensuing conduct, which appeared not very amiable, I suppose resulted from this deliberation.

CHAPTER LVI.

ARIADNE.

My Lord Castlewood had a house in Kensington Square, spacious enough to accommodate the several members of his noble family, and convenient for their service at the palace hard-by when His Majesty dwelt there. Her ladyship had her evenings, and gave her card-parties here for such as would come; but Kensington was a long way from London a hundred years since, and George Selwyn said he for one was afraid to go, for fear of being robbed of a night—whether by footpads with crape over their faces, or by ladies in rouge at the quadrille-table, we have no means of saying. About noon on the day after Harry had made his reappearance at White's, it chanced that all his virtuous kinsfolks partook of breakfast together, even Mr. Will being present, who was to go into waiting in the afternoon.

The ladies came first to their chocolate: them Mr. Will joined in his court suit; finally, my lord appeared, languid, in his bed-gown and night-cap, having not yet assumed his wig for the day. Here was news which Will had brought home from the Star and Garter last night, when he supped in company with some men who had heard it at White's, and seen it at Ranelagh!

"Heard what? seen what?" asked the head of the house, taking up his *Daily Advertiser*.

"Ask Maria!" says Lady Fanny. My lord turns to his elder sister, who wears a face of portentous sadness, and looks as pale as a tablecloth.

"'Tis one of Will's usual elegant and polite inventions," says Maria.

"No," swore Will, with several of his oaths; "it was no invention of his. Tom Claypool of Norfolk saw 'em both at Ranelagh; and Jack Morris came out of White's, where he heard the story from Harry Warrington's own lips. Curse him, I'm glad of it!" roars Will, slapping the table. "What do you think of your Fortunate Youth? your Virginian, whom your lordship made so much of, turning out to be a second son?"

"The elder brother not dead?" says my lord.

"No more dead than you are. Never was. It's my belief that it was a cross between the two."

"Mr. Warrington is incapable of such duplicity!" cries Maria.

"*I* never encouraged the fellow, I am sure you will do me justice there," says my lady. "Nor did Fanny: not we, indeed!"

"Not we, indeed!" echoes my Lady Fanny.

"The fellow is only a beggar, and, I dare say, has not paid for the clothes on his back," continues Will. "I'm glad of it, for, hang him, I hate him!"

"You don't regard him with favorable eyes; especially since he blacked yours, Will!" grins my lord. "So the poor fellow has found his brother, and lost his estate!" And here he turned toward his sister Maria, who, although she looked the picture of woe, must have suggested something ludicrous to the humorist near whom she sate; for his lordship, having gazed at her for a minute, burst into a shrill laugh, which caused the poor lady's face to flush, and, presently, her eyes to pour over with tears. "It's a shame! it's a shame!" she sobbed out, and hid her face in her handkerchief. Maria's step-brother and sister looked at each other. "We never quite understand your lordship's humor," the former lady remarked, gravely.

"I don't see there is the least reason why you should," said my lord, coolly. "Maria, my dear, pray excuse me if I have said—that is, done any thing to hurt your feelings."

"Done any thing! You pillaged the poor lad in his prosperity, and laugh at him in his ruin!" says Maria, rising from table, and glaring round at all her family.

"Excuse me, my dear sister, I was not laughing at *him*," said my lord, gently.

"Oh, never mind at what or whom else, my lord! You have taken from him all he had to lose. All the world points at you as the man who feeds on his own flesh and blood. And now you have his all you make merry over his misfortune!" and away she rustled from the

room, flinging looks of defiance at all the party there assembled.

"Tell us what has happened, or what you have heard, Will, and my sister's grief will not interrupt us." And Will told, at greater length, and with immense exultation at Harry's discomfiture, the story now buzzed through all London, of George Warrington's sudden apparition. Lord Castlewood was sorry for Harry: Harry was a good brave lad, and his kinsman liked him, as much as certain worldly folks like each other. To be sure he played Harry at cards, and took the advantage of the market upon him; but why not? The peach which other men would certainly pluck he might as well devour. "Eh, if that were all my conscience had to reproach me with, I need not be very uneasy!" my lord thought. "Where does Mr. Warrington live?"

Will expressed himself ready to enter upon a state of reprobation if he knew or cared.

"He shall be invited here, and treated with every respect," says my lord.

"Including picquet, I suppose!" growls Will.

"Or will you take him to the stables, and sell him one of your bargains of horse-flesh, Will?" asks Lord Castlewood. "*You* would have won of Harry Warrington fast enough, if you could; but you cheat so clumsily at your game that you got paid with a cudgel. I desire, once more, that every attention may be paid to our Cousin Warrington."

"And that you are not to be disturbed when you sit down to play, of course, my lord!" cries Lady Castlewood.

"Madam, I desire fair play for Mr. Warrington, and for myself, and for every member of this amiable family," retorted Lord Castlewood, fiercely.

"Heaven help the poor gentleman if your lordship is going to be kind to him!" said the Stepmother, with a courtesy; and there is no knowing how far this family dispute might have been carried, had not, at this moment, a phaeton driven up to the house, in which were seated the two young Virginians.

It was the carriage which our young Prodigal had purchased in the days of his prosperity. He drove it still: George sate in it by his side; their negroes were behind them. Harry had been for meekly giving the whip and reins to his brother, and ceding the whole property to him. "What business has a poor devil like me with horses and carriages, Georgy?" Harry had humbly said. "Beyond the coat on my back, and the purse my aunt gave me, I have nothing in the world. You take the driving-seat, brother; it will ease my mind if you will take the driving-seat." George laughingly said he did not know the way, and Harry did; and that, as for the carriage, he would claim only a half of it, as he had already done with his brother's wardrobe. "But a bargain is a bargain; if I share thy coats thou must divide my breeches' pocket, Harry; that is but fair dealing!" Again and again Harry swore there never was such a brother on earth. How he rattled his horses over the road! How pleased and proud he was to drive such a brother! They came to Kensington in famous high spirits; and Gumbo's thunder upon Lord Castlewood's door was worthy of the biggest footman in all St. James's.

Only my Lady Castlewood and her daughter, Lady Fanny, were in the room into which our young gentlemen were ushered. Will had no particular fancy to face Harry, my lord was not dressed, Maria had her reasons for being away, at least till her eyes were dried. When we drive up to friends' houses nowadays in our coaches and six, when John carries up our noble names, when, finally, we enter the drawing-room with our best hat and best Sunday smile foremost, does it ever happen that we interrupt a family row? that we come simpering and smiling in, and stepping over the delusive ashes of a still burning domestic heat? that in the interval between the hall-door and the drawing-room, Mrs., Mr., and the Misses Jones have grouped themselves in a family tableau; this girl artlessly arranging flowers in a vase, let us say; that one reclining over an illuminated work of devotion; mamma on the sofa, with the butcher's and grocer's book pushed under the cushion, some elegant work in her hand, and a pretty little foot pushed out advantageously: while honest Jones, far from saying, "Curse that Brown, he is always calling here!" holds out a kindly hand, shows a pleased face, and exclaims, "What, Brown, my boy, delighted to see you! Hope you've come to lunch!" I say, does it ever happen to *us* to be made the victims of domestic artifices, the spectators of domestic comedies got up for our special amusement? Oh, let us be thankful, not only for faces, but for masks! not only for honest welcome, but for hypocrisy, which hides unwelcome things from us! While I am talking, for instance, in this easy chatty way, what right have you, my good Sir, to know what is really passing in my mind? It may be that I am racked with gout, or that my eldest son has just sent me in a thousand pounds' worth of college-bills, or that I am writhing under an attack of the *Stoke Pogis Sentinel*, which has just been sent me under cover, or that there is a dreadfully scrappy dinner, the evident remains of a party to which I *didn't* invite you, and yet I conceal my agony, I wear a merry smile, I say, "What! come to take pot-luck with us, Brown, my boy? Betsy, put a knife and fork for Mr. Brown! Eat! Welcome! Fall to! It's my best!" I say that humbug which I am performing is beautiful self-denial—that hypocrisy is true virtue. Oh, if every man spoke his mind, what an intolerable society ours would be to live in!

As the young gentlemen are announced, Lady Castlewood advances toward them with perfect ease and good humor. "We have heard, Harry," she says, looking at the latter with a special friendliness, "of this most ex-

traordinary circumstance. My Lord Castlewood said at breakfast that he should wait on you this very day, Mr. Warrington, and, Cousin Harry, we intend not to love you any the less because you are poor."

"We shall be able to show now that it is not for your acres that we like you, Harry!" says Lady Fanny, following her mamma's lead.

"And I to whom the acres have fallen?" says Mr. George, with a smile and a bow.

"Oh, cousin, we shall like you for being like Harry!" replies the arch Lady Fanny.

Ah! who that has seen the world, has not admired that astonishing ease with which fine ladies drop you and pick you up again? Both the ladies now addressed themselves almost exclusively to the younger brother. They were quite civil to Mr. George; but with Mr. Harry they were fond, they were softly familiar, they were gently kind, they were affectionately reproachful. Why had Harry not been for days and days to see them?

"Better to have had a dish of tea and a game at picquet with them than with some other folks," says Lady Castlewood. "If *we* had won enough to buy a paper of pins from you we should have been content; but young gentlemen don't know what is for their own good," says mamma.

"Now you have no more money to play with, you can come and play with us, cousin!" cries fond Lady Fanny, lifting up a finger, "and so your misfortune will be good fortune to us."

George was puzzled. This welcome of his brother was very different from that to which he had looked. All these compliments and attentions paid to the younger brother, though he was without a guinea! Perhaps the people were not so bad as they were painted? The Blackest of all Blacks is said not to be of *quite* so dark a complexion as some folks describe him.

This affectionate conversation continued for some twenty minutes, at the end of which period my Lord Castlewood made his appearance, wig on head, and sword by side. He greeted both the young men with much politeness: one not more than the other. "If you were to come to us—and I, for one, cordially rejoice to see you—what a pity it is you did not come a few months earlier! A certain evening at picquet would then, most likely, never have taken place. A younger son would have been more prudent."

"Yes, indeed," said Harry.

"Or a kinsman more compassionate. But I fear that love of play runs in the blood of all of us. I have it from my father, and it has made me the poorest peer in England. Those fair ladies whom you see before you are not exempt. My poor brother Will is a martyr to it; and what I, for my part, win on one day, I lose on the next. 'Tis shocking, positively, the rage for play in England. All my poor cousin's bank-notes parted company from me within twenty-four hours after I got them."

"I have played, like other gentlemen, but never to hurt myself, and never indeed caring much for the sport," remarked Mr. Warrington.

"When we heard that my lord had played with Harry, we did *so* scold him," cried the ladies.

"But if it had not been I, thou knowest, Cousin Warrington, some other person would have had thy money. 'Tis a poor consolation, but as such Harry must please to take it, and be glad that friends won his money, who wish him well, not strangers, who cared nothing for him, and fleeced him."

"Eh! a tooth out is a tooth out, though it be your brother who pulls it, my lord!" said Mr. George, laughing. "Harry must bear the penalty of his faults, and pay his debts, like other men."

"I am sure I have never said or thought otherwise. 'Tis not like an Englishman to be sulky because he is beaten," says Harry.

"Your hand, cousin! You speak like a man!" cries my lord, with delight. The ladies smile to each other.

"My sister, in Virginia, has known how to bring up her sons as gentlemen!" exclaims Lady Castlewood, enthusiastically.

"I protest you must not be growing so amiable now you are poor, Cousin Harry!" cries Cousin Fanny. "Why, mamma, we did not know half his good qualities when he was only Fortunate Youth and Prince of Virginia! You are exactly like him, Cousin George, but I vow you can't be as amiable as your brother!"

"I am the Prince of Virginia, but I fear I am not the Fortunate Youth," said George, gravely.

Harry was beginning, "By Jove, he is the best—" when the noise of a harpsichord was heard from the upper room. The lad blushed: the ladies smiled.

"'Tis Maria, above," said Lady Castlewood. "Let some of us go up to her!"

The ladies rose, and made way toward the door; and Harry followed them, blushing very much. George was about to join the party, but Lord Castlewood checked him. "Nay, if all the ladies follow your brother," his lordship said, "let me at least have the benefit of your company and conversation. I long to hear the account of your captivity and rescue, Cousin George!"

"Oh, we must hear that too!" cried one of the ladies, lingering.

"I am greedy, and should like it all by myself," said Lord Castlewood, looking at her very sternly; and followed the women to the door, and closed it upon them, with a low bow.

"Your brother has no doubt acquainted you with the history of all that has happened to him in this house, Cousin George?" asked George's kinsman.

"Yes, including the quarrel with Mr. Will, and the engagement to my Lady Maria," replies George, with a bow. "I may be pardoned for

saying that he hath met with but ill fortune here, my lord."

"Which no one can deplore more cordially than myself. My brother lives with horse-jockeys and trainers, and the wildest bloods of the town, and between us there is very little sympathy. We should not all live together, were we not so poor. This is the house which our grandmother occupied before she went to America and married Colonel Esmond. Much of the old furniture belonged to her." George looked round the wainscoted parlor with some interest. "Our house has not flourished in the last twenty years; though we had a promotion of rank a score of years since, owing to some interest we had at court then. But the malady of play has been the ruin of us all. I am a miserable victim to it: only too proud to sell myself and title to a *roturière*, as many noblemen, less scrupulous, have done. Pride is my fault, my dear cousin. I remember how I was born!" And his lordship laid his hand on his shirt-frill, turned out his toe, and looked his cousin nobly in the face. Young George Warrington's natural disposition was to believe every thing which every body said to him. When once deceived, however, or undeceived about the character of a person, he became utterly incredulous, and he saluted this fine speech of my lord's with a sardonical, inward laughter, preserving his gravity, however, and scarce allowing any of his scorn to appear in his words.

"We have all our faults, my lord. That of play hath been condoned over and over again in gentleman of our rank. Having heartily forgiven my brother, surely I can not presume to be your lordship's judge in the matter; and instead of playing and losing, I wish sincerely that you had both played and won!"

"So do I, with all my heart!" says my lord, with a sigh, "I augur well for your goodness when you can speak in this way, and for your experience and knowledge of the world, too, cousin, of which you seem to possess a greater share than most young men of your age. Your poor Harry hath the best heart in the world; but I doubt whether his head be very strong."

"Not very strong, indeed. But he hath the art to make friends wherever he goes, and in spite of all his imprudences most people love him."

"I do—we all do, I'm sure; as if he were our brother!" cries my lord.

"He has often described in his letters his welcome at your lordship's house. My mother keeps them all, you may be sure. Harry's style is not very learned, but his heart is so good that to read him is better than wit."

"I may be mistaken, but I fancy his brother possesses a good heart and a good wit too!" says my lord, obstinately gracious.

"I am as Heaven made me, cousin; and perhaps some more experience and sorrow than has fallen to the lot of most young men."

"This misfortune of your poor brother—I mean this piece of good fortune, your sudden reappearance—has not quite left Harry without resources?" continued Lord Castlewood, very gently.

"With nothing but what his mother can leave him, or I, at her death, can spare him. What is the usual portion here of a younger brother, my lord?"

"Eh! A younger brother here is—you know—in fine, every body knows what a younger brother is," said my lord, and shrugged his shoulders and looked his guest in the face.

The other went on: "We are the best of friends, but we are flesh and blood: and I don't pretend to do more for him than is usually done for younger brothers. Why give him money? That he should squander it at cards or horse-racing? My lord, we have cards and jockeys in Virginia, too; and my poor Harry hath distinguished himself in his own country already before he came to yours. He inherits the family failing for dissipation."

"Poor fellow, poor fellow, I pity him!"

"Our estate, you see, is great, but our income is small. We have little more money than that which we get from England for our tobacco—and very little of that, too—for our tobacco comes back to us in the shape of goods, clothes, leather, groceries, ironmongery, nay, wine and beer for our people and ourselves. Harry may come back and share all these: there is a nag in the stable for him, a piece of venison on the table, a little ready money to keep his pocket warm, and a coat or two every year. This will go on while my mother lives, unless, which is far from improbable, he gets into some quarrel with Madam Esmond. Then, while I live he will have the run of the house and all it contains: then, if I die leaving children, he will be less and less welcome. His future, my lord, is a dismal one, unless some strange piece of luck turn up on which we were fools to speculate. Henceforth he is doomed to dependence, and I know no worse lot than to be dependent on a self-willed woman like our mother. The means he had to make himself respected at home he hath squandered away here. He has flung his patrimony to the dogs, and poverty and subserviency are now his only portion." Mr. Warrington delivered this speech with considerable spirit and volubility, and his cousin heard him respectfully.

"You speak well, Mr. Warrington. Have you ever thought of public life?" said my lord.

"Of course I have thought of public life, like every man of my station—every man, that is, who cares for something beyond a dice-box or a stable," replies George. "I hope, my lord, to be able to take my own place, and my unlucky brother must content himself with his. This I say advisedly, having heard from him of certain engagements which he has formed, and which it would be misery to all parties were he to attempt to execute now."

"Your logic is very strong," said my lord. "Shall we go up and see the ladies? There is a picture above stairs which your grandfather is

said to have executed. Before you go, my dear cousin, you will please to fix a day when our family may have the honor of receiving you. Castlewood, you know, is always your home when we are there. It is something like your Virginian Castlewood, cousin, from your account. We have beef, and mutton, and ale, and wood, in plenty; but money is woefully scarce among us."

They ascended to the drawing-room, where, however, they found only one of the ladies of the family. This was my Lady Maria, who came out of the embrasure of a window, where she and Harry Warrington had been engaged in talk.

George made his best bow, Maria her lowest courtesy. "You are indeed wonderfully like your brother," she said, giving him her hand. "And from what he says, Cousin George, I think you are as good as he is."

At the sight of her swollen eyes and tearful face George felt a pang of remorse. "Poor thing!" he thought. "Harry has been vaunting my generosity and virtue to her, and I have been playing the selfish elder brother down stairs! How old she looks! How could he ever have a passion for such a woman as that?" How? Because he did not see with your eyes, Mr. George. He saw rightly too now with his own, perhaps. I never know whether to pity or congratulate a man on coming to his senses.

After the introduction a little talk took place, which, for a while, Lady Maria managed to carry on in easy manner: but though ladies, in this matter of social hypocrisy, are, I think, far more consummate performers than men, after a sentence or two the poor lady broke out into a sob, and, motioning Harry away with her hand, fairly fled from the room.

Harry was rushing forward, but stopped—checked by that sign. My lord said his poor sister was subject to these fits of nerves, and had already been ill that morning. After this event our young gentlemen thought it was needless to prolong their visit. Lord Castlewood followed them down stairs, accompanied them to the door, admired their nags in the phaeton, and waved them a friendly farewell.

"And so we have been coaxing and cuddling in the window, and we part good friends, Harry? Is it not so?" says George to his charioteer.

"Oh, she *is* a good woman!" cries Harry, lashing the horses. "I know you'll think so when you come to know her."

"When you take her home to Virginia? A pretty welcome our mother will give her! She will never forgive me for not breaking the match off, nor you for making it."

"I can't help it, George! Don't you be popping your ugly head so close to my ears, Gumbo! After what has passed between us, I am bound in honor to stand by her. If she sees no objection, I must find none. I told her all. I told her that madam would be very rusty at first; but that she was very fond of me, and must end by relenting. And when *you* come to the property, I told her that I knew my dearest George so well, that I might count upon sharing with him."

"The deuce you did! Let me tell you, my dear, that I have been telling my Lord Castlewood quite a different story. That as an elder brother I intend to have all my rights—there, don't flog that near horse so—and that you can but look forward to poverty and dependence."

"What? You won't help me?" cries Harry, turning quite pale. "George, I don't believe it, though I hear it out of your own mouth!"

There was a minute's pause after this outbreak, during which Harry did not even look at his brother, but sate gazing blindly before him, the picture of grief and gloom. He was driving so near to a road-post that the carriage might have been upset but for George's pulling the rein.

"You had better take the reins, Sir," said Harry. "I told you you had better take them."

"Did you ever know me fail you, Harry?" George asked.

"No," said the other, "not till now"—the tears were rolling down his cheeks as he spoke.

"My dear, I think one day you will say I have done my duty."

"What have you done?" asked Harry.

"I have said you were a younger brother—that you have spent all your patrimony, and that your portion at home must be very slender. Is it not true?"

"Yes; but I would not have believed it if ten thousand men had told me," said Harry. "Whatever happened to me, I thought I could trust *you*, George Warrington." And in this frame of mind Harry remained during the rest of the drive.

Their dinner was served soon after their return to their lodgings, of which Harry scarce ate any, though he drank freely of the wine before him.

"That wine is a bad consoler in trouble, Harry," his brother remarked.

"I have no other, Sir," said Harry, grimly; and having drank glass after glass in silence, he presently seized his hat and left the room.

He did not return for three hours. George, in much anxiety about his brother, had not left home meanwhile, but read his book, and smoked the pipe of patience. "It *was* shabby to say I would not aid him, and, God help me! it was not true. I won't leave him, though he marries a blackamoor," thought George: "have I not done him harm enough already by coming to life again? Where has he gone; has he gone to play?"

"Good God! what has happened to thee?" cried George Warrington, presently, when his brother came in, looking ghastly pale.

He came up and took his brother's hand. "I can take it now, Georgy," he said. "Perhaps what you did was right, though I for one

will never believe that you would throw your brother off in distress. I'll tell you what. At dinner I thought, suddenly, I'll go back to her and speak to her. I'll say to her, 'Maria, poor as I am, your conduct to me has been so noble, that, by Heaven! I am yours to take or to leave. If you will have me, here I am: I will enlist: I will work: I will try and make a livelihood for myself somehow, and my bro——, my relations will relent, and give us enough to live on.' That's what I determined to tell her; and I did, George. I ran all the way to Kensington in the rain—look, I am splashed from head to foot—and found them all at dinner, all except Will, that is. I spoke out that very moment to them all, sitting round the table over their wine. 'Maria,' says I, 'a poor fellow wants to redeem his promise which he made when he fancied he was rich. Will you take him?' I found I had plenty of words, and didn't hem and stutter as I'm doing now. I spoke ever so long, and I ended by saying I would do my best and my duty by her, so help me God!

"When I had done she came up to me quite kind. She took my hand, and kissed it before the rest. 'My dearest, best Harry!' she said (those were her words; I don't want otherwise to be praising myself), 'you are a noble heart, and I thank you with all mine. But, my dear, I have long seen it was only duty, and a foolish promise made by a young man to an old woman, that has held you to your engagement. To keep it would make you miserable, my dear. I absolve you from it, thanking you with all my heart for your fidelity, and blessing and loving my dear cousin always.' And she came up and kissed me before them all, and went out of the room quite stately, and without a single tear. They were all crying, especially my lord, who was sobbing quite loud. I didn't think he had so much feeling. And she, George? Oh, isn't she a noble creature?"

"Here's her health!" cries George, filling one of the glasses that still stood before him.

"Hip, hip, huzzay!" says Harry. He was wild with delight at being free.

Monthly Record of Current Events.

UNITED STATES.

CONGRESS met on the 6th of December. The Message of the President and the Reports of the heads of the Departments give the usual summary of our domestic condition and foreign relations.

The President's Message opens with an elaborate *resumé* of the progress and ultimate settlement of the *Kansas* difficulty. The people of that Territory having rejected the "proposition" contained in the "English Bill," it is not probable, he says, that under the further provisions of this Bill a new Constitution can be lawfully framed and presented to Congress until the population of the Territory is ascertained to reach the number (93,420) required for a representative in Congress. It is recommended that a provision similar to that laid down in the case of Kansas shall, by a general Act, be applied to all Territories, without, however, giving it a retrospective action so as to embrace any State which, as in the case of Oregon, acting upon the past practice of the Government, has already formed its Constitution, elected its officers, and is now prepared to enter the Union.—Then follows a general history of the Mormon rebellion in *Utah*, relating the insurrectionary acts of that people, the dispatch of the army, their privations on the march, the sending out of Messrs. Powell and M'Culloch as Peace Commissioners, the voluntary mission of Colonel Thomas L. Kane, and the final submission of the Mormons to the laws and the constituted authorities. The President concurs in the opinion of Messrs. Powell and M'Culloch that this result was attained wholly in consequence of the dispatch of a formidable military force, and that a less decisive policy would probably have resulted in a long, bloody, and expensive war. The presence of this army has also done much to restrain the hostility of the Indian tribes of that region, and to secure emigrants to the Far West from their depredations.

The nature of our difficulties with *China* did not, in the opinion of the President, demand a resort to immediate hostile measures, since the insult offered to our flag had been promptly avenged by the capture of the Barrier Forts. Our Minister was therefore instructed to maintain a neutral position in the contest between the European Powers and the Chinese, while co-operating with the former in urging a just treaty. These instructions have been executed with skill and ability, and the result has been the negotiation of a highly satisfactory treaty with China.——With *Japan*, also, a new treaty has been concluded, which will augment our trade with that Empire, and remove the disabilities which have been imposed upon our people in the exercise of their religion.——With *Great Britain* the question of the right of search has been satisfactorily adjusted, the British Government in an honorable manner abandoning its claim to this right. Our Government has expressed its willingness to consider any proposals which may be made by that of Great Britain, having in view some joint plan for verifying the nationality of vessels suspected of sailing under false colors; but the President apprehends that no such plan can be devised which will be free from grave objections, though he will form no decision without careful consideration.—The complications arising from the Clayton and Bulwer Treaty have not been adjusted, and negotiations are now pending in relation to them, the present condition of which the President does not think proper to communicate.

With *Spain* our relations are altogether unsatisfactory. The claims of our citizens upon the Spanish Government have not been settled, though the justice of the principle upon which they are based was acknowledged in 1854, and the indemnity for damages sustained up to that period was agreed upon. This has not been paid; and now the Spanish Government proposes to pay only one-third of the amount then fixed; and this offer is accompanied by a declaration that the pay-

ment is made only as a matter of favor.——The necessity for the acquisition of *Cuba* is strongly urged. In its present colonial condition it is a constant source of injury and annoyance to the American people; wrongs committed by the officials of the island can be redressed only after an appeal to the Home Government, which is then transmitted back to the Captain-General. The island is also the only spot in the civilized world where the African slave-trade is openly tolerated, and so long as it is an open market for slaves this trade can not be suppressed. If this market had not been open our late difficulty with Great Britain could not have occurred. Cuba, from its geographical position, commands the mouths of the Mississippi and the commerce of its valley, comprising half the States of the Union. While this island is under the dominion of a distant foreign power, that commerce is liable to be destroyed in time of war, and has been annoyed in time of peace. Our relations with Spain are in constant jeopardy so long as Cuba remains under its present Colonial Government. Under similar circumstances France sold Louisiana to us. Attempts have been repeatedly made to acquire Cuba by similar means—the only ones we shall ever adopt unless unforseen circumstances should render a departure from them clearly justifiable under the law of self-defense. Our newly-appointed Minister to Spain is instructed to renew the negotiations for purchase; and as it may become indispensable to success that an advance should be made to the Spanish Government, the President intimates that it is desirable that he should be authorized by Congress to make this advance.——The recommendation is renewed that an appropriation should be made in favor of the claimants in the *Amistad* case.

Our relations with *Mexico* are of a peculiar character. Though that country has for years been in a state of revolution, heretofore the possession of the capital by a military chief has usually been followed by the temporary submission of the country to his Government. But now antagonist parties hold possession of different States, and all resort to forcible measures to extort money from foreigners. In consequence of these measures our diplomatic relations with the Government now in possession of the capital have been suspended. Should this party succeed in subduing their opponents, there will be no reasonable hope of a peaceful settlement of our difficulties; but should the Constitutional party prevail, it may be expected to be willing to redress our grievances so far as it has the power. But for this expectation the President would have recommended that Congress should authorize him to take possession of a portion of the territory of Mexico, to be held as a pledge for the satisfaction of our demands. The frontier Mexican States of Sonora and Chihuahua, adjoining our Southwestern frontier, are in a state of anarchy, and are ravaged by the Indians. The Government is powerless. This prevents the settlement of our own Territory of Arizona, and it is apprehended that savages and outlaws may interrupt the postal connection recently established between our Atlantic and Pacific possessions. To avoid this, the President recommends that the Government of the United States should assume a temporary protectorate over the northern portions of Chihuahua and Sonora, and establish military posts there.

The importance of the routes across the Isthmus is urged at length. It is of the utmost concern to the commercial world that these routes should be unimpeded, while the governments through whose territories they pass have only a minor interest in the question. While their rights of sovereignty should be respected, other nations should demand that these routes should not be closed by revolutionary outbreaks, or by arbitrary decrees of Government. The United States ask for no advantages here which are not common to the rest of the world. The Transit Line through Nicaragua has been closed since February, 1856, and no competition existing with the Panama Route, the rate of passage to and from California has been enhanced greatly to our damage. In November, 1857, a treaty was signed by our Secretary of State and the Minister of Nicaragua, but the Nicaraguan Government has not ratified this treaty, mainly on the alleged ground that it authorized the United States to keep the route open, in case Nicaragua should fail to do so. The feebleness of the Nicaraguan Government renders such a stipulation absolutely necessary, while the concession of the right would probably obviate all necessity for its actual exercise. Under these circumstances the President recommends the passage of an act authorizing him to employ the land and naval forces of the United States to prevent the closing or obstruction of the Transit Route through Nicaragua. The maintenance of the Panama Route is already guaranteed by treaty between the United States and New Granada; and that of Tehuantepec, which has just been opened under favorable auspices, by treaty with Mexico.——The injuries sustained by our citizens during the last two or three years in *Nicaragua* and *Costa Rica* have not been redressed; and unless this is soon done, prompt measures must be resorted to.——With *New Granada* are standing causes of complaint, to which have been added the outrage at Panama in April, 1856. A treaty for the adjustment of these was concluded in September, 1857. This was transmitted to Bogota and ratified with certain amendments; should these be accepted by the Senate, all existing causes of complaint against New Granada, on the subject of claims, will have been removed. Questions have, however, arisen as to the right of New Granada to impose a tonnage duty on United States vessels at the Isthmus ports, and to levy a tax upon passengers and mails transported over the Panama Railway. No effort has recently been made to collect these taxes, and negotiations are in progress to adjust the matter.

With *Brazil* our relations are of the most friendly character. The import duties on articles of our production have recently been greatly reduced—that on flour from $1 42 to 49 cents a barrel; the export duty of 11 per cent. on coffee is still levied, which is a heavy charge upon consumers in this country, as we purchase about half the entire crop. Our Minister will urge the removal of this duty, it is hoped with success.——A Commissioner has been dispatched to *Paraguay* with full powers to settle, in an amicable manner, all the difficulties existing between that Government and our own. It is hoped that atonement will be voluntarily made for the wrongs committed against the United States, and indemnity be granted to our citizens who have been despoiled of their property. Should this not be done, force will be employed; and in view of this contingency a naval expedition has been sent out, sufficient for the purpose.

The Message then proceeds to speak of the panic of last year, and of its disastrous effect upon our commercial and manufacturing interests. This, the President says, was not caused, and could not be prevented, by legislation. It would have taken place had the tariff of 1846, or a much higher one, been in operation, not less than under that of 1857. Such revulsions will continue, at intervals, so long as our present system of bank credit prevails. He renews his recommendation for the passage of a uniform bankrupt law, applicable to banking institutions, and believes that this is all the power which the General Government possesses in the matter. In consequence of the diminution of the importation of foreign goods caused by the panic, the revenues of the Government have not equaled its necessary expenses, and the issue of $20,000,000 of treasury notes, and a subsequent loan of the same amount, were authorized by Congress to meet the deficiency. It is not advisable to go on increasing our national debt in order to meet the ordinary expenses of government. Our true policy is to increase our revenue so as to meet our expenses. Moreover, the protection afforded by an augmented tariff would benefit our manufacturing interests. The President recommends the imposition of specific duties in respect to all articles to which they can be properly applied—such as iron, raw sugars, and wines and spirits.

The receipts into the Treasury for the fiscal year ending June 30, 1858, from all sources, including the $20,000,000 of treasury notes, were $70,273,869 59; to which is to be added the balance on hand at the beginning of the year, of $17,710,114 27; making the entire revenue for the year $87,983,983 86. The expenditures for the same period were $81,585,667 76, of which $9,684,537 99 was for the redemption of treasury notes and payment of public debt; leaving a balance in the Treasury on the 1st of July, the commencement of the fiscal year, of $6,398,316 10. The receipts for the present fiscal year, from ordinary sources, including one-half of the loan of $20,000,000, already negotiated, and the balance on hand at the commencement of the year, are estimated at $70,129,195 56. The expenditures for the year are estimated at $74,065,896 99; leaving a deficiency of $3,936,701 43. Extraordinary means are placed in the hands of the Secretary of the Treasury by the issue of treasury notes already redeemed, and negotiating the balance of the loan already authorized. These, it is estimated, will produce $11,000,000, leaving a balance in the Treasury at the close of the present year of $7,063,298 57. For the next fiscal year the revenues, including this balance on hand at the commencement, are estimated at $69,063,298 57, and the expenditures at $73,139,147 46, leaving a deficit at its close of $4,075,848 89, to which must be added the deficiency in the Post-Office Department of $3,838,728, making the entire estimated deficit at the close of the present year to amount to $7,914,576 89, which will be increased by appropriations to be made by Congress, for which no estimate has been made by the Treasury Department. To meet these deficiencies, and to provide for the gradual redemption of treasury notes, the President recommends a revision of the tariff, to be made at the present session of Congress.

The entire public debt is now $54,910,777 66, to which will be added during the present year $10,000,000, being the unnegotiated half of the loan already authorized.—The President explains and defends the increased expenditures of the Government on the ground of public good, specifies some reductions that have been made in the different Departments, and invites Congress to ascertain if other retrenchments are not feasible. He recommends the building of an additional number of small steamers. Attention is again called to the question of a Railroad to the Pacific, the construction of which should not be undertaken by Government, though Congress might aid the Companies undertaking it by grants of land or money under such conditions as would secure the transmission of troops, munitions of war, and the mails. The feasibility of a railroad is argued from the success attending the attempt to establish an overland mail route.

The Secretary of the Treasury, after presenting the fiscal condition of the country, of which an abstract has been given above, advocates at length such a revision of the tariff as will produce the additional revenue required. Neither the exigencies of the Government, he says, nor the interests of the country demand a return to the tariff of 1846. The duties of 40 and 100 per cent. imposed by that act are, in the present condition of trade and commerce, wholly indefensible. The public mind will not acquiesce in a higher rate than 30 per cent., the maximum under the present law. Adhering to the general principles of the present tariff, he recommends that the articles embraced in schedules C, D, F, G, H, which now pay 24, 19, 12, 8, and 4 per cent., shall pay 25, 20, 15, 10, and 5 per cent. This will give an increased revenue of $1,800,000 upon the basis of the importations of last year, which it is anticipated will be largely increased during the ensuing year. To provide for the additional amount required, certain articles must be raised from lower to higher schedules. He furnishes a table containing the amount of importations, and the revenues obtained from each article, and when the amount which the legislation of Congress makes necessary is ascertained, the work of making the proper transfers will be simple and easy. He argues at length in favor of continuing to estimate the value of goods at their valuation where produced rather than at that in our markets.——The bullion received at the mints amounted to $51,494,311 in gold, and $9,199,954 in silver. The coinage amounted to $52,889,800 in gold, $8,233,287 in silver, and $234,000 in cents.

The Secretary of War reports the actual strength of the army at 17,498 men. The demands for various military posts and stations leave only 13 regiments, numbering a little more than 11,000 men, for actual service in the field. Upon this small force has devolved the duty of prosecuting the Indian wars, which have raged from the British possessions on the Pacific to the borders of Mexico, as well as that of crushing the rebellion in Utah. No army of the same size ever performed, in the same space of time, movements of such extent, surmounting such formidable obstacles. With the Indians on the Pacific a permanent peace has been established. With the Navajos there can be no relaxation in the prosecution of the war till they are subdued. The war in Texas, which has but just begun, may be long and fierce. There have been hostile manifestations on the confines of Iowa and Minnesota, and our force is not sufficient to allow sufficient troops to be sent there to quiet these alarms altogether. Although the re-

bellion in Utah has been suppressed, a spirit of insubordination is still manifested, which will require a strong force to be kept in that Territory.

The Secretary of the Navy reports that the five steam sloops-of-war, authorized by the Act of 1857, will soon be completed; the seven screw steam sloops are in a state of great forwardness; five will be ready for sea in May, and the others in June. The side-wheel steamer building in California will be launched in the spring, and ready for sea in August. A considerable additional increase of the navy is urged. Heavy armed vessels of light draught are recommended, to the number of at least ten more than are now in process of construction.

The Secretary of the Interior anticipates an increase of revenue from the sales of public lands. He thinks that at least $5,000,000 may be expected from this source during the year.——In view of the ascertained existence of precious metals in Oregon, New Mexico, and Kansas, he suggests the passage of a general law reserving to the United States all gold, silver, and quicksilver mines, under proper restrictions, leaving those of copper, lead, iron, and coal subject to the ordinary laws of settlement and sale.——From January 1 to September 30, 4091 applications for patents were received, and 696 caveats were filed; 2816 patents were issued, 15 extensions granted, and 1256 applications rejected.

The Postmaster-General reports the whole number of post-offices on the 30th of June to be 27,997, an increase during the year of 1391. The length of mail-routes was 260,603 miles, an increase of 18,002 miles. For the year 1859 the estimated receipts of the Department are $11,094,393; expenditures, $14,776,520; deficiency, $3,682,127. In lieu of the present franking privileges granted to members of Congress, he proposes that they shall be furnished with stamps, to be paid for from the contingent fund. He also suggests a uniform rate for letter postage of five cents for all distances.

The Grand Jury of Columbia, South Carolina, refused to find a bill against the crew of the slaver *Putnam*. The United States steamer *Niagara*, which conveyed the rescued Africans to Liberia, has returned. Of the 271 taken on board at Charleston 55 died on the passage. The number originally shipped on the *Putnam*, on the 4th of July, 1858, was 367: of these only 216 were landed alive at Monrovia on the 18th of October.——A portion of the filibusters who had assembled at Mobile under Walker, to whom the Collector of the Port refused a clearance for Nicaragua, sailed from Mobile on the 6th of December, in the *Susan*, a coasting vessel. They were stopped by a revenue cutter, but, pretending to be engaged in a coasting voyage, were suffered to proceed.——Michael Cancemi, the Italian charged with the murder of Policeman Anderson, in New York, in July, 1857, as noted in our Record for September of that year, has just been tried for the fourth time for that offense. At the first trial the jury failed to agree; at the second he was found guilty of murder, but a new trial was granted on the ground that the Judge erred in charging that, in cases of felony, evidence of previous good character was not admissible. During the third trial it was found that one of the jurors had been tampered with; he was set aside by consent, the prisoner assenting to be tried by the remaining eleven. He was found guilty; but the verdict was set aside on the ground that the prisoner could not, even by his own consent, be tried by less than twelve jurors. The offense was proved beyond doubt, yet the jury brought in a verdict of manslaughter.

SOUTHERN AMERICA.

In *Mexico* the "Liberals" are gaining ground, now having possession of nearly every point except the capital, upon which their forces are concentrating. On the 15th of October a small party actually made their way into the city, but soon retired again to Tacubaya. A Spanish squadron has appeared in the Gulf to enforce a demand of indemnity for wrongs committed against Spanish subjects. Juarez, the Constitutional President, has issued a proclamation, in which he speaks of a probable war with Spain.

The Nicaragua Transit Route across the Isthmus is again closed. The steamer *Washington* sailed from New York for San Juan del Norte, having on board a large number of passengers professing to be bound for California, although it was suspected that many of them were filibusters meditating hostilities in Nicaragua. On reaching San Juan it was found that the steamer *Hermann*, which was expected to be in waiting on the Pacific side, had passed on from Panama without stopping, and that the Government of Nicaragua refused to allow the passengers of the *Washington* to enter the country. Outside the harbor the steamer was boarded and examined by a boat from the United States war steamer *Savannah*. Immediately on anchoring the *Washington* was boarded by officers from the British steamers *Valorous* and *Leopard*, who demanded permission to examine the passenger list, and inquired if there were arms and ammunition on board; no formal examination, however, was made. The Nicaraguan Government persisting in its refusal to allow the passengers to proceed, the *Washington* went to Aspinwall, where such of her passengers, two hundred and thirty in number, as were able to pay their passage proceeded to California. About ninety, who were destitute of funds, were brought back to New York by the *Washington*. This proceeding of the British in attempting to search an American vessel regularly cleared, immediately after she had been visited by our own naval officers, and the sudden closing of the Transit Route, will add to the complication of our relations with Great Britain and Central America.

EUROPE.

Lord Napier, the British Minister to the United States, has been recalled, or rather transferred to a European Embassy; he is to be succeeded by Mr. Lyons, just created Baron Lyons, at present an *attaché* of the Embassy at Florence.

Count Montalembert has been tried for writing a magazine article reflecting upon the Emperor and attacking the doctrine of universal suffrage; found guilty, and sentenced to six months' imprisonment and a fine of 3000 francs. His publisher was sentenced to a month's imprisonment and a fine of 1000 francs.—Prince Louis Napoleon is to resign the government of the colonies, and assume that of Algeria. The Emperor has addressed to him a note in relation to the engagement of free negro laborers on the coast of Africa. He says that if these laborers are not allowed the exercise of their free will in emigrating, and if their enrollment is only the slave-trade in disguise, he will not have it on any terms; for he will nowhere protect enterprises contrary to progress, humanity, and civilization.

Literary Notices.

The Land and the Book, by W. M. Thomson, D.D. (Published by Harper and Brothers.) The object of this work is to present illustrations of the Bible, drawn from the manners, customs, productions, and scenery of the Holy Land. "The Book" takes its tone and coloring from "the Land" in which it was written. Most of the sacred writers passed their lives within the narrow limits of Palestine. Except in the Flight to Egypt, the Saviour never journeyed more than forty or fifty miles from his home at Nazareth. His illustrations, like those of the Prophets and Evangelists, were all drawn from objects which every day met his eyes and those of his hearers; their force and beauty depends much upon their exact truthfulness, and to appreciate them demands an acquaintance with the objects from which they were drawn. No man living possesses so minute a knowledge of the Holy Land as the author of these volumes. He has resided in the country for a quarter of a century, during which he traversed it repeatedly in every direction, made himself thoroughly acquainted with its antiquities and ruins, its history and productions, and the manners and customs of the people. In the light of these, and possessed of rare powers of observation and description, Dr. Thomson has studied the Scriptures amidst the scenes in which they were written. He has thrown the stores of illustration thus obtained into a peculiarly happy form. He takes his reader on a six months' tour through the length and breadth of the land; commencing at Beirût, the "queen city of Palestine," the route follows the sea-shore to Sidon, "mother of all Phœnicia," and Tyre, the first city "whose merchants were princes;" crosses the mountains to the Jordan, follows its course down, skirting the sacred Lake of Tiberias; returns to the sea-coast and the ruined towns of ancient Philistia, turning aside to every spot hallowed by the foot of the Saviour, or made memorable by the records of chronicler, prophet, or evangelist; and finally ending at Jerusalem. This one imaginary journey embodies the observations made during many tours, extending over more than a score of years, giving occasion to notice every thing in scenery or productions or customs which throws light upon the allusions or illustrations of the sacred record. A large portion of the book was actually written in the very spots described — in the open country, upon the mountain side, by sea-shore or sacred lake, under the olive or the oak, or beneath the shadow of some great rock. The descriptions have a freshness and vigor which could be given by no elaborations in the closet. Like those of the Book which they illustrate, they breathe of the open air; they are as free and racy as though they fell warm from the lip of an actual spectator. The pictorial representations — of which the volumes contain nearly three hundred — are equally true to nature. Every one portrays some actual scene, some striking custom, or some natural product, which illustrates the sacred page. We feel warranted in pronouncing "The Land and the Book" the most thorough, accurate, and reliable work that has been produced in illustration of the Scriptures. While the general reader will peruse it with pleasure for its animated description and graphic narrative, the clergyman and Sabbath-school teacher will find it an absolutely essential portion of his apparatus for the study and elucidation of the Word of God.

Peasant Life in Germany, by Miss Anna C. Johnson. (Published by Charles Scribner.) The writer of this volume has struck out a new path in the wide field of foreign travel. With the exception of William Howitt, who has given a lively description of German rural life, no previous tourist has made the manners and habits of the common people the object of primary interest. Miss Johnson appears to have gone to Europe with the express purpose of describing the condition of the Continental peasantry. She sails for Bremen in the spring of 1857, and after a prosperous voyage, soon plunges into the villages of the interior. With a young German *Fraulein* who could speak English (no uncommon attainment with the constant intercourse between Germany and the United States) as an interpreter, she makes herself at home in the dwellings of the rural districts, and has certainly picked up no small amount of curious information, such as has seldom appeared in print before, respecting habits, and modes of life.

The agriculture of the country, of course, occupies a prominent place in her pages. This is carried to a very high degree of perfection, although the domestic habits of the people do not indicate a remarkable progress in civilization. The villages, in general, appear scarcely superior to a collection of Indian wigwams. The houses are crowded together on a narrow street, showing the gloom and dirt of centuries. Not a foot of land is left for garden or grass plat; but instead of them is the cow-yard, which you are often obliged to pass through in order to reach the door. On entering the hovel—for it can scarcely be called a house—you find one little room containing a bed, a settle, a few chairs, a long, bare, wooden table, which is never moved, and which serves for work-table, eating-table, or any convenient use which may be required. A clock, perhaps, is hung on the wall, with a cross and some pictures of the Virgin and the saints. The kitchen is a room some ten or fifteen feet square, so dark that a person can scarcely be seen across it, opening on one side into the stable, and on the other into the stable-yard, looking like a place unfit for pigs to feed, much less for human beings to cook their food. Above are the sleeping rooms, each with two beds, a double bed being an institution not to be found in all Germany. The beds are very narrow, and the sheets and quilts are made to correspond. One or two light feather beds are made up on the outside, and a neat white or colored spread goes over the whole. The floors are scrubbed till they are dazzling white, and covered with sand. If you are tempted to breakfast with the family amidst such ungracious surroundings, you will find only coffee and black bread and rolls, any thing more being regarded as a gross violation of propriety at that hour. But at ten o'clock the etiquette is relaxed, and you will be treated to bread and butter, cold ham or beef, and other refections equally substantial and nutritious. At dinner we have a snow-white cloth upon the long table, a plate to each person, and a knife and fork to each plate; one large pint tumbler full of water, out of which each will drink till it is empty, when it will be filled again, and a great loaf of black bread, from which each will cut a

slice when he wants it. The first course is what in New England is called corned beef, with which you eat nothing but bread. Then comes some kind of fried meat and boiled potatoes, and probably cabbage, which is a standing dish in universal request. Every dish looks clean and wholesome, and each one helps himself from each dish which is passed around, with a spoon or knife and fork upon it. For dessert you will have a kind of cake, made very thin, with plums placed in close rows all over the top, and baked in large tins three feet long. It is then cut in strips, and arranged *cob-house* fashion upon plates. If it is the season of fruit you will also have apples, pears, plums, and grapes. The family are by no means poor, but have a snug little property, perhaps of eight or ten thousand dollars. Besides their farm they have a brick-making establishment, with a plenty of live stock. The cows, pigs, and poultry are all kept in dark pens, and do not see the light of day from one end of the year to the other. The cows are fed in summer on green fodder, which is daily cut for their use; and though their milk is not the sweetest, they seem well to do, and always look fat and sleek. Much of the farm work is done by women. Indian corn is raised in some places, but with only very inconsiderable success. A whole field will sometimes have only one or two ears on a stock. It is never used for bread, but only for geese and pigs. The great staple is rye. The German sticks to his black bread as tenaciously as to his tobacco. These huge black loaves are every where to be seen, and never is the baking done in the family. In the country villages there is one grand oven to which all transport their loaves after having kneaded them at home. Carts are at all times seen going through the streets loaded with these loaves, piled in like so many stones, and about as hard. The bread is always sour, as it is permitted to ferment till it is like honey-comb. Among the peasantry the great loaf is placed upon the table morning, noon, and night, and each one cuts and comes again till it is gone, though our tourist found it such a horrible mess that she could hardly swallow it.

A very considerable portion of this volume appears to be the result of personal observation. The authoress was evidently always on the alert, curious in regard to the most trivial details, and never weary of examination and comparison. She has also made a judicious use of the authorities of previous writers in matters of historical and statistical research; although, in some cases, she may have received with too easy acquiescence the verbal accounts of credulous or perhaps mischievous informants.

History of Friedrich the Second, by THOMAS CARLYLE. (Published by Harper and Brothers.) The copious summary of this work which has been given in a previous number of this Magazine will enable the reader to form an adequate estimate of perhaps the most characteristic production of its brilliant and profound, but erratic author. Not that the charge of eccentricity, in the usual sense of the term, can be fairly brought against Mr. Carlyle. He is untainted by the desire of producing a sensation, of making himself a conspicuous subject of observation, of exciting attention by the utterance of reckless paradoxes or the use of fantastic expressions; his writings have too much of his own heart for this; but, with the rugged earnestness of his Scottish nature, he loves to dig around the foundation of received ideas, and while detecting many a hollow spot, naturally exposes its weakness by his quaint and unexpected illustrations. But with all the strangeness of his language, Carlyle has no affectation of mind. His downright sincerity and straightforwardness do not always find sufficient representation in the smooth and formal phrases of the schools; and hence, to a great degree, he has been compelled to create his own vocabulary, and clothe his strenuous convictions in forms which have no precedent in the current usages of society. Allusion has often been made to the bad influence of such a style on literature. But the evil, whatever it may be, carries its own antidote. No one without the intense individuality of conception, and the inevitable habit of profound reflection, which form the basis of Carlyle's intellectual life, can imitate his manner without making himself ridiculous. Hence he has had, unlike most distinguished modern writers, no successful copyist. He must, accordingly, stand alone in English literature, and he who undertakes to handle his bow, without his nerve and sinew, will only expose his own presumption and feebleness. The volumes now issued bring us only to the threshold of the subject. We are introduced to Frederick the Great only as the Crown Prince; but ample preparation is made for the exhibition of his career as the prominent monarch of the eighteenth century. A frightful array of historical preliminaries is dispatched, and we may anticipate smoother sailing in the subsequent volumes.

The Life and Times of Sir Philip Sidney. (Published by Ticknor and Fields.) The traditional enthusiasm excited by the character of this paragon of chivalry has usually been accompanied with but little exact information in regard to his biography. The principal sources of knowledge on the subject are the memoirs by Fulke Greville and by Dr. Zouch, both of which fail to do complete justice to their illustrious theme, and have, besides, for some time been so scarce as to be difficult of attainment by the generality of readers. In the present work the writer has attempted to glean the scattered facts of the life of Sidney and arrange them in a succinct and accurate narrative. The task, in our opinion, has been accomplished with a very considerable degree of success. Every important document appears to have been carefully consulted, conflicting evidence patiently sifted, and a judicious estimate formed of the rare and beautiful character to which the volume is devoted. The style, in the main, is simple and impressive, though, perhaps, now and then a little disfigured by an unexpected ambitious flight. Sir Philip Sidney was born during the reign of Queen Mary, in Penshurst Castle, an old baronial dwelling in the county of Kent. His childhood and youth exhibited a generous love of learning, a singularly amiable disposition, and a certain pensive dignity which evinced a reflective turn of mind unusual at his age. He was educated both at Cambridge and at Oxford, where he became a proficient in Latin and Greek, and early acquired a taste for antiquarian research among curious old books and parchments. He cultivated not one art or science, but the whole circle of arts and sciences, aspiring to pre-eminence in every branch of knowledge. Before he had arrived at the age of seventeen—when he received his degree at the university—his judgment was consulted by men of science, while he was a liberal patron to artists. Every hour had its chosen employment; but none

was given to frivolous pleasures or unlawful indulgence. His personal appearance at this time corresponded to the promise of his character. He was extremely beautiful; his hair of a dark amber color, his eyes of deep blue, expressive of thought and feeling, and his features regular and harmonious. After leaving college he received a license from Queen Elizabeth "to go to parts beyond the sea for the space of two years, for his attaining the knowledge of foreign languages." He at once repaired to Paris, and under the auspices of Sir Francis Walsingham, then resident minister at the court of Charles IX., was initiated into the scenes of the great world. His manners attracted the fancy of the King, who appointed him to the office of Gentleman of his Bedchamber. Leaving France soon after the terrible massacre of St. Bartholomew's, he visited Germany, residing for several months at Frankfort, in the house of Andrew Wechel, a learned printer of that day, and arriving at Vienna in the autumn of 1573. Here he applied himself to the study of those accomplishments which were essential to the education of a cavalier—fencing, the use of arms in tournament and tilt, tennis-playing, music, and horsemanship. He next turned his steps toward Venice, which at that time abounded in the attractions most adapted to his taste. It was the rendezvous of poets, painters, and sculptors. Young cavaliers from England and France were in quest of silks and laces for their wardrobes, and of polished weapons and gilded leather for their military array. Soldiers from Stockholm and Madrid met on the ramparts of the arsenal. The glass-works of Murano furnished mirrors to Europe. The lovers of art found endless delight in the masterpieces of the Venetian school, which was then at the height of its glory. Pordednone, Paul Veronese, Tintoretto, and above all, Titian, still moved in the society, which was illustrated by the splendor of their genius. Palladio, the great architect, was yet alive. Tasso, though still in the bloom of youth, had written his "Rinaldo," and was about publishing his "Jerusalem." In such an atmosphere of letters and art Sir Philip Sidney would find a congenial abode. After residing a few months in Venice, he retired to the quiet and learned city of Padua, in order to devote himself to severe study in geometry and astronomy, to Cicero's Epistles and the works of Plutarch, which were then rare, and to be obtained only with difficulty. He remained there eight months, relieving his more strenuous literary pursuits by the pages of Petrarch and Boccaccio, Dante and Ariosto. After three years' absence from his native land he became impatient to return. He was now adorned with the ripest accomplishments. He had learned to converse fluently in the French, Spanish, and Italian languages; had enriched his mind both with classic lore and the literature of the age; had grappled with the profound problems of philosophy; had seen the ideals of his imagination embodied in the works of art; had learned lessons of statesmanship and military life, and was crowned with an indescribable grace, which, emanating from a serene religious faith, reflected new brightness on the consummate beauty of his character. His career, however, was one of promise rather than of accomplishment. The high hopes which his genius and virtue had awakened were frustrated by his early death at the age of thirty-two. "He trod," as has been said, "from his cradle to his grave amid incense and flowers, and died in a dream of glory."

The illustrated edition of *The Poetical Works of* EDGAR ALLAN POE, published by J. S. Redfield, is, in point of typographical and artistic execution, one of the most beautiful volumes of the season. It is too late now to speak of the rare genius of the unfortunate author, or of the errors of his life: the world has long done justice to the former and deplored the latter. Some of the best artists of both hemispheres have engaged in the illustrations to this edition. It contains a score of Pickersgill's admirable drawings; a dozen or more exquisite landscapes by Birket Foster; and about as many, fully equal in merit, by our countryman Cropsey; a few of Darley's characteristic designs; with others by Teniel, Skelton, and Madot. These are engraved upon wood in the highest style of the art, and full justice has been done to them by the daintiest and glossiest of cream-colored paper, the jettiest of ink, and the most careful printing. The volume is a typographical luxury which will be appreciated in this holiday "gift season."

The American Gentleman's Guide to Politeness and Fashion, by HENRY LUNETTES. (Published by Derby and Jackson.) Notwithstanding the masculine *nom de plume* borne upon its title-page, this work is understood to be written by a lady. It might very appropriately have been entitled "A Woman's Thoughts about Men;" and very sensible thoughts they are too, which Young America may study much to his benefit. He would learn that, in the opinion of a sensible woman, a Gentleman, and even a Man of Fashion, is neither a fool nor a fop; that good taste, with a decent respect for the current customs of society, is essential to good dressing; that good breeding involves a constant regard to the feelings of others; and that good manners imply sundry accomplishments not to be imparted by Monsieur Pirouette, or learned without study and reflection. Beyond these general hints he would find special directions for particular occasions: How to enter a room and how to leave it; how to welcome a friend or cut a bore; how to write a letter or leave a card; how to comport himself at home and abroad; in the parlor and the street; at church and the opera; how to eat, drink, talk, and walk; how to give presents and how to receive them; how to woo, win, and wed; how to treat his mother and sister, his female acquaintances, his *fiancée*, and his wife—all of which (to borrow the oracular language of Dr. Watts) "will be of very great advantage."

HERRING'S *Village Blacksmith* was pronounced by artists and amateurs to be one of the finest pictures ever exhibited in this country. It represents the interior of a smithy. The stalwart smith, pincers in hand, is engaged in shoeing a noble horse, when he is interrupted by his rosy wife, who has just brought his dinner; a greyhound, magnificently drawn, is gravely watching the operations of the blacksmith. The four figures—man and woman, horse and dog—are admirable types of their several species, and all the accessories of the group are rendered with perfect truth. The painting has been capitally engraved by Patterson for the "Cosmopolitan Art Association," every subscriber to which will receive a copy. The print measures thirty by thirty-eight inches, and is every way worthy the attention of all lovers of art. Engravings of this class are usually sold at from ten to forty dollars. The cost of subscription to the Association, which insures a copy of the *Blacksmith*, is but three dollars.

Editor's Table.

TEACHERS AND TEACHING.—The most thoughtful men are sometimes inclined to wish that Providence would authenticate the ministry of its agents in such a plain and palpable manner as to leave no reasonable doubt of the office assigned them. Nor can it be questioned that it would be agreeable, in certain of its aspects, to the senses and to the intellect to see the unmistakable seal of God on the brows of his chosen instruments. But, for wise purposes, this is not the mode of divine action. The elect servants of Providence have no Pentecost. They have no splendid inauguration in their work. Symbols of purity and power—the one glittering in the flame, and the other sweeping in the wind—do not attend their footsteps. Nothing more than indirect evidence is given of their call to perform great tasks. The agents themselves, as well as the spectators of their deeds, are left to ascertain the purposes of Providence by other methods than unequivocal signs or miraculous attestations; and thus the higher faculties of their nature are exercised in the growth of character, in child-like trust, in simple obedience, while they fill the sphere to which they have been silently and secretly ordained. It can not be expected, therefore, that the world will be always prompt to recognize such men as Providence selects to execute its plans. If the men themselves are often slow in arriving at the conviction of a decreed destiny—if their own divine instincts have to pass through a painful process of doubt and struggle ere they reach the open light of God's firmament—what wonder that the dimmer eyes of the world should be so long in reading their heavenly credentials?

Turn in what direction we may, it is not possible for us to find a more striking illustration of the effects of this Providential arrangement than in the position, historically considered, of the teacher. The ideal view of his office is one of the noblest and grandest that can enter the human mind. Call it the highest of earthly offices—call it the chieftainship among those intellectual and moral forces that have the stability, welfare, glory of society committed to their guidance and support—and the language, so far from approaching the borders of extravagance and bombast, is justified by the decisions of the most sober reason. And yet, despite of this great, outstanding fact, the teacher has been generally doomed to an obscure lot in life—his sense of respectability outraged—his zeal fed by no fire outside of his own earnest bosom—his influence subject to all sorts of limitations—and, not seldom, his soul crushed by burdens which the pride, avarice, and meanness of tyrant task-masters have imposed upon it. Who that contemplates the lofty attitude of the teacher in the divine arrangements of the social system could dream that English literature—the richest, broadest, deepest literature in the world—should have until recently ignored the existence and claims of this office, except for purposes of ridicule and satire? Who could have supposed that Johnson would have found it necessary, in his "Lives of the Poets," to apologize for Milton because he had once taught a school for boys? If the position of the teacher in our country has been better, on the whole, than in any other nation, it has not even here been estimated with any thing like a reasonable approach toward its merits. Our countrymen have acknowledged its practical importance, and, with loud words, have vociferated its utility. But utility in what sense? Have they demanded for it that utility which lifts it high above the economic value of the market-place and the exchange—which stamps it with the measure of an immortal worth, and associates it with those redeeming agencies that God employs to restore a ruined race?

Thanks to the spirit of the age, felt here as felt nowhere—thanks, especially, to the spirit of our institutions—we have a public opinion on the subject of education. No one can deny that it is one of the strongest forces of our land. Every man must rejoice in the wonders it has wrought. The civilization of the country, the rapid increase of material wealth, the extension of commerce, the unprecedented growth of national power, are all testimonies, clear and convincing, to the educated mind of our citizens. But, nevertheless, it must be said that public opinion in the United States on the subject of education is exceedingly defective. It does not conform to that high and elevated standard which the nature of the mind and the responsibilities of the work require. The great majority of the American people regard education as a valuable piece of machinery. It is the machinery of factories and railroads—only in a more dignified form. It is a commercial thing—appreciated in accordance with the laws of trade. It is an organic part of an earthly system—a most expert means of training the eye to a sharp outlookingness, the hand to a quick dexterity, the brain to an efficient instrumentality for business purposes. Nine-tenths of our population never think of education in any other light than as a chief auxiliary to worldly success. Personal and selfish considerations control their opinions of its uses and adaptations. The same imperfect view of education is taken in its bearing on the perpetuity of our national institutions. Education is represented as a cheap defense of nations—as a silent, unarmed, universal police that preserves the order and security of society. It creates an active, shrewd, intelligent community, versed in the geography of the earth, sagacious of times and seasons, potent in wielding the plastic elements of worldly prosperity.

Such sentiments in respect to education must react on the teacher. If the objects of education possess no other interest than belongs to a scheme of worldly advantage—if they are nothing more than a provision to get bread and meat, to secure respectability, to win distinction on the arena of earthly struggle—if man, in no other sense than as an intellectual animal, and as a creature for civil government, is the being to be educated, it necessarily follows that the teacher must be degraded to the same level of selfish and sordid carnality. The humble workman that sweats over the anvil and forge in manufacturing tools of iron and steel for the factory or the farm is side by side with him who converts the mind into a mere set of instruments to compute sales, determine the price of stocks, concoct pills, write legal documents, and order the affairs of state. A higher mechanic, it must be admitted—a more refined and elaborate artisan—but, notwithstanding the saving clause of intellectual precedence, the teacher deals with a mere fictitious nominality in the purer, sublimer forces of our spiritual nature. Agreeably

to this creed he is simply a skillful operative in the manufacturing department of intellect, handling brains as others handle cotton and wool, and stamping them as marketable commodities, to be exchanged for money.

It is easy to see that this position of the teacher is egregiously false and pernicious. It is not the position of an intellectual and moral agent ordained by Providence to perform a sublime and holy work. It is not the position of a man set apart in solitary significance from all other men, taken into closest companionship with God, commissioned to execute a task as vast as the nature of an immortal mind and as solemn as the issues of eternity. We do not deny that education has most valuable earthly uses and applications. Nor can we doubt that every just system of instruction and training will have due reference to the adaptations of the present life. Men must eat and drink, build houses and establish families, engage actively in trade and commerce. Education must look to this fact and lay no slight emphasis on its divine meaning. But let the fact stand where God puts it. Let food and raiment rest on the foundation and in the connection established by Christ's Sermon on the Mount. Any form of civilization that changes the ground of this fact wars against God's laws and curses humanity. Any system that assigns the teacher a mere earthly work, and cherishes no sacred estimate of the spiritual portion of his duty in developing the higher nature of man, and in ordering his life for the service of truth, virtue, and piety, is not in alliance with God's providence, but is treacherous to the noblest and best interests of our being. If a teacher fail to cultivate the prudential virtues of human life; if he neglect the great, practical, everyday qualities that are needed for sagacity, industry, and thrift, he certainly falls far short of his responsibilities. But let it not be forgotten that the earthly part of his office is tributary to its diviner part. A man's work in this world always leans on his work for the other world. Faith is essential to the right culture of the senses and of the intellect. Reason needs religion for its growth and discipline. And hence, the vitiating feature in most of our systems of education is, not that the earthly province of intellect is regarded, but that it is almost exclusively regarded. A teacher is thus degraded into a mere earthly machine. The mightier impulses of his moral nature are either left inoperative or they are utterly deadened; instead of doing God's work in God's spirit and in God's way, he does man's work with man's temper for man's glory.

What, then, is the teacher's true position? We consider him, in a specific sense, one of God's agents for the performance of a great and noble work. His office is a branch of God's providence designed to fulfill a most vital and important agency in executing the purposes of redeeming love and restoring man to the peace and blessedness of the universe. Its main sphere lies in the moral and spiritual portions of man's nature; in the affections, that involve his strength and happiness; in the conscience, that dictates the right and forbids the wrong; in the will, that executes the decisions of the judgment with inflexible energy — in all the deeper and most truthful instincts, that carry our progressive being in their intimations, and are ever struggling to free themselves from the darkness and evil encircling them. To form men to a just and respectable citizenship, so that they can honorably discharge their obligations to the commonwealth; to fit them for life and activity in their varied connections, and so develop their faculties as that they can answer the ends of an earthly existence, and, at the same time, contribute their share of effort toward the regeneration of human society, is the teacher's vocation; but all this is only a scaffolding for a task infinitely more suggestive and impressive. Man, as a moral agent —man, as the subject of divine government—man, as kindred to angels, enlisting the sympathies of perfect love and created to enjoy the companionship of perfect purity—is intrusted to his hands. It is in this capacity, representing the dignity and grandeur of an immortal being, precious to the affections of Jehovah, and consecrated by the blood of Christ, that the teacher finds the vast meaning of his work. Truth must have such a hold upon his reverence and love that it will flow forth in his looks, tones, and actions—a strong, steady stream, fed by the fount of Heaven. In his hands science must not merely embody the general laws of nature, but witness for God and express the wisdom and perfection of His nature. All art must respond to a divine claim and beautify the universe, not to the eye and intellect, but to the moral sensibilities of the heart. History, too, must testify, not in dead words, but in the living tongue of faith, to God's presence among men; its events must be interpreted to show His authoritative control over the affairs of mankind and along the path of centuries past; his illumined eye must trace the movements of that cloud of pillared flame which, as of old, has guided the elect of God to victory and glory. To him is committed the task of separating the true from the false, the pure from the base, the precious from the vile, the abiding and eternal from the vain and transitory; and appreciating all that is fair, and loving all that is good, to introduce it into the minds under his care, and nourish them with its quickening sustenance. By him the sensibilities of the mind in their relation to intellectual tastes and habits are first awakened. By his fingers are those chords first struck which are to vibrate forever with notes of joy or woe. The earliest impressions, the most permanent influences, are received from him; and, indeed, the position of the teacher places him between the phenomena of the universe, the varied and wonderful facts of human history, the multiplied experiences of life, and the pupil dependent on him, almost implicitly and exclusively, for knowledge, direction, and guidance. It is his genius that interprets the world to the youthful student, explains its mysteries, solves its enigmas; the elder nature is received into the younger nature and blends with its struggling vitality; his image is reproduced, and his power, whatever may be its degree and bearing, becomes an assimilative force that is never lost.

The office of the teacher, therefore, is a ministry of Providence. It is a divine work that he has to perform. A portion of his labor, by its nature and results, is incorporated with the present constitution of society. It may be seen in the industry and skill of a thriving population. It may be seen in smiling homes and crowded thoroughfares of business. The earthly magnificence of civilization attests its presence and exalts its power. And viewed in this light, it takes its place with other temporary arrangements to improve and advance the material condition of the human race. But its

real import is not rendered in these facts. The great work of the teacher is not made visible in such outward and perishable signs. Mind exists for higher purposes than are attained in civilization. It seeks a nobler habitation than iron or marble. It is subject to a better economy than civil society. It has been created for a wisdom that dwells in the mind of God—for a strength, spiritual and sublime—for a communion invisible and eternal. And it is mind with such susceptibilities and aspirations—mind as the image of God—that the teacher has in trust to impress and ennoble. The work, then, of the teacher is a Christian work. Its conditions, instrumentalities, aims, and ends, are distinctly and vitally Christian.

How strikingly and beautifully significant in their respective spheres are the offices of preacher and teacher! The one is to the scheme of Divine Grace what the other is to the scheme of Divine Providence. Instituted directly and authoritatively by God, invested with His most sacred and affecting sanctions, the office of the preacher represents all that is most solemn and touching in Christianity. In his tones of expostulation and entreaty, the voice of Jesus as once heard amidst the scenes of the land of the olive and the vine and suddenly hushed in the death-cry of the cross, again rises and swells over the world—its wonderful compass of utterance completed with the triumphant notes of the resurrection, and the pathos of its humiliating story set in magnificent relief by the jubilant proclamations of the coronation-glory in heaven. Every Sabbath and oftener, those tones are penetrating hearts that know their Shepherd's call and heed it. The widowed mother listens to His consolations, and bereaved sisters witness the falling of His tears over their lost Lazarus. Nor is His earthly life only embodied in the work of the ministry of reconciliation. Entered within the vail of the upper sanctuary, and standing in the immediate presence of his Father as the High-Priest of a redeemed race, he repeats his intercessions by the mouths of his anointed servants, and claims the homage of the world as the merited inheritance of his prayers and love. Through this ministry God and Christ are still with men. Through it, the Holy Spirit, commanding the resources of omnipotence and holding the secret springs of every human heart, glorifies the grace of redemption. Through it, a heavenly guardianship is exercised over the spiritual welfare of the Church, and a redeemed race sanctified to God. But the wisdom, power, glory of God are not limited to the Gospel. The forms which they assume in its doctrines and precepts are transcendent, and, viewed in their origin and authority, are exclusive. They shut out all rivalry. They put at an infinite remove all possible approach to their incomparable excellence. It is true, nevertheless, that God intends the spirit of this Gospel to vitalize all nature, materialism, life. Therefore, while he limits the preacher to the work of preaching the Gospel as the means of salvation, and allows no interference with his specially-assigned vocation, he commits this other work to other hands. Another agent has been chosen to fulfill this mission. Another ministry has been organized silently, without signs and wonders, without a baptism of fire, to represent God, Christ, and the Holy Ghost in those relations to nature and society which are sustained by man in his present fugitive existence. This is the ministry of the teacher. The peculiarities of this office, distinguishing it from every other kind of action on the human mind, indicate its divine aspects in the economy of Providence. The evidence is not, indeed, outward and demonstrative. But look at its inward spirit, its moral scope, its breadth of bearing, its intensity of influence, and who could imagine that God would confer such a power on this agency and assign it no specific task in the system of his government? The divine mind has revealed itself in Christianity. Its attributes and perfections, its plans and purposes, are there made known. And why? Not only that we may believe in Him as the God of the Bible, but that we may be able to detect His working, and identify His presence in all other forms of manifestation. The principles on which He holds intercourse with the human mind are there stated, illustrated, confirmed. Guided by the light shed from the sacred page on God's character and acts, we are ordinarily competent to trace His intelligence and goodness whenever and wherever they are exhibited. If, then, we have caught the impress of God from the Scriptures; if, furthermore, we have been trained by them to perceive and recognize His image, whether it rise to our view amidst the wonders of creation or the mysteries of Providence, we need no argument to convince us that the office of the teacher is peculiarly significant of a divine end, and demands, for its efficient action, the endowments of a divine spirit.

Now it is just here that American mind needs a new mode of culture. Our public opinion, as before stated, puts the teacher among the agencies of a material civilization. It assigns him an earthly office, presents earthly motives, bestows earthly rewards. It is mainly secular in its spirit and aims. Nor are teachers generally in advance of public opinion on this subject. The most of them accept the verdict of the masses, and look no higher than the temporal aspects of their work. Few of them have a warm, glowing, bounding heart in their labors. A certain degree of interest, perhaps of pleasure, they are compelled to feel in their vocation. The laws of business necessitate this state of mind; selfishness demands it; but every thinker knows that only the surface of the soul responds to such feeble and evanescent motives. The depths of the heart, where dwell the supreme forces of thought and energy, where the imagination finds its eagle wing and the will its Herculean strength, where the nerve gathers its lightning and the muscle its brawny vigor, these depths never answer to the call of sordid earthliness. Hence teachers so often disparage their work. They do not disguise their dissatisfaction, oftentimes their disgust, with its duties. It is a dull and monotonous routine, a weary drudgery, a thankless thing; and in this spirit a great number of them hasten their escape from its galling bondage and seek a more congenial sphere.

The great points to which this higher culture of opinion, as it respects teachers and teaching, should be directed, are the moral aspects of the work and its relations to the providential indications of the day. Let us look first at the moral aspects of this work.

Teaching is not a trade. It is not a secular profession, growing out of the conventional necessities of society, and founded on the propriety and convenience of distributing labor into different hands. No; if it were, it might be left to adjust itself to the circumstances of the age, and the selfish inter-

ests of men be trusted to guard its action. Teaching has a deeper and broader basis than trades and professions. It belongs to mind as mind, springs from the essential conditions of its present state, and involves the whole system of Providence in its mode of dealing with mankind. The office of the teacher is a necessary result of those laws which the Creator has impressed on mind, and his agency is intimately, inseparably connected with those ends which cultivated intellect is designed to subserve. Other men in their business relations to society may be viewed as products of civilization, a sort of after-growth that the diversity and complexity of the social state call into existence. The teacher does not occupy such a position. Society affords him a field of action, but it does not originate his responsibilities, nor can it define the measure of his duties. Standing in closer contact with mind than any other human being, and working in a sphere peculiarly spiritual and sacred, he must be contemplated as one of those select means that Providence ordains to fulfill its vast purposes of mercy toward the family of man. His work, therefore, is pre-eminently moral. The ruling idea of his position is drawn from the fact that he is the appointed agent to introduce a moral being to those objects of thought, and to awaken those susceptibilities, which involve moral welfare. Intellectual culture must be held strictly subordinate to this higher aim. If he is a mere intellectualist, knowledge may be imparted, talent aroused, genius stimulated; but this is the smallest part of the work that God gave him to perform. The plan of Providence obviously is, that the heart is the avenue to the intellect; and it is equally apparent that the teacher has a much more important task to execute in behalf of the moral sensibilities than for intellectual functions. Looking at his work in the light of intellectual philosophy, every sensible teacher knows that the capacity to feel is stronger, quicker, deeper than the capacity to think; and, moreover, he knows that if he would cultivate the reasoning and imaginative faculties he must draw on those resources of impulse and activity which are gathered up in the heart. Apart from this, the moral nature is more plastic than the intellectual; it is more controllable by educative means; the sympathy, example, and spirit of the teacher exert a much greater influence over it than over the intellect; and, consequently, the purpose of Providence is clearly indicated that the teacher shall make this portion of our nature the sphere of his greatest efforts.

The direction, then, in which public opinion on this subject should now be cultivated is evident. It is not mere scholarship that we ought to seek at the hands of teachers. No amount of communicated knowledge, no acquirement of skill and power in the use of the intellectual faculties, no brilliancy of developed genius on the part of his pupils, should satisfy the claims that we have on teachers. If they give us cultivated intellect alone, or, taking a step higher, if they give us cultivated intellect with prudential habits and a conventional virtue, they have defrauded us of the truest, noblest part of their work. So far as that culture extends it is worthy of just and generous appreciation. But it does not extend far enough. It doubtless meets the demands of society. It is the education that ordinarily satisfies the factory, the counting-room, the exchange. Broadway and Wall Street care for nothing better. Still, this is not the real issue. Education has an infinitely greater work to do than to supply mercantile wants. Its office is not to furnish sharp, shrewd intellects, ready accountants, safe engineers. It does not glory in converting men into interest-tables and counterfeit detectors. No; the work of the true teacher is to give us MEN.

The position of the teacher, if studied in the light of Providential law, is a position in advance of the spirit and tastes of society. The most practical of men, he is an idealist whose imagination pictures the possibilities of progress ere they open to minds of less far-sightedness. What others know of mind by experience and observation he perceives by instinct. A man of faith, he interprets the phenomena of intellect by higher rules than logic offers; a man of feeling, his spirit gives him access to the hearts of others. The habit of thinking for others, although a strong social tie, tends to insulate him from the common forms of intercourse; and hence, in certain aspects of character, he is the most solitary of beings. The teaching mind is eminently suggestive. Freshness is its most prominent characteristic. No thought is old, no image commonplace, no arguments trite, to its ever-quickening activity. There is always something in its original resources to impart a brightening glow to familiar facts and oft-handled topics. It is consequently a creative intellect, rejoicing in its strength, seeing in every hour what it never saw before, and cherishing a sense of easy, child-like, buoyant novelty that is never satiated. The world is not a dead thing to its eye and heart. Books live, nature lives, science and art live, before it. Religion is a constantly-transforming power, and into its experience something more of heaven daily enters. Such is the character of the true teacher. And how can a mind of that scope, a soul of boundless sympathy with whatever is beautiful and trust-worthy, a spirit fed by the hand of God with the bread of immortal life—how can such a man reduce himself within the narrow proportions of a fictitious conventionalism, and live for the poor awards of the perishing hour? Every genuine teacher is conscious of a leadership in mind, conferred by God, and not to be alienated at the caprice of fashion and the whims of opinion. Few such there are; but these select few present the true standard, and disclose to us the "*pattern*" of the divine mind.

The second point we proposed to notice is the relation of the moral aspects of the teacher's work to the Providential indications of the day.

It is quite clear to us that we are in a transition period as respects this great subject. Reforms, at first, rarely define themselves. A feeling, born of God, is awakened in the hearts of men—a feeling of imperfection in the prevailing system—a sense of dissatisfaction—and then, a gradually-shaping thought—impulse subsiding in firm and fixed will, followed by union of sentiment and action on behalf of the proposed change. We think it is beyond doubt that the opinion of the advanced Christian thinkers of the day is undergoing a vast, a radical change on the subject of education. So far, the movement has assumed no public, palpable form, but it is silently, effectually advancing. The leaven is working, and that, too, powerfully. There is an evident, a deep-rooted discontent with all our modes of education. Men feel that there is not a sufficient degree of moral dignity attached to the office of teaching; and furthermore, that the results of our present systems of education are not,

either in kind or degree, what they should be. In many instances that have come under our personal knowledge, there is a settled distrust of our higher academies and colleges. Often we hear leading men declare that they will never send another son to college. Making due allowance for the spirit of fault-finding, which is so common in the world, and believing, also, that no small share of the blame thrown upon institutions of learning would be much more justly located if put to the account of vain and thoughtless parents, we must admit that the demand is altogether reasonable for a higher tone of teaching. We need the noblest order of men for this work. Give us men of ripe, extensive, thorough scholarship, men of refined, elegant tastes, and high, commanding intellects; but let them be men of perfected power, who can communicate themselves as well as their learning—men of profound impulses and burning sympathies, who have souls to move the world. There is a manifest want of this sort of personal power in most of our teachers. Too many of them are only living editions of text-books. Destitute of all vital, transmissive, inspiring influence, they confine themselves to accurate analysis, patient elaborations, learned comments on subjects in hand, but no virtue goes out from them, and they never stir the depths of souls that await their touch to spring into life. This is a capital defect. There is no excuse for it. There ought to be no forbearance extended to it. A man who can not rouse the faculties of his pupils to think and create for themselves, who is simply content to drag heavily through a recitation and allow the minds before him to slumber on, is no teacher. No matter what his learning, no matter what his other qualifications, if he fail here he is unfit for his position. The main work is left undone. For the great office of the teacher reaches far beyond his supervision of the acquirements of his pupils. Where acquisition ends the highest education begins; and hence the paramount aim of the teacher should be to cultivate the mind so as to give it a full and complete power over its stores of knowledge, and thereby keep the faculty of thinking in its rightful ascendency over the faculty that merely receives. But, above all else, we need in such men the strong and earnest spirit that magnifies its office, and embraces it as a trust from God. Such a spirit will have all the glow that imagination kindles; and filled with impulses more stirring and fervent than chivalry excited, and throbbing with a heroism that feeds on achievement and lives by conquest, it will bear its possessor through his labors as a glorious pastime, in which he rejoices with exceeding joy. Such a spirit consecrates men in their work. It gives them peace and satisfaction in all its arduous duties. It is a religious spirit, emanating from God, and lifting the heart back to Him; and whenever its presence is enthroned within the teacher it crowns his life with the truest and most lasting usefulness.

It is a hopeful sign that such teachers are beginning to be demanded. Men are opening their eyes to the fact that education does a much grander work for man as man than for man as artisan, physician, lawyer, statesman; and the truth is slowly vindicating itself that it is a mightier instrumentality for the family than for the state. We hail this as a significant indication of a brighter era. Of all causes that have tended to enfeeble the power of the teacher, and to restrict the scope of education, the general sentiment that the whole system was simply designed to make respectable citizens has been most pernicious. Happily for the age a broader and sounder view is taking hold on the public mind. It is one step toward freedom from the bondage of a material civilization; and if faithfully pursued, we shall soon see teaching regarded as the apostleship of God's providence.

Few things are more suggestive to a reflecting mind than the wonderful development of intellect at the present day by means of the external agencies and appliances of civilization. Certain it is, that in this country a large proportion of our intellectual energy is quickened and organized by these outside causes. Trade, enterprise, competitions, ambition, newspapers, are the electric influences that thrill through the brains of our countrymen. What a mighty galvanic battery is New York! Imagine a net-work of wires extending from New York and thickly covering the whole surface of the land—every prairie, and rice-field, and cotton plantation lying beneath its closely-woven filaments; the mountains of granite, and the mountains of coal, and the mountains of iron held by its magic threads as firmly as gravitation binds them to the globe; the waters of the Northern Lakes and the waters of the Southern Gulf; the waters of the Mississippi and the Penobscot, of the Potomac and the Rio Grande, all opening a submissive avenue to the lightning, and then embosoming it as serenely as if they remembered their divine brotherhood in the clouds, and would gladly renew their severed friendship in the firmament; the wheat lands of Wisconsin and the sugar lands of Louisiana alike yielding their sods of wealth to its welcome touch, and pulsating in every atom of dust under its strange quickenings; and then far away westwardly, where another shore fronts another continent, and the children of the young East look forth on the fathers of the old East, even there the golden sands sparkling under the same outspreading wonder—imagine such a telegraphic triumph with all its quick-coming and fast-changing might, and what is this picture compared with the living reality of New York! Who can compute the number, measure the intensity, comprehend the effects of such a city on the intellect and heart of the whole country? One of the peculiar features of American industry, in contrast with the severe toil of other nations, is its constant, inspiriting action on mind. With us labor and opportunity—the open field and the free rivalry—have a prodigious influence on the growth of talent and genius. At the same time they expose American mind to great evils. The difficulty obviously lies in the want of balance between those agencies which act on the national intellect through our educational system, and those which operate so much more potently in after life. To what extent this adjustment of forces could be practically secured it is difficult to determine. But it can scarcely be doubted that the peculiar temper of American mind might be better consulted in our methods of education. By this we do not mean that the course of study should be adapted to the utilitarian views of our people. The ordinary routine of education should never recognize the prevailing forms of outward life. Nevertheless it is exceedingly important to deal with American mind during the season of instruction and training with reference to the spirit which the future is almost sure to awaken. Take, for il-

lustration, two prominent elements of American mind, viz.: IMAGINATION and IMPULSE. Every thinker knows how largely these enter into the everyday life of our countrymen. If they seldom assume those more distinct and palpable shapes which are denominated Utopian and Quixotic, they yet pervade in a more subtle and diffusive manner nearly every thing that we undertake. Now, assuredly, there ought to be special reference in our methods of culture to these faculties. Such modes ought to be used as tend to develop and discipline them. If they stand out conspicuously in American life they ought to stand out conspicuously in American training. But just here our present system of education is strikingly defective. American society pays the penalty of the neglect. Imagination and impulse, denied the refining and ennobling cultivation they are entitled to receive, spring into intense activity under the stimulants of American life, and frequently display themselves in forms of intellectual and moral morbidness, of reckless speculation, of fanatical violence, that dishonor our nature and darken our name.

It is not easy to remedy this evil. Freedom of intellect, like freedom of action, naturally tends to excess. Strength is nearly allied to lawlessness. Energetic life is impatient of restraint, and hurries into wild extravagance. But it is anomalous that a community like ours, showing such solidity of common sense and heartily devoted to the cardinal virtues of private duty, should have so large a degree of unbalanced intellect and unregulated passion among its professedly educated classes. There is much more of this fanatical folly than circumstances explain. The infirmities of human nature do not afford a solution of the problem. Our conviction is clear that the educational system of the country is neither active nor thorough enough for the impassioned force of American mind; and hence the pressing want of the day is a mightier vitalization of those agencies, which are organized to act in the guidance and discipline of our youthful population. Nothing is plainer to our mind than that the office of teaching is rapidly assuming a new and vast interest, detaching itself more and more from the mere economic arrangements of society, and yet, at the same time, pressing closer and closer on them, rising higher and higher in sacredness of nature, and extending wider and wider in scope of activity. It is much more than a conservative energy; it is a creative, determining, perfective power. The one is content with the past, the other aspires to the divine idea of the future. The one keeps things as they are, the other improves them. If a man is in fine health conservatism may preserve his vigor. If he has a fortune, it is a safeguard against waste and profligacy. If he were in Paradise it would be a wise counselor, and, heeded, would restrain him from the forbidden fruit. But in this disordered and wretched world we need a more living and demonstrative force than conservatism. We need seers whose eyes shall catch the vision of what society ought to be, and whose tongues, touched by seraphic fire, can tell the glory sweeping before them. And our faith writes itself in this simple creed, viz.: The preacher and the teacher are God's chief agents in the intellectual, moral, social advancement of the world. Public opinion in the United States is favorable, in an eminent degree, to the position and influence of the preacher. Taken as a class, our ministers are a most noble body of men, worthy of the confidence and devotion with which they are regarded. If the American pulpit be measured by a just standard of intellect, piety, and usefulness, it must be acknowledged that it exerts a most salutary agency on the thought and character of the country. Next to the preacher should be ranked the teacher. If the one belongs to the ministry of grace, the other belongs to the ministry of providence. And whenever the teacher's work is elevated to the rank God has assigned to it—whenever men enter on it as on a hallowed task, and bear its burdens, meet its sacrifices, discharge its duties, by the motives and for the glory of the cross of Christ—then shall we see the quick gathering of a new splendor on our sky.

Editor's Easy Chair.

"Beware the January month, beware
Those hurtful days, that keenly-piercing air
Which flays the herds; when icicles are cast
O'er frozen earth, and sheathe the nipping blast."

SO sang old Hesiod before any other singer that the world has ever heard; and how the conventional English translation makes it sound like Cowper or any other mild English poet. The literal translation, given by Rev. Mr. Banks, "head master of Ludlow school," in England, shows us how much is lost in twisting the old Greek into modern English rhymes:

"But the month Lenœon (evil days, all galling the oxen), this month avoid and the hoar-frosts which, when the north wind blows, are hard upon the earth; the north wind which sweeping through steed-rearing Thrace upon the broad deep is wont to heave it, and land and forest re-echoes; and falling on them brings to many-feeding earth many lofty-foliaged oaks and branching pines in the mountain dells, so that all the immense forest resounds."

Such a simple, straight rendering smacks of the racy, sinewy Greek. But the old English translations of the classics, and of all foreign tongues, are as unjust as the French form of the Greek drama. French art, indeed—except the modern stage and the mechanic arts—has always been second-rate. What could a child, introduced to Greek fable by the measured jingling of Racine or the rougher hand of Corneille, know of the mystery and terror and pathos of the stern old story?

The same conventional paralysis falls upon the British translations of a century since. Pope's Homer is the archetype of all of them. It was one of the marvelous literary successes of the age. It was a splendid exercise of scholarly ingenuity. In an age when there was no great genius, and a society utterly artificial, it looked, of course, much larger than it is. It looked very large indeed to Addison, and perhaps he was not unwilling to help Tickell in a rival translation.

"Who would not smile if such a man there be?
Who would not weep if Atticus were he?"

But there is as profound a difference between Pope's Homer and any simple literal translation as between Pope and Chaucer. The marrow, the sweetness and force, all seem to escape from the regular cadence of the harmonious line. It is Homer in a peruke and small-clothes—as in Pope's time they played Macbeth in a full-bottomed wig. No wonder Shakespeare suffered in the estimation of such an age; no wonder that Pope's translation increased the vogue of Mr. Pope, but did little in giving a new world to Homer.

So it is with Sir William Jones's translations from the Oriental languages. They are conceits dressed *à l'Anglaise*. Charles Lamb, writing to Cary, the translator of Dante, says: "Your Dante and Sandys's Ovid are the only helpmates of translations. Neither of you shirk a word. Fairfax's Tasso is no translation at all. It's better in some places, but it merely observes the number of stanzas; as for images, similes, etc., he finds 'em himself, and never 'troubles Peter for the matter.'" It is strange Lamb did not mention Chapman's Homer when he was writing of the matter—Chapman of the long, majestic, resonant line.

But if there must be translations, let us have the words as nearly as they can be rendered. A man forgives the rhythm, for it can not be reproduced. It can only be imitated in the new language, except, indeed, in translations from the modern German, which sometimes turn themselves into English. However, that is not merely because of the resemblance of the languages, but it comes from the spirit of the age. As there is a more intimate intercourse among nations, the national habit of thought is modified—becomes less individual, and more universal. The modern mind of the world thinks together—so that we can without great difficulty English a French or German work without losing the peculiar flavor. But what shall we do with Italian novels of a hundred and fifty years ago? What do we do with Boccaccio?

If in Homer's day there had only been an England and English scholars, and some one of them had done his "distinguished" contemporary into our native tongue, how racily different and how much more true it would have been than any version we have!

The Easy Chair slips into this chat about translations as he straightens his legs before the cheerful winter fire, and thinks of Christmas and of New-Year's, and of the pleasant leisure that comes therewith—a leisure to be consecrated to and by good books of every age.

In country homes especially, far and near, where, by long usage, the Easy Chair has perhaps a monthly place, it loves to hail the fires that announce the setting in of the long, comfortable home-evenings, in which some manly or tender voice invites the poets and philosophers and story-tellers of every time and country to share and quicken the social life.

Oh, happiest fate of all, to say what strangers gladly hear, to be placed in print upon the family shelves, and so, as it were, adopted into a thousand circles! For the family is not only the people who darn stockings and laugh and chat and fall asleep, but it includes the pictures on the wall, the bird in the cage, the dog and cat upon the mat, and the silent, modest friends, who, "clothed all in leather," stand cheerfully against the wall, or lie willingly upon the table. Yes, and the tiles around the chimney.

"The lady with the gay macaw,
The dancing-girl, the grave bashaw
With bearded lip and chin;
And, leaning idly o'er his gate,
Beneath the imperial fan of state,
The Chinese mandarin."

In the brown old farm-house, sunken under the hill among gray mossy apple-trees, near Newport, where the good Bishop Berkeley lived when he was in this country, there are the tiles still ranged about the fire-place which he brought from England. Whoever sees them looks into the Bishop's home, and talks with him, and listens to the grave, sweet voice weaving strange speculations and breathing high hopes for humanity.

With such friends of every kind around us—old Hesiod himself among them—and with the bright blaze before us, shining in kind eyes, and that kindness sinking deep down into our hearts, why should we "beware the January month?" Why should we not hail the days and nights in which the sense of comfort from art is most exquisite, and in which we may help those who wonder where they shall find the fire that burns bright and warm for them?

But while we chat of books and men, do not forget the sweet season, the holy tide. Remember Christmas and New-Year—the festivals of good actions and good resolutions. May not a man's charity at Christmas (the Easy Chair does not mean his giving diamond necklaces to his wife, but his real charity) be taken as the test of the honesty of his vows at New-Year's, and the tenacity of his purpose?

Hark! hear the Waits:

"Christmas is here!
Winds whistle shrill,
Icy and chill,
Little care we;
Little we fear
Weather without,
Sheltered about
The mahogany-tree.

"Once, on the boughs,
Birds of rare plume
Sang, in its bloom;
Night-birds are we,
Here we carouse,
Singing like them,
Perched round the stem
Of the jolly old tree.

* * * *

"Evenings we knew
Happy as this;
Faces we miss
Pleasant to see,
Kind hearts and true,
Gentle and just,
Peace to your dust!
We sing round the tree.

* * * *

"Sorrows begone!
Life and its ills,
Duns and their bills,
Bid we to flee.
Come with the dawn,
Blue-devil sprite;
Leave us to-night
Round the old tree!"

But while so many bring in the boar's head with rosemary and sing that song, how many others will hereafter sing, remembering this Christmas:

"With trembling fingers did we weave
The holly round the Christmas hearth;
A rainy cloud possess'd the earth,
And sadly fell our Christmas eve.

"At our old pastimes in the hall
We gambol'd, making vain pretense
Of gladness, with an awful sense
Of one mute shadow watching all.

"We paused; the winds were in the beech;
We heard them sweep the winter land:
And in a circle, hand in hand,
Sat silent, looking each at each.

"Then echo-like our voices rang;
We sang, though every eye was dim,
A merry song we sang with him
Last year; impetuously we sang.

"We ceased: a gentler feeling crept
Upon us: surely rest is meet:
'They rest,' we said, 'their sleep is sweet,'
And silence followed, and we wept.

"Our voices took a higher range:—"

So let all our voices, and repeat once more what every returning Christmas should hear us repeating, Milton's Ode on the Nativity.

And so, kind friends, a merry Christmas, and peace be with ye all!

Yes, and a Happy New Year!

For the day, which is like all other days, and yet entirely different, has come also, and men and women feel older—feel as if there had been some especial step, some peculiar movement in the great march of life.

When the clock strikes we feel as if something had been achieved. But the same passage of time is marked by every monotonous tick of the pendulum as by the sweet clangor of the bell. The lover loves no more when he tells his passion than when he is silent.

Last night, the last of the year, was St. Sylvester's eve. He was the first Pope of that name, the Saint, and perhaps a worthy man. In any case, he gives the title to one of the pleasant and half-melancholy evenings of the year. In Germany it is an open and solemn festival.

How well the Easy Chair remembers the *Sylvester-abend* of a year which is past now as irretrievably as the years before the flood. Strauss, Johann Strauss of Vienna, *the* Strauss who composed the waltzes and loved the Princess Sophia (as romance tells), and composed for her bridal the pulsing, yearning, melancholy *Sophien Waltzer*, gave a concert in Kroll's Garten. It was in that pretty pavilion which is now fallen forever.

We all sat chatting and smoking the light cigar, or drinking the mild white beer of Berlin—beer which is drained from glasses so long that the drinker seems to himself, as he gazes along the vast perspective, to be pouring the Amazon down his throat. The busy women sat knitting, with cups of coffee at hand; the husbands were musingly smoking and reading the well-read paper. Up and down the long hall swarmed the younger people. How can the Easy Chair call them beautiful? how can he call them graceful? Let him be content to say that they were cheerful and rosy, and that nowhere has he ever seen a more contented throng.

By-and-by came guests with false noses and whiskers, and stage cloaks. It was an amusing travesty of a *bal masqué*—a ball of masks in which nobody was masked. There were flashes of fun, and peals of loud laughter, and a growing buzz and rustle, when a compact man, buttoned closely in a black suit, stepped quickly from the side of the platform upon which the orchestra was gathered. He advanced to the front, and turned toward the audience. His head was square, and the short, stiff, black hair rose directly from his earnest forehead. There was nothing flippant or foppish in his look, but rather a sad sobriety. Without waiting to bow or smile, he bent his head to the audience, and at the same moment raised his arm and his violin-bow. It was like touching the key of an organ. There followed a burst of rich instrumental harmony. The men laid down their papers, the women knitted on in quiet enjoyment, and one by one the young people, in every kind of comic costume, slid into the circling waltz.

The delicious music poured from the orchestra; and the figures, full of gay life, glided around the hall. The imperturbable figure of the conductor stood erect, and upon the sway of his directing, moderating arm seemed all the sound to wait. The *élan* of the music is indescribable to all who have not heard it, or who do not waltz. It was hard to think that any body could hear it, and not feel the Terpsichorean fire creeping through the veins. It was as subduing and supreme as the summer air—yes, and as passionately languid. The music streamed, the dancers circled on. Tap, tap! the imperturbable man with stiff, iron-gray hair knocked upon his stand. It was the sign of stopping. Louder and louder the fiddles and the flutes, and the wailing oboes, and the hollow bassoons; swifter and swifter the hurrying happy feet; one more wave of the arm, the hand dropped, the music ended.

And so it continued all the evening. The pretty pavilion flamed with bright lamps; wreaths of Christmas green hung festooned along the cornices; there was a rushing of waiters, a confused hubbub of talk and laugh, an incessant movement; then the long appealing adagio chords that introduced the theme, chased by the light leaping waltz.

But the whole scene was ruled, actually and in its impression, by the compact little man buttoned up in black clothes. There was something weird in his appearance—a total suppression of his real life under the necessity of the moment. It was easy to believe all the stories that were told of him, as he stood there impassive and absolute. A cloud vailed him, although he was visible directing an orchestra. One thought of the Princess, of the exquisite sadness of the bridal waltzes he wrote for her, and how he probably stood in the same severe and sad posture, conducting them as they were played for the first time, calm and implacable, pouring all his wild regret into that lyric melody, by whose inspiration the eager feet sped on in the palace hall, until, fatigued and fainting, the Princess fell.

Hoffman would have made a story of Strauss. But to see Strauss was to read a story of Hoffman's.

It was long past midnight when the Easy Chair came out, and, through the black Thier-Garten, went homeward to the city. Beneath the stately Brandenburg Gate, and under the Lindens, he passed to the Friedrich-Strasse, and so to his room. With his mind full of the strange, pathetic figure of the musician he fell asleep. And suddenly, "in the first sweet sleep of night," he was awakened by a sound so soft and exquisite and solemn, that, as he lay wondering and thoughtful, he seemed to hear the very divine harmonies that announced the Nativity.

"When such music sweet
Their hearts and ears did greet
As never was by mortal finger strook;
Divinely-warbled voice,
Answering the stringèd noise,
As all their souls in blissful rapture took,
The air, such pleasure loth to lose,
With thousand echoes still prolongs each heavenly close."

So must the early Christians have been heard singing in the Catacombs, filling the air with holy joy.

There was something so peaceful, so consoling, and sympathetic in the sound, that it was useless to try to find out whence it came. All that had been sweet and sad—all that was to be regretted and deplored—all that was best and worst to be remembered in the history of the year, was plainly heard in that music. And yet so tender, so entreating—"Come unto me, all ye that labor and are heavy laden, and I will give you rest."

The next morning it proved to be the New-Year's singers—a kind of Waits that go from house to house singing hymns. But floating up from the street, and stealing in through the chambers to the back of the house, it easily seemed the voices of angels singing in the air.

And, ever since, no night of all the calendar is more honored by the Easy Chair than that of Saint Sylvester.

Of all the topics that interest the groups in town that hang upon the arms of the Easy Chair none is of more frequent or sadder mention than that of the execution of the boy Rodgers.

"Child-choking," says Veal, gently.

"Tut, tut," interposes Leather; "a youth of eighteen is no chicken. He was just as responsible as he would have been at forty."

"And yet you can not deny," adds Martingale, "that there is something horrible in coldly hanging up a boy on a gallows."

"But why," cries Leather, again, "why have all your sympathy for the death of the evil-doer, and none for that of his innocent victim? If it be a terrible thing that a man who has imbruted himself with drink so that he rushes out and covers himself with the blood of an innocent man should be killed, what have you to say of the equally sudden killing of a quiet, inoffensive man walking along the street? If it be a question of sympathy, it really seems as if you might spare a little for the man of the two who was not drunk, and who had not cut off the head and hand of a worthy family."

Leather had the air of a man who has said an undeniably true thing. Martingale shook his head.

Veal took up the thread of talk.

"Here was a youth who had lived in the country all his life—who comes to town and falls into bad company: gets drunk with others, and into a brawl: a man is murdered, and he alone of his company is caught. Now, granting that blood must have blood, you must also grant, what the laws allow, that there may sometimes be a justification of mercy. And is not mercy justified in the case of a boy who is drunk, who has no malice, and of whom more can not be truthfully affirmed than that he was one of a party which committed a homicide? Ought there to be no difference in the punishment of such an offender and one who goes deliberately and murders a man in revenge of a grudge—or to rob his pockets? The boy's chin was yet downy: he had evidently repented: it is not known that he committed the deed. Granting that the good order of society requires blood for blood, it did not require *his* blood." And Veal turned pale with excitement.

"Your theory would put an end to the operation of the criminal law," said Leather.

"I can not see that," replied Martingale. "The privilege of mercy in society is just as sacred as the necessity of justice. In every case of criminal conviction the inevitable question will be, 'Will society be better served by mercy or justice?' Generally, you may say, the latter will be the best servant. But then you allow that there may be other cases. Was not this one of them?

"Of course the offense of getting drunk is not to excuse the crime of murder. But you are not to hang a man because he gets drunk. And say what you will, a drunken man ceases to be a moral agent. You may say that he does so at his own risk. But though that be so, it yet lessens the guilt of his offense.

"It may be very true that there is an alarming rowdyism in New York and that public order demands a victim. If that be so, the victim should be one whose fate can not possibly excite doubt or general regret, for if it does, the very purpose you have in view is lost. If there must be a victim (a thing, of course, which I utterly deny, for our laws contemplate no examples of this kind *as* examples, but only as proper punishments of ascertained crimes. The law would hardly take any man suspected of ill conduct and hang him up as a warning to others. He could only be hung up when a specific ill conduct had been proved, and the benefit of the example is collateral—and very problematical)—but I say, if there must be a victim, let it be a criminal of well-known character, in whose case there are no circumstances that appeal to public pity. That is to say, take your worst criminals and not your best, for what you call examples.

"Moreover, it is the duty of the executive to withstand any desire of general revenge and retaliation upon the class of rowdies by hanging any one who may happen to be caught. If it be said at any time of capital conviction, 'the public desires a victim,' that is the very time for the Governor to pause and scrutinize the case most carefully; to suspect his severity of being sharpened by his consciousness of the public feeling of exasperation against offenders in general. The prerogative of mercy with which he is clothed is the voice of Philip sober. The urgent entreaty of the public sentiment that there shall be an example is the cry of Philip drunk. Society has empowered its Governor, in this instance, to withstand its own wishes.

"Besides, if you insist upon blood for blood, you must take great care that the practice be justified by every case. If the circumstances are such as to excite doubt, perplexity, and pity, the community will at last declare that if blood can be had for blood only at such a cost of public sympathy, the punishment shall practically cease; and nobody will be instrumental in dooming a man to a fate so terrific.

"During the twelvemonth two criminals have been hung—one, the negro D'Orsay, and the other, the boy Rodgers. The negro was well-nigh a brute, the boy was what you know. Now, meanwhile, there have been plenty of villains deserving the extremest punishment who have escaped. I care not how they did it; but do you not see, again, that if the punishment of death is sure to fall only upon those who are the least guilty in public estimation, society will soon lose all the advantages of the punishment?"

So the talk went on. There is certainly a great deal of force in what Martingale said. But there

is one thing he did not say, which would have strengthened his argument.

If society must have blood for blood, that is, if it must take human life, ought it not to take it in the most solemn and summary manner? Could any thing be more repugnant to decency and judicial solemnity than the scene at Rodgers's execution? If that were to be repeated, the common sense of the community would at once put a stop to hanging.

Here was a criminal to be put to death. Every consideration required that it should be done as decorously as such a dreadful deed can be. One can fancy the officers of the law, the victim, and the clergymen, with the few grave witnesses whose presence the law might require, assembling in a prison-yard, into which no other than the Divine eye could look by any chance, and there the terrible act consummated at once, without suffering to the criminal, and no other pang than the necessary one of beholding such a spectacle to the few witnesses. Then the body is removed, and coffined, and delivered to the family, not at the prison but at their home, while a brief statement of the fact of the execution, signed by the witnesses, is published in the papers.

This is a case in which the most fearful duty of society would be most decently performed.

But in the present case there was, according to the reports, a collection of curious people in the yard; the other prisoners, by broken bits of glass, contrived to see the sight; when the boy was placed upon the platform, instead of standing upon a drop, through which, in falling, his neck would be broken and instant death ensue, he is swung up and to and fro in the air; the rope slips; he struggles fearfully for a few minutes, even to the loosing of one hand and raising it to his breast; is finally taken down and handed to his relatives, who fall, fainting and shrieking, upon his swollen and distorted face; and the whole miserable story is told at length and with terrible detail in the newspapers of the next morning.

If this is the best way in which society can inflict the punishment of death, it is very clear that it will not be long inflicted.

If we must do it, why not do it in a shorter, more summary, and less disgusting manner? Why not use the guillotine, which in a twinkling severs the head from the body? or, why not adopt the garrote, by one wrench of which death is made sure? The dangling and suffocation of the gallows are repulsive beyond any necessity. Why should we scorn to be helped by science even in the discharge of so fearful a duty?

During the dog-days our Colleges celebrate their anniversaries, and our papers comment upon the poems and orations then and there delivered, and sigh that we have no University. High schools in plenty, they grant, but no University. Money in plenty many of the high schools have, but yet they make no effort to be Universities. They take raw boys of fifteen, put them through a little Virgil and Terence, less Æschylus and Aristotle; dub them A.B., and send swarms of conceited youth, with a smart smatter of books, upon a defenseless land.

So the eloquent papers declaim, and not without some justice.

But while we plead for a University, let us understand what we are about. It is not a University for England, France, or Germany; nor for the tenth century, nor the eighteenth. It is a University in and for America to-day. It is an institution which shall answer *our* questions, satisfy *our* wants, and give us the education that is essential.

Who, then, are "we" and "us?" We are people who, having to make our living by every kind of industry under heaven, want to know every science, art, and literature under the sun. All pursuits that were ever followed are followed here; by a necessity which is universal, and by talent which is intelligent.

Now what are our Colleges?

They are mostly medieval institutions, in which Latin and Greek and Mathematics and Mental and Moral Philosophy are professed to be taught. How many graduates of Yale or Harvard last year can write tolerable Latin, or translate tolerable Greek, verses, this year? How many retain more than the Greek alphabet, or the meaning of a few Latin phrases, after ten years? Is not the best result of the four years' course, as a general rule, that which was done by the students from preference and outside the College requirements? Is there much positive practical relation between the study of those four years and the lives that immediately follow?

Experience shouts the reply.

Of course we willingly grant that a youth can not be for four years exposed to scholastic influences without some chance of good and serviceable results. The social and friendly result is often good, sometimes bad. If there be a taste for study of any kind, there is noble leisure and opportunity afforded for following it. But the college, as a rule, is perfectly unelastic. It makes young men nothing in particular, and it does not even get them ready to be made something of afterward. There is a deal of profound twaddle talked about strengthening the mind by studying mathematics, et cetera. But as the best exercise for the body is that of healthful labor, so the best training of the mind is study of that which interests it. And you can not make an interest. It grows. If a young man has no taste of any kind; if, as the President of Harvard once said in a sermon, "most men have no particular vocation, but will do equally well whatever they devote themselves to doing," then why set such young men to reading foreign languages and authors who, by the hardness of approach, are prevented from being agreeable? Surely a young American, of no particular taste, if he is to pass four years in study, had better pass it in becoming familiar with English than Greek or Latin literature.

Do you think he will have time for that by-and-by, and meanwhile had better find out that there is such a thing as Greek literature?

Yes; but then the result will be that he will know there is a Greek literature, but know nothing in that or any other.

Columbia College has recently made an effort. Columbia College does not often make efforts. Columbia College for many long years vegetated upon College Green and accumulated much money. Under its present President, a gentleman of scholarship, of generous sympathies, and of youthful energy, it has resolved to try the experiment of University lectures: that is to say, lectures upon general topics, open to every body. The gentlemen who lecture are, some of them, masters in their kinds, and they treat subjects cognate to the sympathies, interests, and welfare of the community.

This is an era. This is something that ought to be of good service in popular education. And if the range is gradually extended—if the most eminent scientific men in every department devote themselves to the work—if the best historical scholars, if the most accomplished students in literature train themselves so as to make their courses what Cousin's and Guizot's have been in France, and Schelling's and Ritter's and Neander's in Germany—perhaps the summer holidays may pass without the fervent longing of the newspapers: "Oh that we had a University!"

Apropos of these remarks comes a letter from Quincy, Illinois:

"Dear Easy Chair,—Will you indulge the presumption of an ardent admirer while he makes a suggestion, which he would be pleased to have receive the consideration of our sage old Easy Chair?

"'Suckers,' albeit given to the raising of grain rather than to literature, sometimes read. They read the *Monthly*, including the Easy Chair; as also the *Weekly*, and divers other meritorious publications. But while they may claim to be a reading people, it must be admitted that many of them, including your friend and servant, are deficient in such scholastic attainments as will enable them to readily translate, and easily comprehend, the many Latin, Greek, and nondescript gems with which certain contributors to our popular miscellanies choose to interlard their effusions.

"And now, O Easy Chair! will you lend your influence to persuade these classical gentlemen to give us a translation with each of their foreignisms; or better still, to discontinue the use of them?

"Not long since I noticed in European news a copy of a ukase from the Czar Alexander, ordering 'the *American* language' included in the studies of the Government military schools. If, then, there is a demand for the American language, will there not be for American literature? But is it not essential that it be purely American? Is not the American language complete of itself; and ought not Americans to confine their pens to that language when writing for American publications?

"Will the Easy Chair kindly admit these crude ideas into its cogitations, and thereby confer a favor upon

"A. Sucker."

This is a suggestion worth attention. The quotation of old classic authors in their own language, except for scholarly occasions, is a foolish pedantry. When Latin was the tongue of literature, and every reader and writer was familiar with Latin and Greek, it was natural to quote the language because it was most easily understood. For that very reason a quotation should now be Englished. In the modern languages it is not so necessary because they are much more familiar. But even in such cases, except when a brief and common phrase is used, every man who writes for the general public would better serve himself and the public by translating.

OUR FOREIGN GOSSIP.

Within the fortnight of this, our time of writing, Mr. Bright may be said to have been the man most talked of on both sides of the Channel waters; and this by reason of his two Birmingham speeches, to say nothing of a later and lesser one before the Reform Conference of London.

Mr. Bright's Reform opinions are easily stated: he advises a compromise between the diverging opinions of the country; that is to say, a franchise dependent upon rate-paying, the ballot, and an entirely new distribution of Parliamentary seats.

He has amused and vastly gratified his audience at Birmingham by an onslaught, garnished with plentiful sneers, upon the Peerage of England; but Mr. Bright is too wise, and by far too shrewd a man, to believe that any present, possible, and practicable Parliamentary reform in England shall be forwarded by such pretty irony and such wanton abuse of the titled race as he indulged his hearers with at Birmingham.

He was, for the nonce, playing the rhetorician and not the reformer.

When he comes to speak of the foreign relations of England—as he does more especially in the second day's speech at Birmingham—he is truer to himself, and far more (if we may be allowed the word) idiosyncratic. Mr. Bright recognizes no "balance of power in Europe" theory; he does not believe in treaties which demand an upholding of Swedish power, provided she will make no sale of territory to Russia; or in other treaties which involve English freemen in the squabbles that may arise between various members of the Germanic Confederacy; he does not believe that Great Britain should make herself wet-nurse for Portugal and Spain; he does not believe in the outlay of millions for the conservation of such sun-smitten territory as India; he does not believe in fighting to force opium on China; he does not believe in any counter-marching against Russia, or in the Christian duty of upholding the Crescent and Mussulman bigamy along the shores of Africa and upon the more beautiful shores of the Bosphorus.

In saying this much, we have given fair epitome of his speech upon the foreign relations of England; at least so far as his negative propositions go.

Affirmatively, he is more vague and less positive. He believes in Christian duty, and in its assertion and maintenance. But we shall do him less injustice if we give him the benefit of the closing periods of his second Birmingham speech:

"Two nights ago I was permitted to address, in this hall, a vast audience, composed, to some extent, of your countrymen who have no political power, who are at their work from dawn till dusk, and from early youth almost to tottering age, and who have, therefore, but very limited means of informing themselves on these great subjects. Now I am permitted to speak to a somewhat different audience. You represent those of your great community who have had a more complete education, who have on some points greater intelligence. You are the representatives of those who have power and influence in your district. And I am speaking, too, within the hearing of those whose gentler nature, whose finer instincts, whose purer minds have not suffered, as some of us have suffered, in the strife and turmoil of life. You can mould opinions, you can create political power. You can not think a good thought on these subjects and communicate it to your neighbor—you can not make these points points of discussion in your social circles and your more general meetings, without affecting sensibly and speedily the course which the government of your country will pursue. (Hear.) I may ask you, then, to believe, as I most devoutly believe, that the moral law was not written only for men in their individual character, but that it was written as well for nations, and for nations great as this of which we are citizens. (Hear, hear.) I believe, too, that if nations reject and deride that moral law there is a penalty which will inevitably follow. It may not come at once—it may not come in our lifetime—but rely upon it the

great Italian is not a poet only, but he is a prophet, when he says,

'The sword of heaven is not in haste to strike,
Nor yet doth linger.'

(Hear, hear.) We have experience, we have beacons, we have landmarks enough; we know what the past has cost us, we know how much and how far we have erred. But we are not left without a guide. It is true we have not, as our ancient people had, the Urim and the Thummim, the oraculous gems on Aaron's breast, from which we can take counsel; but we have the unchangeable and eternal principles of the moral law of God, and only so far as we live by their guidance can we be permanently a great nation, or our people a happy people." (Loud cheers.)

Mr. Bright has ripened during his short-lived retirement, both as political canvasser and as rhetorician; his Continental travel has given him a deftness of language which surely did not belong to him in the old corn-law times. See here how prettily he discusses and disposes of the panic which grew out of the fortifications of Cherbourg:

"You never fortified any place, you know—(A laugh)—you have not got a greater fortress than Sebastopol at Gibraltar. (Hear, hear.) You have not got an impregnable fortress at Malta—you have not spent the fortune of a nation in the Ionian Islands—you are doing nothing at Alderney—in point of fact, there never was any nation so perfectly guiltless of making preparations to do any thing to any body. (Hear, hear, and laughter.) Therefore you have the greatest possible right to proclaim your alarm, and make a stand because of this fortress which the French have built on their own coast. (Cheers and laughter.) I believe there are many in this room who at one time or other have been brought into contact with some unhappy fellow-creature who had a peculiar and a painful suspicion upon his mind. (Cheers and a laugh.) I recollect a friend of mine telling me that, when going down from Derby to Leeds one day, a gentleman in the train who sat opposite entered into conversation with him. He did not at first observe any thing peculiar about the gentleman; but in the course of the journey the conversation turned upon hotels; both had been stopping at the Midland Hotel at Derby—which is a very good one—and in speaking about it the stranger said, 'Did you notice any thing peculiar about the bread at the Midland Hotel?' 'No,' said my friend. 'I did,' was the reply; 'and I am convinced there was an attempt to poison me; and what is most singular, I never go to a hotel but I discover that there is an attempt made to poison me, or to do me mischief.' (Hear, hear, and a laugh.) Well, what did that mean? It meant that this unfortunate individual was laboring under the greatest calamity that can befall the human mind. (Hear.) But what shall we say of the nation—or, rather, it is not the nation, but a mere handful of people—what shall we say of these, when they, knowing that we are the most combined people on the face of the earth—almost 30,000,000 in number—united under a government which, though we intend to reform it—(hear, hear)—we have a respect for and obey—(hear, hear)—that we have mechanical power and industry which no country in the whole world offers any parallel to—means of defense to any extent—the free waves of the sea flowing around our shores—what shall we say of these people who go about day and night laboring under a hallucination that we are in danger of a hostile invasion, and to protect ourselves we must take the initiative and extend our power?"

Another point which he makes in regard to foreign wars will be interesting to spinsters everywhere: "Forty thousand men perished on the bleak heights of Sebastopol; one hundred thousand men have been or will be sacrificed upon the burning plains of India, in suppression of a rebellion which was only roused by the wanton tyranny of England. Thus one hundred and forty thousand men pay for English pride and folly with their lives—and what is the consequence?

"Why, just this: one hundred and forty thousand English women are deprived either of husbands or of the chance of having husbands!"

And he argues that thus profligacy and infamy are fattening upon the national holocaust. The idea is novel, at any rate; and will commend itself to those who are the advocates of woman's rights all over the world.

From Mr. Bright to Mr. Gladstone the transition is easy. If the former is the representative of positive, economic, and progressive England, Mr. Gladstone is the representative of scholarly, accomplished, and conservative England.

This latter, not long ago, drew upon himself the attention of readers and reviewers by his masterly studies about Homer; showing rare familiarity not only with the old Greek speech and letters, but with the Greek spirit of life and courage.

It may have been for this—it may have been to rid themselves of a doubtful supporter and a truculent critic—that my Lord Derby and Mr. Disraeli have sent him as Special Commissioner to the old Greek isles of Ionia.

Do our readers know what they are and where they are? Let them look upon their maps then. They will find them lying not far off from the Dalmatian coast, eastward of Sicily and Calabria. They are a dependence of Great Britain; and the population—talking Greek and Italian and Turkish—live under a constitution provided for them by the English Parliament. But they are a restive people, and quarrel with their condition, though it is freer than that of any nation around them; and give loose to their querulous habit by talking bitterly about the Queen, and the royal family, and the Parliament, and every body of British blood. They worship according to the rites of the Greek Church; and with this lien upon Russian sympathies it is conjectured, not without reason, that Russian emissaries may have fomented their discontent.

Mr. Gladstone is deputed to allure them by his honeyed words into allegiance.

Will he succeed? People say Yes; other people say No.

Shall we give a pretty ending to this mention of Gladstone by a poem of his? It is a translation of a canzonette of Horace, just now wet from the publishers, and will show at once his loving scholarship and his grace of language.

It is the famous Ode IX., "*Donec gratus eram tibi:*"

Horace. While no more welcome arms could twine
Around thy snowy neck than mine,
Thy smile, thy heart, while I possess'd
Not Persia's monarch lived as bless'd.

LYDIA. While thou didst feed no rival flame,
Nor Lydia next to Chloe came;
O then thy Lydia's echoing name
Excelled e'en Ilia's Roman fame.

HORACE. Me now Thracian Chloe sways,
Skilled in soft lyre and softer lays;
My forfeit life I'll freely give,
So she my better life may live.

LYDIA. The son of Ornytus inspires
My burning breast with mutual fires;
I'll face ten several deaths with joy
So fate but spare my Thurian boy.

HORACE. What if our ancient love awoke,
And bound us with its golden yoke;
If auburn Chloe I resign,
And Lydia once again be mine?

LYDIA. Though brighter than a star is he,
Thou rougher than the Adrian sea,
And fickle as light cork, yet I
With thee would live—with thee would die.

And now, since we have broached poetry (you will bear us testimony that we rarely do it), we will regale you with another rendering of the same Ode, by no less a personage than Lord Derby, the premier of England. It is not often we chance upon the metrical labors of such workers; or can compare in scholarship and grace, by one classic measure, a pair of statesmen.

Lord Derby renders the *Donec Gratus* in this style:

HORACE. While I was dear to thee,
While with encircling arms,
No youth preferred to me
Dared to profane thy bosom's snowy charms;
I envied not, by thee adored,
The wealth, the bliss of Persia's lord.

LYDIA. While all thy bosom glowed
With love for me alone;
While Lydia there abode, [throne,
Where Chloe now has fixed her hateful
Well pleased, our Roman Ilia's fame
I deemed eclipsed by Lydia's name.

HORACE. 'Tis true my captive heart
The fair-haired Chloe sways,
Skilled with transcendent art [lays;
To touch the lyre, and breathe harmonious
For her my life were gladly paid,
So Heaven would spare my Cretan maid.

LYDIA. My breast with fond desire
For youthful Calais burns;
Touched with a mutual fire,
The son of Ornithus my love returns;
For him I'd doubly die with joy,
So Heaven would spare my Thurian boy.

HORACE. What if the former chain
That we too rashly broke,
We yet should weave again, [yoke?
And bow once more beneath th' accustomed
If Chloe's sway no more I own,
And Lydia fill the vacant throne?

LYDIA. Though bright as morning star
My Calais' beaming brow;
Though more inconstant far,
And easier chafed than Adrian's billows thou;
With thee my life I'd gladly spend,
Content with thee that life to end.

Suppose now that, for the sake of a common standard of comparison, we pass the ball over to your side of the water! Will the ancient General Cass give us a rendering? or Sam Houston? or Mr. Giddings?

Let not these gentlemen count it altogether an effeminacy; and, though they all be past the season of wooing, let them assure themselves that a man is never too old to equip himself with the resources of language, whose pliability is only known, and is best known, when one language is measured against another.

WE shall skip back to France now for a single word about the apprehended imbroglio with Portugal. Our readers will recall the story we gave, a month or two since, of the seizure of a French ship upon the coast of Africa, whose cargo of "indented apprentices" had revolted and slain the crew. That trouble was with England, and was quickly arranged.

The new *contretemps*, growing out of the French shipment of African "laborers," involved the Government for a time with the authorities of Portugal.

There was no revolt of the emigrants in this case; but a French ship, laden with her apprentice cargo of miserable blacks, touched at a Portuguese colony, was suspected, seized, ship and cargo confiscated, and sent home to Lisbon.

Louis Napoleon, with some half dozen warships and shotted guns bearing upon the chief streets of Lisbon, demanded restitution and apology. The quaking Portuguese—with a sad leer at their great almoner, England—granted both. Whereupon the burly *Times* newspaper utters its condemnation in this style:

"The recent transactions between France and Portugal can not give occasion for unmixed satisfaction to any one of the parties engaged in them. France has done a high-handed act of violence, and may enjoy the complacent consciousness of having exercised a giant's power; but she has done so at the expense of being ranked henceforward among the few slave-trading nations of the earth. Portugal enjoys the dignity of having suffered force in the cause of humanity; but she has seen, what can not be seen without emotion by any nation, armed foreign ships pointing their guns down the streets of her capital, coercing her courts of law, and insulting her sovereign. England may, perhaps, exult a little in her superior righteousness, and plume herself over the moral backslidings of France; but she also is not without an uneasy feeling that her dignity has been in some way touched in this matter, and that, if she has not been made to eat dirt, there has been some intangible, indirect insinuation whispered that there was, somewhere or other, a little portion of dirt ready made up, which, under some possible condition of circumstances, might be presented to her to swallow. The whole matter has been an uncomfortable imbroglio, and the preceding difficulties between England and America, arising from the same subject, were not less unpleasant. It seems scarcely probable, indeed, that these occasional outbursts of temper and interpositions of the *vis major* can occur among civilized powers without leading eventually to some serious complication; and it is not unprofitable at this moment to pass in review the position which the maritime nations hold toward each other in this very delicate and dangerous business of suppressing the slave-trade."

And there is a column more, if there were room or occasion to quote it. But we should be unjust to the Emperor if we did not allow him voice too. We cite a portion of his letter to the Prince-Minister of Algeria, and which is curiously dated just two days before the appearance of the *Times* article.

We translate *verbatim:*

"ST. CLOUD, *October* 30.

"MY DEAR COUSIN,—I earnestly desire that, at the moment when the difference with Portugal, with regard to the *Charles-Georges*, has been terminated, the question of the engagement of free laborers on the coast of Africa shall be definitively examined and settled according to the true principles of right and humanity. I energetically demanded the restitution of the *Charles-Georges* because I will always maintain intact the independence of the national flag; and it required in this circumstance the deepest conviction of my right to make me risk a rupture with the King of Portugal of those friendly relations which I am anxious to keep up with him.

"But as to the principle of the engagement of negroes my ideas are far from being fixed. If, in fact, the laborers hired on the coast of Africa are not free agents, and if that recruitment is nothing but the slave-trade in disguise, I will not have it on any condition. It is not I who will any where protect undertakings which are contrary to progress, humanity, and civilization," etc., etc.

So much for politics. Shall we turn now to look far eastward, where suddenly, in the twinkling of a mail (as we may say), a new, and joyous, and civilized kingdom has burst upon the world? What other than Japan?

What rare walks under the shady coppices that fringe the outlying fields by Jeddo! What cottages with roses; what winding roads with myrtle and honey-suckle; what rounded undulations of green surface—all odorous with a thousand flowers, and gemmed with temples and palaces! What fare maidens to greet one in the outlying arbors, where fragrant and steaming teas refresh one! What a new world of blue skies, and luscious perfumes, and verdant wealth, and luxuriant vegetation of all sorts, with a grand, dim outline of Alpine mountains!

Can these stories all be true—of the millions who dwell in Jeddo—of the castle, with its green casemates, and space to lodge forty thousand?

Then Japan is no longer a vision, but a fact, of our time; and the rich country by the Amoor, and the Japanese Emperors, civil and religious, must all come in for their share in the distribution of the world's balance.

Shall we believe you have seen all these stories, or shall we repeat?

The visitor speaks of Lord Elgin's residence at Jeddo:

"In front of it was a street which continued ten miles, as closely packed with houses and as densely crowded with people as it is from Hyde Park corner to Mile-end. At the back of it stretched a wide and somewhat dreary aristocratic quarter, containing the residences of three hundred and sixty hereditary princes, each a petty sovereign in his own right, many of them with half a dozen town houses, and some of them able to accommodate in these same mansions ten thousand retainers. Passing through the spacious and silent (except where a party of English were traversing them) streets, we arrive at the outer moat of the castle. Crossing it we are still in the Princes' Quarter, but are astonished as we reach its further limit at the scene which now bursts upon us—a magnificent moat, seventy or eighty yards broad, faced with a smooth green escarpment as many feet in height, above which runs a massive wall, composed of stones Cyclopean in their dimensions. This is crowned, in its turn, by a lofty palisade. Towering above all, the spreading arms of giant cedars proudly display themselves, and denote that within the imperial precincts the picturesque is not forgotten. From the highest point of the fortifications in rear of the castle a panoramic view is obtained of the vast city with its two million and a half inhabitants, and an area equal to, if not greater than, that of London. The castle alone is computed to be capable of containing forty thousand souls. But the party on shore did not confine itself to exploring the city alone; excursions of ten miles into the country were made in two different directions, and but one opinion prevailed with respect to the extraordinary evidences of civilization which met the eye in every direction. Every cottage, temple, and tea-house was surrounded by gardens laid out with exquisite taste, and the most elaborate neatness was skillfully blended with grandeur of design. The natural features of the country were admirably taken advantage of; and a long ride was certain to be rewarded by a romantic scene, where a tea-house was picturesquely perched over a waterfall, or a temple reared its carved gables amidst groves of ancient cedars. The tea-house is a national characteristic of Japan. The traveler, wearied with the noonday heat, need never be at a loss to find rest and refreshment. Stretched upon the softest and cleanest of matting, imbibing the most delicately flavored tea, inhaling through a short pipe the fragrant tobacco of Japan, he resigns himself to the ministrations of a bevy of fair damsels, who glide rapidly and noiselessly about, the most zealous and skillful of attendants."

AND from Japan we leap back to the story of an old French duel.

Toward the end of the seventeenth century a sergeant of the Royal Guard was quartered with a peasant, in the South of France, whose name was Lebré.

The peasant was young, and had a young wife and a pretty one; the sergeant was gallant, and presumed upon his profession and his rank to pay excessive and disagreeable attentions to the young and the pretty wife of Lebré.

The peasant was incensed, and met the sergeant with offensive words.

The soldier answered them by a blow. Lebré sought arms and demanded satisfaction. But in that time the honor of a peasant was worth nothing; a soldier could not recognize it; and the poor peasant, in answer to his challenge, was thrust out of his own cottage.

He came back, however, quietly and determinedly. He led his wife away across the country to her father's house. He bade him keep her and defend her until such time as he could avenge his wounded honor.

The wife loved him, and implored him to remain; the father esteemed him, and sought to break his resolve; but all in vain. He left, and for eight years was seen no more.

He enlisted in the army. He fought through two campaigns; he sought only the rank which should place him on equality with his enemy. Yet the sergeant might win promotion; he had this to fear; but he sought to make up the difference in term of service by attention and by courage.

In six years he won the rank of sergeant: there were thousands of sergeants in the French army—where should he meet the offender?

For two years he was ordered from post to post, until one day he recognized his old foe—still a sergeant.

They dined one day together, in company with other officers. Lebré controlled himself until dinner was ended; then he spoke.

"Comrades," said he, "if one of you had received a blow, what should be done? Sergeant (addressing his enemy), what say you?"

"*Parbleu!*" says the sergeant, "I would give it back, and the next day fight!"

"*Tres bien!*" says Lebré. "Do you happen to remember a peasant you ventured to strike, eight years gone, for the reason only that he would defend his wife?"

"The peasant I don't remember; but his pretty wife, and the blow—yes."

"Ah, it is a long time. The blow deserves two—take them!"

And Lebré strikes.

Before the sergeant has recovered himself, his sword is drawn; the cause is old, therefore there shall be no delay, they must fight now.

The comrades gather around them. The sergeant can make no refusal; they fight, and the sergeant is killed.

A few weeks after Lebré is named lieutenant, and gains *congé* to go back to his old home; demands his wife, finds her blooming as ever, and the household is one again.

The story has the authority of Eugène Bonnemère, in his *Histoire des Paysans*.

We gave a period or two the last month to mention of the Literary Congress at Brussels. Its labors have been signalized more by a pleasant banquet than by any initiative of reform. Indeed, if we may judge by the tone of the Continental journals, there is a feeling of disappointment, as if authors' rights had again given way to the law of publishers, and to the law of custom.

"Be convinced of this, oh my brothers," says a saucy author, writing from Paris on the eve of the Brussels adjournment, "that hereafter, whenever publishers talk unctuously of literary property and of the rights of genius, it is not of you or your rights, or of your children's rights, they would speak, but purely of their own trade interest. And we could lay our hand upon the shoulder of millionaire publishers at our Congress of Brussels, who give magnificent fêtes at which they would blush to welcome those writers who have built their fortune, and yet send their physician to attend at the first threat of any ailment which may impair their working capacity."

The same writer informs us farther that an association of German authors is in process of arrangement, by which the writers are to become partners in a great publishing house, to be managed for their benefit and behoof by some practical and experienced publisher as actuary of the company, the authors to receive a share of profits adjusted by the positive sale of their books, and not by their reputation. We give his talk for all it may be worth.

Something more reliable we are able to give with reference to the present duration of book copyrights in the different countries of Europe. In Greece and Sardinia the duration of the right of reproduction is only fifteen years from the date of the first publication. In the Roman States it is fixed at twelve years from the death of the author. In England it extends to the whole life, and seven years after decease, or to forty-two years in case the seven years granted to the heirs, added to the period enjoyed by the author, do not make up forty-two years. If the work has not appeared until after the death of the author, the right of reproduction is also forty-two years. In the United States, the term is twenty-eight years; but an extension of fourteen years is in certain cases accorded to the author, if living, at the expiration of that time, or if dead, to his widow, children, or grandchildren. In Belgium and Sweden, the heirs have a right of enjoyment for twenty years after the death of the author; in Sweden, however, the work falls into the public domain if the heirs neglect to reprint it. In Russia the right of reproduction is maintained for twenty-five years after the death of the author, and for an additional ten years if a fresh edition be published in the five years preceding the expiration of the first term. In France, the term of the enjoyment of the right is fixed for the children's benefit at thirty years from the period of the death of the author, or from that of the widow if she held a community of property with her husband. For other heirs it is, however, only ten years. In Austria, Bavaria, Portugal, Prussia, Saxony, the Two Sicilies, Würtemberg, and the States of the Germanic Confederation, it is thirty years from the date of the author's death for the benefit of the heirs, or other parties interested, without distinction. In Spain, the term is fifty years from the death of the author. In Denmark, the period which had previously been unlimited, was, by a law of December last, reduced to thirty years after the death of the author. The above enactments do not, however, in every country apply to artistical works. In England, engravings, lithographic prints, and productions obtained by similar processes, are only secured for twenty-eight years from the date of first publication. On sculptures, models, casts, etc., it is only fourteen years. In Belgium, for artistical productions not capable of being reproduced by impression, such as sculptures, etc., the term is for the life of the author and ten years after.

Scribe appears to have been the lion of the Brussels Congress, and the devotion of the publishers to the great dramatist is said to have been neither affected nor insincere. The old gentleman was invited to a royal banquet, and had unfortunately left behind him in Paris his decorations; so he finds his way to a shop where the insignia are sold, and proposes to hire decorations for the evening, leaving bank-notes equivalent to their value in pawn.

But the good woman who manages the commerce refuses to take any gage; the great Scribe shall have what he wishes; it will add to their value to say that he has worn them. And so the politic and admiring lady—if she should ever visit Paris—has, by reason of her courtesy, opened for herself half the theatres of the capital.

We gave, not long ago, a description of the new hotel of Scribe in the Rue Pigale: it is now rapidly approaching completion. Its frescoes (of the library) are illustrations of his own history; its cabinets are full of bijoux of presentation. It is said (how truly we can not say) that the profits upon his new play alone, *Trois Maupin*, will pay for all the decoration of his hotel; and the *Trois*

Maupin is only one of four hundred which bear his name!

Pleasant.

Far less pleasant is an account of the wages of the small workers in the capital, and this notwithstanding a steady increase, equal to one and one-half per cent. per annum, since the discovery of the gold fields. Engravers, for instance, were paid on an average 4fr. 20c. per day, in 1847; the average at present is 5fr.; increase, 19 per cent. in ten years. Jewelers, who received on an average 4fr. 50c. now earn 5fr. 50c. and 6fr.; increase, 22 per cent. In the various metal trades the average has risen from 3fr. 93c. to 4fr. 48c., or 10 per cent. In what are called *articles de Paris*—that is, all kinds of light ornamental matters in mother-of-pearl, ivory, etc., or gloves, fans, etc.—the increase is about 12 per cent. Cabinet-makers, who earned 3fr. 50c. in 1853, had 4fr. 25c. in 1857, an increase of 16 per cent. in four years. Paper-hangers have between 9 and 10fr. per day; lace and trimming makers, 3fr. 50c.; upholsterers, 5fr.; the increase being in all these cases 11 per cent. Shoemakers are paid from 2fr. to 3fr. 50c. per day; by the piece they may earn as much as 8 and 10fr. by working from 14 to 15 hours a day; increase 10 per cent. For house-painters (4fr.), carpenters (4fr. to 5fr.), locksmiths (3fr. 50c.), and stone-cutters (5fr.), the increase is as much as 25 per cent. For bakers (4fr. 30c.), brushmakers (4fr.), and rope-makers (3fr. 50c.), it is 9 per cent. A hatter may earn from 10fr. to 11fr. per day; a tailor's wages are on an average 3fr. 80c.; the increase in both cases is 11 per cent. since 1847. The earnings of porters, errand-boys, and the like, may generally be stated at 3fr. per day, being an increase of 20 per cent.

Editor's Drawer.

A HAPPY NEW YEAR every reader of the Drawer is bound to have, with or without wishing for it; for who reads the Drawer with a long face or a sad heart? It is good to be merry and wise. And so the Drawer comes monthly, from year to year; one of the institutions of the land and the age; a feature peculiar to *Harper*, and so welcome to all clever people every where, that to find a man who does not love to read it would be harder than to find black swans. The Drawer is the reservoir of the people's humor; it is filled by the voluntary correspondence of the fun-lovers all the land over; so that now, when a good thing happens in court or courting, in the world of politics or letters, in high life or life not quite so high—whoever hears it is under bonds to sit down forthwith and make a pen-and-ink sketch of the same for the Drawer.

Last month it came to pass that the long yarns of the story-makers were so spun out that little room was left in the Magazine for the Drawer, whose fair proportions were sadly curtailed, and many capital contributions were crowded out; but they are sure to keep, and in due time will be forthcoming. Like an omnibus, the Drawer always has room for one more, and, without stretching, for a dozen more, provided always they have the ring of the true metal in them, like those that follow.

Some six or eight years since a certain Dr. D——s, and a man of considerable talent, was lecturing, at Temperance Hall, in Charleston, South Carolina, on animal magnetism, and performing various experiments in that science. To demonstrate the influence that one mind could exercise over another in that state, he requested the audience to write on cards the names of animals and other objects, which he would cause the "subject" to name without having any communication with him. The Doctor was a large, portly man; and the hall was but dimly illuminated, except near the staging. Taking one of the cards, and concentrating his mind for a few moments on the object mentioned, he pompously asked of his subject, "What object do you now see?"

The young man hesitated for a few moments, and then replied: "It appears like a jackass, Doctor; but I rather think it is *your shadow!*"

Like most men of genius the late Judge Brackenridge was distinguished by many striking peculiarities. He chose to do every thing in a manner to please himself, without caring for the observations of others. When he resided at Pittsburgh he was in the practice of going every morning during the summer to bathe in the Alleghany; and, in order to save time and trouble in undressing, he walked to the river with no other habiliments than his cloak and slippers. One of those votaries of humor who are to be found in almost every part of the country took it into his head to have a little fun at the learned gentleman's expense: and, one morning, just as he had set out to indulge in his customary dip, the wag hired an Irish laborer who was passing by to keep a watch upon the "unfortunate gentleman," telling Pat that he was a little out of his mind, and that his friends feared he intended to make away with himself. On walks the Judge, and, close after his heels, his newly-engaged keeper. Off goes the old cloak; and, just as the supposed maniac was about taking the dreadful leap, his faithful guardian seizes him firmly by the arm, exclaiming,

"Och, not so fast, my gay fellow! you sha'n't commit so great a sin this time if Paddy Malone can help it!"

And, sticking fast to the wondering eccentric, he replaced his cloak and slippers, and led him in safety to the hotel, amidst the merriment of half the people in the borough, who had been drawn together to enjoy the fun.

"Under a law of the State of Pennsylvania, passed April 14, 1851, the widow and children of every decedent are entitled, as against creditors and 'the rest of mankind,' to such real or personal property as they may elect to retain, to the amount of three hundred dollars; and it is made the duty of executors and administrators to have the said property appraised, and an inventory and certificate of the same filed in the Orphans' Court.

"Letters of administration were granted by the Registrar of Alleghany County, Pennsylvania, to Judge Smith and David Jones upon the estate of Lewis Jones, deceased. The Judge belonged to that 'ornamental' class of judicial officers so prevalent in this State. The administrators having appraised and set aside personal property valued at $298, under the provisions of the humane law aforesaid, proceeded, without the aid of counsel, to draw up the necessary 'papers' to be filed in court. The Judge, of course, undertook the performance of this responsible duty. We won't say

that the job was performed *secundum artem*, but our legal readers will doubtless admire the ingenuity and legal ability of the Judge. Here is the document:

"'Reed of Judge Smith and David Jones Administrators of my Decesed husband Lewis Jones the sum of two hundred and ninety-eight Dollars in Pursuance of the act of 14 April 1851, allowing three hundred Dollars to all Widows exempt from levy and sale.

"'Witness present her
"'JOHN S. JONES. TEMPERANCE + JONES.
mark

"'*August the 25th, A.D.* 1858.'"

"WE have in our village," says a correspondent, "two fine specimens from the 'Emerald Isle,' and withal both intelligent, quick-witted, and on hand. One of them, Patrick Clark by name, is a brewer; and the other, a merchant, is named Dennis B. Smith. Patrick, the other day, got up a fine conundrum, and off he started with it to enlighten Dennis. Meeting him, he said, 'Dennis, why am I like a wild beast?' intending to have him 'give it up;' and then the answer would be, 'Because I'm always a brewing" (bruin). But, as quick as a flash, Dennis replies, '*Because you are a Paddy!*' This used Patrick up, of course. 'And only to think of it,' said he, in his disgust; 'he a brother Irishman, and call me a Paddy!'

"But Dennis once got his 'come-up-ance.' The weather was very cold and blustering one morning, and every one was saying, 'It's cool again.' 'That's it!' says Dennis; 'just Luke Cooligan's name: now I'll puzzle some one.' The first one he came across was a staid citizen, of whom he asked, 'Why is the weather this morning like an Irishman in town?' intending the answer, when given, to be 'Because it's cool again' (Cooligan). But the citizen hemmed for a moment, and replied, 'I don't know, without *because it's blowing around!*' Dennis had no more to say, and left."

A FRIEND in the "Old North" writes to the Drawer: "Not many days ago business called me to Johnston County, North Carolina, and I arrived there during the week of County Court. That dignified and luminous body had just adjourned for the day. Old General H——, the father of the bar; Hon. M. R——; Major H——, of facetious memory; the young limb that couldn't see 'the pint,' George V——; 'Gus,' and a number of others of the brethren, were sitting out in front of their rooms, chatting over the 'trials' of the day. Something had gone wrong. No fun had turned up. Every body was sober, for it was only Tuesday, and the aspect of things was decidedly unpromising, when a couple of citizens, slightly elevated, approached the senior, and put the following 'case:'

"'You see, Gen'rall, my hound Beck, that was —or, as the children called her, Beck*ee*—was a fine dog, that no man's money could buy, for I've been offrid as much as five dollars for her by good judges; she was at my house, and Jim Hinyer he cum with a warrant from Squire Wooly to take me and my dog *in one and the same warrant!* sundries excepted; and so he scared the dog and she run off the land, and so he tuck up with Gaston here, on his land; and Gaston he had set a log-trap, and had baited it, as I can prove by Willoughby Newton, for he seed the bait was lamb, and he is furthermore to be summoned; as also Gordon Blake, for he says 'twas lamb, and will prove my dog not of a sheep-stealing nature, as I can also establish by as respectable a man as keeps licker here or elsewhere; and so be there was a trial on it, and the dog was not tuck by the officer, but got off as I tell yer, and was dead at the time of trial. And Squire Wooly he called in Squire Horn, and the two disagreed, and one bethrowed the plaintiff, and gin judg*ment* for the costs; and the other gin judgment for me, and allowed no appeal, and for the costs; and there the matter stood at a variance until the lawyers would come. Now, how is it, Gen'rall? We leave it to you; and I want to know ef I am to let eny man as may choose cum to my house and scare off and be the means to kill my dogs, and he not a sheep-killing, as I can establish; or sum other man is to bait him with lamb, and he die in consequence, and a valuable dog; whether my rights are to be purtected? We'll have to have a suit about it; for Squire Wooly he said, and Squire Horn both said, all was done according to *Cantwell's Jestiss.* Now tell me that; an', if the case goes on, money shall not be lacking. I will pay you, Sir; that I will. I have as many friends as any man.'

"The case is still on."

AN Arkansas correspondent writes us that "the memory of Mr. Squibob, of Little Rock, is very treacherous in respect to proper names, and many have been the occasions on which he has been exceedingly annoyed by this strange defect in his mental organization; sometimes even to the extent of being obliged to refer to some paper about his person to discover his own name. So common has this become with him that he has a sort of system by which, when thus overtaken by his faults, he extricates himself oftentimes without being obliged to make known his weakness in this regard. On one occasion, however, his cherished expedients sent him flying out of the frying-pan into the fire. He had made a trade with his neighbor, John Jones, and it became necessary that he should draw a writing in which Mr. Jones's name should appear. Squibob scribbled away very well until he came to where Jones's name should come in, when he was taken with his old fault, and came to a dead halt. He tried and tried, but the name would not come. He knew it as well as his own, if he could only think of it! He scratched his head, nibbed his pen, hoping to get at the name without the humiliation of an acknowledgment to Jones of being the possessor of such an unreliable memory; but the harder he tried to call the name to mind the farther off it seemed to go; until at last, in his despair, he bethought himself of an expedient which had often served him a good purpose; and so, pretending to commence writing again he asked Jones, without looking up, how he spelled his name?

"His neighbor very slowly spelled it out—'J-o-n-e-s.'

"Squibob, seeing what a predicament he had got into, thought he would come out with flying colors by another expedient which, in such cases, had often served him a good purpose; and so he very composedly remarks—as though he, of course, knew Jones's *surname*—'Your *christen* name, I meant.'

"Jones again slowly spelled out—'J-o-h-n.' Whereupon Squibob *caved;* and, to save his reputation as to his knowledge of orthography, made,

then and there, full confession of his weakness aforesaid, and of the expedients with which he had attempted to hide it from his neighbor."

Squire Grubb, of Pike County, Illinois, had been a hard drinker; but when Washingtonianism swept over the Western country he joined the army of its converts, and made speeches on Temperance in as temperate a spirit as could be expected of a political candidate and stump speaker. He took occasion, in one of his slashing harangues, to allude to one of his former boon companions as "a certain man who is a public nuisance." Doubting if he was the individual meant, his old friend stepped up to the Squire, who stood, after his lecture was finished, surrounded by applauding friends, and inquired who he "alluded to, just now, as a nuisance?" The Squire put himself in as dignified an attitude as it is possible for a short, wiry man with red hair and freckled face to assume, and replied,

"As *Solomon* said to David, 'Thou art the man!'"

His party friends gave him an overwhelming majority that fall on the strength of that Scriptural quotation.

Mrs. John Trip was once at a court in Hartford, as a witness against one of her sons, between whom and old John a fierce quarrel had arisen. Lawyer Chapman, of waggish celebrity, was for the defendant. As Mrs. Trip was expatiating at great length on the exceeding vileness of her son's conduct, Chapman suddenly stopped her, and inquired blandly how many sons she had. After thinking a moment, she answered, "Seven." The lawyer started back, as if struck with great astonishment. "A remarkable coincidence! remarkable! Just the number that Mary Magdalen had devils cast out of her!"

Another time, when Chapman was badgering a witness, he did not, according to his own account, come out quite so smoothly. A man had been knocked down by his neighbor. The witness had seen the blow given, and was doing her best to describe the scene. But Chapman, who was for the defendant, was not easily satisfied.

"*How* did he strike him, my good woman, *how?*"

"Why, yer see, Sir, he stood—"

"But how did he *hit* him? I want to know just how?"

"I'm a tryin' to tell yer! Ye see, Ike was a stanin'—"

"I can't stop to hear all that again! I want to know *how* he hit him. You can tell a straight story, can't you?"

The woman hesitated, and seemed trying to consider what to answer; when he bellowed forth, as if the whole fate of the universe depended on her testimony,

"If you have come here to testify in this case, would you have the goodness to tell me how that blow was struck?"

The witness looked at him with blazing eyes, and, shaking her clenched fist at him, answered,

"If I had a broomstick, and was near enough, I'd show you how!"

Two doctors, one of divinity and one of medicine, flourished in the same New England village. The "cure of souls" to the former belonged; the latter doctored the bodies that held the souls. But the reverend doctor was fond of prescribing for the sickly sheep of his flock; he would practice as well as preach, greatly to the annoyance of him whose duty it was to dispense pills and potions to the perishing people. And what made the matter more intolerable was that the pious pastor spread himself on one plaster; and for all ills that flesh is heir to prescribed one and only remedy—a carrot poultice. Had the sick man fever or fits, a broken leg or a pain in his head, sore eyes or the colic—hit or miss, if the minister heard of it, he advised the inevitable carrot poultice.

The church bell was cracked. A parish meeting was called to devise ways and means to remedy the evil. To mend the bell or get a new one?—that was the question. The venerable pastor learnedly discoursed on bells—their make, and how to repair them when they are damaged. He was done; and the medical doctor stood up and said, he was pleased with what had been said, and perhaps the bell could be cured in the way their excellent pastor had proposed; but he would suggest the application to the fracture of a warm carrot poultice!

The *application* was seen and felt. The indignant pastor left the house. A rich and benevolent parishioner offered to give a new bell. It was bought; and while it *tolled* the people to prayers it *told* the minister to mind his own business, and let M.D. apply the poultices when they were needed.

"And why not empty your Drawer every month, and not keep a fellow waiting half a year to see himself in print?"

The sole and simple reason, O inquiring reader! is that sometimes the Drawer overflows, and the lighter things that float on the surface run out to sea, or to be seen, first; while the weightier and better things, that will keep, are kept till another time. "Let us be patient," saith that longest of fellow-poets, and all will come along in due season.

In Demarara, South America, was a Judge—there called stipendiary magistrate—who rejoiced in the name of Barrel. He was noted for being hard on the sailors, who were often before him. One night the Judge was returning home on foot from a dinner party, and, being top-heavy, fell into the canal. It was easy to fall in, impossible to get up the steep bank without help, for which he lustily roared. Two sailors passing heard him floundering like a walrus, and calling out, "Who's that in thar?" the Judge cried out, "It's the stipendiary magistrate, *Barrel;* help!" "*Barrel*, is it?" returned Jack; "well, keep the bung up and you'll float!" And they floated on.

In the Pennsylvania coal "diggins," one Sabbath morning not long since, the Rev. N. G. P—— was delivering an excellent sermon on the deluge. During the sermon, and while the speaker, in thrilling and excited tones, was exclaiming, "And the waters are still rising higher and *higher* and higher!" a Scotch engineer in one of our mines, who, fatigued by the work of the night before, had fallen into a doze, awoke with a start; and, at the top of his voice, exclaimed, "Sandie! *Sandie!* 'tis time to start the muckle engine!"

Here is something about the children:

"I have a little five-year-old, who is very pious,

and a little red-headed three-year-old, who is accounted a great vixen.

"The elder walked out into the garden one beautiful morning, and, looking up, with her deep, dark eye full of thought, said,

"'Good-morning, my Father in heaven; I thank you for this beautiful morning.'

"In a severe thunder-storm which occurred the other day, little red-head was very much alarmed. Her mother said, 'Do not be afraid; your Father in heaven holds the lightnings in his hand.'

"She replied, 'Oh, yes, I know that; but you know, Ma, the lightning is so slippery I am afraid he might let it slide when he didn't mean to!'"

"THE sunlight of our house is a four-year-older named Lambert. Now Lam is particularly fond of Sundays, that day being to him the shortest of the week. Why Sunday should be his peculiar choice is a point which sometimes puzzles me, and I can only account for it by his love of music, and especially organ, or loud music, as he calls it.

"A few days ago he was sitting on the front steps of the house, when a boy, in passing, remarked to his companions that he hated Sunday, as he did not know what to do with himself. Lam immediately jumped up and asked the boy if he didn't want to go to heben.

"'Yes,' replied the boy, 'I suppose so.'

"'Den go to church and hear big music, and you'll feel heben all day Sunday.'

"The idea of heaven being all day Sunday is a good many sermons in few words."

BILLY was four years old and tired of keeping Sunday all day; he asked his mother to make a tail to his kite and help him fly it.

"Oh not to-day, Billy, it's Sunday."

"Well, Ma, let's just make believe it's Monday." Smart that, for Billy.

"A LITTLE girl, eight years old, was last week going along Sixth Street, when she passed where a Dutch butcher was killing a calf. Surprised at a sight that seemed to her so cruel, she stopped and gazed at the little animal until its life was extinct, when she turned to the butcher and said,

"'Doesn't it make you sick to kill such a little calf?'

"'Oh no,' said the Dutchman, '*it iz a very healthy bizness!*'"

ABOUT fifteen years ago there was considerable excitement and feeling respecting a Senatorial election then pending in Savannah. The Democratic candidate was Judge M'Allister, a man eminent both at the bar and the forum. His opponent (Whig) was a wealthy merchant, of German extraction, who had but little to say. The Whigs were successful, and Snider was elected. At the expiration of the term the same parties were again in the field. At a Democratic meeting Mr. Millan, a witty Irish lawyer and stump speaker, was advocating the claims of Judge M'Allister, when he introduced the following story:

"Once upon a time a countryman of his wished to purchase a parrot. A friend offered to sell him a bird; remarking that it was quite young and had not yet learned to speak, but if he would take pains with it he could teach it almost any thing. So the bargain was concluded. Pat bought the bird and carried it home. Some years afterward, meeting his friend, he was asked how the bird came on? Pat replied that 'it had not learned to spake yet, but had done a dale of thinking!' Mr. Millan then said, The bird was an owl! and so it was with Mr. Snider. He had been two years in the Senate, had not yet spoken, but no doubt he had done a 'dale of thinking.'"

A BALTIMOREAN writes: "On a last summer trip I visited the Delaware Water Gap, where, one evening after tea, the gentlemen being congregated upon the portico, the conversation turned upon Spiritualism. Each one had something to say upon this subject; some relating the marvels they had witnessed, others speaking contemptuously of the whole subject as an unmitigated humbug. Among the latter was a stout, jolly-looking old gentleman, who gave audible vent to his unbelief by exclaiming,

"'Gentlemen, I will tell you a little anecdote which illustrates the whole subject in a nut-shell.'

"Of course all listened, and he went on to say:

"'Old Judge P——, who lives near Easton, had a Dutchman working for him who was continually boasting of "what they could do in Germany"—asserting that many persons there had the power of charming snakes and wild beasts, rendering them perfectly harmless for the time; while others could not be killed or wounded by bullets, but could invariably catch the ball in their hands from any weapon discharged at them. This latter power the Dutchman professed to be master of, boasting of his willingness to stand up and be shot at when any one desired to test it.

"'The old Judge had heard this boast so often that he determined to give the Dutchman an opportunity of proving his power. Taking his rifle, and inviting some friends to see the fun, he informed Hans of his intention, who exclaimed, with a great deal of confidence, "Oh, you may shoot; I catch de ball; no bullet can kill me!" "Now, Hans," said the Judge, as he proceeded to load his rifle, standing at a distance of about a dozen yards from him, "you know I am a dead shot, and I shall bore a hole through you, *sure!*" "Oh, shoot away! You can't hit me; I catch de ball in my hand!" exclaimed the Dutchman, as he undauntedly faced the Judge. "Very well, then; I shall be sure to kill you if you don't catch the ball," said the Judge, at the same time taking deliberate aim at the Dutchman; when, just as matters were becoming serious, the Dutchman suddenly threw up his hand, and cried out, "Shtop! shtop! By jings, maybe it won't do for dish country! But if it was in Germany I be *sure* to catch de ball!"

"'And this,' continued our fat friend, 'is the way with Spiritualism—by jings! it won't do for *dish* country!'"

YANKEE DOODLE UNDER DIFFICULTIES.

To the Editor of the Drawer:

"SIR,—I am an ill-used individual. I ask you to give voice to my sufferings, and I beseech the public to lend an old friend a sympathizing ear. You and I are old friends. So are your readers, all old acquaintances of mine—all old friends.

"Sir, I am that venerable and patriotic tune surnamed Yankee Doodle. Nearly seventy years have I lived and flourished in this happy land, cherished and protected. But, in these latter days, I am the victim of a vile conspiracy, of which concert-rooms are the scene of action, foreign whis-

kerandoes the malignant plotters, and, alas! my own friends too often the approving lookers-on! Sir, you know my history and my merits. I was, indeed, a British foundling. But, Sir, the universal Yankee nation has adopted me. I am proud of the connection. Sir, I flatter myself that the advantage has been mutual. I have served that nation long and well. From a thousand screaming fifes, on a thousand bloody fields, I have cheered them on to victory. Millions of youthful lips my strains have puckered in their first harmonious effort. A hundred times my liquid notes have been 'married to immortal verse,' and of *me* has the poet beautifully said,

"'Twill do to whistle, sing or play,
—And jest the thing for figh-tin'.'

Sir, I have a right to be indignant when I am insulted and made game of.

"Why is it, Sir, when one of your foreign Crowderos, your bewhiskered fancy fiddlers, has tickled his audience with his capering fingers, till they call him out again—why is it that I am to be dragged out and tortured for an *encore?* What have I done to be served up so—'Yankee Doodle, *with variations!*' Sir, I am not played, I am shamefully played *with*, smothered in 'ornaments,' strangled, bedeviled, *fiddle-de-deed to death!* Sir, I do not deserve this. I am a simple, well-meaning, old-fashioned tune. I am of a cheerful temper; I have reason to believe my mother was a Jig, and you know the Jigs are a merry family. But, Sir, the Jigs don't go crazy—they don't turn summersets, and rush up and down like mad, growling and screeching, and whizzing, and pirouetting through the gamut, with one leg poised on the base, and the other quivering among the harmonics! Sir, they make *me* do that! Yes, Sir, *me*—Yankee Doodle—the National Anthem of this great Republic—*me* they put through such shameful antics, as if I were a dancing dog, or an organ-grinder's monkey! And, with bitter malignity, they boast that I have been well *executed!* Have they not troops of brazen *Cavatinas* and *Arias*, *Fantasias* without modesty and *Airs de Ballet* of supple limb, that I must be seized upon? Do I deserve to be disguised in the trappings of a Fantasia? Sir, imagine your own respectable grandfather tricked out and capering as a *figurante?*

"I appeal to you, Mr. Editor, and to a generous and attached public, to interfere in behalf of an oppressed old friend. Under the pretense of homage to my popularity and patriotism, I am cruelly tortured. If you will not save me, I'll break the fiddle-strings myself, if I perish in the attempt!

"Your abused and indignant friend,
"YANKEE DOODLE."

DURING a sojourn of old Colonel J. B. D——, of Chotauk, Virginia, with a friend at Culpepper Court House, an Association of the clergymen of the neighborhood was held at that place. The friend, who was a zealous member, entertained the ministers one day at dinner. The company for some time conversed upon a variety of topics connected with the Church and the cause of religion, during which Colonel Jack sat silent; but feeling ambitious of displaying his knowledge or interest in religious matters, he, at the first pause, commenced a question which unfortunately was not permitted to be finished.

"Parson C——," said Colonel Jack, "tell me, was it the Virgin Mary or Mary *M'Daniel* who—"

Here he was saluted with a shout of laughter, long-continued, which smothered the remainder of the inquiry. We fear the Colonel's theological investigations have not been since resumed, or his information in regard to Mary *Magdalene* increased.

FATHER ROLLINS, out in Wisconsin, was preaching from the words, "He that believeth shall be saved." He opened at considerable length with a general view of the subject, and then, concentrating his force, proceeded to a *critical exegesis* of the text in this wise:

"My brethren, I wish to direct your attention closely and particularly to the *wording* of this Scripture, as thereby to reach the very meat and substance of it. The text says 'He that believeth:' observe, my brethren, it does not say he that *believes*, nor he that believed; but it plainly and expressly declares it is he that believ*eth* who shall be saved. Mark, my brethren, the force, in the Scripture, of the little word *eth!*"

Perhaps they did mark it; but what the good preacher meant was more than the wisest of them could tell.

IN the most beautiful town in North Carolina, where have been born and have bloomed her fairest daughters, and where for a number of years shone in undimmed radiance the brightest intellects which have ever ornamented and blessed her—in the court-house which has so often been graced with the elegant oratory of a Gaston, or startled with the flashing wit or bitter irony of a Stanley, the following very amusing incident occurred:

An old court-crier, who had grown gray in the cause and as deaf as a beetle, was in the habit of calling the names of witnesses (which he generally managed to get wrong) from the second story window of the court-house, in such a stentorian voice as to be heard with distinctness for a square or more. On one occasion, in the course of a very serious and somewhat important suit, the presence of a witness, named Arabella Hanks, was needed. The crier, like a parrot, sat nodding on his perch, when he was aroused from his slumber by an order from the Court to call the witness. Looking anxiously at the Judge, with his hand at his ear, in order to catch the sound correctly, he said,

"What, your Honor?"

"Call Arabella Hanks," said the Judge.

Still in doubt, the poor crier arose from his seat and said again, with a much-puzzled look,

"What, your Honor?"

"Call Arabella Hanks, crier, and delay the business of the court no longer!" said the Judge, much provoked.

The old crier, thereupon, with a countenance indicating both doubt and desperation, proceeded to the window, and in his loudest voice called out,

"*Yaller* Belly Shanks! Yaller Belly Shanks! Yaller Belly Shanks! come into court!"

It is needless to say that the seriousness of the court-room was convulsively dispelled; and quiet was restored only to be again disturbed by the laughter caused by the crier, who, in answer to the Court as to whether or not the witness answered, said, "No, your Honor; and I don't believe there is such a person in the county, for I've lived here forty years, and I never *he'erd* of him before!"

THE Drawer acknowledges the receipt of a mag-

nificent poem, dedicated to the Emmet Guards of Pittston, Pennsylvania; but its length forbids its gracing these pages. Take a stanza or two by way of a specimen:

Come all you Pittston Heroes, and listen unto me,
I'll sing for you a patriotic song of praise and dignity;
As I mean to sing your praises, for which we have so much regard.
For with joyous times I will compose these lines for the Pittston Emmett Guards.

Beneath the American Eagle our Company was organized,
And by our Brigade, Major Harvey, our Company was patronized;
All honor and respect he paid to us, and he said he would us reward,
For on that day Major Harvey did say they are the Pittston Emmet Guards.

VERY sad, but sadly true, is the following fearful incident, which occurred not long since at a cemetery not far distant from Wheeling, Virginia:

Theodore, a bright boy of thirteen, had died. His brother, Hanson, but five years of age, seemed to regard his death as a commonplace affair, and all attempts to rouse him up to a consciousness or seriousness on the subject were vain. He seemed unchanged—unmoved.

The funeral *cortége* reached the grave; the solemn burial-services were read; and the old sexton commenced the work of covering the remains, but no sooner had the first lump of clay fallen upon the sounding box than little Hans, who had stood regarding the impressive services without a sign of emotion, suddenly raised himself to his full height, and, with clenched hands and a look of defiance that seemed fearful, he exclaimed, in a shrill voice, arresting instantly the attention of all, "Old man, stop! I'll kill you if you cover my brother up in that dark hole!" and, with a wild maniac scream that sounded piercingly mournful, he fell motionless to the earth. The great deep of many hearts was broken up, and tears fell like rain-drops.

OUT in Arkansas, a correspondent says that in reading a newspaper, printed in the year 1810, he finds several anecdotes which he commends to the Drawer. Here are four and no more:

"A vain fellow, who commanded a small vessel, but who tried to appear bigger than the captain of a first-rate man-of-war, told his cabin-boy one day, that he had company coming on board to dine; and that when he asked him for the silver-handled knives and forks, he must tell him they were gone on shore to be ground; and answer in the same strain any other questions he might ask. He did so. The knives and forks went off very well. The next question was, 'Where is that large Cheshire cheese, boy?' 'Gone ashore to be ground, Sir!'"

"On the edge of a small river in the county of Cavan, in Ireland, there is a stone with the following strange inscription, no doubt intended for the information of strangers traveling that way: 'N.B. When this stone is out of sight it is not safe to ford the river.' But this is still surpassed by the famous post erected a few years since by the surveyors of the Kent Roads, in England: 'This is the bridle path to Feversham—if you can't read this, you had better keep the main road.'"

"The following anecdote lately occurred at Boston. A lady having cut an advertisement out of a newspaper with an intention to send it to the printer for further information, pinned it upon her gown. A gentleman (to whom she was partial) observing that it began with 'To let,' asked, '*At what price*, madam?' She looked at the piece, and perceiving his drift, answered, '*At the price of your hand*, Sir.'"

"The Duke of R——, going on horseback, upon a visit to a worthy clergyman at Nacton, near Landguard Fort, to take the diversion of shooting, desired a simple rustic about sixteen, who was servant in the family, to take care and rub down his horse, and not give him any water, when the lad replied, 'Yes, maister—no, maister,' on which the groom, who stood by, severely rebuked him for his rudeness, telling him that the person who alighted was a great man, 'and whenever he bids you do any thing,' said the groom, 'you must be sure to say *Your Grace*.' Young Hob treasured up in his memory the advice which he had received; a few days after, when the Duke mounted his horse, he bade the lad take the stirrup a hole lower; the boy, with great solemnity, answered, '*For what we are going to receive the Lord make us thankful!*'"

THIS, from Mystic, is very good in its way. Cursing is rarely to be commended, but in this case it seems to have been well defended:

"In times 'langsyne' old Mr. Crocker, of the then pastoral village but now beautiful city of Norwich, went to buy some corn of neighbor L——l; but though he had enough and could have spared some, he refused to sell any. Corn was scarce, yet Crocker knew that Farmer L——l had a goodly quantity of golden ears in his crib, and was, therefore, very wroth at the refusal. He could get no corn, so he cursed L——l soundly and went his way. Now swearing, in those times, was a grave offense in the eyes of the law, and on L——l's entering a complaint, Crocker was summoned to appear before Justice Hyde to answer the complaint. He came into the court with his Bible under his arm, plead guilty, and then plead his own case. Opening the Good Book, he turned to Proverbs xi., 26, and read, 'He that withholdeth corn, the people shall curse him: but blessing shall be upon the head of him that selleth it.' 'God curses him, I curse him, and now do you curse him, Squire Hyde, for one of your curses is worth two of mine, and *do* all of *you* gentlemen curse him.'

"He won his case and was dismissed without being fined.

"Once, when called upon to hand in to the Assessors his tax list, he wrote this:

"'One old house all out of repair,
Two hogs, two sheep, and a poor old mare:
Thus you have my honest list,
Pray don't let the toll exceed the grist.'"

"IN the county of N—— they have no 'Poor-house,' and whenever a pauper appears he is quartered upon some kind old citizen, the county paying his expenses monthly.

"Old Elam H—— had one of these vagrants to board, and at every meeting of the Board of Police presented his bill, which was regularly paid. The old fellow being very fond of whisky, and the last 'drap' having disappeared in the usual way, bethought him of an expedient to raise the wind and, at the same time, the *sperits*. He called on the Probate Clerk with a long face, and told him the old pauper was dead and he wished the money im-

mediately to bury him decently. The cash was drawn from the County Treasury, and Old Elam went on his way rejoicing with his 'keg full.' At the next session of the Board, however, the monthly bill of expenses was, as usual, laid before them. Mr. H—— was called on to explain this little discrepancy, as the books showed the pauper dead and his ferriage over the Styx was already paid.

"Old Elam scratched his head, when his countenance brightened. 'Well, gentle*men*, when I left home that day the old fellow *war*, to all appearance, dead as a possum. I don't know how to account fur it, *on*less maybe the old chap was in a sort of *trance*.'"

"During the last session of our Circuit Court two of our citizens were arraigned for infracting our laws by getting up a small fight between them. It is the privilege of such offenders, in this State, each to make a statement of the facts before His Honor, the Judge. One of the belligerents, a Mr. P——, was remarkably slow of speech, and very deliberate in his actions. After the statement of his rival was concluded, Judge H—— called Mr. P—— to the stand.

"'Well, Mr. P——, please give your account of this affair.'

"'Wa'al, Jedge,' said Mr. P——, 'you see J—— there and myself had some little talk about an old matter of business, and he stated something that wasn't so, and I told him he lied, Jedge, and he knocked me down, Jedge, he did; and he caught hold of my whiskers, Jedge, and he dragged me two or three yards over the ground, Jedge; and—'

"'But,' says Judge H——, interrupting, 'Mr. P——, was you hurt or frightened much during the time?'

"'Wa'al, Jedge, I can't say that I was frightened, but I was *tre*mendously *fatigued!*'"

This is very neat, and it has a moral, too.

"We have, in this city of Western New York, a clergyman full of faith and zeal, whose aim is to teach his flock to cleave to 'the promises.' The 'line upon line' of his preaching is faith in God, and in his family he urges the power of that faith.

"He has a little boy and girl, both bright. Not long ago, they were together on the roof of their father's house, and had gradually worked their way nearer to the eaves than was safe. Of course, they became somewhat alarmed; and the boy, in fear, called out to his sister, 'Libby, you hold on to me, and I'll hold on to the promises.'"

"'The promises' consisted of the inner casing of the open scuttle!"

Another story, "The dipped Candle," sent by the same correspondent, has been around here before.

The Rev. Dr. Chapin is well remembered throughout Connecticut for his eccentricities and humorous sarcasms, as well as for his great ability as a preacher. For many years he was pastor over the church in Rocky Hill—so long, indeed, that a hole of considerable size had actually been worn by his feet through the oak flooring of his uncarpeted study, in the place where he had been accustomed to sit while writing. Many anecdotes are told of him, but the following, never in print, are furnished by an admirer of the Drawer:

"Some years ago it was the custom in Connecticut for the ministers of the adjacent parishes to meet together for religious purposes, when one of their number, particularly one of the younger members, would deliver a sermon for the rest to criticise. On one occasion the sermon was preached by the Rev. Mr. W——, an exceedingly long-limbed, awkward divine, who had just received his license. When it came to the Doctor's turn to make his criticisms he began,

"'I don't know but that some might call this outreaching of arms (suiting the action to the word) *gesturing*, but, for my part, I call it *lobstering*.'"

"A spruce young divine was once considerably taken aback when making a pilgrimage to the Doctor. As he drew near the house, seeing a rough-dressed old man, he called out,

"'Old codger, can you tell me where Dr. Chapin lives?'

"The old gentleman, without noticing the rudeness of the speech, directed him to the house. The young man was duly ushered in, and informed that the Doctor would be in within a few moments. Judge of his surprise when in walked the same old codger, and announced himself as Dr. Chapin!"

An Alabama little one has his smart speeches prettily reported in the following letter:

"My little son Harry is quite an oddity in his way. On one occasion, as I was walking out with him and a younger brother, Ovid, Harry became frightened by a cow, whereupon I laughed at him, and, in order to shame him, called him a coward. After going on a little way further, Ovid got frightened at a large hog, and came running back to me, crying out, 'The hog will bite me!'

"'Papa,' said Harry (who is, by-the-by, only four years old), 'ain't Ovid a *hoggard?*'

"On another occasion, at the dinner-table, when the plates were being removed for dessert, Harry said: 'Mother, what are we going to have?' His mother replied: 'Wait and see, my son.' And when the pudding was brought on he turned very gravely to his mother and exclaimed: 'Is that the *wait and see?*' since which time 'wait and see' has become proverbial with us.

"He is a very matter-of-fact child, and takes every thing in its literal sense. I was teaching him to count the holes on a flute. He commenced one, two, three, and skipping one kept on with four, etc., when I interrupted him with 'Don't skip; now commence again.' He began one, two, three, four, *don't skip*, five, etc.

"At another time, when his mother was talking to him about death, and telling him when he died he would be a little angel and fly up to heaven on wings, he exclaimed: 'Mother, will the sky be hard to break?'

"Once my mother wanted the garden-rake, and it could not be found, and she set all the servants to looking for it. We had a little negro boy named Milas, a very bright little fellow, who joined in the search. After a while he came trotting up, with his face all aglow, as though some bright idea had struck him, and cried out:

"'I know where the rake is.'

"'Where is it, Milas?'

"'Lost!'"

From Wiesbaden, in German land, a correspondent of the Drawer writes:

"We had a regular row in the Kursaal the other day. Some impudent fellow, English or Amer-

ican, put upon the reading-room table a few copies of the inclosed parody on Mary Howitt's 'Spider and the Fly,' and the croupiers got their bile up at it. I snatched up the one I now send you for the Drawer; almost all the others were consigned to perdition. Some of your readers (!) may get a hint about these gambling hells if you print the parody. I think the writer would have done better to use the word 'sharper' instead of 'sponger.'

THE SPONGER AND THE FLAT.

(*As sung at Baden-Baden, Homburg, Wiesbaden, and Ems, every Summer.*)

AIR—"The Spider and the Fly."

"Will you walk into my Kursaal?" said the Sponger to the Flat,
"'Tis the richest, gayest Kursaal that ever you were at.
The way into my Kursaal is up this granite stair,
And I've got many curious things to show you when you're there."
"Oh, no, no," said the simp'ring Flat, "to ask me is in vain,
For they who mount your granite stair well fleeced come down again."

"I'm sure you must be weary now of walking here and there—
Will you rest upon my cushioned seat, where lounge the young and fair?"
The Sponger said unto the Flat, with a twinkle in his eye,
While his wicked soul planned artful snares to catch the passers-by.
"Oh, no, no," said the Flat, "because I've heard my mother say
That those who on your cushions rest you cruelly do flay."

Said the cunning Sponger to the Flat, "Dear friend, what can I do
To prove the warm and true regard I've always felt for you?
I have within my Kursaal good store of all that's nice:
I'm sure you're very welcome—'tis hot—pray take an ice."
"Oh, no, no," answered him the Flat, "kind Sir, that can not be;
I've heard what's in your Kursaal, and I do not wish to see."

"Now do walk in," the Sponger said, "for here you're sure to find
A host of wealthy beauties, all the gems of womankind;
I'm sure you'll make a conquest there among their flutt'ring hearts,
For they seek for men of noble mien—for gentlemen of parts;
Come, sit then at my table, where they play at rouge et noir,
There you'll see a row of beauties as you ne'er have seen before;
Win freely, at your pleasure, from my heaps of glitt'ring gold,
And find that Fortune kindly gives her favors to the bold!"
"I thank you, gentle Sir," he said, "for what you're pleased to say,
And, wishing you good-morning now, I'll call another day."

The Sponger turned him round about, and went into his den,
For well he knew the silly Flat would soon come back again;
So he made a corner ready at his table of roulette,
Where, close by, a brother Sponger, winning rapidly, was set;
Then he came out to his door again, and said, with cunning wile,
"Come try your fortune, noble Sir, and win this golden pile,
Here beauteous women sit and play, and stake their souls for gold—
Come, make a noble fortune now—success attends the bold."

Alas! alas! how very soon this very verdant Flat
Came simp'ring to the Kursaal, and at the table sat;
With wistful eyes he saw the prize the cunning Sponger won,
Not knowing what a web of craft around him had been spun;
Thinking only of his noble mien, and the heaps of glitt'ring gold,
And beauty sighing at his feet—of winning wealth untold—
When up the Sponger started from his roulette-table lair,
And cleaned him out of all his cash, and laughed at his despair.
He plucked him at his table, and he fleeced him in his den,
Reduced him to a beggar, and—then drove him out again!

And now ye Flats who travel, and this sad story read,
To idle, silly, flatt'ring words I pray you ne'er give heed;
When Kursaal harpies tempt you, forget not what they're at,
But take a lesson from this tale of the Sponger and the Flat.

A PARTY of jolly boys started in a *jolly* boat for a cruise to Albert Head. Of course "schnapps" was the meat and drink of the crowd, and before long a few were the worse for *wear*. At night the party hung up their blankets on the floor, and hung themselves up on the blankets, preparing for a deadly warfare against flies, fleas, and beetles. After a few occasional squibs popping from one to another, sleep threw her mantle over them and made their couch more agreeable. Early in the morning, they were awakened by their host, who, from the balmy state of the atmosphere, the quietude of the sea-beach, and the absence of women, proposed to the party to arouse themselves and take a bath. Harry, however, was still asleep when John pushed him roughly and bawled in his ears,

"Come, Harry, let's all take a swim!"

Harry, whose head had been swimming all night, and upon whose liquid dreams hovered thoughts of previous sprees with a glorious wind-up of a cocktail in bed, in the morning, as an eye-opener, aroused himself, and, gradually turning over, said,

"Boys, just oblige me, I'll take my swim in bed, if you will hand it to me."

"Drunk still!" was the ejaculation of the boys.

A YANKEE and a British American were conversing about the future growth of the resources of Vancouver Island, etc., when the Yankee jibed this "brother of the same language" about the want of cattle to support a large population, and intimated that the inhabitants would depend upon California and Oregon to furnish their animal food. Her Most Gracious Majesty's subject replied,

"You are entirely mistaken, my dear fellow; we've plenty of cattle on the 'ills, *but we can't overtake them!*"

It became a by-word on Yates Street for a while after.

IN the earlier days of Virginia, about the year 1812, when party spirit between Democrats and Federalists ran very high, particularly in the Loudoun district, unusual excitement prevailed in the contest for Congress between Joseph Lewis (Federalist) and William Brent (Democrat). Abraham Thomson Mason, a man of warm friendships,

strong passions, and great courage, took a very active part in the contest, as an ardent but imprudent friend of Brent. He was constantly involving himself and others in broils by his intemperate zeal, often doing more harm than good to his cause. His brother, John Thomson Mason, who had withdrawn from public and professional life, was living in retirement on his estate in the adjoining County of Washington, in Maryland. He was as devoted a Democrat as his brother; but, unlike him, was a cool, reflective, prudent man, and withal a man of great humor. Abraham had great confidence in his judgment and wisdom, and in his perplexities as to how Joe Lewis was to be beaten and the *country saved*, he bethought himself to consult his brother in Maryland upon the subject. The *vast importance* of the issue was made known, and advice and counsel asked. The Maryland brother agreed to reflect over the matter, and give the result in the morning. The morning came, and with it the anxious inquiry if any scheme had been devised for the defeat of Joe Lewis? The reply was, "Yes, Abraham, I think I have it. Go home at once, and come out *yourself* for Joe Lewis; and if that don't beat him, nothing will!"

Of course the remedy was not resorted to, and Joe Lewis was elected.*

A Western contributor draws a graphic picture of a scene in Court:

"Our quiet village was recently thrown into a state of great excitement by a case of infanticide. The young mother charged with the horrid crime was brought to trial. Crowds thronged the court-room to hear the examination of witnesses and the speeches of counsel. The ladies came too, and mingled with the multitude. In the evening an old lady, on her way to meeting, turned in with the crowd into the court-room, and was borne along to one of the highest seats. One of our smart lawyers, Mr. Hinton, was getting warmed with the subject, and when he is warmed he is hard to be beaten. He came now to describe the murder: the little innocent babe, looking up, perhaps, with a smile into the face of the unnatural mother, who seizes it with her monster hands—and as the tears began to flow from the eyes of judge and jury and the silent audience, the old lady screamed, at the top of her voice, 'Glory! glory! bless the dear baby!' The shock was too much for the Court. The transition was sudden, but complete. The good old woman was led out of court, remarking, as she went, it was the best sermon she ever heard in her life."

During the Twenty-seventh Congress, in 1841, the colossal statue of Washington—which, at the time, and since, has excited so much criticism—had just been completed and delivered to the Government. What disposition to make of it, or where it was to be placed, were questions that involved much contrariety of opinion among members of Congress. Mr. Adams at the time was a member of the House. He admired the statue as a work of Art, and manifested much interest that it should have such a conspicuous position as was worthy of the subject and the skill of the artist. He said he had given the subject considerable attention, and had come to the conclusion that the southwest corner of the rotunda of the Capitol was the proper place for it, for in that position it would arrest the attention of all who entered the Capitol. Mr. Stanley, of North Carolina, replied, that it was quite probable the member from Massachusetts was correct in his views; but, as a preliminary question, he would move for the appointment of a committee of Virginia abstractionists, to ascertain where *the corner of a rotunda was!* Mr. Adams, from his seat, in his usual shrill voice, responded, good-humoredly, "I give it up!"

In one of the frontier counties of Illinois, while thinly settled, there resided *a lawyer*, in name, rather than in legal learning. He had great contempt for books and forms of every kind; and in the management of his business relied more upon (to use his own expression) "the broad and glorious principles of common sense" than upon adjudged cases. He had the entire *swing* of the legal business of the county. The increasing population and business of the county finally attracted another lawyer from New England—a man of some pretensions, at least, to a legal education. It was not long before the two rivals were brought in professional conflict before the Court. The Yankee lawyer opened his case with considerable system and with some show of learning, and, to the great astonishment of all present, he was fortified with a number of books to support his points. A case in Johnson's (New York) Reports was a decision precisely in point; and he, accordingly, triumphantly rested his case upon that authority. The Illinois advocate arose to reply. He deprecated this innovation of *reading books upon questions of common sense;* but especially did he protest against placing any confidence in *reports*. "For," said he, "the Court is well aware that, in nine cases out of ten, *reports* are great *lies;* but, in this instance, I regard the conduct of the counsel as insulting to the Court. He has not only asked you to believe *reports*, but whose reports, do you think? Why, Bill Johnson's, down on Cedar Creek! who, may it please your Honor, is known to be the biggest liar in Knox County!"

The New England lawyer removed to an adjoining county forthwith.

On opposite sides of the same street in Newburyport, Massachusetts, lived two boys, four summers old—Frank and Johnny.

Frank was a pattern of good nature and good breeding; while Johnny was a "grim, mischief-making child," and conjured up to his mother's view the ghost of many a prison from the vasty deep of coming years.

One day Johnny had been playing some of his wicked pranks, and had been brought to the "inquisition," when his mother, in the course of her lecture, exclaimed, "Why will you be so naughty? Why won't you be a good boy, like Frank?"

The urchin looked up, and with great gravity replied, "Because I am afraid to be a good boy."

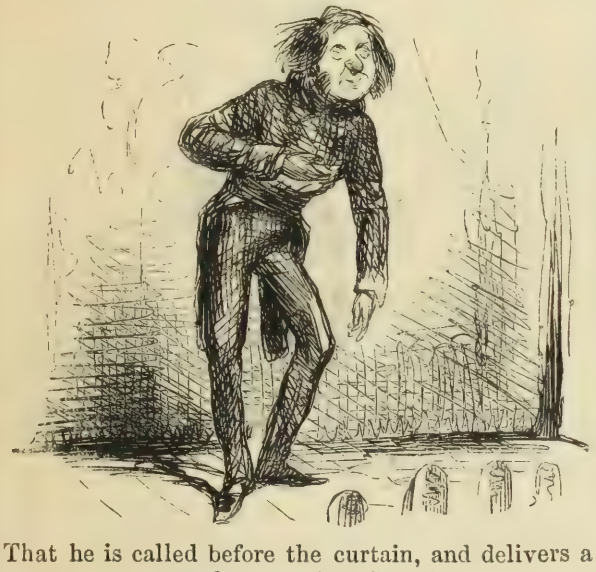
"Afraid!" said his mother; "why, what in the world are you afraid of, Johnny?"

"I am afraid," he answered—"I a-m a-f-r-a-i-d, if I should be a good boy, they would *burn* me, as they did John Rogers!"

His fear saved him the *fagot* at that time, whatever its effect on the *fire*.

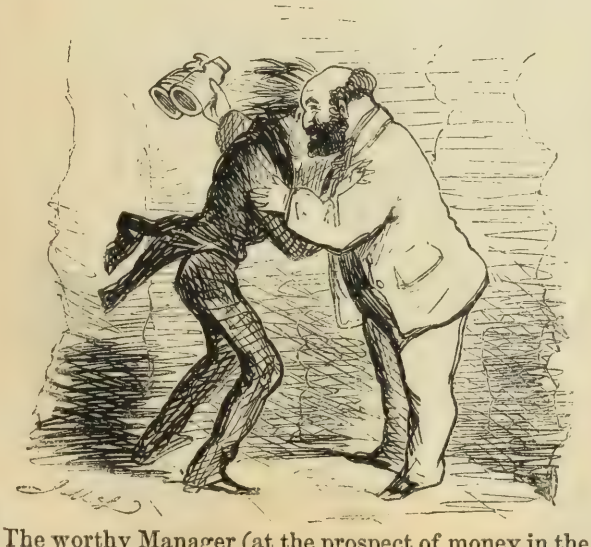
---

* These two brothers were the uncles of A. T. Mason, of whose death at the hands of Colonel M'Carty we gave such an interesting account in a recent number of our Magazine.

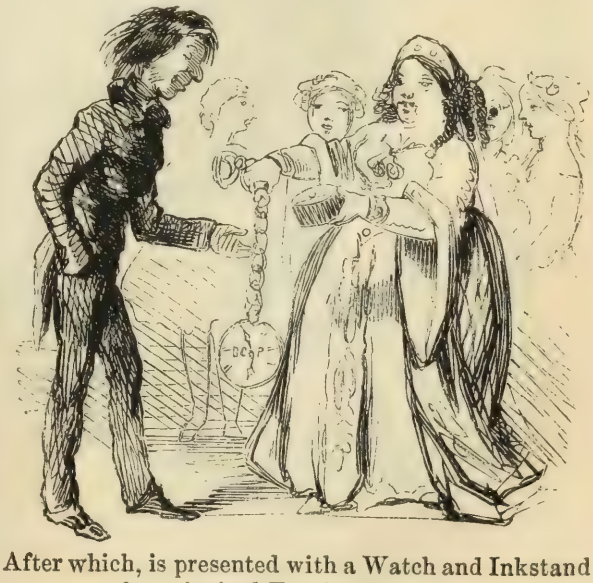


Experience of a Dramatic Author.

Dionysius Bellerophon, having completed his great American play, is very much elated thereat.



Luxuriates in dreams, viz., That his play has been received with terrific applause. And—



That he is called before the curtain, and delivers a neat and appropriate Speech—

During which he is almost suffocated with the multitude of bouquets, etc.—

The worthy Manager (at the prospect of money in the Treasury) embraces him with tears in his eyes.

After which, is presented with a Watch and Inkstand by principal Tragic Actress;—

Supes, drawn up in Battle-array, crying "Bravo! Bravo!"—

And last, but not least, is invited to take a big drink by all the Dramatic Critics.

Reality: Overture—Curtain rises. First hiss! D. B. has a peculiar sensation.

Forty-thousand hisses, yells, etc. Play d—d. Cries for Author. D. B. appears to thank Audience—

When he is received with a shower of strong-smelling Testimonials.

Grand finale.—D. B. carried home on a Wheel-barrow, Policeman bearing original Manuscript.

Fashions for January.

Furnished by Mr. G. Brodie, 300 *Canal Street, New York, and drawn by* Voigt *from actual articles of Costume.*

Figures 1 and 2.—Sortie du Bal and Morning Toilet.

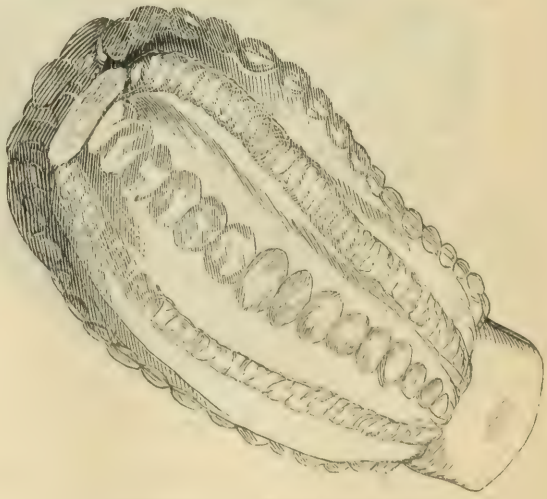
FIGURE 3.—YOUNG LADY'S EVENING DRESS.

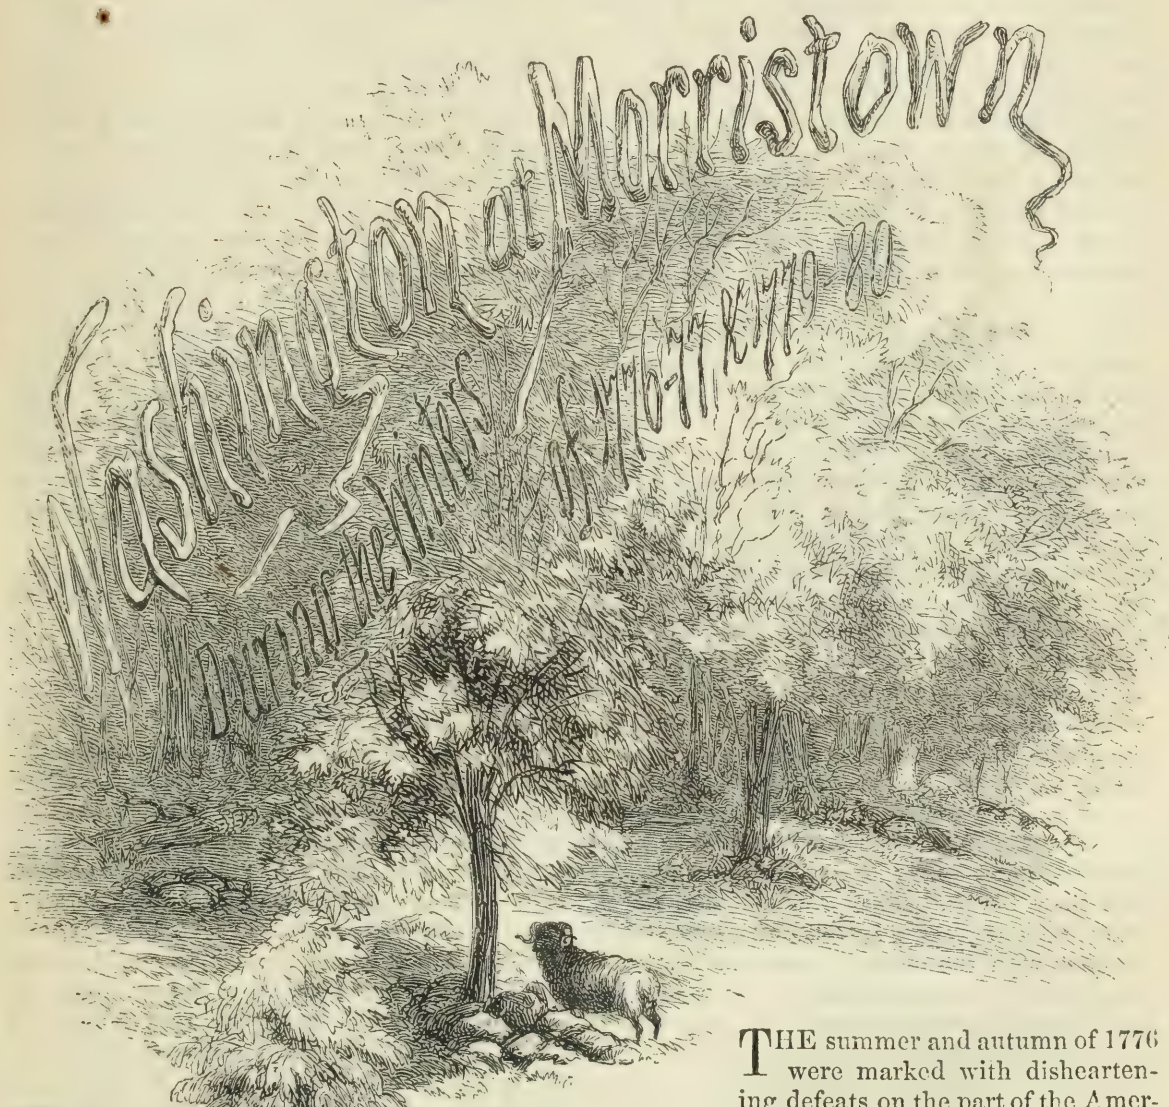
THE SORTIE DU BAL which we select for illustration is characterized by simplicity and elegance. It is made of white Cashmere, with a wide border of pink silk plush, upon each edge of which is a trimming of swansdown, a third row also ornamenting the centre of the plush upon the shoulders. A cable silk cord, with colored tassels to match, completes the trimming. The coiffure is of chenille silk, with pearls, and a pearl fringe. The hair is worn according to individual taste and the style of face.

The MORNING DRESS is of dark green merino, with the berthe, frill, sleeves, and skirt-front of plaided poplin. The ornaments consist of narrow tartan-plaid ribbons and brandebourgs, with a black cording which outlines the plaid. The jupe is of Nansouk, and flounced.

FIGURE 3 is designed for an Evening Dress for a Miss of 10 or 15 years. The frock is of taffeta, trimmed with narrow ribbons; body *à la Vierge* plaited before and behind, the plaits meeting under the sash.

FIGURE 4.—PINE-APPLE UNDER-SLEEVE.





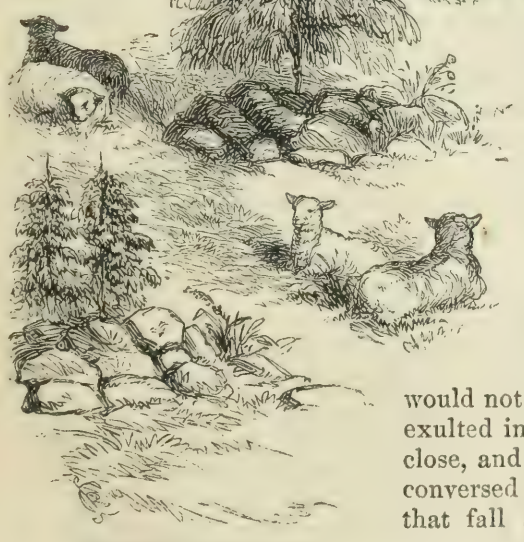


FIGURE 5.—UNDER-SLEEVE.

HARPER'S NEW MONTHLY MAGAZINE.

No. CV.—FEBRUARY, 1859.—Vol. XVIII.

THE summer and autumn of 1776 were marked with disheartening defeats on the part of the American army. General Greene, Washington's ablest officer, was unable, by reason of sickness, to participate in the Battle of Long Island. In September Washington was sorely tried by the conduct of two regiments of militia at Harlem Heights, and in November, at Hackensack, he experienced "great mortification" at the surrender of Fort Washington, "with two thousand men, a good deal of artillery, and some of the best arms we had." He declares to his brother that he is "wearied to death with the retrograde motion of things, and solemnly protests that a pecuniary reward of £20,000 a year would not induce him to undergo what he does." The enemy exulted in the prospect of bringing the rebellion to a speedy close, and the patriots were proportionately depressed. I have conversed with several aged people who resided in Newark that fall and saw both the retreating Americans and their pursuers. Many times have these witnesses described the for-

CHIMNEY FOUNDATIONS.

Entered according to Act of Congress, in the year 1859, by Harper and Brothers, in the Clerk's Office of the District Court for the Southern District of New York.

lorn and hopeless aspect of the fugitives, and the vivacious and hopeful aspect of the enemy in pursuit. The season was wet and the roads were almost impassable. The old soldiers were wont to call this dreary march "the mud-rounds." I have read the copious notes taken by a pension agent from the lips of scores of Revolutionary soldiers, and most of them speak of that march as attended with very peculiar sufferings and hardships. Old Mr. David Gordon, cheerful at the age of ninety years as a bird, often spoke of "the mud-rounds" with a shudder, and he was better off than many of his fellows, for he had shoes. The weather was in keeping with the occasion, and yet all who saw him then declare that Washington appeared entirely calm and confident, as if he were a conqueror at the head of an enthusiastic army.

I need not stop to detail the brilliant achievements of Washington at Trenton on the 26th of December, 1776, the 2d of January following on the banks of the Assunpink, and on the succeeding day at Princeton. There is one fact which I do not remember to have seen mentioned, showing what our army did on the 2d and 3d of January, 1777. Scarcely had the soldiers rested from the extraordinary fatigues of crossing the Delaware on Christmas night, the march on Trenton the next morning, the recrossing of the Delaware into Pennsylvania, when they were summoned to new hardships. Again they crossed the Delaware to Trenton and took position on the south bank of the Assunpink. Feeling his situation to be critical, Washington, on the night of 1st January, ordered General Cadwallader, stationed at Crosswicks, and General Mifflin at Bordentown, to join him immediately with their troops. This they did that night. The next day strong parties were sent out to skirmish with the enemy, so as to retard their movements as much as possible. It was known that Cornwallis, with a strong force, was marching from Princeton, so that the 2d of January was an anxious day for the Americans. About sunset of that day the enemy came up, and the sharp but brief action at Assunpink was fought. That night Washington stationed his guards, kindled his camp fires, and had parties throwing up breast-works to deceive the enemy. In the dead of night the retreat commenced by a circuitous route for Princeton, which can not be less than fifteen miles. The next morning the Battle of Princeton was fought and won, and Washington pushes his army on to Kingston, three miles beyond Princeton. There it was decided not to venture an attack on New Brunswick, but to bear off to the left through Rocky Hill and Pluckemin for Morristown. Accordingly the Americans, a large part of whom had not slept for two nights, all of whom had not slept for one night, marched that night to Pluckemin, a distance of some eighteen or twenty miles from Princeton! That is, our brave men had fought the severe battles of Assunpink and Princeton and marched over thirty miles within some thirty hours. It was a great achievement.

The memorable "mud-rounds" retreat through New Jersey preceded the victories at Trenton and Princeton, and the enemy found the "fox was not bagged," and the rebellion not yet ended. The correspondence of Washington after these victories shows how they had cheered both him and his countrymen. He speaks of the ardor of the Eastern regiments to protract their time of service, and also of the fact that the militia were pouring in from all quarters. He says, "The enemy have evacuated all the country below; they went off in the greatest hurry and confusion."

It may not be uninteresting to state in this connection that many of the Hessian prisoners taken at Trenton were employed afterward in the iron-works of Morris County. John Jacob Faesch, owner of the Mount Hope Furnace, and Lord Stirling, owner of the Hibernia Furnace, in the vicinity of Rockaway, took a large number of the Hessians as operatives. A number of these remained and settled in that region after the war was concluded. The Government furnished Faesch with muskets to quell any insubordination among these prisoners.

From Washington's letter to Congress, December 20, 1776, we learn that he "had directed three regiments to halt at Morristown, in Jersey—where I understand about 800 militia had collected—in order to inspirit the inhabitants, and as far as possible to cover that part of the country." These were Eastern regiments, which reached Morristown about the middle of December. A letter from General M'Dougall to Washington states that these were "Gratton's Regiment, with 250 men; Bond's Regiment, with 100 men; and Porter's Regiment, with 170 men; in all, 520 men." On account of General M'Dougall's illness General William Maxwell, a spirited officer from New Jersey, took the command of these troops at Morristown. A letter from Washington to Maxwell, December 30, speaks of four regiments as at that point, the fourth being made up of the militia commanded by Colonel Jacob Ford, Jun. This latter officer had been "charged with the duty of covering the retreat of Washington through New Jersey," and he commanded in a skirmish with 800 of the enemy under General Leslie, who had landed at Elizabethtown Point and advanced as far as Springfield. The alarm of the invasion was spread through the county of Morris, and hundreds of her patriotic citizens hastened to aid in driving back the enemy. One young man, Mr. Samuel Beach, was teaching school at Lyon's Farms, but when the alarm was given he dismissed his school and shouldered his musket, which he used to very good effect. His sister, the late venerable Mrs. Colonel Jackson, of Rockaway, declared that he was black as a negro when he reached home, so that she did not recognize him until he spoke. The enemy so warmly met retreated. This skirmish at Springfield was on the 14th of

MAP OF THE VICINITY OF MORRISTOWN, NEW JERSEY.

(From a MS. map by R. Erskine, F.R.S., used by the army, 1778–80. Names in *Italics* are not in the original.)

December, 1776, and must not be confounded with a second battle at the same place in 1780.

On the 22d of December Colonel Ford led his troops back to Morristown, and from a statement made by General Maxwell we learn that, while on parade on the morning of December 31st, he was seized with "a delirium in his head; that he was borne off by a couple of soldiers, after which he never rose from his bed. During his illness a double guard was mounted before his door." He died on the 11th of January, 1777, and by command of Washington was buried with military honors. It is worthy of remark that this regretted officer was soon followed to the grave by his father, Colonel Jacob Ford, Sen., who died on the 19th of January, having been a leading citizen in Morris County from the time of its organization.

Colonel Jacob Ford, Jun., was connected with an enterprise which proved of signal importance to the country during the war. Both he and his father were men of large means. The son was an enterprising man, who some years before the war had erected several forges west of Morristown for making iron. He was the first owner of the Mount Hope property, which afterward, under Faesch, produced shot largely for our army. Early in 1776, as I learn from a manuscript in the New Jersey Historical Society, the younger Ford agreed with the Provincial Congress of New Jersey "to erect a powder-mill for the making of gunpowder, an article so essentially necessary at the present time." The Congress agreed to "lend him £2000 of the public money for one year, without interest, on his giving satisfactory security for the same, to be repaid within the time of one year in good merchantable powder;" the first installment of "one ton of good merchantable gunpowder" to be paid "on the 1st of July next, and one ton per month thereafter till the sum of £2000 be paid." I have reason to infer that Colonel Ford's "good merchantable gunpowder" did service that winter at Springfield, Trenton, Princeton, and in many other places. This powder-mill at Morristown, projected and built by Colonel Ford, was an important affair, and deserves mention in connection with his name, and especially as this mill was one constant temptation to the enemy to attempt to reach

Morristown, and as constant a reason why the citizens of Morris County so stoutly defended their strongholds that it is said a detachment of the enemy never did enter the county.

On the 6th or 7th of January, 1777, Washington reached Morristown, and took winter-quarters at the Arnold Tavern. The house is still standing, although somewhat changed since it sheltered its most illustrious guest. It is on the west side of the square, and is now owned by William Duncan. In 1777 it was owned by Colonel Jacob Arnold, the efficient commander of a company of light horse, a detachment of which was on duty as body-guard of Governor Livingston. The Arnold Tavern at that time was a two-storied house. The first floor was divided into four rooms, a hall running from front to rear. The two rooms on the south side of this hall were occupied by Washington, who used the front room as a general office and sitting-room, and the back room for a sleeping apartment. Tradition states that it was in this house he was so sick with quinsy sore throat that serious fears were felt lest he should not recover, and that he was asked whom he considered most competent to succeed him in case of his death. His reply pointed out General Greene as that man.

After the Battle of Princeton the enemy went into winter-quarters at New Brunswick. On reaching Morristown Washington wrote: "The situation is by no means favorable to our views; and as soon as the purposes are answered for which we came, I think to remove, though I confess I do not know how we shall procure covering for our men elsewhere." And yet, when we consider how easy the communication was between Morristown and the posts on the Delaware and Hudson, how easy the passes leading into Morristown were to be guarded, how admirable the position for gaining intelligence concerning the enemy, and, moreover, the fact that Morris County was settled with a highly patriotic population, it may well be questioned whether Washington could have found a situation better adapted to his wants.

Let us glean a few facts from old books and manuscripts, and also from eye-witnesses who until recently were living to tell what they had seen. These facts will show what was the condition of things when Washington spent his first winter here. The records of the courts show that the pecuniary embarrassments of the people were very great. The mass of the people were Whig in sentiment and action. Thomas Millege, of Hanover, a wealthy land proprietor, had been elected sheriff of the county, but writes in April, 1776, that he has scruples of conscience about the oath of office. His scruples finally led him to join the enemy, and his large estate was confiscated. I have before me an old manuscript which states that after the war Millege ventured back to Hanover, and that the people appointed a committee of three officers, who waited on him "without any ceremony, and told him that he must be out of the place by sunrise next morning, and never be seen in Hanover again, or he would be drummed out of the county on a wooden horse. Before sunrise he went, and has not been seen here since."

The merits of the Declaration of Independence were sharply discussed by the people, and the late Rev. Dr. Ashbel Green remembers that his father, widely known as Parson Green, held "many an ardent controversy with an English emigrant, a man of considerable property, and not a little hauteur, who had drunk deeply into Toryism." This Tory was alarmed at a threat of a coat of tar and feathers, and induced Parson Green to write for him "a humiliating statement" to be read on the next Sabbath publicly. This was done, the man standing up while his confession of the sin of Toryism was read from the pulpit. The man then started for Morristown to have Dr. Johnes read the same confession there during the afternoon

THE FAESCH HOUSE.

service; but the Doctor declined to do it. I state the fact to show how popular the Independence cause was, which could compel a Tory to such a humiliating step. In Pequannock township there were some beautiful farms belonging to the patriots, which certain Tories expected to get when confiscation should take place. The patriots in that region held long and frequent consultations in the house of a Mrs. Miller, whose sturdy counsels had great weight with her neighbors. In Mendham, with very few exceptions, the people were patriots. Captain David Thompson, a devout elder in the Presbyterian Church, and noted for his eloquence in prayer, said, "We can look to Jehovah when all other refuges fail;" and the Captain's wife declared to the numerous soldiers whom she entertained without charge that "nothing was too good for the use of those who fight for our country!" In Whippany the resolute Anna Kitchel scorned to procure a British protection when urged to do so by a timid deacon, "having," as she told him, "a husband, father, and five brothers in the American army! If the God of Battles do not care for us, we will fare with the rest!" Well said, brave Anna Kitchel! And she was not the only brave woman in Morris County. There were hundreds who cultivated the fields, and took care of the old and the young, while the men were away to defend the country.

If we go among the mountains northwest of Morristown, we find that Charles Hoff, the manager of the Hibernia Furnace, is urging Lord Stirling to bring General Knox up, in order to see if good cannon can not be cast there. In one letter he assured his Lordship that on a certain day they did cast a cannon which "missed in the breach; all the rest was sound and good." But if they made no cannon at Hibernia they made large quantities of ball and shot, as they also did at Mount Hope. The powder-mill at Morristown is making considerable quantities of "good merchantable gunpowder," which fact the enemy are known to regard with but little favor. And in order to increase the enemy's discomfort in this respect, it is said that occasionally loads of kegs, apparently full of powder, but in reality of sand, were ostentatiously conveyed from the mill to the magazine, carefully guarded with soldiers.

Among the remarkable men of Morris County at that time was Colonel William Winds, who had just led his regiment back from Ticonderoga. He was an eccentric man, with a voice like thunder, greatly beloved by his soldiers, a man of undoubted bravery and patriotism, and of whom many curious anecdotes are retained in the popular memory to this day. The pulpit of the Morristown Presbyterian Church was occupied by Dr. Timothy Johnes, whose contemporaries describe him as a mild but eminently persuasive preacher, and as a most admirable pastor. Washington was a constant attendant on his preaching both winters he spent in Morristown. Dr. Johnes was a decided patriot, and did not exclude his views from the pulpit. The Black River—now Chester—pulpit was occupied by the Rev. Mr. Woodhull, who not only preached patriotism, but repeatedly represented his people in the Provincial Congress. Parson Green, of Hanover, a man of very uncommon abilities, was also elected to the Provincial Congress, and threw his influence very decidedly in favor of his country.

These facts are merely grouped together to show what was the character and the condition of the people when Washington came among them. They were not as rich as patriotic, but they did what they could, and their illustrious guest repeatedly acknowledged his obligations to them.

It is an interesting task to gather up the few facts which yet remain descriptive of the situation of the army that winter. It is somewhat singular that, in his works of Washington, Mr. Sparks does not even record Bottle Hill—now Madison—or in any way mention the fact that the principal encampment that winter was near that place. The same is true of Lossing's Field-Book of the Revolution, and of other works. This hiatus can now be supplied from authentic sources. About one mile and a half from the present village of Madison, near the road leading to Morristown, was the encampment in what has been called Spring Valley, but the Indian name of it is Lowantica Valley. The highlands slope gracefully into a very fine southern exposure, well protected from the northern winds. Through this valley flows a beautiful spring brook. The encampment was on the property of one Isaac Pierson, whose daughter-in-law still survives at the age of ninety years. The facts relating to this encampment have been gathered in a manuscript by the Rev. Samuel L. Tuttle, pastor of the Presbyterian Church of Madison.

A large part of the soldiers were quartered upon the inhabitants in Hanover, Whippany, Chatham, Madison, and Morristown. This was done by commissioners, of whom Aaron Kitchel, of Hanover, was one. This gentleman was a man of excellent parts, and acted a conspicuous part in the Revolutionary War. He had two houses, and gave up the larger one to the soldiers. Dr. Ashbel Green remembers that his father's family "consisted of nine individuals; and, as well as can be recollected, fourteen officers and soldiers were quartered in the same dwelling." Mr. Uzal Kitchel, a worthy farmer in Whippany, had twelve soldiers to keep that winter. It is said that he refused to keep forty-one, the number an officer wished to billet on him. There was scarcely a house in that entire vicinity in which soldiers were not billeted; and the general spirit of the people was well expressed by Mrs. Hannah Thompson, wife of Captain David, when she said to certain hungry soldiers, "You are engaged in a good cause, and we are willing to share with you what we have as long as it lasts." Noble women, noble men were those

who entertained the soldiers of Washington that winter!

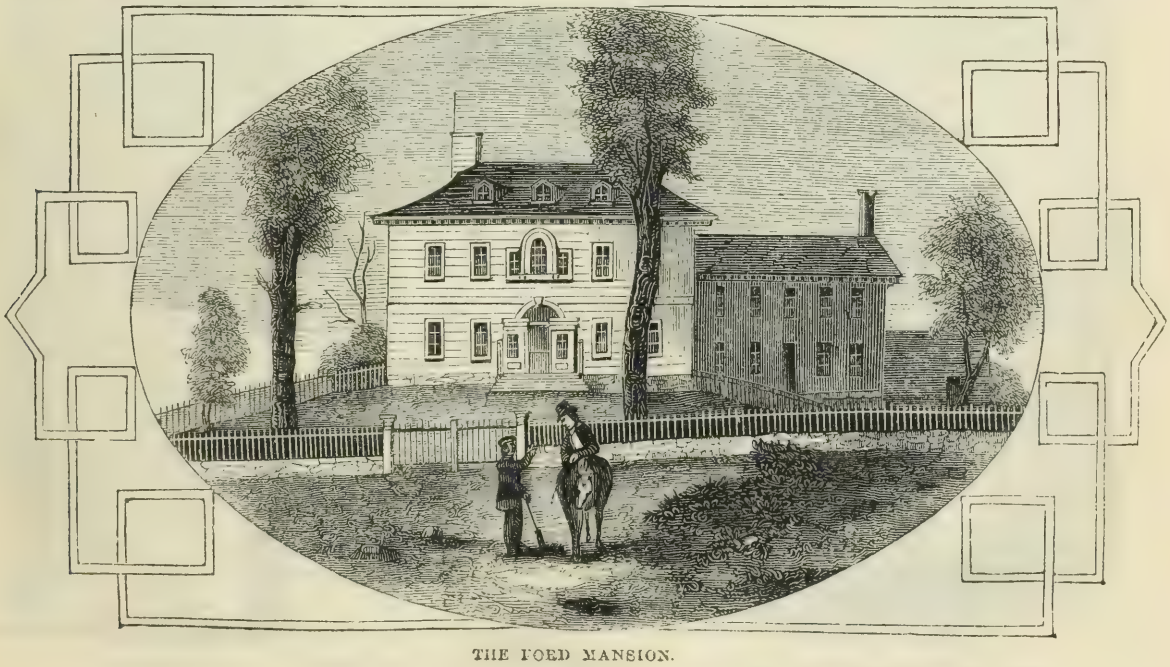
While his officers were looking after the comfort of the soldiers Washington was not idle at the Arnold Tavern. Frequently he rode to the different points where his soldiers were stationed to assure himself of their comfort. Frequently with his suite he rode through Madison and Chatham to the brow of the Short Hills, whence he could overlook all the country as far as New York. Here he always kept a sentinel, who had an alarm gun—named "The Old Sow"—and the materials for a beacon fire always ready. In addition to these duties we find Washington conducting a stern correspondence with Lord Howe concerning the cruel treatment of our countrymen "on board the prison-ships in the harbor of New York." He calls it "barbarous usage," and says that "their miserable, emaciated countenances confirm" the reports which the escaped prisoners bring back. These letters did good, and taught his lordship a lesson in humanity. There are other causes of anxiety which trouble him. The term of enlistment of many of the soldiers was drawing to a close, and he entreats the President of Congress, the various Committees of Safety, and the Governors of the different States, to send him men and munitions. On the 26th of January he wrote: "Reinforcements come up so extremely slow that I am afraid I shall be left without any men before they arrive. The enemy must be ignorant of our numbers, or they have not horses to move their artillery, or they would not suffer us to remain undisturbed."

At this point I may introduce a tradition which probably is authentic. It is said that a certain man was employed by Washington as a spy to gain information concerning the enemy, but it was suspected that he carried more news to the enemy than he brought to those in whose employ he was. General Greene, who acted as Quarter-Master General, occupied a small office on the southeast corner of the public square, where the store of Mr. William Lindsley now is. One day Colonel Hamilton was in this office when the suspected spy made his appearance. The Colonel had made out what purported to be a careful statement of the condition of the army as to numbers and munitions, making the numbers much more flattering than the actual facts. Leaving this statement on the table apparently by mistake, Colonel Hamilton left the office saying he would return in a few minutes. The spy instantly seized the paper as a very authentic document, and left with it for parts unknown! It was supposed that this trick did much to preserve the army at Morristown from attack that winter.

The anxieties of Washington were to be increased by the inroads of an unexpected and dreaded enemy—the small-pox. It has been supposed by some that this disease was introduced into the American camp through the agency of the British commander, but I have seen no authority to confirm so harsh an opinion. The Morristown bill of mortality shows that, on the 11th of January, 1777, the widow Martha Ball died of small-pox. On the 24th Gershom Hatheway, and on the 31st Ebenezer Weed died of the same disease. On the 5th of February Washington wrote: "The small-pox has made such head in every quarter that I find it impossible to keep it from spreading through the whole army in the natural way. I have therefore determined not only to inoculate all the troops now here that have not had it, but shall order Dr. Shippen to inoculate the recruits as fast as they come to Philadelphia. They will lose no time, because they will go through the disorder while their clothing, arms, and accoutrements are getting ready."

Dr. Green, in his Autobiography, states that the determination to inoculate the soldiers "produced great alarm among the inhabitants." Parson Green and some of his leading parishioners had a conference with Washington on this subject, and so cogently did he defend the measure that the Hanover Committee "came back perfectly reconciled to the measure." The most of those who took the disease in the natural way died.

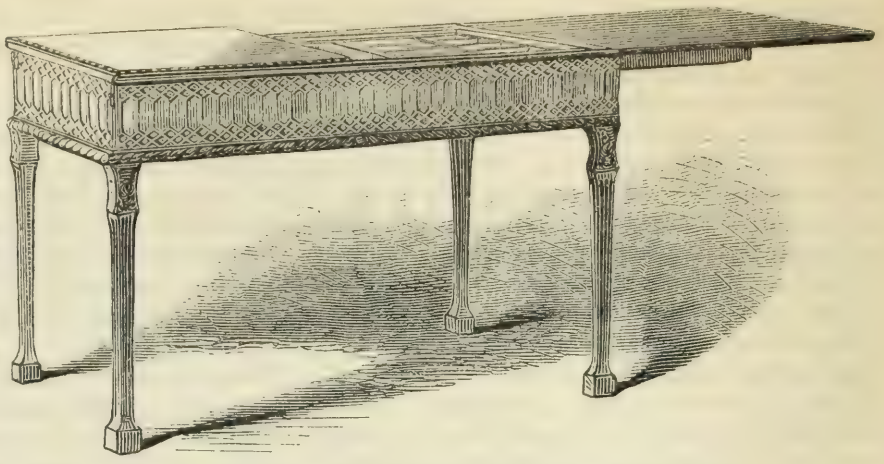
If we examine the Morristown bill of mortality, we find that in February the small-pox is raging in that parish. Pastor Johnes attended eleven funerals among his own people in February caused by small-pox, in March nine, in April twenty-one, and in May eleven funerals produced by small-pox. These do not include deaths in the army from the same cause. Some days Dr. Johnes attended two such funerals; and on the 14th and 30th of April he attended three each day. This terrible disease spared no age or condition; the little infant, the mother, the father, the youth, the aged, the free and the bond, perished before this destroyer. Sixty-eight small-pox funerals did Dr. Johnes attend among his own people that memorable year. And I may add that putrid sore throat, and dysentery, with other diseases, swelled the deaths in that parish in 1777 to a sum total of two hundred and five, which was one death to every one day and a half the year through. The good pastor had sorrow upon sorrow, and the bell, which still strikes the hours in the old church, never was so busy in sounding the death-knell as in that fearful year of 1777.



And so death carried on a warfare with both soldiers and citizens that winter, but their faith in God did not waver. It was a dark time; but they believed that "a good time was coming." Washington was not an unmoved spectator of the trials about him, which he could do but little to alleviate. That winter, so far as I can now learn, had but few of the gay assemblies common to the winter-quarters of an army. Death rioted on every hand, and dancing and death make not pleasant partners. In the spring of 1777 the old church at Morristown was used as a hospital for the army; but probably not for small-pox patients, but for those

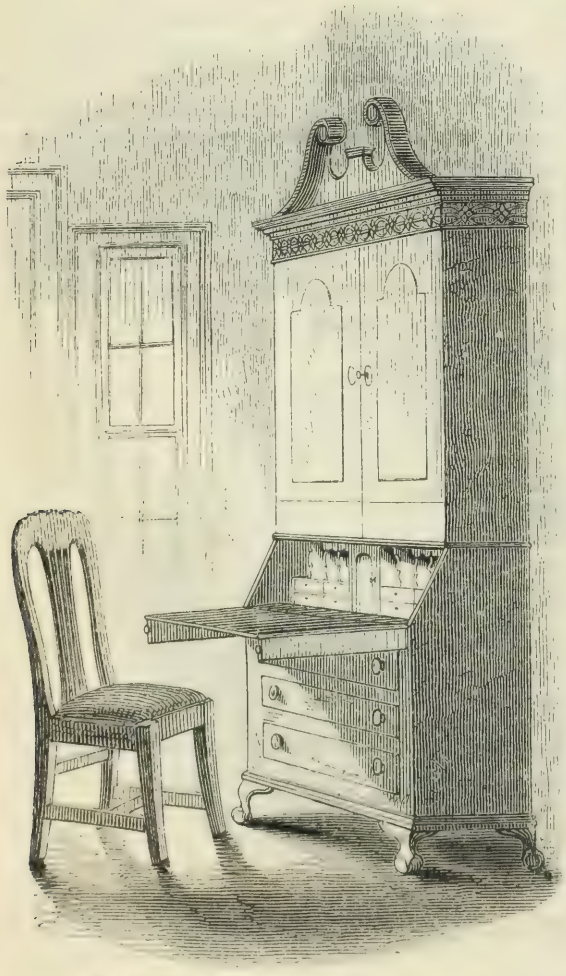
sick of other diseases. This accounts for the fact that before Washington left Morristown that spring, as tradition says, he attended public service several times in the open air. The place of meeting was in a grove immediately back of Dr. Johnes's house. It is said that on one occasion he was occupying a chair which had been brought for his use when a woman with a child entered the assembly. Washington seeing that she had no seat immediately rose and seated her in his chair. Indeed there are many traditions which speak of the unvarying courteousness of this great man while in Morris County, insomuch so that the people not merely regarded him as the hero of Trenton and Princeton, but as the perfect gentleman. It was during this spring also that the fact occurred which is related by Hosack in his Life of Clinton: "While the American army, under the command of Washington, lay in the vicinity of Morristown, the service of the Communion (then observed semi-annually only) was to be administered in the Presbyterian Church in that village. In a morning of the previous week the General, after his accustomed inspection of the camp, visited the house of the Rev. Dr. Johnes, then pastor of that church, and after the usual preliminaries, thus accosted him: 'Doctor, I understand that the Lord's Supper is to be celebrated with you next Sunday. I would learn if it accords with the canons of your Church to admit communicants of another denomination.' The Doctor rejoined, 'Most certainly: ours is not the Presbyterian's table, General, but the Lord's: and hence we give the Lord's invitation to all his followers of whatsoever name.' The General replied, 'I am glad of it: that is as it ought to be; but as I was not quite sure of the fact, I thought I would ascertain it from yourself, as I propose to join you on that occasion. Though a member of the Church of England I have no exclusive partialities.' The Doctor assured him of a cordial welcome, and the General was found seated with the communicants the next Sabbath."

On the 2d of March Washington wrote that "General Howe can not have less than ten thousand men in the Jerseys. Our number does not exceed four thousand. His are well-disciplined, well-officered, and well-appointed. Ours are raw militia, badly officered, and under no government." The balance in this account seemed decidedly against him, and yet his faith failed not.



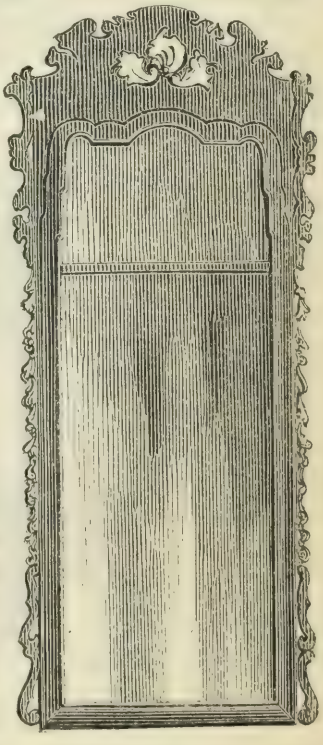
Meanwhile the entire army has been inoculated with surprising success. Divine Providence, smiling on the plan, sent very favorable weather, and suffered the disease by inoculation to assume a mild type. When the campaign opened this enemy was not dreaded. Colonel Ford's powder-mill has not been idle, but has produced a respectable quantity of "good merchantable powder." The blast furnaces at Hibernia and Mount Hope have also furnished some tons of hard balls and shot, and fitted to strike hard blows when sent by good powder. One memorable occurrence enlivened all hearts at Morristown just as the campaign was opening, and that was the news that two vessels had just arrived from France with 24,000 muskets. It was about the end of May that Washington led his army from Morristown to engage in the campaign of 1777, made memorable by the bloody reverses at Chad's Ford and Germantown.

I pass over the intervening time between Washington's leaving Morristown in May, 1777, and his return to it in December, 1779. The duty of selecting the winter-quarters had been committed to General Greene, who had reported two places to the Commander-in-Chief—the one at Aquackanock, and the other within four miles of Morristown. Greene preferred the former, and, from some manuscript letters, I infer he was chagrined that Washington chose Morris-

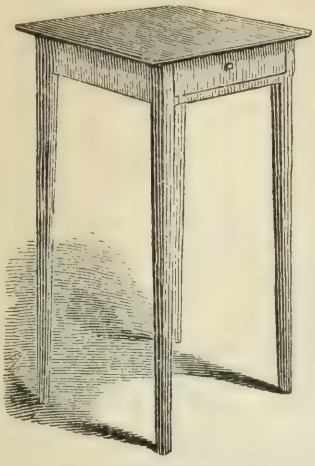


THE FORD MANSION.

town. On the 7th of December, 1779, he writes to Governor Livingston from Morristown that "the main army lies within three or four miles of this place," and on the 15th he ordered Generals Greene and Duportail to "examine all the grounds in the environs of our present encampment for spots most proper to be occupied in case of any movement of the enemy toward us," the positions to be large enough for the manœuvres of ten thousand men.



ANTIQUE ORNAMENTAL TABLE USED BY WASHINGTON.

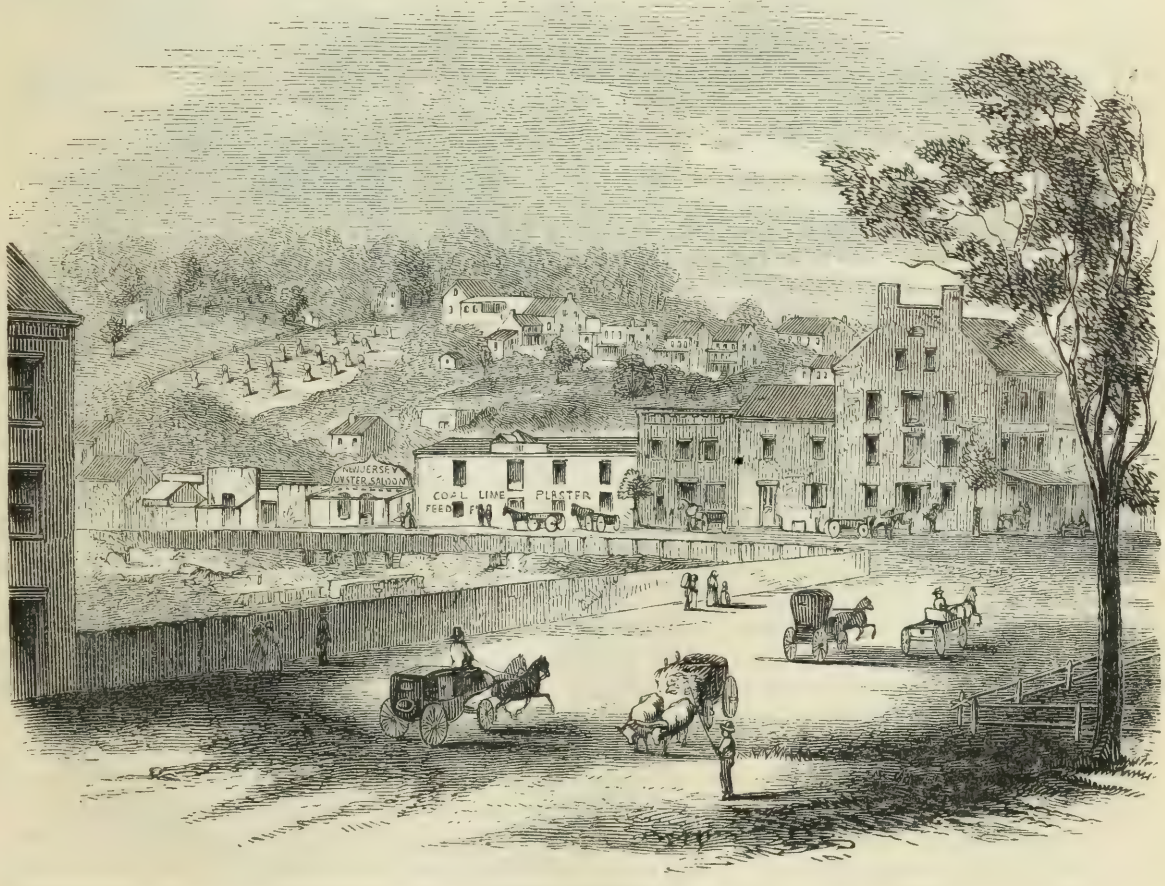


On the 1st of December Washington became the guest of Mrs. Ford, the widow of Colonel Jacob Ford, Jun., and daughter of the excellent pastor, Dr. Johnes. The fine old mansion was built in 1774 in the most substantial manner. It lies on the gentle elevation half a mile east of town, and is in full view as you approach the town on the railroad. The view from the house, in every direction, is extremely beautiful. It is a pleasing fact that this house, in which Washington lived one winter, has undergone scarcely any change since he occupied it. The same weather-boards which resisted the storms of that severe winter are doing the same service now. The spacious hall is the same as when the manly form of Washington first stood there; not a plank has been changed, and the same old double door that opened and shut for him opens and shuts for you. "The widow Elizabeth Lindsley," the honored mother of Colonel Jacob Ford, Sen., "lived almost long enough to see this house built; and if we reckon her as one generation, then we have the somewhat un-American fact that seven generations of the same family have lived in the same mansion; and, if nothing prevent, the old house is good for another hundred years at least. Excepting the matter of paper and paint, your eye rests on the same cornices, casements, surbases, windows, mantle-pieces, fire-places, and hearth-stones that were there when Washington dwelt there. I confess to be moved by very peculiar feelings in visiting a place hallowed with associations which gather around no other place in this country. Take this old chair, which Washington once used, and seat yourself by this old secretary in the hall at which he often wrote; or take this plain little table — a favorite with Washington that winter—on which he is said to have written many of those noble letters which issued from Morristown that winter; look at the very ink-spots on that table, said to be spots left by him, and then read carefully the letters which he wrote in that house; let your imagination bring back the past, not only Washington but his dignified wife, the brilliant

WASHINGTON'S SECRETARY AND CHAIR.

MIRROR.

SMALL WRITING-TABLE.



Alexander Hamilton, the recreant Quaker but magnificent soldier, Nathaniel Greene, the stern Steuben, the polished Kosciuszko, the accomplished Stirling, the noble Knox, and perhaps, as an occasional visitor there, Benedict Arnold, a Satan in Paradise, and you have the materials with which to start your emotions however lethargic they may be."

Several articles of furniture which were used by Washington are still in the house A chair and secretary are in the hall; a very pretty parlor secretary is in the parlor; in one of the upper rooms is the little table already referred to; and in the bedroom on the first floor is the very mirror which hung in Washington's bedroom.

On the 22d of January, 1780, Washington wrote to Greene; the Quarter-Master General, that "eighteen belonging to my own family, and all Mrs. Ford's, are crowded together into her kitchen, and scarce one of them able to speak for the colds they have caught." Washington occupied the southeast rooms on the first and second floors. Back of the main house a log-cabin was built as a kitchen for Washington's family, and at the southwest end of the house another cabin was built as a general office. This was occupied by Colonel Hamilton and Major Tench Tighlman. These buildings were guarded by sentinels day and night. In the meadow, southeast of the house, were cabins for the Life-Guard, said to consist of two hundred and fifty men, under the command of General Colfax.

If we pass toward Morristown we come to the house once occupied by the pastor, Dr. Johnes. In the town itself, and just back of the present building, was the old church, and in its steeple hung the very bell which still summons the people to the house of God. On the west side of the public square was the Arnold Tavern; on the south side, where now is Washington Hall, was the old magazine, and opposite that General Greene's office. Probably most of the private houses had military guests.

On the mountain back of the court-house is what is known as Fort Nonsense. There are signs of work having been done here as if in preparation for some kind of a fortification. Dr Lewis Condict says that there are two accounts given of this fort: the one is, that Washington designed to plant cannon there, with which to command all the entrances to Morristown in case of an attack from the enemy; the other and more probable account is, that Washington, finding his troops needed exercise, both for purposes of health and military subordination, set them to work at this fortification, as if it were a matter of the utmost importance in defending the stores, the people, and the army

FORT NONSENSE.

THE OLD WICKE HOUSE.

itself. Having answered its design, tradition says that Washington asked one of his friends what the useless fort should be named. The reply was, "Let it be called *Fort Nonsense.*"

The principal encampment in the winter of 1779–80 was on the Wicke and Kimball farms, about four miles southwest of Morristown. The Wicke House is still standing, and has undergone but few changes. On the outside door still hangs the heavy dog-headed knocker which has often startled the family when the army was encamped on the farm. An immense chimney-stack occupies the centre of the house, on three sides of which are large fire-places.

The camps of the various brigades were scattered over a tract of about two thousand acres. Scattered over this the remains of many chimney foundations are still visible. They can be traced for a considerable distance along the face of the elevation, which is still known as Fort Hill. This hill slopes steeply on the north, east, and west sides. On the summit there are traces of huts, but no signs of a parapet. The top was probably leveled, so that the artillery, in case of attack, could sweep the entire face of the mountain.

Let us now gather, so far as possible, what took place that winter. Dr. Thacher, in his *Military Journal,* says, that his brigade, on the 14th of December, 1779, reached "this wilderness about three miles from Morristown, where we are to build log-huts for winter-quarters." At that date the same witness says, "The snow on the ground is about two feet deep, and the weather

extremely cold. The soldiers are destitute of both tents and blankets, and some of them are actually barefooted and almost naked. Our only defense against the inclemency of the weather consists of brushwood thrown together. Our lodging last night was on the frozen ground. Those officers who have the privilege of a horse can always have a blanket at hand. Having removed the snow we wrapped ourselves in great-coats, spread our blankets on the ground, and lay down by the side of each other, five or six together, with large fires at our feet, leaving orders with the waiters to keep it well supplied with fuel during the night. We could procure neither shelter nor forage for our horses, and the poor animals were tied to trees in the woods for twenty-four hours without food, except the bark which they peeled from the trees." The whole army set to work to build huts, but the weather was so severe that the half-clad soldiers suffered greatly. "In addition to other sufferings," says Thacher, "the whole army has been for seven or eight days entirely destitute of the staff of life; our only food is miserable fresh beef, without bread, salt, or vegetables."

But lest some may think that the severity of that winter has been exaggerated, let me glean a few facts from the newspapers of the day. The *New Jersey Gazette*, of February 9, 1780, says: "The weather has been so extremely cold for near two months past that sleighs and other carriages now pass from this place (Trenton) to Philadelphia on the Delaware, a circumstance not remembered by the oldest person among us." As early as December 18, 1779, an officer writes from Baskin Ridge that "the weather is excessively cold;" and a correspondent, who writes to the *Gazette* about the expedition which Lord Stirling led against the enemy on Staten Island, states not merely that they crossed on the ice to the island, but that one of the enemy, being pursued, crossed "the Kills" to the Jersey shore on the ice—a circumstance then regarded as unparalleled, but which has been done this last winter. The Hudson River was frozen so that foot-passengers and, as I have heard old people say, even teams crossed on the ice from Jersey City and Hoboken to New York. So far as mere cold was concerned, that winter was one of unparalleled and continuous severity. Add to this the snow-storms, and we have a winter awful to be encountered by an army so poorly clad, housed, and fed as was ours.

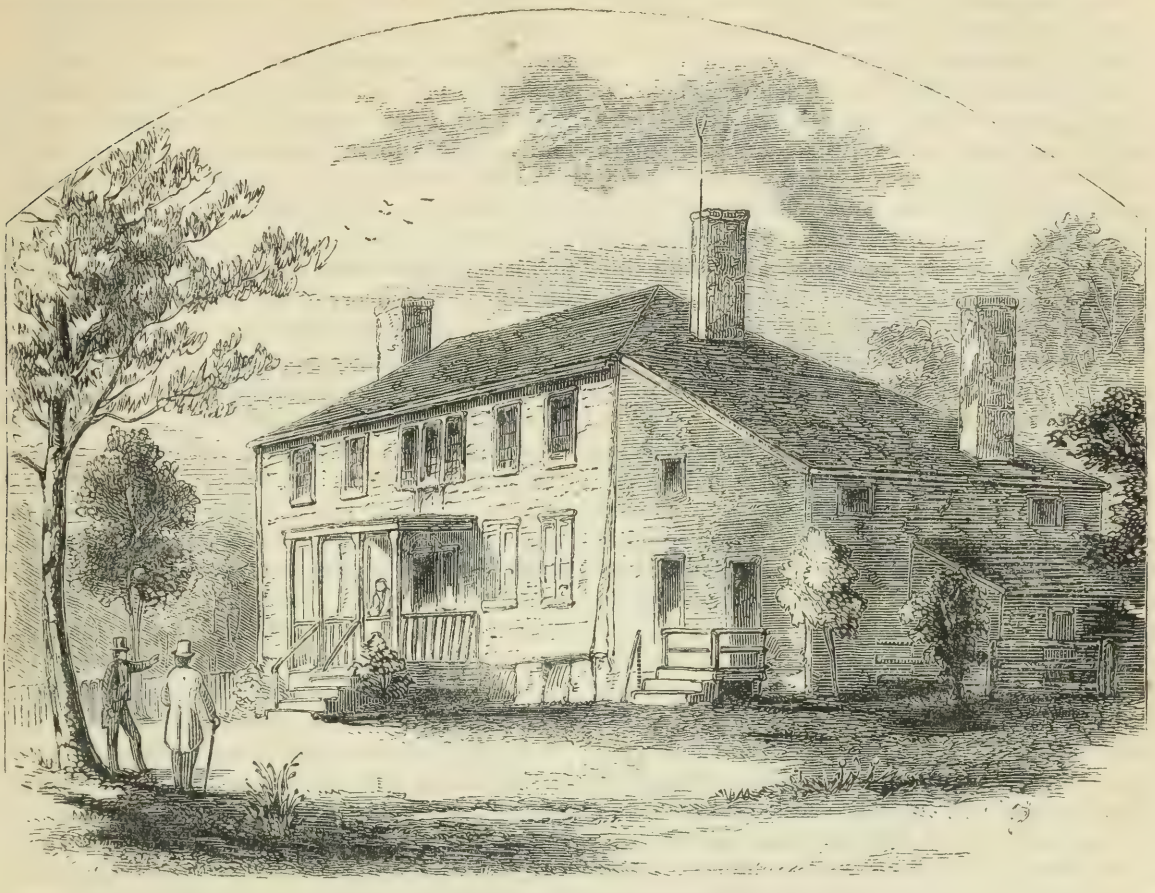
On the 14th of December, according to Thacher, the snow was about two feet deep. On the 22d of that month an officer writes to the *New Jersey Gazette* that a snow-storm was raging. But the great snow-storm began on the 3d of January. The contemporary newspapers speak of this storm as most terrific, and I have heard old people describe it. Dr. Thacher has given us a minute description too interesting to be omitted. He says that

"On the 3d inst. (January, 1780) we experienced one of the most tremendous snow-storms ever remembered; no man could endure its violence many minutes without danger of his life. Several marquees were torn asunder and blown down over the officers' heads in the night, and some of the soldiers were actually covered while in their tents, and buried like sheep under the snow. My comrades and myself were roused from sleep by the calls

FORT HILL.

of some officers for assistance; their marquee had blown down, and they were almost smothered in the storm before they could reach our marquee, only a few yards distant, and their blankets and baggage were nearly buried in the snow. We (the officers) are fortunate in having a supply of straw for bedding; over this we spread all our blankets, and with our clothes and large fires at our feet, while four or five are crowded together, preserve ourselves from freezing. But the sufferings of the poor soldiers can scarcely be described: while on duty they are unavoidably exposed to all the inclemency of the storm and severe cold; at night they now have a bed of straw on the ground, and a single blanket to each man; they are badly clad, and some of them are destitute of shoes. We have contrived a kind of stone chimney outside, and an opening at one end of our tents gives us the benefit of the fire within. The snow is now from four to six feet deep, which so obstructs the roads as to prevent our receiving a supply of provisions. For the last ten days we received but two pounds of meat a man, and we are frequently for six or eight days entirely destitute of meat, and then as long without bread. The consequence is, that the soldiers are so enfeebled from hunger and cold as to be almost unable to perform their military duty or labor in constructing their huts. It is well known that General Washington experiences the greatest solicitude for the sufferings of his army, and is sensible that they in general conduct with heroic patience and fortitude."

This storm, so graphically described, continued several days, and we shall not appreciate the sufferings of our army if we do not remember that the huts, according to Thacher, were not occupied until the middle of February. I have conversed with the descendants of some Mendham people who baked for the army. They had it from their ancestors that for several days access to the army, even from Mendham or Morristown, was next to impossible; and an officer, under date of 26th January, 1780, writes to the *New Jersey Gazette* in a merry style, as follows:



"We had a fast lately in camp, by general *constraint*, of the whole army, in which we fasted more sincerely and truly for *three days* than ever we did from all the resolutions of Congress put together. This was occasioned by the severity of the weather and drifting of the snow, whereby the roads were rendered impassable and all supplies of provision cut off; until the officers were obliged to release the soldiers from command and permit them, in great numbers together, to get provisions where they could find them. The inhabitants of this part of the country discovered a noble spirit in feeding the soldiers, and, to the honor of the soldiery, they received what they got with thankfulness, and did little or no damage."

Published accounts and tradition alike declare that Washington suffered acute distress in seeing the sufferings of his soldiers. He is said to have forced his way to the camp both to cheer his soldiers and to learn, by personal inspection, their wants. On the 8th of January he addressed a noble letter to "the Magistrates of New Jersey," in which he uses the following language: "The present state of the army, with respect to provisions, is the most distressing of any we have experienced since the beginning of the war. For a fortnight past the troops, both officers and men, have been almost perishing for want. They have been alternately without bread or meat the whole time, with a very scanty allowance of either, and frequently destitute of both. They have borne their sufferings with a patience that merits the approbation, and ought to excite the sympathy, of their countrymen. But they are now reduced to an extremity no longer to be supported." This appeal met a warm response from the magistrates and the people of New Jersey; for, on the 20th of January, Washington wrote to President Witherspoon "that all the counties of this State that I have heard from have attended to my requisition for provisions with the most cheerful and commendable zeal." To "Elbridge Gerry, in Congress," he wrote, on the 29th of January, that "the exertions of the magistrates and inhabitants of that State were great and cheerful for our relief."

It will add interest for one moment to descend from "cold generalities" to particulars. The camp was in the immediate vicinity of Mendham, inhabited by one of the most patriotic communities. The spirit of that people was properly shadowed forth in the actions and words of Hannah, wife of Captain Thompson, as she had the great kettle full of meat and vegetables for the hungry soldiers from the snow-invested camp. When the poor fellows thanked her, she said, "Eat what you want; you are engaged in a good cause, and we are willing to share with you what we have as long as it lasts!" The potato bins, flour barrels, and meat barrels of a great many good farmers in Morris County, besides those of David Thompson, of Mendham, and Uzal Kitchel, of Whippany, were freely drawn on to supply the wants of "the country's defenders." The old people have told me that winter the poultry was not at all safe, even at a distance of miles from the camp. Elizabeth Pierson, second wife of Rev. Jacob Green, "particularly lamented the loss of a fat turkey;" but the patriotic parson only showed how the people felt when he consoled his wife for her loss when he rather excused what the soldiers had done by quoting these words from the Book of Proverbs: "Men do not despise a thief, if he steal to satisfy his soul when he is hungry." It is said that the good man never smiled or laughed; but his eyes must have twinkled a laugh over his own apology for the rogues who stole the turkey.

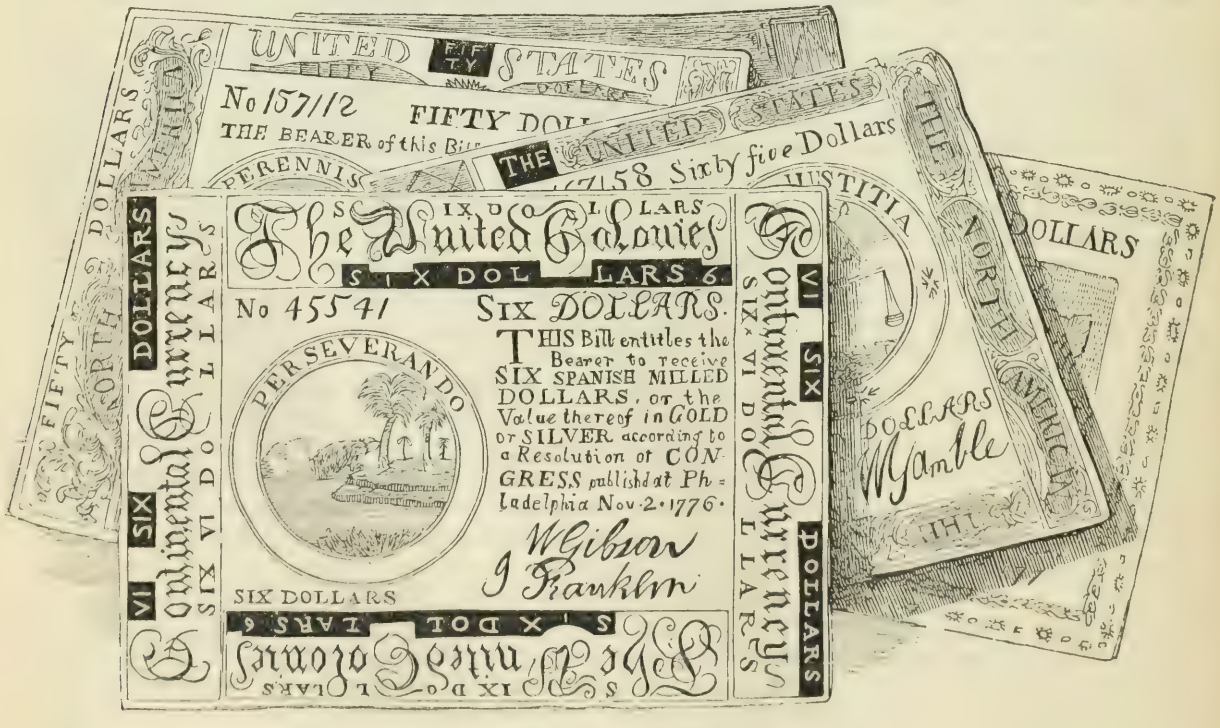
Over on "Smith's Hammock," not far from the Hanover Church, Mrs. Smith has assembled the good women of the neighborhood to sew and knit for the barefooted and barebacked soldiers on the Wicke Farm. In Whippany, Anna Kitchel and her neighbors are doing the same kind of good works. In Morristown "Mrs. Counselor Condict" and "Mrs. Parson Johnes" have gathered together their friends to engage in the same business. It was so in all the region of Morris, and even in Sussex, and many a blessing did these deeds of mercy bring down on those who sent the clothes. Let the memory of those women never perish!

And here let me place the capital upon the unpretending monument I am raising to the memory of these Morris County women of the Revolution. On the 28th of December, 1779, as we learn from Isaac Collins's newspaper,

LORD STIRLING'S MANSION.

Lady Washington passed through Trenton while "the storm was raging." Some gallant Virginia soldiers, very proud of her, and also of her husband, as Virginians, paraded in honor of her, and escorted her on her way toward Morristown. She spent New-Year's Day at the Ford Mansion. She was not very beautiful, but she was a very engaging woman, whose dignity and affability of manners illustrated the high position she held. She was a graceful and bold rider, and when the weather became mild sometimes accompanied her husband in his rides to the Wicke Farm or the Short Hills, and until recently there were those still living who remembered to have seen her riding on horseback, and by the engaging courtesy with which she bowed to the humblest soldier or other person she chanced to meet, she won all hearts to herself. But to my anecdote. It was during this severe winter that several ladies, who held high positions in Morris County society, resolved to visit Lady Washington at the Ford Mansion. Among these was "Madame Budd"—as she was called—the mother of Dr. Bern Budd, who came near being hanged for uttering counterfeit money, was prominent. Madame Troupe was another, and they two headed quite a circle in this call on the distinguished Lady Washington. As one of the ladies related the fact: "As we were to call on so grand a lady we put on our best bibbs and bands. So, dressed in our most elegant ruffles and silks, we were introduced to her ladyship. And don't you think we found her *knitting, and with a speckled (check) apron on!* She received us very graciously and easily; but after the compliments were over, she resumed her knitting. There we were, without one stitch of work, and sitting in state, while General Washington's lady was knitting stockings for her husband! And this was not all. In the course of the afternoon she took occasion to say, in a very pleasant manner, that at this time it is very important that American ladies should be patterns of industry to their countrywomen, because the separation from the mother country will dry up the sources whence many of our comforts have been derived. We must become independent by our determination to do without what we can not make ourselves. While our husbands and brothers are examples of patriotism, we must be examples of thrift and industry! And all this while her fingers gesticulated by busily knitting stockings for her husband!"

Straws show the course of the current, and I have the copy of a paper which conveys to us a knowledge of one fact which made that winter almost unendurable. The original manuscript is in the possession of Thomas Biddle, Esq., near Philadelphia. This paper reads as follows:



"The subscribers agree to pay the sums annexed to their respective names, and an equal quota of any further expense which may be incurred in the promotion and support of a dancing assembly to be held in Morristown the present winter of 1780."

The subscriptions to this paper are headed

by the name of George Washington; and it is signed by thirty-four persons, among whom are Generals Greene, Knox, Stirling, and Wilkinson, Colonels Hamilton, Erskine, Jackson, Hand, Baron de Kalb, and others. But it was not the names which excite so much attention as the sum which is set over against each name, which is simply "four hundred dollars," making the round sum of thirteen thousand and six hundred dollars "for the support of a dancing assembly in Morristown this present winter of 1780!" These assembly balls were held at "O'Hara's Tavern," which was probably the building in which Washington had his headquarters in 1777.

I will frankly confess this subscription paper produced an unpleasant sensation in my mind, and no reasonings have as yet entirely removed the sense of unfitness in the contrast of dancing assemblies at O'Hara's tavern and the sufferings of the barefooted, naked, starving soldiers in the camp only four miles off. Just think of what one of those men, who did not attend the assembly balls, related. It was Captain William Tuttle, who said, "There was a path which led from the Wicke House down to the Jersey camp, and I have often seen that path marked with blood, which had been squeezed from the cracked and naked feet of some of our soldiers who had gone up to the house to ask an alms!" How they suffered there, with the snow piled about them, with insufficient clothing and very scanty and poor food! And yet there was dancing at O'Hara's! But it is not my object to criticise this contrast; for dancing and dying, feasting and starvation, plenty wreathed with flowers, and gaunt famine, barefoot and wreathed in rags, are contrasted facts in other places than at Morristown, and at other times than "the present winter of 1780." My object in mentioning this subscription paper is to throw light on the currency of the day. Here were thirteen thousand six hundred dollars subscribed to pay the dancing-master and tavern-keeper for a few nights' entertainment. Nominally it is up to the extravagance of the modern Fifth Avenue; but if you will examine the advertisements of the day you will obtain light. For instance, here is an old newspaper which publishes "One thousand *continental* dollars reward for the recovery of my negro man Toney;" while, in the same paper, another man promises to give "Thirty Spanish milled dollars for the recovery of his mulatto fellow, Jack." The thirty silver dollars were worth as much as one thousand continental dollars. The entire sum subscribed by those thirty-four gentlemen, in 1780, for assembly balls, was not worth more than three hundred silver dollars. Sparks says "forty paper dollars were worth only one in specie." In the "Memorial of the officers of the Jersey Brigade to the Legislature," in 1779, they say, "Four months' pay of a private will not procure his wretched wife and children a single bushel of wheat . . . The pay of a Colonel will not purchase the oats for his horse, nor will his whole day's pay procure him a single dinner." I have seen a letter from General Greene, the Quarter-Master General, to his deputies, and their replies to him, all of which speak of the state of the currency as very nearly worthless. So that, upon the whole, we may admire the brave officers at Morristown, "this present winter of 1780," who, with "hungry ruin" staring them in the face, sought to relieve the severities of such a winter with some of the gayer courtesies of fashionable life.

There was but little fighting that winter. On the 12th of January Quarter-Master Lewis had

CONTINENTAL MONEY.

orders to gather enough sleds to convey Lord Stirling's detachment of 2500 men, on the 14th, to Staten Island; an expedition which Isaac Collins thought would serve "to show the British mercenaries with what zeal and alacrity the Americans will embrace every opportunity, even in a very inclement season, to promote the interests of their country, by harassing the enemies to their freedom and independence." During this expedition "the cold was intense, and the limbs of about five hundred of the men were frozen." On the night of 25th January a party of the enemy crossed to Elizabethtown and burned the Presbyterian Church, the Town House, and "plundered the house of Jeconiah Smith." The same night another party "made an excursion to Newark, surprised the guard there, took Mr. Justice Hedden out of his bed, and would not suffer him to dress; they also took Mr. Robert Niel, burned the Academy, and went off with precipitation." Rivington's *Royal Gazette* speaks of this Justice Hedden as "a rebel magistrate, remarkable for his persecuting spirit."

During this winter Lafayette was in France interceding for his beloved America, and did not reach this country until the last of April. On the 14th of February Dr. Thacher writes in his journal, with evident exultation, that "having continued to this late season in our tents, experiencing the greatest inconvenience, we have now the satisfaction of taking possession of the log-huts just completed by our soldiers, where we shall have more comfortable accommodations." In March he writes:

"The present winter is the most severe and distressing that we have ever experienced. An immense body of snow remains on the ground. Our soldiers are in a wretched condition for want of clothes, blankets, and shoes; and these calamitous circumstances are accompanied by a want of provisions. It has several times happened that the troops were reduced to one half or to one quarter allowance, and some days have passed without any meat or bread being delivered out." On the 18th of March Washington wrote to Lafayette, that "the oldest people now living in this country do not remember so hard a winter as the one we are now emerging from. In a word, the severity of the frost exceeded any thing of the kind ever experienced in this climate before."

In examining some manuscripts in possession of a distinguished Jersey man, I found some letters from Joseph Lewis, Quarter-Master at Morristown, to one of his superiors. In one of these letters is the following significant passage:

The Justices (of Morris County) at their meeting established the following prices to be given for hay and grain, throughout the country, from 1st December, 1779, to 1st of February next, or until the Regulating act take place:

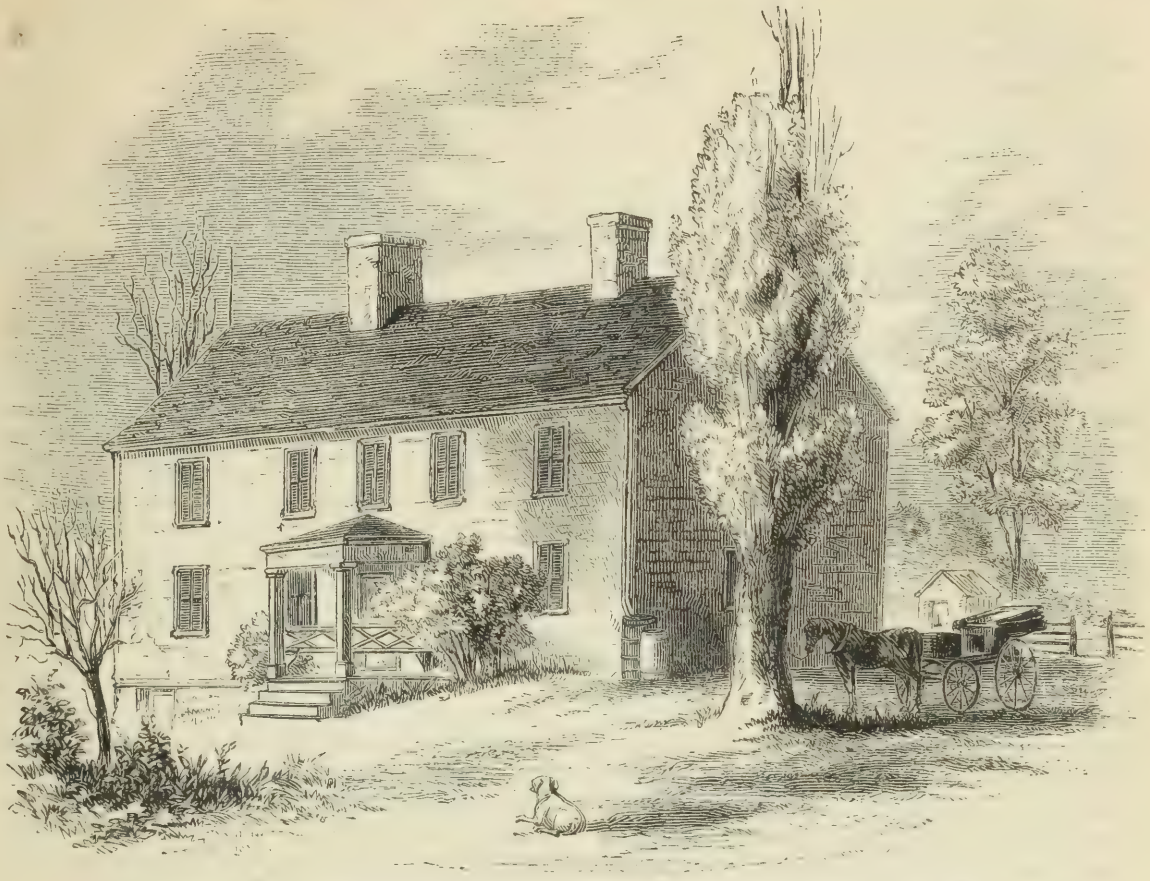
For hay, 1st quality	£100	per ton	=$250
" 2d quality.....	80	"	= 200
" 3d quality.....	50	"	= 125
Hay for horse 24 hours	$6		
" per night ...	4		
Wheat, per bushel	50		
Rye, per bushel	35		
Corn, per bushel	30		
Buckwheat and oats, per bshl.	20		

By putting this price-current alongside of the subscription for assembly balls, we have a well-defined view of the difficulties which met Washington in keeping together some eighteen or twenty thousand men, and at the same time inspiriting them with courage to persevere in the conflict with Great Britain. Quarter-Master Lewis wrote to his superior, in January, 1780, that, if he can not be furnished with money, he shall be obliged to leave Morristown to escape the enraged soldiers. "We are now as distressed as want of provision and cash can make us. The soldiers have been reduced to the necessity of robbing the inhabitants to save their own lives." In March, the distressed little Quarter-Master became pathetic, and wrote to his superior: "I wish I could inhabit some kind retreat from those dreadful complaints, unless I had a house filled with money, and a magazine of forage, to guard and protect me!" And again he cries out, "Good God! where are our resources fled? We are truly in a most pitiful situation, and almost distracted with calls that it is not in our power to answer."

If we now return to the Ford Mansion, we find that young Timothy Ford, son of Washington's hostess, has been a great sufferer the whole winter from a severe gunshot wound received in a battle the previous fall; and among other pleasing courtesies, we are told that every morning, as Washington left his bedroom, he knocked at Timothy's door to ask "How the young soldier had passed the night?" And every one who saw these little attentions thought "how beautiful they seemed in so great a man!" "In conversation, his Excellency's expressive countenance is peculiarly interesting and pleasing; a placid smile is frequently observed on his lips, but a loud laugh, it is said, seldom ever escapes him;" and with this picture of him in mind, I love to think of the great Washington standing at the young soldier's door, with a kindly smile, asking after his health. As for his labors, we obtain some idea of these by recurring to his correspondence, now with the magistrates of New Jersey, now with Governors of the different States, now with Congress, now with his general officers — letters all full of wisdom; many of them are sorrowful, as, with a winning but energetic earnestness, he pleads for his soldiers, who are in want of shoes, blankets, bread, and almost every thing else but true patriotism, of which they did not lack. He pleads for reinforcements, with which he hopes to bear the cause of freedom on to victory. In these numerous letters he sends out the steady and valiant influences of his own self-reliant spirit, to infuse courage and hope into the hearts of his countrymen from Boston to Charleston. I love to associate these letters with the old secretary and the little ink-stained table, which still remain in the Ford Mansion.

Among the letters which Washington wrote that winter from the Ford Mansion was one to "Major-General Arnold," in answer to his letter requesting "leave of absence from the army

during the ensuing summer," for the benefit of his health. Washington writes to him: "You have my permission, though it was my expectation and wish to see you in the field." Then alluding to the birth of a son which Arnold had communicated, he adds, "Let me congratulate you on the late happy event. Mrs. Washington joins me in presenting her wishes for Mrs. Arnold on the occasion." How little any of the parties to these felicitations could anticipate the future! Before that infant was six months older his mother was raving like a maniac over the infamy of her husband, and the name of Benedict Arnold had become a stench in the nostrils of every American patriot, and is likely to continue so while the world endures.



But while the officers were trying to make merry at O'Hara's tavern by indulging in dancing, and while the soldiers were hungry and shivering over on the Wicke Farm, and while Washington was animating his countrymen with the electricity of his own irrepressible hopefulness and energy, it is a happy circumstance that the much-admired and the very admirable Franklin has interested whole nations in Europe in our affairs, especially France and Spain. In April, 1780, we find that the French Minister, the Chevalier de la Luzerne, and a distinguished Spanish gentleman, Don Juan de Miralle, representing the dignity of his Court before our Congress, passed through Trenton on their way to the head-quarters at Morristown. According to the *New Jersey Gazette* this was on the 18th of April, and on the next day "they arrived at head-quarters, in company with his Excellency, General Washington. The news of help coming from France was circulated through the camp, and made it more cheerful; and now that the French Minister was to visit them, it seemed to the soldiers a proof positive that the good news were true. So that it was a great day in the Wicke Farm camp when these distinguished foreigners were to be received. Even soldiers who had neither shoes nor coats looked cheerful, as if the good time, long expected, was now at hand. General Washington has many plans to lay before these representatives of two powerful allies, and of course time did not hang heavily. On the 24th Baron Steuben, the accomplished disciplinarian to whose severe training our army owed so much, has completed his preparation for the review of four battalions. This parade was probably somewhere in the vicinity of Morristown. An eye-witness makes a large draft on his stock of adjectives in describing the review: "A large stage was erected in the field, which was crowded with officers, ladies and gentlemen of distinction from the country, among whom were Governor Livingston, of New Jersey, and lady. Our troops exhibited a truly military appearance, and performed the manœuvres and evolutions in a manner which afforded much satisfaction to our Commander-in-Chief, and they were honored with the approbation of the French Minister and all present." Our enthusiastic witness forgot to say whether Baron Steuben did or did not bring forward on that brilliant occasion any of the patriots who had no shoes or coats; but probably they did duty in camp that day, while those who were better clothed, but not better disposed, flaunted before spectators their gayest war-plumage.

"In the evening General Washington and the French Minister attended a ball provided by our principal officers, at which were present a numerous collection of ladies and gentlemen of distinguished character. Fire-works were also exhibited by the officers of artillery." So that doubtless that night of April 24, 1780, was a very merry night; rockets exploded in the air, cannons occasionally roared like thunder, and some very curious powder-inventions whirled and snapped to the vast delight of thousands who did not attend the ball. O'Hara's parlors were made as light as they could be with good tallow-candles requiring to be snuffed, and so, truly,

"All went merry as a marriage bell."

History and tradition are both silent as to what were the opinions of Deacons Timothy Lindsley, and Philip Condict, and Matthias Burnet, and especially good, patriotic, Pastor Johnes, concerning these vanities. They were patriots, and felt bound to rejoice with those that rejoiced that day; but as Presbyterians, it is doubtful whether any of them was at O'Hara's that night. One thing, however, is certain, that Pastor Johnes is feeling sad to learn that his parishioner, Jacob Johnson, on whose death-bed he has been attending so assiduously for weeks, is passing through the article of death. Jacob Johnson had been a bold rider in Arnold's troop of light-horse, but a more noted man than he was that same night entering "the dark valley," and the cheerful light at O'Hara's sheds no cheerfulness on the dying. The next day Jacob Johnson died, which, to his little children and his widow, was a much more interesting event than another which occurred the same day, when "the whole army paraded under arms," in order that the French Minister may review them once more before he makes report to his master, Louis Sixteenth.

From Dr. Thacher's *Journal* and the *New Jersey Gazette*, we learn that "the distinguished gentleman, Don Juan de Miralles," visited the Short Hills on the 19th or 20th of April, and undoubtedly admired the magnificent prospect there spread out before him. It was then, and it is now, a paradisaical prospect, which, once seen, is not to be forgotten. When Baron Steuben, on the 24th of April, had arranged the grand review of his battalions to the delight of Washington, De la Luzerne, and others, and that night, while the fire-works were flashing their beautiful eccentricities in the darkness, and the sounds of music and dancing were heard at O'Hara's, Don Juan de Miralles was tossing with death-fever. Four days afterward he died, and on the 29th of April his funeral took place

HOUSE, NEAR BASKING RIDGE, IN WHICH GENERAL LEE WAS CAPTURED, IN 1776.

in a style never imitated or equaled in Morristown since. Dr. Thacher exhausted all his expletive words in expressing his admiration of the scene, and doubtless would have used more if they had been at hand. Hear him:

"I accompanied Dr. Schuyler to head-quarters to attend the funeral of M. de Miralles. The deceased was a gentleman of high rank in Spain, and had been about one year a resident with our Congress from the Spanish Court. The corpse was dressed in rich state and exposed to public view, as is customary in Europe. The coffin was most splendid and stately, lined throughout with fine cambric, and covered on the outside with rich black velvet, and ornamented in a superb manner. The top of the coffin was removed to display the pomp and grandeur with which the body was decorated. It was in a splendid full dress, consisting of a scarlet suit, embroidered with rich gold lacè, a three-cornered gold-laced hat, a genteel-cued wig, white silk stockings, large diamond shoe and knee buckles, a profusion of diamond rings decorated the fingers, and from a superb gold watch set with diamonds several rich seals were suspended. His Excellency General Washington, with several other general officers, and members of Congress, attended the funeral solemnities and walked as chief mourners. The other officers of the army, and numerous respectable citizens, formed a splendid procession extending about one mile. The pall-bearers were six field-officers, and the coffin was borne on the shoulders of four officers of the artillery in full uniform. Minute-guns were fired during the procession, which greatly increased the solemnity of the occasion. A Spanish priest performed service at the grave in the Roman Catholic form. The coffin was inclosed in a box of plank, and in all the profusion of pomp and grandeur was deposited in the silent grave, in the common burying-ground near the church at Morristown. A guard is placed at the grave lest our soldiers should be tempted to dig for hidden treasure."

This pompous funeral, so pompously described, was quite in contrast with the funeral procession which the previous week entered the same burying-ground. The numerous friends and neighbors of Jacob Johnson made a long procession, but his oldest son, Mahlon, who still survives, remembers that there was only one vehicle on wheels at that funeral. Dr. Johnes and the physician led the procession on horseback, and the only wagon present was used to convey the coffin to the grave-yard. All the people, men, women, and children, either rode on horseback or walked on foot. At the house the pastor drew heavenly consolation for the afflicted from the Word of God, and at the grave dismissed the people by thanking them for their kindness to the dead. And had Dr. Johnes officiated at the funeral of General Washington his services would have been just as simple and unostentatious. These two funerals make no uninteresting features in the social life of Morristown when Washington spent his last winter there.

But more important matters than following a bejeweled corpse to the grave are claiming Washington's attention. The time for opening the campaign is close at hand, stores are to be collected, many cavalry and baggage horses are to be procured, and a great many other things to be done, the plans for which must be devised at head-quarters. It is true that Steuben has brought the army into such discipline, as to the manual exercises and the various evolutions, as was highly gratifying. An eye-witness said, "They fire with great exactness, and their ranks are pervaded with spirit and alacrity." Yet

twenty thousand men in a single campaign would eat much bread, wear out many clothes, and burn up large quantities of ammunition, and all these necessaries must be procured or the "army must disband, and dreadful consequences ensue—an event," says brave General Greene, "I will not torture your feelings with a description of." For an insight into the difficulties of Washington, before the campaign opened, let me refer to some unpublished letters of Quarter-Master Lewis. April 17, 1780, he writes: "We are entirely destitute of forage, and every thing to encourage the farmers to turn out. I am therefore of opinion that we shall be obliged to make use of arms to collect teams sufficient to move the next division." April 20, he writes: "The wages of teams are £20 per day and found, and £40 if they find forage." This was at the time the Maryland troops were sent southward, as I suppose, under Baron de Kalb. Lewis continues: "The distress we are reduced to for want of assistance from some quarter is sufficient to excite me to plead for relief from every quarter." The poor Quarter-Master cries out in distress to his superior, "Have you no words of comfort to give me? I am obliged to make brick without straw, or, what is tantamount, I am obliged to procure teams and necessaries for the army without money or any thing to do it with." These petulant and desperate sayings of Lewis, who was by no means a great man, are quite as indicative of Washington's embarrassments as the more dignified sayings of Robert Morris, who *was* a great man. The problem to be solved was how to pay for necessaries held at high rates with money nearly worthless—so nearly so, that the merry officers have to pay thirteen thousand six hundred dollars for a little fun at O'Hara's a few nights; money so worthless that "the pay of a colonel would not purchase oats for his horse." That very spring Abraham Clark "shuddered at the prospect before us," when, with "a vigorous war to prosecute," "our money is reduced almost to nothing, and still depreciating with rapidity;" so that "in the market a paper dollar is estimated at present at one penny, and will soon be less than a half-penny in all probability."

It is true that in February there was held "a convention for regulating prices;" but that convention could not change the unchangeable fact that the army must have "18,000 cwt. of beef or pork, 10,000 barrels of flour, 3758 bushels of salt, 3500 tons of hay, 30,000 bushels of corn, oats, or buckwheat." It is true that an attempt was made to legislate the price of provisions, so that "flour should be four and a half dollars per hundred, summer-fatted beef five and a half dollars per neat hundred, etc., etc." Yet supposing those to be the prices of the provisions, but the money was worth "in market only one penny to the dollar," then it would take nine hundred dollars to buy a barrel of flour, and even a gallon of rum would cost one hundred and fifty dollars! We quite fail to comprehend the situation of our fathers without taking up facts in detail. We think that in our day provisions have attained to "starvation prices;" but it is not necessary to give a handful of bank-bills for a barrel of flour or seven pounds of sugar. No doubt in "the Fifth Avenue" there are far more splendid parties than our officers in "the present winter of 1780" had at O'Hara's, and yet, nominally, it does not cost so much "to pay the fiddler" in the Fifth Avenue as it did in Morristown not quite eighty years ago.

This may be regarded as a low view of patriotism, but it is a plain and apprehensible view. I should like to know how rapidly our Government would have carried on the late war with Mexico if the currency with which the expenses were to be defrayed had been made up of "Michigan Wild-cat bills." Yet, in spite of these circumstances, Washington's faith was as steady as the magnetic needle. Although "drained and weakened as we already are," yet "we must make a decisive effort on our part. Our situation demands it. We have the means of success without some unforeseen accident, and it only remains to employ them."

It was not wonderful that Frederic Frelinghuysen should speak of "the amazing expense of attending Congress, and my inability to support it," on a per diem allowance of six shillings! It was not wonderful that the officers of the Jersey Brigade should entreat the Legislature for help, and that it required the matchless influence of Washington to keep them from resigning in a body. The enemy knew our weak point, and smuggled into the different colonies "cart-loads" of counterfeit bills. The difficulties appalled even General Greene, who wrote to Washington on the 21st of May: "Had your Excellency been as much exposed to the murmurs of the people and the complaints of the officers as I have been, you would agree with me in opinion that some healing measures are necessary for both, before great exertions are to be expected from either." Well said, brave ex-Quaker, not now a non-resistant, but quite otherwise! But where are your "healing measures" to come from, when common sense says there is but one healing measure, and that is good hard money, of which there is scarce none in the country? Greene feared lest our affairs "grow worse and worse, until ruin overtake us;" but Washington said, hopefully, "We have the means of success, and it only remains for us to employ them." "Very few of the officers were rich," and therefore a considerable number of them were "compelled to resign their commissions." To complete the trying circumstances of the case, the news reach Morristown that the enemy at the South is carrying every thing before him, and that Charleston is taken. On Washington rested the almost creative work of levying, clothing, feeding, and paying an army, without money; of resisting the disposition of desperate officers to resign their commissions, and of counteracting the influence of defeat at the South, which "the wise

ones" prophesied would soon become defeat at the North also. What an iron will it is that moves the pen at that old secretary in the Ford Mansion! What prodigious courage and resolution are traced on the calm, stern face which bends over that table! The doubting look and take courage. Every where his letters speak prophecies of success, and reproduce the spirit of their writer, North, East, South, and West. As he stands among his Jersey officers, well-nigh desperate by their worthless pay, he speaks to them of the claims of their country; they forget themselves, their sufferings, their beggary, and put themselves new and living sacrifices on the altar of their country, exclaiming, "We love the service, and we love our country!" The influence which beguiled the Jersey officers into such noble self-forgetfulness and sacrifice for the sake of their country was acting on thousands in all parts of the nation; and it is in these facts we find such beautiful illustrations of the influence which pre-eminent greatness and virtue exert.

Amidst all the gloomy and depressing circumstances which are associated with Washington that memorable season, there is an anecdote, apparently trifling, but yet worthy to be told. The late General John Doughty, of Morristown, was an officer in the Revolutionary war, and knew Washington during both the winters he spent at Morristown. He often told his friends that he never heard of Washington's laughing loud but once during those two winters. The exception was one that took place in the spring of 1780, when Washington had purchased a young, spirited horse of great power, but which was not broken to the saddle. A man in the army, or town, who professed to be a perfect horseman, and who made loud proclamation of his gifts in that line, solicited and received permission from the General to break the horse to the saddle. Immediately back of where the ruins of the New Jersey Hotel now are was a large yard, to which Washington and his friends went to see the horse receive his first lesson. After many preliminary flourishes, the man made a leap to the horse's back; but no sooner was he seated than the horse made what is known as a "stiff leap," threw down his head and up his heels, casting the braggart over his head in a sort of elliptical curve. As Washington looked at the man unhurt, but rolling in the dirt, the ludicrous scene overcame his gravity, and he laughed aloud so heartily that the tears ran down his cheeks.

On the 6th of June General Knyphausen attempted to reach Morristown. He landed at Elizabethtown Point, and proceeded as far as Connecticut Farms; but General Maxwell, with "his nest of American hornets," set on the invaders so furiously that they retreated hastily. It was during this incursion that Mrs. Caldwell, the wife of the Rev. James Caldwell, was wantonly murdered, as her epitaph says, "by the bloody hand of a British ruffian," but in reality by a refugee, who shot her "through the window of a room to which she had retired for safety and prayer, two balls passing through her body." This wanton act sent a thrill of horror through the nation, and was of sufficient importance to occupy a place in Washington's correspondence.

On the 10th of June Washington was at Springfield, New Jersey, not far west of Newark, at which place he had his head-quarters until the 21st, except that one day he was at Rockaway. One of his letters states that on the 21st the whole army, except two brigades under General Greene, was slowly proceeding toward the Hudson by way of Pompton. When the enemy learned that our troops were on the march they made another attempt to reach Morristown. The unsleeping sentinels on the Short Hills, on the 23d of June, detected the signs of invasion, and gave the alarm. On that day the Battle of Springfield was fought, Knyphausen commanding the enemy, and Greene our forces. It was on this occasion that tradition says that Parson Caldwell, whose wife had been shot, was present inspiriting our troops. Finding that wadding was needed, he gathered up the hymn-books in the old church and distributed them, with the significant direction, "Put Watts into them, boys!" The arrangements of Greene were consummate, and our men acted valorously. Some whole companies were cut to pieces. Washington was on his way to Pompton when he received word of Knyphausen's incursion, and taking "two brigades of light infantry, he endeavored, by a forced march, to get into the rear of Knyphausen, and prevent his return to New York; and he would have effected his purpose if the retreat of the enemy had been delayed two hours longer." The Rev. Jacob Green, of Hanover, was a spectator of this battle from the neighboring heights, and as several soldiers testify in their pension affidavits, the lion-roar of General Wind's voice that day vied with the roar of fire-arms. Lieutenant-Colonel Benoni Hathaway—he was master of the magazine of powder, and was afraid of nothing but witches, against whose advances he guarded himself by the rightly-adjusted horse-shoe—was also there, having very unlawfully broken from the ranks of his cowardly General. He led forty picked men through an unreaped rye-field. The standing grain concealed the movement from the enemy. Suddenly bold Benoni's sharp voice cried out "Fire!" and a volley of well-directed bullets served as a sort of condiment to the enemy's dinner. William Ball recorded it in his affidavit that he was a member of the same company with Lieutenant Timothy Tuttle, under General Heard. "General Heard seemed slow in his movements toward the enemy, and Lieutenant Tuttle invited all who were willing to face the enemy to follow him. He led us on past the church and to the battle-ground, in the hottest part of it." Ashbel Green was a member of this brigade, and complains that he did not get a shot at the enemy, "owing, as I con-

ceive, to the cowardice of a certain Brigadier-General who commanded us." Afterward he charitably thinks the General acted from *prudence.*

Benoni Hathaway was greatly incensed at the conduct of General Heard, and in the archives at Trenton may be seen the original charges which he sent to Governor Livingston, demanding that Heard should be tried. I suppose he was not tried; but the document deserves to be copied entire and literally:

MORRISTOWN 15*th July* 1780

To his Exilencey the Governor

I send you in Closed Severel charges which I charg B. D. Haird with while he comanded the Militare Sum Time in jun Last at Elizabeth Town farms which I pray his Exilencey would Call a Court of inquiry on these Charges if his Exilencey thinkes it worth notising

from your Hum Ser

BENONI HATHAWAY *Lut Coll.*

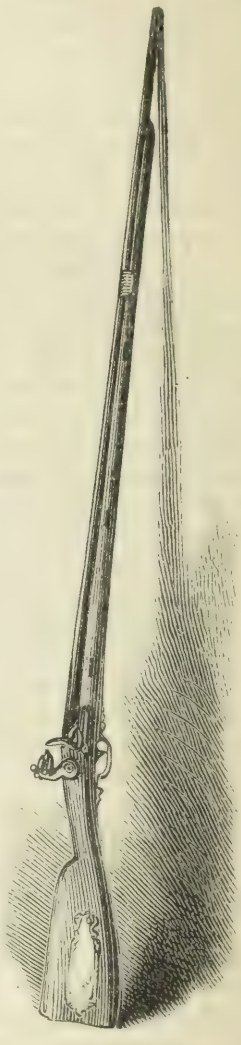
To Exilencey the Governor.

This Is the Charges that I bring against General Haird While he Comanded the Militia at Elizabeth town farms sum Time in Jun last 1780

1 Charg is for leaving his post and Marching the Trups of their post and Leaving that Pass without aney gard between the Enemy and our armey without giving aney notis that pass was open Betwen three and fore Ours.

2 Charg is Retreating in Disorder Before the Enemy without ordering aney Reargard or flanks out leading of the Retreat Him Self

3 Charg is for marching the Trups of from advantiges peace of ground wheare we mit Noyed them much and Lickley prevented thear gaining the Bridg at Fox Hall had not the Trups Bin ordered of which prevented our giving our armey aney assistence in a Time of great Distres.



4 Charg is for marching the Trups of a Bout one mile from aney part of the Enemy and Taken them upon an Hy mountain and kept them thear till the Enemy had gained Springfeald Bridg.

List of evidence

Coll Van Cortland	Capt. Nathanal Horton
Wm Skank the Brigad Major	Adjt Kiten King
	Major Samuel Hays
Capt. Benjman Cartur	Leutnant Backover

This singular document does not speak very much for Hathaway's education; but it shows that, in common with many others, he could wield the sword and rifle better than the pen. This battle at Springfield was a sharply contested action. Dr. Thacher, who was in one of the brigades led back by Washington, says: "We discovered several fresh graves, and found fifteen dead bodies which we buried. We were informed by the inhabitants that the enemy carried off eight or ten wagon loads of dead and wounded." As Ashbel Green's company was pushing on in hot haste to the battle he saw "the road in several places literally sprinkled with the blood of our wounded countrymen as they were carried to a distance from the battle-ground." On that day one Mitchel was directed by his colonel to rescue a man who was desperately wounded. As he was executing the order the enemy fired a volley, and in after years the old man said, "As the bullets went *whisht* by my ears, I vow I was scared!" It was on the same day that this man Mitchel was scared again by hearing bullets whistling too near his ears; and he found at last that a Hessian, concealed behind a barn, was firing at him. Mitchel rushed on the German in great fury, and the poor fellow cried out in broken English, "Quarter! quarter!" But Mitchel, enraged by the fellow's skulking way of fighting, said, "I'll give you quarter!" and discharged his gun at him, breaking his arm. He then took his prisoner within the American lines. This man afterward settled in Morris County near his captor, Mitchel, and they "were just as good friends as possible. Many a time did they fight over the Battle of Springfield over a pitcher of cider."

But it is time to bring these desultory sketches to a close. The interest which is felt in even slight things connected with Washington is a sufficient apology for inserting some traditions and facts in this article which have not been published before. Some years ago the writer was well acquainted with a large number of aged people whose memory was stored with incidents pertaining to the Revolution. Among these were soldiers who had fought and suffered in that war. Besides these, in Morris County are many families whose fathers lived here during that trying period, and from these sources I have derived many unwritten traditions concerning Washington while a resident at Morristown. Besides these I have in my possession, or have had access to many old manuscript letters and other documents, which have aided me in adding some light to that interesting period of Washington's life.

ANCIENT RIFLE.

I may appropriately close this historical monograph with an original letter of Washington, which has never yet been published, and which is a very striking commentary on the difficulties of his position the last winter he was in Morristown. It was found among some old papers in the possession of Stephen Thompson, Esq., of Mendham, New Jersey, a son of Captain David Thompson, who is referred to in this article. It will be remembered that the great snow-storm which caused such distress in the camp began on January 3, 1780. The famine which threatened the army caused Washington to write a letter "to the Magistrates of New Jersey," which is published in Sparks's editions of the Writings

of Washington. A copy of that letter was inclosed in the letter which is now published for the first time. It is a valuable letter, as showing that Washington's "integrity was most pure, his justice most inflexible."

"HEAD-QUARTERS, MORRISTOWN, *January* 8, 1780.

"SIR,—The present distresses of the army, with which you are well acquainted, have determined me to call upon the respective counties of the State for a proportion of grain and cattle, according to the abilities of each.

"For this purpose I have addressed the magistrates of every county to induce them to undertake the business. This mode I have preferred as the one least inconvenient to the inhabitants; but, in case the requisition should not be complied with, we must then raise the supplies ourselves in the best manner we can. This I have signified to the magistrates.

"I have pitched upon you to superintend the execution of this measure in the County of Bergen, which is to furnish two hundred head of cattle and eight hundred bushels of grain.

"You will proceed, then, with all dispatch, and, calling upon the Justices, will deliver the inclosed address, enforcing it with a more particular detail of the sufferings of the troops, the better to convince them of the necessity of their exertions. You will at the same time let them delicately know that you are instructed, in case they do not take up the business immediately, to begin to impress the articles called for throughout the county. You will press for an immediate answer, and govern yourself accordingly. If it be a compliance, you will concert with them a proper place for the reception of the articles and the time of the delivery, which, for the whole, is to be in four days after your application to them. The owners will bring their grain and cattle to this place, where the grain is to be measured and the cattle estimated by any two of the magistrates, in conjunction with the Commissary, Mr. Vorhes, who will be sent to you for the purpose, and certificates given by the Commissary, specifying the quantity of each article and the terms of payment. These are to be previously settled with the owners, who are to choose whether they will receive the present market price—which, if preferred, is to be inserted—or the market price at the time of payment. Immediately on receiving the answer of the magistrates you will send me word what it is.

"In case of refusal, you will begin to impress till you make up the quantity required. This you will do with as much tenderness as possible to the inhabitants, having regard to the stock of each individual, that no family may be deprived of its necessary subsistence. Milch cows are not to be included in the impress. To enable you to execute this business with more effect and less inconvenience, you will call upon Colonel Fell and any other well-affected active man in the county, and endeavor to engage their advice and assistance. You are also authorized to impress wagons for the transportation of the grain.

"If the magistrates undertake the business, which I should infinitely prefer on every account, you will endeavor to prevail upon them to assign mills for the reception and preparation of such grain as the Commissary thinks will not be immediately needful in the camp.

"I have reposed this trust in you from a perfect confidence in your prudence, zeal, and respect for the rights of citizens. While your measures are adapted to the emergency, and you consult what you owe to the service, I am persuaded you will not forget that, as we are compelled by necessity to take the property of citizens for the support of the army, on whom their safety depends, you should be careful to manifest that we have a respect for their rights, and wish not to do any thing which that necessity, and even their own good, do not absolutely require.

"I am, Sir, with great respect and esteem,

"Your most obedient servant,

"GE. WASHINGTON.

"P.S. After reading the letter to the Justices you will seal it.

"LT. COL. DE HART."

ETHAN ALLEN AND HIS DAUGHTER.

["She was a lovely, pious, young woman, whose mother, then long in the spirit-land, had instructed her in the truths of the Bible. When she was about to die, she called her father to her bedside, and, turning upon him her pale face, lighted by lustrous blue eyes, she said, with a sweet voice: 'Dear father, I am about to cross the cold, dark river. Shall I trust to your opinions, or to the teachings of dear mother?' These words, like a keen arrow, pierced the recesses of his most truthful emotions. 'Trust to your mother!' said the champion of infidelity; and, covering his face with his hands, he wept like a child."—*Harper's Monthly for November.*]

"THE damps of death are coming fast,
My father, o'er my brow,
The past with all its scenes has fled,
And I must turn me now
To that dim future that in vain
My feeble eyes descry:
Tell me, my father, in this hour
In whose stern faith to die?

"In thine? I've watch'd thy scornful smile,
And heard thy withering tone,
Whene'er the Christian's humble hope
Was placed above thine own;
I've heard thee speak of coming death
Without a shade of gloom,
And laugh at all the childish fears
That cluster round the tomb.

"Or is it in my mother's faith?
How fondly do I trace
Through many a weary year long past
That calm and saintly face!
How often do I call to mind,
Now she is 'neath the sod,
The place—the hour—in which she drew
My early thoughts to God!

"'Twas then she took this sacred book,
And from its burning page
Read how its truths support the soul
In youth and failing age;
And bade me in its precepts live,
And by its precepts die,
That I might share a home of love
In worlds beyond the sky.

"My father, shall I look above,
Amid this gathering gloom,
To Him whose promises of love
Extend beyond the tomb?
Or curse the Being who hath bless'd
This checkered path of mine;
Must I embrace my mother's faith,
Or die, my sire, in thine?"

The frown upon that warrior-brow
Passed like a cloud away,
And tears coursed down the rugged cheek
That flowed not till that day;
"Not—not in mine"—with choking voice
The skeptic made reply,
"But in thy mother's holy faith,
My daughter, may'st thou die!"

C. C. Cox.

FOLLIES OF FASHION.

HOW strange is the origin of a fashion! The "abomination of wigs" was first adopted by a Duke of Anjou to conceal a personal defect! Charles the Seventh of France introduced long coats to hide his ill-made legs. The absurdly long-pointed shoes—often two feet in length—were invented by Henry Plantagenet to cover a very large excrescence he had upon one of his feet. When Francis I. was obliged to wear his hair short on account of a wound in the head, the crop became the prevailing fashion of his Court. Madame de Montespan invented the *robe battante*, or hooped skirt, to conceal an accident in her history; which, however, occurred at such regular periods that people soon began to guess the cause when they perceived the effect. Not least curious of all is the origin of the long-fashionable shade of yellow called Isabella. When Ostend was besieged by the Spaniards, the Infanta Isabella of Spain, in a fit of injudicious patriotism, made a solemn vow not to change her linen till the town was taken. The besieged, either not hearing this vow or else too rebellious to regard it, held out till time, which sullies every thing, and possibly perspiration, if, indeed, Infantas of Spain do perspire, brought her Royal Highness's linen to a color which needed a name. In a person of her rank it could not be *dirty;* and so it was called *Isabella*, became the fashionable loyal color, and was worn, so says the chronicler, "with honor by all, and with convenience by many"—making loyalty, so to speak, dirt cheap.

We have it on the best historical authority* that the present prominence of the nasal organ on the Israelitish face divine is owing, in great measure, to the fact that, at one time, when the propriety of abolishing that somewhat distinctive feature was in debate in the Israelitish camp, the tyrant Fashion came to its rescue. Here is the account of the transaction—not in Homeric verse, but as veracious as though it were:

> "Says Aaron to Moses,
> Let's cut off our noses;
> Says Moses to Aaron,†
> 'Tis the fashion to wear 'em."

The gentle reader will perceive (on reference to the first Jewish countenance he may meet) that the plea was found quite unanswerable.

What might have been the result had it been disregarded who can tell? 'Tis certain that

* Mother Bunch.

† With the caution characteristic of a great legislator.

very sad effects have ensued upon a failure to pay proper heed to the behests of the mighty potentate. Take, for instance, the Liliputian nation, who (as recorded by their veracious historian, Swift) declared war against the inhabitants of Blefuscu, solely because the latter refused to break their eggs at the same end which Fashion dictated to the former as the proper one for breakage. The Big-Endian rebellions cost the monarch of Liliput not less than forty first-rate ships of war, a multitude of smaller vessels (the war being chiefly maritime), and 30,000 of his best seamen and soldiers; while the loss of the Big-Endians—the rebels—was, rightly, much greater.

So Louis the Eleventh of France had the temerity to crop his hair and shave his beard at a time when Fashion dictated ambrosial locks and flowing beard. What was the consequence? His Queen, Eleanor of Acquitaine, properly disgusted at such contempt of appearances, rested not till she procured a divorce, and married the Count of Anjou, afterward King of England. Is it too much to suppose that the interminable wars which followed upon this alliance were brought about, primarily, by the injudicious conduct of King Louis?

Who will say, looking upon these and like facts, that Fashion is to be contemned; or that her changes are unworthy the historian's note or the philosopher's attention? As for the popular mind—that is, with its usual sagacity keenly alive to any thing relating to so important a subject as dress, as is at once proven by the common remark, in every body's mouth, of knowing a man by the style of his coat, or, as Captain Cuttle would put it, "by the cut of his jib."

First among fashionable follies—on the score of absurdity—come the trunk hose, which were thought indispensable about the middle of Queen Elizabeth's reign, and which were, in fact, a sort of masculine counter-puff to the verdingale, which then first began to swell the fair proportions of feminine loveliness, taking the place of the hoop of our day. The coat is what the dandy of our times most prides himself on. From the time of Henry VIII. of England, and for the three succeeding reigns, his breeches were the objects of a young man's chief solicitude. Figure 1, representing James the First of England in hunting costume, is taken from a book devoted to various fashionable methods of killing time, published in the year 1614. It will be seen that "the great, round, abominable breech," as it was styled, then tapered down to the knee, and was slashed all over, and covered with embroidery and lace. Stays were sometimes worn beneath the long-waisted doublets of the gentlemen, to keep them straight and confine them at the waist. In our illustration the King is evidently incased in whalebone.

The fashion varied. We read of "hose pleated as though they had thirty pockets;" "two yards wide at the top;" and (date 1658) of "petticoat-breeches, tied above the knee,

FIGURE 1.

ribbons up to the pocket-holes, half the width of the breeches, then ribbons hanging all about the waistband, and *shirt hanging out*"—which last fashion may be said to have altogether died out among our modern dandies. We read of breeches "almost capable of a bushel of wheat;" and of alterations which had to be made in the British Parliament House, to afford additional accommodations for the members' seats. It is related of a fast man of the time, that, on rising to conclude a visit of ceremony, he had the misfortune to damage his nether integuments by a protruding nail in his chair, so that by the time he gained the door the escape of bran was so rapid as to cause a state of complete collapse.

A law was made "against such as did so stuff their breeches to make them stand out; whereupon," says an ancient worthy, "when a certain prisoner (in these tymes) was accused for wearing such breeches contrary to law, he began to excuse himself of the offence, and endeavoured by little and little to discharge himself of that which he did weare within them; he drew out of his breeches a pair of sheets, two table-cloaths, ten napkins, four shirts, a brush, a glass, a combe, and night-caps, with other things of use, saying, 'Your worships may understand that because I have no safer a store-house, these pockets do serve me for a roome to lay my goods in; and though it be a straight prison, yet it is a store-house big enough for them, for I have many things more yet of value within them.' And so his discharge was accepted and well laughed at; and they commanded him that he should not alter the furniture of his store-house."

Figure 2 is an excellent representation of a dandy of 1646, from a very rare broadside printed in that year. From the description of his garments we learn that he wears a tall hat with a

FIGURE 2.

bunch of ribbon on one side and a feather on the other, his face spotted with *patches*, two love-locks, one on each side of his head, which hang down upon his bosom, and are tied at the ends with silk ribbons in bows. A mustache encompasses his mouth. His band or collar, edged with lace, is tied with band-strings and secured by a ring. A tight vest is left partly open, and between it and his breeches his shirt sticks out. The cloak was in those days carried upon the arm. His breeches were ornamented with "many dozens of points at the knees, and above these, on either side, were two great bunches of ribbon, of several colors." His legs were incased in "boot-hose tops, tied above the middle of the calf, as long as a pair of shirt-sleeves, and double at the ends, like a ruff-band. The tops of the boots were very large, fringed with lace, and turned down as low as his spurres, which gingled like the bells of a morrice-dancer as he walked." In his right hand he carried a stick, which he "played with as he straddled along the street singing."

With such boots "straddling" was an ungraceful necessity. A buck of those days, who was probably not well up to the straddling dodge, complains that "one of the rowels of my silver spurs catched hold of the ruffle of my boot, which being Spanish leather, and not subject to tear, overthrew me!"

The love-lock worn by our beau caused an immense sensation among quiet, staid people. Mr. Prynne wrote against it a quarto volume, called "The Unloveliness of Love-locks," in which he quotes a nobleman who, having been scared from this vanity by a violent sickness, "did declare the love-lock to be but a cord of vanity by which he had given the devil hold fast to lead him at his pleasure; who would never resign his prey as long as he nourished this unlovely bush."

Patches, mentioned above as one of the decorations of our beau, were introduced about the middle of the seventeenth century. The fashion is said to have come from Arabia. Among Eastern nations a black mole is considered a "beauty spot," a fit theme for poetic raptures. Hence those to whom Nature had denied this boon endeavored to imitate it by means of black silk and paste. In England, however, the taste was arbitrary, and the excess to which it was carried during the reign of Queen Anne was as barbarous as comical. Pepys makes frequent mention of the mode in his "Diary," as: "My wife seemed very pretty to-day, it being the first time I had given her leave [!] to wear a black patch." And again: "May 5—To the Duke of York's Play-house: one thing of familiarity I observed in my Lady Castlemaine; she called to one of her women for a little patch off her face, and put it into her mouth and wetted it, and so clapped it upon her own, by the side of her mouth."

When at its height the patching mania must have made curious havoc among the facial charms of the fair daughters of Eve. Various shapes were used. A satirical poet of 1658 says:

"Her patches are of every cut,
For pimples and for scars;
Here's all the wandering planets' signs,
And some of the fixed stars
Already gummed, to make them stick,
They need no other sky."

This lady's face (Figure 3) is from a portrait of a reigning beauty of those times, and may be considered a fair sample of the fashion. She has a star and half-moon upon the cheek, a circular mark upon her chin, and—marvel of mar-

FIGURE 3.

vels—a coach, coachman, and two horses with postillions upon her forehead! The last ornament seems to have been a favorite, for the author of "God's Voice against Pride in Apparel" (1683) says: "Methinks the mourning

coach and horses, all in black, and plying in their foreheads, stands ready to whirl them to Acheron."

Patches were even made a symbol of political allegiance—the ladies who favored the Tories patching the right side of the face, while those who adhered to the Whigs patched the left side. Mr. *Spectator* tells us that, "Whatever may be the motives of a few fantastical coquettes, who do not patch for the public good so much as for their own private advantage, it is certain there are several women of honor who patch out of principle, and with an eye to the interests of the country." And we learn farther that these ladies were very far above sacrificing the public welfare for the sake of any mere personal feeling, as, "in a late draught of marriage-articles, a lady has stipulated with her husband that, whatever his opinions are, she shall be at liberty to patch on which side she pleases."

Patches were absolutely requisite as ornamental toilet appendages even so late as 1766, but soon after went out of fashion. The women of Chili and Peru to this day affect the mode, but with them the black plasters are but little variegated in shape. A patch on each temple is thought a rare beautifier in some portions of Spanish South America.

Masks formed another fashionable decoration to the face—ostensibly to preserve the complexion, but in reality to lend a fancied charm to the features. In Figure 4, from a portrait taken in the middle of the seventeenth century, we see the half-mask, which was thought sufficiently ornamental to be worn with full dress. During the reign of Charles II. few ladies visited the theatre unmasked. We read of

> "Half-wits and gamesters, and gay fops, whose tasks
> Are daily to invade the dangerous masks."

During the latter half of the seventeenth and the beginning of the eighteenth centuries vizard masks, covering the entire face, were worn by ladies when they rode out. They were suspended to the side by a string, as shown in Figure 5, copied from a print of 1743. When in use these masks were held by the teeth, by means of a round bead fastened on the inside.

John Durant Breval, who wrote a poem on

FIGURE 4.

FIGURE 5.

FIGURE 6.

"The Art of Dress," in 1717, claims for the hoop an English origin. He sings:

> "When and from whence the Ruff at first was brought,
> Long, but in vain, have puz'ling Criticks sought.
> In after times, some future Bentley's care
> Shall gravely mark the climate, and the year.
> Bentley (great sage), who ne'er vouchsafes to write
> But such important matters come to light.
> Queen Kate of Austrian Blood, Demure and Wise,
> Swell'd the stiff-circle to a larger size,
> And wore it as was then the *Spanish* mode,
> For Female shoulders thought too great a Load.
> Some Winters passed, and then Eliza sway'd,
> Sworn Enemy to *Rome*, a wondrous Maid!
> She turn'd out *Popish* modes, but kept in *That*,
> And introduc'd, besides, the *Steeple-Hat*;
> Fenc'd the huge *Petticoat* with Ribs of Whale,
> And arm'd our mothers with a circling mail."

Hoops, however, seem in the first place to have been rather an extension or exaggeration of a feature in female dress mentioned so early as the beginning of the fifteenth century, under the name of "padding, or false hips." It was not till toward the close of the seventeenth century that we hear much of them. Good old Sir Roger de Coverley, describing the portraits of his ancestors hanging up in his family mansion, says: "You see, Sir, my grandmother has on the new-fashioned petticoat, except that the modern [1710] is gathered at the waist. My grandmother appears as if she stood in a large drum; whereas the ladies now walk as though they were in a go-cart." The "drum" style is shown in Figure 6, from a portrait of the Earl and Countess of Somerset, which will give the reader an accurate idea of the state of dress during a part of the reign of James I. of England. The "new-fashioned petticoat," which, according to Sir Roger, caused the ladies to walk as though they were in a go-cart, is shown in Figure 7. It widens gradually from the waist to the ground; and the gown is looped up around the body in front, and falls in loose folds behind, somewhat after the manner of the washer-women of the present time.

The shape and size of the hoop has undergone, at different times, remarkable changes. A writer of the last century says: "It (the hoop) has been known to expand and contract itself from the size of a butter-churn to the cir-

FIGURE 7.

cumference of three hogsheads. At one time it was sloped from the waist in a pyramidal form; at another, it was bent upward like an inverted bow, by which the two angles, when squeezed upon both sides, almost came in contact with the ears; and again it is nearly oval in form, and scarce measures, from end to end, above twice the length of the wearer!" Figures 8 and 9 furnish samples of these styles, in sketches taken from contemporary prints. Figure 9 is from a print dated 1746, and gives a pretty good idea of those hoops which spread at the sides. These were formed of whalebone, and their wearers doubled them round in front, or lifted them up on each side, when they entered a door or carriage.

About 1740 an ugly novelty was introduced, called the *sacque*—a wide, loose gown, open in front, and hanging free of the body from the shoulders to the ground, being gathered in

FIGURE 8.

FIGURE 9.

great folds over the hooped petticoat, which was thus made to take up more room than ever. Figure 10 exhibits this.

FIGURE 10.

About 1750 an exceedingly small cap (Figure 11) was the mode; and this, with the hair closely turned up beneath it, gave, by contrast with the enormous bulging hoops, an extraordinary meanness to the head when compared with the rest of the body.

The *Spectator* ceased not to make sport of the hoops of his day. We find there the petition of "one William Jingle, coach-maker and chair-maker of the liberty of Westminster," which states that for the service of ladies wearing hoop petticoats said Jingle "has built a round chair in form of a lantern, six yards and a half in circumference, with a stool in the centre of it; the said vehicle being so contrived as to receive the passenger by opening in two in the middle, and closing mathematically when she is seated." And farther, "that petitioner has also invented a coach for the reception of one lady only, who is to be let in at the top." And "that the said coach has been tried by a lady's woman, in one of these full petticoats, who was let down from a balcony and drawn up again by pulleys, to the great satisfaction of her lady and all who beheld her."

The *Tattler* reports the proceedings in a

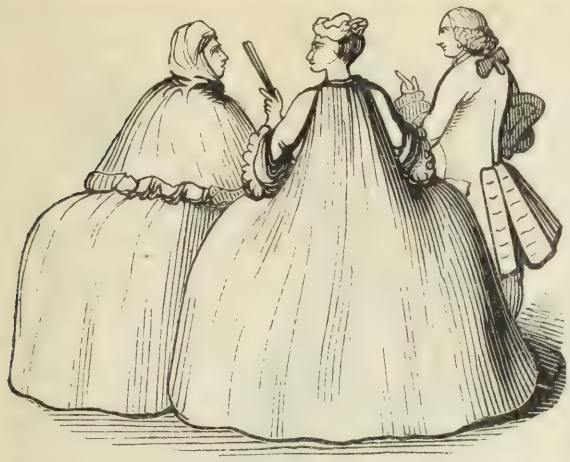


FIGURE 11.

trial held by himself upon one of the hooped ones, who "was taken up as she went out of the puppet-show some three nights ago." Having divested this young lady of her hooped garment, a jury of matrons brought her into the house. "I had before given directions for an engine of several legs, that could contract or open itself like the top of an umbrella, in order to place the petticoat upon it, by which means I might take a leisurely survey of it as it should appear in its proper dimensions. I directed the machine to be set upon the table, and dilated in such a manner as to show the garment in its utmost circumference; but my great hall was too narrow for the experiment, for before it was half unfolded it described so immoderate a circle that the lower part of it brushed upon my face as I sat in my chair of judicature. I then inquired for the person who belonged to the petticoat, and to my great surprise was directed to a very beautiful young damsel, with so pretty a face and shape that I bid her come out of the crowd, and seated her upon a little crock at my left hand.

"'My pretty maid,' said I, 'do you own yourself to have been the inhabitant of the garment before us?' . . . . . I then ordered the garment to be drawn up by a pulley to the top of my great hall, and afterward to be spread open by the engine it was placed upon, in such a manner that it formed a very splendid and ample canopy over our heads. I entered upon the whole cause with great satisfaction, as I sat under the shadow of it."

An instrument or appendage called "a pair of hips," was, as before said, the predecessor and also contemporary of the hoop. In 1710, a lady whose maid has run away, taking with her some of the *recherché* articles of her mistress's wardrobe, advertises the truant and the lost valuables. Among the latter are mentioned "four pairs of silk stockings, *curiously darned* (darned stockings being also then the rage), three pairs of fashionable eyebrows, two sets of ivory teeth, and one pair of box (wood) for common use, with two pairs of *hips* of newest fashion."

Figure 12 is from a print in a French work, date of 1727, and represents an Alsatian belle of that period. There is evidence in the manner in which her gown hangs that hoops were then the mode even in Alsace. The dress of this belle is very curious. Her robe appears to be of two different materials, half the petticoat being laid in very fine close plaits and the other half in larger plaits. The body is made with an immensely long pointed stomacher, trimmed with lace and jewels. Over it is a lace handkerchief with long pointed ends, apparently of black silk trimmed with black lace. The sleeves are full, puffed, short, and open, longer beneath than on top, and long gloves join them and conceal the arm. The most singular feature of this costume is the *coiffure*, which consists of an enormous three-cornered edifice of satin, lace, and jewels, stretching out on each side far beyond the width of the figure, and standing up in a point in front. The hair is turned back from the forehead, and hangs in a very long plait which the fair one carries over one arm. Fancy such a figure promenading Broadway!

FIGURE 12.

After being the mode full half a century hoops were discarded. Only, however, to be revived in, if possible, greater extravagance than ever toward the close of the eighteenth century. Figure 13 represents a lady's court-dress of 1796. Not content with its natural enormity, the hooped skirt was at this time decorated with immense bows of ribbon, cords, tassels, wreaths of flowers, and long swathes of colored silks, hung and twisted about it in the most horrid taste.

FIGURE 13.

FIGURE 15.

"Good Queen Bess" was noted for her extravagant and extraordinary taste in matters of dress. She possessed costumes of all countries, and left at her death no less than three thousand habits or suits in her wardrobe. Her courtiers used to give her gowns, petticoats, kirtles, doublets, and mantles, mostly highly embroidered and adorned with jewels. *Paul Hentzner*, a German traveler, who paid a visit to the English Court when Elizabeth was still in her heyday, says:

"The Queen had in her ear two pearls with very rich drops. She wore false hair, and that *red;* her neck was uncovered, and she had a necklace of exceeding fine jewels. Her gown was white silk, bordered with pearls the size of beans; and over it a mantle of flush silk shot with silver threads. Her train was very long. Instead of a chain she had an oblong collar of gold and jewels." This must have been before increasing years induced the Virgin Queen to favor the Elizabethan ruff and high collar con-

FIGURE 14.

FIGURE 16.

cealing even the neck. As her charms decayed she grew more chary of their exhibition.

Ruffs were the leading enormity in the dress of this period. Elizabeth's were the most extravagant. But her courtiers all wore them. The Queen imported a *starcher*, "the substance called starche" being just then brought into use. Stubbs, the chief railer against the vanities of those days, says: "There is a certain liquid matter which they call starche, wherein the devil hath learned them to wash and dive their ruffs, which, being dry, will then stand stiff and inflexible about their necks." We read, too, of wire supports to make the ruffs stand out; of "three or four small ruffs placed under the master-devil ruff," "which was often loaded and adorned with gold and silver and needlework." Thus arranged these monstrous appendages expanded like wings as high as the head, or fell over the shoulders like flags, as shown in our sketches of courtiers of that period.

Several important toilet luxuries and conveniences were introduced in the time of Queen Bess. Sir Thomas Gresham first began to manufacture pins and ribbons during this reign. Knitted worsted stockings, too, were first made in England about the year 1565, by a London apprentice named William Ryder, who, having seen some that came from Italy, imitated a pair exactly, and presented them to the Earl of Pembroke. Also, we find it written in Stowe's "Chronicle" that, "in the 2d yeere of Queen Elizabeth, her silk-woman, Mistress Montagu, presented her Majesty for a New-Yeere's gift a pair of black silk knit stockings," which she had made herself. So well did these please the Queen that she declared, according to Stowe, "Henceforth will I wear no more cloth hose"—that is to say, stockings of cloth sewed into shape.

FIGURE 17.

FIGURE 18.

Elizabeth had a passion for strange ornaments of embroidery work. She had a dress with lizards and all sorts of creeping things on it. There is a portrait of her wherein she wears a gown embroidered with serpents, birds, a sea-horse, a swan, and an ostrich; while in another portrait a spotted ermine crowned, the emblem of chastity, is embroidered upon her gown sleeve.

Figure 17 is from a portrait of Sir William Russell, one of Queen Elizabeth's most distinguished courtiers, and will give some idea of the style of dress among the gentlemen of the later part of her reign. In his immense ruff, his "pease-cod-bellied doublet" of thickly quilted black silk, slashed sleeves, showing a rich lace under-garment, Venetian hose, and stockings of finest yarn, the dandy of those days seems to have been an exceedingly stiff and ungainly figure. In Lord Howard of Effingham (Figure 16), another courtier of Elizabeth's, we see an example of the trunk hose and the sleeveless doubtlet, which were for a time the mode. A poet of the day speaks of

"A fair black coat withouten sleeve,
And buttoned the shoulder round about;
Of xxs. a yard, as I beleeve,
And layd upon with parchment lace withoute."

Sleeves were, while in the mode, a very *recherché* article of dress. They were made separate from the garment, and were often of great splendor. Among Elizabeth's wardrobe were "a pair of sleeves of sypers (Cyprus work), wrought with silver and black silk;" "a pair of sleeves of gold pulled out with lawn;" "a pair of sleeves of gold and silver knytt, cawle fashion;" and many more, each in a different style. Her father, Henry VIII., was also remarkable for his splendid sleeves. The por-

trait of the Earl of Surrey (Figure 18) will give the fair reader some idea of the ridiculous appearance of these sleeves upon gentlemen. This gallant is dressed in a suit of scarlet throughout, and must have presented a most surprisingly gorgeous spectacle as he walked out, rapier in hand, looking at least twice as broad as he was long.

Garters, also, were a most fashionable male ornament. They were worn externally below the knee, and became so expensive and yet so common a luxury that we read of men of mean rank wearing garters and shoe-roses of more than five pounds in value. They were made of gold and silver, satin and velvet, often deeply fringed with gold. Taylor, the water-poet, satirizes those who

"Wear a farm in shoe-strings edged with gold,
And spangled garters worth a copyhold."

The mode seems to have excited the envy of the fair sex. In one of Massinger's plays, a young lady, whose attendant has just supplied her with shoes, garters, fans, and roses, exclaims:

"Would 'twere in the fashion
That the garters might be seen too!"

To which reasonable wish her attendant replies,

"Many ladies
That know they have good legs, wish the same with you:
Men that way have the advantage."

It is recorded at a later period, of the Queen of France, Anne of Austria, that she contrived to elude the jealous scrutiny of Cardinal Richelieu, and to send the Duke of Buckingham her own garter as a memorial.

A SPANISH GENTLEMAN OF 1560.

With all the exposure of the bust permitted by fashion during the reign of the Virgin Queen, "the abomination of wearing short sleeves" failed to receive the countenance of England's fair. Indeed, for many years, "naked down from the elbows" was a fashion which was looked upon with horror and disgust—a hint to our modern ball-room belles.

Ardent a devotee of fashion as was Elizabeth, she could not bear that her subjects should please themselves in the shape, size, and material of their attire. In no reign were so many sumptuary laws enacted. She decreed that no "great ruff should be worn; nor any white color in doublets or hosen; nor any facing of velvet in gowns, but by such as were of the bench. That no gentlemen should walk in the streets in their cloaks, but in gowns. That no hat, or curled or long hair be worn, nor any gowns but such as be of a sad color." All which to the contrary, the "common people," at whom these acts were leveled, were most unlawfully extravagant, causing the clergy great trouble of mind, and calling forth from the reformers of that age such devout tracts as "England's Vanity; or, the Voice of God against the monstrous sin of Pride in Dress and Apparel." In this little book the writer utters the following quaint denunciation:

"Ladies, shall I send you to the Royal Exchange, where a greater than an angel has kept open shop for these sixteen hundred years and more, and has incomparably the best choice of every thing you can

ask for? And because he sells the best pennyworths, himself descends to call, '*What do you lack? what do you buy?*' and advises you to buy of him. Lord, hast thou any *mantoes* for ladies, made after thine own fashion, which shall cover all their naked shoulders and breasts and necks, and adorn them all over? Where are they? Revelations, iii., 18, brings them forth. There they are, ladies; and cheap too, at your own price, and will wear forever; and with this good property, that they thoroughly prevent the shame of your nakedness from appearing; and if you stoutly pass away, and take them not with you, if there be a God in heaven, you'll pass naked into hell to all eternity!"

Among the numerous caprices of Dame Fashion, not the least strange is that in pursuance of which the shape, color, and quantity of the hair has been most curiously diversified. False hair was used by the ancients. The Emperor Commodus used a wig, which was first oiled, then powdered with gold. There is in the British Museum an ancient Theban wig, the curling and arranging of which would puzzle many a modern hair-dresser. After an existence of some thousands of years the hair still preserves the curl imparted to it by some unknown art of the Theban perruquier.

The reign of the peruke in Europe, as an article of fashion, began at the commencement of the seventeenth century. They were soon the rage, their ugliness, and the protests of fair-tressed damsels and love-locked young beaux to the contrary, notwithstanding. The barbers, of course, hailed the innovation with delight; and it is related of one zealous perruquier that he hired his sign-painter to depict, with due pathos and expression of attitude and face, Absalom hanging by his hair in the tree, and David weeping beneath, while out of his mouth proceeded the legend—

"Oh, Absalom! oh, Absalom!
Oh, Absalom, my son!
If thou hadst worn a periwig
Thou hadst not been undone!"

During the reign of Queen Elizabeth it became the fashion for the gallants to comb their wigs in public, as a means of busying their hands.

"How we rejoiced to see 'em in our pit!
What difference methought there was
Betwixt a country gallant and a wit:
When you did order *periwig with comb*,
They only used four fingers and a thumb."

FIGURE 20.

The combs thus publicly displayed were of very large size, of ivory or tortoise-shell, curiously chased and ornamented, and were carried in the pockets as constantly as the snuff-box. On the Mall, and in the boxes, the dandies walked and combed their perukes. There is a picture yet

FIGURE 21.

in existence of John, Duke of Marlborough, at his levee, in which his Grace appears dressed in a scarlet suit, with large white satin cuffs, and a very long white peruke, which he combs; while his valet stands behind him, adjusting the curls after the comb has passed through them.

Miason, who traveled in England in 1698, says of the gentlemen: "Their perruques and their habits were charged with powder, like millers, and their faces daubed with snuff." The muff, now so exclusively the property of the ladies, was then an indispensable article to the gentlemen. Tom Brown gives, in his "Letters from the Dead to the Living," the following description of the beaux of the early part of the eighteenth century: "We met three flaming beaux of the first magnitude. One made a most magnificent figure: his periwig was large enough to have loaded a camel, and he bestowed upon it at least a bushel of powder I warrant you. His sword-knot dangled upon the ground, and his steinkirk, that was most agreeably colored with snuff from top to bottom, reached down to his waist; he carry'd his hat under his left arm, walk'd with both hands in the waist-bands of his breeches, and his cane, that hung negligently down in a string from his right arm, trailed most harmoniously against the pebbles, while the master of it, tripping it nicely upon his toes, was humming to himself."

The costliness of wigs (£20 being a very common price) created a curious branch of robbery—a gang of London thieves devoting themselves to the stealing of perukes from the heads of their owners, and making the streets unsafe for the *big-wigs* after nightfall. The most ingenious mode of day robbery was for the thief to carry on his head, concealed in a basket, a smart lad, who, in passing through the crowd, would dexterously snatch from the head of its wearer and conceal the most attractive looking wig in the company. Also it was dangerous for any child, with a beautiful head of hair, to wander abroad, certain women being always upon the alert to entice such into out-of-the-way places and there rob them of their locks.

FIGURE 22.

Pepys, who was an amateur in wigs, wonders, naïvely, "what will be the fashion after the plague is done, as to periwigs, for nobody will dare to buy any haire for feare of the infection, that it had been cut off the heads of the people dead with the plague." But the fashion outlived even this blow, and an old writer pointedly says, that "Forty or fourscore pounds a year for periwigs, and ten to a poor chaplain to say grace to him that adores hair, is sufficient demonstration of the weakness of the brains they keep warm."

Wigs, as well as natural hair, were dyed; red being curiously enough the favorite color during Elizabeth's reign. The Virgin Queen herself possessed no less than eighty wigs, of *various colors;* and we may suppose that the broad-ruffled votaries of fashion of those days who were obliged, on account of the breadth and stiffness of their collars, to feed themselves with spoons two feet long, were not far behind their royal mistress in the matter of wigs. The ladies, as in duty bound, followed the example of their lords, and, as usual, so far exceeded the masculine absurdity, that in the course of two centuries the female fashionable head passed through some most extraordinary metamorphoses. The head-dress of the Third William's time —a specimen of which is given in Figure 22— compares oddly with that of a century and a half

FIGURE 23.

FIGURE 24.

previous (see Figure 23); while the fashion of 1783, shown in Figure 24, copied from a French print of that year, is still more *outré* than either.

Such changes gave cause for the old poet's satire:

"Now dress'd in a cap, now naked in none;
Now loose in a *mob*, now close in a *Joan;*
Without handkerchief now, and now buried in ruff;
Now plain as a Quaker, now all of a puff;
Now a shape in neat stays, now a slattern in *jumps;*
Now high in French heels, now low in your pumps;
Now monstrous in hoop, now trapish, and walking
With your petticoats clung to your heels like a maulkin;
Like the cock on the tower, that shows you the weather,
You are hardly the same for two days together."

FIGURE 25.

FIGURE 26.

FIGURES 27, 28, 29.

When wigs were changed from flowing to crisp locks the ladies perpetrated enormities of which Figures 25 and 26, on the preceding page, will give the reader a faint idea, and in which the hair was disposed in rows of curls towering up, one above the other, to a tremendous height. On these followed the *commode*—an actual tower of true and false hair, rags, ribbons, feathers, powder, and pomatum, accompanying which was a head-dress of which the following comic summary is given in an old print of the last century:

"A cap like a bat
(Which was once a cravat),
Part gracefully platted and pinned is;
Part stuck upon gauze,
Resembles mackaws,
And all the fine birds of the Indies.

But above all the rest
A bold Amazon's crest
Waves nodding from shoulder to shoulder;
At once to surprise,
And to ravish all eyes,
To frighten and charm the beholder.

In short, head and feather,
And wig altogether,
With wonder and joy would delight ye;
Like the picture I've seen
Of th' adorable queen,
Of the beautiful, blest Otaheite.
Yet Miss at the rooms
Must beware of her plumes;
For if Vulcan her feather embraces,
Like poor Lady Laycock,
She'll burn like a haycock,
And roast all the Loves and the Graces."

Figures 27, 28, 29, 30, are *fair* examples of this towering monstrosity. So enormous were these "heads" that women of fashion were compelled to ride with them thrust out of the carriage-windows, or kneel down in the carriage to accommodate them within. The body of the vast edifice was formed of tow. Over this the hair was turned, and false hair added in great curls, bobs, and ties, all powdered in profusion; then hung all over with vulgarly large rows of pearls, or even glass beads. Above this came flowers, and the whole was surmounted by broad, silken bands and great ostrich feathers. The entire structure added about three feet to the lady's legitimate height, and caused the gentlemen to look like dwarfs beside their wives. Of course such an edifice was to be constructed only at a vast expense of time and labor, and could not lightly be disturbed. Heads, when properly dressed, "kept for three weeks," as the barbers quietly phrased it. To "keep" them longer necessitated the employment of numerous preparations sold and warranted to destroy the vermin which bred in the flour and pomatum so liberally used. "Directions for opening a three weeks' head," openly circulated in those days, should have been enough to disgust *cleanly* people with the fashion. Of course false hair was still in great demand; and we read of a young country girl, with fine locks, coming to London and selling her hair for fifty pounds ($250), with which sum as her dower she returned, pacified an obdurate father, and married his willing son.

FIGURE 30.

What with the towers and trains of the ladies, the wigs and tight breeches of the gentlemen, and the *stays* worn by both sexes, locomotion in full dress must have been a matter of difficulty, while a departure from the erect position seems to have been an impossibility. At a ball given by an English royal Duke, "Lady H——d" chanced to drop her handkerchief. Having a bad cold, she needed it; but neither she nor her partner, a royal Duke, being dressed for stooping, they were obliged to ring for the servant to assist her ladyship's nose to a handkerchief.

Yet even these towers of flowers and feathers were preferable to the disgusting fashion which followed it, of piling garden stuff—such as carrots and parsneps—on the head. Here is an inventory of the contents of such a fashionable head as we just mentioned:

"Sing her daub'd with white and red,
Sing her large terrific head,
Nor the many things disguise
That produce its mighty size;
And let nothing be forgot,
Carrots, turnips, and what not;
Curls and cushions for *imprimis*,
Wool and powder for the *finis;*
Lace and lappets, many a flag,
Many a party-colored rag,
Pendent from the head behind,
Floats and wantons in the wind."

For a long time gray powder was the rage. This applied on black hair caused it to look blue, transforming young ladies for the time being into actual blues. Figure 31 is a sample of this head-dress. This is alluded to in the following graphic account of a fashionable lady's toilet for the year 1759—just one hundred years ago:

"Hang a small bugle cap on, as big as a crown,
Snout it off with a flow'r, vulgo dict, a pompoon;
Let your powder be gray, and braid up your hair,
Like the mane of a colt to be sold at a fair.
A short pair of jumps, half an ell from your chin,
To make you appear like one just lying-in;
Before, for your breast, pin a stomacher bib on,
Ragout it with curlets of silver and ribbon.
Your neck and your shoulders both naked should be,
Was it not for Vandyke, blown with cheveux-de-frize.

FIGURE 31.

FIGURE 32.

Let your gown be a sack, blue, yellow, or green,
And frizzle your elbows with ruffles sixteen;
Furl off your lawn apron with flounces in rows,
Puff and pucker up knots on your arms and your toes;
Make your petticoats short, that a hoop eight yards wide
May decently show how your garters are ty'd;
With fringes of knotting your dicky cabob,
On slippers of velvet, set gold à-la-daube.
But mount on French heels, when you go to a ball;
'Tis the fashion to totter, and show you can fall;
Throw modesty out from your manners and face,
A-la-mode de Francois, you're a bit for his Grace."

So vast were the "towers" and so expanded the hoops that the doors of the French Queen's palace were forced to be made both higher and wider to admit herself and her ladies. The author of "The Enormous Abomination of the Hooped Petticoat," 1745, has a description of a lady entering a room which will put some malicious persons in mind of experiences of the present day: "Suppose the fine lady entering a room: First enters, wriggling and sideling and edging in by degrees, two yards and a half of hoop; for as yet you see nothing else. Some time after appears the inhabitant of the garment herself; not with a full face, but is profile. Next, in due time, follows two yards and a half of hoop more; and now her whole person, with all its appurtenances, is actually arrived fully and completely in the room. She sits down: if it be upon a couch or squab, though the couch or squab be five yards long, her hoop takes up every inch of it, from one end to the other. If upon a chair, it is the same in effect; only the hoop is suspended in the air, without any thing else to rest upon."

The "heads" excited the satire of all the poets and poetasters of the age. They were compared to almost every disagreeable subject in nature; but no amount of fun affected the mode. The quick changes from one monstrous fashion to another more monstrous still, caused one to sing,

FIGURE 33.

"O let a wind-mill decorate the hair,
A wind-mill, apter emblem of the fair!
As every blast of air impels the vane,
So every blast of folly whirls their brain."

To shape and order the cumbrous "head" required the strength and energies of a *male* hair-dresser, whose labors are thus described by the author of the "New Bath Guide:"

"And first at her porcupine head he begins
To fumble and poke with his irons and pins,
Then fires all his crackers with horrid grimace,
And puffs his vile rocambol breath in her face,

FIGURE 35.

FIGURE 36.

Discharging a steam that the devil would choke,
From paper, pomatum, from powder and smoke;
The patient submits, and with due resignation,
Prepares for her fate in the next operation.
When lo! on a sudden, a monster appears,
A horrible monster, to cover her ears;
What sign of the zodiac is it he bears?
Is it Taurus's tail, or the *tête de mouton*,
Or the beard of the goat, that he dares to put on?
'Tis a wig *en vergette*, that from Paris was brought.
Une tête comme il faut, that the varlet has bought
Of a beggar, whose head he has shaved for a groat.
Now fixed to her head, does he frizzle and dab it;
'Tis a fore-top no more—'tis the skin of a rabbit—
'Tis a muff—'tis a thing that by all is confest,
Is in color and shape like a chaffinch's nest."

FIGURE 34.

The strong scents which were universal toilet adjuncts from the time of Queen Bess down to the close of the last century, seem to have been necessities rather than luxuries. Cold water as a purifier was not much used in the cumbrous toilets of those days. To ladies who painted in red and white, as they did in the last century, an imprudent washing of

FIGURE 37.

the face would have been almost certain death. Lady Fortrose indeed killed herself by such a rashness, and several similar deaths are on record. A writer in the *Gentleman's Magazine* for 1741 confesses that "from my *love of appearing clean*, and conversing with the ladies, I am what people call a Beau." At Bath, the focus of every thing refined and fashionable during the early part of the last century, they never washed the uncarpeted floors of the apartments; but they were occasionally smeared over with a mixture of soot and small beer, which hid, or at any rate clouded, all unsightly accumulations.

Lest our fair readers think we give undue prominence to the fashionable absurdities of their sex, we must cite here one more extravagance in male attire, which seems to eclipse almost any thing to be laid to the fairer portion of creation. The Prince of Wales, who was afterward George IV., and whose wardrobe sold at auction, after his death, for the trifling sum of $45,000 (it was estimated to have cost $500,000), was the first to countenance buckskin breeches as an indispensable fashionable morning garment. This article was made to fit so close to the person that, we read, the maker and a couple of assistants were usually required to aid at the ceremony of trying it on. In some instances it was actually suspended from the ceiling by machinery, and the wearer *descended into it*, endeavoring, partly by the influence of his natural gravity, and partly by the pullings and haulings of those around him, to get home into the shell prepared for him. The effect of three hours' work of this kind (and the task lasted that time) may be imagined, especially if it was in the summer time. To walk in them was a torture, and to get out of them no less; but the dandy submitted to all with the devotion of a new-made saint, and the imperturbable firmness of a martyr.

In conclusion, we come to bonnets—of which the varying shapes are so numerous that we can give only a few of the most remarkable.

The horned and peaked styles (Figure 32) were in vogue during the reigns of the Plantagenets, but died out before Elizabeth's time. When the tower was the mode, a head-covering to correspond was a necessity. The balloon or hood (Figure 35) seems to have been rather graceful than otherwise. But it was soon driven out by the basket-shaped contrivance shown in Figure 37. This, heavy as it looks, was exceedingly light and fragile, composed chiefly of laces, gauze, wire, and ribbon, and intended to protect and shelter, and not weigh down, the immense head which it covered.

The three styles here presented in Figure 34 were all the rage at different periods, and all are more graceful than the cumbrous head-piece shown in Figure 33.

This was the height of the mode about 1768, and was—so says Stewart, a perruquier-author, in his *Plocacosmos*—thought a most graceful adornment! What taste!

But equally ungraceful and fashionable was the monstrous cap shown in Figure 36—a fact we should be loth to ask the reader to believe, were it not that our engraving is copied from an engraved likeness of the fair Mary Anne Robinson, the first love of that prince who was afterward George IV. One can scarcely imagine that a really beautiful woman would so disfigure herself. No wonder a pious rhymer of those days sang:

"The pride of our females all bound'ry exceeds,
'Tis now quite the fashion to wear double heads.
Approaching this town to disburse heavenly treasure,
I passed by a head that would fill a strike-measure,
If I'd had that measure but close to my side,
I then should have had the experiment tried.
By sins a man's said to be covered all o'er,
With bruises and many a putrified sore;
From the sole of his foot to his crown they aspire,
But the sins of a woman rise half a yard higher."

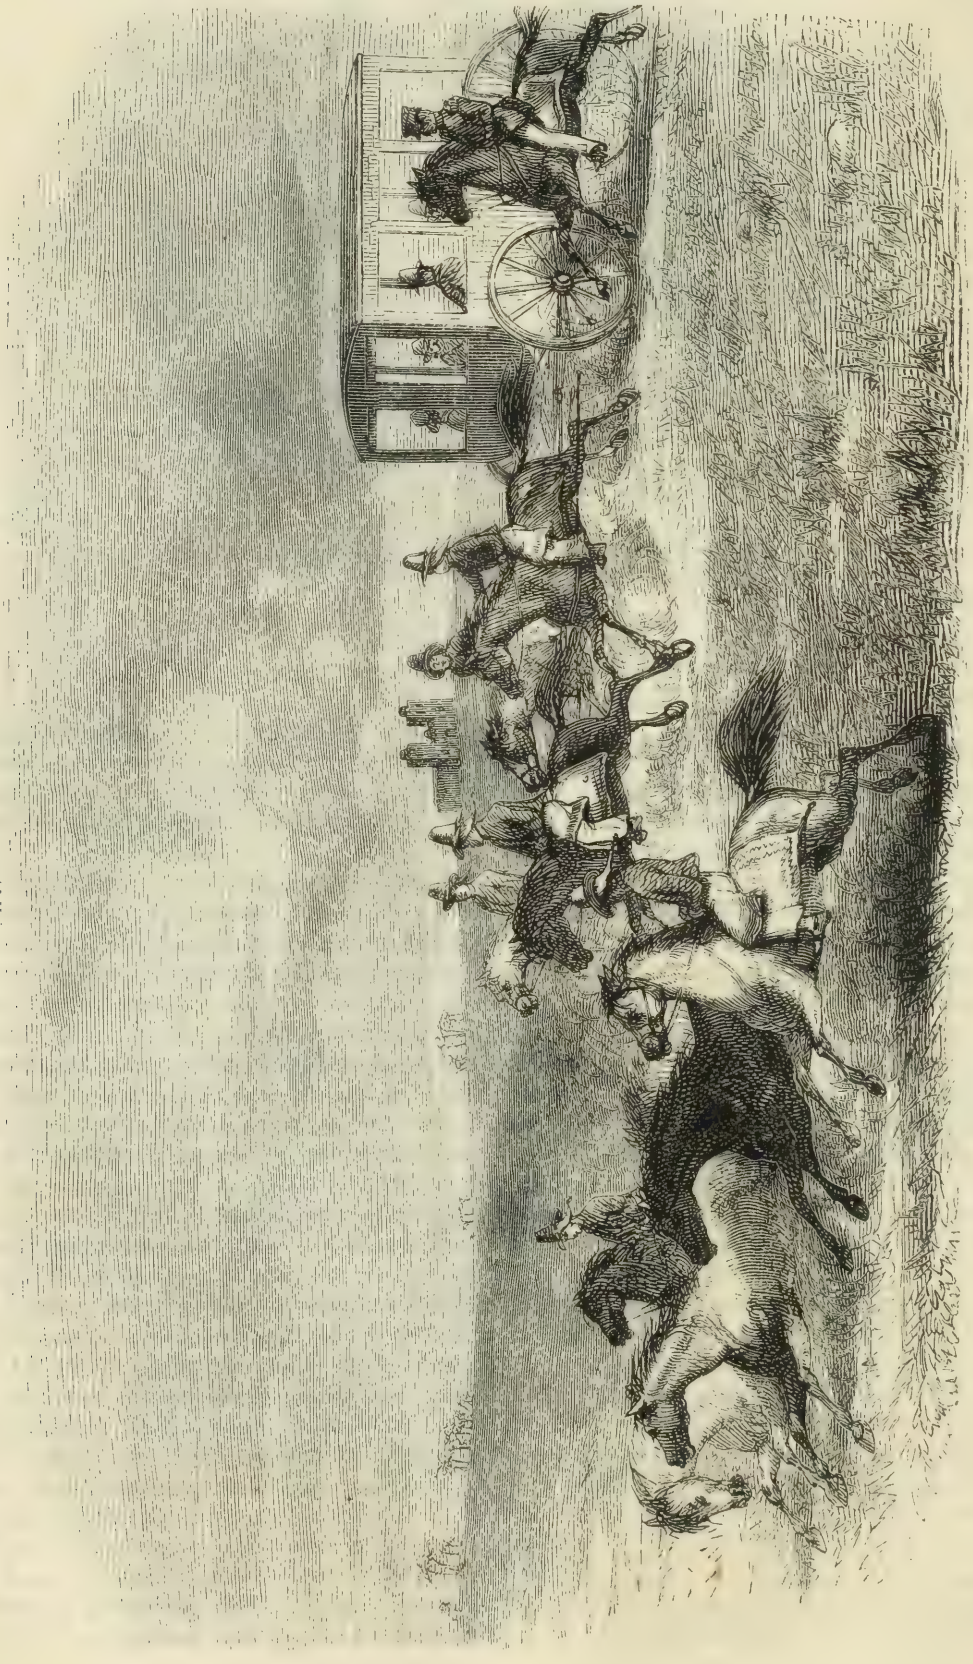
And yet, not one of the bonnets so ridiculed will seem more strange and *outré* to our small bonneted generation than will this specimen of the head covering which excited the budding vanity and enthusiasm of our mothers.

CARLO ANTONIO LOPEZ, PRESIDENT OF PARAGUAY.

LA PLATA.*

WHATEVER may be the immediate issue of the dispute with Paraguay, which forms so unfortunate an episode in the history of the La Plata Exploring Expedition, the ultimate results of this expedition can not fail to be of the highest importance. The basin drained by the affluents of the Rio de La Plata contains more than 800,000 square miles—a territory seven times larger than Great Britain, four times larger than France, two and a half times larger than the original thirteen States of the Union. In extent it ranks the third of the great river basins of the earth, being exceeded only by the basins of the Amazon and the Mississippi; while, as a home for civilized men and as the probable seat of a mighty Empire, its natural capabilities are surpassed only by those of our own great Western Valley.

The policy of Spain toward her colonies in the New World was always narrow and selfish. None suffered more than the vast region of La Plata. The merchants of Seville and Lima obtained the monopoly of the trade of Peru, and prohibitory edicts were issued against that of La Plata; so that when, after nearly three centuries of possession, the Spanish power passed away, only a few isolated portions of the country had been brought into subjection by civilized man.



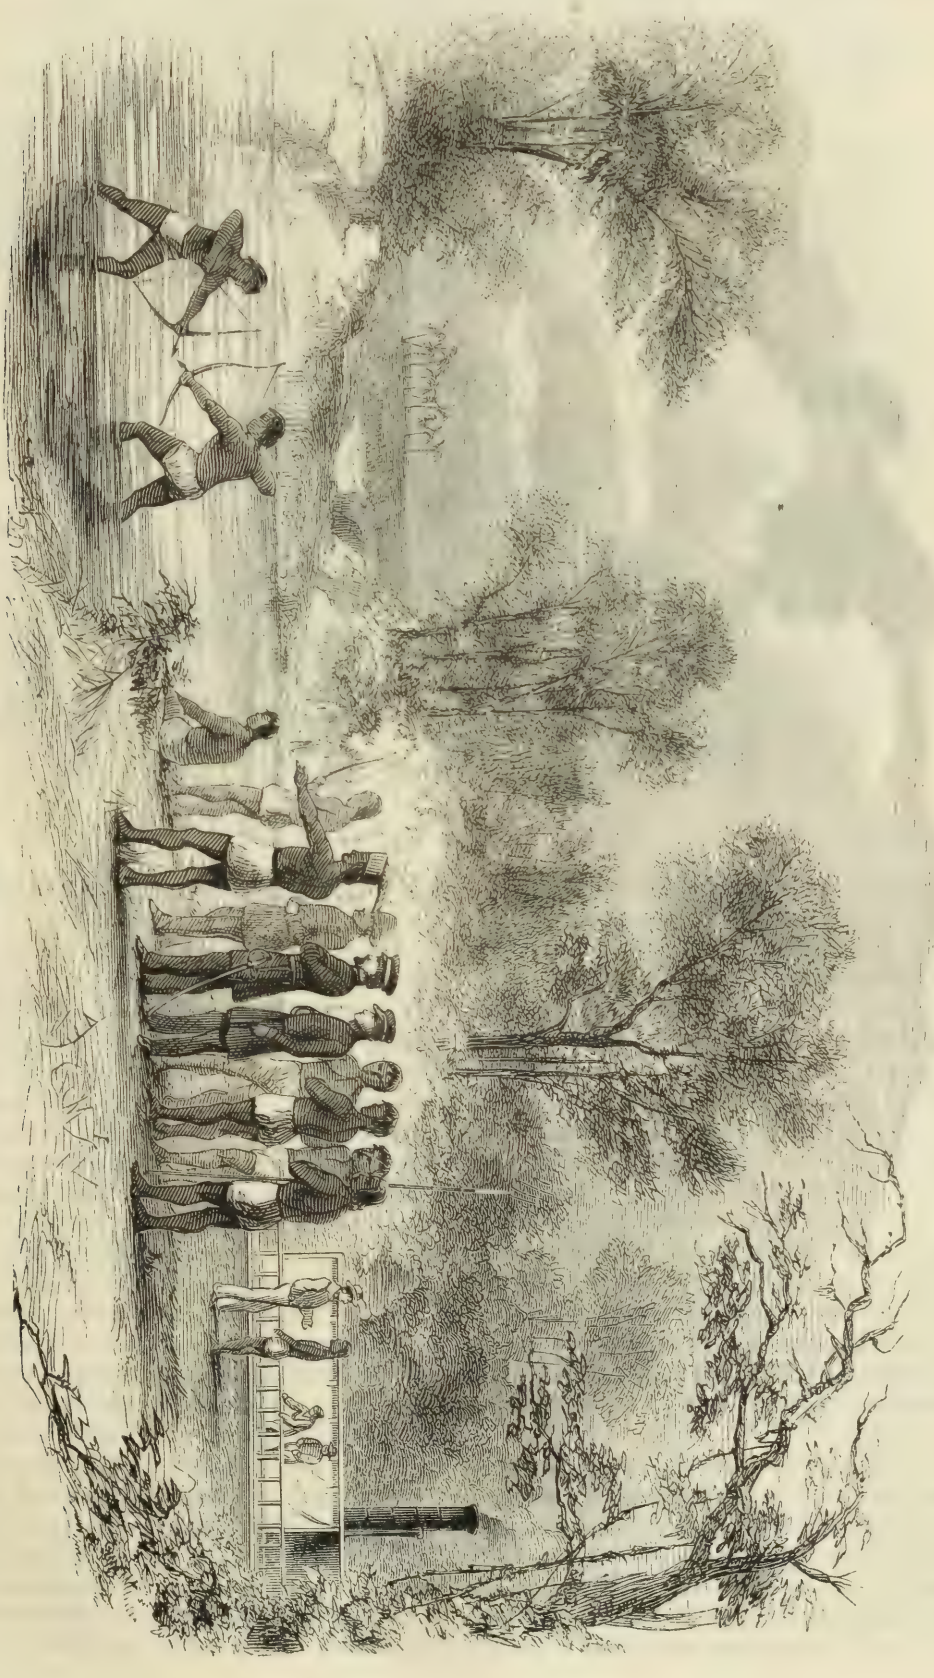
The anarchy and civil wars which ensued were still less favorable to the development of the resources and population of La Plata. Paraguay, under the iron rule of Francia, was shut off from all communication with the outer world; Uruguay, pounced upon by Brazil, was almost desolated in gaining her independence, the ill-consolidated Argentine Confederation fell under the brutal tyranny of Rosas, whose chief aim was to secure for his own State of Buenos Ayres the supremacy over the whole Confederation; to effect which the waters of La Plata were closed to the commerce and navigation of the world. Aided by Brazil, some of whose finest provinces were isolated by the closing of the Paraguay and Parana, the other States of the Confederation, under the lead of Urquiza, took up arms against Rosas, and, after a weary war of years, totally defeated him on the 3d of February, 1852, and secured the independence of the Argentine States, and the right to the free navigation of their own waters. Urquiza, a man of enlarged and liberal views, was placed at the head of affairs; and on the 28th of August, 1852, he issued a decree declaring the navigation of the waters of the Con-

* *La Plata: The Argentine Confederation and Paraguay.* Being a Narrative of the Exploration of the Tributaries of the River La Plata and adjacent Countries, during the years 1853, '54, '55, and '56, under the orders of the United States Government. By THOMAS J. PAGE, U. S. N., Commander of the Expedition. With Map and Numerous Engravings. Harper and Brothers.

federation free to the vessels of all nations. The seal which had so long closed this great country was broken, and a vast region was at once opened to the commerce of the world.

Our own Government was the first to avail itself of the opportunity thus offered to obtain a more extended knowledge of La Plata. The steamer *Water Witch* was put under the command of Lieutenant (now Captain) Thomas J. Page, who was charged to explore the rivers of La Plata, and to report upon their navigability and the commercial resources of the countries traversed by them.

Lieutenant Page performed the duties intrusted to him with rare tact, fidelity, and intelligence. His narrative, recently published, gives an account of explorations embracing more than eight thousand miles of travel by water and land, in the Argentine Confederation and Paraguay. These explorations were



THE GALERA.

made with the full consent and cordial co-operation of all the States in whose territories they took place; and without the slightest unfriendly act on either side, up to the time of the unfortunate rupture with President Lopez of Paraguay, which has at length resulted in the dispatch of the largest naval force which our Government has as yet fitted out.

The *Water Witch* reached Buenos Ayres on the 25th of May, 1853. The country was in a state of civil war. Buenos Ayres, unwilling to recede from her supremacy in the Confederation, had taken up arms against Urquiza, who was besieging the capital by land, while his fleet blockaded the port with the design of starving the city into surrender. He at once formally authorized the expedition to proceed; but various diplomatic reasons detained the *Water Witch* at Buenos Ayres for some months.

The members amused themselves as they

RIO NEGRO—INDIANS FISHING.

USE OF THE LASSO AND BOLAS.

could in watching the movements of the blockading squadron, and those of the merchantmen who were endeavoring to enter the port. The former showed marvelous skill in not overhauling the vessels deeply laden with flour and other edibles designed to feed the hungry population whom Urquiza was trying to starve into submission. How they could fire at them and invariably miss was a secret which was fully exposed one day, by the commander of the blockading fleet openly carrying his vessels over to the inside party. The blockade was at an end, and Urquiza could reduce the city only by bombardment. This he was loth to do; and very willingly acceding to a proposition for accommodation made through the representatives of France, England, and the United States, he withdrew his army from before the city.

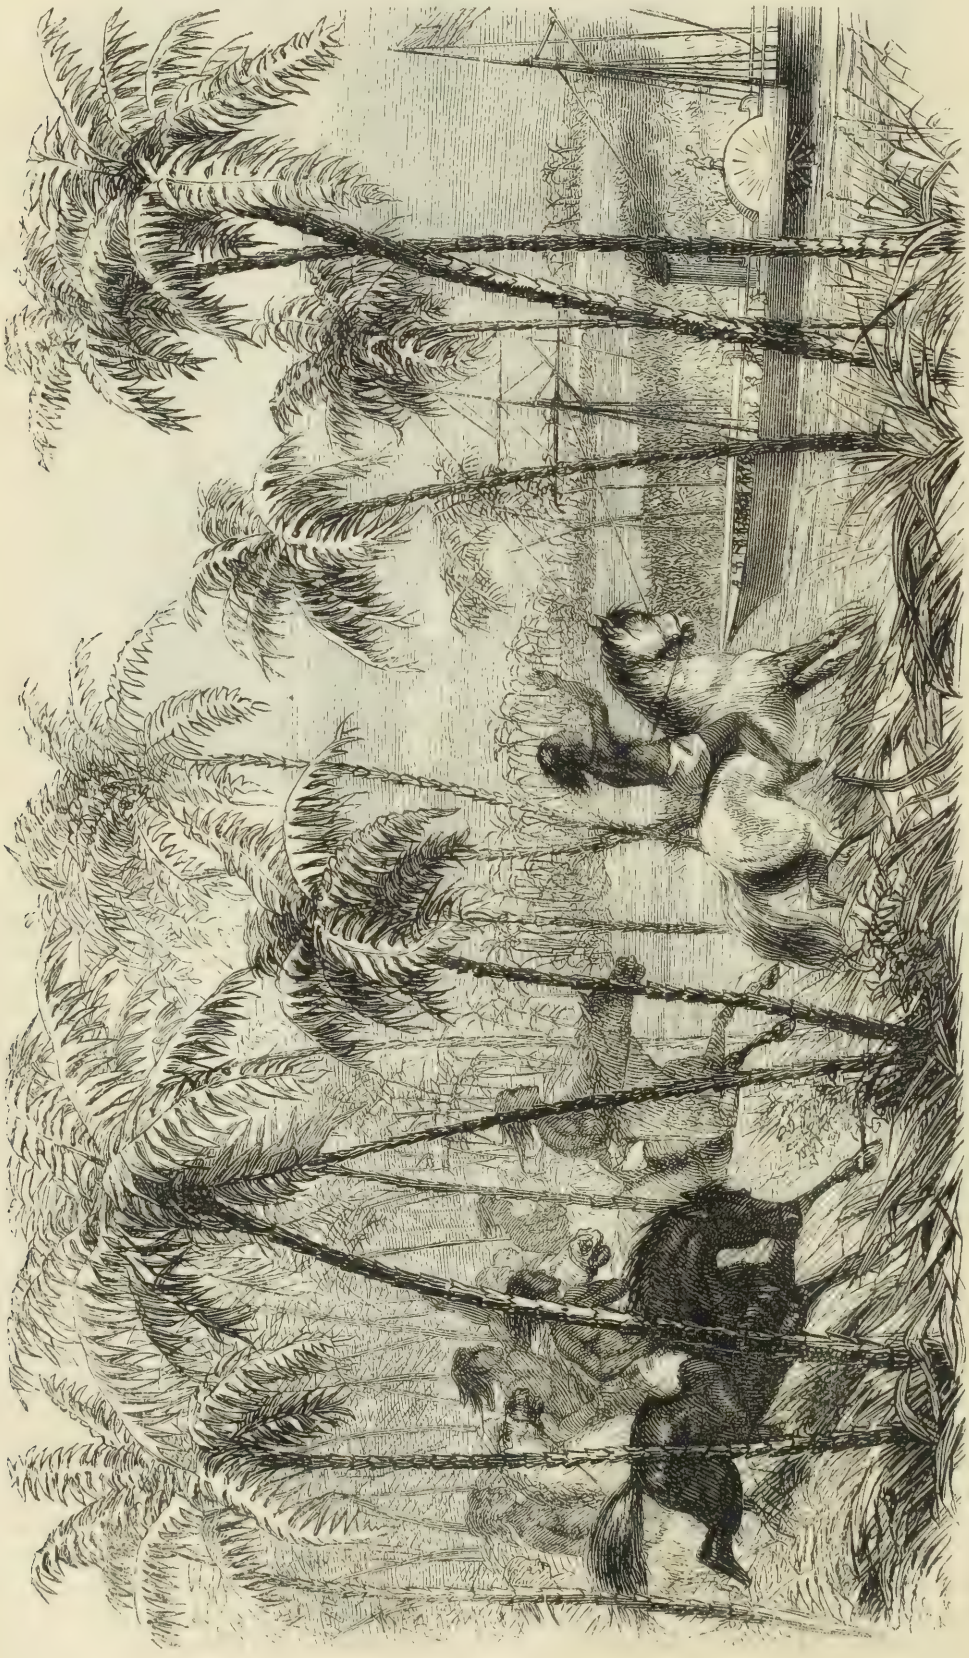
The negotiations between the Argentine Confederation on the one side, and the representatives of the United States, Great Britain, and France on the other, were now transferred to the residence of Urquiza in the interior of the Province of Entre Rios, and the *Water Witch* was employed to convey the President, his suite, and afterward the American Ministers, Messrs. Schenck and Pendleton, up the River Uruguay to Gualaguaychu, the port nearest to Urquiza's *estancia* of San José.

From Gualaguaychu to San José, a distance of fifty miles, the road lay wholly within the estate of Urquiza, which extends some ten miles further, embracing several hundreds of square miles of the most fertile part of Entre Rios. The mode of conveyance was by a *galera*—a vehicle not unlike an omnibus, drawn by four horses, each mounted by a gaucho, and capable of carrying a dozen passengers.

While the ministers were engaged in negotiations, Page and his naval companions busied themselves by inspecting the various operations carried on at this great estancia; saw the gauchos, equipped with lasso and bolas, dashing in among the herds of wild cattle, flinging them to the ground, and branding them with the distinctive mark of the owner; visited the wheat-fields, nurseries, and gardens; and wondered at the immense herds of deer, and droves of ostriches—fifty of these long-necked, long-legged birds being counted together—which surrounded the house. Urquiza's dwelling is a one-

COSTUMES IN THE INTERIOR.

storied quadrangular stone building of eighty feet on each side. Two lofty turrets afford a view of miles in every direction over the level pampa. Farther than the eye can reach the land is his own; and this is but one of his many estates. On this estancia of San José are 70,000 sheep, 40,000 head of cattle, and 2000 horses.



Their time for observation was short. The negotiations were pushed forward rapidly, and with entire cordiality on both sides. Three days after their arrival at San José the treaty of July 27, 1853, was concluded and formally signed by Urquiza; and on the same day treaties in similar terms were concluded with the Ministers of Great Britain and France. The vital article of these treaties is that by which the navigation of the great rivers La Plata, Uruguay, and Parana will henceforth be free to the commerce of the world; this freedom no longer depending upon decrees which may be abrogated, laws which may be repealed, or constitutions which may be changed; but is under the solemn guarantee of international contracts. Buenos Ayres indeed subsequently protested against this treaty; but in her anomolous position, neither in nor out of the Confederation, her discontent is of little consequence. If she remains in the Confederation, she must be governed by the supreme power; if she goes out of it, she has no claim to impede the free navigation of rivers of which she owns only a small part on one shore.

On the 1st of September, 1853, the proper work of the Expedition was begun by the *Water Witch* commencing the ascent of the Parana. The Rio de la Plata is an estuary rather than a river. It is 180 miles wide at the ocean, extending inland 170 miles, where it receives its two great affluents: the Parana, in its lower course running nearly southeast, and the Uruguay, a little west of south; between these rivers lie the states of Entre Rios and Corrientes, while on the western bank of the Parana lie the states of Buenos Ayres and Santa Fé, and higher up the almost unknown region of the Grand Chaco, occupied by scattered bands of Indians, who acknowledge fealty to no civilized power.

The design of the exploration was purely scientific. The precise geographical position of all important points was to be ascertained by astronomical observations. During the day these were taken on shore; at night, when the

vessel was at anchor, they were made from the deck. Elaborate charts were also to be prepared, giving a faithful representation of the river and as much as possible of the adjacent country. For this purpose an elevated position was taken on the hurricane deck, where the commander and two assistant officers were always posted when the steamer was under way. One observer, with chart-paper before him, projected the course of the river, noted its width and depth, and delineated the topography of either bank; while the other recorded these observations in his note-book, together with remarks upon any peculiar characteristics of the shores and vegetation. When in deep water, soundings were made every five minutes; when the water was shallow, the soundings were made as rapidly as the lead could be thrown.

For 200 miles the Parana and its branches form a low delta, studded with innumerable isl-

MEETING INDIANS IN THE CHACO.

ands, covered with orange and peach trees. The oranges are of poor quality, but the peaches, which grow wild, are of admirable flavor. The fruiterers lay their boats against the banks, and load them directly from the overhanging trees. These islands, at this season, present an enchanting spectacle. The low banks are fringed with aquatic plants; the willows droop their pensile boughs over the water, forming arbors under which the boatmen indulge in their noontide *siesta*. The air is loaded with delicate odors from innumerable flowers, and the eye is almost wearied with the gorgeous coloring of the tropical vegetation. From the mast-head of the steamer, as far as the eye could reach over the level banks, there was but a wilderness of foliage, and flowers, and fruit.

The river now begins to emerge from this low delta, presenting steep banks of from fifty to a hundred feet in height, with a rich soil. Here

ATTACK UPON THE "WATER WITCH."

are the great estancias, or grazing establishments, covered with herds of cattle and horses. The civil wars which have ravaged the country for so many years have sadly diminished these; but they still constitute the wealth of the country. The great estancieros reside at Buenos Ayres, luxuriating in the enjoyments of city life, leaving their estates to the management of the *capitaz* and his subordinate herdsmen.

Rosario, 200 miles from the mouth of the Parana, and 400 from the ocean, will probably in time become the great emporium of the eleven provinces west of the Parana. When the Expedition reached it, in September, 1853, its population was about 4000. Within two years, and before the *Water Witch* left La Plata, the population of Rosario had increased to 12,000—an increase paralleled only by that of some of our own Western cities

Three hundred and fifty miles from its

PURSUIT OF INDIANS ON THE SALADO.

mouth the Parana receives the Salado, its first great tributary from the west, the subsequent exploration of which forms one of the most interesting features of Captain Page's narrative. From this point, with the single exception of the little hamlet of Capilla de San José, settlements are confined wholly to the eastern bank of the river. On the west, far up the Parana and Paraguay, is "*El Gran Chaco*," which covers an area of 200,000 square miles—equal to that of our four great States of New York, Pennsylvania, Virginia, and Ohio. It is partitioned by imaginary lines among the neighboring Governments, but is in the actual possession of hordes of inhospitable savages, who acknowledge allegiance to no power but that of their own caciques, who rule with unquestioned authority.

Corrientes, the capital of the State of that name, is a flourishing town upon the eastern bank of the Parana, just below its junction with the Paraguay, and about 1000 miles from the ocean. The Parana, whose course has hitherto been north and south, turns sharply to the east after receiving the Paraguay. It keeps this course for two or three hundred miles, when it resumes its former direction, running nearly parallel with the Paraguay. Within the peninsula formed by these two rivers lies the inland State of Paraguay, with a territory of 72,000 square miles, and a population of some 300,000 souls. Cut off from the rest of the world by position, Paraguay has been still more isolated by the policy of its rulers. The independence of the country was acknowledged in 1811; the next year the administration was confided to two consuls, Yegros and Francia, the latter of whom soon gained the management of affairs, and established the most absolute system of despotism ever known in the civilized world. He seems to have been possessed by two leading ideas: To concentrate all power in his own person; and to shut out his dominions from intercourse with the rest of the world. No official record of his decrees was kept; his orders, with "executed" marked on the margin, were returned to him, and then destroyed. The only trade allowed was that carried on by himself. When he wanted articles of foreign production, a permit was sent to Corrientes for a single vessel to come to the port of Nembucu. An invoice of the cargo was forwarded to him, upon which he fixed his own price, paying for it in *yerba*. So completely was the produce of this favorite beverage monopolized by Paraguay, that Francia might have parodied our own boast, by saying that in La Plata "Yerba is king." The tyranny of Francia extended to every department of life; his spies and emissaries were at every man's door; his orders admitted of no delay or appeal. He died in 1840, having governed more than a quarter of a century. He left his country impoverished; its resources undeveloped; its population diminished. In spite of the numerous executions which he ordered, more than seven hundred prisoners filled the jails of Asuncion. Yet his power was from first to last unquestioned. In life he was *El Supremo*, and even yet the Paraguayans speak of him, only in whispers, as *El Defunto*—"The Deceased." The church in which he was buried is shunned to this day. One morning when it was opened for prayer his monument was found scattered in fragments over the floor; his bones had disappeared—how or whither nobody knew or cared: it was whispered about that the devil had only claimed his own, body and soul.

After a number of changes in the form of government, Señor Carlo Antonio Lopez was, in 1844, elected President for ten years. He soon possessed himself of power scarcely less absolute than that of Francia, though far more wisely exercised; for Lopez is unquestionably a man of no common talent. It is said that Paraguay has a constitution on paper—there certainly was one in Francia's time; but nobody now seems to know any thing of its provisions; Lieutenant Page could get no official information respecting it. The President is the State; he appoints the commandantes; these nominate the representatives to Congress; and Congress chooses the President. Of course, when Lopez's term expired there was no rival candidate, and he was again elected.

The Expedition left Corrientes on the 26th of September, having been occupied nearly a month in surveying the Parana. They now entered the Paraguay—a noble river of half a mile broad, with a winding course, but an open and unobstructed channel—and soon entered the territory of Paraguay. The country was beautiful. "In the islands of the Parana," writes Page, "we have seen the lovely gardens of La Plata; we have now before us her parks. It is the region of the palm, which here rises to a great height. The grass is green and luxuriant as a well-kept lawn; deer gambol under the trees, and it needs not a vivacious imagination to conceive that at each bend of the river some noble mansion to which these parks pertain will appear. A few habitations are alone wanting to animate the landscape."

The eastern bank is defended by *piquettes* and *guardias;* the former at intervals of three miles, the latter at wider distances. These are the stations of a river police for the prevention of smuggling, and dispatch offices for the transmission of intelligence to the capital. The guardias consist of bamboo huts, with an adjacent lofty look-out; the piquettes are thatched sheds, with raw-hide hammocks for the men. On the west bank is the Chaco. Here are no guardias; the Indians being without canoes, the river is thought a sufficient protection from their incursions.

Asuncion, the capital, lies 160 miles above the mouth of the Paraguay. Immediately on his arrival Page sought an interview with the President, who received him in a plainly carpeted room, with a circular table in the centre, and a few cane-seated chairs arranged around

the walls. At the table sat Lopez, a stout man of fifty-four years of age, wearing his hat, according to his usual habit in receiving visitors of whatever rank. The existing treaty with Paraguay secured the right of navigating the river only as far as Asuncion. There were unsettled questions as to boundaries between Paraguay and Brazil; and as the river formed the only outlet to some of the richest Brazilian provinces, Lopez had closed its navigation above Asuncion, with a view of bringing Brazil to terms. One of the leading objects of the expedition was to explore the upper course of the Paraguay. Lopez hesitated to allow this, lest Brazil should adduce it as a precedent, and demand the right of passage, which he would not grant in the present state of their political relations. Page replied that the Expedition being of a purely scientific character, any privileges granted to it could not be made a precedent for navigation for commercial purposes, and urged the benefits which would accrue to Paraguay from a scientific exploration of waters so little known. Lopez saw the force of this reasoning, and not only gave the required permission, but afforded every facility for carrying it into effect. He allowed them to build a small steamer at Asuncion, designed to traverse the minor streams, and gave orders by which an abundant supply of fuel was furnished for the *Water Witch*. Up to the time of the unfortunate rupture, of which we shall soon have to speak, nothing could be more friendly and courteous than the conduct of the President of Paraguay. Page loses no opportunity of doing ample justice to Lopez in this respect, even while most severely animadverting upon his subsequent conduct.

A month having been occupied in these negotiations, the ascent of the river was begun on the 7th of November. Orders from Lopez had preceded them, and they were every where received with the utmost kindness. On the east bank were occasional villages and estancias; on the west the Chaco, which is here claimed by Paraguay, although no actual authority is exercised over it. One day, while running close to the west bank, they saw a host of mounted Indians in the distance. On they dashed like centaurs, men and women naked with the exception of a piece of stuff about the loins. They had neither saddles nor bridles, guiding their fiery horses among the trees by a hide thong passed around the lower jaw. Arrived at the bank they made signals for a "talk." The steamer was stopped, and a party sent ashore. The Indians proved to be a band of the Angaité, one of the most warlike of the tribes of the Chaco, who have for more than three centuries defied the power of the white man. They have maintained their independence, not among deadly morasses or inaccessible mountains; but in a land of fertile plains, and noble forests, accessible by navigable streams, and irrigated by abundant tributaries; a land in the most literal sense flowing with milk and honey. They were noble-looking creatures, all above the middle stature, well formed, and athletic. The old Jesuits give the most extraordinary accounts of the physical vigor of the Indians of the Chaco. Dobrizhoffer says if one dies at fourscore he is lamented as having been cut off in the flower of his age. He speaks of men of a hundred years mounting fiery horses like boys of twelve. Azara says that they have no equals in physical nobleness; he speaks of men more than a century old, vigorous and athletic, with perfect teeth and unthinned hair. One of these caciques, six feet and two inches in height, who still mounted his horse, handled his lance, went to war, and followed the chase with the youngest, was, in 1794, asked his age. He replied that he did not know; but that when the cathedral at Asuncion was built he was married and had a son. The cathedral was built 105 years before; so that the chief must have been more than 120 years old.

The abandoned fort of Olimpo marks the boundary, as claimed by Paraguay. Beyond this, the west bank belongs to Bolivia, the right to Brazil. Bolivia, in fact, claims Olimpo, and, in 1852, it was named as one of the three free ports of entry; and a prize of ten thousand dollars was offered to the first commercial expedition which should enter either of them. At the time when the Expedition reached it, with the exception of the deserted fortress and a few dilapidated huts formerly occupied by the officers, there was not for miles around the vestige of any occupation by the whites. It stood as isolated from all civilization as a desert island. But since the river has been opened to Brazilian vessels the fort has been again occupied by Paraguay.

Corumba, a little station about 300 miles beyond the frontier, was the point to which Brazil had limited the permission to ascend. It is a forlorn village occupied by a commander, fifteen soldiers, and some thirty half-breed women and children. Permission was subsequently given to explore all the Brazilian affluents of La Plata; but the difficulty with Paraguay rendered this unavailing for the time.

Corumba was reached on the 1st of December. The Expedition then descended the river to Asuncion, where it arrived on the 20th.

The *Water Witch*, drawing nine feet, had thus, at the season of low water, ascended this noble river a distance of 1000 miles from the ocean in a direct line, or twice as far by the course of the river, without meeting with the slightest obstruction. It therefore furnishes a practicable highway into the very heart of the South American continent. With the possible exception of our own great Western River, we may safely affirm that no other river on the earth presents so many facilities for navigation by steam. Of the availability of the country watered by it and its affluents for colonization and subsequent commerce, we shall hereafter speak more in detail.

As the Expedition approached Asuncion the

altered demeanor of the authorities at the various places where they touched showed that something was wrong. What this was was soon explained. Lopez was angry because they had ascended beyond the limits of Paraguay. This cloud quickly blew over. Lopez was highly gratified with the sketch of the river which Page gave him; and the relations between the Expedition and the President became more friendly than ever.

Lieutenant Page projected a series of journeys by land, to be undertaken by himself and his officers, into the interior of Paraguay. Lopez entered cordially into the scheme, and gave directions which every where procured the most hospitable reception to these parties. "A hint from the President," says Page, "would be quite sufficient to insure kind treatment to strangers at the hands of every Paraguayan. But, independent of any influence which the expression of his Excellency's will might have, I believe hospitality to be a national virtue. As there are no public houses, travelers must depend exclusively on private entertainment. I instructed the vaqueano to make remuneration on all occasions in the course of our route. It was invariably offered, but in a majority of cases declined." The Narrative presents throughout a genial picture of the people of Paraguay. Though the country is mainly agricultural, there is little variety in the articles cultivated. The people have few inducements to urge them to the strenuous industry which characterizes our race. Shut out from communication with other lands, they neither know nor desire their luxuries. Give them maté, beef, and mandioca, and they are satisfied. Their climate is deliciously soft, and with the festivals of the Church, and an occasional dance to break the monotony of existence, they dream life away, imagining that Paraguay is the true Elysium. Yet with increased intercourse with other lands new wants will arise, which the productions of their country will afford them the means of gratifying. There is no tropical or semi-tropical product which the soil of Paraguay is incapable of supplying. The women manifest a native grace which the laborious training of other lands can hardly equal. In the remotest towns of Paraguay and the Argentine Confederation women were every where met who had never seen any thing beyond the narrow limits of their secluded homes, who yet manifested all the refinement and delicacy of manner and feeling which we are accustomed to consider the results of elaborate education.

Almost the only instance of inhospitable treatment recorded by Lieutenant Page during his excursions in Paraguay took place at the Puesta del Estado, one of the numerous Government estancias. They had arrived there, after a ride of six hours, hungry and tired. After waiting a long time the servant of the State announced that dinner was ready. They looked about in vain for some token of the promised meal. Presently a couple of men stepped into the porch, each bearing a long stick thrust through a piece of roasted beef. "Is that our dinner?" asked the hungry men. "*Si Señor*," was the reply, delivered in a tone which implied "What more would you have?" The meat, unaccompanied by salt, bread, or vegetables, was so tough as to defy the assaults of knives or teeth. It seemed to have been taken from a bullock as old as the most long-lived Chaco Indian, while right before their eyes two thousand fat beeves were luxuriously grazing. By dint of much solicitation a few eggs were added to the meal, for which a dollar a person was demanded and paid. "I never reported the capitan of this puesta," says Page, "or he would probably have lost his place."

A very interesting journey was performed by Lieutenant Powell into the districts where the *yerba* is grown. From this herb is produced the *maté*, the favorite beverage of La Plata. The word maté means simply a gourd, and properly denotes the vessel from which the decoction is imbibed, by means of a tube with a perforated bulb at the extremity. The *Yerba maté* or *Ilex Paraguayensis* is a species of holly; the lands where it grows belong to the State, and the herb is a Government monopoly. It is gathered either by the officials of the Government, or by individuals who receive permission to collect and prepare it, receiving one-third of the product for the labor. The leaves and tender twigs are stripped from the bushes, roasted for thirty-six or forty-eight hours over a slow fire, pounded to a powder, and packed in hides for exportation. The present net revenue derived from this article amounts to about $360,000 a year.

The little steamer built at Asuncion, and named the *Pilcomayo*, proved a failure. An attempt was made to ascend in her the River Vermejo, which, rising in the Andean chain, passes through the Chaco, and empties into the Paraguay a little above its confluence with the Paraná. In thirty-two days the boat only made 137 miles, through a country of great beauty and fertility. Many Indians were seen on its banks, who subsist mainly by hunting and fishing. So novel an appearance as a steamboat failed to excite their wonder.

These expeditions and the necessary work of the Expedition filled up several months, at the close of which Lieutenant Page determined to prosecute some explorations in the Argentine State of Corrientes. Up to this time the friendly relations of Lopez had continued unbroken, and when Page called to take formal leave the demeanor of the President was unusually cordial. He even relaxed from his usual official dignity so far as to accompany his visitor to the door with many expressions of kindly feeling and proffers of all needed assistance.

Lieutenant Page was soon recalled to Paraguay by intelligence that serious misunderstandings had occurred between Mr. Hopkins the American Consul, who was also agent of a commercial Company, and President Lopez.

It originated in a mere trifle, which in other countries would never have become a government affair. When Lieutenant Page returned it had assumed the aspect of a diplomatic quarrel. Crimination had been followed by recrimination on both sides. The *exequatur* of the Consul had been revoked, and the privileges granted to the Company of which he was the head had been suspended. The Commander of the Expedition used every means to allay the difficulty; but the President seems to have become thoroughly angry, and violated the diplomatic courtesies due to the representative of a foreign power. The upshot of the matter was that the American Trading Company were forced to abandon the country, with no inconsiderable loss of property, and Lopez issued decrees, excluding foreign vessels of war from navigating the waters of the Republic, and prohibiting the further progress of the exploration of the rivers. This decree was issued on the 3d of October, 1854, and an alleged violation of it is offered as a justification of the attack upon the *Water Witch* in the following February.

The Expedition now left the waters of Paraguay, and proceeded down the river, bearing the members of the American Company.

The rupture with Lopez presented an insuperable obstacle to the execution of some of the leading objects of the Expedition. Among these was the exploration of the Pilcomayo, which rising among the Bolivian Cordilleras, courses through the Chaco, and falls into the Paraguay opposite Asuncion. No one, as far as is known, has ever ascended this river for more than forty miles; and an attempt to descend it, made in 1844, under the auspices of the Government of Bolivia, failed of success. Yet there is good reason to suppose that with proper means its navigation is practicable.

Still, however, there was much to be done. The whole Argentine Confederation lay open for exploration. The Uruguay, and the Parana beyond its junction with the Paraguay, were to be surveyed; and above all, the question of the navigability of the Salado was to be settled. This river, which forms the southern boundary of the Chaco, passes through some of the most populous States of the Confederation, whose products have hitherto found a market only by being transported eight hundred miles by ox-wagons, requiring a period of ten months to accomplish the journey both ways. It was confidently hoped that nothing more could break in upon the work of the Expedition.

A considerable portion of the crew of the *Water Witch*, and all the surveying officers, with the exception of Lieutenant Jeffers, who was left in command of the steamer, were detailed for the exploration of the Salado, where hostilities were apprehended from the Indians. Lieutenant Jeffers, in the scantily-manned *Water Witch*, was directed to proceed about a hundred miles up the Parana, beyond its junction with the Paraguay, for the purpose of examining certain rapids said to exist there.

The *Water Witch* left Corrientes on the 1st of February, 1855. On the preceding day Lieutenant Page, with the Salado party, set out in the miserable little *Pilcomayo*. As they put off, a Paraguayan boat, which had been hovering about, was observed to pull rapidly up the river. It doubtless bore to Lopez a report of the division of the American force.

On the 3d of February those on board the *Pilcomayo* were surprised to see the *Water Witch* come steaming down the river after them. The story was soon told. The vessel had proceeded quietly on her work, having on board a native pilot who professed to know where the channel lay. Keeping as close as possible to the Argentine bank, he suddenly ran the steamer aground, nearly opposite the little Paraguayan fort of Itapiru. The pilot said that the main channel lay near the Paraguay bank, but that he supposed there was water enough to float the vessel near the other shore. He was ordered to put the steamer in that channel, which ran close by Itapiru. When near the fort, two or three blank cartridges were fired, followed by a shot, which passed through the after-port, cut away the wheel, and killed the man at the helm. The fire was returned from the steamer; the flag-staff of the fort was cut down, and it is said that a number of the Paraguayans were killed. The *Water Witch* then dropped down the stream, and was soon beyond the reach of the guns of Itapiru.

This attack was an outrage for which it is impossible to assign an adequate cause. The *Water Witch* was not within the waters belonging to Paraguay, but in those common to that State and Corrientes; and was not, therefore, violating the order which closed the Paraguayan river to men-of-war, and prohibited the further prosecution of the exploration. She was proceeding in accordance with the express desire of the Governor of Corrientes, and had a perfect right to use the channel, even though it ran directly under the walls of Fort Itapiru. It is absurd to imagine that the Americans could have had any hostile design against Paraguay; for the *Water Witch* was not equipped as a man-of-war; and, as must have been known, had on board but a single officer, and only twenty-eight men, all told, including cooks and stewards. Close by was the Paraguayan fleet, consisting of five vessels, a steamer, many gunboats, and a body of six thousand men who had assembled here to oppose the passage of a fleet which Brazil was on the point of sending up.

Lopez was doubtless angry at the result of the affair of the American Trading Company, and felt himself affronted at the tone of the official correspondence with the Commander of the Expedition; and having never, in all his life, met with an equal, he resolved to avail himself of the first occasion to vindicate his dignity, relying upon the presumed inaccessibility of his country to protect him from future reprisals. He indeed attempted to justify his course by alleging that the Americans were apparently

taking soundings in the waters of Paraguay which were closed to foreign vessels; and caused a chart to be prepared in which the topography of the scene and the movements of the *Water Witch* were made to correspond with this statement. Lieutenant Page presents this fancy chart side by side with one made from actual survey. No two things could well be more dissimilar.

Lieutenant Page was not disposed to rest quiet under this insult to our flag. The armament of the steamer was not such as to enable him to act efficiently against a fort like that of Itapiru. He, therefore, hurried down the river, hoping to obtain guns from our coast squadron.

Arriving at Buenos Ayres, Page found that the American fleet had just left that port. He sent an account of the attack upon the *Water Witch* to Commodore Salter, urging that the *Germantown* should be dispatched at once to Paraguay. "The *Water Witch*," said he, "with the *Germantown*, or a brig in tow, will be amply sufficient to inflict such punishment upon Paraguay as the insult demands—not only knock down the fort, but capture the squadron also." Captain Lynch, who commanded the *Germantown*, offered either to take the vessel up, or to relinquish the command to Page for that purpose. The Commodore, after consulting with our new minister, Mr. Peden, refused to act. "I can not move in the matter," said he; "the affair is referred to the Government, and I shall await instructions." Page then asked that the *Water Witch* might be furnished with a couple of large guns from the squadron. With these, he would undertake to knock down Fort Itapiru, and would pledge his life for the success of the attempt. It was all in vain. "There are other fields for the Expedition," said the Commodore; "and you had better not return to that part of the river until instructions are received from home."

Foiled in his attempts to obtain means to avenge the outrage upon the *Water Witch*, Page turned his attention to the explorations which remained to be accomplished. Foremost among these was the exploration of the River Salado, which, forming the boundary between the settled portions of the Argentine Confederation and the Indian domain of the Chaco, penetrates several important provinces.

To explore this river a little steamer, which had been sent out in pieces from the United States, was chartered for a few weeks. She was called the *Yerba;* her length was 112 feet, and with twenty-five men, provisions for two months, six tons of coal and two cords of wood on board, her draught was twenty-six inches. The short time for which the steamer was chartered permitted them to ascend only 340 miles by the river, or 91 miles in a straight line; but enough was seen to make it evident that the river was navigable much farther.

Lieutenant Page therefore determined to take the steamer back, and then make a journey by land into the interior, and then descend the river to the point where the exploration had ceased. This purpose was in a good measure executed; and the consequent journey was the longest undertaken by land during the progress of the Expedition.

Page was accompanied on this journey by Lieutenant Murdaugh and Cornelius, one of the crew of the *Water Witch*. The Governor of the province furnished them with a small military escort. Thus reinforced they had no doubt that they could make head against any party of wandering savages whom they might encounter. They left Santa Fé on the 12th of November. For a hundred and twenty miles the way was over "a shoreless sea of grass, where the eye found a resting-place only upon the horizon, from which the sun rose as from the ocean." The solitude was broken only by one military post and a single village of peaceful Indians. Then followed a long day's ride over a half-desert region, where the water is scarce and brackish; after which they entered a comparatively populous and well-cultivated country, whose wheat fields afforded a pleasant sight after the monotony of the pampa. From this point there are postas for the accommodation of travelers, where a little indifferent food and a hide cot without bedding may be had.

Cordova, the capital of the State of that name, is a pleasant town of 15,000 inhabitants, situated 240 miles from Santa Fé. A railroad has been surveyed, by Mr. Campbell, an American, from this place to Rosario, the most flourishing port on the Parana. The Cordovese were not over-cordial toward Lieutenant Page. They feared that if he should be able to establish the navigability of the Salado much of the trade which they wished to monopolize would be diverted from their town.

After a considerable stay at Cordova they started for Santiago del Estero, 360 miles further. When the horses were brought up, Page was disappointed at their sorry appearance. They seemed incapable of making a dozen miles a day. He complained to the master of the posta for giving him such miserable-looking beasts; and vexed by the assurance with which the man insisted that they were excellent horses, struck spurs and dashed off, expecting that the horses would drop down in half an hour. The sorry-looking pampa steeds never broke gallop for twelve miles; and, instead of being distressed, were ready, after half an hour's rest, to be driven back at the same speed. At every posta on the road the horses were driven up fresh from the pasture, and yet in all this long journey Page made never less than ten, and commonly twelve miles an hour, often proceeding from twelve to twenty-four miles upon the same horse.

At Santiago they met with the most hospitable reception. Don Manuel Taboado, the Governor of the province, entered warmly into the design of the Expedition, assigned the party apartments in the Government House, and treated them as the guests of the State. The

hospitality of the people was almost embarrassing. Page was afraid to attempt to procure the smallest article; for it was promptly furnished, and the money invariably returned, with the remark, "You can pay for nothing here, Sir." At a picnic given by some of the principal citizens, among the refreshments provided was English ale, which had been brought 650 miles on ox-wagons across the pampas.

They had now by a circuitous route reached within fifty miles of the Salado, and wished from this point to descend the river to the point to which the steamer had ascended. A boat eighteen feet in length happened to be in a stream near the town. By the order of the Governor this was carried over to the Salado on an ox-cart, and the explorers followed in the Governor's own barouche. The boat was launched on the 11th of September, 1855, to the immense astonishment of the by-standers, who had never seen any water-craft larger than a hide *balsa*. For many days the river was found obstructed by *barricados* of drift-wood, which were removed by men sent on by the Governor. These grew less frequent as they descended; but their removal consumed much time.

On the evening of the 25th of September, while bivouacked upon the bank, they were aroused by the approach of a body of horsemen. It was the Governor, at the head of eighty men, in pursuit of a large body of Indians who had crossed the river from the Chaco side, made an attack upon the estancias, killed several persons, and driven off the flocks and herds. Page asked permission to accompany the troops. The Governor would not stop a moment; so in the darkness they floundered through the mud and water of the river, and soon struck the trail of the marauders. As day dawned their traces became more evident. Soon they saw a cloud of dust in the distance. The Indians were hurrying on at full speed, driving their stolen horses in advance. The pursuers pressed on at full gallop. Twice during the chase of three hours the Indians lassoed fresh horses from the drove, mounted them, and dashed on. It seemed but the work of a moment, but each time the pursuers gained a little. When within a quarter of a mile a party of the savages turned, sprang at full height upon the bare backs of their horses, as if to count the numbers of their enemies, and whooped defiance. The handful of soldiers in advance of the main body charged straight at the savages, who met them half-way, spearing right and left; then, suddenly wheeling about, made after their comrades. The soldiers passed on in hot pursuit, and were gaining rapidly, when the Indians suddenly abandoned their horses, and disappeared in the dense forest which they had closely skirted during the chase, and were lost to sight as completely as though the earth had swallowed them. The result of the chase was the capture of two hundred horses and two hundred and fifty head of cattle.

The forest in which the Indians had taken refuge extended for three days' journey, and was so impenetrable as to render pursuit impossible. The soldiers, after a halt of five minutes, retraced their way, under a burning sun, through a country destitute of water. At night they bivouacked near a marsh, where a little brackish water was found in the deep cattle tracks. The horses had been under saddle twenty hours, and, with a rest of only five minutes, had made 120 miles. For the men there was neither food nor drink. At daylight the march was resumed, and night brought them to the river, where they found food and fresh water, the first which they had tasted for forty hours. Water, indeed, was too plentiful, for a heavy rain set in, notwithstanding which Page spread his India-rubber blanket on the ground, and slept soundly till morning. In this Indian chase they had passed through 135 miles of the Chaco, over a rich plain about five miles broad, bounded on one side by the river, and on the other by an unbroken forest which extends for 150 miles. In returning from their plundering excursions into Cordova and Santiago the Indians pass along this plain, where they can find grass and water for the cattle which they have stolen. They double the southern extremity of the forest, and, taking their last draught of fresh water, push northward across the saline pampa which stretches toward the Vermejo. Page was impressed with admiration for the patient endurance of the Santiagan soldiers. Their only pay is a suit of clothes, a ration of beef, and a little tobacco; yet they serve cheerfully, rarely desert, will march for two or three successive days without food or water. But the long civil wars have so weakened the country that the Indians have actually gained upon the whites; and these western provinces are absolutely less populous than they were at the time when they gained their independence. Within the recollection of living men the banks of the Salado were covered with great estancias which are now deserted; the men having been killed, the women and children carried into captivity, and the horses and cattle driven off by the Indians. We may reasonably hope that a better state of things is about to be inaugurated. The establishment of a few military posts will put an effectual check to these savage forays.

The boat proceeded down the river, which grew more and more free from obstructions, until the 3d of October, when the explorers came up with the Santiagan troops, who had followed the bank of the stream, and were going still further down in pursuit of marauding Indians. Page joined the Governor's party, and, sending back the boat, proceeded to a point about eighty miles in a direct line from Monte Aguara, the highest point reached by the steamer in its upward passage. The Salado was here a broad, well-defined stream, flowing through a beautiful country. The guide of the Governor affirmed that it maintained the same character to Monte Aguara; but the rainy season was setting in, and anxious as Page was to unite his

two explorations, it was thought advisable to return. Enough had been accomplished to demonstrate the navigability of the river for a distance of eight hundred miles.

On their return journey by land they found abandoned estancias, and other evidences of Indian forays. In one place the poles of a deserted lodge were tied with a long tress of hair, which must have come from the head of a white woman. They came in sight of a party of Indians who flung themselves down in the tall grass, which protected them from the unskillful fire of the soldiers, who invariably missed though the distance was not more than thirty yards; but the gauchos are less skillful with the musket than with the lasso. One fellow escaped several successive volleys, and Page was looking on, rather amused at the harmless firing, when the General accosted him:

"Commandante, that is a Cordovese, and a noted reprobate, a villain, a traitor."

In a moment Page's carbine was at his shoulder. A sharp report, and the fugitive fell, throwing up his arms and imploring mercy, declaring that he was a captive carried away by the Indians. He was brought in, shot through the thigh—for Page had fired not to kill, but only to bring him down. A couple of the Indians were finally killed, and one of the soldiers. The wounded refugee was treated with very little compunction, for he was well known as a criminal who had escaped justice and fled to the savages, for whom he had acted as guide in more than one foray.

Returning to Santiago after this expedition, which occupied about five weeks, they proceeded northwestward through Tucuman to Salta, a thriving town far up among the mountains. The opening of the Salado had excited much enthusiasm among the Saltanos; for, although it would not bring navigation to their doors, it would reduce the expenses and time of communication with Rosario full four-fifths. The trade of this province, which is rich in mineral and vegetable products, is now mainly conducted over the Cordilleras, by means of mules, to the single Bolivian port of Cobija, on the Pacific. Many years will not, however, pass before this trade, and that of a large part of Bolivia, and no small share of that of Brazil, will pass through the La Plata.

From this extreme point of his explorations Page returned to the Parana by a different route from that which he had followed in going. He descended the river to Montevideo, which he reached on the 24th of January, 1856. Here he found an order from the Secretary of War, complimenting him upon the energy displayed in the prosecution of his explorations, and directing him to return to the United States. The *Water Witch* accordingly left Montevideo on the 3d of February, and came to anchor at the Navy Yard in Washington on the 8th of May, after an absence of three years and four months.

The results of this exploration are of great value. It has demonstrated that the basin of La Plata is one of the most favored regions of the globe. It is rich in all the productions of temperate and semi-tropical zones; the soil and climate are adapted to the great commercial staples of sugar, cotton, and tobacco; in spite of the long civil wars, its plains are still covered with immense herds of cattle and horses. La Plata furnishes a notable exception to the dictum of Humboldt, that "Extreme fertility of soil and insalubrity of atmosphere are as inseparably connected in South America as in Asia." The men on board the *Water Witch*, notwithstanding their constant exposure, were almost absolutely free from sickness. The journeys in Paraguay were made in February—the hottest month of the year—yet no sick persons were seen; malignant fevers seem utterly unknown; in all Paraguay Page never saw a medical man. In his long journey through the Argentine Confederation he slept continually in the open air, according to the custom of the country, without experiencing the least ill effect. "I am constrained," he says, "to pronounce Paraguay, and those parts of the Argentine Confederation which constituted the field of our operations, one of the healthiest regions of the earth."

That such a region must have a future—"a great predestined future," says Lieutenant Page—"none could doubt who for many months had voyaged through such a valley of beauty, presenting, with the exception of our Mississippi, the fairest unbroken extent of cultivable land in the world. Is this wealth of creation to remain unavailable for the comfort and happiness of men, while the powers holding dominion over it invite immigration, and the over-crowded cities of Europe teem with millions whose cry is for bread? Emigrants to the valley of La Plata may reach their homes in ocean steamers. No barren wildernesses are to be traversed. No long winters or autumnal exhalations are to be feared. No warring with Indian, beast, or reptile, or with those tropical miasmas against which the mind and strength of the white race are impotent. If Bolivia, Paraguay, the Argentine Confederation, and Buenos Ayres would unite and form a community of nations, neither filibustering hosts nor imperial fleets could be feared. Spanish galleons, freighted with the 'fifths' of Majesty, or the ships of Great Britain and Portugal, laden with the profits of illegal trade, will never again sail from La Plata. But the steamers of maritime nations, bearing the products of industrial power, will cover her interior water-courses, and in return will pour into the lap of those nations the agricultural and mineral wealth of the Western Indies. No overthrow of existing governments, no political revulsions are necessary to place the inhabitants of these regions under the beneficent influences of a great republican civilization."

A WOMAN'S POEM.

YOU say you love me, and you lay
Your hand and fortune at my feet:
I thank you, Sir, with all my heart,
For love is sweet.

It is but little to you, men,
To whom the doors of Life stand wide;
But much, how much, to woman! She
Has naught beside.

You make the worlds wherein you move;
You rule your tastes, or coarse, or fine;
Dine, hunt, or fish, or waste your gold
At dice and wine!

Our world (alas, you make that too!)
Is narrower—shut in four blank walls:
Know you, or care, what light is there?
What shadow falls?

We read the last new novel out,
And live in dream-land till it ends:
We write romantic school-girl notes,
That bore our friends.

We learn to trill Italian notes,
And thrum for hours the tortured keys:
We think it pleases you, and we
But live to please!

We feed our birds, we tend our flowers
(Poor indoor things of sickly bloom!),
Or play the housewife in our gloves,
And dust the room.

But some of us have hearts and minds?
So much the worse for us and you;
For grant we seek a better life,
What can we do?

We can not build and sail your ships,
Or drive your engines: we are weak,
And ignorant of the tricks of Trade:
To think, and speak,

Or write some earnest, stammering words,
Alone is ours, and that you hate;
So forced within ourselves again,
We sigh and wait.

Ah! who can tell the bitter hours,
The dreary days that women spend?
Their thoughts unshared, their lives unknown,
Without a friend!

Without a friend? And what is he,
Who, like a shadow, day and night,
Follows the woman he prefers?
Lives in her sight?

Her lover, he: a gallant man,
Devoted to her every whim;
He vows to die for her, so she
Must live for him!

We should be very grateful, Sir,
That, when you've nothing else to do,
You waste your idle hours on us:
So kind of you!

Profuse in studied compliments,
Your manners, like your clothes, are fine,
Though both, at times, are somewhat strong
Of smoke and wine!

What can we hope to know of you?
Or you of us? We act our parts:
We love in jest: it is the play
Of hands, not hearts!

You grant my bitter words are true
Of others, not of you and me:
Your love is steady as a star;
But we shall see.

You say you love me: have you thought
How much these little words contain?
Alas! a world of happiness,
And worlds of pain!

You know, or should, your nature now,
Its needs and passions. Can I be
What you desire me? Do you find
Your all in me?

You do. But have you thought that I
May have *my* ways and fancies, too?
You love me; well, but have you thought
If I love you?

But think again. You know me not:
I, too, may be a butterfly,
A costly parlor doll, on show
For you to buy!

You trust me wholly? One word more.
You see me young: they call me fair:
I think I have a pleasant face,
And pretty hair!

But, by-and-by, my face will fade;
It must with time, it may with care:
What say you to a wrinkled wife,
With thin, gray hair?

You care not, you: in youth, or age,
Your heart is mine, while life endures:
Is't so? Then, Arthur, here's my hand,
My heart is yours.

PAYING THE PIPER.

MR. JOSHUA BEEBE, the tired, hungry father of the family residing at No. 185 East Twenty-seventh Street, applied his dead-latch key to the door of his modest but comfortable house, one rather sharp November evening. It was certainly very attentive in Mrs. Beebe, considering that they had been fourteen years married, to meet him in the hall, help him off with his overcoat, and hang up his hat for him; inquiring as she did so for the headache he had complained of in the morning, and hoping that he had not been obliged to stand up in the car all the way, as it often did happen. All wives are not as thoughtful of the personal ease and comfort of the individual who seems to present some claims to the attention of the household, inasmuch as ten hours of the day are spent by him in providing all that they occupy themselves with consuming in the shape of fuel, food, and wardrobe, asking in return an evening's shelter and a decent lodging. It would be looked upon as presuming in some men if they held the faintest expectation of any thing more. They are desired to be grateful for what is meted out to them, and to find no fault with quality or quantity.

Mrs. Beebe, on the contrary, had spent much time and thought on the reception which she now extended to her "dear Joshua."

The parlors were as neat as the desk at his counting-room—if there was any thing Mr. Beebe enjoyed it was seeing things in order. No chair was astray, no work littered the corner of the sofa, no newspaper cuttings were strewed on the crumb-cloth, which was arranged with the most exact precision on a line with the hearth-rug on the one side and the seam of the carpet on the other. A drugget put down askew had been known to spoil Mr. Beebe's peace of mind for an entire evening. Nor was he obliged to turn some one out of his own particular chair—there it stood, on the side of the fire he liked best to occupy, empty, inviting, ready to embrace him. So were his children—Clementina, the eldest, calling him "precious papa;" Georgy, the only son, not so much as asking if he had brought them home any thing; and Lotty, the youngest, darting away at a signal from her mother to bring his comfortable slippers, Miss Clementina's first specimen of fancy work.

The table was already laid; Mr. Beebe never could bear to be kept waiting for his supper, which made its appearance just at the right moment, and consisted of his favorite dishes. The porter-house steak was done to a turn, the light muffins came up hot and hot, and there were apple fritters, from a receipt he had brought from a favorite restaurant down town, where he had first seen and become enamored of them. Now if you consider that it was "washing-day," when most husbands are doomed to dull fires, disordered dining-rooms, cold cuts, and stale bread, you must acknowledge that Mr. Beebe was a fortunate man, and his wife the most devoted and self-sacrificing of women.

Accustomed as he was to her admirable traits of character, Mr. Beebe began to entertain this opinion quite strongly himself by the time they were comfortably settled down for the evening. The children were sent to bed by seven o'clock—a practice which is nearly obsolete, we are well aware, but, as Mrs. Beebe often said to her friends, it was good for their health, and her own too; and it must be acknowledged that the nursery exit in this model family was accomplished with none of those rebellious murmurs and delays, on the part of the children, or the fretful repetitions of "Come, come, Julia, don't you hear me?" "John, your five minutes is up!" "Ebenezer, don't let me have to speak again!" which usually keep the room and the unfortunate visitor who may be attempting conversation in a state of distraction for half an hour at least.

The juvenile Beebes kissed their parents dutifully on the stroke of the clock and retired. Mr. Beebe looked around the room as the door closed after them, the supper-table had diminished into a very convenient circle, close to his elbow, with drop-light over it, and the *Evening Express* lay temptingly at hand. His wife, in her own sewing-chair, fitted her thimble on her finger, and drew from her work-basket some strips of cambric, one end of which was basted on a square of morocco, for what purpose her husband was not yet able to comprehend, though *broiderie Anglais* had been her favorite evening amusement for two winters past, and the fruits of it flourished on the pantalets and petticoats of the little girls.

"Nice children!" said Mr. Beebe, looking thoughtfully across to their mother. "Nobody has better."

"Don't you think Lotty looks rather thin?" And the purple morocco back-ground crackled under Mrs. Beebe's fingers as she slipped the pattern along a few inches.

"Well, no, I hadn't noticed it." Lotty was the favorite with her father, being the youngest, and "all Beebe," as her paternal grandmother often said. It was natural for the father's face to change with an expression of some anxiety.

"And Clementina stoops dreadfully. I am getting quite worried about that stoop. She's just at an age now to be ruined by round shoulders. By-the-way, did you notice that Georgy hacks a little? Mrs. Slote spoke of it this afternoon, and how narrow-chested he was naturally."

"Well, hadn't you better send around for Dr. Dibble in the morning, Eliza? It won't do to let such things go on." Where a man has a good business, which he is proud of having made himself, and an only son to leave it to, the health of the junior becomes a matter of anxious solicitude.

"I don't think the doctor could do any good. He doesn't seem to have much appetite when he gets home from school. I'm afraid he's too much confined."

"Send him out, then; make him play more.

When I was a boy I never wanted to be coaxed to stay out in the street till dark."

"But I'm so afraid of bad associations," said Mrs. Beebe, with a prudential sigh. "We are so near the Avenue, and there's no knowing what he might pick up among that set of boys. I am uneasy the moment he is out of my sight. Clementina's teacher was here to-day, and she quite agreed with me that all the children needed exercise."

"When I was a boy"—and Mr. Beebe tore off the margin of the newspaper and commenced rolling a lamp-lighter after the most approved pattern—"I used to bring in wood, and fetch water, and go of errands. I always had rather more exercise than I wanted."

"But times are very different now, recollect." And the key on which Mrs. Beebe's previous remarks were modulated was exchanged for one a little higher, while the expression became decidedly *staccato*. "There's no wood or water to bring, and the grocer's cart comes every morning for orders."

"Well, I don't know what you're going to do for them. I suppose the girls can't exercise around the house, as you used to?"

"There's no time, poor little things! what with their school, and music lessons, and practice hours. They want recreation and not work. What do you think of a quarter at dancing-school? They are all large enough to go together; in fact, with Clemmy, at her age, it's now or never."

How naturally and quietly the proposal was uttered! Who would have believed the hours of deliberation and preparation it had cost? Who was to infer that the supper was ordered and prepared mainly by Mrs. Beebe herself, to save the cook's feelings—the rooms placed in an unusual state of tidiness—the hearth freshly swept—the coal-hod searched for the largest lumps—the children put upon their best behavior—and the click of the latch-key listened for, that an affectionate and solicitous welcome might be given—all as a preparation for this unconscious and innocent sentence? Not Mr. Beebe, misguided and unsuspicious man that he was; though its success depended on his good humor, as his wife well knew, and his good humor on all these several contingencies. We are not so base as to hint that husbands are often indebted to similar causes for the delicate little attentions received by them in the family circle. By no means. Mrs. Beebe is probably alone in her much-to-be-lamented duplicity, and her husband a solitary victim.

With what outward indifferent composure she awaited the result of her dissembling! and how unsuspiciously Mr. Beebe ruminated! His mind had reverted to some past transaction of the day, entirely forgetful for the moment of the matter under discussion.

"Every body sends their children to dancing-school nowadays," urged Mrs. Beebe, after a momentary pause. "It isn't looked upon as it used to be, even in Church members."

"Dancing-school? oh!" And Mr. Beebe recalled himself with an effort from the mental contemplation of that lot of pine and locust timber which had not turned out according to invoice, and came back slowly to the fire, the hearth-rug, and his wife opposite to him. "What were you saying about Church members going to dancing-school, Eliza?"

"I did not say they went themselves, Joshua—of course not. Mr. Black and Mr. Grigson would look well at their time of life; but they all send their children."

"A very foolish piece of business if they do; that's all I've got to say—wasting just so much time and money. I never could see the sense of it. I never learned to take a step in my life, and I was a famous dancer in my day. Look at you, when I first met you, at John Davenport's wedding. Why, you waltzed like—well, like a duck! I never could waltz; it always made me so dizzy. I wanted to dreadfully that night to ask you."

Mr. Beebe's face glowed pleasantly with the recollection. How it brought that memorable evening of their first introduction before him! How sweet she did look in white muslin and cherry-colored ribbons! To think what a little waist she had then! and how it did hurt him to see that tall groomsman's arm around it, when they were waltzing, after supper!

Mrs. Beebe assisted in recalling some of the events of that never-to-be-forgotten meeting. How she noticed him the first moment she entered the room, and how she dropped her handkerchief, before they were introduced, and he had picked it up for her, with such a look! It made such an impression! And only think how it had turned out! Here they were, married and settled, with children old enough to go to dancing-school! Artful woman, to draw him thus through the pleasant mazes of the past, that he might regard her and her present plans with more complacency.

"If *you* had only gone when you were young, we might have had that waltz. You get over the dizziness when you have had a little practice."

"It's such a piece of extravagance. Music now, there's some sense in that. I like to hear a good tune myself now and then; but it's just throwing money away to send children to dancing-school."

"Only six dollars a quarter."

"Six too many; and three times six is eighteen."

"Well, what is eighteen dollars, or twenty either, when a man has *your* business, to the children's health, let alone forming their manners and making them graceful. I can tell in a minute, when a person enters the room, whether they went to dancing-school when they were young. It does every thing for them, and they're pining for exercise. You might listen to the advertisement, Joshua; there's so much good sense in it." And without giving time for dissent, Mrs. Beebe produced from under

her work a slip she had cut from the *Times* of the day before.

"Now see how very sensible this is:

"'M. Martenelli would take occasion to say, that he has long felt the *necessity* of introducing a system of instruction for his younger pupils by which the exercise of dancing *would be of more benefit physically*, and more useful in the development of graceful movement than it has been of late years. The facility with which the Polka and similar dances of the present time are acquired, has induced many to neglect those exercises that were formerly indispensable. To *that neglect*, as one of the causes, may be attributed—'

"Now listen, Joshua;" and Mrs. Beebe made an impressive pause, to be sure of attention.

'—the appearance *of so many round-shouldered young misses* of the present generation.'

"Just what I said about Clementina, you see.

"'They are sent to school, and allowed to stoop over their desks, without intermediate exercise, until the growing frame assumes the position in which it has been so long restrained. SURELY THESE THINGS SHOULD BE BETTER UNDERSTOOD!

"'Were children sent to dancing-school early in life—

Pause.

'—at intervals during their necessary studies, and the teacher allowed to exercise them in such a manner as would add grace to the figure, walk, and every movement, something would then be gained consistent with the true object of this valuable accomplishment.'

"There, Joshua! what do you think of that?" exclaimed Mrs. Beebe, triumphantly.

"Why, that learning to jiggle up and down in a polka, or to twist their arms off, as they did in that other dance we saw at the last party we went to—Perkins's—stretching them out till they must be numb, and then stretching them backward 'round each other's waists, with such knock-kneed-looking legs, isn't going to do much toward it."

"Exactly what Mr. Martenelli thinks. He's going to have a very different kind of dancing. Listen:

"'Anxious to restore the art to its former usefulness, M. Martenelli, the past season, instructed his classes in that acknowledged graceful study, the "Minuet de la Cœur," and other dances of similar usefulness. The evident success of this course, in its effect upon the pupils, encouraged him to give more attention *to dancing as connected with Calisthenics;* and during his late tour through Germany, France, and Great Britain, he made it his business to call upon the most prominent teachers, and consult with them in regard to the best method of accomplishing these desirable results. He hopes, therefore, to have gained such information as will, in addition to his own experience, enable him to present to his pupils a system that will not only make them dance the Polka, *but will improve their health, figure, walk,* and consequently *have a salutary effect* UPON EVERY MOVEMENT IN LIFE!'"*

"Now there does seem a little sense in that, don't there, Eliza?" for, being a plain man, of few words himself, rhetoric had its effect on Mr. Beebe's mind; and, what with the deep philosophy of M. Martenelli's reasoning, and his wife's impressive reading of the same, the subject began to assume a new light.

"It sounds well, don't it now?"

"Nothing could be plainer." Mrs. Beebe probably did not allude to the Professor's style, but her own comprehension of the absolute wisdom of his premises that all children ought to be sent to dancing-school. "It can't do any harm to try it, at all events. I should be *miserable* if Clementina should get a bad figure, and always feel reproached that I had not done my duty as a mother; not to mention Georgy's cough."

"Eighteen dollars, you say? Well, I guess it won't break me. I'll give it to you now, and have it off my mind. I never care about laying down money, but I do hate to be asked for it, awfully, by you or any body else."

Mr. Beebe usually acted up to this principle, paid cash for every thing on the spot, provided liberally for his household, and the mistress of many a Fifth Avenue mansion, built and furnished "on the two million plan," might have envied her the ease with which her empty purse was filled. To be sure she was always eminently reasonable and judicious in her expenditures—dressing her children and herself with simple good taste, choosing such things for her own wear as would make over to advantage for the little girls, and adapting Master Georgy's round jackets from the tails of his father's coats. The readiness with which supplies were obtained when really needed was a tacit compliment to her excellent management.

So about the house. It was a great step for the Beebes when they removed from the two-story house in Dry-Dock Street, near Mr. Beebe's business, to their present quarters; very far up-town it seemed to their circle of friends, whose rising jealousy was conciliated, however, by the plain and cautious style of furnishing. The present best chamber carpets, dark ingrain, were then on the parlors, and the chairs were open-backed and cane-seated. Kinsfolk and acquaintance who came to sneer were further mollified by pressing invitations to "stay to tea," as in the Dry-Dock Street days, and found the table laid with the same blue dishes, willow pattern, and that they were not required to show their awkwardness in the use of silver forks. Mrs. Beebe had found it necessary to replace her table service since then, and that silver forks saved so much time and trouble in cleaning; but Mr. Beebe never could be made to see that it was infinitely more convenient to eat—peas and pie, for instance—with one, and obstinately adhered to the use of a knife-blade, as he had been brought up to do. There is no computing how much this single prejudice had done to preserve his home from the innovations of intimate fashionable friends. Mrs. Beebe had attracted "a delightful circle" of callers in their new neighborhood; but she never could make up her mind to be sociable with them, and exchange tea-drinking civilities, so long as Joshua would use his knife in such a shocking

* The historian of the Beebe family would not rob the distinguished Professor of the authorship of this remarkable document. We do but conceal the name, lest he should be embarrassed by too great a rush of applications.

way. It hurt her feelings all the more because she was obliged to suffer in silence. Remonstrances were not only useless, but injured her cause in any other salient point of manner or habit she might undertake to reduce. She was obliged to content herself in reprimanding the children sharply if ever they attempted to follow the parental example; but it determined her that they should have "every advantage," and be fully equal to the higher sphere of life in which her maternal pride destined them to move; and, as a special adjunct to her plans, the dancing-school.

Mr. Beebe took out a well-thumbed leathern pocket-book — no modern *porte-monnaie* could have supported its affluence—and counted out twenty-five dollars.

"When I was a boy"—how his wife always dreaded that preface, especially if any of their more recent acquaintances were present—"twenty-five dollars went a great ways. We apprentices were never allowed more than that for our clothes the first two years or so, and boys hadn't the idea that they could learn a trade in that time either, as they have now, or that they could get into business for themselves without saving up a capital. Folks would have thought my father was out of his mind to spend as much as that on a quarter's schooling for the whole of us, let alone a few dancing steps. But now it's paid, or as good as paid, and off my mind, and that's the end of it, so let's have an apple, Eliza."

It is needless to say that Mr. Beebe was waited on with alacrity, and that his wife overlooked, for this occasion, his rejection of a knife and plate, and allowed him to enjoy his favorite fruit in the natural manner, without any intervention of second causes. Let us hope that he had never met with that admirable little article, "The Rind of Fruit Dangerous!" and was not willfully subjecting himself to an attack of indigestion.

Though pioneered and introduced by Mrs. Slote, the most fashionable of all her acquaintances, who first suggested the absolute necessity of dancing lessons, and had sent her children five quarters to Martenelli, Mrs. Beebe ushered her flock into his elegantly frescoed saloons with considerable trepidation. Her dress and theirs seemed to shrink into such extreme plainness, almost meanness, when brought into contact with the elegantly attired ladies in waiting to enroll the fantastic little puppets, who followed their mammas' example, and seemed determined to stare her out of countenance. When it came her turn to advance to the awful presence of the distinguished Professor himself, when he fixed his piercing black eyes upon her, stroked his glossy mustache lightly, and acknowledged the presentation with a bow that, as Mrs. Slote remarked, "would have done credit to Louis Napoleon"—supposing that celebrated individual to have sacrificed to the Graces—her own deficiencies in early good breeding rose before her so vividly as almost to deprive her of the power of speech and motion. How she ever got back to her place again, crossing that immense floor with the gaze of M. Martenelli in the rear, and exposed to a raking fire of eyes and eye-glasses as she advanced, she never could remember—it was like walking in some dreadful dream, where life depends on speed, but one's limbs are paralyzed. Her face was flame-colored, her heart beat so fast that it almost took away her breath.

She did not wonder that the children—up to this time in a wild state of excitement to go—declined doing so, when the day came, without her aid and countenance. They were dressed very neatly; the girls in fawn-colored all-wool mousselines—her own street-dress the year before—made high in the neck, and finished by a plain row of lace. The sleeves were wide, but came to their wrists, covering the arm entirely; white worsted stockings, tolerably well protected by pantalets and morocco buskins, completed their attire. As they were making a first appearance, Mrs. Beebe allowed them to wear their best bonnets and coats, though their school hoods she considered quite good enough for future service. With the flush and sparkle of the unusual excitement, their mother may be pardoned her pride and satisfaction in them when fully equipped in their dark-green merino coats and gray felt hats. Master Georgy of course did not require so great an expenditure of time and thought on his toilet. "Jacket and trowsers, and a boy's collar, are the same all over the world, fortunately," Mrs. Beebe remarked to Hannah, her up-stairs domestic, who was loud in her admiration of the trio.

Great then was Mrs. Beebe's astonishment at the toilets of such of M. Martenelli's pupils as she encountered in the dressing-room. Nearly all of them were accompanied by a nurse or maid, who obeyed the impatient orders of the juveniles as if they were tolerably well accustomed to them—shaking out flounces, arranging and rearranging sleeve-knots, clasping bracelets, and smoothing curls or braids, until their charges were satisfied with their state and condition—no easy task. Mrs. Beebe looked in dismay at these bare-armed, low-necked, bejeweled and beflounced young women, ranging from Lotty's to Clemmy's age—that is, from five to eleven—dressed more elaborately than she had ever been in all her life, even for a ball or party, yet this was only a regular class-day. Even the nurses stared at the little Beebes, who waited on themselves as they had always been accustomed to do, hung up their best bonnets and coats carefully, and did not think of changing their walking shoes. As to open-work thread stockings, gartered above the knee, and very little pantalet below it, French kid slippers, or thin-soled satin gaiter boots, they beheld them now for the first time, and fortunately did not comprehend the sly gestures and remarks they were the subjects of in lacking them.

Nor were "jackets and trowsers the same"—even in New York, leaving out "the rest of the

world"—as Master George had discovered for himself in the opposite apartment. He had been conducted thither by Julian Slote, who had not been as kind as he might be, it afterward appeared, in introducing the new pupil to his old acquaintances of the past winter. George looked very hot and red when his mother met him in the hall. He was not quite sure he had been laughed at, but he had been catechised in a way he did not like any more than the explosions of laughter that had followed some of his replies. The boys—Julian among them—used words that he did not exactly understand; and when they gathered 'round the window by themselves, and said, "What a muff!" he knew they must be speaking of some lady's furs in the street. But what was "a guy?" He meant to ask his father the minute he came home.

Master Julian Slote and his friends were arrayed almost as elaborately as their sisters. Pumps, short trowsers with embroidered seams, open jackets with more embroidery, and no end of tassels; full linen shirt-fronts, fastened by gold studs, sleeve buttons; and neck-ties the colors of the rainbow — not to mention their glossy curls, fresh from the hands of Phalen or Valet — gave Mrs. Beebe new and extended views on the subject so recently settled with Hannah.

It was opening day, and, of course, little progress made toward the famous calisthenic exercises Mrs. Beebe was impatient to see. Madame Labreuil Martenelli was in attendance, and assisted her distinguished husband in marshaling his juvenile cohorts. In fact, it seemed to Mrs. Beebe that he left most of the work to her, though she looked by no means well or strong, and contented himself with finding fault with most of her arrangements, especially such as had given her the most trouble and fatigue.

The little girls did not profit very much in the way of exercise on this occasion, at least, leaving the seats, where they hovered as close as possible to their mother, but once during the whole time, and then only to be ranged against the side of the room and classified as to height. It must be acknowledged that Mrs. Beebe and her flock returned to No. 185 in a much less talkative and excited mood than that in which they had set out; and Hannah was greatly disappointed in not being able to learn the Lancers immediately from Miss Clementina, who had promised to teach her that evening, in view of a party Mr. Slote's Ellen was to give.

But prospects brightened on the following Friday. The seven dollars remaining in Mrs. Beebe's hands after M. Martenelli's charges were paid had furnished slippers and thread stockings for the girls, and pumps for Master George, with such fascinating bows and steel buckles that he felt prepared to encounter Julian Slote on his own ground. The pantalets were tucked up, as well as the mousseline dresses, so that only an edge of embroidery appeared below the skirts. Mrs. Beebe cut up a grass-cloth stiffener of her own to furnish as near an approach to hoops as she dared to venture on—"a first off," remarked Hannah—and replaced the brown hair-ribbons by very wide bows, made from her fall bonnet-strings. Clementina and Lotty could now "hold up their heads and turn out their toes with the best of them"—also a suggestion of the damsel in attendance, who felt all the family pride of the Beebes arrayed against "them Slotes" since the fair Ellen had outshone her at the recent convivial gathering in her accurate knowledge of "visite and grand chain."

Mrs. Slote was wonderfully cordial, and introduced Mrs. Beebe to several of her own acquaintances among the mammas on the side seats. Mrs. Beebe, taught by experience, had come on this occasion in her best dress, only worn in the evening heretofore—a good dark silk. Her cloak was new; and her bonnet, though of the preceding winter, was excellent velvet, and not overloaded by the cheap lace and flowers of a second-rate milliner. Fortunately, she wore no furs; so her new acquaintances were deprived of that infallible means of determining her social position, for had she appeared in any thing less than mink her fate would have been sealed at once. Moreover, Mrs. Slote took occasion to whisper to poor, tired-looking Madame Martenelli "that the papa of the little girls in those dark dresses was immensely wealthy," which procured them instantaneous notice, abundant smiles, and five minutes on the floor; while some forlorn children remained pinned against the wall, without so much as an opportunity of changing their seats.

"It would never do for the little girls to appear more than twice in succession in the same dress," Mrs. Slote informed her friend, privately; and when Lotty and Clementina found themselves arrayed in corn-colored cashmeres, with low necks and short sleeves, on a future class-day, they began to titter and giggle, and make faces behind Madame Martenelli, with almost as much ease and freedom as her older pupils; even coming to push for places and crowd less adventurous spirits off the floor; so that they stood some chance of "exercise," as well as of acquiring the promised gracefulness and good manners.

It was a vast deal of trouble to let down the dresses and pantalets on Saturday night, as a preparation for their walk to Bethel Church with their father; and the little girls sadly felt the want of their now accustomed crinoline; but they had been made to understand that it was not to be mentioned before him, on pain of discontinuance altogether; and Mrs. Beebe, heretofore as eager to display every purchase as if her husband knew the difference between red and blue, flannel or merino, which he did not, never chanced to take the corn-colored low-necks from their hiding-place in the lower drawer when he was about the house.

"Men could not be supposed to judge of what was proper," reasoned the hitherto open Mrs. Beebe; "and Joshua might object to making a change in sleeves. But, poor things! so

long as she was obliged to get them new dancing-school dresses they might as well be made in the fashion."

"I thought you had them all fixed up for winter?" remarked Mr. Beebe. His wife had ventured to ask for "ten or fifteen dollars, to get some flannels and things for the children." She hated asking for money as much as he disliked the application; but having given her so much of late, and not knowing of the corn-colored dresses, which had absorbed all that remained of the twenty-five dollars — though Mrs. Beebe made them herself—it had not occurred to him to look into the green morocco *porte-monnaie* she had left conspicuously on the bureau for three days past. He was not very amiable either. He had found his wife out, on his return home, for the second time within a week, and, as a consequence, the fire gone down, the house like a barn, and fried ham for supper. Hannah, left to her own devices, like all parlor-maids, never once thought of her duties; and the cook, when no special dish was ordered, always fell back on ham. Mrs. Beebe began to find Martenelli's a delightful place to spend an hour or two in the afternoon. Her acquaintance with Mrs. Slote's friends progressed rapidly, and some of them were people she had aspired to visit ever since coming into the neighborhood. There was a talk of a set of "Sociables" for the children, to practice at each other's houses one evening in every week — "simple little gatherings," as Mrs. Lorimer Gardner expressed it, in proposing that "dear Mrs. Beebe" should make one of the twelve ladies interested; "and such an advantage to the young people. Besides, it will give us an opportunity to see more of each other intimately." And this last remark banished, for the time, the prudential motives Mrs. Beebe was secretly balancing.

She had already exchanged calls with Mrs. Lorimer Gardner, who lived in a new, though very narrow, house on Lexington Avenue, and was by far the most stylish person of Mrs. Slote's acquaintance, and constantly quoted by that lady. Mrs. Gardner's velvet carpets, crimson brocade curtains, and rosewood suits, rose up among other things to remind her of the hazard she encountered in accepting. How would three-ply, window-shades, and mahogany look, by contrast, in the full blaze of her very plain chandeliers? In a hurried morning call, with closed blinds, it was less perceptible, and Mrs. Beebe's face fairly burned with the prospect of seeing Mrs. Gardner's eye-glass scrutinizing deficiencies. However, her turn would not come till toward the last, and she might be able to persuade Mr. Beebe into Brussels at least, about holiday time. So she had allowed herself the afternoon in question to enter fully into the discussion of the proposed plan, so that her return was unusually late, and was considered pledged by the other ladies, though leaving herself a mental loop-hole for escape.

"How much did you say?" asked Mr. Beebe, sulkily, for the odor of fried ham, still lingering about the room, reminded him of his tea-table disappointment. "What is it they want now?"

"I want a new jacket, pa," called out Master George, who was hanging over his father's chair, and taking an unusual interest in the conversation. "I ain't going there again in this one. The boys all laughed when Frank Gardner asked me if it was all I'd got; and I said ma said I must wait till you'd got done with your Sunday coat. I want one like Julian Slote's. He got it down at Genin's Bazar."

"Dancing-school manners," said Mr. Beebe, in a tone that his wife knew only too well. "Any thing else?"

"I say, pa, what do you do for a living?" Master George, finding that he had gained a hearing, was obstinately regardless of his mother's signals for silence. "'Cause Julian Slote got mad at me, and said you were nothing but a mechanic. He told Frank and the rest; and I said you wasn't—you was a carpenter, and had a yard and a shop ten times as big as Mr. Slote's cooped up little store! Yes, I did!"

"Oh, George! I'm astonished!" and Mrs. Beebe's accents were fairly pathetic. "How could you say so, and it will go straight to Mrs. Gardner and Mrs. Storm. A ship-builder, child! a very different thing—all the difference in the world!"

"Let him alone," growled Mr. Beebe; "I ain't ashamed of the truth, and don't want my children brought up to be. Brag ahead, Georgy—crow over 'em well—you'll have more to do it on than will ever be made out of dry goods, jobbing, or suing people! You can have your jacket to pay for that!" and coming out of his sulks a little, in the enjoyment of his wife's discomfiture and "Georgy's pluck," Mrs. Beebe found her success with her husband likely to spring from threatened defeat in other quarters.

The truth was, that what with constant wear, and the careless usage which the lady-like manners of Martenelli's young ladies brought into the dressing-room, the beaver bonnets were beginning to look very shabby. Clementina, sharing in the upward tendency that distinguished her mother's aspirations, had fallen in love with the white satin hat, trimmed with blue rosettes and blonde borders, which covered the back of Miss Lily Gardner's head, and Lotty desired her mother to get a crimson one for her with black plumes, like Geraldine Storm's, also a velvet Raglan with bugle trimming. Besides, if they were really going to the Sociables, they must have a silk dress apiece, for it looked so odd to send children out to associate with others, dressed like little Hottentots. Nor were these the only additional expenses springing out of the new arrangements.

It was no easy matter, when the time came, to get Mr. Beebe's consent to let the children go to the evening practice. They had never been up so late before in all their lives, as the

hour set for the commencement of these social gatherings; and as to going out after dark, save for one Fourth of July's experience in fire-works, they would not have known the moon from the stars. Poor Mrs. Beebe was fairly worn-out with trying to get 'round the difficulty, but was obliged at last to take to the open field, and won an unwilling consent with more harsh words and angry feeling than had ever been called up before between Joshua and herself. She had grown very irritable of late—the children were twice as much trouble as ever before, wanting their own way, and teasing her for things that it was impossible to get for them. Clementina's self-will was really frightful, and she did not dare to complain to her father, for he was to know nothing of the points at issue between them. Georgy's rudeness and slang phrases were constantly increasing in the society of the hopeful Julian and Frank: it was questionable whether the "Avenue boys," whose influence his mother had such a horror of, could have done more for this part of his education. Besides, Lotty had such strange feverish attacks, and sometimes coughed all night, Hannah said, though tolerably well, save an increasing fretfulness in the day-time. The quiet, regular, cheerful life of the Beebes was constantly broken in upon, and though Mr. Beebe was too little at home to trace the causes he felt the results, and they chafed him sadly.

Mrs. Gardner, and indeed all the ladies, had spoken of the Sociables as "quiet little affairs;" but when Mrs. Beebe, escorted on foot by Hannah, reached Mrs. Slote's house, the night of their commencement, she found it a blaze of light from attic to basement, with carriages arriving and departing, and the hall filled by people in full dress, who stared at the new-comers in their wraps as they hurried up stairs to the dressing-room. Mr. Beebe, though husbands and fathers were expected, had declined attending, and indeed his wife had not urged it, for after they were once there and in the parlor, he would only have been in the way. She had arrayed herself in the dark silk, now no longer fresh from constant street service, and a very neat set of cambric embroidery. It was a sufficient toilet for any grown-up party she had ever attended so far, in the course of her life. Imagine her consternation at finding most of the other ladies, even their hostess, in full dress—ladies of her own age with uncovered necks and arms—with braids and puffs that belonged to them only by right of purchase and the skill of the hair-dresser, and wonderful dangling head-dresses, that glittered, and trembled, and nodded, whichever way they turned. Mrs. Beebe felt exceedingly like retreating to the dressing-room, and, staid matron as she was, venting her mortification and annoyance by a good cry.

An evening silk and a set of handsome embroidery she must have, at least, before the next came round—the children must go without the new flannels that she usually delayed to purchase until the cold weather fairly set in—and she could cut up the thin brown coat Mr. Beebe had in the summer for George's jacket; he would never know the difference when it was made after one of Julian's, which she could fortunately borrow. Lotty and Clemmy might have her last year's foulard; to be sure she had scarcely worn it, and there was all the expense of making, but it did not signify. The bonnets must be charged—the bills would not be sent in for a while—and it was too bad to keep her so strait, as to money-matters with the business every one said Mr. Beebe was doing!

With these, and similar reflections, Mrs. Beebe consoled herself until she began to think it was high time for the children to be in bed; in fact it was long past ten, the latest hour the household in Twenty-seventh Street were suffered to be astir. Mr. Beebe always locked the doors, and turned out the gas himself; what would he say! But they were just going to have some refreshments, and the children had already made their way with the rest to the supper-room. In fact, their mother had scarcely seen them the whole evening. She could not get near enough to restrain them in the least, and there were oysters fried and stewed, chicken salad, and the usual sweets found on supper-tables. Accustomed to the simplest fare, under watchful supervision, the little Beebes were helped to every thing, and ate twice as much as they would have done had oyster pâtes and rum punch been more familiar food. But their mother had a fresh cause for unrest.

When she consented to join in the Sociables, she had counted on the cost of refreshments. There would be the cake—the cook and herself could manufacture it out of the ample supplies in her store-room; lemonade, a trifle more—possibly ice-cream handed around—she could take the amount from the month's market money without its being known or noticed. There was a man at the piano, she had not provided for the music—how much would he charge? and here a costly supper-table, sparkling with silver, loaded with delicacies, and superintended by a "gorgeous" waiter, in white gloves and neckcloth! But perhaps some plainer party would be given before her own turn came!

Mrs. Storm's was the next, and as much like Mrs. Slote's as if given according to programme, except that a violin accompanied the man at the piano, and the crowd of older people was greater; so of Mrs. Jones's, and Mrs. Smith's, a little added to the gayety and expense at each gathering, until the presence of the juveniles seemed only an excuse for the dress and display and feasting of their elders. Mrs. Beebe increased her millinery bill by two head-dresses, and availed herself of the discovery that she also kept a few gloves for the accommodation of her customers; ribbons for sashes and shoulder-knots followed, and this prepared the way for saying carelessly at the counter of Brown and Co., where she usually made her purchases of dry goods, "Perhaps you'd better charge it; I came out without my purse this morning—" after se-

lecting a second evening silk for Mrs. Gardner's approaching Sociable. The words choked her, though they came forth as naturally as possible, and Brown and Co., knowing very well the business-standing of her husband, were nothing loth to accommodating her, being aware of the peculiar tendency a convenient bill has toward multiplying wants.

Alas for Mrs. Beebe's financial integrity! alas for the night that her husband first became a subscriber at the Republican Reading Room, to pique his offending wife for her Thursday evening desertion, leaving her at liberty to add and subtract from the toilets of her children and herself on those occasions without the dread of his comment and reproof! It was well enough for the little Gardners and Slotes, who had been accustomed to it from babyhood, and rolled to and from the Sociables in a carriage, to go attired after the fashion of *La Petite Amour;* but the Beebes were obliged to walk, and gaiters and sacks were little protection to their bare legs and shoulders when they came out on the damp pavement heated with dancing and stuffed with indigestible supper-dishes. No wonder that Lotty's tendency to croup increased, that master Georgy's "hack" became noticeable even to his father, and that Clementina's teacher called to complain that her pupils were so often absent, so inattentive and idle when they did make their appearance. M. Martenelli's promise of "having a salutary effect upon every movement in life" had not been made good thus far, though "effect" there certainly was, sufficiently marked to all beholders.

The crisis of Mrs. Beebe's mental disquiet was approaching.

Mrs. Gardner reminded her that in three weeks' time her turn would come 'round, and nothing as yet had been accomplished toward the project of refurnishing. The parlors had come to have a habitual slatternly air, from being left entirely to Hannah; the dusty carpets seemed to fade daily before her eyes, the window-panes stared at her from their undraped sashes; and where was supper to be laid, when the back parlor, their only dining-room, was full of guests? Where was it to come from, supposing that a place to lay it could be found? And Mrs. Gardner had suggested that, as their little plan seemed flagging in interest, it would be an excellent idea to make hers—Mrs. Beebe's—a fancy party. "A little change for us, and an excellent practice for the children in supporting character. Of course you know that Martenelli always gives a grand fancy ball in the middle of the season."

No, Mrs. Beebe knew nothing of the kind; but she did not betray her ignorance of it or of fancy parties and costumes in general. Mrs. Slote was privately appealed to, to know "if it would cost a great deal," and from her she heard that Mrs. Gardner had already announced the fancy party at Mrs. Beebe's as a settled thing, and several of the ladies were selecting characters and costumes. Mrs. Slote happened to be employed in the same way when Mrs. Beebe called. She was in the most disorderly of *déshabillés*, seated on the floor, with a great pile of engravings, fashion-plates, and tarnished annuals around her. She offered to take the trouble off her friend's hands, and choose for the three little Beebes as well as her own young people.

"Julian has a fancy dress already—a palmer, with staff and scallop-shells—you have no idea how interesting he looks; and Georgy might go as a Saracen." Mrs. Slote did not mention that a palmer's habit of coarse gray cloth was the cheapest of all costumes, and the Saracen's one of the most troublesome and costly. "Arabella is going to be a nun—very appropriate for her, as she is such a lively child." (Plain linen and black serge would be all the outlay, and she could borrow beads of Bridget, thought Mrs. Slote.) "She wore a peasant's dress at the same ball Julian's habit was made for, and I think it will just about fit Alicia by this time."

Having her own household thus economically provided for, she was at leisure to exercise her taste more fully on the children of her friend. "The Saracen would do for the heroic; Clementina, with her tall, graceful figure, must be classical; and little dumpy Lotty picturesque. Diana, that was a lovely costume, just the thing for Clemy! and it only needed a white skirt, a leopard-skin boddice, a quiver, bow, and a crescent in her hair. Oh, and a large silver arrow to loop up her drapery on the right side. Oh, and fanciful gaiters—buskins, you know—for her feet.

"How would Titania do for Lotty? She was a little too broad, and Titanias were always so common at a child's party! That was the objection to flower-girls. Little Bo-peep—oh, the very thing! and so simple: a petticoat, a jacket, a round straw hat, and a crook; the simplest thing imaginable." So with these suggestions Mrs. Beebe went home, partially relieved, to find Fortune still further favored her. Mr. Beebe had received a letter from a Philadelphia correspondent, with regard to a debt that he was in danger of losing if he did not come on and see to it himself. Usually his shortest absence had been regretted from the moment it was broached, and the hours counted until his return. Mrs. Beebe—to use her own phrase—"always felt lost without Joshua." She was finding herself very fast now, however, and was really obliged to put a restraint upon her words and manner when condoling with him. He naturally expected it, less attractive as home had become, on the threatened journey.

"When would he be obliged to leave?"

"Week after next," he thought. "He should have to wait until after the 29th, when some heavy notes came due, as he might be detained four or five days."

Mrs. Beebe's regrets redoubled. Her party was fixed for the 31st.

Her husband out of the way, half of her difficulties vanished. It made no difference then what he thought of fancy dresses—he would not be near to see, and the bed could be taken out of their own room and the supper laid there. She and the children wouldn't mind if the house *was* turned inside out for one night; the supper and the music must be had, and she must get over the bills with him as she could after his return. There was no retreating from them. And now, elated with the prospect of success thus far, as many an unfortunate has done before her, Mrs. Beebe's mind conceived a bolder stroke still. If Joshua found new carpets down and curtains up he would be forced to give in to the measure, whether he approved of it or not. What was the use of going through two or three scenes, when one grand one was all-sufficient? What *was* the need of being so extremely prudent and economical all the while? She did not intend to live forever in Twenty-seventh Street either, he might make up his mind to that; in a house without an extension room, or at least an English basement, where they could dine on the first floor! He would be sure to flare out about the supper, and she might as well have her carpets at the same time, since she *must* go through with it.

It would do no harm, at all events, to look around a little, and so Mrs. Beebe found herself at Anderson's—for she did not aspire to Sloan's or Humphrey's as yet—the very next afternoon. Then to the upholsterer's. "Suppose—only suppose, you understand—that curtains for two windows were ordered on a given day, could they be finished and put up the day following?"

"Oh, certainly; *cer*-tainly! With the immense facilities of this extensive firm, the best and quickest workmen in the city were constantly employed by them; their enormous business justified it; by all means." And the elegant individual employed as chief salesman to Draper and Co. bowed and rubbed his hands, and attended her, in his extreme politeness, to the very pavement.

Any ordinary instrument of bodily torture is a bed of roses to the mental rack on which Mrs. Beebe found herself stretched until her husband's valise was really packed and she had fairly shut the door upon his departure for Philadelphia.

Mr. Beebe consulted his red silk pocket handkerchief once or twice before he reached the omnibus. He left home so rarely, and so dreaded a strange bed and unaccustomed table that it was really a trial to him. Besides, nobody ever knew what *might* happen! He had never been round the world, or even taken a trip to China to inspect junk building; a journey was a journey to him, and he had not implicit confidence in the Camden and Amboy Railroad. Besides, he always missed the children dreadfully, and Eliza seemed to hate to have him go, especially to-day! How many times she had spoken of it! He had a great mind to turn back and trust to a collector, even after he was on the ferry-boat.

Two days to do the work of six in! Mrs. Beebe had no time for sleep, scarcely for food; the carpets, the curtains, the supper, the music to order; the children's dresses all to see to. It was well Mr. Beebe had left a liberal supply of market money. There was carriage hire to begin with—she never would have got through the first day but for Mrs. Slote's suggestion of a hack; and indeed but for the kindness of this best of friends in taking all the trouble with the supper, and Trombone and Co. Mrs. Beebe was forced to leave both to her, and was greatly relieved to find that dishes and silver would be supplied from Wagner's, as well as brackets for the side-lights Mrs. Slote thought indispensable. Since she was not to pay the bills, Mrs. Slote left general orders—"Every thing as handsome as possible."

The miserable, harassed, distracting day of the party itself! A strange dress-maker, found by Mrs. Slote, in the back chamber finishing the children's costumes; Mrs. Beebe out three hours on a second search among the furriers for the peculiarly spotted skin indispensable to Diana's boddice, and when found, only to be had at the startling price of seven dollars; the two crescents for the Saracen's turban and Diana's hair, of the most brilliant paste, to be hired at a jeweler's, and ten dollars more left in pledge; Bo Beep's crook—"nothing easier to get!"—appeared to be following the missing sheep up to one o'clock, and the quilted red silk petticoat coming home, six inches too long, at three, with a bill of eight dollars more. An unapproachable waiter, too dignified even for suggestions, laying a table in her own room, where every thing that she wanted was, of course. Four o'clock, and no curtains—the shades already taken down—and the carpet people gone for an extra breadth to fit into the recesses after they returned. Five; and Hannah coming to ask if there was to be punch in the gentlemen's dressing-room—a seven-by-nine apartment over the hall! Six; the dress-maker working away on the leopard-skin boddice, breaking her needle or her thread at every stitch, and the room still to be arranged for guests; the upholsterer's man making a distracting noise in putting up the cornices; the children's toilet not begun, and her own entirely unthought of. Seven; with the children at that pitch of excitement when it was impossible to get them to keep quiet a moment, and all the extra force engaged in the endeavor to array them in their unaccustomed habiliments. Eight; and the first carriage rattled up to the door, just as Hannah conveyed the last armful of a miscellaneous collection of articles from the dressing-room, and Mrs. Beebe, shut up in the servants' attic, had progressed as far as stockings and slippers in her own toilet, not so much as knowing whether the man from Draper's had gone, or the gas was lighted in the parlors!

Anticipating, with the eagerness of a child, Eliza's pleasure at his unexpected return, and stealing a kiss from his sleeping children, from

whom he had been separated two whole days, Mr. Beebe turned the corner into Twenty-seventh Street just as the clock at the Station-house sounded eleven. He had driven up from the landing in a hack—an unusual extravagance on his part, for Mr. Beebe still prided himself on his pedestrian powers and the limited amount of his carriage-hire in the course of a year. The cars had been detained, and he had availed himself of all possible speed to reach home before the household were too far gone in slumber to admit him, or the range-fire too low to produce some nice little hot thing for his supper. It would be most a pity to call Eliza and the cook up such a cold night, though; and this most amiable of men was unselfishly relinquishing his original plan, when the driver paused in a stream of light that illuminated the interior of his dingy vehicle.

"Go on, this isn't the house," called out the "fare," not so much as taking the trouble to look about him. Some of the neighbors were giving a party; a full band was playing the "Wedding March" at the top of their speed—the hall door opening at the moment gave a glimpse of the gay crowd that thronged the narrow passage.

"It's No. 185 anyhow; I can see it as plain as day." The night was intensely cold, and the driver was not inclined to give himself or his horses an unnecessary movement.

Mr. Beebe sprang to the pavement a bewildered man, forgetting the dollar bill he had selected from his pocket-book and held in his hand ever since leaving Courtland Street, so as to be prompt with the hackman on his arrival, and would have laid himself open to unpleasant consequences but for that individual's reminder as he prepared to mount the steps. It was his home sure enough; his hall—all he could see of it for the throng; his parlors—no, these windows had curtains, and tassels, and great gilt cornices—and intensely relieved, though still mystified, he was for retreating, valise in hand, as quietly as possible, when he was arrested by the novelty of the sight which the juvenile part of the company presented. Miniature soldiers and sailor boys promenaded about with little girls "rigged up" after a fashion that made Mr. Beebe's unaccustomed eyes stare again—little monkeys that they were, in their powder and patches, their trailing swords, and embroidered doublets.

What was the world coming to? He should like to see *his* children running 'round after that fashion this time of night! and, as if to gratify this sarcastic desire on Mr. Beebe's part, he discovered at the moment—what?—yes, it was—could it be?—he scarcely knew the child, but it was—his own daughter Clementina, a gilt-paper thing with quills sticking out of it hanging over her bare shoulders, a little piece of fur tied around her waist, and short, white petticoats pinned up above her knee, walking about before every body in the most unblushing manner.

Mr. Beebe began to wish for the little dog on which the market dame relied when disturbed with similar doubts as to her own identity, and in this paralyzed state thought to gain his own room and deliberate as to action. It was impossible to force his valise and overcoat through the crowd, and he deposited both on the hat-stand mechanically. The groups in the hall gave way to the rather peculiar late arrival, though the flow of conversation was uninterrupted.

"Who *are* these Beebes?" was the first remark that reached his ears as he attempted to elbow past a tall dame in gold-colored silk with black lace flounces.

"Dear knows!"—gratifying rejoinder to the master of the house, hopelessly squeezed into a niche on the stair-case, and obliged to listen. "Quite common people, I believe—taken up by the Slotes."

"But how came they in *our* set? I don't understand!" and the stout, gold-colored shoulders shrugged superciliously.

"Oh! here comes Mrs. Gardner; she can tell you all about it. How in the world *did* you happen to know the Beebes?"

"Shu!—some of them may be about," and the new-comer laid her finger on her lip, warningly.

"Never fear; *she's* in the back parlor, trying to look easy and unconcerned; and those little torments—abominably rude, under-bred children!—are stuffing themselves at the supper-table beforehand—two of them are, anyhow!"

"How does it look?" and Mr. Beebe found himself shoved a step higher, but still in the throng and in the shadow.

"Oh! that's well enough. Mrs. Slote was afraid, it appears, knowing that Mrs. Beebe wasn't used to such things, and gave Wagner *carte blanche*, so a pretty bill they'll have of it! It's laid in a bedroom, though—only think! and as for the dressing-room, you can't turn round in it!"

"You didn't tell us how they happened to give the party, though."

"Oh! why we undertook to get up the Sociables, Mrs. Storm and myself, and Mrs. John Gardner, my sister-in-law, had to give up—her brother died—just as we got every thing nicely arranged. Mrs. Slote proposed this friend of hers; and though we knew nothing about her we took Louisa's word for it that they were respectable. Do you believe we did not know till I'd called on her, that her husband was—don't scream—only a carpenter! That boy of hers told my Frank."

"Children and fools—ha, ha! Capital joke!" and the black flounces, condescending to notice that some one had been trying to pass five minutes before, swept aside three inches to make room.

But Mr. Beebe began to find himself enlightened, and preferred to remain where he was. He had subdued his first impulse of kicking the strange waiters and musicians, and turning the

whole crowd out of the house, Eliza after them. He was sufficiently enraged even for that at first; and certain undefined plans with regard to shutting her up in an insane asylum began to yield to a more moderate remedy for her apparent mental and moral aberration.

"I can tell you a better joke than that—Are you sure she hasn't left the parlors yet?—the Wedding March always means five minutes to supper, you know. Well, I've just been hearing the oddest thing from Mrs. Slote. She's so droll! you should have heard *her*. You know we have wondered all winter whether there was a Mr. Beebe or not—he never appears any where. Do you think, she got him off to Philadelphia —Mrs. Beebe, you know—and he actually hasn't an idea of the thing, and these very new curtains and the carpets were ordered after he left, and she was in a perfect state of mind for fear they wouldn't be ready in time. Mrs. Slote says she never pitied a poor creature so in all her life, for she's in absolute terror of the bills coming in and her husband finding her out."

"La! she'll get used to that as we have!" and these Roman dames laughed in chorus—stopping suddenly, however, as they caught sight of a pale face and shining eyes looking down over the banister at them. They had forgotten that there are back stairs to most houses, and that it would be natural for the hostess to avail herself of them to glance at her supper-table before the guests were summoned.

Mr. Beebe also recognized the face, and knew from its expression that he should have but little to tell. Where the stout man disappeared to Mrs. Gardner and her set neither knew nor cared, occupied in guessing how much Mrs. Beebe might possibly have overheard of their friendly and charitable comments. Even Hannah did not discover his presence in the house, nor his wife dream that he was this side of New Jersey, as she constrained herself to suppress the anger and mortification she endured, and smile the last guest from the disordered and now dreary-looking rooms.

Had not all gone? She checked the gesture of fatigue and wretchedness that involuntarily clenched her outstretched hands as she threw herself on a sofa, exhausted and miserable, and started up again with a pitiful smile as some one advanced toward her.

"Well, Eliza! Had a nice time? Where's the bills? Suppose we go over 'em together, if you ain't too tired."

But Mr. Beebe's jocular tone was changed into a shout for "Hannah!" and "camfire!" as his wife fell forward on his shoulder, in the first fit of hysterics she had ever treated him to. It did not make much difference whether there was a bed up or not that night, for when Hannah arrived it was with the intelligence that "Lotty was crowing like a chicken with the croup," and Georgy was discovered on the floor of the supper-room, by the doctor hastily summoned, in a severe fit of cholera morbus, that needed quite as much of his attention till daylight.

Mrs. Gardner and Mrs. Storm came to the conclusion that Mrs. Beebe must have overheard their lady-like conversation, as she never returned their party-call, and had broken off with Mrs. Slote. She was too gratefully devoted to her husband's comfort, and in gratifying his slightest wish, to care for them or their society. She had good reason to be; for what man in ten thousand would have paid the four hundred and eighty dollars, including carpets, supper, the doctor, dry-goods bill and all, without upbraiding or reproach, contenting himself with the remark that "Those who dance must pay the piper?" We do not know of another in the whole circle of our acquaintance.

"FOUND FLOATING ON THE WATER."

I AM about to comply with your request, my dear friend, and give you some particulars of my rather remarkable history. It will be imposing a severe tax on your patience, but my hope is that the narrative may possess interest enough to offset it.

In order to give you a correct idea of the circumstances in which I was placed, we must go back for a starting-point to the period of my memory's birth. Tracing thence the incidents of my life, you will be forced to recognize the hand which, by causes apparently trifling and insignificant, restrained me from the commission of a crime that would have imbittered my whole existence.

The first thing which I distinctly remember was being held in my nurse's arms to look upon the ocean. I could not have been more than four years old, and the impression then made on my mind has never been effaced. The huge billows flashed with myriad sapphires and emeralds as the bright sunshine rested on them, their foaming crests seeming to be encircled with a dazzling effulgence of glory. Since that distant day I have never gazed on a body of water, especially under bright skies and in a mild clime, without being instantaneously carried back to this my earliest reminiscence.

Of the scenes which immediately succeeded I have no recollection. Either I was not old enough to comprehend, or, as is most probable, sleep, the sound healthy sleep of childhood, wrapped my senses in blessed oblivion. All is a blank until the period when many persons, men, women, and children, came to see me, taking my hands in their own and gazing earnestly into my eyes. Mothers held their little ones to touch and kiss me; girls and boys led me about a large hall, all vying with each other how first and most to attract my attention; and old men laid their hands on my head, tears flowing fast the while, I knew not why, as they repeated, mournfully,

"How strange! Floating on the water."

I can recall the curious way in which they scrutinized me as they crowded around, the eager questioning of each other, the long recital

that I did not understand, and which always ended with, "Found floating on the water."

You, my dearest Evelyn, knew and appreciated the gentle being who permitted me to call her *mother*, whose lavish affection and untiring care never suffered me to feel the loss of my own. Her image, when for the first time I beheld her, as she crossed that long hall and approached the spot where I stood, is at this moment before me vividly distinct as if the event had happened only yesterday.

My heart warmed toward her from the instant she first folded me in her arms and called me her dear child, her darling *Christine*. She took me away with her a long distance in a carriage. Its rocking motion lulled me to sleep. When I awoke, how astonished and delighted were my wondering senses to behold the little chamber which I was ever after permitted to call my own!

How fresh in remembrance is that narrow room with its tiny furniture; the little crib in which I awoke to happiness; the low shelves crowded with toys variously arranged and pretty enough to turn the head of any child; dolls nicely dressed; oh! how beautiful they seemed to me; little story books full of blue-frocked men and women with red-apple cheeks; miniature chairs, and especially one small rocker, on the back of which was inscribed in large letters,

For Papa's good Christine.

How these all stand out in the picture of my child-life! I somehow knew that they were not bought for me, and yet they were there when I awoke, and there they were always, part and parcel of that cozy chamber. On the walls were hung pleasant pictures, exceedingly pleasant to a child. How I used to lie and watch the grave, kind-looking dog, in the frame at the foot of my bed! I asked good Marny, my nurse,

"Is it *my* dog?"

"No; it was the pet of another little Christine. When she went to heaven poor Ponto sat on her grave and mourned till he died. This was his picture."

Then there was a wondrous print of Red Riding Hood, with her pot of butter and the sly old wolf grinning at her through the bushes; and a most attractive representation of the undying "Babes in the Wood," clad in scarlet frocks and weeping into blue handkerchiefs, while the cruel uncle, who sported white pantaloons and bright buttons, coolly walked away in the distance.

Few persons are aware how strong is the direct influence which picture stories exert over the minds of children. How many belligerent manifestos have I hurled at that "wicked old wolf!" How often have I clenched my little fists at the "cruel uncle!" To this day I never see any exhibition of meanness or deceit without having the same temptation to scowl and threaten beset me.

Surrounded by comforts, by luxuries even, my wishes granted for the asking, kindness and love were so showered upon me during my first remembered years, that I neither thought nor cared who I was or how I came to be an object of such affectionate devotion. I was sheltered as much as possible from every annoyance and from all vulgar observation by my beloved mother; and yet I often overheard her, to friends from a distance or to strangers, relating in low tones a long story, which somehow seemed to have reference to me, although evidently not intended for me to hear. Methinks I this moment feel her kind hand as she smoothed my long curls, and hear her kinder voice utter those words, which, from being so often repeated, became stereotyped on my memory—"When all was over, this dear child was found floating on the water."

I was not old enough to reason, yet to be an object of so much attention was gratifying to my pride even at this early age. With a disposition naturally enthusiastic and ardent, I loved every body, because every body loved or seemed to love me.

When I began to attend school, this was still more apparent. I seemed to be singled out for every favor, every little act of kindness, and in my simplicity I believed that all the world was good. My schoolmates universally asserted my right to be exempt from vexation, and the teachers appeared more lenient to me than to others.

"Don't tease Christine; she must not be vexed," was the expression of all. I was, in fact, the pet of the school. If a new pupil came she was immediately taken aside, and, in earnest, mysterious tones, informed why I was thus petted; the communication always ending, as I knew it would end, with—"Found floating on the water."

As I became more advanced in years these words were less frequently heard. It was becoming an old story. The present, with its tangible realities, was crowding out the, to me, uncertain past. Faces and forms which hitherto had indistinctly haunted my imagination gradually faded. In my solitary musings they would sometimes start out from the gathering oblivion, like spectres; and, like spectres, instantly vanish, if duty or pleasure recalled me to myself. I had always heard of another Christine—my angel sister. *My* playthings had been hers. Dreams of her in her far off home would come to me, as I reposed on her little cot and her good Ponto kept guard over my slumbers! All these appeared to me like the details of a pleasant story, some portions of which were fresher and more recent than the rest because they had happened lately.

When Marny laid me away for the night, my dear mother would come and sit beside me, sing me little songs, and tell me about the good children whom our Lord loved and blessed, and who were now gathered to His bosom. These she called "Angel Hymns." How I loved to hear her sing them! She would frequently lay some little toy on my pillow, which she called a dream-charm; and I, clasping it tightly in my

hand, would unconsciously sail away, in sweet forgetfulness, to the shores of dream-land.

Every body knows what a passion children have for head-less, wheel-less, tail-less play-things. Give them the choice, and, five times out of six, a box of mutilated toys would be preferred to one that was perfect. It affords supreme pleasure to the little things to try on heads and set dislocated limbs. Many a time have I seen a stylish doll, decked with silks and lace, forsaken by a child for a rag baby with a flat head, limpsy neck and features, done in pen and ink. You recollect the story of the little prince who, surrounded by multitudes of toys, tired of them all and longed for the privilege of playing at mud-pies in a gutter. Some Scotch divine says that this example confirms the doctrine of innate total depravity; and there are times, perhaps, in the lives of all children, when mothers will be tempted to agree with him.

I certainly can not boast of a taste purer than that of my juvenile brothers and sisters; for I have often left my nicely-arranged play-shelves to tumble over a box of men and women maimed, or of mimic villages which looked as if they had been sacked and plundered. Among these ruins I one day found a little, well-worn shoe. My dear mother caught me in the act of trying to get it on over my own. Taking the little cast-off thing from me she pressed it to her lips, while the large tears which forced themselves through her closed eyelids revealed the intensity of her feelings. I marveled at her emotion then. Bereaved as I have since been, the love which stoops to kiss a little half-worn shoe has nothing mysterious in it.

"It was worn by angel Christine when she lived and walked on the earth!" said she.

"Is she my sister?" I asked.

"Once she came to live with me as you do now. Our Lord then called her to another home in the skies, and gave you to my love. Now I have two Christines—one in my home on earth, and one in my home above!"

"Wasn't God willing that you should have two little girls at the same time?"

"All little children belong to God," she answered. "He has a right to call them home when he pleases."

"Shall we ever see angel Christine?"

"We shall go to her; she can never return to us."

A loving kiss reconciled every thing that to my simple comprehension was obscure; and fully satisfied with the happy lot of one Christine, my childish mind gave itself no disquietude about the higher felicity of the other.

My mind matured with my years; and although those mystical words, "Found floating on the water" were not now heard, they were never forgotten. They had been too often repeated in my hearing to pass entirely out of mind. Occasionally, too, the suspicion would arise that I had not always lived in A——; that at some time other and different scenes had surrounded me. About this time, however, an incident occurred which tended to arouse my hitherto dormant curiosity.

It was at a merry-making—the birthday party of my friend, Marian Slade. She was nine years of age; and though larger and older than myself, we were on this occasion dressed alike, and I was second in importance only to her. Mirth and joy ruled the hour. While frolicking in a circle around Marian my playmates began to compare ages. It was the first time that the thought of my own age had ever entered my mind when one little girl, almost a stranger in A——, turned to me, and abruptly asked,

"How old are you, Christine?"

Chagrined at my inability to answer the question, my confusion became visible in my face. What could I say? How old was I? I had never asked myself the question before, and was now puzzled for a reason why no one else had ever asked it. There was a sudden glance of intelligence interchanged all round the circle, which was immediately broken, and the stranger girl drawn into a corner. From the fragments of whispers which I could catch they were telling her of some fatal calamity. Ah! it was the same old story. Either my ear caught or imagination supplied the words—"Found floating on the water."

Pained, reserved, I had lost all interest in the occasion, except so far as it had reference to the mystery of my own age. I saw that my companions were making every exertion to banish the incident from my mind, but I stood aloof, silent and unhappy.

For the first time in my life I was vexed at being an object of attention and curiosity. Why did my playmates look so pitifully upon me? Why did they patronize me? I needed not their protection. What was the meaning of those strange words? Was I "found floating on the water?"—I, who had such a kind mother, such a dear home? The idea was absurd! It could not be possible that she whom I loved so well was not indeed my *real* mother. Yet, had I always lived with her? There was certainly something which I did not understand; and I firmly resolved to have the mystery unraveled before another day.

That evening I went to my little bed *wide awake* and waited the accustomed visit. My mother soon came. I heard her voice, and the words alone of the hymn fell on my ear. My mind was elsewhere. This night "The Happy Land" had no charms for me. I was of the "earth, earthy." I soon interrupted her with the inquiry,

"Mother, when shall I have a birthday?"

"When you are a little older," she replied. "Marian is a great girl, nine years old."

"When shall I be nine?"

"Not for a great while," and the hymn immediately went on again. But I was not to be put off thus.

"Did I ever float on the water?" I asked.

For a moment she was silent. I could contain myself no longer. Bursting into tears, I opened to her my heart. The circumstances which had taken place at the party, my impressions, recollections, and suspicions, confused and faint as they were, were all narrated.

My mother saw at once that my mind was awake and must be satisfied; that the time had come for a revelation. Taking my hand she said,

"Shall I tell my dear Christine a story? A true story?"

"Yes, mother," I replied; "tell a story about *me*, about me when I was a baby."

Wrapping around me her large shawl and taking me in her arms, she seated herself in an easy chair by the side of my bed. Of that time or of that place I have never lost sight. Methinks I see her now, so gentle, so quiet, just as she sat in that still room. The twilight gradually fading left good Ponto in the shade. His head seemed to droop lower and lower, as if he was glad to resign his watch into the keeping of a friend. The wolf could not be seen in the dim light, and Riding Hood stood out in the foreground a picture of innocence and beauty. The charitable shadows hid the uncle and shrouded the babes in mourning.

There, in the silence of early night, my dear mother related to me, in simple and plain language, the calamity which, at one fatal blow, had probably deprived me of both parents, and made me an orphan. Not a syllable did I lose then; not one has since been forgotten. During that short period, and even while her words were being drunk in, I passed from babyhood to thoughtful, actual maturity. Ideas and impressions then stamped themselves on my mind in characters which to this hour are clear and ineffaceable. My intense curiosity, the painful interest with which I listened to her recital, the thrill of horror that crept over me as she proceeded, are as vivid now as, when pressed to her bosom, I for the first time learned the sad story of my orphanage.

In the spring of 18— a noble steamer left the quay at New Orleans, freighted with human life—happy fathers and mothers surrounded by their children, brothers and sisters, friends, comrades, and strangers, with bright hopes and cloudless anticipations of coming pleasure. On the eve of that happy day the bright sun went down amidst mirth and music and joy. On the morrow that same sun arose in his glory to behold sorrow and silence and death. In the calm midnight that ship-load of sound sleepers were suddenly aroused from their dreams of happiness by the awful cry of "Fire!" The steamer had caught amid-ships, and the doomed passengers awoke with death staring them in the face. To burn or drown were the only alternatives. Isolated from human aid, amidst smoke and bursting flame on one hand and the yawning sea on the other, shrieks of agony arose to God from those who had never before called on his name in prayer. The fire raged with fury. Wives plunged frantically into the deep calling in vain on their burning husbands. Mothers rushed madly into destruction, alike unconscious of the part they acted or of the fate of their offspring. Little children, terrified, distracted, helpless, called on parents whom death had rendered deaf to their call. In that wild night of terror brothers and sisters, friends, comrades, and strangers, were parted never again to meet on earth. Despair sat at the helm until the ship was burned to the water's edge, and when morning dawned the remorseless waves swept over a charred, unsightly wreck.

At daylight a passing vessel came with swift wings to the rescue, alas! too late. All had perished with the exception of a single sailor, who miraculously clung to the burning timbers—all save one little child. When all was over his child was found floating on the water. I needed not my mother's assurance to convince me who that lone child was.

She then told me of herself. Just before this calamity occurred God had taken away her husband and an only child, a dear daughter, named Christine. Hearing of the little child whom both fire and waves had spared she hastened at once to adopt me. Heaven seemed to have directed her, for on the gold clasp of my sleeve-tie was found a single name, the name of her own dear child, *Christine*.

She arose, unlocked a small cabinet, and drew therefrom the little ornament which confined my sleeve when I was rescued from the water. Pointing to the name of Christine, engraven upon it, she said,

"Keep it, my child. Perhaps your own fond mother last clasped it on your arm. Never part with this little relic of your first years. I hoped for a time that it might lead to your discovery; but none have sought, none have claimed you. It may be that all your immediate relations perished on that fatal night. I can call you my own, my darling child, dear to my lonely heart when first found and with the passage of every day growing still dearer. My little Christine left me for a happier home, and you came to take her place in my affections. I clothed you with her garments; the playthings and books in which she took so much delight are yours, and now I shall lay you to rest in her bed."

All that had puzzled me was now understood. Light had broken in on obscurity, and my mind was relieved. For a little time I pondered on the fate of my parents, when sweet sleep vailed the scene and put to rest all my meditations.

Cast as I was into the arms of love, reposing in the lap of luxury, I had never known the absence of comfort or the lack of affection. Thoughts of the past, therefore, could occasion no regrets; and why should I sigh for friends and relations whom I had never known? Attachment for my adopted mother was no whit diminished. My only wonder was, if by possibility I could have loved my own mother more.

Life thus happily passed away until I was about seventeen years old. I then left school

and received private instruction at home. The health of my beloved mother had already begun to fail, and she soon assured herself that the time had come when she must gather hopes for her last journey. What anguish wrung my bosom as I yielded to the conviction that my only friend on earth was about to leave me—forever!

My whole time was now spent at her sick pillow. Only one earthly care now engrossed her thoughts; this was, so far as human foresight and wisdom could avail, to secure my comfort and happiness.

Death hurried his coming. Peacefully and joyfully she bade adieu to her Christine on earth to rejoin her angel Christine in the better land. Although my head was bent for the blow its suddenness prostrated me. I can not portray, even faintly, how desolate, how disconsolate my heart was in that first hour of sorrow. How willingly would I have laid my head beside hers on that pillow of death, and, with her, gone down into the dark valley!

After my mother's death I went to reside with her only brother, Uncle Hugh, as I had been taught to call him, whom she had constituted my guardian. He was as a kind father to me; and yet the encouraging glance, the approving smile, the untiring love which I had enjoyed for so many years were wanting.

How could I fight the battle of life alone? Such consolation as the world has to bestow was profusely tendered; but who, in recent and bitter affliction, was ever thus consoled? My dear mother had been taken from me, and I had no one now to love. Where should I go for sympathy, for counsel? Twice in my short life Fate had made me an orphan. My heart yearned for affection; and many sad days and sleepless nights were passed in sorrow for the dead.

Time, however, blunted my grief, and, with the buoyancy and hopefulness of youth, I again sought pleasure with new friends and among new scenes. Uncle Hugh was a considerate man of fifty, who had buried his heart in early manhood. His housekeeper, a comfortable, cheery dame, carried sunshine wherever she went. But I did not forget my dear mother. She was now with my angel sister; and I took great comfort in looking forward to that reunion of us all which her faith had made certain to my mind would eventually take place.

Some time during the next year I met Harry Dyson, for the first time, at the house of a mutual friend. There was something about him which, at this first meeting, attracted—yes, almost fascinated me. The interest was mutual. With pleasure I heard him inquire who I was, and solicit an introduction. We met strangers—we parted friends. Every hour that we subsequently spent together endeared us to each other more and more. Still there was never any thing like rapture in our attachment. My feelings were the same as if I had always known and loved him. A quiet enjoyment of each other's society—a calm, contented happiness—always marked our intercourse, such as is wont to be the accompaniment of old and long-established friendships only.

In my musing hours, like all young girls, I had often wondered if I should ever be in love. I had set up in my mind an ideal standard of the holy passion. This was higher and more absorbing than the love which now filled my heart. That I loved Harry was abundantly proved by the misery which the mere thought only of separation from him caused me. But my feelings were very different from what fancy had pictured as the rapture of first love. Our tastes were similar. Our hearts beat in unison. Undoubtedly this was love; only too tame, and possessing too little romance, to jump with my preconceived notions. These trifling doubts, however, did not disturb my general satisfaction. Harry and I were content. We talked over our attachment, and spoke of our marriage even, but always with the same calm, equable sensations, precisely as we discussed the love passages of our friends. Perhaps our intercourse was as remarkable for nothing else as for the perfect confidence and candor which characterized it. Strange as it may seem, we would freely discuss each other's faults without occasioning any thing like coldness between us. Contrary to the experience of most lovers, our reproof of one another seemed only to cement more strongly the bond of affection. Mutual friends unanimously declared that we were alike in disposition and temperament, and that our lives would flow on side by side, and get as one, like the gentle course of a river after the flood has abated and the wind is hushed to repose. Every body was satisfied that for us to perform the journey of life together had been written in the decrees of Heaven.

We were not engaged to be married—that is to say, no formal compact had been entered into—and yet, so well did we understand each other's feelings, that, in my mind, matrimony and Harry Dyson were inseparably connected. In fact, our plans were all laid, and we only waited the advent of a new year to cast in our lot together. Even now I shudder when I think of our near approach to what then seemed the consummation of happiness. Had we reached it, what a consummation of misery would it have been to us both!

Harry was in the full enjoyment of health, handsome in person, at the head of a large mercantile house, and possessed of abundant wealth. Some years previous he had come to A—— a stranger. With letters of introduction, independent of his position, which would have carried him into any society, he avoided notice. Passing by all others, he devoted himself to me. Autumn matured what summer had promised, and the coming winter was fixed upon as the season for our marriage.

One evening—I still remember it well—Harry begged the pleasure of introducing a friend to our little family circle. "I do not think

Christine will like Frank Wallace," said he. "However, in spite of his dignified and distant manner, he is a good fellow. Upon familiar intercourse his reserve all wears away, and the genial qualities of his soul make themselves felt. If you can have patience with his manner at first, you will soon discover his worth."

Harry did no more than justice to his friend. Reserved, and at times so much so, indeed, that it almost amounted to austerity of manners, his soul always betrayed its sensitiveness to every touch of honor and every impulse of generosity. I soon discovered, indeed, that this seeming reserve was only the effect of prudence and stern principle. His profession, the law, accustomed him to speak and think logically; while he was now and then so eloquent, so brilliant, that in listening to him one forgot he was ever any thing else. His fine figure, and certain nameless qualities which mark the true gentleman, prepossessed you in his favor at first sight. He struck me as being singularly handsome; yet to this hour I can not tell the color of his eyes, for when he speaks the light of his genius so flashes and dances in them that their hue is changed with every varying sentiment.

Such was Frank Wallace. He was received as Harry's friend, not as a stranger, and it very soon came to pass that all his leisure hours were passed in our society. From the first it was manifest that he approved of Harry's choice; that he was interested in me, and my woman's tact soon led me to suspect that he was not thus interested solely because I was the betrothed of his friend. I was aware, however, that to hint my suspicions would bring down upon me a shower of ridicule; for it was a favorite hobby of Harry's that women were always susceptible, and at all times prone to take too much for granted. By broaching the subject I should lay myself open to his satire, and I did not care to expose myself to it.

I therefore silently watched the growth of a passion which was constantly betraying itself: by look and gesture when I was present; by attention to my unexpressed wishes when absent; by a thousand circumstances trifling in themselves and generally brought about indirectly. He never breathed a syllable of love. I think he did not once dream that I had any suspicion of its existence in his heart. In many ways, however, and always unobtrusively, my pleasure was preferred, my taste adopted. The flowers I most loved were placed on my work-table without comment—never given to me. The poem I praised was ever on his lips. The walks, the drives, the views, which I preferred were his favorites. That which I most admired seemed, more than any thing else, to attract his attention. I loved Harry Dyson, and looked on him as my future husband beyond the spectre of a doubt; yet I often caught myself comparing the two, and more than once thought that if I did not already love the one I should most certainly love the other.

Though my own eyes might be fixed on my work or my drawing, I very well knew, if he were present, that his were riveted on me. When he was absent I pitied him, to think that, young and gifted as he was, he should so misplace his affections. I wished that I had a sister to bestow upon him. My own heart assured me that I had inspired him with love—a love which would probably make him miserable—and yet I did not regret it. I took a guilty pleasure rather—so it then seemed to me—in watching for his coming, in listening to the fine intonations of his musical voice, in witnessing his repressed emotion. When Harry read aloud—you know how well he read poetry—and the sentiment was sad, the low, half-suppressed sigh at my side revealed a sympathy which duty forbade me to reciprocate. Neither could I give vent to hearty merriment, however witty the sentiment might be, knowing, as I did, that the heart of him who sat by my side was full of heaviness.

After he had gone, Harry and I would sit in the moonlight and talk of the future. To his vision all was brightness; for he had no glimpse of the dark cloud which threatened my horizon.

I was perplexed. What ought I to do? Was it possible that, by any change of circumstances, I could separate from Harry? The thought made me wretched. How was I to construe my emotions? Loving one tenderly, *deeply*, as I did, why should the heartaches of another interest me? Why should I be uneasy in his presence? Why moved by his sadness? Did I experience toward him a sensation of pity only, or was it a dearer and different sentiment? If I attempted an analysis of my feelings I had not the courage to complete it. I had no one else to speak to upon the subject but Harry, and he seemed to be stone-blind.

Meantime the preparations for our marriage were going forward. The wedding-day was at last appointed. Harry was calmly happy, I despairingly calm. In this conflict of feeling my affection for Harry never faltered for a moment. My love was constant, devoted, like that of a sister. But it occupied only a part of my heart, in no way interfering with that other embryo passion which now seemed ready to take joint possession and entirely destroy my peace of mind.

I sat alone, and the strange events in my early history occupied my thoughts. If my own parents had lived I should have probably been in a very different position. I should never have seen either Harry or Wallace. Should I not then have been far happier? When in all sincerity I loved him to whom I was betrothed, why did the slightest sigh of another have power to move me and cause my heart to flutter? This was inexplicable. Was I an anomaly among my sex? Did I love two at the same time? Certainly not; for if my affection for one was love, that which I bore the other was something else, so widely different in character and intensity were the feelings enter-

tained toward each. How was I to understand my heart?

Harry came in as usual, and surprised me by asking, somewhat abruptly,

"Did it ever occur to you that our friend Wallace is in love?"

"Why do you ask?" I inquired, with as much calmness as I could command.

"Because his manner is strange at times, and his language somewhat confused. This has made me suspect that he is caught in Cupid's snare."

"Do you know on whom his affections are placed?" I inquired.

Harry laughed aloud.

"Why you take it seriously, as if the matter were settled. I am by no means certain that my suspicions are well founded. If they were, notwithstanding our almost constant intercourse, I should be puzzled to fix upon the object of his adoration. It must be the moon, or some bright particular star, or the last new poem, for he seldom leaves his office except to visit us, and therefore, to my knowledge, sees no woman but you."

"What reason have you, then, to suspect that he is in love?"

"Why, yesterday, in speaking of our marriage, contrary to his usual custom, he burst into a rhapsody about matrimony and misery, disappointment and love, which I could account for in no other way. But my suppositions may be all wrong. Perhaps he thought I expected him to say something, and at the moment he happened to be in a tragic humor. He intends to leave us and spend some months in travel as soon as we are settled."

My heart fainted within me. I lacked courage to tell Harry all, to brave his ridicule, or witness his disappointment. Could I suffer Wallace to go away lonely, wretched, in despair? Should I not thereby be guilty of a wrong, the remembrance of which would haunt me through life? Then again, how could I wound the noble spirit, the generous, unsuspecting nature of Harry, my best friend, my betrothed husband, by revealing to him the apprehension that I loved another? I despised myself on account of the desire which now arose in my mind, and refused to be quieted, the desire to remain as I was—*unmarried*. By so doing I could always esteem Harry as my best friend, without making another, who loved me so well, hopelessly miserable.

Distressed at my situation, ashamed of emotions which I could not control, the wretchedness which my marriage with Harry would entail upon me and his, if I refused to marry him, were clearly foreseen.

In either event, how would it be with poor Wallace? I was on the eve of my marriage, and dared not reflect on its consequences. How confused, how conflicting, how unsatisfactory were my reflections! These were the last moments I should be able to call my own. To-morrow—yes, in a few hours—my hand, my heart, my liberty would be given into the keeping of another. Every thought and impulse of my soul would be schooled into subjection. Another's will must govern me; another's taste, another's pleasure, another's preferences be consulted before my own. Was the prospect before me, such as it should be, a future full of hope and promise? Were these strange contradictory emotions such as should fill the breast of a loving bride on the eve of her marriage? What would Harry Dyson say if he could read my soul?

"Oh God!" I cried, in my extremity, "give me strength to do my duty!"

On the instant there arose within me a calm resolve to look Fate in the face. I determined to tell Harry Dyson all my doubts and all my fears; to open my whole heart. Hopes I had none. To one so brave, so good, so generous, it was a duty which I owed, either to give him all my love or none. His affection ought not to be trifled with. I could not deceive him, and would not impose upon him a divided heart.

And yet how could I bear an eternal separation from Harry, my best friend, and, as it then seemed to me, my only stay on earth? The thought overwhelmed me. Life seemed insupportable without his friendship. My heart was nigh to bursting when tears came to my relief.

A gentle knock at the door told who was there, and for an instant my soul ascended to Him who knows all our infirmities.

"O God, the father of the orphan, have mercy upon me! Guide and guard my steps!"

Harry, surprised, as well he might be, to find me in tears, by no means attributed them to the right cause.

"'Tis hard, I know," said he, "to leave a pleasant home, but ours will be a happy one."

The happy, happy future, bright to him as the stars which paled or glistened above our heads, was, as usual, his favorite theme. Poor Harry! How could I say or do any thing to dim those bright anticipations, to make sad the heart which was so loving, so good, so true? Since our first acquaintance with each other no discordant note had ever marred the harmony of our intercourse. Not a harsh, not a cold, nor an unkind word had ever passed between us. Now I should appear cruel and deceitful: Harry would be wronged and indignant, and both of us be wretched. But the decisive moment had arrived. Either Harry or Wallace must be given up. To separate from one was misery, from the other despair. Harry saw my excited state, and, ever good, ever considerate, attributed it all to nervous sensibility on account of the approaching change in my situation. At one moment I almost determined to abide by my engagement at all hazards, marry Harry Dyson, and forget Frank Wallace. At the next the tall figure of the latter, as I had seen him on the evening previous, rose up before me. His full eyes, with their mournful expression; his face, pale and sad to heart-breaking;

his low voice, tremulous with sadness; his hands, nervously clasped together; and the sigh which escaped him as he bade me farewell—all rushed upon me, begetting an almost irresistible desire to speak that word which would again recall him to his former self.

"Come, dear Christine," said Harry, affectionately taking my hand, "do not give way to sad anticipations. You know me too well to be afraid to intrust your happiness in my keeping."

"Dearest, best of friends!" cried I, with a calmness that astonished me, "I have a confession to make which you must hear this night or never. I have unintentionally deceived your trusting, generous heart. How shall I find words to say that your betrothed wife is unworthy of your love—that she loves another?"

"What mean you? In God's name explain yourself," stammered he, pale as death.

I then opened my heart to him. I revealed all my emotions, contradictory and inexplicable as they were. Nothing was kept back. After I had ceased speaking he stared for a minute into my face, as if he thought me bereft of reason. Uncertain how to construe my perfect calmness and self-possession, the idea of a rival rushed into his mind.

"O God!" he cried, in anguish of spirit, "is it my friend, my almost brother, who has done me this great wrong? Frank Wallace! Is this your honor? Never again will I put confidence in a human being. She whom I love better than life forsakes me. He whom I trusted as a brother betrays me."

"Oh, Harry!" I interposed, "Frank Wallace does not suspect my love, has never breathed his own. I alone am guilty."

"Christine," said he, and his voice was soft as music to my ear, "is all our love come to this? Is all my heart's devotion slighted, scorned even, for the love of one who is ignorant of your passion, and has never declared his own? Christine! Christine! Where, oh! where is your woman's pride?"

"Alas! Harry," I replied, "I love you, and therefore can not deceive you. The pages of my secret soul have been opened, not that Frank Wallace may read what is written there, but because you are too noble, too generous to be wronged. I could not impose on you a divided heart and a divided love."

He took my cold hand in his as he said,

"Forget it all, Christine. I forgive the fright you have caused me. Forget it. To-morrow is our wedding-day. When the nuptial rite has made this dear hand my own, we will laugh at all these foolish scruples. Let it all pass. You are mine in the sight of Heaven as religiously as if our vows had been already exchanged at the altar. Oh, Christine, my beloved, recall it all! Once again say you love me alone. In the wide world there is no one else for me to love but you. I have neither parents nor brother nor sister. An orphan in the widest sense of the term, will you too cast me off?"

Trembling, and with overflowing eyes, he drew me to his side. "Sit down by me," said he, "and listen to the sad story of my life."

He then told me that when twelve years old he was left at school in his native city of New Orleans, while his parents traveled North. His only sister was with her nurse in the country. His parents were intending to take no one with them on their journey except a single faithful servant. They expected to be absent during the summer.

"My sister's name," said he, "was Christine, "and the thought has sometimes entered my mind that I was first attracted toward you on account of your name."

"Was your sister's name Christine?" I asked, struck by the coincidence and with a sensation which words can not portray.

"Christine Dyson was my dear sister's name. Your name, and something which can not be called a resemblance and yet is very nearly akin to it—for it always reminds me of my dear mother—drew me toward you and laid the foundation of a love that has been increasing ever since we met."

"But, Harry," I cried, eagerly, "go on with your story. How did you lose your parents?"

"Oh!" said he, much affected, "theirs was a terrible fate. The remembrance of it always rends my heart. The vessel in which they took passage caught fire, and during the darkness of night was burned to the water's edge. My father and mother, with every soul on board, and with no one near to see or save, either perished in the flames or were drowned in mid-ocean."

"And your sister, your sister Christine?" I cried, trembling with the agony of doubt and conjecture, "your little sister! What became of her?"

"Alas!" continued Harry, "when the intelligence first arrived it paralyzed the whole community. Horror was depicted on every face. I was old enough to know and sensibly feel my loss. A sickness of weeks confined me to my bed. I had yet one consolation left. My dear little sister had been spared, and I was not alone. As soon as my health would allow, I was driven into the country to see her. How little was I prepared for the blow which stunned me! The last thing my mother did before her departure was to visit her darling child. Distressed with the thoughts of separation from both her little ones for so long a time, she suddenly concluded to take the youngest with her. It was an afterthought, consequently her hasty determination was not known to her friends. And so they perished, father, mother, sister, nurse, and servant, all in one dreadful night of terror. You see, my own Christine, I have nothing and nobody left to love, except this single treasured memento of my dear sister."

When he first mentioned his sister I was of course struck by the similitude of name. A suspicion was aroused which gained strength as his recital continued. The name, the incidents connected with his parents' death, so strangely

like those of my own dear father and mother, the time, the circumstances, every thing, served more and more to strengthen my suspicion. Imagine then, if you can, the tumultuous, overwhelming tide of gratitude, love, and joy united which took possession of my soul when he took from the locket that was fastened around his neck a little golden sleeve-tie, the fac-simile of that intrusted to me by the mother of my adoption and ever since cherished as a sacred talisman. I had just strength enough to seize the armlet in my hand, hurry from the room, take its fellow from the repository and place them both in his hand, saying at the same time:

"Thank your God, Harry Dyson, that you have been spared from the crime of marrying your sister," when I fainted and fell in his arms.

On awaking to consciousness I saw that all had been explained. I had nothing to confess, nothing for which to ask forgiveness. My dearest and best friends were around me. Uncle Hugh was smiling through his tears; Dame Matilda bathing my brow. Harry, pale as death but supremely happy, with both my hands in his own, was on his knees before me. Another, need I say who? was in the back-ground. His beaming eyes told at first glance the love that was flooding his soul.

"Come, Frank," cried Harry, "kneel here with me. Dear Christine, he has told me all his heart. Look upon him and love him. You can not be my wife, but none can deny my right to claim you as a sister. Look up, darling Christine, and tell our dear Wallace, as I have done, that he is welcome to the little child who was *found floating on the water*."

A CHRISTMAS IN HAMBURG.

HAMBURG possesses very few of the attractions necessary to induce a foreigner to select it as a place of winter sojournment.

The whole city—with the exception of a small part which was destroyed by the great conflagration of 1842—is built in the planless, uncomfortable style of nearly all the ancient German towns; with dark, narrow, crooked streets; scanty, filthy sidewalks, wretchedly paved with cobble-stones, so that it would be difficult for the inhabitants to keep them clean, even were they so disposed: which latter supposition is by no means warrantable. As to the climate, during the winter season, it is difficult to imagine one more disagreeable. During a large portion of the time we are enveloped in a fog so dense that it is impossible to see across the street; and, when this is not the case, the sky usually lowers until it appears to rest on the chimney-tops, and a mist, or rather heavy dew, continues to distill during the whole day. The condition of the dirty, badly-paved streets in such weather may easily be imagined, as also how agreeable must be our promenades.

The Hamburgers, however, seem as much accustomed to it as do their native ducks, and may always be seen, even during smart showers, loitering unconcernedly along, without umbrellas, and the women even without a head-covering. The weather is seldom cold, but always chilly, and that oppressive, drowsy influence, which, to an American, seems always to pervade the atmosphere of Europe during winter, operates here with double force. The air seems, really, at times, to be impregnated with a soporific gas. The canals, which intersect the town in every direction and withdraw nearly all noise from the streets, cause such a continual silence to prevail that, when strolling along the dusky alleys, I often feel as if "treading the drowsy shades of Sleepy Hollow."

It would be natural to suppose that the inhabitants of a town which affords so few facilities for outdoor amusements during this long season of the year would seek a compensation through diversions within. This is, in one respect, the case; for the people are among the most inveterate of even German smokers and dancers; but the desire and opportunities for intellectual recreation and improvement may be seen in the fact that the whole city, of nearly two hundred thousand inhabitants, has but two so-called literary associations, of which wine, cigars, and games of chance form the principal features. In short, I have never before lived in an atmosphere, both mental and material, so well adapted to breed blues as that of Hamburg.

During the last ten days Hamburg has entirely changed its usual aspect, and appeared like one of its own servant-girls who has doffed her smutty gown of russet and appears in her parti-colored, fantastical, holiday attire. Its wonted dullness and stillness, too, have been superseded by extraordinary bustle and preparation; and all this for the celebration of *Christmas*. For Christmas, to the great mass of Germans, is, literally, the day for which all other days were made. Not only have all the streets and walks been blocked up almost to impassableness by temporary booths, displaying every imaginable and unimaginable variety of gimcracks and gewgaws, and the brightly illuminated shop windows filled with dolls and puppets of every possible and impossible description; but every little nook and niche is occupied by a Liliputian shop-tender with his or her miniature store of miniature toys, and the passer-by is every moment greeted by a piping voice, offering and even imploring a purchase, while the sallow faces of the dirty little beggar-merchants assume a look even more pitiful and distorted than that of the dolls they hold forth in their tiny fingers. So prevalent is the custom of Christmas present-making here, and to such an extent do the presents consist of trifles of this class, that, during the week preceding Christmas, a regular bazar is established—a Crystal Palace—with a universal exhibition of trinkets from all parts of the globe. In all these displays the prominent features are the ludicrous, the fantastical, the bizarre.

All the squares, market-places, street-cor-

ners, and steps of public buildings, are covered with little forests of *Christmas-trees*—those all-important, indispensable *Weihnachtsbäume*—on which hang, literally, the Christmas joys and toys of German childhood. More of this anon.

In the literary sphere the change has been no less absolute and all-pervading. Christmas tales, Christmas plays, Christmas legends, Christmas songs, Christmas comedies, Christmas carols, *que sais-je?* Unceasing streams of Christmas advertisements fill all the newspapers and run over in the form of a foaming flood of extras. Room can scarcely be spared for even the telegraphic dispatches from the Paris and London bourses.

Even in the present critical and excited state of Prussia political discussions are almost entirely crowded out by those of more important Christmas and its festivities. In the social circles, of course, the same topic rages. Children prattle about Christmas-trees; servants chatter of dance and spree; young people of wine and waltzing, and old ones of sumptuous feasting and of the best means to make all the others enjoy themselves. Had the potentates of Germany but the power of creating Christmases at will, they would never lack the means of quenching revolutions.

The practice of a friendly fraud and polite, innocent evasion of a tax collected on this day by friend from friend, which lately originated in Paris, has of course already found currency here. I mean the economical method of making *one* gift perform the office of a *dozen* or a *score*. Those of my readers who have ever spent a few months in some retired frontier hamlet, where very little money circulates, have doubtless had occasion to observe how sometimes a stray five-dollar bank-note, which had accidentally found its way there, would be used to pay debts to perhaps twenty times its own value ere it again escaped. The farmer who brought it from the city paid his tailor, the tailor his butcher, and he in turn the farmer, so that the same busy, debt-paying bank-note would pass through the same man's hands half a dozen times in the course of a week. Precisely after this manner it goes here with Christmas present-giving. The fact is, that people have become weary of being annually subjected to so unprofitable a system of mutual taxation; and as it is of too long standing to be easily abolished, they have invented this economical method of relieving themselves of its pecuniary burden; retaining, at the same time, all its agreeable features. For instance, the young lady, Fräulein Lange, receives from a young gentleman a green silk bag tied at the neck with a blue ribbon. She opens the bag and finds it filled with bonbons. She is delighted, returns him her thousand thanks, tastes them, finds them *reizend* (charming), and as soon as the bearer's back is turned ties the bag with a *red* ribbon and sends it to her cousin, Fräulein Schaeffer, as a Christmas present. But the latter, who has perhaps already received half a dozen similar gifts, empties the sweetmeats into a *scarlet* bag, and sends them as a Christmas gift to her aunt, Frau Müller, who, perhaps, immediately sends them as a Christmas present to her young friend, the original Fräulein Lange; whence the busy, important little bag soon starts on a fresh round of calls, in its character of Friendship-carrier, and discharger of civility-debts.

Another kind of present-giving here, is in the donations made by employers to their employés. This is not only universal but also real, and seems to have been conventionally regulated according to the wages of the workers. Servant-girls, whose wages range from twenty-five cents to a dollar a week, get from one to five dollars. Ladies' chamber-maids, and those of equal grade, from three to eight dollars. Apprentices, from two to ten dollars; while clerks and journeymen, whose salaries range from three hundred to one thousand dollars, receive from ten to twenty-five dollars. This present is regarded by both giver and receiver as a reward of diligence and fidelity during the past year, and encouragement to practice the same virtues during the year to come. It always consists of money, and in a community where people seldom hope to rise above the sphere in which they were born, its effect appears to be favorable in cherishing a sympathy between master and servant.

Thus far I had been an unparticipating observer. The novelty and magnitude of the preparations for a festival to which, in my own land, so niggardly a portion of excitement and gayety is appropriated, kept my attention on the stretch, and lent absorbing interest to the whole affair. But now that the culminating moment was at hand, I began to feel an intense longing to be present and assist at the dénouement.

I remarked the joyful anticipations beaming from every face, and recoiled at the prospect of withdrawing to my silent, solitary chamber, and trailing through the long hours of Christmas-eve over Heine and Schiller. From a similar situation must have originated the fable of Tantalus.

Wrapped in moody reflections, I was lounging listlessly along the city's finest promenade, the *Yungfernstieg*, as it borders upon that beautiful little sheet of water, Hamburg's gem and pride, the Binnen-Alster. A heavy slap on the shoulder caused me to turn suddenly, and I found myself at noses' points with the broad, grinning, good-natured face of Carl von Langenstein, a fine, whole-souled law-student, whose acquaintance and friendship I had made at Heidelberg nearly two years before.

Carl is a genuine specimen of the German student-class; frank, generous, and good-humored; not over-shrewd, but relishing even a dull joke; hospitable, kind, and warmly attached to his friends, among the nearest and dearest of which he reckoned, of course, his long pipe and beer-glass.

On learning that I was still unengaged for the evening, his features exhibited the most

satisfactory indications of delightful disappointment, and seizing my hand between both of his, he suited the action to the word in a *pressing* invitation to spend the evening at his father's, and witness a regular old-fashioned, German, family Christmas festival. One-tenth of his cordiality would have insured my acceptation. We took a short turn around the Binnen-Alster, recalled a few prominent and delightful reminiscences, and agreed upon six o'clock as the time for my introduction into his paternal mansion. What a flood of pleasing sensations is often thus, all at once, poured in upon the soul by the happy and unexpected combination of a few little circumstances! I had issued forth, lonely and discontented; I returned full of pleasing anticipations.

As the day wore on signs of the approaching "*Fest*" grew and multiplied on every hand. At one o'clock workmen ceased their labor; shops were shut; through the windows opposite my room I had sundry glimpses of servant-maids flitting about in their gayest short-gowns of parti-colored plaid, small caps, covered with glittering spangles, and white chemise sleeves contrasting with their red, brawny arms; scampering hither and thither in the last hurry and excitement of preparation for a glorious night's dance and Bier-schmaus. At two o'clock, in this latitude, night begins to shadow forth her coming, and already the theatres and other numerous places of public amusement were blazing forth an extra glare. Populous as Hamburg is its greatest diameter scarcely exceeds a mile. The Baron von Langenstein's residence was on the side of the city opposite my hotel. Punctually, therefore, at half past five I called a cab, for a rate of more than two miles an hour, being here considered a luxurious velocity, is obtained only at the expense of a round extra.

The streets were nearly deserted, and as I passed along the sounds of song and boisterous revelry, coming from cellars and grog shops, the gusts of stormy music bursting from ball-room windows, past which whirled couple after couple in the giddy waltz, all proclaimed that the bacchanals were fast approaching their wonted climax of gayety and uproariousness, and that the menials of all grades and classes were in the full enjoyment of their gratuities.

As I stepped out of the "droschkey" a watchman presented himself, touched his hat, and respectfully accosted me with, "Drink your health, Sir?" This respectable method of begging is industriously practiced on Christmas-eve by the watchmen, and so productive do they make it, and so conscientiously do they spend the proceeds, that most of them are dead drunk before midnight.

Hamburg is over one thousand years of age, and the old Senator von Langenstein's mansion, judging from its appearance, might have been built by the founder of the city. The iron knocker, on the huge oaken door, was so heavy that its bare fall made the great halls ring again. The door was slowly drawn open by a servant in a black, high-crowned, narrow-brimmed hat, trimmed with gold lace, a very long-waisted blue coat, with a narrow swallow-tail, reaching to his heels; a reddish vest with four rows of brass bell-buttons on each breast; short knee-breeches, stockings extending half-way up the thighs, and terminating in a long fringe of gilt tassels, low-quartered, high-heeled shoes, with immense buckles, a perfect specimen, in short, of a livery from the fifteenth century. I was neither shown into an ante-chamber to dance attendance, nor yet even asked for my name; but the waiter, nothing doubtful that all was right, conducted me up a broad, steep flight of stairs, into the gentlemen's toilet-chamber, and delivered me over to Carl, who, with his upper lip rolled up, leaving a huge friendly grin below, and eyes beaming a whole soulful of good nature through his concave glasses, insisted on my playing the passive, while he disencumbered me even to my rubbers, examined the bottoms of my pants all around, and perceiving a speck of mud, caught a brush, dashed off the obtrusive particle, and then led the way to the parlor.

The old Baron seems about seventy, dignifiedly corpulent, with a face as round, full, and white as a Dutch cheese, and an upper lip made the invisible support of a shaggy, pale-yellow mustache.

At my entrance he rose, waddled to within about four feet of me, stopped short, brought his heels together, clasped his puffy hands, bringing the thumbs directly over the place where the pit of his stomach lay buried, and made a short, jerking movement of the body, which, I presume, was intended for a bow, and in which the projecting abdomen was thrust still further forward, and the head and haunches thrown back; then, by means of four extra steps, advancing eighteen inches nearer, he buried my hand in his, and with a grin which looked for all the world like the ancestor of all Carl's friendly grins, cordially bade me welcome, and presented me to the circle.

The impression made upon a foreigner by a parlorful of German belles, though peculiar, is not unpleasing; for although their plump, colorless countenances and pale-blue eyes have very little expression, this little is composed of unmingled good-humor, and if their features exhibit, on the one hand, little vivacity, they show, on the other, no vinegar. Their manners, though usually lukewarm, are seldom cold; and the lack of sprightliness in their conversation is abundantly compensated by simplicity and general information. The Senator's lady is by birth Spanish, full twenty-five years younger than himself, and still possessing, in the grace and rapidity of her movements, the quick and delicate play of features, and the lightning of her large hazel eyes, all the bewitching coquetry and fascination of her nation's female sex. She speaks excellent French and tolerable English. Her enunciation is rapid, and the manner in which her agile tongue at-

tempts to sputter off the uncouth, lumbering German, was at times truly laughter-provoking. It reminded me of the antics of a little monkey I once saw trying to roll a heap of large books and magazines down about the floor. In rolling off a small one he entangled himself in a large one, and in disengaging himself from that he tumbled down three or four at once. I had just fairly accommodated myself to my new sphere, when one of the walls of the room suddenly parted asunder, and displayed a vista down the centre of which extended a dining-table decked with a confusing profusion of things, among which flowers, grapes, oranges, and fancy-cut decanter-tops were conspicuous. Hamburg is noted for the comforts of her kitchen, and our dinner did ample justice to her fame. But why make my readers' mouths water by a description, or even an enumeration, of the twenty-three courses of soups, meats, sauces, and intermediates, of which the dinner consisted? We all know that the Germans are fond of good living: suffice it to say that my host, as far as good living goes, nourishes a thoroughly national taste.

Although a German may not be as capable as some other people of either fabricating or appreciating a keen witticism, his corporeity has good capacities for comprehending good cheer, and as much loud laughter is the result in the one case as the other. Had a foreigner unacquainted with the language been present, he would never have doubted that some of the wittiest remarks ever uttered were produced on this occasion.

Among the guests was a Heidelberg student of theology, with a pair of long, white, silky mustaches, and on the end of his chin a tuft of tow-colored beard about an inch in diameter and four or five inches long, who had come to spend the holidays with his *Duzbruder* Carl. He was the self-constituted spokesman of the company, and entertained us at first with such Black Forest legends and Christmas tales as were either too ancient or too new to be generally known. As the stream of his loquacity became shallow and insipid he managed to feed it for a time longer with college anecdotes, a very few of which would bear to be retold. Among them was that of a student who, after wasting the term, like most of his classmates, in carousing away the night and sleeping off the day, went, at the approach of vacation, to one of his professors, and requested the necessary certificate of having attended his just-ended course of lectures. The professor gazed at him attentively, but could not recollect having ever seen him at his lectures. "Very likely," replied the student; "my seat is behind the pillar yonder." "Wonderful!" quietly remarked the the old professor, as, with fallen under-jaw, he gazed through his green glasses at the post in question; "there must be some architectural error in the construction of that pillar. You are the twenty-seventh student who has occupied the seat behind it during this course of lectures." The appearance, however, of twenty bright thalers from the pocket of the student quickly convinced the professor that he too was one of the multitude whom the miraculous twenty-inch post had concealed from his view during a whole course of lectures, and the certificate was soon safe in the desk of the clerk.

Another anecdote was of the lecturer on Chemistry, who brought out his electrical apparatus, one day before the class, to show them the principles and effects of electricity. "Now, gentlemen," began he, "this battery is very heavily charged. A spark from the knob would instantly *kill* a *man*, and would *stun* even an *ox*." A moment after, in one of his heedless gestures, the professor brought his knuckles within striking distance of the knob. The bright flash and sharp report followed—the professor fell—the students gathered around, supposing him, from what he had just affirmed, to be killed. A moment after, however, he opened his eyes, and with immense drops of sweat on his face, began to gather himself up. "We believed you were killed," outbroke the students, in glad surprise. "No," said the professor, "I was only *stunned*." The students recalled his previous remark, and roared.

Should the reader already begin to tire of such entertainment, let him recollect that I have selected the very spiciest out of at least twenty, and then decide whether wit or wine was at the bottom of all our mirth.

The hostess presided at the table, and both her tongue and eyes were ubiquitous. Not the slightest incident occurred that she did not notice, and pleasantly remark upon; not an article disappeared from either the plates or glasses of a guest which was not instantly replaced. She had a word for all and every body, now in one language, now in another, with a fluency and rapidity of succession truly astonishing.

Our host meanwhile preserved his good-natured gravity undisturbed, and appeared to become by degrees entirely absorbed in his good cheer, or rather, *that* in him. It seemed as if there was, somewhere within his bulky system, a little Sahara which absorbed glass after glass, and bottle after bottle, without producing the least visible effect.

The character of the assembly was now approaching the uproarious. The rapid and ceaseless flow of Weiss-wein and Roth-wein had at length begun to undermine the foundations of common sense, protected though it was by even German nerves. The light-blue eyes of the ladies assumed an unnatural brightness, and flushes were making desperate efforts to show themselves through their fat cheeks.

As the dinner gave place to the dessert, the tales and anecdotes changed to songs and jests, which, notwithstanding the presence of the ladies, made up in vociferousness what they lacked in delicacy.

The old Senator, now perceiving the turn things were taking, showed how well his sense

of propriety had preserved its equilibrium by rising from the table.

Then followed the universal shaking of hands, each one with all the rest, commencing with the hostess and making the whole parallelogram of the table, accompanied by the friendly *gesegnete Mahlzeit* ("blessed be the meal to you!"), and we adjourned to take coffee; the hostess and ladies to the parlor, while we followed the Baron to his smoking apartment; for, to a German, his pipe or cigar, and a cup of strong coffee, after dinner, are as indispensable as the dinner itself. The room was spacious and simply but richly furnished, and the effects of ages of perpetual tobacco-smoke were visible on the antique but elaborate furniture. The richly-papered, smoke-dinged walls were hung, on three sides, with portraits of all the German emperors, from Conrad the First down to Franz the Second. The fourth side was entirely occupied by an immense pipe-case, or pipe-*rack*, containing several hundred pipes. This collection would vie, at least in variety, with Professor Davies's collection of Indian pipes. Here were long-stailed and short-stailed; straight and crooked; large-bowled and little-bowled; plain and ornamented; meerschaum, porcelain, clay, stone, and wooden. These, as the old Senator assured me, were all either Christmas or birthday gifts. The collection which, at its establishment in its present location, consisted of only a dozen or fifteen, has been receiving semi-annual accessions during the last half-century. "Nothing was more fit, therefore, than, at each of these festivities, to place the collection at the service of his convivials."

On a centre-table in the middle of the room stood a gilt and burnished *vase à cigarres*, of elaborate workmanship, and containing a hundred or more of Upman's best. On the floor beside it stood a large vase-shaped vessel, holding at least half a keg of superior Holland tobacco. All around the room luxurious arm-chairs, settees, and sofas, invited us to repose after the arduous labors of an *extensive* dinner. Most of us, pipes and cigars being duly got in operation, accepted the invitation. Curling clouds now began to obscure the ceiling, and the silence that reigned was like that of a dormitory, being interrupted now and then by a long-drawn sigh-like sound, as a long dense stream of smoke issued from one or another pair of inflated cheeks. I amused myself meanwhile by examining the heterogeneous display of pipes. They were arranged in chronological order, and displayed, at a glance, a concise history of the rise and progress of pipe-manufacture in Germany. The first one in the upper tier, which purported to be nearly two hundred years old, and to have descended from one Herr Rittmeister von Baumeister, consisted simply of a cubic piece of common stone, hollowed out, with a straight elder stick about six inches long for a stail. Next, came one with the bowl scooped out of an oak knot, and bearing a close resemblance to a soup-ladle, the cavity being twice as broad as deep, and capable of holding half a pound. Not far from this was a huge, uncouth one of iron, with a sheet-iron tail, almost large enough for a stove-pipe. This a blacksmith named Taugenichts had made for his own use more than a century since.

But even a slight sketch of half the collection would fill a book; and, indeed, it is a source of wonder to me that a quarto volume of 4500 pages, with copious explanatory notes and an appendix, has not already appeared on this subject. Many of the pipes were of really curious design and workmanship; but I looked in vain for a *beautiful* specimen. All the carvings and paintings, whether designed to represent human heads, beasts, or reptiles, were caricatures, and most of them very poor ones. Here, also, German taste had not left itself without a witness. Most of the more modern ones bore an inscription, motto, or stanza; and I remarked that these, as well as the carvings and pictures, were generally on the *back* side of the bowl, so that the smoker might puff and contemplate at the same time. The jovial, and, in many instances, even more than jovial character of the inscriptions, showed them to date from the time when their present owner was also a harum-scarum Heidelberger blade.

The fumidity of the atmosphere had by this time become quite insupportable, and its soporiferous influence on the smokers was both visibly and audibly evident, inasmuch as the sonorous snoring of the sleepers constituted a harmonious concert almost equal to that proceeding from a populous pig-sty in a July noontide.

I therefore adjourned to the drawing-room. The German ladies are, as every body by this time knows, in one respect, at least, like those of all the other Continental nations; they are passionate lovers of dancing. The billiard-room had attracted those few of the young men who were not disposed to a nap in the smoking-room; but the ladies had made partners of one another, the piano was in full operation, and all the girls were engaged in waltzing, the only dance known or recognized here; and at this they certainly excel. Why should they not? From earliest infancy they are as much accustomed to it as a Tartar to his saddle.

I was scarcely seated and enjoying the whirl and twirl of their confusing revolutions before the pretty hostess was at my side, and inquiring why I did not join in the waltz? "I am not an adept at the art," was my answer. "Do they not, then, waltz in America?" "Comparatively little!" "Why not; is it not fashionable?" "Yes; but not popular." She did not fully comprehend me; I explained.

Then followed what former experience had led me to expect, namely, a good-humored but satirical and unsparing philippic upon the hypocritical Puritanism of the Americans. A German will seldom let slip a good opportunity for inveighing against our method of spending existence. We are almost universally regarded as

a race of ascetic misers—heartless, covetous religionists—whose real, though unwritten articles of faith ever contain, as the fundamental truth—*money*, and of it the quickest method of making the most. We were now joined by the Heidelberger theological student, who was anxious to learn about the festivities with which we Americans filled up our Christmas holidays. Here was another exposure of my country and countrymen to the weak shafts of good-natured irony. My story was short and plain, and quickly told. "For the morning a sermon; for dinner, a roast turkey; for the afternoon, a magazine; in the evening, whist and drunken Irishmen." An equally brief and authentic description of a holiday among the Hottentots could not have made a more original impression. Madame clasped her small white hands, and threw them up and down at arms'-length, with ringing laughter, and then declared, in her soft and charming broken English, that it was just what she should expect, after hearing that waltzing was unpopular; while the student, after twisting back his mustaches, in order to laugh without inhaling them, drew out his portfolio, noted down the heads of my narration, and avowed his intention of making it the basis of a magazine article on American life and manners.

The next demand was for a Christmas tale, tradition, or legend. Here I was compelled to plead utter poverty. The student took the opportunity to extol the German as exceeding all other languages in its richness in legendary lore, and went on to expatiate at some length, and with evident pride, always calling it "the poetical feature of the language." This boast is common among educated Germans, and corresponds to the vanity of many Englishmen over their own John Bullism. Thus passed the time until a huge, ancient Nuremberg clock, in a distant room, hammered off nine reverberating strokes.

Soon after an irregular and vociferous thumping in the adjoining hall made me start in surprise. The others, however, seemed to have been waiting for it, and greeted it with outbursts of joy, particularly the younger members of the company. A simultaneous rush was made to the source of the racket, and there stood the bald-headed, gray-mustached, pursy old patriarch, with a little drum attached to his neck and resting upon his enormous abdomen. In his puffy hands were a pair of short drumsticks, with which he was battering the little drum-head with a clumsiness and unmercifulness not to be exceeded by the best drum-major in Christendom.

This, as Carl informed me, is a traditional custom by which the good German ancestors used to frighten away all the vagabond witches which might happen at the time to have appropriated to themselves lodgings in the house, in order not to be pestered with them the succeeding year. We formed a processional march and followed the drummer, the servant in livery going before, as marshal, and opening the doors. In this manner we marched all through the house, up stairs and down stairs, into bedrooms and through lumber rooms, not omitting even the garret or the cellar, in which latter the variegated and savory odors of the lately cooked dinner mingled with those of the preparing supper. At last, after having effectually scared all the rats and witches out of all the unfrequented recesses and cobweb corners, we came suddenly to a halt, before the door of the only yet unvisited room. This was the nursery; and, as Carl told me, had, for a fortnight past, been locked against every body but the parents. The waiter-marshal, with more than usual pomp and circumstance, swung open the door, and my eyes met a novel and interesting sight. In the centre of the room stood a fir-tree, about ten feet in height, illuminated by something like one hundred and fifty little wax-tapers fastened to the branches, which latter were also literally loaded down with toys, grapes, golden apples, dolls, and gewgaws of every possible and impossible description. The effect was brilliant, even splendid, and would have been very beautiful had not the harmony of the whole been marred, in true accordance with German taste, by a huge, hideous double mask, or rather Janus-head, placed in the centre of the bush, and so lighted by candles within it that flames and smoke issued from its mouth, nose, eyes, and ears. I soon found, however, that my taste did not accord with that of the majority. This was precisely the feature most admired by all except the Baroness.

After walking around the tree, admiring it and its contents, and commenting upon them in whole and in detail, for half an hour or more, the impatient juvenile throng was let loose, and like a band of little poachers, quickly stripped the tree of its gaudy and variegated burden. The twinkling tapers, dispersed among the unadorned boughs, looked like the waning, lonely lights of a ball-room after the midnight hour has robbed it of its gay and gaudy groups.

Now came the *tempus ludendi;* the romping, racketing, confusion worse confounded. Squeaking pigs and squeaking dolls, squalling boys and whining dogs, peeping birds and piping beastlings, wooden whistles, tin whistles, sugar whistles, and the whole genus of whistles, trumpets, horns, and squawkers; all did their duty to raise the din; while half a dozen minikin drums, mingled with the shouts and screams of the juvenile performers, completed the concert.

Amidst all this rumpus and hurly-burly my attention was attracted to a pale but interesting little girl, apparently eight or ten years of age, with long flaxen hair and light-blue eyes, who, having received as present a small but excellent guitar, had withdrawn to a distant corner, seated herself recliningly on a sofa, and was thrumming with her slender fingers the most plaintive and melancholy tones. There was something so touching and prepossessing in her sad yet delicate and sensitive expression of counte-

nance that I was induced to inquire about her of Carl. "Poor little Aminchen!" said he; "one year ago she was the merriest member of this mirthful flock here; but for the last six months she has hardly smiled, and even when she does her smiles are more sorrowful and affecting than other girls' tears."

"What misfortune," asked I, "could it be, so great, or which so young a mind could sufficiently appreciate to be thus suddenly and severely chilled and withered by it?"

"Disappointed love," said Carl, earnestly, yet evidently anticipating a smile of incredulity on my part. The bare idea was so unnatural and preposterous that I, of course, at first felt inclined to regard it as one of Carl's serio-comical jests; but another look at the delicate and sensitive expression of settled sorrow in little Amina's wan yet highly intelligent countenance produced an involuntary semi-conviction; and Carl, in compliance with my request for further explanation, went on to relate that her parents, whose only child she was, were Germans, and resided in Braunschweig; that her mother was of Spanish descent; and that the little Aminchen was born while her parents were once lying in quarantine at the island of Malta. About a year since a fine, rosy-cheeked, curly-headed boy, the son of her father's friend, and some two or three years older than herself, came from Greece to pay them a visit. Although it was the first time they had met their mutual attachment soon became unusually strong, and the girl, in particular, gave every indication of being seriously and deeply in love. She became all at once grave and womanly in her ways; was meditative, and often melancholy; and in her little lover's presence she was reserved, and even embarrassed. At this period the boy began to suffer from the effects of the northern climate, became ill, was taken home, and died. Little Amina, on hearing the news, fainted, and had since been pining continually, under every symptom of a broken heart. Should the eye of a psychologist light by chance on this little sketch, let him regard it as he deems most metaphysically orthodox; that is, provided he deigns to regard it with any opinion at all. To me the very appearance of this little embodiment of infantile grief moving about like a spectre, as it were, in the broad sunlight of mirth and happiness, made her an object of touching interest. Poets and novelists have moralized and sentimentalized *ad nauseam* on faded flowers and faded cheeks, blue violets and blue veins, and the whole genus of symbols and symptoms of disappointed passion, until we have come to regard them in a matter-of-fact light, and like all other things of course. As I am neither poet nor novelist, my province is neither fiction nor sentimentalism, but only to speak right on just as I think, like any other plain, blunt man. But in this case I will not deny that there seemed to me to be something tenderly affecting — not from its very nature, but, quite the contrary, from its very unnaturalness and uncommonness. When the shaft of Death pierces the *old* dove, or Cupid's dart the *young* one, we yield them with resignation, as payment due, the one of Nature's debt, the other of her tribute; but here was Cupid and Death united—a most unnatural coalition—to make the little *fledgling* a victim to their undue rapacity. Misfortune, like a rash and ruthless boy, had beaten down and destroyed the beautiful young butterfly even in the early spring morning of its existence, and while it was innocently and unsuspectingly engaged in sipping sweets from its very first flower. Her parents had sought, by every means that could be devised, to expel the gnawing idea that was preying upon the vitals of her infant soul. They had traveled abroad with her, sent her to school, set her to learn music, drawn her into youthful society, immersed her in amusements and recreations; but all to no effect. The stem of the rose-bud was broken. Of what use, now, that the gardener should place it in the warmest sunbeams, and in the society of the gayest flowers? It droops and wilts even quicker than it would have done in shade and solitude.

My reverie was interrupted by a scene of quite a different character. No people are so fond of rejuvenescence, in the term's most childish signification, as the Germans. The old Senator had become entirely absorbed in the sports of the little ones, and it was ludicrous in the last degree to see him floundering about on his hands and knees; his immense paunch swaying from side to side like that of a female hippopotamus; grinning so desperately that his toothless gums showed like a bloodless gash from ear to ear; the long beard of his long chin tickling the point of his nose; wheezing and whining out his fits of phthisicky laughter; while his eyes gleamed with that peculiar pale glow which aged eyes assume when under the excitement of delight, like the dying embers of decayed wood fanned by a sudden breeze. It is interesting to see old age thus making a sudden revolution, and seeming, for a short time, to cast off the yoke of care and decay. The old Baron, like the vast majority of his countrymen, is a faithful and practical follower of Epicurus. Pleasure is the chief end of existence, and therefore, among all other pleasures, he has enjoyed the childish Christmas-tree fun nearly seventy times over.

In the midst of our merriment a servant appeared at the door, and by a bow, which tested the elasticity of his hamstrings, announced that tea was on the table.

Leaving the children, therefore, to their sports, we repaired to the dining-room. Here another agreeable surprise awaited us. I had noticed, during the last half hour, that the Baroness and her daughter were absent from the nursery, and now, we beheld all the napkins raised by an irregular heap, greater or smaller, of something under them. Each guest, on being seated and raising his napkin, discovered his pile of presents. Each lot was accompanied by a slip

of paper, with a stanza or two written on it, in which the names of the articles presented were interwoven with a tender sentiment or friendly wish. My Heidelberg intimacy with Carl had been closely connected with pipe-smoking; for whether playing at a game of chess, roaming about the romantic old castle-garden, taking a jaunt up to the Königstuhl, Wolffbrunnen, or along the lovely valley of the Neckar, the long pipe-tail and good-natured grin were Carl's lips' constant companions. Partly from sympathy, but chiefly because his tobacco was of the very best quality, I acquired the habit of keeping him company; but quitted it and Heidelberg at the same time. Carl had found something quite rare and rich in the idea of having taught smoking to an *American*, from the very home of the tobacco-leaf; and now I found, among my presents, an elegant meerschaum accompanied by a couple of stanzas, a plain translation of which I venture to give, not from their intrinsic excellence, but as truly indicating the social and moral drift of ideas among the generality of young Germans:

"Friendship and tobacco-smoke agree;
Warm, strong, and savory, they both should be:
Smoke rolls in volumes from the glowing bowl;
Thus Friendship gushes from the kindling soul.
Then smoke, and think on Heidelberg and me;
In heaven, where cigars grow on every tree,
Where brooks run beer, tobacco grows in groves,
We'll meet, and smoke, and drink to former loves."

My present from the Baroness was a beautiful cravat, attended with an elegantly written Spanish couplet, gently requesting me "to bear the giver in mind" as often as I the "cravat around my neck should bind." Beside it was a gold pen from the old Senator, with an awkward, half-rhymeless, limping pair of stanzas, written, doubtless, in half the time that it took me to read them, and expressing the idea that letter-correspondence is one of the best uses to which the pen can be put; and begging to be occasionally remembered in this use of my present.

The old gentleman received his usual quantum of pipes, which, indeed, seems here to form a leading article of Christmas-present commerce.

This was, of the whole evening, and, *par excellence*, the real feast of friendship, and flow of social feeling. Each one was, in turn, requested to exhibit to the company his presents, which were freely admired and commented upon. Then came the reading of the rhymes. These, according to the degree of intimacy between the parties, were polite, affectionate, friendly, or jovial, and gave rise to a great deal of hilarity and facetiousness. True, some of the jests, both oral and written, as well, in fact, as some of the presents themselves, were not as Puritanically unexceptionable as would have been expected in a Bostonian society of equal grade; but then the two countries differ as widely with regard to the standard of taste in *this* respect as in many *others*. This leads me to remark, that, during my travels on the Continent, I have been the victim of much rallying and satire concerning the prudery which my countrywomen continue to exhibit to the world. I am free to own that I never could see much harm in the ladies of New York forcing the Crystal Palace committee to dress the statues, as was, at that time, a universal report; nor could I relish, as much as many did, the immense amount of fun, ridicule, contempt, and caricature to which that report gave occasion among the European press and public. At the same time I just as frankly acknowledge myself equally stupid with a German in ability to perceive any good reason why the legs of a piano should be changed to its *limbs;* the knees of a sleigh to its *elbows;* or the tail of a man's coat to the extremity of a gentleman's outer vestment. Miss America is little aware how notorious her false modesty has become throughout Christendom; and even if she were, I presume she wouldn't care much. She is young and beautiful, though somewhat large of her age, and her precocity has drawn upon her the world's attention; every body watches with criticising, or even carping scrutiny, her every word and movement; they seem bent upon compelling her, *nolens volens*, to assume the position of a model and a paragon: where the wonder if, in the immaturity of her judgment and experience, she occasionally betrays a little *mauvaise honte?* She errs at worst but on the right side: which one, of all her transatlantic sisterhood, can boast a similar error in this regard?

After tea, cards—that universal, indispensable source of social amusement all over Europe—were introduced, and absorbed the time until two o'clock. Then came the breaking-up bustle, a repetition of the wholesale hand-shaking, the *Schlafen Sie wohl* ("sleep well"); and to me, a stranger, intending soon to depart, was always added the friendly wish of *eine glückliche Reise* ("a prosperous journey"). Arm in arm with Carl I took the way to my hotel, along the streets, now deserted, except by a few who seemed to be doing their best to supply the absence of a crowd by occuping each walk in rapid alternation. As we passed the numerous gin-hovels and wine-palaces the waning lights, the maudlin gabble, the low, drawling bacchanalian song told that another lusty Christmas festivity had nearly exhausted its vigor and vivacity, and was fast sinking into the leaden arms of Morpheus.

Arrived at my door, Carl took his long pipe from his mouth, and, in true accordance with his nation's rites of friendship, threw his right arm over my shoulder, pressed his mustached lips to mine, gave a smack that would have made a house-maid's heart leap within her (endurance or offense is, in such cases, the alternative), and, with enthusiastic cordiality in his tone and features, gushed out his hearty "*Leben Sie wohl.*"

HINTS ON SELF-CULTURE.

Second Article.

THERE are certain principles which should always guide us in the work of self-culture; for this is not a work of chance or accident, but one founded in the nature of the soul, and controlled by laws that the Creator of all mind has established for its discipline and development. It is easy to forget this fact. The spiritual nature of man is so far removed from material objects, so pure and unearthly in its essence, so open to impulses apparently fitful and irregular, so secret and subtle in many of its modes of action, that we are prone to overlook its dependence on fixed and permanent principles. But God designs that we should labor intelligibly in every thing. The pursuit of truth involves order and method at every step, and its use, in whatever form applied, requires the same steady conformity to the plan which divine wisdom has instituted. The cultivation of mind is our greatest work, and in proportion to its superiority are we under obligation to execute this task with intelligence and success.

First of all, we should recollect that self-culture, as its name implies, is our own work. Its necessity, importance, dignity, are derived from ourselves. Its claims are inward, not outward. Its means and aids demand that our will and strength should be infused into them before they can contribute to personal growth. In nothing is the idea of our individual existence raised so high and associated with such supremacy as in self-culture. Here the soul has sovereignty without dispute or rivalry. Filled as the universe is with influences to promote its enlargement of capacity and to secure its attainment of excellence, they are utterly powerless unless the soul itself breathe its own vitality into them. Not an archangel can cross the threshold of its sanctuary without its leave. Not even Christ can redeem and save it, if it refuse its co-operation. What a fearful prerogative is this! And yet it is not a vaster thought than we need. Such is our feebleness of purpose, our indolence and frailty, that we require a momentous sense of responsibility like this to arouse and sustain our faculties. Amidst the multiplied ties that bind us to life and act on us without our sympathy or concurrence—amidst those circumstances which so frequently reduce us to a state of passive recipiency—we are here exalted to a position in which our individuality is perfected. We are separated from the world. We are a world in ourselves. No man is our fellow—no Eve is our "help-meet." The dearest connections, no less than the coarser bonds uniting us to material objects, drop away from the spirit, and we are inclosed in the silence and solitude which befit a being ordained to decide its immortal destiny. A great thought, then, meets us in the outset of this work—the thought of self-culture as our own work, to be begun, carried on, consummated, as a peculiar trust, devolved on us from Heaven, and for which we are amenable to the throne of God.

But again, it is pre-eminently our work. Whatever else may claim attention and regard, self-culture always and every where takes precedence. Not indeed that we are to neglect other duties, or violate any of the manifold obligations which are binding on us; but the sentiment of self-culture is ever to be uppermost, and in every thing done for others the growth of our own moral nature is to be faithfully respected. No man has a right to serve another at the expense of his own improvement. Sacrifices of time, convenience, and comfort, sacrifices of interest and even intellect, he may justly and honorably make for the welfare of others; but the true, real good of his own being must never be bartered away in exchange for any supposed advantages to society or country. That is a false philanthropy which would impoverish a human soul to enrich the wisdom and virtue of the world. Indeed, it can not enrich them. A man's soul is worth more in its life than in its loss; and the best service that we can possibly render to humanity is to build up such a force of character, to attain such excellence, to embody such a spirit in all our acts, as shall tend to awaken the sympathies of others and draw them to the communion of goodness. Yet many persons think that their own moral nurture is to be held secondary to the welfare of others. According to their ideal of usefulness, they are to practice an entire self-abnegation, to forget themselves utterly, and to be simply and solely intent on doing good to the world. We have known not a few who had fallen into this error. Preachers of the Gospel have sometimes confessed, that, in their zeal to see others converted, they have quite exhausted their own spirituality. Teachers we have seen who labored for their pupils until their intellects were brought down to the level of mere machines—all their generous impulses stifled—all their elasticity of soul crushed. And philanthropists have often crossed our path, who, in their eagerness to abate evil, have forgotten the duties they owe to themselves—have abandoned all thoughtful meditation—have lost self-control and self-direction, and, to those in contact with them, have presented the pitiable spectacle of a temper and an example in utter hostility to the spirit and aims of the cause which they advocated. This is a deep wrong to one's own heart. It is treachery to the dignity and glory of our nature. The imagination is so easily excited to clothe our philanthropic schemes with delusive aspects, and a sort of moral romance is so apt to lead us off into the regions of extravagance and folly, that we need a wise caution so to govern our judgment, discipline our passions, and direct our enthusiasm as to avoid, in such enterprises, the sacrifice of our own souls. In the eye of truth and justice no one can be innocent who holds his growth and advancement in goodness subordinate to usefulness. It is nothing less than moral suicide to destroy the aspirations and deaden the instincts of our inner life for the sake of philanthropic

objects. God's martyrs are not found among these ambitious men. Our highest obligation is to implant the image of God within us; to show it in the serene beauty of Christ-like actions; to perfect, as far as possible, our own character, and to make it the medium of a pure, hallowed, transforming influence on other minds. Such a character is kingly in its power, priestly in its purity. Such a manhood is patriotism and philanthropy in its presence, in its breath and motion, in its eye and countenance and tone. It is in character as exhibited in a genuine, Christian manhood—a character stamped from above, and witnessing to the workmanship of Christ—that our real greatness lies. We are not to look for it in deeds. Deeds are often more splendid than their actors, borrowing a lustre from some adventitious aid, and heightening their value by the chances of time, place, and circumstance. Or they may fall below the standard of the actors, and, by adverse agencies past control, fail to be the exponents of their virtue and energy. Viewed in either light, actions are deceptive tests of truth, power, and scope of manhood. But character always expresses the certain measure of a man's greatness. It reveals the precise degree of his goodness. It tells how far he has conquered himself and the evil in his pathway, how high he has ascended in the realms of being, how much of the Infinite and the Eternal he has realized; and by this means it takes the rank of the noblest social influence in the world. Men read it as they read no written volume; men listen to it as they listen to no other eloquence; men admire it as they admire nothing else, and by admiration grow into its excellence and become like it.

Again, in the work of self-culture, we should remember the dependence of all our faculties on one another. Nothing is more common than the idea that intellectual power may be the result of the development of a single faculty; and, accordingly, if a person is conscious of possessing any one attribute in a marked degree, he is almost sure to employ his strength in its improvement. Now this opinion ought to be received with no slight qualification. Indeed it is scarcely true in any respect, that genuine vigor of mind ever springs from the prominence of one faculty. Wherever the higher offices of mind are concerned, wherever the nobler forms of truth are to be apprehended and brought home with intense vividness to the consciousness, it is not reason or imagination or judgment, simply as such, that are exercised, but all the powers of the mind are engaged in the process and concur in the result. Often, when not apparent to us, memory is busy in the use of its garnered treasures, and association is suggesting its concealed resemblances. There is much less of this independent action of single faculties than is usually supposed; and really there is reason to doubt if the mind ever puts forth its active energy in this way. Certain it is that, in its loftier flights, in its deeper penetrations, all the faculties move together and assist each other; for it is our spiritual nature, not any distinct portion of it, that embraces and appreciates the great facts which constitute intelligence, wisdom, virtue.

Aside from this, however, the primary object of these faculties would seem to be, that they should act as means or instruments by which the mind could contemplate the different aspects of truth, enter into all its relations, and avail itself of its whole worth in the expansion of its range and the increase of its force. As the mechanic uses his various tools in producing a piece of work, as any creation of art must go through numerous processes before it can be completed, so the mind employs its faculties in obtaining and assimilating knowledge. Side by side imagination and reason go forth in quest of wisdom, and often analysis, suggestion, and taste are so closely connected as practically to blend into oneness. But be this as it may, there is no one province of the mind that does not derive aid and advantage from every other. It frequently happens that imagination presents a conjecture or a hypothesis to reason out of which it rears a magnificent structure. And nothing is more common, in the evolving of truth, than for a train of argument to inspire fancy and conduct the quickened intellect into the illuminated realms of beauty and sublimity. A thought may provoke an image, an image may lead back to a principle. These are constant phenomena in mental history, and they serve to show the interdependence of all our intellectual attributes.

There is practical value in this fact. Let us suppose that we are cultivating the memory. To store it simply with the results of perception, to burden it with the contents of books, is surely not to cultivate it. Memory is something more than a chest of drawers or a furniture shop. Such a course may make it a mechanical memory; but that is not the memory which an intellectual agent needs. To cultivate the memory is to awaken its power of simultaneous action with the kindred faculties of the mind, to identify it with their operations, to make it their close companion in all their exercises. If reason is pursuing a process of investigation, if imagination is creating its wondrous forms of beauty and grandeur, if the moral sensibilities are engaged in their holy offices, memory is constantly wanted to recover a fact, an illustration, a sentiment previously acquired; and frequently the whole success of the work, then in course of performance, depends on the facility with which memory can yield its service. How is this vitality of memory to be secured? We must make its acquisitions the common property of all the intellectual faculties. Memory retains the thought, fact, image but in trust for them, and whenever needed it is prompt to obey their bidding. But this supposes a process of mind that has been previously performed by the other faculties. The fact was not merely acquired by the memory. Nor was it simply

lodged there. Reason and imagination, if rightly trained, connected themselves with it on its first entrance into the memory, and established ties of association with it. They have, therefore, a work to do for the memory as well as the memory for them; and by this faithful mutuality of action their strength is developed, and completeness of intellectual power secured.

In mental culture it is very desirable to remember this law of relation, and to derive from it those benefits which it was designed to confer. We often lose much of the power of one faculty by the weakness of other faculties. The habit, so common to all, of viewing the mind as a collection of attributes, has insensibly affected our modes of thought, and, in a great degree, prevented us from apprehending the intimate connection between its varied offices. No exercise of mind can be long continued without calling all its qualities into action; and hence the method of nature indicates, that whatever awakens one faculty should tend to quicken the others. Sensation arouses perception; but it is equally clear that perception, if cultivated aright, imparts a new vitality to sensation. The senses are inlets to mind. This, however, is only a partial statement of the fact, for they are outlets also. If, then, these senses feed the intellect, it is just as certain that the intellect reciprocates their work and trains them to mature effectiveness. Agreeably to this law, as culture advances with age and experience, the senses become more and more spiritualized. The distinction between matter and mind is, of course, as broad as ever, but the senses lose much of their grossness, and enter into nearer, fuller sympathy with spirit. In the progress of a true education the same law appears in application to the nobler intellectual faculties. The union between them becomes more complete. Hence, poets who have produced their great works late in life have combined the poetic and philosophic elements in the highest perfection. In this respect age seems essential to breadth and unity of genius. One class of emotions predominates in a less degree; the circle of impressions is widened; nature is both a more general and generous ministry, and the mind, open in all its sympathies and allied in all its powers, receives and communicates to the utmost of its capacity.

Our efforts at self-culture should constantly recognize this connection among the mental faculties and their interdependence. No one of them ought to be cultivated for its own sake. Nor should we exercise any property of the mind because of the pleasure which is peculiarly the effect of its functions. Reason ought never to be so absorbed in a process of argument as to exclude the presence of the other mental powers; nor should imagination ever consider itself the solitary tenant of its world. Such habits are common, but pernicious. If reason is investigating a great truth, imagination, when disciplined, is frequently a valuable ally in its work. There are few subjects of thought that have not the elements of knowledge, beauty, emotion united in them. Nearly all objects appeal to the nature of man, not to his intellect or sensibilities, in their exclusive functions; and hence no rule in the practical culture of mind is more worthy of rigid observance than, as far as possible, to get the whole scope of a truth or a fact, to use it as tributary to our entire inner being, and thus make it the means of a thorough and uniform growth. Especially should the connection between the intellect and the moral constitution be kept in view. Knowledge becomes wisdom whenever the heart appropriates to itself the ideas of the intellect; and the intellect is always invigorated by the presence of well-ordered affections. In all mental action we should put as much of ourselves as can be embodied, and we are always the nobler and the better in proportion as thought and language express the force of our nature. It is one of the infirmities of our condition—a sad sign of degradation—that intellect and affection should be so frequently divorced. Nor can there be a more satisfactory proof of the healthy progress of the mind, in the discipline of its ability and the attainment of excellence, than this reunion of the functions of thought and feeling. In our vocabulary Light and Love ought to be convertible terms. Intellect would then be more trustworthy, and impulse a safer guide to human conduct.

Another principle that should govern us in self-culture is to use all the means within our reach to promote its work. Among these books are prominent. They are the best gifts of former generations. In them the past ministers to us with even more wisdom and devotion than it served its own day. Books create a social world of their own, and afford us the most genial fellowship that intellect can enjoy. They yield us intercourse without the restraints of conventionalism, and the forms of etiquette are set aside by the gentle force of sympathy. The satisfactions of companionship are found in them. If not adapted to our mood, we dismiss them; if we are weary, we can resign them. We have no character to sustain in their presence. Dignity does not awe, contrast does not humiliate us. There is a better bond than courtesy to unite us. A common interest in the truth, a kindred joy in the beautiful and the glorious inspire the same hope and trust, create the same intellect and heart. Books feed the mind. We derive much of our most assimilable nutriment from them. By them we grow into larger stature. They add the senses of others to our own, and we have a clearer eyesight, a keener touch, an acuter hearing. Our life is multiplied by them. Books enlarge the sphere of our being. They are the open highways of thought, along which we are borne on distant journeys to realms more gorgeous than the East, more fertile than the tropics. By means of books our consciousness—that latent heart of being—is more fully revealed, and we are thus made better known to ourselves. In this respect books are

often our most valuable friends. They have a more subtle, penetrating insight into our character, comprehend our wants more fully, and respond to our aspirations more kindly and heartily than even our warmest, truest friends. With them, we are souls. Our disguises are thrown off; vanity ceases its masquerade; pretension endures rebuke, and is patiently silent beneath the probe of reality. And what a vast service they render by interpreting our thoughts, by bringing out into open and illumined spaces the dim conceptions of the mind, by perfecting our half-formed ideas, by assuring our hesitancy and relieving our doubts! What benefactors are like them! The great Lawgivers have gone, Prophets have completed their visions and departed, Apostles walk the earth no more; but we can never want for the presence of majesty and goodness so long as books enshrine the wisdom, heroism, piety of the world. From these "*sceptred urns*" we are still ruled; and what a sovereignty in being subjected to so ennobling a sway!

In the work of self-culture we should attach a great importance to books. There is no other medium through which the human mind can come in contact with so much to arouse its dormant energy, to inflame its sluggish spirit, to expand its capacity. If you desire a horizon of boundless sweep, a landscape of vast extent, a firmament of unlimited expanse, books only can furnish such a scene of magnificence. The literature of the world, considered in its relations to the variety, depth, and compass of intellect contained in it, is the grandest exhibition of its powers that man has displayed. Hence our minds can nowhere find such a store-house of intelligence. Books are admirably fitted on this account to render us invaluable aid in self-culture. If we enter a large library, we can not fail to meet with many works which are adapted so perfectly to us that we almost fancy they were decreed to suit our temperament, habits, and constitution. We recognize ourselves in them. Our future is pictured in them. They speak what we need, above all else, to hear and point us to the path our steps are struggling to discover. In communion with them we are lifted out of our ordinary state. Renewing the youth of the mind, they awaken a fresh sense of strength that thirsts for arduous efforts. A charm is contained in them that we can not comprehend—a magic that our critical skill wonders over but fails to explain. Now these are the books for you to take to your heart. They are your property by spiritual ownership. Whatever aim their writers had in view need not concern you; they are commissioned to do you service; and the more confiding your fellowship with them the stronger and nobler you will become. Judicious friends may give you profitable advice about books. But remember that the benefit of advice is found in the subsequent ability which it creates to advise yourself. You will soon learn that books do not conform, in many instances, to recommendations, and few prove to be to us what they were promised by our advisers. Books are like articles of diet; the mind is quick to learn what can be best digested and make the healthiest blood. Do not read merely to get information—that is the least advantage of reading. If you are simply a well-informed man, you will never have much pleasure or power in the exercise of your intellect, nor will society ever have any great use for you. Read that you may get something more than reading. Be a reader that you may step higher and be a thinker. A true education begins where acquirement ends; and at the precise point where your favorite authors terminate their offices within you, the growth of your genuine manhood will commence. Do not be afraid of being detained over a page. If a wise author arrest you by a profound thought, hours may be profitably spent over it. After all a few things cultivate us, and intellectual experience will soon show you where they are found.

But let us not suppose that books alone are adequate to the intellectual and moral wants of self-culture. They have their limits. Invaluable as a means of instruction and influence, they are confined, nevertheless, within a restricted range, and if pressed beyond their true bounds of service they may be converted into instruments of weakness and stupidity. We have endeavored to show that all the faculties of the mind are intimately connected, and find their best development in assisting each other. A similar principle applies to the means of culture. Reading, meditation, the study of outward objects, the study of inward experience, social relations, life, religion, are all combined into a great system auxiliary to this end. Each performs its share of the work and aids the others. If we read in such a manner as to strengthen and discipline the intellect, it will be more competent to practice the art of observation and to enter into the meaning of objects around us. Thus, too, the study of ourselves, the careful cultivation of insight, prepares us to be more scientific and rational interpreters of external phenomena. Viewed merely as an intellectual influence, religion exerts a wonderful power over the perceptions as well as the consciousness, and by its effect on the habits of the mind qualifies it to be a more energetic and successful agent in all the relations of thought and action. Self-culture embraces the use of all those means that exercise our faculties and fit them to discharge the functions which creative intelligence has assigned to them.

The visible universe is full of wisdom and beauty. It is the workmanship of an Infinite Mind, and as such addresses us. If the laws of material nature are the expression of infinite thought; if all its scenery is alive with the presence of God, sympathetic with His love, and majestic with His grandeur—then it must be adapted to cultivate thoughtfulness and sensibility in us. It is not an idle show, a pageant to amuse the senses; nor is it a series of won-

ders to startle the imagination; but a display of the Divine attributes, designed to elevate our conceptions, to purify our spirit. To be insensible to its order, utility, excellence, is to neglect the glory of God as manifested in his works. To study the material universe for the gratification of a love of science, to contemplate it for imaginative enjoyment, to avail ourselves of its machinery for economic uses, and to look no higher than the ends of science, imagination, and utility, is to stop short of its true design—to fail in appreciating its great purpose. Nature appeals to the intellect, and affords a vast field for observation, reflection, analysis. It trains the understanding and the reason. Over what a wide surface its mighty instrumentality is spread! There is not an attribute of mind but has worlds upon worlds here opened before it. Kingdom rises above kingdom, empire swells beyond empire, to invite us to activity, pleasure, reverence, and gratitude. A thousand objects teach us how to see, feel, act. Lessons in sagacity, prudence, forethought, are every where abundant. At one time we are instructed as though we had no province distinct from the bee and the ant; at another time the emphasis of nature seems to be laid on common sense as the one ever-urgent, ever-present necessity of human life. Here, labor is magnified as a main fact in the restorative economy of providence, the curse of sin lost in the blessing of redemption; and there, nature wears such aspects as would appear to indicate that we were formed chiefly to revel in the joys of contemplation. Why is nature so manifold, so varied? Why has it so many outlets in all directions? Why this vast succession of audience-chambers, in which poet, philosopher, divine, every form of intellect, every kind of taste, every grade of talent and genius, finds nature in waiting to enlighten and inspire? This is a divine provision to meet the numerous wants of our intellectual and moral being. It is this that adapts nature to all moods, temperaments, vocations, ages, and fits it to be a ministry of truth and power to the mind of our race.

One can not but feel sad at the thought that so much of the cultivating influence of outward nature, of its orderly arrangements, of its beauty and beneficence, is lost on the great, common mind of the world. The evidences of skill around us; the tokens of God's parental love, that are fresh every morning and new every evening, the wonders of Omnipotence and Omnipresence; the invocations to sentiment and feeling; were never intended for a select class of gifted men and women, but for man as man—for man as a creature of boundless capacity, infinite aims, eternal hopes. The vast universe is not for poets and artists, for philosophers and sages. The love of nature was never designed to be a professional badge, an artistic accomplishment. No; its reason lies deeper than images and pictures. God ordained the material heavens and the earth to be a witness of Himself, of his perfections, of his glory; and hence, "*there is no speech nor language where their voice is not heard.*" "*No speech nor language:*" what words are these! "*No speech nor language!*" It speaks to childhood, maturity, age. It speaks to learned and unlearned, rich and poor, high and low, bond and free. The sense of beauty, the sense of gratitude for beneficence, the sense of humility in the presence of infinite power, the sense of confidence in the love that governs the universe, are bestowed upon all, that they may be purified and exalted through their influence. No man, therefore, can become a cultivated man without their agency. He must know God in his works. He must know beauty and sublimity as God has represented them in their myriad shapes and aspects. Self-culture, then, embraces a study of the universe. The senses must be trained to receive its images of simplicity, uniformity, grandeur, magnificence. Imagination and reason must appropriate its revelations. Nor must it be a mere study of intellect. The devotion of the heart must be yielded, in love and reverence, to its manifestations of the character of God; and witnessing in every thing, from the grass beneath our feet to the majestic orbs rolling through remote space, the silent but touching tokens of His parental providence, we must learn the trust that leans on His goodness and is calm amidst the anxieties of life.

Our social relations are important means also of self-culture. Instituted by the benevolence of the Creator for the benefit of our entire nature, they are not to be regarded merely as sources of pleasure, but as invaluable aids to the growth and maturity of our inner being. What an expenditure of mind in the daily business of life! The wants of society must be consulted; and, to provide for them, the most far-sighted intelligence has often to be exercised. Take a barrel of flour, a bale of cotton, a hogshead of sugar, and think of the intelligence, forethought, practical skill in the use of means, required in their production and manufacture. The whole system of labor, trade, commerce, involves the constant activity of mind; and even those minute things in domestic life which are almost too insignificant to be noticed, have taken their place in household economy as the result of patient study and repeated trials of ingenuity. When we examine the structure of a steam-engine or a watch, we see clearly enough the connection between mind and art; but, in reality, there is not a tool, a machine, an instrument in daily use, which it has not cost more or less thought and genius to create. The silks and laces of a lady's wardrobe strike any one's eye as evidences of tasteful design and elaborate workmanship; but the thread and the needle used in converting them into articles of clothing, the hook-and-eye fastenings, the indispensable pin, are also the fruits of wisdom and skill which mankind slowly acquired. We are not to suppose, then, that business is a mechanical routine—a dull and heavy drudgery. Some occupations are indeed so;

but nevertheless the idea of business, as a portion of the system of Providence, is the idea of intellectual activity. Any form of business may educate the mind, may enlarge its views, train its faculties, elevate its spirit. Do not think, therefore, that you must necessarily seek a profession to find opportunities of culture. No; the day-laborer, the farmer, the mechanic, are intellectual and moral agents. The homeliest toil takes hold upon the faculties of an immortal nature; and no work is so humble, no service so insignificant, as not to contribute to the soul's growth.

Let us turn from business to home. Every thing connected with home is a discipline—a culture. To provide for its wants; to regulate its order, convenience, and comfort; to guard it from evil; to secure its peace and happiness; to fulfill the purpose of God in establishing the domestic constitution—what strength of intellect, what strength of virtue are needful! A human being, standing amidst the responsibilities of home, presents the most impressive moral spectacle that this world can exhibit. On his intelligence, on his firm will, on his truthful integrity, on his kind spirit, how much depends! The different members of a household are daily called to adjust themselves to each other's peculiarities; to afford counsel, sympathy, support; to shun occasions of ill-feeling and angry passions; to aid one another by every office of tenderness. The acquirement of good manners, the practice of the genuine, unaffected, heartfelt politeness of the fireside, is a task of no small moment. How many efforts have to be made, how many humiliations to be endured, how many defeats borne, ere we learn to be kind—uniformly and reliably kind—on principle! Looking simply to the intellectual aspects of home, we see a provision for the daily use of intelligence, taste, and adaptation of thought in the intercourse of family life. Few appreciate properly this feature of domestic character. Nor are there many who think that their intellectual resources are much needed in the fellowship of the table and the private circle. And yet home is the place, above all others, for our talents and even genius to be brought into the service of others. The same sort of mind that we employ in the business of the world is not, indeed, required here; but, notwithstanding, it is a beautiful and varied field for the display of one's knowledge, tact, wit, and power. Home ought to have a much higher position, intellectually, than opinion ordinarily assigns. We believe that it is essential to the development of the more refined, the nobler qualities of the mind; and that, independently of its agency, the finer arts of thought, taste, expression, can not be fully acquired. Scholarship may be elsewhere attained; but the intellect of the accomplished man, the wisdom of the true gentleman—genial, attractive, inspiriting—is formed at home. All of us have seen and recognized this type of intellect. In any company it defines itself at once, by its perfect harmony with surrounding circumstances; by the self-possessed ease with which it takes your level, and abates none of its charming dignity; by its noiseless motion through the atmosphere of thought; by the serene strength with which it glides unawares into your heart, and occupies your being without disturbance. Apart from this, home cultivates our best sensibilities; teaches patience, forbearance, gentleness, sympathy; breaks down the barriers which our exclusiveness is always raising around us; gives others a property in us; gives us a property in them.

The greatest means of self-culture remains to be noticed. It is Christianity. Through its instrumentality the infinite attributes of the Divine nature are brought into contact with the human mind. By that strength its weakness is invigorated; in that light its vision is made clear and bright. Revealing such truths as we need most to know, it teaches them in the way most suitable for us to learn, presents them to intellect, will, conscience, sensibility—strengthens the understanding and quickens the heart. It never expands the intellect at the expense of the heart. Impulse is not stimulated to the injury of reason and judgment. But for Christianity man would be a creature of sense. It centralizes the principle of faith within him, and thus establishes a new law for the control of his intellectual and moral being. None of us can measure our obligations, in this particular, to Christianity. Faith is the vital sentiment of spiritual existence. Limited as the mind is within a narrow horizon, distrustful of itself even on its own ground, conditioned by the terms of probation, and subjected to circumstances that oppress and perplex its operations, faith opens a new mode of being, and makes it an heir to the treasures of immortality. The habit that faith creates of looking to the future, is in itself a mighty intellectual power, for by this means we liberate ourselves from the thralldom of the near, the tangible, the material; we are victorious over the present, and anticipate the approaching but distant glory of our nature. But, in a moral point of view, it is yet more ennobling. By it we are united to infinite goodness. We partake of His boundless life, share the love and imbibe the spirit of His perfect nature.

Christianity lays a deep emphasis on the mind. It attaches a profound importance to its faculties, aims, hopes, aspirations. No system ever taught such elevated sentiments in respect to its dignity and capacity. The soul is the great idea of Christianity. For its sake all things exist, and apart from it life has no meaning, the universe no grandeur, Providence no purpose. There is a vast moral power in this fact, for it exalts the mind at once to the loftiest position of which it is capable. Agreeably to this view of the intrinsic worth of the soul, it provides all the means and influences necessary to raise it above the corruptions and infirmities of earth, and to restore it to the inheritance of

heavenly excellence. Every thing in human life—all forms of experience, all kinds of contact with the outer world—are converted into instruments to serve this paramount end. We labor and toil, not only to provide food and raiment, but to create and foster those virtues which ennoble our being. According to its idea, friendship and love are not mere joys but awakenings of the heart to its higher wants, prophecies of a holier fellowship beyond the grave. Christianity is much more than a system, with its own select and appropriate means. Beyond this, it is an influence permeating every object in the universe. All things are subordinated to its supremacy. All things honor its incomparable majesty. All things are hallowed to its ministry. The grass, the flowers of the field, the birds of the air, convey its instruction to us. It brings heaven and earth into our service, and lays the resources of infinity at our feet. Nowhere have we such perfect sympathy, such mighty aid, as it offers; and hence, in the work of self-culture, it is at once the highest wisdom and the truest happiness to seek its guidance and depend on its support.

HESTER GRAHAME: ONE WOMAN'S LIFE.

"EVERY face is either a history or a prophecy." I think that of my friend Hester Grahame was both; for I studied it many years since, and each year proves the truth of my reading.

Hester was born in a little wood-colored house half-way up Red Mountain, in a town and county known to all tourists. The father and mother of this child did not possess, to any considerable degree, that thrift and energy which characterizes most Yankee farmers; for they were always in trouble. Nobody's cattle had such a genius for running away; no other fences fascinated the wind to such an extent as did theirs; and it was certain that they were always a little too late for any good fortune that befell their neighbors. They had been blessed with many children; but, as Mrs. Grahame said, "Nobody was ever so onlucky with their children as Job and her." So, when little Hester was born, there were but three boys left. If you were ever in a house where the article most needed could never be found; where the person most depended upon was never ready; where the neighbors knew much better than the parents where the next meal was coming from, you can form some idea of the influences that surrounded the childhood and girlhood of which I am endeavoring to tell you.

Schools and churches were not so common then as now; and by the time Hester could walk the four miles that lay between her own hill and the one upon whose top the schoolhouse was perched, the poor, inefficient mother had fallen into a decline, and before the child could spell the word death, the mother knew to the fullest extent its wondrous meaning. Of course there was no more school for Hester. She must see to the house—must take care of father and brothers; and her natural quickness and energy coming to her aid in the course of a few months, she did far better than her mother had ever done. So all her daily work was done well; but when she looked down upon the lake bathed in the glory of sunset; when she watched the grand old mountains as they threw off their robe of mist and stood alone against the sky, there came longings to that child's heart for another, a broader life—one that should be as beautiful as that smooth lake—as great and self-reliant as those moveless mountains.

They were not altogether vague yearnings either; for as the years gave her strength and judgment she saw that she must contrive some way to know more, and so do more, than she could now; and the how to do it was soon decided. One day, after the housework was done, she went out and picked a basketful of the large raspberries that clung to the sides of the mountain. This time she did not make them into pies, but walked to the nearest village and tried to sell them. I do not know about faint heart never winning fair lady; but sure am I that faint heart never succeeded in selling berries; and poor little Hester was almost discouraged as she knocked at the door of a substantial-looking house and asked the old gentleman who opened it the oft-repeated question. She thought he was pleasant-looking; and while he went to ask his wife, peeped timidly into the large entry, and then into the room beyond—almost screaming with delight as she saw long, deep shelves lined with books. By-and-by the old gentleman and his wife came back, and when the latter had examined the berries, after the manner of steady housekeepers, concluded to take them. "But the price. What would the little girl ask?" No one knew less about the price than the little girl; they might give her what they liked.

This amused the good man; and he soon found out that the child wanted the money to buy a book with; and after a few more questions, he told her that he was Mr. Center, the minister, and that he would pay her for the berries and give her a book besides. Never child climbed Red Mountain with a lighter heart than did Hester that afternoon; the stern heights above her seeming to smile their congratulations as she held up the long-coveted treasure. But it must not be opened until the supper was ready—until the dishes and milk-things were washed. Then down upon the broad, flat stone that served for door-step she spelled out the title of Mr. Center's present. It was that old, old book, the "Pilgrim's Progress;" and not until the long summer twilight was ended did she lift her eyes from its pages. It was hard work for her to read; she had to spell many words; but still she gathered somewhat of the meaning; and before Saturday night she closed the covers with a tear as she thought, "I have no more to read." When the Sab-

bath came, she thought if she could go to the village for a book she could surely walk there to church; so, prevailing upon one of her brothers to accompany her, they started, and, very much to his astonishment, Mr. Center saw his little brown-eyed friend walk into his meeting-house.

After service he came and spoke to her; and upon the next day his well-fed nag ambled to the foot of the mountain, where Mr. Center dismounted and left the beast to his own pleasure while he climbed the rugged pathway you thought so picturesque last summer.

The child Hester had finished washing; so she sat down with him and told him some of her dreams and plans—he listening kindly, and promising to befriend her. Of course Hester's father did not object. Alas! Job Grahame's character is told only too clearly when I say he was never known to object to any thing except a deficient supply of cider and tobacco. So this arrangement was made: Mr. Center would lend her books, and if she found any thing very difficult in them he would explain. He proved as good—in fact, much better—than his word; for, besides the faithful teacher, he became the warm, earnest friend; and many times said, proudly, as he marked his pupil's progress, or watched her expressive face, "Hester will make her way in the world!" And from that hour Hester's true life began; from that hour, whatever drudgery (and there was much), whatever of care and anguish (and she had many a bitter hour) came to her, she had this one consolation—she could leave it, lose it in her books. Mr. Center (blessed be his memory!) kept a firm, steady hand with her. Dearly as she loved reading, the Grammar and Arithmetic must be learned first; passionately as the child's heart asked for poetry, it was given but sparingly—oftener some earnest, strong prose that made the girl look down deep into herself, and grow strong, because she had to be so strong in order to understand it all.

No bookworm was she either. If the "Midsummer Night's Dream" made her a little discontented with home care and roughness, then from the very same volume would be found a passage elevating any life, however humble, so it was well-lived.

Being a poet, being famous, Mr. Center told the eager, ambitious child, was of little value, so that one was a Christian, and did their work well; not stopping to murmur because it was not to their liking. So the years went by, and still Mr. Center watched and guarded her; and it was well that he did so, for before she was a woman life grew to be a hard thing for her.

A village had grown up at the foot of the mountain, just on the shore of the lake, and its public-house possessed great attractions for Job Grahame and his oldest son. He was the brightest of the three; and poor Hester's heart sank within her when she found that she could no longer depend upon him; that night after night the two would return from a drunken carouse, and only arise the next morning to betake themselves to the scene of their last night's degradation. That is not a pleasant time to remember; it makes the tears come to Hester's eyes now when she recalls how earnestly she used to pray for one quiet hour, when, with Milton or Shakspeare, she could dream by herself. But I am glad to say she did not neglect what the selfishness of others threw upon her. She planned, she asked advice, and in the autumn the barn held nearly as much as when old Grahame mismanaged the farm. And there were still leisure minutes, and every one was improved, so that once a fortnight she trudged down the mountain to her teacher. Once, as she was reciting a lesson, she chanced to look up, and saw, sitting at the other end of the room, a man whom she did not know, and whom her teacher carelessly presented as "My nephew, Mr. Brownlow," and then asked the next question.

When the lesson was finished Paul opened the door for Hester, as he would have done for any woman, she thanking him by a little bend of her head; and before she had walked a mile she had forgotten his existence in the fascinating pages of "Marmion." A deep sigh, as she reached her own door, told that she thought there was a long distance between the book and milking the cow; but the smile never left her face as she did all her work that night, for she was young, and youth makes not much of stepping over the line which separates fact and fancy.

A few days after, as she was picking up some chips in the door-yard, her deep sun-bonnet pulled over her face and her thoughts with Lady Clare, a voice at her side startled her by saying, "Good-evening."

She looked up hastily, and saw Mr. Brownlow. The "good-evening" was returned; and then the gentleman, taking a book from his pocket, said, "My uncle says you are fond of reading, and as I was coming this way I thought I would bring you something new."

"Oh! I am so glad!" was the eager, joyous cry; and Hester let fall the chip-basket, and, taking the book, seemed completely absorbed in its contents.

Mr. Brownlow smiled. He did not know what to make of this young girl; but being a patient man, he seated himself upon a log and looked at her.

Thirty-five years had passed over Paul Brownlow's head—years in which he had enjoyed more than most men do in a lifetime. Inheriting a large fortune, he had not known a single ungratified want until a few months before, when he had trusted his property in a speculation that failed and ruined him—if a man can be ruined by losing his money. But he was no weak boy to shrink and shiver at what life gave him; so he entered a lawyer's office, worked hard, and the week he was at his uncle's saw him admitted to the bar—beginning at so late an hour the struggle for fame and livelihood

which many men earn, if they earn it at all, before that time.

When he was a rich man many mothers had paraded their daughters before him, and rumor had many times coupled his name with that of the reigning belle; but none of these women had power to move him. Indeed, he had sometimes distrusted his own ability to love. He had looked around his quiet, luxurious library, with its old books, its fine paintings, and beautiful statues (every one of which his own taste had collected in his foreign tours), and said that one room had more charms for him than any woman's face, however beautiful, or woman's heart, however loving. If he had thought so when ease and luxury were his, how much more when toil and poverty stared him in the face!

He was not a great man, but he had a good heart, and that strong will and patient perseverance which mean almost genius. One quiet month he had resolved to pass at his uncle's; after that he would count each day as loss that did not advance him a long way upon his upward road.

He was a little interested in his uncle's account of Hester, and her earnestness as she recited a prosaic lesson in Latin Grammar upon that first day of their acquaintance rather pleased him. As I have said, she did not remember him long, but he watched her climbing the mountain, eyes bent on book, yet just as secure of foot as a mountain goat, and could not help smiling a little to himself to think that his eyes would follow her so persistently. He could not help thinking of her long after the winding path concealed her from his view; and in the two or three days that intervened between that first meeting and his call upon her he surprised his good uncle not a little by asking him if he did not wish to send his pupil Hester some books. Mr. Center replied that she came after her books when she wanted them, which reply made Paul ask, "How often?" "When she gets time," was the answer; whereupon Mr. Brownlow thought he should do a very kind thing if he carried her one. So the afternoon I have told you of, he started with a volume of Woodstock, and during the course of his hard walk came to the conclusion that he was doing a decidedly foolish thing. He changed his mind after he heard the joyous exclamation, and saw the bright eyes sparkle as she took the book. And all this time he was seated upon the old log, looking at Hester. If the pages had been open before his own eyes he thought he could not have told more clearly what she was reading, for flushing cheek and ever-changing eye told him how imagination possessed itself of the fascinating story.

I think Hester must have felt his gaze, for she looked up after a time and seemed to be aware of her incivility.

"I am very sorry I have left you sitting upon the stump so long. Won't you walk into the house and rest you?"

Paul thought he could not stop, but found he could stop long enough to find out her opinion of "Marmion;" and as she told him, he did not fail to notice the freshness of her ideas, even of her forms of expression. She had not read the book—she had lived it; she was no unmoved spectator; in very deed and truth she had acted her part in those deeds of chivalry. At length, with a half-smile, she resumed her long-neglected employment of chip-picking, her quick sense of the ridiculous telling her at that particular moment how amusing it was for a barefooted girl like herself to pass so much time amidst the stately revelry of palaces, with knights and high-born dames for her companions. Paul saw it too; and although she was much too honest and noble to think herself lowered by her surroundings, he could not help pitying her as the quick blood crimsoned her cheek when she saw him glance almost unconsciously at her bare, brown feet. Timidly, yet most earnestly, for she was very thankful for the book, she pressed him to stay and share their supper of bread and milk, and, wondering at himself, he at last consented. Poor Hester, she has never forgotten how happy she was that father and brother were sober that night. It was not the last bowl of milk he drank in that little house, for month after month went by, and still he dallied at his uncle's; and when the autumn came he could no longer deny that Hester Grahame's smiles and words were the dearest things on earth to him; that to have and hold that simple girl would be the most precious possession that life would give him. For the first time in his life he found a part of himself which he could not master. And how was it with Hester? She has told me since, amidst tears even, that no summer of her life was like that; she has told me Mr Brownlow did almost every thing toward making her what she afterward became; how he taught her, read to her, and, more than all, saw what none had seen before, that by-and-by this young girl would find in herself a power of utterance that would place her high in the world of authors. She has told me how a sense of rest came to her through him; how his calmness strengthened her, and that his keenly-felt appreciation became the dearest part of her life. And yet, close to womanhood as she was, she did not dream that she loved Paul Brownlow other than as a friend. She had read of love and lovers; but it was a grand thing for poems and for plays, suited to gallant knights and courtly women, but it was altogether above her simple life. And Paul saw it—saw that she was as free and unrestrained in her intercourse with him as she would have been with a dearly-loved brother; and to his honor be it spoken, not by word or look did he try to draw away the screen from the pure heart. He could not marry her then (oh, how he longed for the money that he had thrown away upon himself!); he had only his brain and his hands; he could not tell yet if there was force enough in them

to support himself; and Hester herself was fastened at home, for her father had been growing infirm all summer, and now scarcely ever left the house. It was very hard for him to leave her there. He saw what her life must be, and he longed to take her in his arms and give her rest and leisure by his own toil; but he could not do it then. "At least," he said, "I can wait one year before I tell her this that she does not dream of." So one night he walked up the mountain and tried to say his "Good-by" simply, as friends say it; but he made a poor dissembler, and if Hester had not been so unconscious, if she had not trusted him so entirely, he never would have kept the promise he made himself. He would have taken her little form very close to his heart, and in wild words, such as he, calm man, never thought of before, would have told her what she was to him. But her simplicity checked him; so he only told her that he should write her very often, should send her books, and think of her many times each day. He told her how his letters and her answers would pass through his uncle's hands; then released the hands that had been hidden in his almost ever since he came, and pressed his lips to the brow that he hoped would lie on his bosom for many a year; then went away; and many white hairs mingled with his dark locks ere he saw Hester again. The parting was not to her as it was to him; for she was young and ignorant of the world's ways, and never thought but he knew best. He said it was right for him to go; that took away the sting for her; still she was very lonely. She did not try to disguise the fact to herself, and many places whose beauty attracted her were shunned because they brought to her so many memories of him. The letters came and went, almost the only events in her life. The minister was old and feeble, and did not try to teach her now, so she worked on by herself, learning more each day than the student of many a college does in a year. Her tact and diligence did much for the farm; so that matters were rather looking up with them when her oldest brother was attacked with fever, and after weeks of suffering died.

While she was watching him her old friend, Mr. Center, died by reason of years, and when she found time to think, she mourned his loss deeply; but not for many years did she know that with him she lost the great blessing of Paul Brownlow's love. Upon the same day that Mr. Center was seized with paralysis, a letter came from Paul to Hester telling her that he was obliged to go to France for a client, that he was succeeding in his business as he had never dared hope he should, and then in words as true and manly as a great love could make them, he told her what she was to him, and besought her, if she could indeed love him, to wait and trust him until he could take her to the home that would certainly be theirs at last.

But Hester never received that letter. It was probably overlooked among the mass of papers Mr. Center had accumulated; so that Paul waited and waited, and still no answer. Then from different European cities he wrote, and wrote again, without ever receiving one word in return, and by-and-by he thought her dead; and the weary heart that man carried about for many a year proved how dear she had been to him. I have no power to tell you how Hester toiled and hoped through all the years that lay between her and the success which was at last given her. While her father lived she knew she could not leave home, but she never lost sight of her aim; and as, summer after summer, she taught the district school, she denied herself dress and many little luxuries any other woman would have called indispensable, in order to buy good strong books that would help her to mould herself, until her character should be somewhat in unison with all noble, beautiful things. She called no work beneath her. Any thing she could find she made her hands do, and withal there was not a better daughter or sister in New Hampshire.

Of course there were moments of sadness, almost despair; but she noted God's discipline with the hardy mountain pine near her own door, and said, "So He deals with me; it is hard, but I can bear it." Full well she knew that she loved Paul Brownlow—that knowledge came to her with the sickness of heart that followed the cessation of his letters—but she did not repine, although her eye was very dim, and her lip quivered painfully as she tried to be brave, and tell herself, "That the love would be very blessed if God had given it; but so long as He withheld it, He could make up for it wholly, entirely."

And so her beautiful youth passed; and when the infirm old father died and one brother married, Hester took the other, who was partially insane, into the city with her, and with her brain and a few manuscripts attempted to support herself and him. She did not know how much her poems and stories were worth; but she could not help hoping that the words she had prayed over so earnestly, and felt so keenly, would not fall entirely unnoticed by her fellows. That city life is too painful for me to write much of. If you have ever haunted publishers' offices, beseeching them to give you work, not for fame but for daily bread, you can tell a little about it; if you have never done it, bless God that you have no such bitter experience to remember. As Hester was unknown, the sketches and poems, although accepted, were not often paid for, and when she found no money came from them, she procured sewing, and managed to do what Thomas Carlyle says is the first problem of all philosophy—"Keep soul and body together." Day after day she sewed, and waited patiently her time, which came at last; for her poems began to be copied, and one day she received a letter from the editor of a popular newspaper offering her steady work and good pay. Now that her books are the fashion, she thinks with sadness of the

first money that gentleman paid her, for she sees again the childish look with which her helpless brother regarded the bright fire she dared afford that night. She knew not all the agony of that upward ascent until she stood upon the summit.

Very soberly, very earnestly, she did her work—God never loosing her from care for one single day; for no hand but hers ever ministered to her brother's wants, and every evening she sang the simple hymn which would alone persuade him to lie quietly in his bed. There was no great variety in Hester's life; but still she persevered, and at the close of every year she might have said, "I am gaining—nearer my end than I was a twelvemonth since;" and the day came when she lived comfortably, and allowed herself to rest now and then.

And all this time Paul Brownlow was in the same city, about his own business, their paths never for one moment crossing. He had not forgotten Hester—his love for her kept his heart young and pure, and many times he drew back his hand from a selfish act, for he felt those pure eyes upon him. Life gave him very much of success. He came from Europe, and found himself famous for the skill with which he had managed an intricate law question; but almost every evening he thought, "Life has given me all but the treasure I valued most—that was not for me." But God was very good to these two lovers. One Christmas-day a friend handed Paul a little volume, saying, "Here, Brownlow, is your Christmas present." The book chanced to be Hester's poems. Paul read many of them, and liked well their quiet, tender beauty. It was as if the heart of the writer were opened to him; he saw how it had waited, suffered, conquered, too, at the last; noted its wonderful acquaintance with nature, its earnest sympathy with truth, its loving faith and invincible will. Then he read a descriptive poem, but stopped at the last line in perfect amazement. Who wrote this book? He remembered one such day, one such scene, in his life, and—Hester Grahame was very near him. And that line was certainly an allusion to himself.

The book was thrown down, and he went from his room, hunted up his friend, and in a few words obtained the information he wanted. He sought Hester's quiet, secluded home—more than ever solitary on this Christmas evening, for out of it she had followed the dead body of her brother not many hours before. She sat by her west window, and as the servant opened the door Paul saw again the face which was dearer to him than aught else upon earth. She knew him directly, and held out her hand; but when I tell you that she is now Paul Brownlow's wife, you will not doubt his right to the kiss which he certainly took. They had been long parted, these lovers; they had loved more than most men and women do; and yet, by God's grace, they had been able to stand alone, to do each their life-work well; and you can understand why, as they sat together, they spoke no passionate words—why silent caresses and murmured thanksgivings were their only signs of betrothal. They had nothing to wait for; so on the morrow they were married—and you know, now, why Paul Brownlow loves his wife so much—why, when you turned the leaf down in that volume of "Woodstock," he told you, "You may do it in any other book of mine, but not in that;" for that was the first book of his that his wife's fingers ever touched.

I heard him ask Hester, one day as they sat very close to each other, "if she was content;" and when she said, "Perfectly content," I knew they were the dearest words he had ever heard.

BIRD MINISTRY.

WHAT a grand old nurse Nature is! The griefs of man are not more numberless than are the remedies for them which she has in her great store-house. She deals always in simples, and is ever unerring in *the fit*, will we but trust her. Do we come to her with the heartache, and throw ourselves upon her bosom, and ask her for sympathy and help? How kindly does she receive us, and fan us with her breezes, and soothe us with sweet sounds, and anoint us with the balm of a thousand flowers! The imps that have tortured our hearts take to themselves wings and fly away, we know not whither, as we receive her soothing attentions. Is the spirit fretted by the losses and crosses of life? How skillfully does she mix up her sunshine and green leaves and fragrant flowers and strengthening winds; and to one who will go forth and willingly take the medicine at her hand, how soon is the dose operative! All *pathies* are alike at her fingers'-ends. She is allopathic, homeopathic, or even hydropathic, to suit the taste or necessities of her patients. To be sure she does not force open the jaws and compel the swallowing of her prescription, whether we will or not. We must come to her lovingly, and ask in faith for help; and at once, wisely and well, she bestows it. And there is no bill sent in claiming remuneration for either medicine or prescription. Not one whit of a quack is she. She does not have a mint, or a julep, or some No. 6 to give to all indiscriminately for all ailments, whether colds or fevers. But she takes the diagnoses of cases most skillfully. The pulse is felt, all the symptoms looked at, and the remedy applied accordingly.

Is the heartache very severe? She does not burst upon us at once in the full splendor of her glory, with all her strong voices and pleasant odors and bright hues, and so disgust us by the want of consonance with our feelings. She vails herself when she meets us, and mayhap sends a violet to peep out from between its green leaves, or a little bird to charm us with its untaught song, tuned carefully to the complaining minor; and then, when this homeopathic dose—*this similia similibus*—has done its work, with the most careful modulation, she gets into her own

full, joyous major, and the heart soon loses its heaviness.

In the winter the good dame seems to retire from business, and give up her practice to clumsy second-hand practitioners, who administer pills and powders, calomel and jalap, until the whole creation groans. But this is a mere pretense. All the while she is really at work in her laboratory, getting ready for a new season; and when it comes, most vigorously does she set to work. Pools of Bethesda are every where, and the waters continually troubled. The poor, the lame, and the halt have only to wash and be whole. Melancholies, disgusts, and despairs, that have become chronic during her vacation, are soon tumbled off; and heartaches, and carpings, and complainings gotten rid of.

Far be it from me to slight any of the sweet influences of nature or single out one and say to it, Thou art better and more holy than thy companions. There are debts which have long been due to each and all of them which I would fain pay when the exchequer is ready for it. But as only one thing can be done at a time, I would now make a small installment on my account with the good Dame for value received *per* the notes of her minstrels, the birds.

I remember, not many years since, there was a time when spring played the laggard. Long after the time when the almanac assured us she ought to have come, bearing in her hands birds, and flowers, and the green leaves with the pleasant breezes playing between them, she lazily delayed her coming, and let winter continue to hold dominion over us until our hearts were weary with waiting.

I was at the time a sojourner in a land that lies far to the westward. One Saturday night, just as the clock sounded its curfew notes, a little bird flew in at my window, that was open just far enough to admit its tiny form. The storm was raging without, and I knew it had come to me for protection. It was a wee thing, not so large as a sparrow, and trembled with fear and cold. I caught it in my hands and was endeavoring to assure it of sympathy and friendly care, when, as I stepped into the hall, I heard a knocking upon the glass that was over the front door. Immediately the door was opened and in came the mate of the bird I held in my hand. At any rate they were as like as two peas. I liked the way it had announced itself. It did not ring the bell like any common visitor, but, in evidence of familiarity and confidence, gave a pass-word entirely intelligible to me who was in communication, but would have escaped the ear of the uninitiated or unfriendly.

That night the two had shelter from the storm, and a night's lodging free of charge. But when the night was gone and the storm was over they had leave to go where they listed.

But it was soon revealed to me that they had been sent as heralds or spies, or in the two characters combined, and that they had carried back a good report. For upon that day, which was the Sabbath, they, and their brethren and sisters according to the flesh, came and occupied a little tree that stood just beneath my window, and all day long made it vocal with sweet melodies. They were my preacher and my orchestra on that day. They carried my thoughts backward to the pleasant valley where I had first learned to love their songs—to the time when I had no more care than they, and was quite as light-hearted and forward, to "the land of the Hereafter," where swift wings will carry the spirits of the "just made perfect" on messages of mercy and errands of love to our Father's sorrowing children, who have not yet been gathered into "the house not made with hands."

How many ways Nature has of keeping us simple-hearted and childlike, if we will but let her!

It would do us all good, it seems to me, if we would oftener yield to the sweet influences that take us back to the time when we were guileless children, and knelt nightly at our mother's knee to say "Now I lay me down to sleep." Even business men, who are almost surrounded by brick and mortar and buried up therein, would often be rested by thoughts of birds and brooks and trees and flowers and clear country air, and they might make money all the faster thereafter and therefor. Would they sometimes let their thoughts go back to "the grand old hills," the trees and grass, the birds and butterflies, their hearts would not grow old so fast, and a love for the freedom and freshness of nature would be kept alive therein. Their vision, which is almost obscured by dollars and cents, would be cleared, and their eyes opened to see other values than commercial, and their hearts, instead of turning into money-chests, would retain a little of their youth and freshness.

But to go back to the birds. Dear little creatures! how they always stir up my heart until the good gets uppermost! And yet most unuseful of all useless things are they—most *un*-American in their notions as to the importance of creating money values. To be sure, they are useful to those who are in possession of that rather unfashionable commodity—a heart, as they always enable those who possess it to ascertain precisely where it is—whether it is in the right place or not.

Thorough little Democrats are they all, singing just as merrily and sweetly for the ragged urchin that has not where to lay his head as for the grandest millionaire; being just as glad to cure the heartache for the outcast maiden as for the finest lady arrayed in silks and laces.

Yet to the strict utilitarian most unprofitable and *shiftless* things do they seem, singing away, hour after hour, as hard as they can, to any one who will take the trouble to listen; never asking even "a quarter" for admission to their concerts, or passing around a hat just to get enough to pay expenses! They ask no "eight dollars a day" for laboring for the pub-

lic good; but work "free, gratis, for nothing," and board themselves into the bargain! And yet churlish men will shoot them because they come to their cherry-trees and help themselves to refreshments after their fatiguing labors are over; or perhaps these men, in case of their own absence, put up other scarecrows in the trees, and so the poor birds, naturally mistaking the effigies for the originals, either go away dinnerless, or eat in mortal fear, and so impair their digestion. And that, too, when they have sung themselves hungry for the benefit of these same "lords of creation"—ungrateful wretches that they are! The birds are welcome to every blessed cherry that is growing upon my trees or ever shall grow there. No ugly scarecrow shall ever frighten them away or give them the palpitation of the heart.

How often I have wished that I had all the birds in the world shut up in a great cage, with nothing to do but take care of them! Would they not have soft beds and good dinners! None of them should ever die, without benefit of clergy, from the shots of wicked men or the stones of cruel boys. When they "paid their debt to nature," quietly and carefully should they be laid down to rest with "the kings and counselors of the earth."

This love for birds is one of the earliest feelings that I remember, and I have sundry violations of the command "Thou shalt not kill" lying heavily upon my conscience in consequence of attempts, in the "days langsyne," to make divers individuals of them forsake their nomad life and dwell in fixed habitations.

Richer than Crœsus was I once, when I had given me, to be all my own, a beautiful red-bird, recently captured. He wore upon his head a crest that waved more gracefully than the plume of an ancient knight. I put him in a cage, and gave him candy and cake and every nicety that the house afforded. Nay, to have secured its life I would have given all my earthly possessions, including my new waxen doll, that opened its blue eyes so bewitchingly whenever it was *made to*, with all its paraphernalia of dresses and head-gear. I was unwearied in my attentions. But my efforts were vain. The little bird drooped and died. Died, I suppose, of a broken heart. Often since when I have pined in desolation in a strange place, and my heart has seemed nigh unto breaking with its longing for "the loved ones away," I have thought of that little bird that folded its wings so mournfully and died because it was kept from its nest and its loved ones.

The chipping-bird was my earliest acquaintance, and the mere flapping of its wings will stir within me now every recollection that is dear of home and childhood. With what earnestness and assiduity did I seek to sprinkle salt upon its tail, that I might catch it and have a real live bird of my own! as I was assured that the one would follow the other as certainly as any effect follows any cause whatsoever. But the task was about as difficult as to find the pot of gold at the bottom of the rainbow. No single one of the birds would ever stand still to be salted!

I have a mournful recollection connected with this same little bird. I came home from school one summer's day feeling that the whole world was "upside down." I had been sitting upon a backless bench the live-long afternoon. The young life drooped within me as the flower shrinks away from the continued gaze of the sun. Besides, I was at the foot of my class, and had been put under the master's desk for whispering. Coming home in such a mood, I threw my bonnet behind the door, and deposited my book upon the floor with a decided emphasis. I was then ready to make baby cry, pull pussy's ears, or do any other desperate and unamiable thing. Even my new doll had lost its power to charm, and would not behave itself! At length, weary of every thing because weary of myself, I went out to my garden. This was a charmed place. To it daily were my "earliest visitation and my last." It was a little spot, not larger than a breakfast table, which I held in fee simple. It was all my own, to do just what I pleased with and in. I had planted there a pink-root that dear Kate had given me, and red and white and yellow four-o'clocks, and speckled ones besides, and there were lady's slippers so very double that the tiniest foot of elf or fay could not have found its way into them. Then there were two little johnny-jump-ups, with their tri-colored faces peeping up from between the green leaves, to say a cheery good-morning to me when I made them my morning visit. But the crowning glory of the whole was a great yellow sun-flower that was so big and so high I could not see the whole of it at once. I generally contrived to escape from mamma's eyes, and once or twice during every shower steal out there to see how the flowers liked the rain, and whether they were well-bred enough to say "Thank you" for it, as they ought. I was always in my garden as soon as I came from school, to see if the four-o'clocks did open their eyes just at the right time, or if some of them did not occasionally deserve a fault-mark for being tardy, and to ascertain if the sun-flower did always impudently stare the sun right in the face. I must not forget to mention that, in the corner just by my bed, there stood an emigrant barberry bush, beneath which I used to lie, and, while the sun was baking my face, watch the butterflies and wonder where they went to in winter, and what kind of a bed the sun slept in at night, and if the angels up in heaven had to learn spelling lessons, and if they had any backs to their seats up there, and if they all had as large flower-beds as they wanted and could raise as many flowers in them; and much I wondered if these same blessed angels were all as fortunate as I was, and had Aunt Hannahs in the country where they could go and stay as long as they pleased, which *I* could not do.

For days before the afternoon aforesaid I

had been watching with the intensest delight the operations of a pair of chipping-birds that were nesting in this same barberry bush. I had seen them carry the straw and construct the outer walls of their tenement, then borrow some hair from the back of a good-natured ox for ceiling purposes, and afterward carefully put in the lining of down. I had seen, soon after this was done, three little eggs deposited in this snug receptacle so carefully prepared. They were little things not much larger than great O in the primer; and, to my childish fancy, the birds seemed to have stolen some blue from the sky with which to color them, over which, while they were putting it on, some dust had blown, or snuff from grandpapa's great silver snuff-box.

I am sure the architects themselves were not prouder of their work than I, or disliked more to go away from it. There was a league of amity between us. I gave them a part of every meal, and they were fearless of my approach, for they soon learned that their happiness was precious to me.

Thither, as I have said, I went that evening, and there was one of these identical little birds singing away with all its might as merrily as any little bird ever sang in the world. Why should it not? Its house was all builded, and there were no carpenters coming with unpaid bills for doing it. Its mate was well and happy, and they had nothing to do but love one another. But for the first time the joyous notes of the little songster fell gratingly upon my ear. The sense of justice spoke in the child's heart and demanded sympathy in its griefs from those in whose joys it had so much rejoiced. "It mocks me!" I cried, passionately. "It mocks me because I am feeling so badly." In a moment, almost before I knew it, a stone that lay at my feet was thrown, and the bird lay gasping before me. My passion was gone in an instant. I caught the bird in my hands, and held it to my bosom until it grew stiff and cold in death. I kissed it again and again, while the tears fell thick and fast. The dear little bird was dead, and I with my own hands had killed it. Worlds would I have given, had they have been mine to give, to have had power to call it back to life. But the wish was vain. That which I could not give I had taken away. Beneath the barberry bush I dug its grave, and sorrowfully laid it down to sleep with all the departed; but from that hour my garden lost its gayety. I always approached the bush with sadder heart and slower step.

There are times in the experience of all when the spirit is so worn by its contact with uncongenial souls, or the heart so wounded by the cares and deceits of business, that it refuses to be comforted by any of man's devices. It must receive its benediction from some of the sweet influences of nature or go unblessed. In none of her utterances does she speak more soothingly or with more infallible power to charm than by the songs of her minstrels.

It is stated by the biographer of Kant, the great metaphysician, that at the age of eighty he had become indifferent to much that was passing around him in which he had formerly taken great interest. The flowers showed their beauteous hues to him in vain; his weary vision gave little heed to their loveliness; their perfume came unheeded to the sense which had before inhaled it with eagerness. The coming on of spring, which he had been accustomed to hail with delight, now gave him no joy save that it brought back a little hedge-sparrow, which came annually and made its home in a tree that stood by his window. Year after year, as one generation went the way of all the earth, another would return to its birth-place to reward the tender care of their benefactor by singing to him their pleasant songs. And he longed for their return in the spring with "an eagerness and intensity of expectation."

I remember how I was rested once by the song of a little bird. I had walked far, and wearily went onward, dragging heavily my aching limbs. Winter held every thing bound in its unrelenting grasp, and presented to the eye no pleasant or grateful thing. The face of mother earth was bare and uninviting. The trees stretched out despairingly their naked limbs. The sky, too, looked frowningly upon me. Hope was about taking its flight, when a little bird came and sat upon a limb just before me, and sang of hope and rest. When I came where it was it flew on before me again, and so on and on, ever singing, until I came to my resting-place, when it flew away to accomplish its mission of hope and love to some other one who was weary or suffering.

Even the commanding tone of that pedagogue, the whip-poor-will, does not fall gratingly upon my ear as it comes borne upon the still air of the evening. To be sure, in these days of reform and refinement, the command is considered rather old fogyish and indelicate. But the bird can refer to the law and the testimonies, and quote chapter and verse; for it is but other language for the "Spare not the rod" of the wisest man about whom the Catechism asks us. I like the conservative spirit which keeps it from running after any of the new-fangled notions. It does not say, harshly and coarsely, "Flog that rascal Bill!" nor, in more modern and polite parlance, "Chastise that refractory William!" But just as its father and grandfather, and all its ancestors away back to the time of "good old Noah," have said, it says, "Whip-poor-Will, Whip-poor-Will!"—thus using an expletive of pity with an abbreviation of affection to show that the command is given reluctantly, and from a conscientious conviction of its deservedness.

I have sometimes thought that "will," in bird-language, was a generic term, and a synonym for "man" in our own; and, as used here, was intended to be applied to all mankind; and that the command, thus applied, was the utterance of a nice sense of justice which would give to

all their deserts. This bird, as every one knows, has its reflective organs greatly in preponderance, and is, therefore, of a meditative character. Its days are devoted to solemn thought upon the ways of the world, and its nights to the announcement of its conclusions. Now who that looks upon mankind with an eye half open does not see that there are few who so live through the day that, by the time night comes, they do not deserve the punishment this bird-judge so sympathizingly pronounces? Nay, who of *us* would escape, if all had their deserts?

The mournful cooings of the meek-eyed dove always touch my feelings, and make me certain that I have still a heart within me. Who can resist the influence of its plaintive strains? The whole appearance of the bird, too, is in keeping with the minor inflection of its song. There is a subduedness about the expression of the eye, a meek looking-upward for sympathy, that always makes me wish to do something to bless it. It comes to us in no flaunting array of scarlet or yellow, demanding admiration whether we feel it or not; but in the unpretending garb of humble worth it presents itself. Yet, though unobtrusive, how tasteful is the blending of colors, the curving of the neck and the rounding of the breast, how beautiful! Who but the Great Architect could so have moulded form as to produce such beauty?

Very serious, too, seem to be its views of life. It does not chirp and chatter away its existence. Looking beneath the surface, it is not cheated by the smile on the outside, but sees the heartache within, and then sends forth its sympathizing song to tell the lonely and the sorrowing that their griefs are cared for, and that nature has in her great heart a feeling respondent to their own.

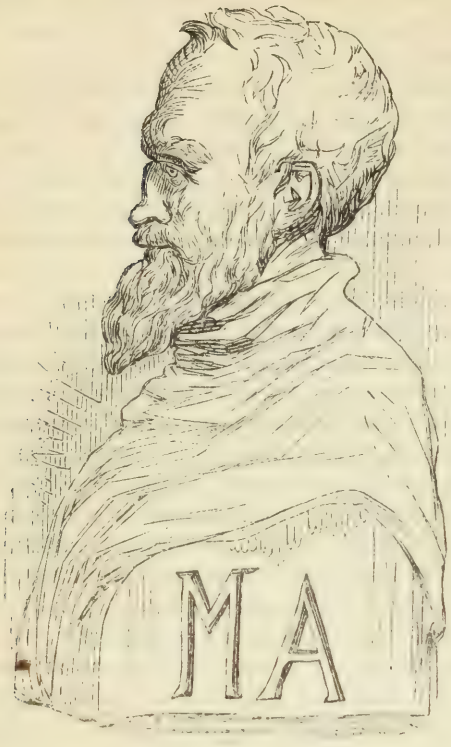
Among my feathered friends there is an emblem of faithfulness that commends itself to my conservative spirit in these days of instability and overturnings. While kingdoms pass away, and the old every where gives place to the new, this bird, "faithful among the faithless," sings ever the same song, "Bob White, Bob White!" There comes forth no other utterance—no modern improvements are ever adopted. It never talks of Reginald, or Mortimer, or Malcolm; but, with the fixedness of woman's devotion, tells us ever and forever of "Bob White, Bob White!" though who the said Bob White was, or what he did to make him worthy of perpetual remembrance, the memorializer sayeth not, neither can any man say.

With a liking for looking at the inward significance of things, and seeing correspondences between the different orders and ranks of creation, I sometimes trace resemblances between these feathered bipeds and Plato's bipeds without feathers. At such times the whip-poor-will shadows forth the croakers among mankind—those that tell us that all mankind are knaves and villains, and all the stock in trade would be insufficient to buy halters for those who deserve hanging!—those also whose eyes are ever open to see any want of righteousness in their neighbors, and their tongues ever ready to pronounce sentence of condemnation, while they entirely forget to look after their own ways. They demand a whipping for "poor Will," while they forget to inquire how many stripes "the beam in their own eye" makes them worthy to receive.

The dove finds its counterpart in the meek and gentle of the earth, who have open hearts and ready hands for all the sons and daughters of affliction; yet their love flows out in silent rills, and blesses without noise or ostentation.

The lark, with its gay, glad song, is an emblem of the light-hearted, the care-hating. If the sun shine to-day, they make not their hearts sad lest shadows and darkness come to-morrow. If to-day there are storms and darkness, they see the sun shining behind the cloud, and believe that the silver lining will soon be turned toward them. Human sun-flowers are they, that ever look the sun in the face—larks that have always a voice tuned to the notes of gladness.

Even the domestic hen, with its industrial cackle, saying over and over after every so worthy effort, "I've laid an egg—I've laid an egg!" is not without its prototype among men. I never hear a man telling of the great things that he has done, the enterprises he has accomplished, how every thing would have fallen through or nothing been attempted had *he* not have been there, without thinking I hear an imaginary hen cackling just over his shoulder, and declaring, vociferously, "I've laid an egg—I've laid an egg!" Nay, such a vision as this has sometimes greeted my inward eyes even in the sacred desk! Ah, yes! the hen has many imitators among men who will not let their good deeds proclaim themselves, but they must needs cackle until all run to see. Nay, there are those who will even do the deed for the sake of the cackling!



THE VIRGINIANS.

BY W. M. THACKERAY.

CHAPTER LVII.

IN WHICH MR. HARRY'S NOSE CONTINUES TO BE PUT OUT OF JOINT.

MADAME DE BERNSTEIN was scarcely less pleased than her Virginian nephews at the result of Harry's final interview with Lady Maria. George informed the Baroness of what had passed, in a billet which he sent to her the same evening; and shortly afterward her nephew Castlewood, whose visits to his aunt were very rare, came to pay his respects to her, and frankly spoke about the circumstances which had taken place; for no man knew better than my Lord Castlewood how to be frank upon occasion, and now that the business between Maria and Harry was ended, what need was there

of reticence or hypocrisy? The game had been played, and was over: he had no objection now to speak of its various moves, stratagems, finesses. "She is my own sister," said my lord, affectionately; "she won't have many more chances—many more *such* chances of marrying and establishing herself. I might not approve of the match in all respects, and I might pity your ladyship's young Virginian favorite; but of course such a piece of good fortune was not to be thrown away, and I was bound to stand by my own flesh and blood."

"Your candor does your lordship honor," says Madame de Bernstein, "and your love for your sister is quite edifying!"

"Nay, we have lost the game, and I am speaking *sans rancune*. It is not for you, who have won, to bear malice," says my lord, with a bow.

Madame de Bernstein protested she was never in her life in better humor. "Confess, now, Eugene, that visit of Maria to Harry at the spunging-house—that touching giving up of all his presents to her, was a stroke of thy invention?"

"Pity for the young man, and a sense of what was due from Maria to her friend—her affianced lover—in misfortune, sure these were motives sufficient to make her act as she did," replies Lord Castlewood, demurely.

"But 'twas you advised her, my good nephew?"

Castlewood, with a shrug of his shoulders, owned that he *did* advise his sister to see Mr. Henry Warrington. "But we should have won, in spite of your ladyship," he continued, "had not the elder brother made his appearance. And I have been trying to console my poor Maria by showing her what a piece of good fortune it is, after all, that we lost."

"Suppose she had married Harry, and then Cousin George had made his appearance?" remarks the Baroness.

"*Effectivement*," cries Eugene, taking snuff. "As the grave was to give up its dead, let us be thankful to the grave for disgorging in time! I am bound to say that Mr. George Warrington seems to be a man of sense, and not more selfish than other elder sons and men of the world. My poor Molly fancied that he might be a—what shall I say?—a greenhorn perhaps is the term—like his younger brother. She fondly hoped that he might be inclined to go share and share alike with Twin junior; in which case so infatuated was she about the young fellow that I believe she would have taken him. 'Harry Warrington, with half a loaf, might do very well,' says I; 'but Harry Warrington with no bread, my dear!'"

"How no bread?" asks the Baroness.

"Well. No bread except at his brother's side-table." The elder said as much.

"What a hard-hearted wretch!" cries Madame de Bernstein.

"Ah, bah! I play with you, aunt, *cartes sur table!* Mr. George only did what every body else would do; and we have no right to be angry with him, really, we haven't. Molly herself acknowledged as much, after her first burst of grief was over, and I brought her to listen to reason. The silly old creature! to be so wild about a young lad at her time of life!"

"'Twas a real passion, I almost do believe," said Madame de Bernstein.

"You should have heard her take leave of him! *C'était touchant, ma parole d'honneur!* I cried. Before George, I could not help myself. The young fellow, with muddy stockings and his hair about his eyes, flings himself among us when we were at dinner; makes his offer to Molly in a very frank and noble manner, and in good language, too; and she replies. Begad it put me in mind of Mrs. Woffington in the new Scotch play that Lord Bute's man has wrote—Douglas—what d'ye call it? She clings round the lad; she bids him adieu in heart-rending accents. She steps out of the room in a stately despair—no more chocolate, thank you. If she had made a *mauvais pas* no one could retire from it with more dignity. 'Twas a masterly retreat after a defeat. We were starved out of our position, but we retired with all the honors of war."

"Molly won't die of the disappointment!" said my lord's aunt, sipping her cup.

My lord snarled a grin, and showed his yellow teeth. "He, he!" he said, "she hath once or twice before had the malady very severely, and recovered perfectly. It don't kill, as your ladyship knows, at Molly's age."

How should her ladyship know? She did not marry Doctor Tusher until she was advanced in life. She did not become Madame de Bernstein until still later. Old Dido, a poet remarks, was not ignorant of misfortune, and hence learned to have compassion on the wretched.

People in the little world, as I have been told, quarrel and fight, and go on abusing each other, and are not reconciled for ever so long. But people in the great world are surely wiser in their generation. They have differences; they cease seeing each other. They make it up and come together again, and no questions are asked. A stray prodigal, or a stray puppy-dog is thus brought in under the benefit of an amnesty, though you know he has been away in ugly company. For six months past, ever since the Castlewoods and Madame de Bernstein had been battling for possession of poor Harry Warrington, these two branches of the Esmond family had remained apart. Now, the question being settled, they were free to meet again, as though no difference ever had separated them; and Madame de Bernstein drove in her great coach to Lady Castlewood's rout, and the Esmond ladies appeared smiling at Madame de Bernstein's drums, and loved each other just as much as they previously had done.

"So, Sir, I hear you have acted like a hard-hearted monster about your poor brother Harry!" says the Baroness, delighted, and menacing George with her stick.

"I acted but upon your ladyship's hint, and desired to see whether it was for himself or his reputed money that his kinsfolk wanted to have him," replies George, turning rather red.

"Nay, Maria could not marry a poor fellow who was utterly penniless, and whose elder brother said he would give him nothing!"

"I did it for the best, madam," says George, still blushing.

"And so thou didst, O thou hypocrite!" cries the old lady.

"Hypocrite, madam! and why?" asks Mr. Warrington, drawing himself up in much state.

"I know all, my infant!" says the Baroness in French. "Thou art very like thy grandfather. Come, that I embrace thee! Harry has told me all, and that thou hast divided thy little patrimony with him!"

"It was but natural, madam. We have had common hearts and purses since we were born. I but feigned hard-heartedness in order to try those people yonder," says George, with filling eyes.

"And thou wilt divide Virginia with him, too?" asks the Bernstein.

"I don't say so. It were not just," replied Mr. Warrington. "The land must go to the eldest born, and Harry would not have it otherwise: and it may be I shall die, or my mother outlive the pair of us. But half of what is mine is his: and he, it must be remembered, only was extravagant because he was mistaken as to his position."

"But it is a knight of old, it is a Bayard, it is the grandfather come to life!" cried Madame de Bernstein to her attendant, as she was retiring for the night. And that evening, when the lads left her, it was to poor Harry she gave the two fingers, and to George the rouged cheek, who blushed for his part, almost as deep as that often-dyed rose, at such a mark of his old kinswoman's favor.

Although Harry Warrington was the least envious of men, and did honor to his brother as in all respects his chief, guide, and superior, yet no wonder a certain feeling of humiliation and disappointment oppressed the young man after his deposition from his eminence as Fortunate Youth and heir to boundless Virginian territories. Our friends at Kensington might promise and vow that they would love him all the better after his fall; Harry made a low bow and professed himself very thankful; but he could not help perceiving, when he went with his brother to the state entertainment with which my Lord Castlewood regaled his new-found kinsman, that George was all in all to his cousins: had all the talk, compliments, and *petits soins* for himself, while of Harry no one took any notice save poor Maria, who followed him with wistful looks, pursued him with eyes conveying dismal reproaches, and, as it were, blamed him because she had left him. "Ah!" the eyes seemed to say, "'tis mighty well of you, Harry, to have accepted the freedom which I gave you; but I had no intention, Sir, that you should be so pleased at being let off." She gave him up, but yet she did not quite forgive him for taking her at her word. She would not have him, and yet she would. Oh, my young friends, how delightful is the beginning of a love-business, and how undignified, sometimes, the end! What a romantic vista is before young Damon and young Phillis (or middle-aged ditto ditto) when, their artless loves made known to each other, they twine their arms round each other's waists and survey that charming *pays du tendre* which lies at their feet! Into that country, so linked together, they will wander from now until extreme old age. There may be rocks and roaring rivers, but will not Damon's strong true love enable him to carry Sweet-heart over them? There may be dragons and dangers in the path, but shall not his courageous sword cut them down? Then at eve, how they will rest cuddled together, like two pretty babes in the wood, the moss their couch, the stars their canopy, their arms their mutual pillows! This is the wise plan young folks make when they set out on the love-journey; and—oh me!—they have not got a mile when they come to a great wall and find they must walk back again. They are squabbling with the post-boy at Barnet (the first stage on the Gretna Road, I mean), and, behold, perhaps Strephon has not got any money, or here is Papa with a whacking horse-whip, who takes Miss back again, and locks her up crying in the school-room. The parting is heart-breaking; but, when she has married the banker and had eight children, and he has become, it may be, a prosperous barrister—it may be, a seedy raff who has gone twice or thrice into the *Gazette*—when, I say, in after years Strephon and Delia meet again, is not the meeting ridiculous?

Nevertheless, I hope no young man will fall in love, having any doubt in his mind as to the eternity of his passion. 'Tis when a man has had a second or third amorous attack that he begins to grow doubtful; but some women are romantic to the end, and, from eighteen to eight-and-fifty (for what I know) are always expecting their hearts to break. In fine, when you have been in love and are so no more, when the King of France, with twenty thousand men, with colors flying, music playing, and all the pomp of war, having marched up the hill, then proceeds to march down again, he and you are in an absurd position.

This is what Harry Warrington, no doubt, felt when he went to Kensington and encountered the melancholy reproachful eyes of his cousin. Yes! it is a foolish position to be in; but it is also melancholy to look into a house you have once lived in, and see black casements and emptiness where once shone the fires of welcome. Melancholy? Yes; but, ha! how bitter, how melancholy, how absurd to look up as you pass sentimentally by No. 13, and see somebody else grinning out of window, and evidently on the best terms with the landlady. I always feel hurt, even at an inn which I frequent, if I see other folks' trunks and boots at the doors of the rooms which were once mine. Have those boots lolled on the sofa which once I reclined on? I kick you from before me, you muddy, vulgar highlows!

So considering that his period of occupation was over, and Maria's rooms, if not given up to a new tenant, were, at any rate, to let, Harry did not feel very easy in his cousin's company, nor she possibly in his. He found either that he had nothing to say to her, or that what she had to say to him was rather dull and commonplace, and that the red lip of a white-necked pipe of Virginia was decidedly more agreeable to him now than Maria's softest accents and most melancholy *moue*. When George went to Kensington, then, Harry did not care much about going, and pleaded other engagements.

At his uncle's house in Hill Street the poor lad was no better amused, and, indeed, was treated by the virtuous people there with scarce any attention at all. The ladies did not scruple to deny themselves when he came; he could scarce have believed in such insincerity after their caresses, their welcome, their repeated vows of affection; but happening to sit with the Lamberts for an hour after he had called upon his aunt, he saw her ladyship's chairmen arrive with an empty chair, and his aunt step out and enter the vehicle, and not even blush when he made her a bow from the opposite window. To be denied by his own relations—to have that door, which had opened to him so kindly, slammed in his face! He would not have believed such a thing possible, poor simple Harry said. Perhaps he thought the door-knocker had a tender heart, and was not made of brass; not more changed than the head of that knocker was my Lady Warrington's virtuous face when she passed her nephew.

"My father's own brother's wife! What have I done to offend her? Oh, Aunt Lambert, Aunt Lambert, did you ever see such cold-heartedness?" cries out Harry, with his usual impetuosity.

"Do *we* make any difference to you, my dear Harry?" says Aunt Lambert, with a side look at her youngest daughter. "The world may look coldly at you, but we don't belong to it: so you may come to us in safety."

"In this house you are different from other people," replies Harry. "I don't know how, but I always feel quiet and happy somehow when I come to you."

"Quis me uno vivit felicior? aut magis hâc est
Optandum vitâ dicere quis potuit?"

calls out General Lambert. "Do you know where I got these verses, Mr. Gownsman?" and he addresses his son from college, who is come to pass an Easter holiday with his parents.

"You got them out of Catullus, Sir," says the scholar.

"I got them out of no such thing, Sir. I got them out of my favorite Democritus Junior—out of old Burton, who has provided many indifferent scholars with learning;" and who and Montaigne were favorite authors with the good General.

CHAPTER LVIII.

WHERE WE DO WHAT CATS MAY DO.

We have said how our Virginians, with a wisdom not uncommon in youth, had chosen to adopt strong Jacobite opinions, and to profess a prodigious affection for the exiled royal family. The banished prince had recognized Madam Esmond's father as Marquis of Esmond, and she did not choose to be very angry with an unfortunate race, that, after all, was so willing to acknowledge the merits of her family. As for any little scandal about her sister, Madame de Bernstein, and the Old Chevalier, she tossed away from her with scorn the recollection of that odious circumstance, asserting, with perfect truth, that the two first monarchs of the House of Hanover were quite as bad as any Stuarts in regard to their domestic morality. But the king *de facto* was the king, as well as his Majesty *de jure*. De Facto had been solemnly crowned and anointed at church, and had likewise utterly discomfited de Jure, when they came to battle for the kingdom together. Madam's clear opinion was, then, that her sons owed it to themselves as well as the sovereign to appear at his royal court. And if his Majesty should have been minded to confer a lucrative post, or a blue or red ribbon upon either of them, she, for her part, would not have been in the least surprised. She made no doubt but that the King knew the Virginian Esmonds as well as any other members of his nobility. The

lads were specially commanded, then, to present themselves at Court, and, I dare say, their mother would have been very angry had she known that George took Harry's laced coat on the day when he went to make his bow at Kensington.

A hundred years ago the King's drawing-room was open almost every day to his nobility and gentry; and loyalty—especially since the war had begun—could gratify itself a score of times in a month with the august sight of the Sovereign. A wise avoidance of the enemy's ships-of-war; a gracious acknowledgment of the inestimable loss the British isles would suffer by the seizure of the royal person at sea, caused the monarch to forego those visits to his native Hanover which were so dear to his royal heart, and compelled him to remain, it must be owned unwillingly, among his loving Britons. A Hanoverian lady, however, whose virtues had endeared her to the prince, strove to console him for his enforced absence from Herrenhausen. And from the lips of the Countess of Walmoden (on whom the imperial beneficence had gracefully conferred a high title of British honor) the revered Defender of the Faith could hear the accents of his native home.

To this beloved Sovereign Mr. Warrington requested his uncle, an assiduous courtier, to present him: and as Mr. Lambert had to go to Court likewise, and thank his Majesty for his promotion, the two gentlemen made the journey to Kensington together, engaging a hackney coach for the purpose, as my Lord Wrotham's carriage was now wanted by its rightful owner, who had returned to his house in town. They alighted at Kensington Palace Gate, where the sentries on duty knew and saluted the good General, and hence modestly made their way on foot to the summer residence of the Sovereign. Walking under the portico of the Palace, they entered the gallery which leads to the great black marble staircase (which hath been so richly decorated and painted by Mr. Kent), and then passed through several rooms, richly hung with tapestry and adorned with pictures and bustos, until they came to the King's great drawing-room, where that famous Venus by Titian is, and, among other master-pieces, the picture of St. Francis adoring the infant Saviour, performed by Sir Peter Paul Reubens; and here, with the rest of the visitors to the Court, the gentlemen waited until his Majesty issued from his private apartments, where he was in conference with certain personages who were called in the newspaper language of that day his M—j—ty's M—n—st—rs.

George Warrington, who had never been in a palace before, had leisure to admire the place, and regard the people round him. He saw fine pictures for the first time too, and I dare say delighted in that charming piece of Sir Anthony Vandyke, representing King Charles the First, his Queen and Family, and the noble picture of Esther before Ahasuerus, painted by Tintoret, and in which all the figures are dressed in the magnificent Venetian habit. With the contemplation of these works he was so enraptured, that he scarce heard all the remarks of his good friend the General, who was whispering into his young companion's almost heedless ear the names of some of the personages round about them.

"Yonder," says Mr. Lambert, "are two of my Lords of the Admiralty, Mr. Gilbert Elliot and Admiral Boscawen: *your* Boscawen, whose fleet fired the first gun in your waters two years ago. That stout gentleman all belaced with gold is Mr. Fox, that was minister, and is now content to be paymaster with a great salary."

"He carries the *auri fames* on his person; why, his waistcoat is a perfect Potosi!" says George.

"*Alieni appetens*—how goes the text? He loves to get money and to spend it," continues General Lambert. "Yon is my Lord Chief Justice Willes, talking to my Lord of Salisbury, Doctor Hoadley, who, if he serve his God as he serves his King, will be translated to some very high promotion in heaven. He belongs to your grandfather's time, and was loved by Dick Steele and hated by the Dean. With them is my Lord of London, the learned Doctor Sherlock. My lords of the lawn sleeves have lost half their honors now. I remember when I was a boy in my mother's hand, she made me go down on my knees to the Bishop of Rochester; him who went over the water, and became minister to somebody who shall be nameless—Perkin's Bish-

op. That handsome fair man is Admiral Smith. He was president of poor Byng's court-martial, and strove in vain to get him off his penalty; Tom of Ten Thousand they call him in the fleet. The French Embassador had him broke, when he was a lieutenant, for making a French man-of-war lower topsails to him, and the King made Tom a captain the next day. That tall, haughty-looking man is my Lord George Sackville, who, now I am a major-general myself, will treat me somewhat better than a footman. I wish my stout old Blakeney were here; he is the soldier's darling, and as kind and brave as yonder poker of a nobleman is brave and— I am your lordship's very humble servant. This is a young gentleman who is just from America, and was in Braddock's sad business two years ago."

"Oh, indeed!" says the poker of a nobleman. "I have the honor of speaking to Mr. ——"

"To Major-General Lambert, at your lordship's service, and who was in his Majesty's some time before you entered it. That, Mr. Warrington, is the first commoner in England, Mr. Speaker Onslow. Where is your uncle? I shall have to present you myself to his Majesty if Sir Miles delays much longer." As he spoke, the worthy General addressed himself entirely to his young friend, making no sort of account of his colleague, who stalked away with a scared look as if amazed at the other's audacity. A hundred years ago a nobleman was a nobleman, and expected to be admired as such.

Sir Miles's red waistcoat appeared in sight presently, and many cordial greetings passed between him, his nephew, and General Lambert; for we have described how Sir Miles was the most affectionate of men. So the General had quitted my Lord Wrotham's house? It was time, as his lordship himself wished to occupy it? Very good; but consider what a loss for the neighbors!

"We miss you, we positively miss you, my dear General," cries Sir Miles. "My daughters were in love with those lovely young ladies— upon my word they were, and my Lady Warrington and my girls were debating over and over again how they should find an opportunity of making the acquaintance of your charming family. We feel as if we were old friends already; indeed we do, General, if you will permit me the liberty of saying so; and we love you, if I may be allowed to speak frankly, on account of your friendship and kindness to our dear nephews: though we were a little jealous, I own a little jealous of them, because they went so often to see you. Often and often have I said to my Lady Warrington, 'My dear, why don't we make acquaintance with the General? Why don't we ask him and his ladies to come over in a family way and dine with some other plain country gentlefolks?' Carry my most sincere respects to Mrs. Lambert, I pray, Sir; and thank her for her goodness to these young gentlemen. My own flesh and blood, Sir; my dear, dear brother's boys!" He passed his hand across his manly eyes: he was choking almost with generous and affectionate emotion.

While they were discoursing—George Warrington the while restraining his laughter with admirable gravity—the door of the King's apartments opened, and the pages entered, preceding his Majesty. He was followed by his burly son, his Royal Highness the Duke, a very corpulent Prince, with a coat and face of blazing scarlet: behind them came various gentlemen and officers of state, among whom George at once recognized the famous Mr. Secretary Pitt, by his tall stature, his eagle eye and beak, his grave and majestic presence. As I see that solemn figure passing, even a hundred years off, I protest I feel a present awe, and a desire to take my hat off. I am not frightened at George the Second; nor are my eyes dazzled by the portentous appearance of his Royal Highness the Duke of Culloden and Fontenoy; but the Great Commoner, the terrible Cornet of Horse! His figure bestrides our narrow isle of a century back like a Colossus; and I hush as he passes in his gouty shoes, his thunder-bolt hand wrapped in flannel. Perhaps as we see him now, issuing with dark looks from the royal closet, angry scenes have been passing between him and his august master. He has been boring that old monarch for hours with prodigious long speeches, full of eloquence, voluble with the noblest phrases upon the commonest topics; but, it must be confessed, utterly repulsive to the little shrewd old gentleman, "at whose feet he lays himself," as the phrase is, and who has the most thorough dislike for fine *boedry* and for fine *brose* too! The sublime minister passes solemnly through the crowd; the company ranges itself respectfully round the wall; and his Majesty walks round the circle, his royal son lagging a little behind, and engaging select individuals in conversation for his own part.

The monarch is a little, keen, fresh-colored old man, with very protruding eyes, attired in plain, old-fashioned snuff-colored clothes and brown stockings, his only ornament the blue ribbon of his Order of the Garter. He speaks in a German accent, but with ease, shrewdness, and simplicity, addressing those individuals whom he has a mind to notice, or passing on with a bow. He knew Mr. Lambert well, who had served under his Majesty at Dettingen, and with his royal son in Scotland, and he congratulated him good-humoredly on his promotion.

"It is not always," his Majesty was pleased to say, "that we can do as we like; but I was glad when, for once, I could give myself that pleasure in your case, General; for my army contains no better officer as you."

The veteran blushed and bowed, deeply gratified at this speech. Meanwhile the Best of Monarchs was looking at Sir Miles Warrington (whom his Majesty knew perfectly, as the eager recipient of all favors from all ministers) and at the young gentleman by his side.

"Who is this?" the Defender of the Faith condescended to ask, pointing toward George

Warrington, who stood before his sovereign in a respectful attitude, clad in poor Harry's best embroidered suit.

With the deepest reverence Sir Miles informed his King that the young gentleman was his nephew, Mr. George Warrington of Virginia, who asked leave to pay his humble duty.

"This, then, is the other brother?" the Venerated Prince deigned to observe. "He came in time, else the other brother would have spent all the money. My Lord Bishop of Salisbury, why do you come out in this bitter weather? You had much better stay at home!" and with this, the revered wielder of Britannia's sceptre passed on to other lords and gentlemen of his Court. Sir Miles Warrington was deeply affected at the royal condescension. He clapped his nephew's hands. "God bless you, my boy!" he cried; "I told you that you would see the greatest monarch and the finest gentleman in the world. Is he not so, my Lord Bishop?"

"That, that he is!" cried his lordship, clasping his ruffled hands and turning his fine eyes up to the sky; "the best of princes and of men."

"That is Master Louis, my Lady Yarmouth's favorite nephew," says Lambert, pointing to a young gentleman who stood with a crowd round him; and presently the stout Duke of Cumberland came up to our little group.

His Royal Highness held out his hand to his old companion in arms. "Congratulate you on your promotion, Lambert," he said, good-naturedly. Sir Miles Warrington's eyes were ready to burst out of his head with rapture.

"I owe it, Sir, to your Royal Highness's good offices," said the grateful General.

"Not at all; not at all: ought to have had it a long time before. Always been a good officer; perhaps there'll be some employment for you soon. This is the gentleman whom James Wolfe introduced to me."

"His brother, Sir."

"Oh, the real fortunate youth! You were with poor Ned Braddock in America—a prisoner, and lucky enough to escape. Come and see me, Sir, in Pall Mall. Bring him to my levee, Lambert;" and the broad back of the Royal Prince was turned to our friends.

"It is raining! You came on foot, General Lambert? You and George must come home in my coach. You must and *shall* come home with me, I say. By George you must! I'll have no denial," cried the enthusiastic Baronet; and he drove George and the General back to Hill Street, and presented the latter to my Lady Warrington and his darlings, Flora and Dora, and insisted upon their partaking of a collation, as they must be hungry after their ride. "What, there is only cold mutton? Well, an old soldier can eat cold mutton. And a good glass of my Lady Warrington's own cordial, prepared with her own hands, will keep the cold wind out. Delicious cordial! Capital mutton! Our own, my dear General," says the hospitable Baronet, "our own from the country, six years old if a day. We keep a plain table; but all the Warringtons since the Conqueror have been remarkable for their love of mutton; and our meal may look a little scanty, and is, for we are plain people, and I am obliged to keep my rascals of servants on board-wages. Can't give them seven-year-old mutton, you know."

Sir Miles, in his nephew's presence and hearing, described to his wife and daughters George's reception at Court in such flattering terms that George hardly knew himself, or the scene at which he had been present, or how to look his uncle in the face, or how to contradict him before his family in the midst of the astonishing narrative he was relating. Lambert sat by for a while with open eyes. He, too, had been at Kensington. He had seen none of the wonders which Sir Miles described.

"We are proud of you, dear George. We love you, my dear nephew—we all love you, we are all proud of you—"

"Yes; but I like Harry best," says a little voice.

—"not because you are wealthy! Screwby, take Master Miles to his governor. Go, dear child. Not because you are blessed with great estates and an ancient name; but because, George, you have put to good use the talents with which Heaven has adorned you; because you have fought and bled in your country's cause, in your monarch's cause, and as such are indeed worthy of the favor of the best of sovereigns. General Lambert, you have kindly condescended to look in on a country family, and partake of our unpretending meal. I hope we may see you some day when our hospitality is a little less homely. Yes, by George, General, you must and shall name a day when you and Mrs. Lambert, and your dear girls will dine with us. I'll take no refusal now, by George I wont!" bawls the knight.

"You will accompany us, I trust, to my drawing-room?" says my lady, rising.

Mr. Lambert pleaded to be excused; but the ladies on no account would let dear George go away. No, positively, he should *not* go. They wanted to make acquaintance with their cousin. They must hear about that dreadful battle and escape from the Indians. Tom Claypool came in and heard some of the story. Flora was listening to it with her handkerchief to her eyes, and little Miles had just said:

"Why do you take your handkerchief, Flora? You're not crying a bit."

Being a man of great humor, Martin Lambert, when he went home, could not help entertaining his wife with an account of the new family with which he had made acquaintance. A certain cant word called humbug had lately come into vogue. Will it be believed that the General used it to designate the family of this virtuous country gentleman? He described the eager hospitalities of the father, the pompous flatteries of the mother, and the daughters' looks of admiration; the toughness and scarci-

GEORGE MADE MUCH OF.

ty of the mutton and the abominable taste and odor of the cordial; and we may be sure Mrs. Lambert contrasted Lady Warrington's recent behavior to poor Harry with her present conduct to George.

"Is this Miss Warrington really handsome?" asks Mrs. Lambert.

"Yes, she is very handsome indeed, and the most astounding flirt I have ever set eyes on," replies the General.

"The hypocrite! I have no patience with such people!" cries the lady.

To which the General, strange to say, only replied by the monosyllable "Bo!"

"Why do you say 'Bo!' Martin?" asks the lady.

"I say 'Bo!' to a goose, my dear," answers the General.

And his wife vows she does not know what he means, or of what he is thinking, and the General says,

"Of course not."

CHAPTER LIX.

IN WHICH WE ARE TREATED TO A PLAY.

THE real business of life, I fancy, can form but little portion of the novelist's budget. When

Thus, in talking of the present or the past world, I know I am only dangling about the theatre-lobbies, coffee-houses, ridottos, pleasure-haunts, fair-booths, and feasting and fiddling-rooms of life; that, meanwhile, the great serious past or present world is plodding in its chambers, toiling at its humdrum looms, or jogging on its accustomed labors, and we are only seeing our characters away from their work. Corydon has to cart the litter and thrash the barley, as well as to make love to Phyllis; Ancillula has to dress and wash the nursery, to wait at breakfast and on her misses, to take the children out, etc., before she can have her brief sweet interview through the area-railings with Boopis, the policeman. All day long have his heels to beat the stale pavement before he has the opportunity to snatch the hasty kiss or the furtive cold pie. It is only at moments, and away from these labors, that we can light upon one character or the other; and hence, though most of the persons of whom we are writing have doubtless their grave employments and avocations, it is only when they are disengaged and away from their work that we can bring them and the equally disengaged reader together.

he is speaking of the profession of arms, in which men can show courage or the reverse, and in treating of which the writer naturally has to deal with interesting circumstances, actions, and characters, introducing recitals of danger, devotedness, heroic deaths, and the like, the novelist may, perhaps, venture to deal with actual affairs of life; but, otherwise, they scarcely can enter into our stories. The main part of Ficulnus's life, for instance, is spent in selling sugar, spices, and cheese; of Causidicus's in poring over musty volumes of black-letter law; of Sartorius's in sitting, cross-legged, on a board after measuring gentlemen for coats and breeches. What can a story-teller say about the professional existence of these men? Would a real rustical history of hobnails and eighteenpence a day be endurable? In the days whereof we are writing, the poets of the time chose to represent a shepherd in pink breeches and a chintz waistcoat, dancing before his flocks, and playing a flageolet tied up with a blue satin ribbon. I say, in reply to some objections which have been urged by potent and friendly critics, that of the actual affairs of life the novelist can not be expected to treat—with the almost single exception of war before named. But law, stock-broking, polemical theology, linen-drapery, apothecary-business, and the like, how can writers manage fully to develop these in their stories? All authors can do is to depict men *out* of their business—in their passions, loves, laughters, amusements, hatreds, and what not—and describe these as well as they can, taking the business part for granted, and leaving it, as it were, for subaudition.

The Macaronis and fine gentlemen at White's and Arthur's continued to show poor Harry Warrington such a very cold shoulder that he sought their society less and less, and the Ring, and the Mall, and the gaming-table knew him no more. Madame de Bernstein was for her nephew's braving the indifference of the world, and vowed that it would be conquered if he would but have courage to face it; but the young man was too honest to wear a smiling face when he was discontented, to disguise mortification or anger, to parry slights by adroit flatteries or cunning impudence—as many gentlemen and gentlewomen must and do who wish to succeed in society.

"You pull a long face, Harry, and complain of the world's treatment of you," the old lady said. Fiddle-de-dee, Sir! Every body has to put up with impertinences: and if you get a box on the ear, now you are poor and cast down, you must say nothing about it, bear it with a smile, and if you can, revenge it ten years after. *Moi qui vous parle*, Sir!—do you suppose I have had no humble pie to eat? All of us in our turn are called upon to swallow it; and, now you are no longer the Fortunate Youth, be the Clever Youth, and win back the place you have lost by your ill luck. Go about more than ever. Go to all the routs and parties to which you are asked, and to more still. Be civil to every body—to all women especially. Only, of course, take care to show your spirit, of which you have

plenty. With economy, and by your brother's, I must say, admirable generosity, you can still make a genteel figure. With your handsome person, Sir, you can't fail to get a rich heiress. *Tenez!* You should go among the merchants in the City, and look out there. They won't know that you are out of fashion at the court-end of the town. With a little management, there is not the least reason, Sir, why you should not make a good position for yourself still. When did you go to see my lady Yarmouth, pray? Why did you not improve that connection? She took a great fancy to you. I desire you will be constant at her ladyship's evenings, and lose no opportunity of paying court to her."

Thus the old woman who had loved Harry *so* on his first appearance in England, who had been so eager for his company, and pleased with his artless conversation, was taking the side of the world, and turning against him. Instead of the smiles and kisses with which the fickle old creature used once to greet him, she received him with coldness; she became peevish and patronizing; she cast jibes and scorn at him before her guests, making his honest face flush with humiliation, and awaking the keenest pangs of grief and amazement in his gentle manly heart. Madame de Bernstein's servants, who used to treat him with such eager respect, scarcely paid him now any attention. My lady was often indisposed or engaged when he called on her; her people did not press him to wait; did not volunteer to ask whether he would stay and dine, as they used in the days when he was the Fortunate Youth and companion of the wealthy and great. Harry carried his woes to Mrs. Lambert. In a passion of sorrow he told her of his aunt's cruel behavior to him. He was stricken down and dismayed by the fickleness and heartlessness of the world in its treatment of him. While the good lady and her daughters would move to and fro, and busy themselves with the cares of the house, our poor lad would sit glum in a window seat, heart-sick and silent:

"I know you are the best people alive," he would say to the ladies, "and the kindest, and that I must be the dullest company in the world —yes, that I am."

"Well, you are not very lively, Harry," says Miss Hetty, who began to command him, and perhaps to ask herself, "What! Is this the gentleman whom I took to be such a hero?"

"If he is unhappy why should he be lively?" asks Theo, gently. "He has a good heart, and is pained at his friends' desertion of him. Sure, there is no harm in that?"

I would have too much spirit to show I was hurt, though," cries Hetty, clenching her little fists. "And I would smile, though that horrible old painted woman boxed my ears. She *is* horrible, Mamma. You think so yourself, Theo! Own, now, you think so yourself! You said so last night, and acted her coming in on her crutch, and grinning round to the company."

"I mayn't like her," says Theo, turning very red. "But there is no reason why I should call Harry's aunt names before Harry's face."

"You provoking thing, you are always right!" cries Hetty; "and that's what makes me so angry. Indeed, Harry, it was very wrong of me to make rude remarks about any of your relations."

"I don't care about the others, Hetty; but it seems hard that this one should turn upon me. I had got to be very fond of her; and, you see, it makes me mad, somehow, when people I'm very fond of turn away from me, or act unkind to me."

"Suppose George were to do so?" asks Hetty. You see it was George and Hetty, and Theo and Harry, among them now.

"You are very clever and very lively, and you may suppose a number of things; but not that, Hetty, if you please," cried Harry, standing up, and looking very resolute and angry. "You don't know my brother as I know him—or you wouldn't take—such a—liberty as to suppose—my brother, George, could do any thing unkind or unworthy!" Mr. Harry was quite in a flush as he spoke.

Hetty turned very white; then she looked up at Harry, and then she did not say a single word.

Then Harry said, in his simple way, before taking leave, "I'm very sorry, and I beg your pardon, Hetty, if I said any thing rough, or that seemed unkind; but I always fight up if any body says any thing against George."

Hetty did not answer a word out of her pale lips, but gave him her hand, and dropped a prim little courtesy.

When she and Theo were together at night, making curl-paper confidences, "Oh!" said Hetty, "I thought it would be so happy to see him every day, and was so glad when papa said we were to stay in London! And now I do see him, you see, I go on offending him. I can't help offending him; and I know he is not clever, Theo. But oh! isn't he good, and kind, and brave? Didn't he look handsome when he was angry?"

"You silly little thing, you are always trying to make him look handsome," Theo replied.

It was Theo and Hetty, and Harry and George, among these young people, then; and I dare say the reason why General Lambert chose to apply the monosyllable Bo to the mother of his daughters was as a rebuke to that good woman for the inveterate love of sentiment and propensity to match-making which belonged to her (and every other woman in the world whose heart is worth a fig); and as a hint that Madam Lambert was a goose if she fancied the two Virginian lads were going to fall in love with the young women of the Lambert house. Little Het might have her fancy—little girls will—but they get it over; and you know, Molly (which dear, soft-hearted Mrs. Lambert could not deny), you fancied somebody else before you fancied me," says the General; but Harry had evidently not been smitten

by Hetty; and, now he was superseded, as it were, by having an elder brother over him, and could not even call the coat upon his back his own, Master Harry was no great catch.

"Oh yes; now he is poor we will show him the door, as all the rest of the world does, I suppose," says Mrs. Lambert.

"That is what I always do—isn't it, Molly?—turn my back on my friends in distress?" asks the General.

"No, my dear! I *am* a goose, now, and that I own, Martin!" says the wife, having recourse to the usual pocket-handkerchief.

"Let the poor boy come to us, and welcome: ours is almost the only house in this selfish place where so much can be said for him. He is unhappy, and to be with us puts him at ease: in God's name let him be with us!" says the kind-hearted officer. Accordingly, whenever poor, crest-fallen Hal wanted a dinner, or an evening's entertainment, Mr. Lambert's table had a corner for him. So was George welcome, too. He went among the Lamberts, not at first with the cordiality which Harry felt for these people, and inspired among them; for George was colder in his manner, and more mistrustful of himself and others, than his twin-brother; but there was a goodness and friendliness about the family which touched almost all people who came into frequent contact with them; and George soon learned to love them for their own sake, as well as for their constant regard and kindness to his brother. He could not but see and own how sad Harry was, and pity his brother's depression. In his sarcastic way George would often take himself to task before his brother for coming to life again, and say, "Dear Harry, I am George the Unlucky, though you have ceased to be Harry the Fortunate. Florac would have done much better not to pass his sword through that Indian's body, and to have left my scalp as an ornament for the fellow's belt. I say he would, Sir! At White's the people would have respected you. Our mother would have wept over me as a defunct angel, instead of being angry with me for again supplanting her favorite—you *are* her favorite; you deserve to be her favorite: every body's favorite: only, if I had not come back, *your* favorite, Maria, would have insisted on marrying you; and that is how the gods would have revenged themselves upon you for your prosperity."

"I never know whether you are laughing at me or yourself, George," says the brother. "I never know whether you are serious or jesting."

"Precisely my own case, Harry, my dear!" says George.

"But this I know, that there never was a better brother in all the world; and never better people than the Lamberts."

"Never was truer word said!" cries George, taking his brother's hand.

"And if I'm unhappy, 'tis not your fault—not their fault—nor perhaps mine, George," continues the younger. "'Tis fate, you see; 'tis the having nothing to do. I *must* work; and how, George?—that is the question."

"We will see what our mother says. We must wait till we hear from her," says George.

"I say, George! Do you know, I don't think I should much like going back to Virginia?" says Harry, in a low, alarmed voice.

"What! in love with one of the lasses here?"

"Love 'em like sisters—with all my heart, of course, dearest, best girls! but, having come out of that business, thanks to you, I don't want to go back, you know. No! no! It is not for that I fancy staying in Europe better than going home. But, you see, I don't fancy hunting, duck-shooting, tobacco-planting, whist-playing, and going to sermon, over and over and over again, for all my life, George. And what else is there to do at home? What on earth is there for me to do at all, I say? That's what makes me miserable. It would not matter for you to be a younger son; you are so clever you would make your way any where; but for a poor fellow like me, what chance is there? Until I do something, George, I shall be miserable, that's what I shall!"

"Have I not always said so? Art thou not coming round to my opinion?"

"What opinion, George? You know pretty much whatever you think, I think, George!" says the dutiful junior.

"That Florac had best have left the Indian to take my scalp, my dear!"

At which Harry bursts away with an angry exclamation; and they continue to puff their pipes in friendly union.

They lived together, each going his own gait; and not much intercourse, save that of affection, was carried on between them. Harry never would venture to meddle with George's books, and would sit as dumb as a mouse at the lodgings while his brother was studying. They removed presently from the court-end of the town, Madame Bernstein pishing and pshawing at their change of residence. But George took a great fancy to frequenting Sir Hans Sloane's new reading-room and museum, just set up in Montague House, and he took cheerful lodgings in Southampton Row, Bloomsbury, looking over the delightful fields toward Hampstead, at the back of the Duke of Bedford's gardens. And Lord Wrotham's family coming to May Fair, and Mr. Lambert, having business which detained him in London, had to change his house too, and engaged furnished apartments in Soho, not very far off from the dwelling of our young men; and it was, as we have said, with the Lamberts that Harry, night after night, took refuge.

George was with them often, too; and, as the acquaintance ripened, he frequented their house with increasing assiduity, finding their company more to his taste than that of Aunt Bernstein's polite circle of gamblers, than Sir Miles Warrington's port and mutton, or the daily noise and clatter of the coffee-houses. And as he and the Lambert ladies were alike strangers in London, they partook of its pleas-

ures together, and, no doubt, went to Vauxhall and Ranelagh, to Marybone Gardens, and the play, and the Tower, and wherever else there was honest amusement to be had in those days. Martin Lambert loved that his children should have all the innocent pleasure which he could procure for them, and Mr. George, who was of a most generous, open-handed disposition, liked to treat his friends likewise, especially those who had been so admirably kind to his brother.

With all the passion of his heart Mr. Warrington loved a play. He had never enjoyed this amusement in Virginia, and only once or twice at Quebec, when he visited Canada; and when he came to London, where the two houses were in their full glory, I believe he thought he never could have enough of the delightful entertainment. Any thing he liked himself he naturally wished to share among his companions. No wonder that he was eager to take his friends to the theatre, and we may be sure our young country folks were not unwilling. Shall it be Drury Lane or Covent Garden, ladies? There was Garrick and Shakspeare at Drury Lane. Well, will it be believed, the ladies wanted to hear the famous new author whose piece was being played at Covent Garden?

At this time a star of genius had arisen, and was blazing with quite a dazzling brilliancy. The great Mr. John Home, of Scotland, had produced a tragedy, than which, since the days of the ancients, there had been nothing more classic and elegant. What had Mr. Garrick meant by refusing such a master-piece for his theatre? Say what you will about Shakspeare; in the works of that undoubted great poet (who had begun to grow vastly more popular in England since Monsieur Voltaire attacked him), there were many barbarisms that could not but shock a polite auditory; whereas Mr. Home, the modern author, knew how to be refined in the very midst of grief and passion; to represent death, not merely as awful, but graceful and pathetic; and never condescended to degrade the majesty of the Tragic Muse by the ludicrous apposition of buffoonery and familiar punning, such as the elder playwright certainly had resort to. Besides, Mr. Home's performance had been admired in quarters so high, and by personages whose taste was known to be as elevated as their rank, that all Britons could not but join in the plaudits for which august hands had given the signal. Such, it was said, was the opinion of the very best company, in the coffee-houses, and among the wits about town. Why, the famous Mr. Gray, of Cambridge, said there had not been for a hundred years any dramatic dialogue of such a true style; and as for the poet's native capital of Edinburgh, where the piece was first brought out, it was even said that the triumphant Scots called out from the pit (in their dialect), "Where's Wully Shakspeare noo?"

"I should like to see the man who could beat Willy Shakspeare," says the General, laughing.

"Mere national prejudice," says Mr. Warrington.

"Beat Shakspeare, indeed!" cries Mrs. Lambert.

"Pooh, pooh! you have cried more over Mr. Sam Richardson than ever you did over Mr. Shakspeare, Molly!" remarks the General. "I think few women love to read Shakspeare: they say they love it, but they don't."

"Oh, papa!" cry three ladies, throwing up three pair of hands.

"Well, then, why do you all three prefer 'Douglas?' And you boys, who are such Tories, will you go see a play which is wrote by a Whig Scotchman, who was actually made prisoner at Falkirk?"

"*Relictâ non bene parmulâ*," says Mr. Jack the scholar.

"Nay; it was *relictâ bene parmulâ*," cried the General. "It was the Highlanders who flung their targes down, and made fierce work among us red coats. If they had fought all their fields as well as that, and young Perkin had not turned back from Derby—"

"I know which side would be rebels, and who would be called the Young Pretender," interposed George.

"Hush! you must please to remember my cloth, Mr. Warrington," said the General, with some gravity; "and that the cockade I wear is a black, not a white one! Well, if you will not love Mr. Home for his politics, there is, I think, another reason, George, why you should like him."

"I may have Tory fancies, Mr. Lambert; but I think I know how to love and honor a good Whig," said George, with a bow to the General: "and why should I like this Mr. Home, Sir?"

"Because, being a Presbyterian clergyman, he has committed the heinous crime of writing a play, and his brother parsons have barked out an excommunication at him. They took the poor fellow's means of livelihood away from him for his performance; and he would have starved, but that the young Pretender on *our* side of the water has given him a pension."

"If he has been persecuted by the parsons there is hope for him," says George, smiling. "And henceforth I declare myself ready to hear his sermons."

"Mrs. Woffington is divine in it, though not generally famous in tragedy. Barry is drawing tears from all eyes; and Garrick is wild at having refused the piece. Girls, you must bring each a half dozen handkerchiefs! As for Mamma, I can not trust her; and she positively must be left at home."

But Mamma persisted she would go; and, if need were to weep, she would sit and cry her eyes out in a corner. They all went to Covent Garden, then; the most of the party duly prepared to see one of the master-pieces of the age and drama. Could they not all speak long pages of Congreve? had they not wept and kindled over Otway and Rowe? Oh ye past literary glories, that were to be eternal, how

long have you been dead? Who knows much more now than where your graves are? Poor, neglected Muse of the by-gone theatre! She pipes for us, and we will not dance; she tears her hair, and we will not weep. And the Immortals of our time, how soon shall they be dead and buried, think you? How many will survive? How long shall it be ere Nox et Domus Plutonia shall overtake them?

So away went the pleased party to Covent Garden to see the tragedy of the immortal John Home. The ladies and the General were conveyed in a glass coach, and found the young men in waiting to receive them at the theatre door. Hence they elbowed their way through a crowd of torch-boys, and a whole regiment of footmen. Little Hetty fell to Harry's arm in this expedition, and the blushing Miss Theo was handed to the box by Mr. George. Gumbo had kept the places until his masters arrived, when he retired, with many bows, to take his own seat in the footman's gallery. They had good places in a front box, and there was luckily a pillar behind which Mamma could weep in comfort. And opposite them they had the honor to see the august hope of the empire, his Royal Highness George Prince of Wales, with the Princess Dowager his mother, whom the people greeted with loyal, but not very enthusiastic, plaudits. That handsome man standing behind his Royal Highness was my Lord Bute, the Prince's Groom of the Stole, the patron of the poet whose performance they had come to see, and over whose work the Royal party had already wept more than once.

How can we help it if, during the course of the performance, Mr. Lambert would make his jokes, and mar the solemnity of the scene? At first, as the reader of the tragedy well knows, the characters are occupied in making a number of explanations. Lady Randolph explains how it is that she is so melancholy. Married to Lord Randolph somewhat late in life, she owns, and his lordship perceives, that a dead lover yet occupies all her heart; and her husband is fain to put up with this dismal, second-hand regard, which is all that my lady can bestow. Hence, an invasion of Scotland by the Danes is rather a cause of excitement than disgust to my lord, who rushes to meet the foe, and forget the dreariness of his domestic circumstances. Welcome Vikings and Norsemen! Blow, northern blasts, the invaders' keels to Scotland's shore! Randolph and other heroes will be on the beach to give the foemen a welcome! His lordship has no sooner disappeared behind the trees of the forest but Lady Randolph begins to explain to her confidante the circumstances of her early life. The fact was, she had made a private marriage, and what would the confidante say if, in early youth, she, Lady Randolph, had lost a husband? In the cold bosom of the earth was lodged the husband of her youth; and in some cavern of the ocean lies her child and his!

Up to this the General behaved with as great gravity as any of his young companions to the play; but when Lady Randolph proceeded to say, "Alas! Hereditary evil was the cause of my misfortunes!" he nudged George Warrington, and looked so droll that the young man burst out laughing.

The magic of the scene was destroyed after that. These two gentlemen went on cracking jokes during the whole of the subsequent performance, to their own amusement, but the indignation of their company, and perhaps of the people in the adjacent boxes. Young Douglas, in those days, used to wear a white satin "shape" slashed at the legs and body, and when Mr. Barry appeared in this droll costume, the General vowed it was the exact dress of the Highlanders in the late war. The Chevalier's Guard, he declared, had all white satin slashed breeches, and red boots—"only they left them at home, my dear," adds this wag. Not one pennyworth of sublimity would he or George allow henceforth to Mr. Home's performance. As for Harry, he sat in very deep meditation over the scene; and when Mrs. Lambert offered him a penny for his thoughts, he said, "That he thought Young Norval, Douglas, What-d'ye-call-'em, the fellow in white satin—who looked as old as his mother—was very lucky to be able to distinguish himself so soon. I wish I could get a chance, Aunt Lambert," says he, drumming on his hat; on which Mamma sighed, and Theo, smiling, said, "We must wait, and perhaps the Danes will land."

"How do you mean?" asks simple Harry.

"Oh! the Danes always land, *pour qui sçait attendre!*" says kind Theo, who had hold of her sister's little hand, and, I dare say, felt its pressure.

She did not behave unkindly—that was not in Miss Theo's nature—but somewhat coldly to Mr. George, on whom she turned her back, addressing remarks, from time to time, to Harry. In spite of the gentlemen's scorn, the women chose to be affected. A mother and son, meeting in love and parting in tears, will always awaken emotion in female hearts.

"Look, Papa! there is an answer to all your jokes!" says Theo, pointing toward the stage.

At a part of the dialogue between Lady Randolph and her son, one of the grenadiers on guard on each side of the stage, as the custom of those days was, could not restrain his tears, and was visibly weeping before the side box.

"You are right, my dear," says Papa.

"Didn't I tell you she always is?" interposes Hetty.

"Yonder sentry is a better critic than we are, and a touch of nature masters us all."

"*Tamen usque recurrit!*" cries the young student from college.

George felt abashed somehow, and interested too. He had been sneering, and Theo sympathizing. Her kindness was better—nay, wiser—than his skepticism, perhaps. Nevertheless, when, at the beginning of the fifth act of the play, young Douglas, drawing his sword and looking up at the gallery, bawled out—

Ye glorious stars! high heaven's resplendent host!
To whom I oft have of my lot complained,
Hear and record my soul's unaltered wish:
Living or dead, let me but be renowned!
May Heaven inspire some fierce gigantic Dane
To give a bold defiance to our host!
Before he speaks it out, I will accept,
Like Douglas conquer, or like Douglas die!

The gods, to whom Mr. Barry appealed, saluted this heroic wish with immense applause, and the General clapped his hands prodigiously. His daughter was rather disconcerted.

"This Douglas is not only brave, but he is modest!" says Papa.

"I own I think he need not have asked for a gigantic Dane," says Theo, smiling, as Lady Randolph entered in the midst of the gallery-thunder.

When the applause had subsided, Lady Randolph is made to say—

My son, I heard a voice!

"I think she *did* hear a voice!" cries Papa. "Why, the fellow was bellowing like a bull of Bashan." And the General would scarcely behave himself from henceforth to the end of the performance. He said he was heartily glad that the young gentleman was put to death behind the scenes. When Lady Randolph's friend described how her mistress had "flown like lightning up the hill, and plunged herself into the empty air," Mr. Lambert said he was delighted to be rid of her. "And as for that story of her early marriage," says he, "I have my very strongest doubts about it."

"Nonsense, Martin! Look, children! Their Royal Highnesses are moving."

The tragedy over, the Princess Dowager and the Prince were, in fact, retiring; though, I dare say, the latter, who was always fond of a farce, would have been far better pleased with that which followed than he had been with Mr. Home's dreary tragic master-piece.

CHAPTER LX.

WHICH TREATS OF MACBETH, A SUPPER, AND A PRETTY KETTLE OF FISH.

When the performances were concluded, our friends took coach for Mr. Warrington's lodging, where the Virginians had provided an elegant supper. Mr. Warrington was eager to treat them in the handsomest manner, and the General and his wife accepted the invitation of the two bachelors, pleased to think that they could give their young friends pleasure. General and Mrs. Lambert, their son from college, their two blooming daughters, and Mr. Spencer of the Temple, a new friend whom George had met at the coffee-house, formed the party, and partook with cheerfulness of the landlady's fare. The order of their sitting I have not been able exactly to ascertain; but, somehow, Miss Theo had a place next to the chickens and Mr. George Warrington, while Miss Hetty and a ham divided the attentions of Mr. Harry. Mr. Lam-

bert *must* have been on George's right hand, so that we have but to settle the three places of the General, his son, and the Templar.

Mr. Spencer had been at the other theatre, where, on a former day, he had actually introduced George to the green-room. The conversation about the play was resumed, and some of the party persisted in being delighted with it.

"As for what our gentlemen say, Sir," cries Mrs. Lambert to Mr. Spencer, "you must not believe a word of it. 'Tis a delightful piece, and my husband and Mr. George behaved as ill as possible."

"We laughed in the wrong place, and when we ought to have cried," the General owned; "that's the truth."

"You caused all the people in the boxes about us to look round and cry, 'Hush!' You made the pit-folks say, 'Silence in the boxes, yonder!' Such behavior I never knew, and quite blushed for you, Mr. Lambert!"

"Mamma thought it was a tragedy, and we thought it was a piece of fun," says the General. "George and I behaved perfectly well, didn't we, Theo?"

"Not when I was looking your way, Papa!" Theo replies. At which the General asks, "Was there ever such a saucy baggage seen?"

"You know, Sir, I didn't speak till I was bid," Theo continues, modestly. "I own I was very much moved by the play, and the beauty and acting of Mrs. Woffington. I am sorry that the poor mother should find her child, and lose him. I am sorry too, Papa, if I oughtn't to have been sorry!" adds the young lady, with a smile.

"Women are not so clever as men, you know, Theo!" cries Hetty, from her end of the table, with a sly look at Harry. "The next time we go to the play, please, brother Jack, pinch us when we ought to cry, or give us a nudge when it is right to laugh."

MACBETH AND LADY MACBETH.

"I wish we could have had the fight," said General Lambert—"the fight between little Norval and the gigantic Norwegian—that would have been rare sport: and you should write, Jack, and suggest it to Mr. Rich, the manager!"

"I have not seen that; but I saw Slack and Broughton at Marybone Gardens!" says Harry, gravely; and wondered if he had said something witty, as all the company laughed so.

"It would require no giant," he added, "to knock over yonder little fellow in the red boots. I, for one, could throw him over my shoulder."

"Mr. Garrick is a little man. But there are times when he looks a giant," says Mr. Spencer. "How grand he was in Macbeth, Mr. Warrington! How awful that dagger-scene was! You should have seen our host, ladies! I presented Mr. Warrington in the Green Room to Mr.

Garrick and Mrs. Pritchard, and Lady Macbeth did him the honor to take a pinch out of his box."

"Did the wife of the Thane of Cawdor sneeze?" asked the General, in an awful voice.

"She thanked Mr. Warrington in tones so hollow and tragic that he started back, and must have upset some of his rappee, for Macbeth sneezed thrice."

"Macbeth, Macbeth, Macbeth!" cries the General.

And the great philosopher, who was standing by, Mr. Johnson, says, "You must mind, Davy, lest thy sneeze should awaken Duncan!" who, by-the-way, was talking with the three witches as they sat against the wall.

"What! Have you been behind the scenes at the play? Oh, I would give worlds to go behind the scenes!" cries Theo.

"And see the ropes pulled, and smell the tallow candles, and look at the pasteboard gold, and the tinsel jewels, and the painted old women, Theo? No. Do not look too close," says the skeptical young host, demurely drinking a glass of hock. "You were angry with your Papa and me."

"Nay, George!" cries the girl.

"Nay? I say, yes! You were angry with us because we laughed when you were disposed to be crying. If I may speak for you, Sir, as well as myself," says George (with a bow to his guest, General Lambert), "I think we were not inclined to weep, like the ladies, because we stood behind the author's scenes of the play, as it were. Looking close up to the young hero, we saw how much of him was rant and tinsel; and as for the pale, tragical mother, that her pallor was white chalk, and her grief her pocket-handkerchief. Own, now, Theo, you thought me very unfeeling?"

"If you find it out, Sir, without my owning it, what is the good of my confessing?" says Theo.

"Suppose I were to die," goes on George, "and you saw Harry in grief, you would be seeing a genuine affliction, a real tragedy; you would grieve too. But you wouldn't be affected if you saw the undertaker in weepers and a black cloak!"

"Indeed but I should, Sir!" says Mrs. Lambert; "and so, I promise you, would any daughter of mine."

"Perhaps we might find weepers of our own, Mr. Warrington," says Theo, "in such a case."

"Would you?" cries George, and his cheeks and Theo's simultaneously flushed up with red; I suppose because they both saw Hetty's bright young eyes watching them.

"The elder writers understood but little of the pathetic," remarked Mr. Spencer, the Temple wit.

"What do you think of Sophocles and Antigone?" calls out Mr. John Lambert.

"Faith, our wits trouble themselves little about *him*, unless an Oxford gentleman comes to remind us of him! I did not mean to go back further than Mr. Shakspeare, who, as you will all agree, does not understand the elegant and pathetic as well as the moderns. Has he ever approached Belvidera, or Monimia, or Jane Shore; or can you find in his comic female characters the elegance of Congreve?" and the Templar offered snuff to the right and left.

"I think Mr. Spencer himself must have tried his hand?" asks some one.

"Many gentlemen of leisure have. Mr. Garrick, I own, has had a piece of mine, and returned it."

"And I confess that I have four acts of a play in one of my boxes," says George.

"I'll be bound to say it's as good as any of 'em," whispers Harry to his neighbor.

"Is it a tragedy or a comedy?" asks Mrs. Lambert.

"Oh, a tragedy, and two or three dreadful murders at least!" George replies.

"Let us play it, and let the audience look to their eyes! Yet my chief humor is for a tyrant," says the General.

"The tragedy, the tragedy!" Go and fetch the tragedy this moment, Gumbo!" calls Mrs. Lambert to the black. Gumbo makes a low bow, and says "Tragedy?" yes, madam."

"In the great cow-skin trunk, Gumbo," George says, gravely.

Gumbo bows, and says "Yes, Sir, with still superior gravity.

"But my tragedy is at the bottom of I don't know how much linen, packages, books, and boots, Hetty."

"Never mind, let us have it, and fling the linen out of window!" cries Miss Hetty.

"And the great cow-skin trunk is at our agent's at Bristol; so Gumbo must get post-horses, and we can keep it up till he returns the day after to-morrow," says George.

The ladies groaned a comical Oh! and Papa, perhaps more seriously, said, "Let us be thankful for the escape. Let us be thinking of going home too. Our young gentlemen have treated us nobly, and we will all drink a parting bumper to Madam Esmond Warrington, of Castlewood, in Virginia. Suppose, boys, you were to find a tall, handsome step-father when you got home? Ladies as old as she have been known to marry before now."

"To Madam Esmond Warrington, my old school-fellow!" cries Mrs. Lambert. "I shall write and tell her what a pretty supper her sons have given us; and, Mr. George, I won't say how ill you behaved at the play!" And, with this last toast, the company took leave; the General's coach and servant, with a flambeau, being in waiting to carry his family home.

After such an entertainment as that which Mr. Warrington had given, what could be more natural or proper than a visit from him to his guests, to inquire how they had reached home and rested? Why, their coach might have taken the open country behind Montague House, in the direction of Oxford Road, and been waylaid by

footpads in the fields. The ladies might have caught cold or slept ill after the excitement of the tragedy. In a word, there was no reason why he should make any excuse at all to himself or them for visiting his kind friends; and he shut his books early at the Sloane Museum, and perhaps thought, as he walked away thence, that he remembered very little about what he had been reading.

Pray what is the meaning of this eagerness, this hesitation, this pshawing and shilly-shallying, these doubts, this tremor as he knocks at the door of Mr. Lambert's lodgings in Dean Street, and surveys the footman who comes to his summons? Does any young man read? does any old one remember? does any wearied, worn, disappointed, pulseless heart recall the time of its full beat and early throbbing? It is ever so many hundred years since some of us were young; and we forget, but do not all forget. No, Madam, we remember with advantages, as Shakspeare's Harry promised his soldiers they should do if they survived Agincourt and that day of St. Crispin. Worn old chargers turned out to grass, if the trumpet sounds over the hedge, may we not kick up our old heels and gallop a minute or so about the paddock till we are brought up roaring? I do not care for clown and pantaloon now, and think the fairy ugly, and her verses insufferable; but I like to see children at a pantomime. I do not dance or eat supper any more; but I like to watch Eugenio and Flirtilla twirling round in a pretty waltz, or Lucinda and Ardentio pulling a cracker. Burn your little fingers, children! Blaze out little kindly flames from each other's eyes! And then draw close together and read the motto (that old namby-pamby motto, so stale and so new!)—I say, let her lips read it and his construe it; and so divide the sweatmeat, young people, and crunch it between you. I have no teeth. Bitter almonds and sugar disagree with me, I tell you; but, for all that, shall not bonbons melt in the mouth?

We follow John up stairs to the General's apartments, and enter with Mr. George Esmond Warrington, who makes a prodigious fine bow. There is only one lady in the room, seated near a window: there is not often much sunshine in Dean Street; the young lady in the window is no special beauty, but it is spring-time, and she is blooming vernally. A bunch of fresh roses is flushing in her honest cheek. I suppose her eyes are violets. If we lived a hundred years ago, and wrote in the *Gentleman's* or the *London Magazine*, we should tell Mr. Sylvanus Urban that her neck was the lily, and her shape the nymph's; we should write an acrostic about her, and celebrate our Lambertella in an elegant poem, still to be read between a neat new-engraved plan of the city of Prague and the King of Prussia's camp, and a map of Maryland and the Delaware counties.

Here is Miss Theo blushing like a rose. What could Mamma have meant an hour since by insisting that she was very pale and tired, and had best not come out to-day with the rest of the party? They were gone to pay their compliments to my Lord Wrotham's ladies, and thank them for the house in their absence; and Papa was at the Horse Guards. He is in great spirits. I believe he expects some command, though Mamma is in a sad tremor lest he should again be ordered abroad.

"Your brother and mine are gone to see our little brother at his school at the Chartreux. My brothers are both to be clergymen, I think," Miss Theo continues. She is assiduously hemming at some article of boyish wearing apparel as she talks. A hundred years ago young ladies were not afraid either to make shirts or to name them. Mind, I don't say they were the worse or the better for that plain stitching or plain speaking: and have not the least desire, my dear young lady, that you should make puddings or I should black boots.

"So Harry has been with them?" "He often comes, almost every day," Theo says, looking up in George's face. "Poor fellow! He likes us better than the fine folks, who don't care for him now—now he is no longer a fine folk himself," adds the girl, smiling. "Why have you not set up for the fashion, and frequented the chocolate-houses and the race-courses, Mr. Warrington?"

"Has my brother got so much good out of his gay haunts or his grand friends that I should imitate him?"

"You might at least go to Sir Miles Warrington; sure his arms are open to receive you! Her ladyship was here this morning in her chair, and to hear her praises of you! She declares you are in a certain way to preferment. She says his Royal Highness the Duke made much of you at court. When you are a great man will you forget us, Mr. Warrington?"

"Yes, when I am a great man I will, Miss Lambert."

"Well! Mr. George, then—"

"*Mr.* George!"

"When Papa and Mamma are here, I suppose there need be no mistering," says Theo, looking out of the window, ever so little frightened. "And what have you been doing, Sir? Reading books, or writing more of your tragedy? Is it going to be a tragedy to make us cry, as we like them, or only to frighten us, as *you* like them?"

"There is plenty of killing, but, I fear, not much crying. I have not met many women. I have not been very intimate with those. I dare say what I have written is only taken out of books, or parodied from poems which I have read and imitated like other young men. Women do not speak to me, generally—I am said to have a sarcastic way which displeases them."

"Perhaps you never cared to please them?" inquires Miss Theo, with a blush.

"I displeased you last night—you know I did?"

"Yes; only it can't be called displeasure, and afterward I thought I was wrong."

"Did you think about me at all when I was away, Theo?"

"Yes, George—that is, Mr.—well, George! I thought you and Papa were right about the play; and, as you said, that it was not real sorrow, only affectation, which was moving us. I wonder whether it is good or ill fortune to see so clearly? Hetty and I agreed that we would be very careful for the future how we allowed ourselves to enjoy a tragedy. So, be careful when yours comes! What is the name of it?"

"He is not christened. Will you be the godmother? The name of the chief character is—" but at this very moment Mamma and Miss Hetty arrived from their walk—and Mamma straightway began protesting that she never expected to see Mr. Warrington at all that day—that is, she thought he might come—that is, it was very good of him to come, and the play and the supper of yesterday were all charming, except that Theo had a little headache this morning.

"I dare say it is better now, Mamma," says Miss Hetty.

"Indeed, my dear, it never was of any consequence! and I told Mamma so," says Miss Theo, with a toss of her head.

Then they fell to talking about Harry. He was very low. He must have something to do. He was always going to the Military Coffee-house, and perpetually poring over the King of Prussia's campaigns. It was not fair upon him to bid him remain in London, after his deposition, as it were. He said nothing, but you could see how he regretted his previous useless life, and felt his present dependence, by the manner in which he avoided his former haunts and associates. Passing by the guard at St. James's, with John Lambert, he had said to brother Jack, "Why mayn't I be a soldier, too? I am as tall as yonder fellow, and can kill with a fowling-piece as well as any man I know. But I can't earn so much as sixpence a day. I have squandered my own bread, and now I am eating half my brother's. He is the best of brothers; but so much the more shame that I should live upon him. Don't tell my brother, Jack Lambert." "And my boy promised he *wouldn't* tell," says Mr. Lambert. No doubt. The girls were both out of the room when their mother made this speech to George Warrington. He, for his part, said he had written home to his mother—that half his little patrimony, the other half likewise, if wanted, were at Harry's disposal, for purchasing a commission, or for any other project which might bring him occupation or advancement.

"He *has* got a good brother, that is sure. Let us hope for good times for him," sighs the lady.

"The Danes always come *pour qui sçait attendre*," George said, in a low voice.

"What, you heard that? Ah! George, my Theo is an ——. Ah! never mind *what* she is, George Warrington," cried the pleased mother, with brimful eyes. "Bah! I am going to make a gaby of myself, as I did at the tragedy!"

Now Mr. George had been revolving a fine private scheme, which he thought might turn to his brother's advantage. After George's presentation to his Royal Highness at Kensington, more persons than one, his friend General Lambert included, had told him that the Duke had inquired regarding him, and had asked why the young man did not come to his levee. Importunity so august could not but be satisfied. A day was appointed between Mr. Lambert and his young friend, and they went to pay their duty to his Royal Highness at his house in Pall Mall.

When it came to George's turn to make a bow the Prince was especially gracious; he spoke to Mr. Warrington at some length about Braddock and the war, and was, apparently, pleased with the modesty and intelligence of the young gentleman's answers. George ascribed the failure of the expedition to the panic and surprise, certainly, but more especially to the delays occasioned by the rapacity, selfishness, and unfair dealing of the people of the colonies toward the King's troops, who were come to defend them. "Could we have moved, Sir, a month sooner, the fort was certainly ours, and the little army had never been defeated," Mr. Warrington said; in which observation his Royal Highness entirely concurred.

"I am told you saved yourself, Sir, mainly by your knowledge of the French language," the Royal Duke then affably observed. Mr. Warrington modestly mentioned how he had been in the French colonies in his youth, and had opportunities of acquiring that tongue.

The Prince (who had a great urbanity when well pleased, and the finest sense of humor) condescended to ask who had taught Mr. Warrington the language; and to express his opinion that, for the pronunciation, the French ladies were by far the best teachers.

The young Virginian gentleman made a low bow, and said it was not for him to gainsay his Royal Highness; upon which the Duke was good enough to say (in a jocose manner) that Mr. Warrington was a sly dog.

Mr. W. remaining respectfully silent, the Prince continued, most kindly: "I take the field immediately against the French, who, as you know, are threatening his Majesty's Electoral dominions. If you have a mind to make the campaign with me, your skill in the language may be useful; and I hope we shall be more fortunate than poor Braddock!" Every eye was fixed on a young man to whom so great a Prince offered so signal a favor.

And now it was that Mr. George thought he would make his very cleverest speech. "Sir," he said, "your Royal Highness's most kind proposal does me infinite honor, but—"

"But what, Sir?" says the Prince, staring at him.

"But I have entered myself of the Temple, to study our laws, and to fit myself for my duties at home. If my having been wounded in the service of my country be any claim on your

kindness, I would numbly ask that my brother, who knows the French language as well as myself, and has far more strength, courage, and military genius, might be allowed to serve your Royal Highness in the place of—"

"Enough, enough, Sir!" cried out the justly irritated son of the Monarch. "What! I offer you a favor, and you hand it over to your brother? Wait, Sir, till I offer you another!" And with this the Prince turned his back upon Mr. Warrington, just as abruptly as he turned it on the French, a few months afterward.

"Oh, George! oh, George! Here's a pretty kettle of fish!" groaned General Lambert, as he and his young friend walked home together.

Monthly Record of Current Events.

UNITED STATES.

CONGRESS has been mainly occupied in discussing the topics presented in the President's Message, though as yet no decisive action has been reached upon any of the prominent subjects under consideration.—The first "Congressional fight" took place between Messrs. English of Indiana, and Montgomery of Pennsylvania, both of whom were prominent in the Kansas measures of the last session. They met in the street, when the latter refused to acknowledge the salutation of the former, whereupon the gentleman from Indiana knocked down, with a heavy cane, the gentleman from Pennsylvania, who retorted by flinging a brickbat at the other.

In the Senate Mr. Douglas was displaced from his position as Chairman of the Committee on Territories, upon the ground that his views upon the question of popular sovereignty were not in accordance with those of the Democratic party. He is succeeded by Mr. Green, of Missouri.—The most interesting debates in the Senate have been upon the Pacific Railroad Bill. The absolute necessity of such a road is admitted by all; but there is a great diversity of opinion upon the mode of construction, and especially upon the line to be chosen. The Southern members wish the road to run through Arkansas, Texas, and New Mexico, while those from the North and West wish it to run through Kansas or Minnesota. Mr. Seward, of New York, on the 21st of December, made an elaborate speech in support of the original bill. This, in effect, provides that the President shall be provided with means to contract for the building of a railroad, starting on the western borders of the State of Missouri, at some point between the Big Sioux and the Kansas rivers, and thence proceeding to San Francisco, by the most eligible route, regard being had to feasibility, shortness, and economy. He urged the immediate construction of the road on the grounds of public policy. If he were allowed to prescribe the route and the policy of constructing the railroad, he would choose a path which would be a continuation of the road that our great Northwestern emigration had hitherto followed. He would discard all employment of Companies, and all grants of public lands, and would build the road, as a military, postal, and national highway, with the money and credit of the Federal Government, and surrender the lands along the route to actual settlers, free of cost. But he had concurred in the presentation of the present Bill, though objectionable in many particulars, as the only alternative. The time for deliberation had passed, and that for action had begun. The road was wanted for political and military purposes—commerce was a mere adjunct. If such a means of communication were not provided, the Atlantic and Pacific States would not remain always united; and the action of Congress would decide whether Washington should remain the capital of the whole United States, or only of the United States of the Atlantic, while the city of Mexico became the capital of the United States of the Pacific. Mr. Iverson, of Georgia, moved that the bill be recommitted, with instructions to the Committee to report two routes—a Northern and a Southern one. He believed the dissolution of the Union to be at hand, and was unwilling to vote money and lands for a road which was sure to be located outside of the South; but wished the South to have a route which should aid her while in the Union, and belong to her when out of it. Mr. Bigler, of Pennsylvania, advocated the building of the road not so much as the best means of developing the material wealth of the intervening country as of maintaining our rights and protecting our citizens on the Pacific coast. The location of the route, whether a few degrees further north or south, was of secondary importance, though for himself he preferred a central route. Viewed simply as a military measure, it was worthy of the best efforts of Government; for were war to break out with a great maritime Power, without this means of concentrating our forces, California would speedily be cut off from communication with the Atlantic States. Six months of such a war might cost more than such a railroad. With this road, what Power would be strong enough to meet us on the Pacific? Without it, what Power would be too weak to annoy us there? He could see little difference between the construction of such a work and that of forts to defend the commercial cities of the sea-board. Three or four hundred millions of dollars would, if required, be voted for the purchase of Cuba, and why should not a grant of public lands be made for the protection of California, Washington, and Oregon? As a channel of commerce, also, this road would open the direct route to China and Japan—not indeed for heavy tonnage, but for the finer fabrics, for precious metals, and for the mails from the East to the West. Mr. Harlan, of Iowa, advocated the central route, as passing through the centre of population. Topographically, there was little difference between the three lines surveyed; either could be built in ten or twelve years without deranging the financial condition of the country. The work should be undertaken by Government, since its cost—which would be one hundred millions of dollars, one-third of the surplus capital of the country—put it beyond the means of native capitalists or companies, and it would not be advisable to place it under foreign control; and, furthermore, there would be no security that contractors, after having secured the best lands in the fertile districts, would

push the road through the precipitous mountains and sterile plains of the interior.—Various amendments to the Bill have been proposed. One offered by Mr. Polk, of Missouri, in favor of the Southern route was lost by 17 to 29; another, by Mr. Foster, of Maine, providing that American iron should be exclusively used in the construction of the road, was adopted by 25 to 23.—Mr. Wilson, of Massachusetts, offered a new Bill, providing that the President and Senate should appoint five civil engineers, who, within two years, shall locate the route of a railroad from the Missouri River to San Francisco, between the 34th and 43d parallels; if the decision of the Commissioners is approved by the President, the railroad shall be built under the direction of a Board, consisting of the Secretaries of War, of the Interior, the Postmaster-General, and Attorney-General, who shall contract for its construction with the lowest bidders, in sections of not more than twenty-five miles, the money to be raised by loan, as needed, in sums of not more than $10,000,000 a year; from the passage of the Act until the road is located, all the public lands between these parallels to be withheld from sale, but to be open to pre-emption by actual settlers; then the proceeds of the lands for 150 miles on each side of the road to constitute a fund for the construction of the road and the payment of the debt incurred by it.—Mr. Rice, of Minnesota, offered a bill providing for the survey of two routes: one from Lake Superior to Puget's Sound, with a branch to the navigable waters of the Columbia, the other from the western border of Texas to San Petro, or San Diego, on the Bay of San Francisco; the termini to be determined by the President, with the consent of the States and Territories in which they are situated; the lands for forty miles on each side of these routes to be surveyed, and the present settlers to have the right of pre-emption on the payment of ten cents per acre; each alternate section, for ten sections on each side of the routes, to be granted to the States and Territories in which they lie, for the construction of the roads; 200 sections may be sold along every twenty miles of the road, as completed, but if the road is not completed within twenty years, all lands unsold to revert to the United States. Mr. Doolittle, of Wisconsin, offered another amendment, referring the whole subject back to the Committee on Public Lands, with instructions to appoint three sets of Commissioners, each consisting of three members, whose duty shall be to locate, within the present year, a Northern, a Central, and a Southern road, and to report the location and cost to the President, who shall thereupon enter into contracts, subject to the approval of Congress, for the building of the roads; none of the public lands to be alienated to the contractors, but the proceeds of the sale to actual settlers, at the rate of $2 50 an acre, to go toward paying the cost of the roads; whenever a section of twenty-five miles is built, Government shall issue bonds to the contractor for $10,000 a mile, to be secured by lien on the road.

Bills have been introduced for building ten additional sloops of war; for the organization of the Territories of Arizona and Dacotah; granting 1,000,000 acres of public land for the aid of schools in the District of Columbia; for abolishing the franking privilege, etc.——The "Leavenworth Constitution" for Kansas was introduced by Mr. Seward. The French Spoliation Bill having been discussed, was passed by 16 to 21.——The Senate took possession of its new Hall on the 5th of January; at the last meeting in the old Hall eloquent commemorative speeches were made by the Vice-President and Senator Crittenden.

In the House, besides some of the questions touched upon in the Senate, the most important business has been the passage, by a vote of 130 to 73, of a bill granting pensions to those who were engaged in the war of 1812; the sums allowed are: for 60 days' service $50 per annum; for 6 months $50; for 12 months and upward $96; the widow of a pensioner to receive the pension during her natural life. The entire amount, exclusive of land grants, paid as army and navy pensions, from the organization of the Government to the 30th of June, 1858, is $86,376,087.

The Message of the Governor of *New York* gives the debt of the State as $31,000,000, of which $24,000,000 are placed to the canal account; the whole amount of tolls upon the canals was $2,072,000, being $700,000 less than the current expenses, interest upon the debt, and other claims upon the canal revenues; he, however, recommends the speedy completion of the enlargement of the Erie canal. Aside from the canal deficiency, there is a deficiency in the general revenue of $460,000. There are 88 railroad corporations in the State, having a debt, funded and floating, of $109,000,000; the roads have cost $137,000,000; of these corporations only 14 paid dividends during the past year. He says that New York has always maintained a conservative attitude toward other States whose system of labor differs from her own; but while disclaiming all right or wish to interfere with their domestic concerns, she insists on her right to maintain the superiority of liberty over slavery, wherever the issue is legitimately presented.——The Message of the Governor of *Massachusetts* is devoted wholly to the concerns of that State, the financial affairs of which are represented to be in a very favorable condition. The public debt is $1,314,000, for the payment of which, as it becomes due, ample provision has been made; the school fund amounts to $1,500,000, which the Governor recommends should be increased to $3,000,000, by the sale of lands.——The Message of the Governor of *Pennsylvania* gives a satisfactory view of the finances of the State, the revenue amounting to more than $4,000,000, exceeding the expenditures by $250,000; the supplies on hand being $750,000. The public debt is nearly $40,000,000, which he recommends should be greatly reduced, with a view to its extinguishment. He opposes any addition, under the present system, to the banking capital or the number of banks; states that the condition of the General Treasury demonstrates the necessity of an increase in the tariff, and favors the President's views in respect to specific duties. In reference to Kansas he says that, under various pretenses, the right of franchise has been denied the people of that Territory; he affirms that no fair construction can be given to the "Dred Scott" decision of the Supreme Court, which would make it the duty of Congress to protect slavery in the Territories, and condemns any such doctrine, no matter how sanctioned.——The Message of the Governor of *Ohio* represents the general condition of the State as flourishing, the finances are easy, the public works well-managed, and the agricultural interests of the State are recovering from the depression of last year. The number of persons receiving public relief is one in one hundred and sixty-two of the population. The ratio

of crimes to the population is about one to two hundred and eight; that of criminals being somewhat less. The Governor thinks that the small ratio of convictions to crimes indicates a defective administration of justice, and is persuaded that in many cases murder escapes adequate punishment through the reluctance of juries to find verdicts which must be followed by sentence of death. He attributes half the crimes, and four-fifths of police offenses, to the intemperate use of ardent spirits, and recommends the establishment of an asylum for inebriates. The administration of civil justice, he says, has not disappointed the expectations of the advocates of an elective judiciary.——The Governor of *Indiana* represents that the revenues of the Wabash and Erie Canal have greatly diminished, and fears that they will be insufficient to keep the works in repair; that the bond-holders have informed the trustees of their determination to close the canal and abandon the work whenever the revenues become inadequate. He says that the laws of the State in regard to the qualifications of voters are inadequate, and recommends a law inflicting severe penalties upon officers who admit illegal or refuse to admit legal votes.——The Governor of *Maine* says that the finances of the State demand the most exact economy in the public service. The expenditures of the year are estimated at $431,000, and the receipts at $368,000. He regards the policy of the General Government upon the Slavery question as injurious to the rights of the Free States, and calls upon the Legislatures and the people to maintain their resistance to the extension of slavery.——The Governor of *Delaware* recommends that the faith of the State be pledged in favor of railroads; that the Public School system be changed so as to secure the better education of children; and favors the restoration of the tariff of 1842.——The Governor of *Illinois* represents the finances of the State to be in a favorable condition. The amount of taxable property has increased $50,000,000 during the year. The debt, principal and interest, is $11,138,000. During the past two years more than $1,100,000 have been paid; and the Governor anticipates that the whole will be paid within six years. In the present aspect of national politics he sees increased reason for a reiteration of adhesion to the Union, and a declaration of opinions adverse to the extension of slavery.

Mr. Douglas, who may now be styled an "anti-Administration Democrat," has been re-elected Senator from Illinois. Since the conclusion of the arduous canvass of the State he has made an extended tour through the country, being every where received with great consideration.—Messrs. H. S. Lane and W. M. M'Carty, Republicans, have been elected United States Senators from Illinois, who will contest the seats now held by Messrs. Bright and Fitch, on the ground of illegality in their election by the last Legislature.——Messrs. Preston, of Kentucky, and J. Glancy Jones, of Pennsylvania, the newly-appointed Ministers to Spain and Austria, have set out for their respective posts.——Recent intelligence has been received of the Paraguay fleet; the different vessels of which, having suffered somewhat from storms, are concentrating toward the mouth of the River La Plata.——New troubles, of a serious nature, have broken out in Kansas, and on the borders of Missouri. They are personal rather than political, growing out of feuds between two opposing gangs of desperadoes, headed by Hamilton and Montgomery. The Governor of the Territory has called out the military.——The filibusters who left Mobile in the *Susan* on the 6th of December returned to that port on the 1st of January. The vessel was driven by adverse winds on the coast of Honduras and wrecked on the 16th of December. With much difficulty the men made their way to Belize, where they found themselves unable to procure a vessel to carry them to their place of destination. Governor Seymour at length offered to send them back to the United States in the British armed steam-sloop *Basilisk*. He would not inquire into their original intentions, but as they had violated no law of England, would consider them simply as shipwrecked American citizens.——Some months ago a yacht called the *Wanderer*, belonging to Mr. Corrie, of South Carolina, was seized at New York on suspicion of being bound on a voyage to Africa for slaves. Nothing being found to substantiate the suspicion, she was discharged, and was cleared with papers for a voyage to Trinidad. The yacht made her appearance on the coast of Georgia about the middle of December, and it was reported that she had landed a large number of native Africans, who were dispersed among the neighboring plantations. The case is now undergoing judicial investigation, there being little doubt that the charge is well-founded.—The subject of reopening the slave-trade is warmly discussed at the South; but though it has many earnest advocates, the general sentiment appears to be decidedly averse to any such project.

SOUTHERN AMERICA.

In *Mexico* affairs have taken an unexpected turn. For some weeks the adherents of Zuloaga appeared to be gaining the advantage over their opponents. They had routed General Degollado, and taken possession of Guadalajara, besides gaining the upper hand of the Pinto Indians, who had advanced upon the capital. Meanwhile General Robles, formerly the Minister at Washington, who, upon the accession of Zuloaga, retained his post as the representative of the new Government, returned to his country, made his way through the "Liberals" who held the coast, and reached the capital, where he began to intrigue against his chief. The troops went over to him and deposed Zuloaga, who took refuge with the British Minister. Robles announced himself to be the head of the "Conservatives," and sent a commission to Vera Cruz proposing to treat with Juarez for a union with the "Liberals."

EUROPE.

From *Great Britain* the most interesting item is the Queen's India Proclamation, announcing that "Victoria, by the grace of God, of the United Kingdom of Great Britain and Ireland, and of the colonies and dependencies thereof in Europe, Asia, Africa, America, and Australasia, Queen, Defender of the Faith," which is now the title assumed by her Majesty, has, "for divers weighty reasons, resolved, by and with the advice of the Lords Spiritual and Temporal and Commons in Parliament assembled, to take upon herself the government of the territories in India heretofore administered in trust for her by the Hon. East India Company." The proclamation calls upon all subjects in India to render obedience to the appointed authorities; confirms all the officers of the Company in their several posts, subject to the Queen's future pleasure; announces that all treaties made by the Company with native princes will be scrupulously maintained; repudiates all desire for further territorial extension; acknowledges the same duties toward In-

dian as toward other subjects; disclaims all right to interfere with their religion, promising that none shall be unduly favored or in any way molested on account of religious faith, and that all, of whatever race or creed, shall be impartially eligible for such offices as they may be qualified to fill; promises that in framing and administering law due regard shall be paid to the ancient rights, usages, and customs of India; pardons the offenses of those who, having been misled into rebellion, desire to return to the path of duty—clemency to be extended to all except such as may be convicted of having taken part directly in the murder of British subjects, with respect to whom "the demands of justice forbid the exercise of mercy;" to those who have given asylum to murderers, or have acted as leaders in the revolt, their lives only are guaranteed, but in apportioning their punishment consideration will be given to the circumstances under which they acted; to all others who are in arms against Government an unconditional pardon and amnesty is promised upon their return to their homes.——In Ireland secret societies of "Ribbonmen" are reviving, and the Lord Lieutenant has issued a very stringent proclamation warning all persons against joining any illegal societies, under pain of severe penalties, and offering large rewards to informers. These societies are reported to have branches in all the great towns in England. One object of these associations is reported to be to favor an invasion by "filibusters" from America. In Skibbereen and its neighborhood a number of arrests have been made upon this charge, and others were anticipated.——The Ionian Islands, over which Great Britain has exercised a protectorate since 1815, are in an extremely disaffected state. Mr. Gladstone, late Chancellor of the Exchequer, has been sent on a mission to investigate the state of things. In the mean while a number of secret dispatches to the Government from Sir John Young, the Lord High Commissioner, have been surreptitiously published. In them he recommends an effort to induce the European powers to consent that Great Britain should formally "annex" Corfu, the principal island of the group, and give up the smaller islands to the Kingdom of Greece, affirming that the inhabitants of Corfu desired to be incorporated with Great Britain. A copy of this dispatch was purloined by a Mr. Guernsey from the table of an official, to whom he had paid a visit, and furnished to a London newspaper. He was tried for theft, but the jury acquitted him on the ground that the document was not taken with any intent of deriving any personal advantage, but merely that it might be made public. The deputies of Corfu, as soon as they were made aware of the contents of the dispatch, drew up a solemn protest against it. Sir Edward Bulwer Lytton, the Secretary of State for the colonies, transmitted a dispatch to the Senate of the Islands, the purport of which is that the object of Mr. Gladstone's mission is simply to inquire whether the relations between the Islands and Great Britain may not be improved, leaving the protectorate untouched.——The Atlantic Telegraph Company have applied to Government for aid to enable it to lay down a new cable. They ask a guarantee for four and a half per cent. upon a capital stock of two and a half or three millions of dollars. Recent investigations lead to the supposition that the main fault in the present cable is about 270 miles from the Irish coast, at a depth of 900 fathoms, and that there is another fault on the other side, probably 300 miles from Newfoundland. Electric currents are still perceptible, but too feeble and uncertain to be of any practical service. Mr. Henley is manufacturing an apparatus from which he hopes some present results may be obtained; but it is now generally admitted that permanent communication can be attained only by an entirely new line. As soon as the season permits an attempt will be made to underrun the cable so as to recover as much of it as possible.

Count Montalembert appealed from the decision of the Court sentencing him to fine and imprisonment. The Emperor offered to pardon him; but the Count refused the offer, and demanded that his appeal should be brought before the tribunal. Upon the new trial the time of imprisonment was reduced to three months, but the same fine was imposed as before. The English newspapers, which contained the report of the first trial, and the eloquent speeches of MM. Berryer and Dufaure, the counsel for the prisoner, were seized.——The commission appointed by the Emperor to inquire into the African emigration scheme have reported in favor of its continuance.

The "Mortara case" has for some months excited much attention throughout Europe, as well as in this country. At Bologna a child of Jewish parents, named Mortara, was secretly baptized, while an infant, by its nurse, thus becoming legally a Christian. The boy had attained the age of seven years when this fact was made known by the nurse. He was at once taken from his parents, on the ground that it was contrary to law that a Christian child should be educated out of the true Church.

THE EAST.

The campaign in India has been opened with every prospect of the speedy suppression of the revolt. The rebels had been dislodged from many strongholds. Several engagements are reported, each resulting in victory on the British side, and heavy losses to the enemy. On the 30th of October the rebels were defeated near Mood Poor; on the 31st the fort of Berwha was taken by storm; and on the same day the strong fort of Berra was captured; on the 23d a detachment was assailed by a thousand rebels, but they were repulsed, with the loss of men and guns; on the 27th the fort of Rohes was taken; and on the 29th Benes Madho, with 20,000 men, was captured, with loss. Tantia Topee was a fugitive, his forces having been routed, with the loss of all their guns and six hundred killed. The number of rebels was still very large—at the lowest estimate, 50,000—but they are scattered about in small bodies. The proclamation, in which the British Crown assumes entire command over India, and promises an amnesty on certain conditions, was read throughout India on the 1st of November, and is said to have given great satisfaction.

The Cape Town (Cape of Good Hope) *Monitor* of November 10 says: "Letters have just been received in Cape Town from Dr. Livingstone. He has arrived in safety as far up the Zambesi as Tete, and he and his whole party were in perfect health and high spirits. Of his Makololos, whom he had left there two years before (about 150 in number), thirty had died of small-pox, and six more had been killed during his absence. The remainder were still at Tete, and would proceed up the country with him."

Literary Notices.

History of the Reign of Philip the Second, Vol. III., by William H. Prescott. (Published by Phillips, Sampson, and Co.) The eventful fortunes of the Moors in Spain, to which a very considerable portion of this volume is devoted, affords a congenial theme for the descriptive powers which have given such graphic beauty to the previous historical compositions of the author. In point of flowing sweetness of narrative, elegance of expression, and sustained picturesque effect, Mr. Prescott has here not only justified his well-established reputation, but even presented new claims to public admiration. It was in the year 711 that the Arabs, after traversing the southern shores of the Mediterranean, reached the celebrated straits which separate Africa from Europe. After pausing for a moment, they descended on the sunny plains of Andalusia; met the whole Gothic array on the banks of the Guadalete; and, within the space of three years, spread themselves over every part of the Peninsula. The whole of that fair domain—with the exception of a small corner in the north, where a remnant of the Goths maintained a savage independence—became subject to the victorious Saracens. Unlike the results of the Norman conquest in England, however, no union between the two races was effected. A wide difference of blood, of religion, of national tradition, placed an impassable gulf between the victors and the vanquished. No length of time served, in the eye of the Spaniard, to give the Moslem invader a title to the soil; and after the lapse of nearly eight centuries the Arabs were still looked upon as intruders, whom it was the sacred duty of the Spaniards to exterminate or expel. During the long period of the Middle Ages, when other nations were occupied with feudal quarrels or border warfare, the Spaniard was intent on the one great object of reclaiming his country from the possession of the infidel. His progress in this work, though certain, was gradual, and was measured by centuries rather than by years. By the end of the ninth century it had reached as far as the Ebro and the Douro. By the middle of the eleventh the triumphant Cid had penetrated to the Tagus; and by the middle of the thirteenth the Moslems had been stripped of the other southern provinces, and reduced to the petty kingdom of Granada. On this narrow spot they continued to maintain a national existence, and to bid defiance, for more than two centuries longer, to all the efforts of the Christians. It was not till the reign of Ferdinand and Isabella (January 2, 1492), that, after a war which rivaled the siege of Troy in its duration, the invaders were finally overcome, and "the august pair made their solemn entry into Granada; while the large silver cross, which had served as their banner through the war, sparkling in the sunbeams on the red towers of the Alhambra, announced to the Christian world that the last rood of territory in the Peninsula had passed away from the Moslem." The war against the Saracens partook of the nature of a religious crusade. Every man learned to regard himself as the soldier of Heaven, forever fighting the great battle of faith. The orders of chivalry, of which there were several in the Peninsula, were founded on the same principles as those of Palestine, where the members were pledged to perpetual war against the infidel. The patriotic principle thus became identified with the religious. In the enemies of his country the Spaniard beheld also the enemies of God; and national hostility was aggravated by religious hatred. By the terms of the capitulation of Granada, it was stipulated that the Moslems should be allowed to remain in possession of their religion, and that no inducements should be held out to effect their conversion to Christianity. But it was only for a few years that these provisions were respected by the conquerors. The clergy were impatient for the triumphs of the cross, and were eager to adopt decided measures in the work of conversion. Cardinal Ximenes, especially, devoted himself to the cause with characteristic energy, and with little scruple as to the means to be employed. In the defect of reason and expostulation he did not hesitate to resort to bribes, and, if necessary, to force. Under these potent influences the work of proselytism made rapid progress. Thousands were added to the Christian fold. The more devoted Mussulmans dreaded the general apostasy of their countrymen. Exasperated by the course of the clergy, they broke out into an insurrection which soon extended along the mountain ranges in the neighborhood of Granada. But this only strengthened the hands of the clergy. The Moors, as Ximenes urged upon the sovereigns, had thus forfeited the advantages secured by the treaty, and incurred the penalties of death and confiscation of property. Their offense could be overlooked only on condition that they should at once receive baptism or leave the country. This proposal found favor in the eyes of Ferdinand and Isabella. As but few of the Moslems were prepared to renounce their country and their worldly prospects for the sake of their faith, in a short space of time the greater portion acceded to the conditions, abjured their own religion, and received that of their enemies. Such was the state of things on the accession of Philip the Second, and at the time when this portion of the history commences. The principal cities of the south were filled with a mingled population of Spaniards and Moriscoes (as the Moors were now called), the latter of whom gave evidence of conversion to the faith of their conquerors. But a large majority of the Moorish population was scattered over the mountain range of the Alpujarras, southeast of Granada, and among the bold sierras that stretch along the southern shores of Spain. Amidst those frosty peaks was many a green, sequestered valley, on which the Moorish peasant had exhausted the resources of his unrivaled cultivation. He constructed terraces from the rocky soil, planted them with vines, and clothed the bald sides of the sierra with a delicious verdure. The land was irrigated by a network of canals. The different elevations afforded the climate of different latitudes. The fig, the pomegranate, the orange grew almost side by side with the hemp of the north, and the grain of more temperate localities. Flocks of merino sheep pastured on the lower slopes of the mountains, and mulberry-trees were raised in great abundance for the manufacture of silk. In these little hamlets the people of the Alpujarras maintained the same sort of rugged independence which was enjoyed by the ancient Goth when he had taken shelter from the Saracen invader in the fastnesses of the Asturias. Here the Moriscoes cherished their national associations, and perpetuated the usages that kept alive the memory of ancient days. The measures

adopted by the Government, under the influence of the clergy, to reduce these sturdy mountaineers to the discipline of the Church, form the principal topics of this interesting volume. The progress of the rebellion, which followed the attempt to enforce the Catholic faith upon the unwilling Moslem, is described in glowing colors. Nor is the tragic picture completed until the policy of the Court is crowned by the expulsion of the Moriscoes. They were first driven away from their mountain homes in Granada. The lands and houses of the exiles were forfeited to the Crown. On the day appointed for their removal they were gathered into the principal churches of their districts, formed into divisions, and sent forth on their dreary march. Within a few years not a Morisco remained on their wonted soil. The outcasts who still lurked in the fastnesses of the mountains were exterminated by the sword, the gallows, and famine. But the exiles carried their superior skill and industry into the various provinces where they were sent. Their presence was revealed by the more minute and elaborate culture of the soil. With their skill in husbandry they combined a dexterity in the various kinds of handicraft that was unknown to the Spaniards. The products of their industry were accordingly more abundant, and were sold at a cheaper rate than those of their neighbors. They continued, however, to be oppressed by the most cruel legislation. Their national songs and dances, the holidays and celebrations which had come down to them from their ancestors, were interdicted under heavy penalties. They were even forbidden to speak or write the Arabic, on pain of imprisonment; and for a repetition of the offense, of four years' confinement in the galleys. Still they flourished under this iron system. As they found a shelter in their new homes, and resumed their former habits of quiet industry, their spirits revived, and they gradually became cheerful and even gay. They lived to a good old age, and furnished examples of longevity which it was not easy to match among the Spaniards. At length, under the reign of the imbecile Philip the Third, the Moriscoes were finally expelled from the Peninsula, an act which deprived Spain of the most industrious portion of her population, and led, among other causes, to the subsequent decline of the monarchy. In addition to the vigorous recital of the oppression of the Moriscoes, Mr. Prescott has devoted several chapters of the present volume to the wars with the Turks, and the domestic affairs of Spain, in which he has ample opportunity to illustrate the qualities which have given him such an eminent rank among American historians. If not the most profound, he is certainly one of the most pleasing of narrative writers. His pen never loses its animation. He gathers materials for picturesque description from the driest detail of facts; and although he seldom kindles into enthusiasm, or betrays the earnestness which proceeds from intensity of conviction, his sympathies are always on the right side—portraying whatever is lovely, noble, and honorable with evident pleasure, and never lending his countenance to baseness, duplicity, or tyrannic power.

Sylvan Holt's Daughter, by HOLME LEE. (Published by Harper and Brothers.) The plot of this novel is original in its conception, and its development is marked by ingenuity of resource and vigor of combination. Margaret Holt is the daughter of a recluse misanthrope, who, from early domestic misfortune, has forsaken society, and nurses a grim, sullen independence in the retirement of the country. She grows up, under the fostering influences of nature, into a maiden of rare beauty and peculiar loveliness of character, in spite of a certain dash of eccentricity, which she partly inherits from her father, and partly derives from the isolated position in which she is placed. Marrying into an ancient aristocratic family, she suffers from the usual effervescence between pride of birth and the gifts of nature; but every new trial only proves a new revelation of her sweet womanly dignity, until at length she is placed in a position which shows that her strength of character is equal to her gentleness of disposition. The subordinate figures in the scene are mostly arranged with excellent effect, although the story is hurried toward the close, and the situations such as do not urgently invite the sympathies of the reader.

What will he do with it? by Pisastratus Caxton, A Novel, by SIR E. BULWER LYTTON. (Published by Harper and Brothers). Every new production of Bulwer appears to justify the opinion of those who assign him the highest rank among modern writers of fiction. The present work exhibits the same knowledge of the world, insight into the springs of passion, power of artistic grouping, and richness of vocabulary which have given most of his previous novels their eminent place in English literature. In his masterly handling of characters and scenes the reader, who is weary of the wretched affectation and imbecility of so many aspiring novelists, will find a positive refreshment.

Travels and Discoveries in North and Central Africa, by HENRY BARTH. (Harper and Brothers.) In this third and concluding volume, Dr. Barth pursues his narrative from the time when, dispirited by the loss of his friend and companion, Overweg, and prevented by the wars in Bornu from pursuing the exploration of that region, he set forth westward to explore the countries on the Isa, or Niger. The road which he had to traverse was long and arduous, leading through the border region lying between the Bornu and Fufulde empires, through the dominions of the conquering Fulbe, through Arbindi and Hombori, unsettled provinces obstructed by nature and infested by man; along the lakes and backwaters of the great river, until he reached the famous city of Timbuktu, to reach which was the object of his arduous undertaking. Here he experienced many inconveniences, and was detained in a sort of honorable captivity for many months. The time was occupied in his usual laborious manner, by researches into the history, character, and customs of the people. Being at length suffered to depart, he retraced his course by a different route; then crossed the desert to Tripoli, whence he embarked for Europe, having occupied nearly six years in his long and adventurous journey. He had succeeded not only in exploring a vast region which was scarcely known even to the Arab merchants, but had established friendly relations with all the most powerful chiefs along the mysterious Niger. In accuracy of observation, patience of research, and minuteness of detail, Barth stands at the head of all modern travelers. He may be considered as having fairly laid open the whole region of Central Africa to within eight degrees of the equator, leaving only a tract of sixteen degrees in breadth between his explorations and those of Livingstone to complete our knowledge of the interior of the continent.

Editor's Table.

A REVISION OF THE AUTHORIZED VERSION OF THE BIBLE.—The question of a new translation of Scripture, or, to speak more exactly, of a revision of our received version, is one which, at the present day, is not confined to men of scholarly attainments, but has excited a deep interest in all classes of intelligent minds. This is in some degree owing to the intense evangelism so characteristic of our era—a spirit somewhat akin to that which prevailed during the Reformation, and which led to the execution of the versions, now existing, in the languages of modern Europe. At all events, we not only find the question mooted by biblical scholars, but the experiment actually made by individuals and by religious societies. We believe it is not the design of all of these new versions to supersede our standard English Bible; but they indicate a dissatisfaction with it, and a desire that its alleged defects may be remedied. It becomes, therefore, a duty of importance to us, who hold the position of mediators between the scholastic and the general mind, to inquire whether the defects of our received version are so many and so great as are alleged, and whether an emendation of it is desirable or practicable.

We admit, at the outset, that the successful transfusion of thought and sentiment from one language into another is a work of almost invincible difficulty; especially when the languages under treatment belong to widely separated eras of the world's history, and are the media of expression for races largely differing in habits of mind, in social usage, and in general spirit. This difficulty is increased when part of the matter to be translated is poetic in form; for in poetry so much depends upon diction and rhythm, that its fine spirit may entirely escape us while making the effort to house it, as it were, in another body. What adequate translation have we of Homer? In Pope's poetic paraphrase the blind old bard appears before us in the garb and wears the mien of a fine gentleman of the eighteenth century; while, in the blank verse of Cowper, he is so prosy, so bare of all appropriate appareling, that we scarce recognize his identity. In the one instance we have Alexander Pope acting the part of Homer; in the other, alas! naught but Homer's ghost. As Boswell once wittily said (and it is the only witty saying of his that we remember), "A translation of poetry may be in the same tune but not in the same tone; Homer plays on a bassoon, Pope on a flageolet."

A translation can never be more than a close approximation to its original. There will always remain delicate shadings of meaning perceptible to those alone who are familiar with both languages. Making, however, every allowance for this and the like difficulties, we may safely say that our English version of the Bible approaches more closely the spirit of its originals than any book ever rendered from an ancient into a modern tongue.

But what are the defects complained of? We do not include now the renderings of the ecclesiastical terms which the churches variously interpret, and which they naturally desire to have translated, or at least construed, according to their own views. We propose rather to select those which interest all readers, the correction of which would, in all likelihood, be universally accepted as an improvement.

The first class of cases which we note are those where, from the constant flux and change which is the normal state of a living language, words in our version which accurately represented the thought of the sacred writers two hundred years ago, do not, at the present day, so precisely express their meaning. Thus, "to prevent," in the language of our translators, meant "to go before;" "to let" signified "to hinder;" "wot" and "wist" were common forms for "know" and "knew;" as also was "bewray" for "expose," "lease" for "lose," "to eschew" for "to avoid," "to entreat" for "to treat," "leasing" for "lies," "bruit" for "rumor," "minish" for "diminish," "an hungered" for "hungry." "Worship" is now limited in its significance to "the homage rendered to a divine being," it included then "civil respect or honor" likewise; "pitiful" then meant "compassionate," but now means "contemptible;" "meat" and "food" were then synonymous terms, now they are not. Such words as "taches," "ouches," and "to ear" (to plow), are unintelligible to the present generation; but it may be said, on the other hand, that they are unimportant and rarely occur.

More important instances are, "Take no thought for the morrow," which, in the time of King James, was good English for "take no anxious thought;" and in Paul's address to the Athenians, the words, "When I beheld your devotions," by which our translators meant the "objects of your worship;" and again, in the account of his journey to Rome, "We took up our carriages," which term, in the English of the sixteenth century, stood for "luggage or baggage." "Grudge not" was then equivalent to "murmur not." And we may add to these what is presumed to be a typographical blunder, "Strain *at* a gnat," for "Strain *out* a gnat"—an allusion to a well-known Eastern custom.

To these must be added the instances where the authors of our version have confessedly not chosen the happiest terms for conveying the meaning of the sacred writers. Thus, in one of the finest passages of St. Paul's writings, they have substituted "charity" for the better word "love" of the earlier English translations. They have written "Jesus" for "Joshua" in Hebrews, which, though literally correct, is confusing to the common reader. They make the Apostle Paul tell the Athenians, quite bluntly, that he considers them "too superstitious," whereas it is in his mind to say that, as a stranger, he has observed that they "are much given to religious devotion;" a statement which affords him the desired opportunity of presenting to their consideration the doctrine of Christ. Indeed, in this entire passage our version fails to indicate adequately the exquisite tact and skill of the Apostle Paul.

Other cases are those where the meaning, already clear, might, in the judgment of the learned, be given with greater clearness, and yet with no loss in the felicity of expression. Such a one is the following: "And other sheep I have, which are not of this fold; them also I must bring, and there shall be one fold, and one shepherd." A closer rendering would doubtless be, "And there shall be one flock, and one shepherd," which expresses the idea of unity more perfectly.

Then again, it is thought by some that the language of our English Bible is, in a few places, too homely, not to say indelicate. An attempt to remedy this and other defects by a new translation,

was made by our distinguished American lexicographer, Noah Webster, but we believe without success. It is not our purpose, however, neither is it practicable in a brief discussion, to make a complete catalogue of the defects of our household version of Scripture. It would be an ungrateful task at best; and besides, we do not attach as much importance to them as do those who insist upon a revision. We might admit every count in the bill of charges, and yet deduce a different practical conclusion. Some of the charges we conceive to be frivolous; others, again, are weighty, and entitled to serious consideration. Yet we hold with Sir Thomas Browne, that "if the substantial subject be well forged out, we need not examine the sparks which irregularly fly from it." In laying the many courses of a building a stone may here and there be illy adjusted to the rest; but if the edifice is so finely proportioned that its architectural effects impress every beholder, we may well bethink ourselves a little before we undertake to meddle with or to mend it. If our readers will conceive the instances above cited and others like them to be somewhat multiplied, they will readily apprehend the nature of the improvements desired. It will be perceived that they do not touch the vital interest at stake—the discovery, by persons of the plainest understanding, of the true path of life. When gathered together they may at first sight make a formidable array; but that they are many, relatively to the entire contents of Scripture, no one possessed of competent knowledge will, we think, undertake to affirm.

The agitation of this question will doubtless excite in many minds the desire to know from what sources we have derived our received version of Scripture, and upon what grounds its title to pre-eminence rests. We may claim for it two signal advantages: the one, that it was made precisely at that stage of the growth of the English language best fitted for such a work; the other, that it is not in itself an original translation, but the sixth of a series of versions, each one of which is a careful revision of its predecessors. We shall devote a portion of our space to the illustration of these points.

The English, being a composite language, is, at different epochs, much affected by the various elements of which it consists. Rooted deeply in the Anglo-Saxon, it is yet supplied in large measure from the resources of the Latin and French. And though its normal state is found in a predominance of Anglo-Saxon vocables, and a simplicity of grammatical structure altogether its own, yet it has been subject to perturbations not unlike those of the planets, when brought within the sphere of each other's influence. From the awkward phrase of Sir John Mandeville to the Latinisms and deep-breathing periods of Milton and Jeremy Taylor, and from thence to the subdued grace of Steele and Addison, and from thence to the pomp of the Johnsonian diction, and from thence to the indescribable contortions of the Carlylean sentence, is a path of direction not agreeing with any rectilinear or known curvilinear movement. This irregular advance proves that our vernacular submits, for a season, to influences which, in process of time, are repelled and cast aside. Our version of the Bible enjoys the felicity of having been made in the period immediately succeeding the primitive one, when the revival of classical learning had infused a new spirit into our literature and enlarged its resources, but had not yet burdened it with imitations of the classic forms. It was the period which gave us our Shakspeare, the wealth and purity of whose diction are not the least of the legacies he has left us; the period afterward characterized as the one when authors drew "from the wells of English undefiled." The ponderous Latinists had not yet Romanized our tongue; the wits of the reign of Queen Anne had not yet subdued it to the quiet grace of the French style of expression. It was in its first vigor, large, hearty, with the dew of the early morning upon it, and, under the inspirations of the universal awakening of the human intellect, ready for the first essays of its power.

We have said that our version belongs to this period of our language, for, though reduced to its present form in the reign of King James I., it is derived from William Tyndale—the earliest translator from the original languages of Scripture into English—who lived in the reign of Henry the Eighth. There is something irresistibly attractive in the character, and withal tragic in the fate, of this man. Deeply learned, and sincerely pious, he was literally without a place to lay his head. To give the Bible to the people of England in their own tongue was the cherished purpose of his life. In a controversy with a church dignitary who opposed his scheme, he had declared with lofty confidence, "If God spares me many years, I will cause the boy that driveth the plow to know more of Scripture than you do." Driven from the soil of England by Henry, whose policy was in the main hostile to the general circulation of the Scriptures, he found a refuge at Antwerp, and subsisted upon the bounty of English merchants resident there. Entrapped at length by the King's emissaries, he was burned at the stake near Brussels, where, from the midst of the flames, he uttered the ever-memorable words, "Lord, open the King of England's eyes!" Who can tell how far such a life, corresponding so closely in its sufferings with the lives of the inspired authors of the New Testament, may have quickened his appreciative sympathy with much that they wrote!

The condition of the English language at the time we have described fitted it admirably for the task of rendering the thoughts and expressions of the Bible. For the greater part of Holy Scripture was written in a tongue which was never over-refined by the action of the speculative intellect. Its tone is one of dignified simplicity. It deals with the primary feelings of our nature, and the striking aspects of the outer world. The New Testament, though the product of a more refined period, has much of it the same character, from the limited culture of nearly all its writers, and the absence on their part of all thought as to their mode of expression. No better representative of its letter and spirit could have been found than the Anglo-Saxon English of the sixteenth century, pre-eminently the language of the people, refined by the advance of learning, and yet not made scholastic by writers whose only world was the student's closet. Tyndale, and his associate Coverdale, though deeply learned, had been made familiar by their manner of life with the common speech of the house, the market, and the wayside. Our version is therefore singularly free from what a writer of the time sarcastically calls "the inkhorn terms," with which the affectation of scholarship and the intercourse of the learned with each other was already infecting our language. Of the sixty-nine words of the Lord's Prayer as rendered in it, five

only are not Saxon. The celebrated Robert Hall, whose sense of the harmony of style was perfect, delighted to quote the sweet Saxon phrases of our Bible, and would describe them as affording him the pleasure of fine strains of music.

Tyndale's translation, though made independently from the original Hebrew and Greek, is closely allied to Wicliff's from the Vulgate, made as far back as 1380. He did not live, however, to complete his work. His friend Coverdale revised and finished his version, and published a complete Bible in English in 1535. A revision of this was published by Mathew in 1537; and still another under the direction of Archbishop Cranmer in 1539; and yet another by the English refugees at Geneva in 1560; and another, called "the Bishops' Bible," in 1568, under the authority of Queen Elizabeth. These several versions have been very appropriately described as bearing "a strong family likeness." They are successive growths from one and the same stock, and in them we can see our English Bible slowly advancing toward its perfection. So well received were they, that, before the undertaking of the final revision by the authority of King James, upward of one hundred thousand copies of the Testament or of the whole volume were in circulation among the people—an extraordinary number for that age.

Our English Bible is not, then, a first attempt, or an independent attempt, to translate the Word of God, but a revision of pre-existent versions made with great care and under favorable auspices. Our language was in a fluent state, which made it pass readily into the moulds of Scripture thought and expression. The Reformation had given a mighty impulse to learning, and in the time of King James there were in Oxford, Cambridge, and London, many eminent Oriental and classical scholars. The King's directions to the translators were drawn up with skill. Among them were the following:

"The ordinary Bible read in the church, commonly called the Bishops' Bible, to be followed, and to be as little altered as the original will permit."

"These translations to be followed, where they agree better with the sense than the Bishops' Bible, to wit, Tyndale's, Coverdale's, Mathew's, Whitchurch's, Geneva."

When none of these accorded with the original, they were, of course, to follow that. We need not repeat the old, familiar story of their labors; how the forty-seven good and capable men, divided into six companies, each company taking a part of the entire volume, wrought at their task three entire years; how each man's work was revised by his associates, and each company's work by the other companies, until every passage had passed under scrutiny from thirteen to seventeen times; how, too, after the exercise of this scrupulous care, a select number of the whole devoted nearly a year to a re-examination of all that had been done. These facts we need mention only in passing. But we may dwell for a moment upon the character of the translators as men every way worthy of their high responsibility, whose ability was only exceeded by their modesty. They say of themselves: "We never thought to make a new translation, but to make a good one better, or out of many good ones one principal good one." And again: "Neither did we disdain to revise what was done, and to bring back to the anvil that which was hammered." And thus have we our incomparable version of Scripture. Rooted in the remote past, it has grown with the growth and become perfect with the perfection of our language. In its slow maturing was contained the promise, the sure prophecy of its enduring vitality. It is permeated by the richest life of our beloved vernacular, and has budded and blossomed with its fairest flowers of expression. Its early translator, Tyndale, chose for his motto, "Time tryeth;" and time *has* tried this work of his learning and piety, and of the no less learning and piety of his successors, and has attested its priceless value. Time has added to it much of the venerableness and authority of the sacred records of which it is so faithful a transcript. The memory of the martyrs who died to produce it and to make it a household volume is embalmed in it. No other book of our language can be so appropriately termed *nutrix gentium*, the foster-mother of races of men. It has met one after the other the advancing generations of Anglo-Saxon lineage, and has guided their spiritual life and given to it its expression. There is not an emotion of our spiritual nature, from the wail of the penitent to the almost seraphic rapture of the translated believer, which does not find in its happy phrase appropriate utterance. So powerfully has association interfused its thought and expression that it would be impossible for us even to think upon these themes in other terms than those which are provided us in our English Bible.

We believe we may safely assume that whatever new translations of Scripture may be made for scholars or for private reading, the use of our received version will never be superseded by any other among the people. If ever amended, it must be with the reverent touch with which we restore the painting of an old master. And even then the changes must stand out as proposed, and receive the sanction of universal consent, before being incorporated with the text. They must by no means be foisted in. We can conceive of no event which would awaken a more universal rebellion in the popular mind than the discovery that, unawares, their received version had been changed. But we doubt if the attempt is desirable in the present divided state of Christendom. At present our Bible is a bond of union between the scattered branches of English and American Protestantism. It is for all sects a common standard of appeal. It is the broad, unbroken platform upon which they may unitedly stand. It is at once a reproach of their divisions, and an eloquent homily upon the necessity of union among Christian men. No more melancholy spectacle could be witnessed than that of the various religious bodies appealing to their own exclusive versions as their ultimate answer in matters of debate. In such a juncture of affairs we believe the world without the churches would correct and rebuke the folly of the world within them. Shortly after the completion of King James's translation, and while the publishing of Bibles was in the hands of private printers, violent sectaries procured the issuing of editions corrupted to suit their own purposes. Some of these alterations seem to have been dictated by a spirit of mischief, if not of malice. Thus one printer is said to have omitted the important word "not" in the Seventh Commandment, for which he was afterward fined several thousand pounds; others changed in decisive passages "unrighteousness," to "righteousness," and "shall not inherit" to "shall inherit." Pos-

sibly there is an allusion to this madness in the doggerel of Hudibras:

"Religion spawned a various rout
Of petulant capricious sects,
The maggots of corrupted texts."

The numerous improved versions made and issued by private scholars are of very various merit. Some of them come to us with every sanction which great reputation can give them, and are really admirable specimens of critical ability. But all that we have seen are inferior to our common English Bible in one important particular—they are not so readable. Who more judicious than the celebrated Dr. Campbell of Aberdeen? Yet who would exchange our common version of the Gospels for his? Unfortunately not every one who addresses himself to this task is as fully qualified to do it well. About forty years ago a well-known divine of England rushed into the field with defiant trumpet blast, denied the literary competency of King James's translators, affirmed that no version had been made from the original Scripture since the days of Jerome, and proceeded to remedy this deficiency in our literature by drawing directly from the Hebrew records. How far he succeeded in his undertaking we are not precisely aware; but we have seen the following cited as a specimen of his earlier efforts: it is from the account of the creation of Eve, the mother of us all:

"Then he brought one to her side, whose flesh he had inclosed in her place. Then Jehovah built the substance of the other, which he took for the man, even a woman," etc.

Our readers may, at their leisure, compare this jumble with the simple rendering of our standard version.

Another luckless wight, who wishes the style of our English Bible to be modernized and made more vivacious, perpetrates the following. It occurs in the answer of the Roman centurion to our Saviour:

"Lord, don't give yourself the trouble of coming. I don't deserve you should honor my house with your presence."

And another, who has an itching for a more dignified diction, travesties the twenty-third Psalm in the following style:

"Deity is my pastor, I shall not be indigent. . . . Thou anointest my locks with odoriferous unguents. My chalice exuberates," etc.

These are follies, but who will say that they are not seriously meant by their authors? They show that a translator may enter upon his work with the utmost self-confidence, and yet totally misconceive the spirit and tone if not the sense of the inspired volume.

But without the alteration of a single syllable the text of our version might be presented in a far more readable form. The division into chapters and verses has its uses, but no one will pretend that it does not interrupt the flow of narrative, of poetry, and of argument. It creates, besides, the pernicious habit of contemplating the contents of Scripture as composed of so many distinct aphorisms; whereas the aphoristic form is peculiar to the book of Proverbs alone. Why not, as in the editions of Homer or Milton, relegate the chapter and verse numbers to the margin, dividing the text into suitable paragraphs according to the sense? The division of the Bible into chapters and verses is no part of its inspiration; it was made on individual responsibility, and, more than that, very carelessly made. It was not originally designed to facilitate reading, but to make reference to a concordance more easy. We owe to Cardinal Hugo de Santo Caro—a concordance-maker of the thirteenth century—the division into chapters, and to a Jewish Rabbin the subdivision of the Old Testament into verses. Robert Stephens, the famous editor and printer, distributed the matter of the New Testament into verses to adjust it to a concordance which he was then passing through the press. He tells us, moreover, that he did the work while traveling on horseback (*inter equitandum*) between Lyons and Paris. Whether he wrought at this verse-making while cantering his good steed on the road, or while baiting at his inn, he does not say—probably both. We can not think that Scripture has been, by this arrangement, rightly divided; in some instances it has been fearfully dislocated to the detriment of its symmetry and beauty. Much would be gained, too, if the citations, in the New Testament from the Old, were indicated by quotation marks and printed in spaced letter. Besides the gain in clearness by this change, it would keep prominently before the eye and mind the confirmation by the authors of the New Testament of the genuineness and inspiration of the more ancient Scriptures. We are of opinion too, that a slight difference in arrangement would give greater impressiveness to the hymn-book of Scripture, the model of all hymnology, the collection of Psalms. These ancient songs, which have a power still to touch the dullest sensibilities, may reasonably ask to be treated with the appearance of justice. What syllabic measure is to classic, and rhyme to modern poetry, the parallelism of the verse-members is to the poetry of the Hebrews. The alliterative treatment of the theme is frequently followed at intervals by a choral refrain; but these features scarcely appear in our present mode of printing the text. The loss of effect is the same as if we were to print a collection of modern hymns as so much prose, leaving the reader to pick out the rhyme and the reason as he best could.

Our discussion has carried us not unwillingly to the remote past; to the seed-time of the rich harvests of blessing which we are now gathering year by year. Then, King Henry's Chancellor, Sir Thomas More, condemned all who were suspected of importing or concealing Tyndale's New Testament to ride through the streets of London with their faces to their horses' tails, with paper caps on their heads, with the copies of Scripture hanging from their cloaks, which they were compelled to cast into the fire at Cheapside; now, one of the noblest organizations known to Christendom strains its resources to the utmost to place a copy in every man's house. Who at that day would have predicted so great a change! Yet we hear one as early as 1610, anticipating, in the spirit of prophecy, and in language of almost superhuman eloquence, the good to be achieved by the universal diffusion of the Scriptures. His words are worthy to be written in gold:

"That most excellent light of Christian wisdom revealed in the sacred books of the divine oracles is incomparable and peerless, whereupon all others do depend; the bright beams of which heavenly light do show us the ready way to eternal happiness amidst the sundry turnings and dangerous windings of this life. And lest either the strangeness of the language wherein these holy books were written, or the deepness of the mysteries, or the

multiplicity of hidden senses contained in them, should any way hide us from the clear view and perfect beholding of that heavenly brightness; God hath called, and assembled into his church, out of all nations in the world, and out of all people that dwell under the arch of heaven, men abounding in all secular learning and knowledge and filled with the understanding of holy things, who might turn these Scriptures and books of God into the tongues of every nation; and might unseal this book so fast clasped and sealed, and manifest and open the mysteries therein contained, not only by lively voice but by writings to be carried down to all posterities. From hence, as from the pleasant and fruitful fields watered with the silver dew of Hermon, the people of God are nourished with all saving food. Hence the thirst of languishing souls is restinguished as from the most pure fountains of living waters and the everlasting streams of Paradise. Hence the want of needy souls is supplied, as out of the best and richest store-house in the world. From hence, as out of the school of all heavenly virtues, all the life, manners, and duties of men are framed and fashioned aright, the unlearned are taught, the learned are exercised; they that are fallen are holpen, that they may be able to rise again; they that stand are preserved from the danger of falling; in a word there is nothing honest, nothing profitable, pleasant, great or rare or excellent, tending either to instruction, holiness of life, or the attaining of endless happiness, but here it may be found."

Editor's Easy Chair.
